C. Refractive index (2.2.6): 1.487 to 1.490.

#### TESTS

*Use the molten substance for all tests.*

**Appearance.** The substance to be examined is clear (2.2.1) and not more intensely coloured than intensity 7 of the range of reference solutions of the most appropriate colour (2.2.2, Method II).

**Alkalinity.** To 100 mL of water R add 1.0 mL of bromothymol blue solution R1 and adjust to a green colour with 0.02 M potassium hydroxide or 0.02 M hydrochloric acid. To 50 mL of this solution add 20 mL of the substance to be examined and titrate with 0.02 M hydrochloric acid to the initial colour. Not more than 8.0 mL of 0.02 M hydrochloric acid is required.

**Related substances.** Gas chromatography (2.2.28): use the normalisation procedure.

*Test solution.* The substance to be examined.

*Reference solution (a).* Dissolve 1 mL of the substance to be examined and 1 mL of *N*-methylpyrrolidone R (impurity C) in methylene chloride R and dilute to 20 mL with the same solvent.

*Reference solution (b).* Dissolve 1.1 g of the substance to be examined in methylene chloride R and dilute to 100.0 mL with the same solvent. Dilute 1.0 mL of this solution to 20.0 mL with methylene chloride R.

*Reference solution (c).* Dissolve 1 mL of butyrolactone R (impurity B) and 1 mL of butane-1,4-diol R (impurity A) in methylene chloride R and dilute to 20 mL with the same solvent.

*Column:*

- *material:* fused silica;
- *size:*  $l = 30$  m,  $\varnothing = 0.32$  mm;
- *stationary phase:* poly(dimethyl)siloxane R (film thickness 5  $\mu$ m).

*Carrier gas:* nitrogen for chromatography R.

*Flow rate:* 1.3 mL/min.

*Split ratio:* 1:80.

*Temperature:*

	Time (min)	Temperature (°C)
Column	0 - 18.75	100 → 250
	18.75 - 30	250
Injection port		250
Detector		250

*Detection:* flame ionisation.

*Injection:* 0.1  $\mu$ L.

*Relative retention* with reference to pyrrolidone (retention time = about 13 min): impurity B = about 0.73; impurity A = about 0.76; impurity C = about 0.97.

Use the chromatogram obtained with reference solution (c) to identify the peaks due to impurities A and B; use the chromatogram obtained with reference solution (a) to identify the peak due to impurity C.

*System suitability:* reference solution (a):

- *resolution:* minimum 2.0 between the peaks due to impurity C and pyrrolidone.

*Limits:*

- *impurity B:* maximum 0.5 per cent;
- *impurities A, C:* for each impurity, maximum 0.15 per cent;
- *unspecified impurities:* for each impurity, maximum 0.10 per cent;
- *total:* maximum 0.7 per cent;
- *disregard limit:* the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Heavy metals** (2.4.8): maximum 10 ppm.

Dissolve 4.0 g in water R and dilute to 20.0 mL with the same solvent. 12 mL of the solution complies with test A. Prepare the reference solution using lead standard solution (2 ppm Pb) R.

**Water** (2.5.32): maximum 0.1 per cent, determined on 1.00 g.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

#### STORAGE

Protected from light.

#### IMPURITIES

*Specified impurities:* A, B, C.

A. butane-1,4-diol,

B. dihydrofuran-2(3H)-one ( $\gamma$ -butyrolactone),

C. 1-methylpyrrolidin-2-one (*N*-methylpyrrolidone).

01/2008:0017 pH (2.2.3): 6.0 to 6.8.

## QUINIDINE SULFATE

## Chinidini sulfas

$C_{40}H_{50}N_4O_8S \cdot 2H_2O$   
[6591-63-5]

$M_r$  783

## DEFINITION

**Content:** 99.0 per cent to 101.0 per cent of alkaloid monosulfates, expressed as bis[(S)-[(2R,4S,5R)-5-ethenyl-1-azabicyclo[2.2.2]oct-2-yl][(6-methoxyquinolin-4-yl)methanol] sulfate (dried substance).

## CHARACTERS

**Appearance:** white or almost white, crystalline powder or silky, colourless needles.

**Solubility:** slightly soluble in water, soluble in boiling water and in ethanol (96 per cent), practically insoluble in acetone.

## IDENTIFICATION

## A. Thin-layer chromatography (2.2.27).

**Test solution.** Dissolve 0.10 g of the substance to be examined in *methanol R* and dilute to 10 mL with the same solvent.

**Reference solution.** Dissolve 0.10 g of *quinidine sulfate CRS* in *methanol R* and dilute to 10 mL with the same solvent.

**Plate:** TLC silica gel G plate R.

**Mobile phase:** diethylamine R, ether R, toluene R (10:24:40 V/V/V).

**Application:** 5  $\mu$ L.

**Development:** twice over a path of 15 cm; dry in a current of air for 15 min between the 2 developments.

**Drying:** at 105 °C for 30 min and allow to cool.

**Detection:** spray with iodoplatinate reagent R.

**Results:** the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

B. Dissolve about 5 mg in 5 mL of *water R*. Add 0.2 mL of *bromine water R* and 1 mL of *dilute ammonia R2*. A green colour develops.C. Dissolve 0.1 g in 3 mL of *dilute sulfuric acid R* and dilute to 100 mL with *water R*. When examined in ultraviolet light at 366 nm, an intense blue fluorescence appears which disappears almost completely on addition of 1 mL of *hydrochloric acid R*.D. Dissolve about 50 mg in 5 mL of hot *water R*, cool, add 1 mL of *silver nitrate solution R1* and stir with a glass rod. After a few minutes, a white precipitate is formed that dissolves on the addition of *dilute nitric acid R*.

## E. It gives reaction (a) of sulfates (2.3.1).

## F. pH (see Tests).

## TESTS

**Solution S.** Dissolve 0.500 g in 0.1 M *hydrochloric acid* and dilute to 25.0 mL with the same acid.

**Appearance of solution.** Solution S is clear (2.2.1) and not more intensely coloured than reference solution GY<sub>6</sub> (2.2.2, Method II).

Dissolve 0.10 g in *carbon dioxide-free water R* and dilute to 10 mL with the same solvent.

**Specific optical rotation (2.2.7):** + 275 to + 290 (dried substance), determined on solution S.

**Other cinchona alkaloids.** Liquid chromatography (2.2.29): use the normalisation procedure.

**Test solution.** Dissolve 20 mg of the substance to be examined in 5 mL of the mobile phase, with gentle heating if necessary, and dilute to 10 mL with the mobile phase.

**Reference solution (a).** Dissolve 20 mg of *quinine sulfate CRS* (impurity A) in 5 mL of the mobile phase, with gentle heating if necessary, and dilute to 10 mL with the mobile phase.

**Reference solution (b).** Dissolve 20 mg of *quinidine sulfate CRS* in 5 mL of the mobile phase, with gentle heating if necessary, and dilute to 10 mL with the mobile phase.

**Reference solution (c).** To 1 mL of reference solution (a) add 1 mL of reference solution (b).

**Reference solution (d).** Dilute 1.0 mL of reference solution (a) to 10.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 50.0 mL with the mobile phase.

**Reference solution (e).** Dissolve 10 mg of *thiourea R* in the mobile phase and dilute to 10 mL with the mobile phase.

## Column:

– size:  $l = 0.15\text{--}0.25$  m,  $\varnothing = 4.6$  mm;

– stationary phase: octadecylsilyl silica gel for chromatography R (5–10  $\mu$ m).

**Mobile phase:** dissolve 6.8 g of *potassium dihydrogen phosphate R* and 3.0 g of *hexylamine R* in 700 mL of *water R*, adjust to pH 2.8 with *dilute phosphoric acid R*, add 60 mL of *acetonitrile R* and dilute to 1000 mL with *water R*.

**Flow rate:** 1.5 mL/min.

**Detection:** spectrophotometer at 250 nm for reference solution (e) and at 316 nm for the other solutions.

**Injection:** 10  $\mu$ L.

**Run time:** 2.5 times the retention time of quinidine.

**Identification of peaks:** use the chromatogram obtained with reference solution (a) to identify the peaks due to impurity A and dihydroquinine; use the chromatogram obtained with reference solution (b) to identify the peaks due to quinidine and impurity C; the chromatogram obtained with reference solution (c) shows 4 peaks due to quinidine, impurity A, impurity C and dihydroquinine which are identified by comparison of their retention times with those of the corresponding peaks in the chromatograms obtained with reference solutions (a) and (b).

**Relative retention** with reference to impurity A: dihydroquinine = about 1.4.

**Relative retention** with reference to quinidine: impurity C = about 1.5.

## System suitability:

– resolution: minimum 3.0 between the peaks due to impurity A and quinidine and minimum 2.0 between the peaks due to impurities C and A in the chromatogram obtained with reference solution (c);

– signal-to-noise ratio: minimum 4 for the principal peak in the chromatogram obtained with reference solution (d);

– mass distribution ratio: 3.5 to 4.5 for the peak due to quinidine in the chromatogram obtained with reference solution (b),  $t_R$  being calculated from the peak due to thiourea in the chromatogram obtained with reference solution (e); if necessary, adjust the concentration of acetonitrile in the mobile phase.

## Limits:

– impurity C: maximum 15 per cent;

– any impurity eluted before quinidine: for each impurity, maximum 5 per cent;

- *any other impurity*: for each impurity, maximum 2.5 per cent;
- *disregard limit*: the area of the principal peak in the chromatogram obtained with reference solution (d) (0.2 per cent).

01/2008:0018  
corrected 6.0

**Boron**: maximum 5 ppm. *Avoid where possible the use of glassware.*

**Test solution.** Dissolve 1.00 g in a mixture of 0.5 mL of *hydrochloric acid R* and 4.0 mL of *water R*.

**Reference solution.** Dissolve 0.572 g of *boric acid R* in *water R* and dilute to 1000.0 mL with the same solvent. Dilute 5.0 mL of the solution to 100.0 mL with *water R*. To 1.0 mL of this solution add 3.0 mL of *water R* and 0.5 mL of *hydrochloric acid R*.

**Blank solution.** Add 0.5 mL of *hydrochloric acid R* to 4.0 mL of *water R*.

Add 3.0 mL of a 100 g/L solution of *2-ethylhexane-1,3-diol R* in *methylene chloride R* to the test solution, to the reference solution and to the blank solution, then shake for 1 min. Allow to stand for 6 min. To 1.0 mL of the lower layer, add 2.0 mL of a 3.75 g/L solution of *curcumin R* in *anhydrous acetic acid R* and 0.3 mL of *sulfuric acid R*. Mix and after 20 min add 25.0 mL of *ethanol (96 per cent) R*. Mix. The blank solution is yellow. Any red colour in the test solution is not more intense than that in the reference solution.

**Loss on drying (2.2.32)**: 3.0 per cent to 5.0 per cent, determined on 1.000 g by drying in an oven at 130 °C.

**Sulfated ash (2.4.14)**: maximum 0.1 per cent, determined on 1.0 g.

#### ASSAY

Dissolve 0.200 g in 20 mL of *acetic anhydride R*. Titrate with 0.1 M *perchloric acid*, using 0.15 mL of *naphtholbenzein solution R* as indicator.

1 mL of 0.1 M *perchloric acid* is equivalent to 24.90 mg of  $C_{20}H_{25}N_4O_2$ .

#### STORAGE

Protected from light.

#### IMPURITIES

A. (R)-[(2S,4S,5R)-5-ethenyl-1-azabicyclo[2.2.2]oct-2-yl](6-methoxyquinolin-4-yl)methanol (quinine),

B. R = CH=CH<sub>2</sub>, R' = H: (S)-[(2R,4S,5R)-5-ethenyl-1-azabicyclo[2.2.2]oct-2-yl](quinolin-4-yl)methanol (cinchonine),

C. R = C<sub>2</sub>H<sub>5</sub>, R' = OCH<sub>3</sub>: (S)-[(2R,4S,5R)-5-ethyl-1-azabicyclo[2.2.2]oct-2-yl](6-methoxyquinolin-4-yl)methanol (dihydroquinidine).

## QUININE HYDROCHLORIDE

### Chinini hydrochloridum

$C_{20}H_{25}ClN_4O_2 \cdot 2H_2O$   
[6119-47-7]

$M_r$  396.9

#### DEFINITION

**Content**: 99.0 per cent to 101.0 per cent of alkaloid monohydrochlorides, expressed as (R)-[(2S,4S,5R)-5-ethenyl-1-azabicyclo[2.2.2]oct-2-yl](6-methoxyquinolin-4-yl)methanol hydrochloride (dried substance).

#### CHARACTERS

**Appearance**: white or almost white or colourless, fine, silky needles, often in clusters.

**Solubility**: soluble in water, freely soluble in ethanol (96 per cent).

#### IDENTIFICATION

A. Thin-layer chromatography (2.2.27).

**Test solution.** Dissolve 0.10 g of the substance to be examined in *methanol R* and dilute to 10 mL with the same solvent.

**Reference solution.** Dissolve 0.10 g of *quinine sulfate CRS* in *methanol R* and dilute to 10 mL with the same solvent.

**Plate**: TLC silica gel G plate R.

**Mobile phase**: *diethylamine R*, *ether R*, *toluene R* (10:24:40 V/V/V).

**Application**: 5 µL.

**Development**: twice over a path of 15 cm; dry in a current of air for 15 min between the 2 developments.

**Drying**: at 105 °C for 30 min and allow to cool.

**Detection**: spray with *iodoplatinate reagent R*.

**Results**: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

B. Dissolve about 10 mg in *water R* and dilute to 10 mL with the same solvent. To 5 mL of this solution add 0.2 mL of *bromine water R* and 1 mL of *dilute ammonia R2*. A green colour develops.

C. Dissolve 0.1 g in 3 mL of *dilute sulfuric acid R* and dilute to 100 mL with *water R*. When examined in ultraviolet light at 366 nm, an intense blue fluorescence appears which disappears almost completely on the addition of 1 mL of *hydrochloric acid R*.

D. It gives the reactions of chlorides (2.3.1).

E. pH (see Tests).

#### TESTS

**Solution S.** Dissolve 1.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 50 mL with the same solvent.

**Appearance of solution.** Solution S is clear (2.2.1) and not more intensely coloured than reference solution Y<sub>6</sub> (2.2.2, *Method II*).

**pH (2.2.3)**: 6.0 to 6.8.

Dilute 10 mL of solution S to 20 mL with *carbon dioxide-free water R*.

**Specific optical rotation** (2.2.7):  $-245$  to  $-258$  (dried substance).

Dissolve  $0.500$  g in  $0.1$  M hydrochloric acid and dilute to  $25.0$  mL with the same acid.

**Other cinchona alkaloids.** Liquid chromatography (2.2.29): use the normalisation procedure.

**Test solution.** Dissolve  $20$  mg of the substance to be examined in  $5$  mL of the mobile phase, with gentle heating if necessary, and dilute to  $10$  mL with the mobile phase.

**Reference solution (a).** Dissolve  $20$  mg of *quinine sulfate CRS* in  $5$  mL of the mobile phase, with gentle heating if necessary, and dilute to  $10$  mL with the mobile phase.

**Reference solution (b).** Dissolve  $20$  mg of *quinidine sulfate CRS* (impurity A) in  $5$  mL of the mobile phase, with gentle heating if necessary, and dilute to  $10$  mL with the mobile phase.

**Reference solution (c).** To  $1$  mL of reference solution (a) add  $1$  mL of reference solution (b).

**Reference solution (d).** Dilute  $1.0$  mL of reference solution (a) to  $10.0$  mL with the mobile phase. Dilute  $1.0$  mL of this solution to  $50.0$  mL with the mobile phase.

**Reference solution (e).** Dissolve  $10$  mg of *thiourea R* in the mobile phase and dilute to  $10$  mL with the mobile phase.

**Column:**

- size:  $l = 0.15\text{--}0.25$  m,  $\varnothing = 4.6$  mm;
- stationary phase = octadecylsilyl silica gel for chromatography R (5–10  $\mu\text{m}$ ).

**Mobile phase:** dissolve  $6.8$  g of *potassium dihydrogen phosphate R* and  $3.0$  g of *hexylamine R* in  $700$  mL of *water R*, adjust to pH 2.8 with *dilute phosphoric acid R*, add  $60$  mL of *acetonitrile R* and dilute to  $1000$  mL with *water R*.

**Flow rate:**  $1.5$  mL/min.

**Detection:** spectrophotometer at  $250$  nm for reference solution (e) and at  $316$  nm for the other solutions.

**Injection:**  $10$   $\mu\text{L}$ .

**Run time:** 2.5 times the retention time of quinine.

**Identification of peaks:** use the chromatogram obtained with reference solution (a) to identify the peaks due to quinine and impurity C; use the chromatogram obtained with reference solution (b) to identify the peaks due to impurity A and dihydroquinidine; the chromatogram obtained with reference solution (c) shows 4 peaks due to impurity A, quinine, dihydroquinidine and impurity C, which are identified by comparison of their retention times with those of the corresponding peaks in the chromatograms obtained with reference solutions (a) and (b).

**Relative retention** with reference to quinine: impurity C = about 1.4.

**Relative retention** with reference to impurity A: dihydroquinidine = about 1.5.

**System suitability:**

- resolution: minimum 3.0 between the peaks due to quinine and impurity A and minimum 2.0 between the peaks due to dihydroquinidine and quinine in the chromatogram obtained with reference solution (c);
- signal-to-noise ratio: minimum 4 for the principal peak in the chromatogram obtained with reference solution (d);
- mass distribution ratio: 3.5 to 4.5 for the peak due to impurity A in the chromatogram obtained with reference solution (b),  $t_{\text{r}}$  being calculated from the peak due to thiourea in the chromatogram obtained with reference solution (e); if necessary, adjust the concentration of acetonitrile in the mobile phase.

**Limits:**

- impurity C: maximum 10 per cent;
- any impurity eluted before quinine: for each impurity, maximum 5 per cent;

- any other impurity: for each impurity, maximum 2.5 per cent;
- disregard limit: the area of the principal peak in the chromatogram obtained with reference solution (d) (0.2 per cent).

**Sulfates** (2.4.13): maximum 500 ppm, determined on solution S.

**Barium.** To  $15$  mL of solution S add  $1$  mL of *dilute sulfuric acid R*. Allow to stand for  $15$  min. Any opalescence in the solution is not more intense than that in a mixture of  $15$  mL of solution S and  $1$  mL of *distilled water R*.

**Loss on drying** (2.2.32): 6.0 per cent to 10.0 per cent, determined on  $1.000$  g by drying in an oven at  $105$  °C.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on  $1.0$  g.

**ASSAY**

Dissolve  $0.250$  g in  $50$  mL of *ethanol (96 per cent) R* and add  $5.0$  mL of  $0.01$  M hydrochloric acid. Titrate with  $0.1$  M sodium hydroxide, determining the end-point potentiometrically (2.2.20). Read the volume added between the 2 inflexion points.

$1$  mL of  $0.1$  M sodium hydroxide is equivalent to  $36.09$  mg of  $\text{C}_{20}\text{H}_{25}\text{ClN}_2\text{O}_2$

**STORAGE**

Protected from light.

**IMPURITIES**

- A. (S)-[(2R,4S,5R)-5-ethenyl-1-azabicyclo[2.2.2]oct-2-yl]-(6-methoxyquinolin-4-yl)methanol (quinidine),

## QUININE SULFATE

Chinini sulfas

$\text{C}_{40}\text{H}_{50}\text{N}_4\text{O}_8\text{S}_2\cdot 2\text{H}_2\text{O}$   
[6119-70-6]

$M_r$  783

## DEFINITION

**Content:** 99.0 per cent to 101.0 per cent of alkaloid monosulfates, expressed as bis[(R)-{(2S,4S,5R)-5-ethenyl-1-azabicyclo[2.2.2]oct-2-yl}[(6-methoxyquinolin-4-yl)methanol] sulfate (dried substance).

## CHARACTERS

**Appearance:** white or almost white, crystalline powder or fine, colourless needles.

**Solubility:** slightly soluble in water, sparingly soluble in boiling water and in ethanol (96 per cent).

## IDENTIFICATION

## A. Thin-layer chromatography (2.2.27).

**Test solution.** Dissolve 0.10 g of the substance to be examined in *methanol R* and dilute to 10 mL with the same solvent.

**Reference solution.** Dissolve 0.10 g of *quinine sulfate CRS* in *methanol R* and dilute to 10 mL with the same solvent.

**Plate:** TLC silica gel G plate *R*.

**Mobile phase:** *diethylamine R*, *ether R*, *toluene R* (10:24:40 V/V/V).

**Application:** 5 µL.

**Development:** twice over a path of 15 cm; dry in a current of air for 15 min between the 2 developments.

**Drying:** at 105 °C for 30 min and allow to cool.

**Detection:** spray with *iodoplatinate reagent R*.

**Results:** the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

- B. Dissolve about 5 mg in 5 mL of *water R*. Add 0.2 mL of *bromine water R* and 1 mL of *dilute ammonia R2*. A green colour develops.
- C. Dissolve 0.1 g in 3 mL of *dilute sulfuric acid R* and dilute to 100 mL with *water R*. When examined in ultraviolet light at 366 nm, an intense blue fluorescence appears which disappears almost completely on the addition of 1 mL of *hydrochloric acid R*.
- D. Dissolve about 45 mg in 5 mL of *dilute hydrochloric acid R*. The solution gives reaction (a) of sulfates (2.3.1).
- E. pH (see Tests).

## TESTS

**Solution S.** Dissolve 0.500 g in 0.1 M *hydrochloric acid* and dilute to 25.0 mL with the same acid.

**Appearance of solution.** Solution S is clear (2.2.1) and not more intensely coloured than reference solution GY<sub>6</sub> (2.2.2, Method II).

**pH** (2.2.3): 5.7 to 6.6 for a 10 g/L suspension in *water R*.

**Specific optical rotation** (2.2.7): -237 to -245 (dried substance), determined on solution S.

**Other cinchona alkaloids.** Liquid chromatography (2.2.29): use the normalisation procedure.

**Test solution.** Dissolve 20 mg of the substance to be examined in 5 mL of the mobile phase, with gentle heating if necessary, and dilute to 10 mL with the mobile phase.

**Reference solution (a).** Dissolve 20 mg of *quinine sulfate CRS* in 5 mL of the mobile phase, with gentle heating if necessary, and dilute to 10 mL with the mobile phase.

**Reference solution (b).** Dissolve 20 mg of *quinidine sulfate CRS* (impurity A) in 5 mL of the mobile phase, with gentle heating if necessary, and dilute to 10 mL with the mobile phase.

**Reference solution (c).** To 1 mL of reference solution (a) add 1 mL of reference solution (b).

**Reference solution (d).** Dilute 1.0 mL of reference solution (a) to 10.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 50.0 mL with the mobile phase.

**Reference solution (e).** Dissolve 10 mg of *thiourea R* in the mobile phase and dilute to 10 mL with the mobile phase.

**Column:**

– **size:**  $l = 0.15\text{--}0.25$  m,  $\varnothing = 4.6$  mm;

– **stationary phase:** *octadecylsilyl silica gel for chromatography R* (5-10 µm).

**Mobile phase:** dissolve 6.8 g of *potassium dihydrogen phosphate R* and 3.0 g of *hexylamine R* in 700 mL of *water R*, adjust to pH 2.8 with *dilute phosphoric acid R*, add 60 mL of *acetonitrile R* and dilute to 1000 mL with *water R*.

**Flow rate:** 1.5 mL/min.

**Detection:** spectrophotometer at 250 nm for reference solution (e) and at 316 nm for the other solutions.

**Injection:** 10 µL.

**Run time:** 2.5 times the retention time of quinine.

**Identification of peaks:** use the chromatogram obtained with reference solution (a) to identify the peaks due to quinine and impurity C; use the chromatogram obtained with reference solution (b) to identify the peaks due to impurity A and dihydroquinidine; the chromatogram obtained with reference solution (c) shows 4 peaks due to impurity A, quinine, dihydroquinidine and impurity C which are identified by comparison of their retention times with those of the corresponding peaks in the chromatograms obtained with reference solutions (a) and (b).

**Relative retention** with reference to quinine: impurity C = about 1.4.

**Relative retention** with reference to impurity A: dihydroquinidine = about 1.5.

**System suitability:**

- **resolution:** minimum 3.0 between the peaks due to quinine and impurity A and minimum 2.0 between the peaks due to dihydroquinidine and quinine in the chromatogram obtained with reference solution (c);
- **signal-to-noise ratio:** minimum 4 for the principal peak in the chromatogram obtained with reference solution (d);
- **mass distribution ratio:** 3.5 to 4.5 for the peak due to impurity A in the chromatogram obtained with reference solution (b),  $t_R$  being calculated from the peak due to thiourea in the chromatogram obtained with reference solution (e); if necessary, adjust the concentration of acetonitrile in the mobile phase.

**Limits:**

- **impurity C:** maximum 10 per cent;
- **any impurity eluted before quinine:** for each impurity, maximum 5 per cent;
- **any other impurity:** for each impurity, maximum 2.5 per cent;
- **disregard limit:** the area of the principal peak in the chromatogram obtained with reference solution (d) (0.2 per cent).

**Loss on drying** (2.2.32): 3.0 per cent to 5.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

## ASSAY

Dissolve 0.300 g in a mixture of 10 mL of *chloroform R* and 20 mL of *acetic anhydride R*. Titrate with 0.1 M *perchloric acid*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *perchloric acid* is equivalent to 24.90 mg of C<sub>40</sub>H<sub>50</sub>N<sub>4</sub>O<sub>8</sub>S.

## STORAGE

## IMPURITIES

A. (*S*)-[(2*R*,4*S*,5*R*)-5-ethenyl-1-azabicyclo[2.2.2]oct-2-yl](6-methoxyquinolin-4-yl)methanol (quinidine),

B.  $R = \text{CH}=\text{CH}_2$ ,  $R' = \text{H}$ : (*R*)-[(2*S*,4*S*,5*R*)-5-ethenyl-1-azabicyclo[2.2.2]oct-2-yl](quinolin-4-yl)methanol (cinchonidine),

C.  $R = \text{C}_2\text{H}_5$ ,  $R' = \text{OCH}_3$ : (*R*)-[(2*S*,4*S*,5*R*)-5-ethyl-1-azabicyclo[2.2.2]oct-2-yl](6-methoxyquinolin-4-yl)methanol (dihydroquinine).

07/2008:2171 *Mobile phase:*

corrected 6.3

- *mobile phase A:* dissolve 1.0 g of *potassium dihydrogen phosphate R* in *water R*, adjust to pH 2.5 with *phosphoric acid R* and dilute to 1000 mL with *water R*;
- *mobile phase B:* *acetonitrile R1*;

## RACECADOTRIL

## Racecadotrilum

C<sub>21</sub>H<sub>23</sub>NO<sub>4</sub>S  
[81110-73-8]M<sub>r</sub> 385.5

## DEFINITION

Benzyl [[(2*RS*)-2-[(acetylsulfanyl)methyl]-3-phenylpropano-yl]amino]acetate.*Content:* 98.0 per cent to 102.0 per cent (dried substance).

## CHARACTERS

*Appearance:* white or almost white powder.*Solubility:* practically insoluble in water, freely soluble in methanol and in methylene chloride.

## IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

*Comparison:* *racecadotril CRS*.

## TESTS

**Appearance of solution.** The solution is clear (2.2.1) and not more intensely coloured than reference solution Y<sub>6</sub> (2.2.2, *Method II*).Dissolve 5.0 g in 10 mL of *acetone R*.**Related substances.** Liquid chromatography (2.2.29).*Solvent mixture:* mobile phase A, mobile phase B (50:50 V/V).*Test solution (a).* Dissolve 50.0 mg of the substance to be examined in the solvent mixture and dilute to 25.0 mL with the solvent mixture.*Test solution (b).* Dilute 5.0 mL of test solution (a) to 25.0 mL with the solvent mixture.*Reference solution (a).* Dilute 1.0 mL of test solution (a) to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.*Reference solution (b).* Dilute 500 µL of *racecadotril impurity A CRS* in *acetonitrile R* and dilute to 250.0 mL with the same solvent. Dilute 1.0 mL of the solution to 10.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 100.0 mL with the solvent mixture.*Reference solution (c).* Dissolve 5 mg of *racecadotril impurity G CRS* in the solvent mixture and dilute to 50 mL with the solvent mixture. To 5 mL of this solution add 1 mL of test solution (b) and dilute to 100 mL with the solvent mixture.*Reference solution (d).* Dissolve 50.0 mg of *racecadotril CRS* in the solvent mixture and dilute to 25.0 mL with the solvent mixture. Dilute 5.0 mL of this solution to 25.0 mL with the solvent mixture.*Reference solution (e).* Dissolve 2 mg of *racecadotril for peak identification CRS* (containing impurities C, E and F) in 1.0 mL of the solvent mixture.*Column:*

- *size:* *l* = 0.25 m, Ø = 4.0 mm;
- *stationary phase:* *end-capped octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature:* 30 °C.

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 5	60	40
5 - 25	60 → 20	40 → 80
25 - 35	20	80

*Flow rate:* 1.0 mL/min.*Detection:* spectrophotometer at 210 nm.*Injection:* 10 µL of the solvent mixture, test solution (a) and reference solutions (a), (b), (c) and (e).*Identification of impurities:* use the chromatogram supplied with *racecadotril for peak identification CRS* and the chromatogram obtained with reference solution (e) to identify the peaks due to impurities C, E and F.*Relative retention* with reference to *racecadotril* (retention time = about 16 min): impurity A = about 0.2; impurity C = about 0.3; impurity E = about 0.5; impurity F = about 0.9.*System suitability:* reference solution (c):

- *resolution:* minimum 1.5 between the peaks due to impurity G and *racecadotril*.

*Limits:*

- *correction factors:* for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity C = 1.4; impurity E = 0.6; impurity F = 0.7;
- *impurities C, E, F:* for each impurity, not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- *impurity A:* not more than the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.1 per cent);
- *unspecified impurities:* for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *total:* not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- *disregard limit:* 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Loss on drying** (2.2.32): maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* at 60 °C for 4 h.**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

## ASSAY

Liquid chromatography (2.2.29) as described in the test for related substances with the following modification.

*Injection:* test solution (b) and reference solution (d).Calculate the percentage content of C<sub>21</sub>H<sub>23</sub>NO<sub>4</sub>S from the declared content of *racecadotril CRS*.

## IMPURITIES

*Specified impurities:* A, C, E, F.*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use* (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): B, D, G, H.

A. ethanethioic acid (thioacetic acid),

B. R = H: [(2*RS*)-2-benzyl-3-sulfanylpropanoyl]amino]acetic acid,

G. R = CH<sub>2</sub>-C<sub>6</sub>H<sub>5</sub>: benzyl [(2*RS*)-2-benzyl-3-sulfanylpropanoyl]amino]acetate,

C. [(2*RS*)-2-[(acetylsulfanyl)methyl]-3-phenylpropanoyl]-amino]acetic acid,

D. R = H: 5,10-dibenzyl-4,11-dioxo-7,8-dithia-3,12-diazatetradecanedioic acid,

H. R = CH<sub>2</sub>-C<sub>6</sub>H<sub>5</sub>: dibenzyl 5,10-dibenzyl-4,11-dioxo-7,8-dithia-3,12-diazatetradecanedioate,

E. R = OH: 2-benzylprop-2-enoic acid (2-benzylacrylic acid),

F. R = NH-CH<sub>2</sub>-CO-O-CH<sub>2</sub>-C<sub>6</sub>H<sub>5</sub>: benzyl [(2-benzylprop-2-enoyl)amino]acetate.

## IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

*Comparison: raloxifene hydrochloride CRS.*

B. Dissolve 20 mg of the substance to be examined in 2 mL of *methanol R*. The solution gives reaction (a) of chlorides (2.3.1).

## TESTS

**Related substances.** Liquid chromatography (2.2.29).

*Solvent mixture: acetonitrile R*, mobile phase A (30:70 V/V).

*Test solution.* Dissolve 30 mg of the substance to be examined in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Reference solution (b).* In order to produce impurity C *in situ*, to 6 mg of the substance to be examined add 15 mL of *acetonitrile R*, 3 mL of *water R* and 5 mL of stabilised *strong hydrogen peroxide solution R*. Store at 30 °C for at least 6 h then dilute to 50.0 mL with mobile phase A. To 1.0 mL of this solution add 3 mg of the substance to be examined dissolved in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

*Reference solution (c).* Dissolve 3 mg of *raloxifene for peak identification CRS* (containing impurity A) in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

*Column:*

– *size:* *l* = 0.25 m, Ø = 4.6 mm;

– *stationary phase:* *base-deactivated octylsilyl silica gel for chromatography R* (5 µm);

– *temperature:* 35 °C.

*Mobile phase:*

– *mobile phase A:* 9.0 g/L solution of *potassium dihydrogen phosphate R* adjusted to pH 3.0 with *phosphoric acid R*;

– *mobile phase B:* *acetonitrile R*;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 9	75	25
9 - 40	75 → 50	25 → 50

*Flow rate:* 1.0 mL/min.

*Detection:* spectrophotometer at 280 nm.

*Injection:* 10 µL.

*Identification of impurity A:* use the chromatogram supplied with *raloxifene for peak identification CRS* and the chromatogram obtained with reference solution (c) to identify the peak due to impurity A.

*Relative retention* with reference to raloxifene (retention time = about 18 min): impurity A = about 0.7; impurity C = about 1.2.

*System suitability:*

– *resolution:* minimum 3.0 between the peaks due to raloxifene and impurity C in the chromatogram obtained with reference solution (b);

– *symmetry factor:* maximum 1.8 for the principal peak in the chromatogram obtained with reference solution (a).

*Limits:*

– *impurity A:* not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);

– *unspecified impurities:* for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);

– *total:* not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

## RALOXIFENE HYDROCHLORIDE

### Raloxifeni hydrochloridum

, HCl

C<sub>28</sub>H<sub>28</sub>ClNO<sub>4</sub>S  
[82640-04-8]

M<sub>r</sub> 510.0

## DEFINITION

[6-Hydroxy-2-(4-hydroxyphenyl)-1-benzothiophen-3-yl][4-(2-piperidin-1-yl)ethoxy]phenyl]methanone hydrochloride.

*Content:* 97.5 per cent to 102.0 per cent (dried substance).

## CHARACTERS

*Appearance:* almost white or pale-yellow powder.

*Solubility:* very slightly soluble or practically insoluble in water and in acetone, slightly soluble in ethanol (96 per cent V/V).

- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Heavy metals** (2.4.8): maximum 10 ppm.

2.0 g complies with test C. Prepare the reference solution using 2 mL of *lead standard solution* (10 ppm Pb) R.

**Loss on drying** (2.2.32): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

**Sulfated ash** (2.4.14): maximum 0.1 per cent determined on 1.0 g.

#### ASSAY

Liquid chromatography (2.2.29).

*Buffer solution pH 2.5*. 7.2 g/L Solution of *potassium dihydrogen phosphate R* adjusted to pH 2.5 with *phosphoric acid R*.

*Test solution*. Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 100.0 mL with the mobile phase. Dilute 5.0 mL of this solution to 50.0 mL with the mobile phase.

*Reference solution (a)*. Dissolve 50.0 mg of *raloxifene hydrochloride CRS* in the mobile phase and dilute to 100.0 mL with the mobile phase. Dilute 5.0 mL of this solution to 50.0 mL with the mobile phase.

*Reference solution (b)*. In order to produce impurity C *in situ*, to 6 mg of the substance to be examined add 15 mL of *acetonitrile R*, 3 mL of *water R* and 5 mL of stabilised *strong hydrogen peroxide solution R*. Store at 30 °C for at least 6 h, then dilute to 50.0 mL with *buffer solution pH 2.5*.

*Column*:

- *size*:  $l = 0.15$  m,  $\varnothing = 4.6$  mm;
- *stationary phase*: *base-deactivated octylsilyl silica gel for chromatography R* (3.5  $\mu$ m);
- *temperature*: 35 °C.

*Mobile phase*: *acetonitrile R*, *buffer solution pH 2.5* (33:67 V/V).

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 280 nm.

*Injection*: 10  $\mu$ L.

*Run time*: twice the retention time of *raloxifene*.

*Relative retention* with reference to *raloxifene* (retention time = about 3 min): impurity C = about 1.2.

*System suitability*:

- *resolution*: minimum 2.0 between the peaks due to *raloxifene* and impurity C in the chromatogram obtained with reference solution (b); if necessary, adjust the concentration of *acetonitrile* in the mobile phase;
- *symmetry factor*: maximum 1.8 for the principal peak in the chromatogram obtained with reference solution (a).

Calculate the percentage content of  $C_{28}H_{28}ClNO_4S$  from the declared content of *raloxifene hydrochloride CRS*.

#### IMPURITIES

*Specified impurities*: A.

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use* (2034). ## RAMIPRIL

### Ramiprilum

$C_{23}H_{32}N_2O_5$   
[87333-19-5]

$M_r$  416.5

#### DEFINITION

(2*S*,3*aS*,6*aS*)-1-[(2*S*)-2-[(1*S*)-1-(ethoxycarbonyl)-3-phenylpropyl]amino]propanoyl]octahydrocyclopenta[*b*]pyrrole-2-carboxylic acid.

*Content*: 98.0 per cent to 101.0 per cent (dried substance).

#### CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: sparingly soluble in water, freely soluble in methanol.

#### IDENTIFICATION

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry (2.2.24).

*Comparison*: *ramipril CRS*.

#### TESTS

**Appearance of solution**. The solution is clear (2.2.1) and colourless (2.2.2, *Method II*).

Dissolve 0.1 g in *methanol R* and dilute to 10 mL with the same solvent.

**Specific optical rotation** (2.2.7): + 32.0 to + 38.0 (dried substance).

Dissolve 0.250 g in a mixture of 14 volumes of *hydrochloric acid R1* and 86 volumes of *methanol R* and dilute to 25.0 mL with the same mixture of solvents.

**Related substances.** Liquid chromatography (2.2.29).

**Test solution.** Dissolve 20.0 mg of the substance to be examined in mobile phase A and dilute to 20.0 mL with mobile phase A.

**Reference solution (a).** Dissolve 5 mg of *ramipril impurity A CRS*, 5 mg of *ramipril impurity B CRS*, 5 mg of *ramipril impurity C CRS* and 5 mg of *ramipril impurity D CRS* in 5 mL of the test solution, and dilute to 10 mL with mobile phase B.

**Reference solution (b).** Dilute 5.0 mL of the test solution to 100.0 mL with mobile phase B. Dilute 5.0 mL of this solution to 50.0 mL with mobile phase B.

**Reference solution (c).** Dilute 1.0 mL of reference solution (b) to 10.0 mL with mobile phase B.

**Column:**

- size:  $l = 0.25$  m,  $\varnothing = 4.0$  mm;
- stationary phase: octadecylsilyl silica gel for chromatography R (3  $\mu$ m);
- temperature: 65 °C.

**Mobile phase:**

- mobile phase A: dissolve 2.0 g of *sodium perchlorate R* in a mixture of 0.5 mL of *triethylamine R* and 800 mL of *water R*; adjust to pH 3.6 with *phosphoric acid R* and add 200 mL of *acetonitrile R1*;
- mobile phase B: dissolve 2.0 g of *sodium perchlorate R* in a mixture of 0.5 mL of *triethylamine R* and 300 mL of *water R*; adjust to pH 2.6 with *phosphoric acid R* and add 700 mL of *acetonitrile R1*;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 6	90	10
6 - 7	90 → 75	10 → 25
7 - 20	75 → 65	25 → 35
20 - 30	65 → 25	35 → 75
30 - 50	25	75

**Flow rate:** 1.0 mL/min.

**Detection:** spectrophotometer at 210 nm.

**Equilibration:** with the mobile phase at the initial composition for at least 35 min; if a suitable baseline cannot be obtained, use another grade of triethylamine.

**Injection:** 10  $\mu$ L.

**Relative retention** with reference to ramipril (retention time = about 18 min): impurity A = about 0.8; impurity B = about 1.3; impurity G = about 1.4; impurity C = about 1.5; impurity D = about 1.7; impurity O = about 2.4.

**System suitability:**

- resolution: minimum 3.0 between the peaks due to impurity A and ramipril in the chromatogram obtained with reference solution (a);
- signal-to-noise ratio: minimum 3 for the principal peak in the chromatogram obtained with reference solution (c);
- symmetry factor: 0.8 to 2.0 for the peak due to ramipril in the chromatogram obtained with the test solution.

**Limits:**

- correction factor: for the calculation of content, multiply the peak area of impurity C by 2.4;
- impurities A, B, C, D: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

- unspecified impurities: for each impurity, not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- total: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);
- disregard limit: the area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent).

**Palladium:** maximum 20 ppm.

Atomic absorption spectrometry (2.2.23, Method I).

**Test solution.** Dissolve 0.200 g in a mixture of 0.3 volumes of *nitric acid R* and 99.7 volumes of *water R*, and dilute to 100.0 mL with the same mixture of solvents.

**Reference solutions.** Use solutions containing 0.02  $\mu$ g, 0.03  $\mu$ g and 0.05  $\mu$ g of palladium per millilitre, freshly prepared by dilution of *palladium standard solution (0.5 ppm Pd) R* with a mixture of 0.3 volumes of *nitric acid R* and 99.7 volumes of *water R*.

**Modifier solution.** Dissolve 0.150 g of *magnesium nitrate R* in a mixture of 0.3 volumes of *nitric acid R* and 99.7 volumes of *water R*, and dilute to 100.0 mL with the same mixture of solvents.

**Injection:** 20  $\mu$ L of the test solution and the reference solution, and 10  $\mu$ L of the modifier solution.

**Source:** palladium hollow-cathode lamp using a transmission band preferably of 1 nm and a graphite tube.

**Wavelength:** 247.6 nm.

**Loss on drying** (2.2.32): maximum 0.2 per cent, determined on 1.000 g by drying in an oven under high vacuum at 60 °C for 4 h.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

## ASSAY

Dissolve 0.300 g in 25 mL of *methanol R* and add 25 mL of *water R*. Titrate with 0.1 M *sodium hydroxide*, determining the end-point potentiometrically (2.2.20). Carry out a blank titration.

1 mL of 0.1 M *sodium hydroxide* is equivalent to 41.65 mg of  $C_{23}H_{32}N_2O_5$ .

## STORAGE

Protected from light.

## IMPURITIES

**Specified impurities:** A, B, C, D.

**Other detectable impurities** (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. ## RANITIDINE HYDROCHLORIDE

### Ranitidini hydrochloridum

$C_{13}H_{23}ClN_4O_3S$   
[66357-59-3]

$M_r$  350.9

#### DEFINITION

*N*-[2-[[[5-[(Dimethylamino)methyl]furan-2-yl]methyl]sulfonyl]ethyl]-*N'*-methyl-2-nitroethene-1,1-diamine hydrochloride.

*Content*: 98.5 per cent to 101.5 per cent (dried substance).

#### CHARACTERS

*Appearance*: white or pale yellow, crystalline powder.

**Solubility:** freely soluble in water, sparingly soluble or slightly soluble in anhydrous ethanol, very slightly soluble in methylene chloride.

It shows polymorphism (5.9).

#### IDENTIFICATION

##### A. Infrared absorption spectrophotometry (2.2.24).

**Comparison:** ranitidine hydrochloride CRS.

If the spectra obtained in the solid state show differences, dissolve 10 mg of the substance to be examined and 10 mg of the reference substance separately in 0.5 mL of *methanol R* in an agate mortar. Evaporate to dryness under a stream of *nitrogen R*. Dry the residues under vacuum for 30 min. Add 3 drops of *liquid paraffin R* to the residues and triturate until the mull shows a milky appearance. Compress the mulls between 2 plates transparent to infrared radiation and record new spectra.

##### B. It gives reaction (a) of chlorides (2.3.1).

#### TESTS

**Solution S.** Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 100.0 mL with the same solvent.

**Appearance of solution.** Solution S is clear (2.2.1) and not more intensely coloured than reference solution BY<sub>5</sub> (2.2.2, Method II).

**pH (2.2.3):** 4.5 to 6.0 for solution S.

**Related substances.** Liquid chromatography (2.2.29).

**Buffer solution.** Dissolve 6.8 g of *potassium dihydrogen phosphate R* in 950 mL of *water R*. Adjust to pH 7.1 with *strong sodium hydroxide solution R* and dilute to 1000 mL with *water R*.

**Test solution.** Dissolve 13 mg of the substance to be examined in mobile phase A and dilute to 100.0 mL with mobile phase A.

**Reference solution (a).** Dissolve 6.5 mg of *ranitidine for system suitability CRS* (containing impurities A, D and H) in mobile phase A and dilute to 50.0 mL with mobile phase A.

**Reference solution (b).** Dilute 1.0 mL of the test solution to 100.0 mL with mobile phase A.

**Reference solution (c).** Dissolve the contents of a vial of *ranitidine impurity J CRS* in 1.0 mL of test solution.

**Column:**

- size:  $l = 0.1$  m,  $\emptyset = 4.6$  mm;
- stationary phase: octadecylsilyl amorphous organosilica polymer R (3.5  $\mu$ m);
- temperature: 35 °C.

**Mobile phase:**

- mobile phase A: acetonitrile R, buffer solution (2:98 V/V);
- mobile phase B: acetonitrile R, buffer solution (22:78 V/V);

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 10	100 → 0	0 → 100
10 - 15	0	100

**Flow rate:** 1.5 mL/min.

**Detection:** spectrophotometer at 230 nm.

**Injection:** 10  $\mu$ L of the test solution, reference solutions (a), (b) and (c) and mobile phase A as a blank.

**Relative retention** with reference to ranitidine (retention time = about 6.8 min): impurity H = about 0.1; impurity G = about 0.2; impurity F = about 0.4; impurity B = about 0.5; impurity C = about 0.6; impurity E = about 0.7; impurity D = about 0.8; impurity J = about 0.9; impurity I = about 1.3; impurity A = about 1.7.

**System suitability:**

- resolution: minimum 1.5 between the peaks due to impurity J and ranitidine in the chromatogram obtained with reference solution (c);
- the chromatogram obtained with reference solution (a) is similar to the chromatogram supplied with *ranitidine for system suitability CRS*;
- the chromatogram obtained with the blank solution does not show any peak with the same relative retention as the peak due to impurity A in the chromatogram obtained with reference solution (a).

**Limits:**

- correction factor: for the calculation of content, multiply the peak area of impurity J by 2;
- impurity A: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- impurities B, C, D, E, F, G, H, I, J: for each impurity, not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
- unspecified impurities: for each impurity, not more than 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- sum of impurities other than A: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- disregard limit: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent); disregard any peak due to the blank.

**Heavy metals (2.4.8):** maximum 20 ppm.

1.0 g complies with test C. Prepare the reference solution using 2 mL of *lead standard solution (10 ppm Pb) R*.

**Loss on drying (2.2.32):** maximum 0.75 per cent, determined on 1.000 g by drying under high vacuum at 60 °C.

**Sulfated ash (2.4.14):** maximum 0.1 per cent, determined on 1.0 g.

#### ASSAY

Dissolve 0.280 g in 35 mL of *water R*. Titrate with 0.1 M *sodium hydroxide*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *sodium hydroxide* is equivalent to 35.09 mg of C<sub>13</sub>H<sub>23</sub>ClN<sub>4</sub>O<sub>3</sub>S.

#### STORAGE

In airtight container, protected from light.

#### IMPURITIES

**Specified impurities:** A, B, C, D, E, F, G, H, I, J.

**Other detectable impurities** (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): K.

A. *N,N'*-bis[2-[[[5-[(dimethylamino)methyl]furan-2-yl]methyl]sulfanyl]ethyl]-2-nitroethene-1,1-diamine,

01/2010:1369

B. R = S-CH<sub>2</sub>-CH<sub>2</sub>-NH<sub>2</sub>: 2-[[[5-[(dimethylamino)methyl]furan-2-yl]methyl]sulfanyl]ethanamine,

K. *N*-methyl-1-methylthio-2-nitroethenamine.

## RAPSEED OIL, REFINED

### Rapae oleum raffinatum

#### DEFINITION

Fatty oil obtained from the seeds of *Brassica napus* L. and *Brassica campestris* L. by mechanical expression or by extraction. It is then refined. A suitable antioxidant may be added.

#### CHARACTERS

*Appearance*: clear, light yellow liquid.

*Solubility*: practically insoluble in water and in ethanol (96 per cent), miscible with light petroleum (bp: 40-60 °C).

*Relative density*: about 0.917.

*Refractive index*: about 1.473.

#### IDENTIFICATION

Identification of fatty oils by thin-layer chromatography (2.3.2).

*Results*: the chromatogram obtained is similar to the corresponding chromatogram shown in Figure 2.3.2-1.

#### TESTS

**Acid value** (2.5.1): maximum 0.5, determined on 10.0 g.

**Peroxide value** (2.5.5, Method A): maximum 10.0.

**Unsaponifiable matter** (2.5.7): maximum 1.5 per cent, determined on 5.0 g.

**Alkaline impurities** (2.4.19). It complies with the test.

**Composition of fatty acids** (2.4.22, Method A). Use the mixture of calibrating substances in Table 2.4.22-3.

*Composition of the fatty-acid fraction of the oil*:

- *palmitic acid*: 2.5 per cent to 6.0 per cent,
- *stearic acid*: maximum 3.0 per cent,
- *oleic acid*: 50.0 per cent to 67.0 per cent,
- *linoleic acid*: 16.0 per cent to 30.0 per cent,
- *linolenic acid*: 6.0 per cent to 14.0 per cent,
- *eicosenoic acid*: maximum 5.0 per cent,
- *erucic acid*: maximum 2.0 per cent.

**Water** (2.5.32): maximum 0.1 per cent, determined on 1.00 g.

#### STORAGE

In an airtight, well-filled container, protected from light.

#### LABELLING

The label states whether the oil is obtained by mechanical expression or by extraction.

01/2008:2135  
corrected 6.0

## REPAGLINIDE

### Repaglinidum

C<sub>27</sub>H<sub>36</sub>N<sub>2</sub>O<sub>4</sub>  
[135062-02-1]

M<sub>r</sub> 452.6

## DEFINITION

2-Ethoxy-4-[2-[[[(1S)-3-methyl-1-[2-(piperidin-1-yl)phenyl]butyl]amino]-2-oxoethyl]benzoic acid.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

## CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: practically insoluble in water, freely soluble in methanol and in methylene chloride.

It shows polymorphism (5.9).

## IDENTIFICATION

A. Specific optical rotation (2.2.7): + 6.3 to + 7.7.

Dissolve 1.00 g in *methanol R* and dilute to 20.0 mL with the same solvent.

B. Infrared absorption spectrophotometry (2.2.24).

*Comparison*: repaglinide CRS.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in *anhydrous ethanol R*, evaporate to dryness and record new spectra using the residues.

## TESTS

**Enantiomeric purity.** Liquid chromatography (2.2.29). Prepare the solutions in amber flasks and vials.

*Test solution.* Dissolve 10.0 mg of the substance to be examined in *methanol R* and dilute to 10.0 mL with the same solvent.

*Reference solution (a).* Dissolve 5.0 mg of repaglinide impurity E CRS in *methanol R* and dilute to 50.0 mL with the same of solvent.

*Reference solution (b).* Dilute 2.0 mL of reference solution (a) to 100.0 mL with *methanol R*.

*Reference solution (c).* Mix 1.0 mL of the test solution and 10 mL of reference solution (a) and dilute to 50.0 mL with *methanol R*.

*Column*:

- size:  $l = 0.1$  m,  $\varnothing = 4.0$  mm,
- stationary phase: silica gel AGP for chiral chromatography R (5  $\mu$ m).

*Mobile phase*:

- mobile phase A: 1.0 g/L solution of potassium dihydrogen phosphate R adjusted to pH 4.7 with dilute sodium hydroxide solution R;
- mobile phase B: acetonitrile R;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 4	80 → 60	20 → 40
4 - 6	60	40

*Equilibration after installation of the column for use:* using water R, slowly increase the flow rate from 0.2 mL/min to 0.5 mL/min. Maintain the flow rate at 0.5 mL/min for 5 min. The column must be washed for 1 h at a flow rate of 1 mL/min with water R and for 1 h with the mobile phase at the initial composition prior to the 1<sup>st</sup> analysis.

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 240 nm.

*Injection*: 10  $\mu$ L of the test solution and reference solutions (b) and (c).

*Retention time*: repaglinide = about 3.3 min; impurity E = about 5.0 min.

*System suitability*: reference solution (c):

- resolution: minimum 1.5 between the peaks due to repaglinide and impurity E.

*Limit*:

- impurity E: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent).

**Related substances.** Liquid chromatography (2.2.29).

*Test solution.* Dissolve 30.0 mg of the substance to be examined in acetonitrile R and dilute to 10.0 mL with the same solvent.

*Reference solution (a).* Dilute 5.0 mL of the test solution to 100.0 mL with acetonitrile R. Dilute 2.0 mL of this solution to 100.0 mL with acetonitrile R.

*Reference solution (b).* With the aid of an ultrasonic bath, dissolve the contents of 1 vial of repaglinide for system suitability CRS in 2.0 mL of acetonitrile R.

*Column*:

- size:  $l = 0.15$  m,  $\varnothing = 4.6$  mm,
- stationary phase: silica gel for chromatography, alkyl-bonded for use with highly aqueous mobile phases R (5  $\mu$ m),
- temperature: 45 °C.

*Mobile phase*:

- mobile phase A: 4.0 g/L solution of potassium dihydrogen phosphate R adjusted to pH 3.2 with dilute phosphoric acid R;
- mobile phase B: mobile phase A, acetonitrile R (300:700 V/V);

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 20	50 → 7	50 → 93
20 - 30	7	93

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 240 nm.

*Injection*: 10  $\mu$ L.

*Relative retention* with reference to repaglinide (retention time = about 10 min): impurity A = about 0.2; impurity B = about 0.3; impurity C = about 0.4; impurity D = about 1.5.

*System suitability*: reference solution (b):

- resolution: minimum 5.0 between the peaks due to impurity B and impurity C,
- the chromatogram obtained is similar to the chromatogram supplied with repaglinide for system suitability CRS.

*Limits*:

- correction factors: for the calculation of contents, multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 0.6; impurity B = 0.7; impurity C = 3.1;
- impurities A, B, C, D: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- any other impurity: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- total: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- disregard limit: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Loss on drying** (2.2.32): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

## ASSAY

Dissolve 0.320 g in 10 mL *methanol R* and add 60 mL of *anhydrous acetic acid R*. Titrate with 0.1 M *perchloric acid*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *perchloric acid* is equivalent to 45.26 mg of  $C_{27}H_{36}N_2O_4$ .

## STORAGE

Protected from light.

## IMPURITIES

*Specified impurities: A, B, C, D, E.*

A. R = H: 4-(carboxymethyl)-2-ethoxybenzoic acid,

B. R =  $C_2H_5$ : [3-ethoxy-4-(ethoxycarbonyl)phenyl]acetic acid,

C. (1S)-3-methyl-1-[2-(piperidin-1-yl)phenyl]butan-1-amine,

D. ethyl 2-ethoxy-4-[2-[[[(1S)-3-methyl-1-[2-(piperidin-1-yl)phenyl]butyl]amino]-2-oxoethyl]benzoate,

E. 2-ethoxy-4-[2-[[[(1R)-3-methyl-1-[2-(piperidin-1-yl)phenyl]butyl]amino]-2-oxoethyl]benzoic acid.

01/2008:0528

## RESERPINE

## Reserpinum

$C_{33}H_{40}N_2O_9$   
[50-55-5]

$M_r$  609

## DEFINITION

Methyl 11,17 $\alpha$ -dimethoxy-18 $\beta$ -[(3,4,5-trimethoxybenzoyl)oxy]-3 $\beta$ ,20 $\alpha$ -yohimban-16 $\beta$ -carboxylate.

*Content:*

– *reserpine*: 98.0 per cent to 102.0 per cent (dried substance),

– *total alkaloids*: 99.0 per cent to 101.0 per cent (dried substance).

## CHARACTERS

*Appearance*: white or slightly yellow, small crystals or crystalline powder, darkening slowly on exposure to light.

*Solubility*: practically insoluble in water, very slightly soluble in ethanol (96 per cent).

## IDENTIFICATION

*First identification: B.*

*Second identification: A, C, D, E.*

A. Ultraviolet and visible absorption spectrophotometry (2.2.25).

*Test solution.* Dissolve 20.0 mg in *chloroform R* and dilute to 10.0 mL with the same solvent. Dilute 1.0 mL of this solution to 100.0 mL with *ethanol (96 per cent) R*. Examine immediately.

*Spectral range*: 230-350 nm.

*Absorption maximum*: at 268 nm.

*Specific absorbance at the absorption maximum*: 265 to 285.

Over the range 288-295 nm, the curve shows a slight absorption minimum followed by a shoulder or a slight absorption maximum; over this range, the specific absorbance is about 170.

B. Infrared absorption spectrophotometry (2.2.24).

*Preparation*: discs.

*Comparison*: *reserpine CRS*.

C. To about 1 mg add 0.1 mL of a 1 g/L solution of *sodium molybdate R* in *sulfuric acid R*. A yellow colour is produced which becomes blue within 2 min.

D. To about 1 mg add 0.2 mL of a freshly prepared 10 g/L solution of *vanillin R* in *hydrochloric acid R*. A pink colour develops within 2 min.

E. Mix about 0.5 mg with 5 mg of *dimethylaminobenzaldehyde R* and 0.2 mL of *glacial acetic acid R* and add 0.2 mL of *sulfuric acid R*. A green colour is produced. Add 1 mL of *glacial acetic acid R*. The colour becomes red.

## TESTS

**Specific optical rotation** (2.2.7): – 116 to – 128 (dried substance).

Dissolve 0.250 g in *chloroform R* and dilute to 25.0 mL with the same solvent. Examine immediately.

**Oxidation products.** Dissolve 20 mg in *glacial acetic acid R* and dilute to 100.0 mL with the same acid. The absorbance (2.2.25) measured immediately at the absorption maximum at 388 nm is not greater than 0.10.

**Loss on drying** (2.2.32): maximum 0.5 per cent, determined on 0.500 g by drying at 60 °C over *diphosphorus pentoxide R* at a pressure not exceeding 667 Pa for 3 h.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 0.5 g.

## ASSAY

**Total alkaloids.** Dissolve 0.500 g in a mixture of 6 mL of *acetic anhydride R* and 40 mL of *anhydrous acetic acid R*. Titrate with 0.1 M *perchloric acid*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *perchloric acid* is equivalent to 60.9 mg of total alkaloids.

**Reserpine.** *Protect the solutions from light.* Moisten 25.0 mg with 2 mL of *ethanol (96 per cent) R*, add 2 mL of 0.25 M *sulfuric acid* and 10 mL of *ethanol (96 per cent) R*, and warm gently to dissolve. Cool and dilute to 100.0 mL with *ethanol (96 per cent) R*. Dilute 5.0 mL of this solution to 50.0 mL with *ethanol (96 per cent) R*. Prepare a reference solution in the

same manner using 25.0 mg of *reserpine CRS*. Place 10.0 mL of each solution separately in 2 boiling-tubes, add 2.0 mL of 0.25 M *sulfuric acid* and 2.0 mL of a freshly prepared 3 g/L solution of *sodium nitrite R*. Mix and heat in a water-bath at 55 °C for 35 min. Cool, add 1.0 mL of a freshly prepared 50 g/L solution of *sulfamic acid R* and dilute to 25.0 mL with *ethanol (96 per cent) R*. Measure the absorbance (2.2.25) of each solution at the absorption maximum at 388 nm, using as the compensation liquid 10.0 mL of the same solution prepared at the same time in the same manner, but omitting the sodium nitrite.

Calculate the content of  $C_{33}H_{40}N_2O_9$  from the absorbances measured and the concentrations of the solutions.

#### STORAGE

Protected from light.

## RESORCINOL

### Resorcinolum

$C_6H_6O_2$   
[108-46-3]

$M_r$  110.1

#### DEFINITION

Resorcinol contains not less than 98.5 per cent and not more than the equivalent of 101.0 per cent of benzene-1,3-diol, calculated with reference to the dried substance.

#### CHARACTERS

A colourless or slightly pinkish-grey, crystalline powder or crystals, turning red on exposure to light and air, very soluble in water and in alcohol.

#### IDENTIFICATION

- Melting point (2.2.14): 109 °C to 112 °C.
- Dissolve 0.1 g in 1 mL of *water R*, add 1 mL of *strong sodium hydroxide solution R* and 0.1 mL of *chloroform R*, heat and allow to cool. An intense, deep-red colour develops which becomes pale yellow on the addition of a slight excess of *hydrochloric acid R*.
- Thoroughly mix about 10 mg with about 10 mg of *potassium hydrogen phthalate R*, both finely powdered. Heat over a naked flame until an orange-yellow colour is obtained. Cool and add 1 mL of *dilute sodium hydroxide solution R* and 10 mL of *water R* and shake to dissolve. The solution shows an intense green fluorescence.

#### TESTS

**Solution S.** Dissolve 2.5 g in *carbon dioxide-free water R* and dilute to 25 mL with the same solvent.

**Appearance of solution.** Solution S is clear (2.2.1) and not more intensely coloured than reference solution B<sub>5</sub> or R<sub>5</sub> (2.2.2, *Method II*) and remains so when heated in a water-bath for 5 min.

**Acidity or alkalinity.** To 10 mL of solution S add 0.05 mL of *bromophenol blue solution R2*. Not more than 0.05 mL of 0.1 M *hydrochloric acid* or 0.1 M *sodium hydroxide* is required to change the colour of the indicator.

**Related substances.** Examine by thin-layer chromatography (2.2.27), using *silica gel G R* as the coating substance.

**Test solution.** Dissolve 0.5 g of the substance to be examined in *methanol R* and dilute to 10 mL with the same solvent.

**Reference solution.** Dilute 0.1 mL of the test solution to 20 mL with *methanol R*.

Apply separately to the plate 2 µL of each solution. Develop over a path of 15 cm using a mixture of 40 volumes of *ethyl acetate R* and 60 volumes of *hexane R*. Allow the plate to dry in air for 15 min and expose it to iodine vapour. Any spot in the chromatogram obtained with the test solution, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with the reference solution (0.5 per cent).

**Pyrocatechol.** To 2 mL of solution S add 1 mL of *ammonium molybdate solution R2* and mix. Any yellow colour in the solution is not more intense than that in a standard prepared at the same time in the same manner using 2 mL of a 0.1 g/L solution of *pyrocatechol R*.

**Loss on drying (2.2.32).** Not more than 1.0 per cent, determined on 1.00 g of powdered substance by drying in a desiccator for 4 h.

**Sulfated ash (2.4.14).** Not more than 0.1 per cent, determined on 1.0 g.

#### ASSAY

Dissolve 0.500 g in *water R* and dilute to 250.0 mL with the same solvent. To 25.0 mL of the solution in a ground-glass-stoppered flask add 1.0 g of *potassium bromide R*, 50.0 mL of 0.0167 M *potassium bromate*, 15 mL of *chloroform R* and 15.0 mL of *hydrochloric acid R1*. Stopper the flask, shake and allow to stand in the dark for 15 min, shaking occasionally. Add 10 mL of a 100 g/L solution of *potassium iodide R*, shake thoroughly, allow to stand for 5 min and titrate with 0.1 M *sodium thiosulfate*, using 1 mL of *starch solution R* as indicator.

1 mL of 0.0167 M *potassium bromate* is equivalent to 1.835 mg of  $C_6H_6O_2$ .

#### STORAGE

Store protected from light.

01/2008:2109  
corrected 6.0

## RIBAVIRIN

### Ribavirinum

$C_8H_{12}N_4O_5$   
[36791-04-5]

$M_r$  244.2

#### DEFINITION

1-β-D-Ribofuranosyl-1H-1,2,4-triazole-3-carboxamide.

**Content:** 98.0 per cent to 102.0 per cent (dried substance).

#### CHARACTERS

**Appearance:** white or almost white, crystalline powder.

**Solubility:** freely soluble in water, slightly soluble in ethanol (96 per cent), slightly soluble or very slightly soluble in methylene chloride.

It shows polymorphism (5.9).

#### IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

**Comparison:** *ribavirin CRS*.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in *methylene chloride R*, evaporate to dryness and record new spectra using the residues.

## TESTS

**pH** (2.2.3): 4.0 to 6.5.

Dissolve 0.200 g in *carbon dioxide-free water R* and dilute to 10.0 mL with the same solvent.

**Specific optical rotation** (2.2.7): –33 to –37 (dried substance).

Dissolve 0.250 g in *water R* and dilute to 25.0 mL with the same solvent. Determine the specific optical rotation within 10 min of preparing the solution.

**Related substances.** Liquid chromatography (2.2.29).

**Test solution (a).** Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 100.0 mL with the mobile phase.

**Test solution (b).** Dissolve 25.0 mg of the substance to be examined in the mobile phase and dilute to 100.0 mL with the mobile phase. Dilute 10.0 mL of the solution to 100.0 mL with the mobile phase.

**Reference solution (a).** Dilute 1.0 mL of test solution (a) to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

**Reference solution (b).** Dissolve the contents of a vial of *ribavirin for system suitability CRS* in 2.0 mL of the mobile phase.

**Reference solution (c).** Dissolve 25.0 mg of *ribavirin CRS* in the mobile phase and dilute to 100.0 mL with the mobile phase. Dilute 10.0 mL of the solution to 100.0 mL with the mobile phase.

**Column:**

- size:  $l = 0.10$  m,  $\varnothing = 7.8$  mm,
- stationary phase: strong cation-exchange resin R (9  $\mu\text{m}$ ),
- temperature: 40 °C.

**Mobile phase:** *water R* adjusted to pH 2.5 with *sulfuric acid R*.

**Flow rate:** 1 mL/min.

**Detection:** spectrophotometer at 207 nm.

**Injection:** 10  $\mu\text{L}$  of test solution (a) and reference solutions (a) and (b).

**Run time:** 11 times the retention time of ribavirin.

**Relative retention** with reference to ribavirin (retention time = about 4 min): impurity F = about 1.2.

**System suitability:** reference solution (b):

- **peak-to-valley ratio:** minimum 1.2, where  $H_p$  = height above the baseline of the peak due to impurity F and  $H_v$  = height above the baseline of the lowest point of the curve separating this peak from the peak due to ribavirin.

**Limits:**

- **impurity F:** not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent),
- **any other impurity:** for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent),
- **total:** not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent),
- **disregard limit:** 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Heavy metals** (2.4.8): maximum 10 ppm.

Dissolve 4.0 g in 20 mL of *water R*, with heating if necessary. 12 mL of the solution complies with limit test A. Prepare the reference solution using 10 mL of *lead standard solution (2 ppm Pb) R*.

**Loss on drying** (2.2.32): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 5 h.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

## ASSAY

Liquid chromatography (2.2.29) as described in the test for related substances with the following modification.

**Injection:** test solution (b) and reference solution (c).

Calculate the percentage content of  $\text{C}_8\text{H}_{12}\text{N}_4\text{O}_5$  using the declared content of *ribavirin CRS*.

## STORAGE

Protected from light.

## IMPURITIES

**Specified impurities:** F.

**Other detectable impurities** (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. **Control of impurities in substances for pharmaceutical use**): A, B, C, D, E, G.

A. R1 = H, R2 = OH: 1- $\beta$ -D-ribofuranosyl-1H-1,2,4-triazole-3-carboxylic acid,

E. R1 =  $\text{CO-C}_6\text{H}_5$ , R2 =  $\text{NH}_2$ : 1-(5-O-benzoyl- $\beta$ -D-ribofuranosyl)-1H-1,2,4-triazole-3-carboxamide (5'-O-benzoylribavirin),

F. R1 =  $\text{CO-CH}_3$ , R2 =  $\text{NH}_2$ : 1-(5-O-acetyl- $\beta$ -D-ribofuranosyl)-1H-1,2,4-triazole-3-carboxamide (5'-O-acetylribavirin),

B. 1- $\alpha$ -D-ribofuranosyl-1H-1,2,4-triazole-3-carboxamide (anomer),

C. R = OH: 1H-1,2,4-triazole-3-carboxylic acid,

D. R =  $\text{NH}_2$ : 1H-1,2,4-triazole-3-carboxamide,

G. 1- $\beta$ -D-ribofuranosyl-1H-1,2,4-triazole-5-carboxamide (N-isomer).

## RIBOFLAVIN

## Riboflavinum

C<sub>17</sub>H<sub>20</sub>N<sub>4</sub>O<sub>6</sub>  
[83-88-5]

M<sub>r</sub> 376.4

## DEFINITION

7,8-Dimethyl-10-[(2*S*,3*S*,4*R*)-2,3,4,5-tetrahydroxy-pentyl]-benzo[*g*]pteridine-2,4(3*H*,10*H*)-dione.

This monograph applies to riboflavin produced by fermentation.

Content: 97.0 per cent to 103.0 per cent (dried substance).

## CHARACTERS

Appearance: yellow or orange-yellow, crystalline powder.

Solubility: very slightly soluble in water, practically insoluble in ethanol (96 per cent).

Solutions deteriorate on exposure to light, especially in the presence of alkali.

It shows polymorphism (5.9).

## IDENTIFICATION

A. Specific optical rotation (see Tests).

B. Thin-layer chromatography (2.2.27).

*Test solution.* Suspend 25 mg of the substance to be examined in 10 mL of water R, shake for 5 min and filter the suspension to remove the undissolved material.

*Reference solution.* Suspend 25 mg of riboflavin CRS in 10 mL of water R, shake for 5 min and filter the suspension to remove the undissolved material.

*Plate:* TLC silica gel plate R (2-10 µm).

*Mobile phase:* water R.

*Application:* as follows, drying in a current of cold air after each individual application:

- 1<sup>st</sup> application: 2 µL of methylene chloride R then 2 µL of the test solution;
- 2<sup>nd</sup> application: 2 µL of methylene chloride R then 2 µL of the reference solution.

*Development:* over a path of 6 cm.

*Drying:* in a current of cold air.

*Detection:* examine in ultraviolet light at 365 nm.

*Results:* the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

C. Dissolve about 1 mg in 100 mL of water R. The solution has, by transmitted light, a pale greenish-yellow colour, and, by reflected light, an intense yellowish-green fluorescence which disappears on the addition of mineral acids or alkalis.

## TESTS

**Specific optical rotation** (2.2.7): – 115 to – 135 (dried substance).

Dissolve 50.0 mg in 0.05 M sodium hydroxide free from carbonate and dilute to 10.0 mL with the same alkaline solution. Measure the optical rotation within 30 min of dissolution.

## 01/2008:0292 Absorbance (2.2.25).

*Test solution.* Dilute the final solution prepared for the assay with an equal volume of water R.

*Absorption maxima:* at 223 nm, 267 nm, 373 nm and 444 nm.

*Absorbance ratios:*

- $A_{373}/A_{267} = 0.31$  to 0.33;
- $A_{444}/A_{267} = 0.36$  to 0.39.

**Related substances.** Liquid chromatography (2.2.29). Prepare the solutions immediately before use and protect from light.

*Solution A:* 13.6 g/L solution of sodium acetate R.

*Test solution.* With the aid of ultrasound, dissolve 0.120 g of the substance to be examined in 10 mL of 0.1 M sodium hydroxide and dilute to 100 mL with solution A.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 10.0 mL with solution A. Dilute 1.0 mL of this solution to 100.0 mL with solution A.

*Reference solution (b).* With the aid of ultrasound, dissolve the contents of a vial of riboflavin for peak identification CRS (containing impurities C and D) in 1.0 mL of a mixture of 1 volume of mobile phase B and 9 volumes of mobile phase A.

*Reference solution (c).* In order to prepare *in situ* impurities A and B, dissolve 10 mg of the substance to be examined in 1 mL of 0.5 M sodium hydroxide. Expose to daylight for 1.5 h. Add 0.5 mL of acetic acid R and dilute to 100 mL with water R.

*Column:*

- size:  $l = 0.25$  m,  $\varnothing = 4.6$  mm;
- stationary phase: end-capped octadecylsilyl silica gel for chromatography R (5 µm).

*Mobile phase:*

- mobile phase A: phosphoric acid R, water R (1:1000 V/V);
- mobile phase B: acetonitrile R;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 5	90	10
5 - 20	90 → 80	10 → 20
20 - 25	80	20
25 - 35	80 → 50	20 → 50
35 - 45	50	50

*Flow rate:* 1.0 mL/min.

*Detection:* spectrophotometer at 267 nm.

*Injection:* 10 µL.

*Identification of impurities:* use the chromatogram supplied with riboflavin for peak identification CRS and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities C and D.

*Relative retention* with reference to riboflavin (retention time = about 16 min): impurity C = about 0.2; impurity D = about 0.5; impurity A = about 1.4; impurity B = about 1.9.

*System suitability:*

- resolution: minimum 5 between the peaks due to impurities A and B in the chromatogram obtained with reference solution (c);
- the chromatogram obtained with reference solution (b) is similar to the chromatogram supplied with riboflavin for peak identification CRS.

*Limits:*

- correction factors: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 0.7; impurity B = 1.4; impurity C = 2.3; impurity D = 1.4;
- impurity A: not more than 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.025 per cent);

- *impurities B, C, D*: for each impurity, not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- *disregard limit for peaks other than those due to impurity A*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Loss on drying** (2.2.32): maximum 1.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on the residue obtained in the test for loss on drying.

#### ASSAY

Carry out the assay protected from light.

In a brown-glass 500 mL volumetric flask, suspend 65.0 mg in 5 mL of *water R* ensuring that it is completely wetted and dissolve in 5 mL of *dilute sodium hydroxide solution R*. As soon as dissolution is complete, add 100 mL of *water R* and 2.5 mL of *glacial acetic acid R* and dilute to 500.0 mL with *water R*. Place 20.0 mL of this solution in a 200 mL brown-glass volumetric flask, add 3.5 mL of a 14 g/L solution of *sodium acetate R* and dilute to 200.0 mL with *water R*. Measure the absorbance (2.2.25) at the absorption maximum at 444 nm.

Calculate the content of  $C_{17}H_{20}N_4O_6$  taking the specific absorbance to be 328.

#### STORAGE

In an airtight container, protected from light.

#### IMPURITIES

*Specified impurities: A, B, C, D.*

- A. 7,8,10-trimethylbenzo[*g*]pteridine-2,4(3*H*,10*H*)-dione (lumiflavine),

- B. 7,8-dimethylbenzo[*g*]pteridine-2,4(1*H*,3*H*)-dione,

- C. 6,7-dimethyl-8-[(2*S*,3*S*,4*R*)-2,3,4,5-tetrahydroxypentyl]-pteridine-2,4(3*H*,8*H*)-dione,

- D. 8-(hydroxymethyl)-7-methyl-10-[(2*S*,3*S*,4*R*)-2,3,4,5-tetrahydroxypentyl]benzo[*g*]pteridine-2,4(3*H*,10*H*)-dione.

## RIBOFLAVIN SODIUM PHOSPHATE

### Riboflavini natrii phosphas

$C_{17}H_{20}N_4NaO_9P$   
[130-405]

$M_r$  478.3

#### DEFINITION

Mixture containing riboflavin 5'-(sodium hydrogen phosphate) as the main component and other riboflavin sodium monophosphates.

*Content*: 73.0 per cent to 79.0 per cent of riboflavin ( $C_{17}H_{20}N_4O_6$ ;  $M_r$  376.4) (dried substance).

It contains a variable amount of water.

#### CHARACTERS

*Appearance*: yellow or orange-yellow, crystalline, hygroscopic powder.

*Solubility*: soluble in water, very slightly soluble in ethanol (96 per cent).

#### IDENTIFICATION

- A. Ultraviolet and visible absorption spectrophotometry (2.2.25).

*Test solution*. Dissolve 50.0 mg in *phosphate buffer solution pH 7.0 R* and dilute to 100.0 mL with the same buffer solution. Dilute 2.0 mL of this solution to 100.0 mL with *phosphate buffer solution pH 7.0 R*.

*Spectral range*: 230-350 nm.

*Absorption maximum*: at 266 nm.

*Specific absorbance at the absorption maximum*: 580 to 640.

- B. Examine the chromatograms obtained in the test for related substances.

*Results*: the principal peak in the chromatogram obtained with the test solution is similar in position and approximate size to the principal peak in the chromatogram obtained with reference solution (b).

- C. Dissolve about 10 mg in *dilute sodium hydroxide solution R* and dilute to 100 mL with the same solution. Expose 1 mL of this solution to ultraviolet light at 254 nm for 5 min, add sufficient *acetic acid R* to make the solution acidic to *blue litmus paper R* and shake with 2 mL of *methylene chloride R*. The lower layer shows yellow fluorescence.

D. To 0.5 g add 10 mL of *nitric acid R* and evaporate the mixture to dryness on a water-bath. Ignite the residue until it becomes white, dissolve the residue in 5 mL of *water R* and filter. The filtrate gives reaction (a) of sodium and reaction (b) of phosphates (2.3.1).

## TESTS

**pH** (2.2.3): 5.0 to 6.5.

Dissolve 0.5 g in *carbon dioxide-free water R* and dilute to 50 mL with the same solvent.

**Specific optical rotation** (2.2.7): + 38.0 to + 43.0 (dried substance).

Dissolve 0.300 g in 18.2 mL of *hydrochloric acid R1* and dilute to 25.0 mL with *water R*.

**Impurity E.** To about 35 mg add 10 mL of *methylene chloride R*, shake for 5 min and filter. The filtrate is not more intensely coloured than reference solution BY<sub>6</sub> (2.2.2, *Method II*).

**Related substances.** Liquid chromatography (2.2.29). *Carry out the test protected from actinic light.*

**Test solution.** Dissolve 0.100 g of the substance to be examined in 50 mL of *water R* and dilute to 100.0 mL with the mobile phase. Dilute 8.0 mL of this solution to 50.0 mL with the mobile phase.

**Reference solution (a).** Dissolve 60 mg of *riboflavin CRS* (impurity D) in 1 mL of *hydrochloric acid R* and dilute to 250.0 mL with *water R*. Dilute 4.0 mL of this solution to 100.0 mL with the mobile phase.

**Reference solution (b).** Dissolve 0.100 g of *riboflavin sodium phosphate CRS* in 50 mL of *water R* and dilute to 100.0 mL with the mobile phase. Dilute 8.0 mL of this solution to 50.0 mL with the mobile phase.

**Column:**

- size:  $l = 0.25$  m,  $\varnothing = 4.6$  mm;
- stationary phase: octadecylsilyl silica gel for chromatography R (5  $\mu$ m).

**Mobile phase:** *methanol R*, 7.35 g/L solution of *potassium dihydrogen phosphate R* (150:850 V/V).

**Flow rate:** 2 mL/min.

**Detection:** spectrophotometer at 266 nm.

**Injection:** 100  $\mu$ L.

**Run time:** until the peak due to riboflavin can be clearly evaluated.

**Relative retention** with reference to riboflavin 5'-monophosphate (retention time = about 20 min): impurity A = about 0.2; impurity B = about 0.3; impurity C = about 0.5; riboflavin 3'-monophosphate = about 0.7; riboflavin 4'-monophosphate = about 0.9; impurity D = about 2.

**System suitability:** reference solution (b):

- resolution: minimum 1.5 between the peaks due to riboflavin 4'-monophosphate and riboflavin 5'-monophosphate.

Calculate the percentage content of free riboflavin (impurity D) and of riboflavin in the form of the diphosphates of riboflavin (impurities A, B, C) from the areas of the peaks in the chromatogram obtained with the test solution and the amount of free riboflavin in reference solution (a).

**Limits:**

- impurity D: maximum 6.0 per cent (dried substance);
- sum of impurities A, B and C: maximum 6.0 per cent (dried substance).

The thresholds indicated under Related substances (Table 2034.1) in the general monograph *Substances for pharmaceutical use* (2034) do not apply.

**Inorganic phosphate:** maximum 1.5 per cent.

Dissolve 0.10 g in *water R* and dilute to 100 mL with the same solvent. To 5 mL of this solution, add 10 mL of *water R*, 5 mL

of *buffered copper sulfate solution pH 4.0 R*, 2 mL of a 30 g/L solution of *ammonium molybdate R*, 1 mL of a freshly prepared solution containing 20 g/L of *4-methylaminophenol sulfate R* and 50 g/L of *sodium metabisulfite R*, and 1 mL of a 3 per cent V/V solution of *perchloric acid R*. Dilute to 25.0 mL with *water R* and measure, within 15 min of its preparation, the absorbance (2.2.25) of the solution at 800 nm, using as the compensation liquid a solution prepared in the same manner but without the substance to be examined. The absorbance is not greater than that of a solution prepared as follows: to 15 mL of *phosphate standard solution (5 ppm PO<sub>4</sub>) R*, add 5 mL of *buffered copper sulfate solution pH 4.0 R*, 2 mL of a 30 g/L solution of *ammonium molybdate R*, 1 mL of a freshly prepared solution containing 20 g/L of *4-methylaminophenol sulfate R* and 50 g/L of *sodium metabisulfite R*, and 1 mL of a 3 per cent V/V solution of *perchloric acid R*; dilute to 25.0 mL with *water R*.

**Heavy metals** (2.4.8): maximum 10 ppm.

To 2.0 g in a silica crucible add 2 mL of *nitric acid R*, dropwise, followed by 0.25 mL of *sulfuric acid R*. Heat cautiously until white fumes are evolved and ignite. Extract the cooled residue with 2 quantities, each of 2 mL, of *hydrochloric acid R* and evaporate the extracts to dryness. Dissolve the residue in 2 mL of *dilute acetic acid R* and dilute to 20 mL with *water R*. 12 mL of the solution complies with test A. Prepare the reference solution using 10 mL of *lead standard solution (1 ppm Pb) R*.

**Loss on drying** (2.2.32): maximum 8.0 per cent, determined on 1.000 g by drying in an oven at 105 °C at a pressure not exceeding 0.7 kPa for 5 h.

## ASSAY

*Carry out the assay protected from light.*

Dissolve 0.100 g in 150 mL of *water R*, add 2 mL of *glacial acetic acid R* and dilute to 1000.0 mL with *water R*. To 10.0 mL of this solution add 3.5 mL of a 14 g/L solution of *sodium acetate R* and dilute to 50.0 mL with *water R*. Measure the absorbance (2.2.25) at the absorption maximum at 444 nm.

Calculate the content of C<sub>17</sub>H<sub>20</sub>N<sub>4</sub>O<sub>6</sub> taking the specific absorbance to be 328.

## STORAGE

In an airtight container, protected from light.

## IMPURITIES

*Specified impurities: A, B, C, D, E.*

- A. R<sub>3</sub> = R<sub>4</sub> = PO<sub>3</sub>H<sub>2</sub>, R<sub>5</sub> = H: riboflavin 3',4'-diphosphate,
- B. R<sub>3</sub> = R<sub>5</sub> = PO<sub>3</sub>H<sub>2</sub>, R<sub>4</sub> = H: riboflavin 3',5'-diphosphate,
- C. R<sub>3</sub> = H, R<sub>4</sub> = R<sub>5</sub> = PO<sub>3</sub>H<sub>2</sub>: riboflavin 4',5'-diphosphate,
- D. R<sub>3</sub> = R<sub>4</sub> = R<sub>5</sub> = H: riboflavin,

- E. 7,8,10-trimethylbenzo[g]pteridine-2,4(3H,10H)-dione (lumiflavin).

01/2009:0349

01/2008:1657  
corrected 6.0**RICE STARCH****Oryzae amyllum****DEFINITION**

Rice starch is obtained from the caryopsis of *Oryza sativa* L.

**CHARACTERS**

*Appearance*: very fine, white or almost white powder, which creaks when pressed between the fingers.

*Solubility*: practically insoluble in cold water and in ethanol (96 per cent).

Rice starch does not contain starch grains of any other origin. It may contain traces of, if any, fragments of the endosperm tissue of the fruit.

**IDENTIFICATION**

- A. Examined under a microscope using a mixture of equal volumes of *glycerol R* and *water R*, it presents polyhedral, simple grains 1-10 µm, mostly 4-6 µm, in size. These simple grains often gather in ellipsoidal, compound grains 50-100 µm in diameter. The grains have a poorly visible central hilum and there are no concentric striations. Between orthogonally orientated polarising plates or prisms, the starch grains show a distinct black cross intersecting at the hilum.
- B. Suspend 1 g in 50 mL of *water R*, boil for 1 min and cool. A thin, cloudy mucilage is formed.
- C. To 1 mL of the mucilage obtained in identification test B add 0.05 mL of *iodine solution RI*. An orange-red to dark blue colour is produced, which disappears on heating.

**TESTS**

**pH** (2.2.3): 5.0 to 8.0.

Shake 5.0 g with 25.0 mL of *carbon dioxide-free water R* for 60 s. Allow to stand for 15 min.

**Iron** (2.4.9): maximum 10 ppm for the filtrate.

Shake 1.5 g with 15 mL of *dilute hydrochloric acid R*. Filter.

**Foreign matter**. Examine under a microscope using a mixture of equal volumes of *glycerol R* and *water R*. Not more than traces of matter other than starch granules are present. No starch grains of any other origin are present.

**Loss on drying** (2.2.32): maximum 15.0 per cent, determined on 1.00 g by drying in an oven at 130 °C for 90 min.

**Sulfated ash** (2.4.14): maximum 0.6 per cent, determined on 1.0 g.

**Oxidising substances** (2.5.30): maximum 0.002 per cent, calculated as H<sub>2</sub>O<sub>2</sub>.

**Sulfur dioxide** (2.5.29): maximum 50 ppm.

**Microbial contamination**

TAMC: acceptance criterion 10<sup>3</sup> CFU/g (2.6.12).

TYMC: acceptance criterion 10<sup>2</sup> CFU/g (2.6.12).

Absence of *Escherichia coli* (2.6.13).

Absence of *Salmonella* (2.6.13).

**RIFABUTIN****Rifabutinum**

C<sub>46</sub>H<sub>62</sub>N<sub>4</sub>O<sub>11</sub>  
[72559-06-9]

M<sub>r</sub> 847

**DEFINITION**

(9S,12E,14S,15R,16S,17R,18R,19R,20S,21S,22E,24Z)-6,18,20-trihydroxy-14-methoxy-7,9,15,17,19,21,25-heptamethyl-1'-(2-methylpropyl)-5,10,26-trioxo-3,5,9,10-tetrahydrospiro[9,4-(epoxypentadeca[1,11,13]trienimino)-2H-furo[2',3':7,8]naphtho[1,2-d]imidazole-2,4'-piperidine]-16-yl acetate.

Semi-synthetic product derived from a fermentation product.

*Content*: 96.0 per cent to 102.0 per cent (anhydrous substance).

**CHARACTERS**

*Appearance*: reddish-violet amorphous powder.

*Solubility*: slightly soluble in water, soluble in methanol, slightly soluble in alcohol.

**IDENTIFICATION**

- A. Infrared absorption spectrophotometry (2.2.24).

*Preparation*: discs.

*Comparison*: *rifabutin CRS*.

- B. Examine the chromatograms obtained in the test for related substances.

*Results*: the principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (a).

**TESTS**

- Impurity A**. Thin-layer chromatography (2.2.27).

*Test solution*. Dissolve 0.100 g of the substance to be examined in a mixture of equal volumes of *methanol R* and *methylene chloride R* and dilute to 10 mL with the same mixture of solvents.

*Reference solution*. Dissolve 10 mg of *rifabutin impurity A CRS* in a mixture of equal volumes of *methanol R* and *methylene chloride R* and dilute to 10 mL with the same mixture of solvents. Dilute 3 mL of the solution to 100 mL with a mixture of equal volumes of *methanol R* and *methylene chloride R*.

*Plate*: TLC silica gel F<sub>254</sub> plate R.

*Mobile phase*: *acetone R*, *light petroleum R* (23:77 V/V).

*Application*: 10 µL.

*Development*: over 2/3 of the plate.

*Drying*: in air.

*Detection*: expose the plate to iodine vapour for about 5 min, then spray with *potassium iodide and starch solution R* and allow to stand for 5 min.

**Limit:**

- **impurity A:** any spot corresponding to impurity A is not more intense than the spot in the chromatogram obtained with the reference solution (0.3 per cent).

**Related substances.** Liquid chromatography (2.2.29).

**Test solution.** Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 50.0 mL with the mobile phase.

**Reference solution (a).** Dissolve 50.0 mg of *rifabutin CRS* in the mobile phase and dilute to 50.0 mL with the mobile phase.

**Reference solution (b).** Dilute 1.0 mL of reference solution (a) to 100.0 mL with the mobile phase.

**Reference solution (c).** Dissolve about 10 mg of *rifabutin CRS* in 2 mL of *methanol R*, add 1 mL of *dilute sodium hydroxide solution R* and allow to stand for about 4 min. Add 1 mL of *dilute hydrochloric acid R* and dilute to 50 mL with the mobile phase.

**Column:**

- **size:**  $l = 0.110$  m,  $\varnothing = 4.6$  mm,
- **stationary phase:** *octylsilyl silica gel for chromatography R* (5  $\mu$ m).

**Mobile phase:** mix equal volumes of *acetonitrile R* and a 13.6 g/L solution of *potassium dihydrogen phosphate R* adjusted to pH 6.5 with *dilute sodium hydroxide solution R*.

**Flow rate:** 1 mL/min.

**Detection:** spectrophotometer at 254 nm.

**Injection:** 20  $\mu$ L.

**Run time:** 2.5 times the retention time of rifabutin.

**Relative retention** with reference to rifabutin (retention time = about 9 min): impurity E = about 0.5; impurity B = about 0.6; impurity D = about 0.9; impurity C = about 1.3.

**System suitability:** reference solution (c):

- **resolution:** minimum 2.0 between the second peak of the 3 peaks due to degradation products and the peak due to rifabutin.

**Limits:**

- **any impurity:** not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent); not more than 1 such peak has an area greater than half the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent),
- **total:** not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (3.0 per cent),
- **disregard limit:** 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Water** (2.5.12): maximum 2.5 per cent, determined on 0.200 g.

**Sulfated ash** (2.4.14): maximum 0.3 per cent, determined on 1.0 g.

**ASSAY**

Liquid chromatography (2.2.29) as described in the test for related substances with the following modification.

**Injection:** test solution and reference solution (a).

Calculate the percentage content of rifabutin.

**IMPURITIES**

A. 1-(2-methylpropyl)piperidin-4-one,

B. X = O: 3-aminorifamycin S,

D. X = NH: 3-amino-4-imidorifamycin S,

C. R1 = CO-CH<sub>3</sub>, R2 + R3 = CH<sub>2</sub>: 21,31-didehydrorifabutin,

E. R1 = R3 = H, R2 = CH<sub>3</sub>: 16-deacetyl rifabutin.

**RIFAMPICIN****Rifampicinum**

C<sub>43</sub>H<sub>58</sub>N<sub>4</sub>O<sub>12</sub>  
[13292-46-1]

$M_r$  823

**DEFINITION**

(2*S*,12*Z*,14*E*,16*S*,17*S*,18*R*,19*R*,20*R*,21*S*,22*R*,23*S*,24*E*)-5,6,9,17,19-Pentahydroxy-23-methoxy-2,4,12,16,18,20,22-heptamethyl-8-[[[(4-methylpiperazin-1-yl)imino]methyl]-1,11-dioxo-1,2-dihydro-2,7-(epoxypentadeca[1,11,13]trienimino)naphtho[2,1-*b*]furan-21-yl]acetate.

Semisynthetic antibiotic obtained from rifamycin SV.

**Content:** 97.0 per cent to 102.0 per cent (dried substance).

**CHARACTERS**

**Appearance:** reddish-brown or brownish-red, crystalline powder.

**Solubility:** slightly soluble in water, soluble in methanol, slightly soluble in acetone and in ethanol (96 per cent).

**IDENTIFICATION**

A. Ultraviolet and visible absorption spectrophotometry (2.2.25).

**Test solution.** Dissolve 50 mg in 50 mL of *methanol R*.

Dilute 1 mL of this solution to 50 mL with *phosphate buffer solution pH 7.4 R*.

*Spectral range:* 220-500 nm.

*Absorption maxima:* at 237 nm, 254 nm, 334 nm and 475 nm.

*Absorbance ratio:*  $A_{334}/A_{475}$  = about 1.75.

**B.** Infrared absorption spectrophotometry (2.2.24).

*Preparation:* mulls in *liquid paraffin R*.

*Comparison:* *rifampicin CRS*.

**C.** Suspend about 25 mg in 25 mL of *water R*, shake for 5 min and filter. To 5 mL of the filtrate add 1 mL of a 100 g/L solution of *ammonium persulfate R* in *phosphate buffer solution pH 7.4 R* and shake for a few minutes. The colour changes from orange-yellow to violet-red and no precipitate is formed.

**TESTS**

**pH** (2.2.3): 4.5 to 6.5 for a 10 g/L suspension in *carbon dioxide-free water R*.

**Related substances.** Liquid chromatography (2.2.29). Prepare the test solution and the reference solution immediately before use.

**Solvent mixture.** To 10 volumes of a 210.1 g/L solution of *citric acid R* add 23 volumes of a 136.1 g/L solution of *potassium dihydrogen phosphate R*, 77 volumes of a 174.2 g/L solution of *dipotassium hydrogen phosphate R*, 250 volumes of *acetonitrile R* and 640 volumes of *water R*.

**Test solution.** Dissolve 20.0 mg of the substance to be examined in *acetonitrile R* and dilute to 10.0 mL with the same solvent. Dilute 5.0 mL of this solution to 50.0 mL with the solvent mixture.

**Reference solution.** Dissolve 20.0 mg of *rifampicin quinone CRS* (impurity A) in *acetonitrile R* and dilute to 100.0 mL with the same solvent. To 1.0 mL of this solution add 1.0 mL of the test solution and dilute to 100.0 mL with the solvent mixture.

**Column:**

- size:  $l = 0.12$  m,  $\varnothing = 4.6$  mm;
- stationary phase: *octylsilyl silica gel for chromatography R* (5  $\mu$ m).

**Mobile phase:** mix 35 volumes of *acetonitrile R* and 65 volumes of a solution containing 0.1 per cent V/V of *phosphoric acid R*, 1.9 g/L of *sodium perchlorate R*, 5.9 g/L of *citric acid R* and 20.9 g/L of *potassium dihydrogen phosphate R*.

**Flow rate:** 1.5 mL/min.

**Detection:** spectrophotometer at 254 nm.

**Injection:** 20  $\mu$ L.

**Run time:** twice the retention time of rifampicin.

**System suitability:** reference solution:

- resolution: minimum 4.0 between the peaks due to rifampicin and impurity A; if necessary, adjust the concentration of acetonitrile in the mobile phase.

**Limits:**

- **impurity A:** not more than 1.5 times the area of the corresponding peak in the chromatogram obtained with the reference solution (1.5 per cent);
- **any other impurity:** for each impurity, not more than the area of the peak due to rifampicin in the chromatogram obtained with the reference solution (1.0 per cent);
- **sum of impurities other than A:** not more than 3.5 times the area of the peak due to rifampicin in the chromatogram obtained with the reference solution (3.5 per cent);

- **disregard limit:** 0.05 times the area of the peak due to rifampicin in the chromatogram obtained with the reference solution (0.05 per cent).

**Heavy metals** (2.4.8): maximum 20 ppm.

1.0 g complies with test C. Prepare the reference solution using 2 mL of *lead standard solution (10 ppm Pb) R*.

**Loss on drying** (2.2.32): maximum 1.0 per cent, determined on 1.000 g by drying at 80 °C at a pressure not exceeding 0.67 kPa for 4 h.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 2.0 g.

**ASSAY**

Dissolve 0.100 g in *methanol R* and dilute to 100.0 mL with the same solvent. Dilute 2.0 mL of this solution to 100.0 mL with *phosphate buffer solution pH 7.4 R*. Measure the absorbance (2.2.25) at the absorption maximum at 475 nm, using *phosphate buffer solution pH 7.4 R* as the compensation liquid.

Calculate the content of  $C_{43}H_{58}N_4O_{12}$ , taking the specific absorbance to be 187.

**STORAGE**

Under nitrogen in an airtight container, protected from light, at a temperature not exceeding 25 °C.

**IMPURITIES**

**Specified impurities:** A.

**Other detectable impurities** (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): B.

A. rifampicin quinone,

B. rifampicin N-oxide.

**01/2008:0432** *Test solution.* Dissolve 50.0 mg of the substance to be examined in the solvent mixture and dilute to 50.0 ml with the solvent mixture.  
**corrected 7.0**

## RIFAMYCIN SODIUM

### Rifamycinum natrium

$C_{37}H_{46}NNaO_{12}$   
[14897-39-3]

$M_r$  720

#### DEFINITION

Sodium (2*S*,12*Z*,14*E*,16*S*,17*S*,18*R*,19*R*,20*R*,21*S*,22*R*,23*S*,24*E*)-21-(acetyloxy)-6,9,17,19-tetrahydroxy-23-methoxy-2,4,12,16,18,20,22-heptamethyl-1,11-dioxo-1,2-dihydro-2,7-(epoxypentadeca[1,11,13]trienimino)naphtho[2,1-*b*]furan-5-olate.

Monosodium salt of rifamycin SV, obtained by chemical transformation of rifamycin B, which is produced during the growth of certain strains of *Amycolatopsis mediterranei*. Rifamycin SV may also be obtained directly from certain *A. mediterranei* mutants.

*Potency*: minimum 900 IU/mg (anhydrous substance).

#### PRODUCTION

It is produced by methods of manufacture designed to minimise or eliminate substances lowering blood pressure.

The manufacturing process is validated to demonstrate that the product, if tested, would comply with the following test.

**Abnormal toxicity** (2.6.9). Inject into each mouse 4 mg dissolved in 0.5 mL of water for injections *R*.

#### CHARACTERS

*Appearance*: fine or slightly granular, red powder.

*Solubility*: soluble in water, freely soluble in anhydrous ethanol.

#### IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

*Preparation*: discs of potassium bromide *R*.

*Comparison*: rifamycin sodium CRS.

B. It gives reaction (a) of sodium (2.3.1).

#### TESTS

**pH** (2.2.3): 6.5 to 8.0.

Dissolve 0.5 g in carbon dioxide-free water *R* and dilute to 10 mL with the same solvent.

**Absorbance** (2.2.25). Dissolve 20.0 mg in 5 mL of methanol *R* and dilute to 100.0 mL with freshly prepared phosphate buffer solution pH 7.0 *R1* to which 1 g/L of ascorbic acid *R* has been added immediately before use. Dilute 5.0 mL of this solution to 50.0 mL with the same phosphate buffer solution containing ascorbic acid. Allow to stand for 30 min. The solution shows an absorption maximum at 445 nm. The specific absorbance at this absorption maximum is 190 to 210 (anhydrous substance).

**Related substances.** Liquid chromatography (2.2.29). Prepare the solutions immediately before use.

*Solvent mixture.* Mix 50 volumes of a 3.9 g/L solution of sodium dihydrogen phosphate *R*, adjusted to pH 3.0 with phosphoric acid *R*, and 50 volumes of acetonitrile *R*.

*Reference solution (a).* Dissolve 10.0 mg of rifamycin B CRS (impurity A) and 40.0 mg of rifamycin S CRS (impurity B) in the solvent mixture and dilute to 200.0 mL with the solvent mixture. Dilute 5.0 mL of this solution to 50.0 mL with the solvent mixture.

*Reference solution (b).* Dissolve 25 mg of the substance to be examined and 8 mg of rifamycin S CRS in the solvent mixture and dilute to 250.0 mL with the solvent mixture.

#### Column:

- size:  $l = 0.25$  m,  $\varnothing = 4.6$  mm;
- stationary phase: octadecylsilyl silica gel for chromatography *R* (5  $\mu$ m).

#### Mobile phase:

- mobile phase A: mix 10 volumes of acetonitrile *R* and 90 volumes of a 3.9 g/L solution of sodium dihydrogen phosphate *R* adjusted to pH 7.5 with dilute sodium hydroxide solution *R*;
- mobile phase B: mix 30 volumes of a 3.9 g/L solution of sodium dihydrogen phosphate *R* adjusted to pH 7.5 with dilute sodium hydroxide solution *R* and 70 volumes of acetonitrile *R*;
- temperature: minimum 20 °C;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 40	80 → 20	20 → 80
40 - 45	20	80
45 - 47	20 → 80	80 → 20

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 20  $\mu$ L.

*Elution order*: impurity A, rifamycin SV, impurity B.

*System suitability*: reference solution (b):

- resolution: minimum 5.0 between the peaks due to rifamycin SV and impurity B.

#### Limits:

- impurity B: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (a) (2 per cent);
- impurity A: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- sum of impurities other than A and B: not more than the area of the peak due to impurity B in the chromatogram obtained with reference solution (a) (2 per cent);
- disregard limit: the area of the peak due to impurity B in the chromatogram obtained with reference solution (a) (0.1 per cent).

**Heavy metals** (2.4.8): maximum 10 ppm.

2.0 g complies with test C. Prepare the reference solution using 2 mL of lead standard solution (10 ppm Pb) *R*.

**Water** (2.5.12): 12.0 per cent to 17.0 per cent, determined on 0.200 g.

**Bacterial endotoxins** (2.6.14): less than 0.50 IU/mg, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for removal of bacterial endotoxins.

#### ASSAY

Carry out the microbiological assay of antibiotics (2.7.2).

## STORAGE

In an airtight container, protected from light at a temperature of 2 °C to 8 °C. If the substance is sterile, store in a sterile, airtight, tamper-proof container.

## IMPURITIES

*Specified impurities:* A, B.

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use* (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): C.

A. rifamycin B,

B. R = R' = O: rifamycin S,

C. -R- = -O-CO-CH<sub>2</sub>-O-, R' = O: rifamycin O.

07/2009:2362

## RIFAXIMIN

## Rifaximinum

C<sub>43</sub>H<sub>51</sub>N<sub>3</sub>O<sub>11</sub>  
[80621-81-4]

M<sub>r</sub> 786

## DEFINITION

(2*S*,16*Z*,18*E*,20*S*,21*S*,22*R*,23*R*,24*R*,25*S*,26*R*,27*S*,28*E*)-5,6,21,23-Tetrahydroxy-27-methoxy-2,4,11,16,20,22,24,26-octamethyl-1,15-dioxo-1,2-dihydro-2,7-(epoxypentadeca[1,11,13]trienoimino)benzofuro[4,5-*e*]pyrido[1,2-*a*]benzimidazol-25-yl acetate.

Semi-synthetic product derived from a fermentation product.

*Content:* 97.0 per cent to 102.0 per cent (anhydrous substance).

## CHARACTERS

*Appearance:* red-orange, crystalline, hygroscopic powder.

*Solubility:* practically insoluble in water, soluble in acetone and in methanol.

It shows polymorphism (5.9).

## IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

*Comparison:* rifaximin CRS.

## TESTS

**Related substances.** Liquid chromatography (2.2.29).

*Solvent mixture:* acetonitrile R, water R (40:60 V/V).

*Test solution (a).* Dissolve 0.100 g of the substance to be examined in 8 mL of acetonitrile R and dilute to 20 mL with water R.

*Test solution (b).* Dissolve 40.0 mg of the substance to be examined in the solvent mixture and dilute to 100.0 mL with the solvent mixture. Dilute 5.0 mL of this solution to 50.0 mL with the solvent mixture.

*Reference solution (a).* Dilute 1.0 mL of test solution (a) to 50.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Reference solution (b).* Dissolve 5 mg of rifaximin for system suitability CRS (containing impurity H) in 4 mL of the solvent mixture.

*Reference solution (c).* Dissolve 40.0 mg of rifaximin CRS in the solvent mixture and dilute to 100.0 mL with the solvent mixture. Dilute 5.0 mL of this solution to 50.0 mL with the solvent mixture.

*Column:*

– size: *l* = 0.25 m, Ø = 4.6 mm;

– stationary phase: end-capped octadecylsilyl silica gel for chromatography R (5 µm);

– temperature: 40 °C.

*Mobile phase:* mix 37 volumes of a 3.16 g/L solution of ammonium formate R adjusted to pH 7.2 with dilute ammonia R1 and 63 volumes of a mixture of equal volumes of acetonitrile R and methanol R.

*Flow rate:* 1.4 mL/min.

*Detection:* spectrophotometer at 276 nm.

*Injection:* 20 µL of test solution (a) and reference solutions (a) and (b).

*Run time:* 3 times the retention time of rifaximin.

*Relative retention* with reference to rifaximin (retention time = about 12 min): impurities D and H = about 0.7.

*System suitability:* reference solution (b):

– resolution: minimum 3.0 between the peaks due to impurity H and rifaximin.

*Limits:*

– sum of impurities D and H: not more than 2.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

– unspecified impurities: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);

– total: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent);

– disregard limit: 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Heavy metals** (2.4.8): maximum 20 ppm.

1.0 g complies with test C. Prepare the reference solution using 20 mL of lead standard solution (1 ppm Pb) R.

**Water** (2.5.12): maximum 4.5 per cent, determined on 0.50 g.

**Sulfated ash (2.4.14):** maximum 0.1 per cent, determined on 1.0 g.

#### ASSAY

Liquid chromatography (2.2.29) as described in the test for related substances with the following modification.

**Injection:** test solution (b) and reference solution (c).

Calculate the percentage content of  $C_{43}H_{51}N_3O_{11}$  using the chromatogram obtained with reference solution (c) and the declared content of *rifaximin CRS*.

#### STORAGE

In an airtight container, protected from light.

#### IMPURITIES

**Specified impurities:** D, H.

**Other detectable impurities** (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): A, B, C, E, F, G.

A. 4-methylpyridin-2-amine,

B. R =  $CH_2CO_2H$ : rifamycin B,

C. R = H: rifamycin SV,

D. rifaximin Y,

H. (2*S*,16*Z*,18*E*,20*R*,21*S*,22*R*,23*R*,24*R*,25*S*,26*R*,27*S*,28*E*)-5,6,21,23-tetrahydroxy-20-(hydroxymethyl)-27-methoxy-2,4,11,16,22,24,26-heptomethyl-1,15-dioxo-1,2-dihydro-2,7-(epoxypentadeca[1,11,13]trienoinimo)benzofuro[4,5-*e*]pyrido[1,2-*a*]benzimidazol-25-yl acetate (hydroxy-rifaximin),

E. rifamycin S,

F. rifamycin O,

G. (2*S*,16*Z*,18*E*,20*S*,21*S*,22*R*,23*R*,24*R*,25*S*,26*R*,27*S*,28*E*)-5,21,23-trihydroxy-27-methoxy-2,4,11,16,20,22,24,26-octamethyl-1,6,15-trioxo-1,2,6,7-tetrahydro-2,7-(epoxypentadeca[1,11,13]trienonitrilo)benzofuro[4,5-*e*]pyrido[1,2-*a*]benzimidazol-25-yl acetate (oxidised rifaximin).

01/2008:2020 Injection: 20 µL.

**RILMENIDINE DIHYDROGEN PHOSPHATE**

Rilmenidini dihydrogenophosphas

C<sub>10</sub>H<sub>19</sub>N<sub>2</sub>O<sub>5</sub>P

**RISPERIDONE**

Risperidonum

C<sub>23</sub>H<sub>27</sub>N<sub>4</sub>O<sub>2</sub>  
[106266-06-2]M<sub>r</sub> 410.5

## DEFINITION

3-[2-[4-(6-Fluoro-1,2-benzisoxazol-3-yl)piperidin-1-yl]ethyl]-2-methyl-6,7,8,9-tetrahydro-4*H*-pyrido[1,2-*a*]pyrimidin-4-one.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

## CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: practically insoluble in water, freely soluble in methylene chloride, sparingly soluble in ethanol (96 per cent). It dissolves in dilute acid solutions.

It shows polymorphism (5.9).

## IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

*Comparison*: risperidone CRS.

If the spectra obtained show differences, dissolve the substance to be examined and the reference substance separately in acetone R, evaporate to dryness and record new spectra using the residues.

## TESTS

**Appearance of solution.** The solution is clear (2.2.1) and colourless (2.2.2, Method II).

Dissolve 0.1 g in a 7.5 g/L solution of tartaric acid R and dilute to 100 mL with the same acid solution.

**Related substances.** Liquid chromatography (2.2.29).

*Test solution.* Dissolve 0.100 g of the substance to be examined in methanol R and dilute to 10.0 mL with the same solvent.

*Reference solution (a).* Dissolve 10 mg of risperidone for system suitability CRS (containing impurities A, B, C, D and E) in 1.0 mL of methanol R.

*Reference solution (b).* Dilute 1.0 mL of the test solution to 100.0 mL with methanol R. Dilute 5.0 mL of this solution to 25.0 mL with methanol R.

*Reference solution (c).* Dissolve the contents of a vial of risperidone impurity K CRS in 1.0 mL of methanol R.

*Column*:

- size:  $l = 0.10$  m,  $\varnothing = 4.6$  mm;
- stationary phase: base-deactivated octadecylsilyl silica gel for chromatography R (3  $\mu$ m).

*Mobile phase*:

- mobile phase A: 5 g/L solution of ammonium acetate R;
- mobile phase B: methanol R;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 2	70	30
2 - 17	70 → 30	30 → 70
17 - 22	30	70

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 260 nm.

*Injection*: 10  $\mu$ L.

*Identification of impurities*: use the chromatogram supplied with risperidone for system suitability CRS and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A, B, C, D and E; use the chromatogram obtained with reference solution (c) to identify the peak due to impurity K.

*Relative retention* with reference to risperidone (retention time = about 12 min): impurity A = about 0.7; impurity B = about 0.75; impurity C = about 0.8; impurity K = about 0.9; impurity D = about 0.94; impurity E = about 1.1.

*System suitability*: reference solution (a):

- the chromatogram obtained is similar to the chromatogram supplied with risperidone for system suitability CRS;
- *peak-to-valley ratio*: minimum 1.5, where  $H_p$  = height above the baseline of the peak due to impurity D and  $H_v$  = height above the baseline of the lowest point of the curve separating this peak from the peak due to risperidone.

*Limits*:

- *impurities A, B, C, D, E*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
- *impurity K*: not more than 0.75 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.15 per cent);
- *unspecified impurities*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- *total*: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);
- *disregard limit*: 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Loss on drying** (2.2.32): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 4 h.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g in a platinum crucible.

## ASSAY

Dissolve 0.160 g in 70 mL of a mixture of 1 volume of anhydrous acetic acid R and 7 volumes of methyl ethyl ketone R and titrate with 0.1 M perchloric acid. Determine the end-point potentiometrically (2.2.20).

1 mL of 0.1 M perchloric acid is equivalent to 20.53 mg of C<sub>23</sub>H<sub>27</sub>FN<sub>4</sub>O<sub>2</sub>.

## STORAGE

Protected from light.

## IMPURITIES

*Specified impurities*: A, B, C, D, E, K.

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use* (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): F, H, I, J, L, M.

A. 3-[2-[4-(*E*)-(2,4-difluorophenyl)(hydroxyimino)methyl]piperidin-1-yl]ethyl]-2-methyl-6,7,8,9-tetrahydro-4*H*-pyrido[1,2-*a*]pyrimidin-4-one,

B. 3-[2-[4-(*Z*)-(2,4-difluorophenyl)(hydroxyimino)methyl]piperidin-1-yl]ethyl]-2-methyl-6,7,8,9-tetrahydro-4*H*-pyrido[1,2-*a*]pyrimidin-4-one,

- C. (9*S*)-3-[2-[4-(6-fluoro-1,2-benzisoxazol-3-yl)piperidin-1-yl]ethyl]-9-hydroxy-2-methyl-6,7,8,9-tetrahydro-4*H*-pyrido[1,2-*a*]pyrimidin-4-one,

- D. 3-[2-[4-(5-fluoro-1,2-benzisoxazol-3-yl)piperidin-1-yl]ethyl]-2-methyl-6,7,8,9-tetrahydro-4*H*-pyrido[1,2-*a*]pyrimidin-4-one,

- E. (6*RS*)-3-[2-[4-(6-fluoro-1,2-benzisoxazol-3-yl)piperidin-1-yl]ethyl]-2,6-dimethyl-6,7,8,9-tetrahydro-4*H*-pyrido[1,2-*a*]pyrimidin-4-one,

- F. 2-[2-methyl-4-oxo-6,7,8,9-tetrahydro-4*H*-pyrido[1,2-*a*]pyrimidin-3-yl]ethyl 4-(6-fluoro-1,2-benzisoxazol-3-yl)piperidin-1-carboxylate,

- H. 3-[2-[4-(2,4-difluorobenzoyl)piperidin-1-yl]ethyl]-2-methyl-6,7,8,9-tetrahydro-4*H*-pyrido[1,2-*a*]pyrimidin-4-one,

- I. 3-[2-[4-[4-fluoro-2-[4-(6-fluoro-1,2-benzisoxazol-3-yl)piperidin-1-yl]benzoyl]piperidin-1-yl]ethyl]-2-methyl-6,7,8,9-tetrahydro-4*H*-pyrido[1,2-*a*]pyrimidin-4-one,

- J. 3-[2-[4-(*Z*)-[4-fluoro-2-[4-(6-fluoro-1,2-benzisoxazol-3-yl)piperidin-1-yl]phenyl](hydroxyimino)methyl]piperidin-1-yl]ethyl]-2-methyl-6,7,8,9-tetrahydro-4*H*-pyrido[1,2-*a*]pyrimidin-4-one,

- K. 3-[2-[4-(1,2-benzisoxazol-3-yl)piperidin-1-yl]ethyl]-2-methyl-6,7,8,9-tetrahydro-4*H*-pyrido[1,2-*a*]pyrimidin-4-one (desfluoro risperidone),

- L. 3-(2-chloroethyl)-2-methyl-6,7,8,9-tetrahydro-4*H*-pyrido[1,2-*a*]pyrimidin-4-one (piperidopyrimidinone intermediate),

- M. 6-fluoro-3-(piperidin-4-yl)-1,2-benzisoxazole.

01/2008:2136

## RITONAVIR

## Ritonavirum

$C_{37}H_{48}N_6O_5S_2$   
[155213-67-5]

$M_r$  721

## DEFINITION

Thiazol-5-ylmethyl [(1*S*,2*S*,4*S*)-1-benzyl-2-hydroxy-4-[(2*S*)-3-methyl-2-[[methyl][2-(1-methylethyl)thiazol-4-yl]methyl]carbonyl]amino]butanoyl]amino]-5-phenylpentyl]carbamate.

*Content*: 97.0 per cent to 102.0 per cent (anhydrous substance).

## PRODUCTION

The production method is validated to demonstrate suitable enantiomeric purity of the final product.

## CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: practically insoluble in water, freely soluble in methanol and in methylene chloride, very slightly soluble in acetonitrile.

It shows polymorphism (5.9).

## IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

*Comparison*: ritonavir CRS.

If the spectra obtained in the solid state show differences dissolve the substance to be examined and the reference substance separately in *methylene chloride R*, evaporate to dryness and record new spectra using the residues.

## TESTS

**Related substances.** Liquid chromatography (2.2.29).

*Solvent mixture.* Mix equal volumes of *acetonitrile R* and a 4.1 g/L solution of *potassium dihydrogen phosphate R*.

*Test solution (a).* Dissolve 10.0 mg of the substance to be examined in the solvent mixture and dilute to 10.0 mL with the solvent mixture. Sonicate if necessary.

*Test solution (b).* Dilute 5.0 mL of test solution (a) to 10.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 20.0 mL with the solvent mixture.

*Reference solution (a).* Dissolve 5.0 mg of *ritonavir for peak identification CRS* (containing impurities E, F, L, O and T) in the solvent mixture and dilute to 5.0 mL with the solvent mixture. Sonicate if necessary.

*Reference solution (b).* Dilute 1.0 mL of test solution (a) to 10.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 100.0 mL with the solvent mixture.

*Reference solution (c).* Dissolve 10.0 mg of *ritonavir CRS* in the solvent mixture and dilute to 10.0 mL with the solvent mixture. Sonicate if necessary. Dilute 5.0 mL of this solution to 10.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 20.0 mL with the solvent mixture.

*Column*:

- *size*:  $l = 0.15$  m,  $\varnothing = 4.6$  mm;
- *stationary phase*: end-capped butylsilyl silica gel for chromatography R (3  $\mu$ m);
- *temperature*: 60 °C.

*Mobile phase*:

- *mobile phase A*: mix 5 volumes of *butanol R*, 8 volumes of *tetrahydrofuran R*, 18 volumes of *acetonitrile R* and 69 volumes of a 4.1 g/L solution of *potassium dihydrogen phosphate R* filtered through a 0.45  $\mu$ m nylon membrane;
- *mobile phase B*: mix 5 volumes of *butanol R*, 8 volumes of *tetrahydrofuran R*, 40 volumes of a 4.1 g/L solution of *potassium dihydrogen phosphate R* filtered through a 0.45  $\mu$ m nylon membrane and 47 volumes of *acetonitrile R*;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 60	100	0
60 - 120	100 → 0	0 → 100
120 - 120.1	0 → 100	100 → 0
120.1 - 155	100	0

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 240 nm.

*Injection*: 50  $\mu$ L of test solution (a) and reference solutions (a) and (b).

*Identification of impurities*: use the chromatogram supplied with *ritonavir for peak identification CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities E, F, L, O and T.

*Relative retention* with reference to ritonavir (retention time = about 34 min): impurity E = about 0.39; impurity F = about 0.40; impurity L = about 0.8; impurity O = about 1.1; impurity T = about 2.6.

*System suitability*: reference solution (a):

- *peak-to-valley ratio*: minimum 1.2, where  $H_p$  = height above the baseline of the peak due to impurity E and  $H_v$  = height above the baseline of the lowest point of the curve separating this peak from the peak due to impurity F.

*Limits*:

- *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity F = 1.4; impurity L = 1.9; impurity T = 1.4;
- *impurities E, O*: for each impurity, not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);
- *impurity T*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
- *impurities F, L*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- *total*: not more than 10 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Heavy metals** (2.4.8): maximum 20 ppm.

1.0 g complies with test C. Prepare the reference solution using 2 mL of *lead standard solution (10 ppm Pb) R*.

**Water** (2.5.12): maximum 0.5 per cent, determined on 0.500 g.

**Sulfated ash** (2.4.14): maximum 0.2 per cent, determined on 1.0 g.

## ASSAY

Liquid chromatography (2.2.29) as described in the test for related substances with the following modification.

*Injection*: test solution (b) and reference solution (c).

Calculate the percentage content of  $C_{37}H_{48}N_6O_5S_2$  from the declared content of *ritonavir CRS*.

## STORAGE

Protected from light.

## IMPURITIES

*Specified impurities*: E, F, L, O, T.

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use* (2034). ## ROCURONIUM BROMIDE

### Rocuronii bromidum

 $C_{32}H_{53}BrN_2O_4$ 
 $M_r$  610

#### DEFINITION

1-[17β-(Acetyloxy)-3α-hydroxy-2β-(morpholin-4-yl)-5α-androstan-16β-yl]-1-(prop-2-enyl)pyrrolidinium bromide.

*Content*: 99.0 per cent to 101.0 per cent (anhydrous substance).

#### CHARACTERS

*Appearance*: almost white or pale yellow, slightly hygroscopic powder.

*Solubility*: freely soluble in water and in anhydrous ethanol.

#### IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

*Comparison*: Ph. Eur. reference spectrum of rocuronium bromide.

B. Solution S (see Tests) gives reaction (a) of bromides (2.3.1).

#### TESTS

**Solution S.** Dissolve 0.10 g in carbon dioxide-free water R and dilute to 10 mL with the same solvent.

**Appearance of solution.** Solution S is clear (2.2.1) and not more intensely coloured than reference solution BY<sub>5</sub> (2.2.2, Method II).

**Specific optical rotation** (2.2.7): + 28.5 to + 32.0 (anhydrous substance).

Dissolve 0.250 g in a 5.15 g/L solution of hydrochloric acid R and dilute to 25.0 mL with the same solution.

**pH** (2.2.3): 8.9 to 9.5 for solution S.

**Related substances.** Liquid chromatography (2.2.29).

*Solvent mixture*: water R, acetonitrile R1 (10:90 V/V).

*Test solution.* Dissolve 0.100 g of the substance to be examined in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

**Reference solution (a).** Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

**Reference solution (b).** Dissolve 5 mg of rocuronium for peak identification CRS (containing impurities A, B, C, F, G and H) in the solvent mixture and dilute to 5 mL with the solvent mixture.

**Column:**

- size:  $l = 0.25$  m,  $\emptyset = 4.6$  mm,
- stationary phase: silica gel for chromatography R (5  $\mu$ m),
- temperature: 30 °C.

**Mobile phase:** mix 100 volumes of a 4.53 g/L solution of tetramethylammonium hydroxide R adjusted to pH 7.4 with phosphoric acid R and 900 volumes of acetonitrile R1.

**Flow rate:** 2.0 mL/min.

**Detection:** spectrophotometer at 210 nm.

**Injection:** 5  $\mu$ L of the test solution, reference solutions (a) and (b) and the solvent mixture (blank).

**Run time:** 2.5 times the retention time of rocuronium.

**Relative retention** with reference to rocuronium (retention time = about 9 min): impurity A = about 0.20; impurity G = about 0.44; impurity F = about 0.75; impurity B = about 0.80; impurity D = about 0.90; impurity H = about 0.95; impurity C = about 1.20; impurity E = about 1.53.

**System suitability:** reference solution (b):

- the chromatogram obtained is similar to the chromatogram supplied with rocuronium for peak identification CRS.

**Limits:**

- **correction factors:** for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 0.47; impurity F = 1.26; impurity G = 0.43; impurity H = 0.35;
- **impurity A:** not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- **impurities B, C:** for each impurity, not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);
- **impurities D, E, F, G, H:** for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- **unspecified impurities:** for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- **total:** not more than 15 times the area of the principal peak in the chromatogram obtained with reference solution (a) (1.5 per cent);
- **disregard limit:** 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent); disregard the peaks due to the blank and to bromide ion eluting just before impurity A.

**Chlorides.** Liquid chromatography (2.2.29).

**Test solution.** Dissolve 20.0 mg of the substance to be examined in water R and dilute to 20.0 mL with the same solvent.

**Reference solution (a).** Dissolve 0.824 g of sodium chloride R and 0.644 g of sodium bromide R in water R and dilute to 1000.0 mL with the same solvent. Dilute 1.0 mL of this solution to 50.0 mL with water R.

**Reference solution (b).** Dissolve 0.824 g of sodium chloride R in water R and dilute to 1000.0 mL with the same solvent. Dilute 5.0 mL of the solution to 50.0 mL with water R. Dilute 2.0 mL of this solution to 50.0 mL with water R.

**Blank solution.** Water R.

**Precolumn:**

- size:  $l = 0.05$  m,  $\emptyset = 4.0$  mm,
- stationary phase: anion exchange resin R (13  $\mu$ m).

**Column:**

- size:  $l = 0.25$  m,  $\emptyset = 4.0$  mm,
- stationary phase: anion exchange resin R (13  $\mu$ m).

**Mobile phase:** a solution containing 0.063 g/L of sodium hydrogen carbonate R and 0.212 g/L of anhydrous sodium carbonate R.

**Flow rate:** 2.0 mL/min.

**Detection:** conductivity detector set at 100  $\mu$ S/V and maintained at 30 °C.

Use a self-generating anion suppressor.

**Injection:** 25  $\mu$ L.

**Retention times:** chloride = about 1.7 min; bromide = about 2.8 min.

**System suitability:** reference solution (a):

- **resolution:** minimum 2.5 between the peaks due to chloride and bromide.

**Limit:**

- **chlorides:** not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent).

**Heavy metals (2.4.8):** maximum 10 ppm.

2.0 g complies with test C. Prepare the reference solution using 2 mL of lead standard solution (10 ppm Pb) R.

**Water (2.5.12):** maximum 4.0 per cent, determined on 0.400 g.

**Sulfated ash (2.4.14):** maximum 0.1 per cent, determined on 1.0 g.

**ASSAY**

Dissolve 0.400 g in 40 mL of glacial acetic acid R. Titrate with 0.1 M perchloric acid, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M perchloric acid is equivalent to 60.97 mg of  $C_{32}H_{53}BrN_2O_4$ .

**STORAGE**

In an airtight container, protected from light.

**IMPURITIES**

**Specified impurities:** A, B, C, D, E, F, G, H.

A. R = CO-CH<sub>3</sub>: 3 $\alpha$ -hydroxy-2 $\beta$ -(morpholin-4-yl)-16 $\beta$ -(pyrrolidin-1-yl)-5 $\alpha$ -androstan-17 $\beta$ -yl acetate,

G. R = H: 2 $\beta$ -(morpholin-4-yl)-16 $\beta$ -(pyrrolidin-1-yl)-5 $\alpha$ -androstan-3 $\alpha$ , 17 $\beta$ -diol,

B. R = R' = CO-CH<sub>3</sub>: 1-[3 $\alpha$ , 17 $\beta$ -bis(acetyloxy)-2 $\beta$ -(morpholin-4-yl)-5 $\alpha$ -androstan-16 $\beta$ -yl]-1-(prop-2-enyl)pyrrolidinium,

C. R = R' = H: 1-[3 $\alpha$ , 17 $\beta$ -dihydroxy-2 $\beta$ -(morpholin-4-yl)-5 $\alpha$ -androstan-16 $\beta$ -yl]-1-(prop-2-enyl)pyrrolidinium,

D. R = CO-CH<sub>3</sub>, R' = H: 1-[3 $\alpha$ -(acetyloxy)-17 $\beta$ -hydroxy-2 $\beta$ -(morpholin-4-yl)-5 $\alpha$ -androstan-16 $\beta$ -yl]-1-(prop-2-enyl)pyrrolidinium,

- E. R = H: 1-[17β-(acetyloxy)-3α-hydroxy-2β-(pyrrolidin-1-yl)-5α-androstan-16β-yl]-1-(prop-2-enyl)pyrrolidinium,  
 F. R = CO-CH<sub>3</sub>: 1-[3α,17β-bis(acetyloxy)-2β-(pyrrolidin-1-yl)-5α-androstan-16β-yl]-1-(prop-2-enyl)pyrrolidinium,

- H. 1-[17β-(acetyloxy)-2-(morpholin-4-yl)-3-oxo-5α-androst-1-en-16β-yl]-1-(prop-2-enyl)pyrrolidinium.

01/2008:2335

## ROPIVACAINE HYDROCHLORIDE MONOHYDRATE

### Ropivacaini hydrochloridum monohydricum

C<sub>17</sub>H<sub>27</sub>ClN<sub>2</sub>O<sub>2</sub>·H<sub>2</sub>O  
 [132112-35-7]

M<sub>r</sub> 328.9

#### DEFINITION

(-)-(2*S*)-*N*-(2,6-Dimethylphenyl)-1-propylpiperidine-2-carboxamide hydrochloride monohydrate.

*Content*: 99.0 per cent to 101.0 per cent (anhydrous substance).

#### CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: soluble in water and in ethanol (96 per cent), slightly soluble in methylene chloride.

#### IDENTIFICATION

Carry out either tests A, C, D or tests A, B, C.

A. Infrared absorption spectrophotometry (2.2.24).

*Comparison*: ropivacaine hydrochloride monohydrate CRS.

B. Specific optical rotation (2.2.7): -64.0 to -74.0 (anhydrous substance).

Mix 2 mL of a 200 g/L solution of sodium hydroxide R and 30 mL of water R and dilute to 100.0 mL with ethanol (96 per cent) R (solution A). Dissolve 0.500 g of the substance to be examined in solution A and dilute to 50.0 mL with solution A.

C. It gives reaction (a) of chlorides (2.3.1).

D. Enantiomeric purity (see Tests).

#### TESTS

**Solution S.** Dissolve 0.50 g in carbon dioxide-free water R and dilute to 25.0 mL with the same solvent.

**Appearance of solution.** Solution S is clear (2.2.1).

**pH** (2.2.3): 4.5 to 6.0 for solution S.

**Absorbance** (2.2.25): maximum 0.030 at 405 nm and maximum 0.025 at 436 nm, determined on solution S prepared immediately before use, with a path length of 5 cm and using water R as the compensation liquid.

**Related substances.** Liquid chromatography (2.2.29).

*Test solution.* Dissolve 55 mg of the substance to be examined in the mobile phase and dilute to 20 mL with the mobile phase.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Reference solution (b).* Dissolve 5 mg of the substance to be examined and 5 mg of bupivacaine hydrochloride CRS (impurity A) in the mobile phase and dilute to 5 mL with the mobile phase. Dilute 1 mL of this solution to 100 mL with the mobile phase.

*Column*:

– *size*: *l* = 0.15 m, Ø = 3.9 mm;

– *stationary phase*: spherical end-capped octadecylsilyl silica gel for chromatography R (4 µm).

*Mobile phase*: mix 1.3 mL of a 138 g/L solution of sodium dihydrogen phosphate R and 32.5 mL of an 89 g/L solution of disodium hydrogen phosphate R and dilute to 1000 mL with water R; mix equal volumes of this solution (pH 8.0) and acetonitrile R.

*Flow rate*: 1.0 mL/min.

*Injection*: 20 µL.

*Detection*: spectrophotometer at 240 nm.

*Run time*: 2.5 times the retention time of ropivacaine.

*Relative retention* with reference to ropivacaine (retention time = about 6 min): impurity A = about 1.6.

*System suitability*: reference solution (b):

– *resolution*: minimum 6.0 between the peaks due to ropivacaine and impurity A.

*Limits*:

– *impurity A*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);

– *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);

– *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Impurity H.** Liquid chromatography (2.2.29) as described in the test for related substances with the following modifications.

*Test solution.* Dissolve 0.100 g of the substance to be examined in the mobile phase and dilute to 10.0 mL with the mobile phase.

*Reference solution.* Dissolve 13.0 mg of 2,6-dimethylaniline hydrochloride R in the mobile phase and dilute to 100.0 mL with the mobile phase. Dilute 1.0 mL of the solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Retention time*: impurity H = about 2-3 min.

*Limit*:

– *impurity H*: not more than the area of the principal peak in the chromatogram obtained with the reference solution (10 ppm).

**Enantiomeric purity.** Capillary electrophoresis (2.2.47): use the normalisation procedure.

*Test solution.* Dissolve 50 mg of the substance to be examined in water R and dilute to 25 mL with the same solvent.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 200.0 mL with water R.

**Reference solution (b).** Dissolve 1.5 mg of the substance to be examined and 1.5 mg of *ropivacaine impurity G CRS* in *water R* and dilute to 100 mL with the same solvent.

**Capillary:**

- **material:** fused silica;
- **size:** effective length = about 72 cm, total length = 80 cm,  $\varnothing = 50 \mu\text{m}$ .

**Temperature:** 30 °C.

**CZE buffer:** prepare a 13.3 g/L solution of *dimethyl- $\beta$ -cyclodextrin R* in an 11.5 g/L solution of *phosphoric acid R* previously adjusted to pH 3.0 with *triethanolamine R*. The CZE buffer is prepared and filtered through a membrane filter (nominal pore size 0.45  $\mu\text{m}$ ) immediately before use.

**Detection:** spectrophotometer at 206 nm.

**Preconditioning of the capillary:** rinse the capillary at 100 kPa with *water R* for 1 min, with 0.1 M *sodium hydroxide* for 10 min and with *water R* for 3 min. If the capillary is new or dry, increase the sodium hydroxide rinse to 30 min.

**Between-run rinsing:** rinse the capillary at 100 kPa with *water R* for 1 min, with 0.1 M *sodium hydroxide* for 4 min, with *water R* for 1 min and with the CZE buffer for 4 min.

**Injection:** under pressure (5 kPa) for 5 s.

**Migration:** apply a field strength of 375 V/cm with an initial ramp of 500 V/s and a positive polarity corresponding to a current of 40–45  $\mu\text{A}$ .

**Run time:** 30 min.

**System suitability:**

- **resolution:** minimum 3.7 between the peaks due to impurity G (1<sup>st</sup> peak) and (S)-ropivacaine in the electropherogram obtained with reference solution (b); if necessary, increase the dimethyl- $\beta$ -cyclodextrin concentration in the CZE buffer or vary the pH between 2.9 and 3.1 or lower the temperature;
- **signal-to-noise ratio:** minimum 10 for the principal peak in the electropherogram obtained with reference solution (a).

**Limit:**

- **impurity G:** maximum 0.5 per cent.

**Heavy metals (2.4.8):** maximum 10 ppm.

Dissolve 2.0 g in a mixture of 15 volumes of *water R* and 85 volumes of *methanol R* and dilute to 20 mL with the same mixture of solvents. 12 mL of the solution complies with test B. Prepare the reference solution using lead standard solution (1 ppm Pb) obtained by diluting *lead standard solution R (100 ppm Pb)* with a mixture of 15 volumes of *water R* and 85 volumes of *methanol R*.

**Water (2.5.12):** 5.0 per cent to 6.0 per cent, determined on 0.100 g.

**Sulfated ash (2.4.14):** maximum 0.1 per cent, determined on 1.0 g.

**ASSAY**

Dissolve 0.250 g in a mixture of 10 mL of *water R* and 40 mL of *ethanol (96 per cent) R*. Add 5.0 mL of 0.01 M *hydrochloric acid*. Carry out a potentiometric titration (2.2.20), using 0.1 M *sodium hydroxide*. Read the volume added between the 2 points of inflexion.

1 mL of 0.1 M *sodium hydroxide* is equivalent to 31.09 mg of  $\text{C}_{41}\text{H}_{76}\text{N}_2\text{O}_{15}$ .

**IMPURITIES**

**Specified impurities:** A, G, H.

**Other detectable impurities** (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): B, C, D, E, F.

A. R =  $[\text{CH}_2]_3\text{-CH}_3$ : (S)-bupivacaine,

B. R = H: (-)-(2S)-N-(2,6-dimethylphenyl)piperidine-2-carboxamide,

C. R =  $\text{CH}_3$ : (-)-(2S)-N-(2,6-dimethylphenyl)-1-methylpiperidine-2-carboxamide ((S)-mepivacaine),

D. R =  $\text{C}_2\text{H}_5$ : (-)-(2S)-N-(2,6-dimethylphenyl)-1-ethylpiperidine-2-carboxamide,

E. R =  $\text{CH}(\text{CH}_3)_2$ : (-)-(2S)-N-(2,6-dimethylphenyl)-1-(1-methylethyl)piperidine-2-carboxamide,

F. (8aS)-2-(2,6-dimethylphenyl)-3,3-dimethylhexahydroimidazo[1,5-a]pyridin-1(5H)-one (acetone adduct),

G. (+)-(2R)-N-(2,6-dimethylphenyl)-1-propylpiperidine-2-carboxamide ((R)-ropivacaine),

H. 2,6-dimethylaniline.

## ROXITHROMYCIN

### Roxithromycinum

$\text{C}_{41}\text{H}_{76}\text{N}_2\text{O}_{15}$   
[80214-83-1]

$M_r$  837

**DEFINITION**

(3R,4S,5S,6R,7R,9R,11S,12R,13S,14R)-4-[(2,6-Dideoxy-3-C-methyl-3-O-methyl- $\alpha$ -L-ribo-hexopyranosyl)oxy]-14-ethyl-7,12,13-trihydroxy-10-[(E)-[(2-methoxyethoxy)methoxy]imino]-3,5,7,9,11,13-hexamethyl-6-[[3,4,6-trideoxy-3-(dimethylamino)- $\beta$ -D-xyllo-hexopyranosyl]oxy]oxacyclotetradecan-2-one (erythromycin 9-(E)-[O-[(2-methoxyethoxy)methyl]oxime]).

Semi-synthetic product derived from a fermentation product.

**Content:** 96.0 per cent to 102.0 per cent (anhydrous substance).

**CHARACTERS**

**Appearance:** white or almost white, crystalline powder.

**Solubility:** very slightly soluble in water, freely soluble in acetone, in alcohol and in methylene chloride. It is slightly soluble in dilute hydrochloric acid.

It shows polymorphism (5.9).

#### IDENTIFICATION

##### A. Infrared absorption spectrophotometry (2.2.24).

**Comparison:** roxithromycin CRS.

If the spectra obtained shows differences, prepare further spectra using 90 g/L solutions in *methylene chloride R*.

##### B. Examine the chromatograms obtained in the assay.

**Results:** the principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (a).

#### TESTS

**Appearance of solution.** The solution is clear (2.2.1) and colourless (2.2.2, Method II).

Dissolve 0.2 g in *methanol R* and dilute to 20 mL with the same solvent.

**Specific optical rotation (2.2.7):** –93 to –96 (anhydrous substance).

Dissolve 0.500 g in *acetone R* and dilute to 50.0 mL with the same solvent.

**Related substances.** Liquid chromatography (2.2.29).

**Solution A.** Mix 30 volumes of *acetonitrile R* and 70 volumes of a 48.6 g/L solution of *ammonium dihydrogen phosphate R*, adjusted to pH 5.3 with *dilute sodium hydroxide solution R*.

**Test solution.** Dissolve 50.0 mg of the substance to be examined in solution A and dilute to 25.0 mL with solution A.

**Reference solution (a).** Dissolve 50.0 mg of *roxithromycin CRS* in solution A and dilute to 25.0 mL with solution A.

**Reference solution (b).** Dilute 1.0 mL of reference solution (a) to 100.0 mL with solution A.

**Reference solution (c).** Dissolve 2.0 mg of *roxithromycin for system suitability CRS* in solution A and dilute to 1.0 mL with solution A.

**Reference solution (d).** Dilute 1.0 mL of *toluene R* to 100.0 mL with *acetonitrile R*. Dilute 0.2 mL of this solution to 200.0 mL with solution A.

**Column:**

- size:  $l = 0.15$  m,  $\varnothing = 4.6$  mm,
- stationary phase: spherical *end-capped octadecylsilyl silica gel for chromatography R* (5  $\mu$ m) with a 10 nm pore size and a carbon loading of about 19 per cent,
- temperature: 15 °C.

**Mobile phase:**

- mobile phase A: mix 26 volumes of *acetonitrile R* and 74 volumes of a 59.7 g/L solution of *ammonium dihydrogen phosphate R*, adjusted to pH 4.3 with *dilute sodium hydroxide solution R*,
- mobile phase B: *water R*, *acetonitrile R* (30:70 V/V),

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 50	100	0
50 - 51	100 → 90	0 → 10
51 - 80	90	10
80 - 81	90 → 100	10 → 0
81 - 100	100	0

**Flow rate:** 1.1 mL/min.

**Detection:** spectrophotometer at 205 nm.

**Injection:** 20  $\mu$ L, using an injector maintained at 8 °C, of the test solution and reference solutions (b), (c) and (d).

**Relative retention** with reference to roxithromycin (retention time = about 22 min): impurity A = about 0.28; impurity B = about 0.31; impurity C = about 0.33; impurity D = about 0.62; impurity E = about 0.67; impurity F = about 0.83; impurity G = about 1.15; impurity K = about 1.7; impurity H = about 1.85; impurity J = about 2.65; impurity I = about 3.1.

**System suitability:** reference solution (c):

- **peak-to-valley ratio:** minimum 2.0, where  $H_p$  = height above the baseline of the peak due to impurity G and  $H_v$  = height above the baseline of the lowest point of the curve separating this peak from the peak due to roxithromycin.

**Limits:**

- **impurity G:** not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent),
- **impurities A, B, C, D, E, F, H, I, J:** for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent),
- **total:** not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (3.0 per cent),
- **disregard limit:** 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent). Disregard any peak due to toluene (use reference solution (d) to identify it).

**Heavy metals (2.4.8):** maximum 10 ppm.

Dissolve 2.0 g in a mixture of 15 volumes of *water R* and 85 volumes of *acetone R* and dilute to 20 mL with the same mixture of solvents. 12 mL of the solution complies with the limit test B. Prepare the standard using lead standard solution (1 ppm Pb) obtained by diluting *lead standard solution (100 ppm Pb) R* with a mixture of 15 volumes of *water R* and 85 volumes of *acetone R*.

**Water (2.5.12):** maximum 3.0 per cent, determined on 0.200 g.

**Sulfated ash (2.4.14):** maximum 0.1 per cent, determined on 1.0 g.

#### ASSAY

Liquid chromatography (2.2.29) as described in the test for related substances, with the following modifications.

**Column:**

- size:  $l = 0.25$  m.

**Mobile phase:** mix 307 volumes of *acetonitrile R* and 693 volumes of a 49.1 g/L solution of *ammonium dihydrogen phosphate R* adjusted to pH 5.3 with *dilute sodium hydroxide solution R*.

**Flow rate:** 1.5 mL/min.

**Injection:** test solution and reference solutions (a) and (c).

**Retention time:** roxithromycin = about 12 min.

**System suitability:** reference solution (c):

- **peak-to-valley ratio:** minimum 1.5, where  $H_p$  = height above the baseline of the peak due to impurity G and  $H_v$  = height above the baseline of the lowest point of the curve separating this peak from the peak due to roxithromycin.

#### STORAGE

In an airtight container.

#### IMPURITIES

**Specified impurities:** A, B, C, D, E, F, G, H, I, J.

**Other detectable impurities** (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use*

(2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*: K.

## RUTOSIDE TRIHYDRATE

### Rutosidum trihydricum

C<sub>27</sub>H<sub>30</sub>O<sub>16</sub>·3H<sub>2</sub>O

M<sub>r</sub> 665

#### DEFINITION

3-[[6-*O*-(6-Deoxy- $\alpha$ -*L*-mannopyranosyl)- $\beta$ -*D*-glucopyranosyl]oxy]-2-(3,4-dihydroxyphenyl)-5,7-dihydroxy-4*H*-1-benzopyran-4-one.

*Content*: 95.0 per cent to 101.0 per cent (anhydrous substance).

#### CHARACTERS

*Appearance*: yellow or greenish-yellow, crystalline powder.

*Solubility*: practically insoluble in water, soluble in methanol, sparingly soluble in ethanol (96 per cent), practically insoluble in methylene chloride. It dissolves in solutions of alkali hydroxides.

#### IDENTIFICATION

*First identification*: B.

*Second identification*: A, C, D.

- A. Dissolve 50.0 mg in *methanol R*, dilute to 250.0 mL with the same solvent and filter if necessary. Dilute 5.0 mL of the solution to 50.0 mL with *methanol R*. Examined between

210 nm and 450 nm (2.2.25), the solution shows 2 absorption maxima, at 257 nm and 358 nm. The specific absorbance at the maximum at 358 nm is 305 to 330, calculated with reference to the anhydrous substance.

B. Infrared absorption spectrophotometry (2.2.24).

*Comparison: rutoside trihydrate CRS.*

C. Thin-layer chromatography (2.2.27).

*Test solution.* Dissolve 25 mg of the substance to be examined in *methanol R* and dilute to 10.0 mL with the same solvent.

*Reference solution.* Dissolve 25 mg of *rutoside trihydrate CRS* in *methanol R* and dilute to 10.0 mL with the same solvent.

*Plate: TLC silica gel G plate R.*

*Mobile phase: butanol R, anhydrous acetic acid R, water R, methyl ethyl ketone R, ethyl acetate R* (5:10:10:30:50 V/V/V/V/V).

*Application: 10 µL.*

*Development: over a path of 10 cm.*

*Drying: in air.*

*Detection: spray with a mixture of 7.5 mL of a 10 g/L solution of potassium ferricyanide R and 2.5 mL of ferric chloride solution R1 and examine for 10 min.*

*Results: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.*

D. Dissolve 10 mg in 5 mL of *ethanol (96 per cent) R*, add 1 g of *zinc R* and 2 mL of *hydrochloric acid R1*. A red colour develops.

## TESTS

**Light absorbing impurities (2.2.25):** maximum 0.10 at wavelengths between 450 nm and 800 nm.

Dissolve 0.200 g in 40 mL of *2-propanol R*. Stir for 15 min, dilute to 50.0 mL with *2-propanol R* and filter.

**Substances insoluble in methanol:** maximum 3 per cent.

Shake 2.5 g for 15 min in 50 mL of *methanol R* at 20-25 °C. Filter under reduced pressure through a sintered-glass filter (1.6) (2.1.2) previously dried for 15 min at 100-105 °C, allowed to cool in a desiccator and tared. Wash the filter 3 times with 20 mL of *methanol R*. Dry the filter for 30 min at 100-105 °C. Allow to cool and weigh. The residue weighs a maximum of 75 mg.

**Related substances.** Liquid chromatography (2.2.29).

*Test solution.* Dissolve 0.10 g of the substance to be examined in 20 mL of *methanol R* and dilute to 100.0 mL with mobile phase B.

*Reference solution (a).* Dissolve 10.0 mg of *rutoside trihydrate CRS* in 10.0 mL of *methanol R*.

*Reference solution (b).* Dilute 1.0 mL of reference solution (a) to 50.0 mL with mobile phase B.

*Column:*

- *size: l* = 0.25 m,  $\varnothing$  = 4.0 mm,
- *stationary phase: octylsilyl silica gel for chromatography R* (5 µm),
- *temperature: 30 °C.*

*Mobile phase:*

- *mobile phase A: mix 5 volumes of tetrahydrofuran R with 95 volumes of a 15.6 g/L solution of sodium dihydrogen phosphate R adjusted to pH 3.0 with phosphoric acid R,*
- *mobile phase B: mix 40 volumes of tetrahydrofuran R with 60 volumes of a 15.6 g/L solution of sodium dihydrogen phosphate R adjusted to pH 3.0 with phosphoric acid R,*

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 10	50 → 0	50 → 100
10 - 15	0	100

*Flow rate: 1 mL/min.*

*Detection: spectrophotometer at 280 nm.*

*Injection: 20 µL.*

*Relative retention* with reference to rutoside (retention time = about 7 min): impurity B = about 1.1; impurity A = about 1.2; impurity C = about 2.5.

*System suitability: reference solution (a):*

- *peak-to-valley ratio:* minimum 10, where  $H_p$  = height above the baseline of the peak due to impurity B and  $H_v$  = height above the baseline of the lowest point of the curve separating this peak from the peak due to rutoside.

*Limits: locate the impurities by comparison with the chromatogram provided with rutoside trihydrate CRS:*

- *correction factors:* for the calculation of contents, multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 0.8; impurity C = 0.5,
- *impurity A:* not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (2.0 per cent),
- *impurity B:* not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (2.0 per cent),
- *impurity C:* not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (2.0 per cent),
- *total:* not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (4.0 per cent),
- *disregard limit:* 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent).

**Water (2.5.12):** 7.5 per cent to 9.5 per cent, determined on 0.100 g.

**Sulfated ash (2.4.14):** maximum 0.1 per cent, determined on 1.0 g.

## ASSAY

Dissolve 0.200 g in 20 mL of *dimethylformamide R*. Titrate with 0.1 M *tetrabutylammonium hydroxide*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *tetrabutylammonium hydroxide* is equivalent to 30.53 mg of  $C_{27}H_{30}O_{16}$ .

## STORAGE

Protected from light.

## IMPURITIES

- A. 2-(3,4-dihydroxyphenyl)-3-(β-D-glucopyranosyloxy)-5,7-dihydroxy-4H-1-benzopyran-4-one (isoquercitrin),

B. 3-[[6-O-(6-deoxy- $\alpha$ -L-mannopyranosyl)- $\beta$ -D-glucopyranosyl]oxy]-5,7-dihydroxy-2-(4-hydroxyphenyl)-4H-1-benzopyran-4-one (kaempferol 3-rutinoside),

C. 2-(3,4-dihydroxyphenyl)-3,5,7-trihydroxy-4H-1-benzopyran-4-one (quercetin).

## SACCHARIN

## Saccharinum

$C_7H_5NO_3S$   
[81-07-2]

$M_r$  183.2

## DEFINITION

1,2-Benzisothiazol-3(2H)-one 1,1-dioxide.

Content: 99.0 per cent to 101.0 per cent (dried substance).

## CHARACTERS

Appearance: white or almost white, crystalline powder or colourless crystals.

Solubility: sparingly soluble in boiling water and in ethanol (96 per cent), slightly soluble in cold water. It dissolves in dilute solutions of alkali hydroxides and carbonates.

## IDENTIFICATION

First identification: C.

Second identification: A, B, D, E.

A. A saturated solution, prepared without heating, turns *blue litmus paper R* red.

B. Melting point (2.2.14): 226 °C to 230 °C.

C. Infrared absorption spectrophotometry (2.2.24).

Preparation: discs.

Comparison: *saccharin CRS*.

D. Mix about 10 mg with about 10 mg of *resorcinol R*, add 0.25 mL of *sulfuric acid R* and carefully heat the mixture over a naked flame until a dark green colour is produced. Allow to cool, add 10 mL of *water R* and *dilute sodium hydroxide solution R* until an alkaline reaction is produced. An intense green fluorescence develops.

E. To 0.2 g add 1.5 mL of *dilute sodium hydroxide solution R*, evaporate to dryness and heat the residue carefully until it melts, avoiding carbonisation. Allow to cool, dissolve the mass in about 5 mL of *water R*, add *dilute hydrochloric acid R* until a weak acid reaction is produced and filter, if necessary. To the filtrate add 0.2 mL of *ferric chloride solution R2*. A violet colour develops.

## TESTS

**Solution S.** Dissolve 5.0 g in 20 mL of a 200 g/L solution of *sodium acetate R* and dilute to 25 mL with the same solution.

**Appearance of solution.** Solution S is clear (2.2.1) and colourless (2.2.2, *Method II*).

**o- and p-Toluenesulfonamide.** Gas chromatography (2.2.28).

**Internal standard solution.** Dissolve 25 mg of *caffeine R* in *methylene chloride R* and dilute to 100 mL with the same solvent.

**Test solution.** Suspend 10.0 g of the substance to be examined in 20 mL of *water R* and dissolve using 5-6 mL of *strong sodium hydroxide solution R*. If necessary adjust the solution to pH 7-8 with 1 M *sodium hydroxide* or 1 M *hydrochloric acid* and dilute to 50 mL with *water R*. Shake the solution with 4 quantities, each of 50 mL, of *methylene chloride R*. Combine the lower layers, dry over *anhydrous sodium sulfate R* and filter. Wash the filter and the sodium sulfate with 10 mL of *methylene chloride R*. Combine the solution and the washings and evaporate almost to dryness in a water-bath at a temperature not exceeding 40 °C. Using a small quantity

of *methylene chloride R*, quantitatively transfer the residue into a suitable 10 mL tube, evaporate to dryness in a current of nitrogen and dissolve the residue in 1.0 mL of the internal standard solution.

**Blank solution.** Evaporate 200 mL of *methylene chloride R* to dryness in a water-bath at a temperature not exceeding 40 °C. Dissolve the residue in 1 mL of *methylene chloride R*.

**Reference solution.** Dissolve 20.0 mg of *o-toluenesulfonamide R* and 20.0 mg of *p-toluenesulfonamide R* in *methylene chloride R* and dilute to 100.0 mL with the same solvent. Dilute 5.0 mL of the solution to 50.0 mL with *methylene chloride R*. Evaporate 5.0 mL of the final solution to dryness in a current of nitrogen. Dissolve the residue in 1.0 mL of the internal standard solution.

Column:

- material: fused silica,
- size:  $l = 10$  m,  $\varnothing = 0.53$  mm,
- stationary phase: *polymethylphenylsiloxane R* (film thickness 2  $\mu$ m).

Carrier gas: *nitrogen for chromatography R*.

Flow rate: 10 mL/min.

Split ratio: 1:2.

Temperature:

- column: 180 °C,
- injection port and detector: 250 °C.

Detection: flame ionisation.

Injection: 1  $\mu$ L.

Order of elution: *o-toluenesulfonamide*, *p-toluenesulfonamide*, *caffeine*.

System suitability:

- resolution: minimum 1.5 between the peaks due to *o-toluenesulfonamide* and *p-toluenesulfonamide* in the chromatogram obtained with the reference solution,
- the chromatogram obtained with the blank solution does not show any peak with the same retention times as the internal standard, *o-toluenesulfonamide* and *p-toluenesulfonamide*.

Limits:

- *o-toluenesulfonamide*: the ratio of its area to that of the internal standard is not greater than the corresponding ratio in the chromatogram obtained with the reference solution (10 ppm),
- *p-toluenesulfonamide*: the ratio of its area to that of the internal standard is not greater than the corresponding ratio in the chromatogram obtained with the reference solution (10 ppm).

**Readily carbonisable substances.** Dissolve 0.20 g in 5 mL of *sulfuric acid R* and keep at 48-50 °C for 10 min. When viewed against a white background, the solution is not more intensely coloured than a solution prepared by mixing 0.1 mL of red primary solution, 0.1 mL of blue primary solution and 0.4 mL of yellow primary solution (2.2.2) with 4.4 mL of *water R*.

**Heavy metals (2.4.8):** maximum 20 ppm.

Dilute 10 mL of solution S to 20 mL with *water R*. 12 mL of the solution complies with test A. Prepare the reference solution using *lead standard solution (2 ppm Pb) R*.

**Loss on drying (2.2.32):** maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 2 h.

**Sulfated ash (2.4.14):** maximum 0.2 per cent, determined on 1.0 g.

## ASSAY

Dissolve 0.500 g in 40 mL of *ethanol (96 per cent) R*. Add 40 mL of *water R*. Titrate with 0.1 M *sodium hydroxide*, using a 10 g/L solution of *phenolphthalein R* in *ethanol (96 per cent) R* as indicator. Carry out a blank titration.

1 mL of 0.1 M *sodium hydroxide* is equivalent to 18.32 mg of  $C_7H_5NO_3S$ .

01/2008:0787

## SACCHARIN SODIUM

## Saccharinum natricum

$C_7H_4NNaO_3S$   
[128-44-9]

 $M_r$  205.2

## DEFINITION

2-Sodio-1,2-benzisothiazol-3(2H)-one 1,1-dioxide.

*Content*: 99.0 per cent to 101.0 per cent (anhydrous substance).

It may contain a variable quantity of water.

## CHARACTERS

*Appearance*: white or almost white, crystalline powder or colourless crystals, efflorescent in dry air.*Solubility*: freely soluble in water, sparingly soluble in ethanol (96 per cent).

## IDENTIFICATION

*First identification*: B, E.*Second identification*: A, C, D, E.

A. Melting point (2.2.14): 226 °C to 230 °C.

To 5 mL of solution S (see Tests) add 3 mL of dilute hydrochloric acid R. A white precipitate is formed. Filter and wash with water R. Dry the precipitate at 100-105 °C.

B. Infrared absorption spectrophotometry (2.2.24).

*Preparation*: discs; dry the substances at 100-105 °C before use.*Comparison*: saccharin sodium CRS.

C. Mix about 10 mg with about 10 mg of resorcinol R, add 0.25 mL of sulfuric acid R and carefully heat the mixture over a naked flame until a dark green colour is produced. Allow to cool, add 10 mL of water R and dilute sodium hydroxide solution R until an alkaline reaction is produced. An intense green fluorescence develops.

D. To 0.2 g add 1.5 mL of dilute sodium hydroxide solution R, evaporate to dryness and heat the residue carefully until it melts, avoiding carbonisation. Allow to cool, dissolve the mass in about 5 mL of water R, add dilute hydrochloric acid R until a weak acid reaction is produced and filter, if necessary. To the filtrate add 0.2 mL of ferric chloride solution R2. A violet colour develops.

E. Solution S gives reaction (a) of sodium (2.3.1).

## TESTS

**Solution S.** Dissolve 5.0 g in carbon dioxide-free water R and dilute to 50.0 mL with the same solvent.**Appearance of solution.** The solution is clear (2.2.1) and colourless (2.2.2, Method II).

Dissolve 5.0 g in 25 mL of carbon dioxide-free water R.

**Acidity or alkalinity.** To 10 mL of solution S add about 0.05 mL of a 10 g/L solution of phenolphthalein R in ethanol (96 per cent) R. The solution is not pink. Add 0.1 mL of sodium hydroxide 0.1 M. The solution becomes pink.**o- and p-Toluenesulfonamide.** Gas chromatography (2.2.28).*Internal standard solution.* Dissolve 25 mg of caffeine R in methylene chloride R and dilute to 100 mL with the same solvent.*Test solution.* Dissolve 10.0 g of the substance to be examined in 50 mL of water R. If necessary adjust the solution to pH 7-8 by addition of 1 M sodium hydroxide or 1 M hydrochloric*acid.* Shake the solution with 4 quantities, each of 50 mL, of methylene chloride R. Combine the lower layers, dry over anhydrous sodium sulfate R and filter. Wash the filter and the sodium sulfate with 10 mL of methylene chloride R. Combine the solution and the washings and evaporate almost to dryness in a water-bath at a temperature not exceeding 40 °C. Using a small quantity of methylene chloride R, quantitatively transfer the residue into a suitable 10 mL tube, evaporate to dryness in a current of nitrogen R and add 1.0 mL of the internal standard solution.*Blank solution.* Evaporate 200 mL of methylene chloride R to dryness in a water-bath at a temperature not exceeding 40 °C. Dissolve the residue in 1 mL of methylene chloride R.*Reference solution.* Dissolve 20.0 mg of o-toluenesulfonamide R and 20.0 mg of p-toluenesulfonamide R in methylene chloride R and dilute to 100.0 mL with the same solvent. Dilute 5.0 mL of the solution to 50.0 mL with methylene chloride R. Evaporate 5.0 mL of the final solution to dryness in a current of nitrogen R. Take up the residue using 1.0 mL of the internal standard solution.*Column*:

- *material*: fused silica,
- *size*:  $l = 10$  m,  $\varnothing = 0.53$  mm,
- *stationary phase*: polymethylphenylsiloxane R (film thickness 2  $\mu$ m).

*Carrier gas*: nitrogen for chromatography R.*Flow rate*: 10 mL/min.*Split ratio*: 1:2.*Temperature*:

- *column*: 180 °C,
- *injection port and detector*: 250 °C.

*Detection*: flame ionisation.*Injection*: 1  $\mu$ L.*Elution order*: o-toluenesulfonamide, p-toluenesulfonamide, caffeine.*System suitability*:

- *resolution*: minimum 1.5 between the peaks due to o-toluenesulfonamide and p-toluenesulfonamide in the chromatogram obtained with the reference solution,
- the chromatogram obtained with the blank solution does not show any peak with the same retention times as the internal standard, o-toluenesulfonamide and p-toluenesulfonamide.

*Limits*:

- *o-toluenesulfonamide*: the ratio of its area to that of the internal standard is not greater than the corresponding ratio in the chromatogram obtained with the reference solution (10 ppm),
- *p-toluenesulfonamide*: the ratio of its area to that of the internal standard is not greater than the corresponding ratio in the chromatogram obtained with the reference solution (10 ppm).

**Readily carbonisable substances.** Dissolve 0.20 g in 5 mL of sulfuric acid R and keep at 48-50 °C for 10 min. When viewed against a white background, the solution is not more intensely coloured than a solution prepared by mixing 0.1 mL of red primary solution, 0.1 mL of blue primary solution and 0.4 mL of yellow primary solution (2.2.2) with 4.4 mL of water R.**Heavy metals** (2.4.8): maximum 20 ppm.

12 mL of solution S complies with test A. Prepare the reference solution using lead standard solution (2 ppm Pb) R.

**Water** (2.5.12): maximum 15.0 per cent, determined on 0.200 g.

## ASSAY

Dissolve 0.150 g in 50 mL of anhydrous acetic acid R, with slight heating if necessary. Titrate with 0.1 M perchloric acid, determining the end-point potentiometrically (2.2.20). Carry out a blank titration.

1 mL of 0.1 M perchloric acid is equivalent to 20.52 mg of  $C_7H_4NNaO_3S$ .

## STORAGE

In an airtight container.

01/2010:2088

## SAFFLOWER OIL, REFINED

## Carthami oleum raffinatum

## DEFINITION

Fatty oil obtained from seeds of *Carthamus tinctorius* L. (type I) or from seeds of hybrids of *Carthamus tinctorius* L. (type II), by expression and/or extraction followed by refining. Type II refined safflower oil is rich in oleic (*cis*-9-octadecenoic) acid. A suitable antioxidant may be added.

## CHARACTERS

*Appearance*: clear, viscous, yellow or pale yellow liquid.

*Solubility*: practically insoluble in ethanol (96 per cent), miscible with light petroleum (bp: 40-60 °C).

	Type I refined safflower oil	Type II refined safflower oil
Relative density	about 0.922	about 0.914
Refractive index	about 1.476	about 1.472

## IDENTIFICATION

*First identification*: B.

*Second identification*: A.

A. Identification of fatty oils by thin-layer chromatography (2.3.2).

*Results*: the chromatogram obtained is similar to the corresponding chromatogram for type I or type II shown in Figure 2.3.2.-1.

B. Composition of fatty acids (see Tests).

## TESTS

**Acid value** (2.5.1): maximum 0.5.

**Peroxide value** (2.5.5, *Method A*): maximum 10.0, or maximum 5.0 if intended for use in the manufacture of parenteral preparations.

**Unsaponifiable matter** (2.5.7): maximum 1.5 per cent, determined on 5.0 g.

**Alkaline impurities** (2.4.19). It complies with the test.

**Composition of fatty acids** (2.4.22, *Method A*). Use the mixture of calibrating substances in Table 2.4.22.-3.

*Composition of the fatty-acid fraction of type I refined safflower oil*:

- saturated fatty acids of chain length less than C14: maximum 0.2 per cent;
- myristic acid: maximum 0.2 per cent;
- palmitic acid: 4.0 per cent to 10.0 per cent;
- stearic acid: 1.0 per cent to 5.0 per cent;
- oleic acid: 8.0 per cent to 21.0 per cent;
- linoleic acid: 68.0 per cent to 83.0 per cent;
- linolenic acid: maximum 0.5 per cent;
- arachidic acid: maximum 0.5 per cent;
- eicosenoic acid: maximum 0.5 per cent;
- behenic acid: maximum 1.0 per cent.

*Composition of the fatty-acid fraction of type II refined safflower oil*:

- saturated fatty acids of chain length less than C14: maximum 0.2 per cent;
- myristic acid: maximum 0.2 per cent;

- palmitic acid: 3.6 per cent to 6.0 per cent;
- stearic acid: 1.0 per cent to 5.0 per cent;
- oleic acid: 70.0 per cent to 84.0 per cent;
- linoleic acid: 7.0 per cent to 23.0 per cent;
- linolenic acid: maximum 0.5 per cent;
- arachidic acid: maximum 1.0 per cent;
- eicosenoic acid: maximum 1.0 per cent;
- behenic acid: maximum 1.2 per cent.

**Brassicasterol** (2.4.23): maximum 0.3 per cent in the sterol fraction of the oil.

**Water** (2.5.32): maximum 0.1 per cent, determined on 1.00 g.

## STORAGE

In a well-filled, airtight container, protected from light.

## LABELLING

The label states:

- where applicable, that the substance is suitable for use in the manufacture of parenteral preparations;
- the type of oil (type I or type II).

01/2011:0529

## SALBUTAMOL

## Salbutamolium

$C_{13}H_{21}NO_3$   
[18559-94-9]

$M_r$  239.3

## DEFINITION

(1*RS*)-2-[(1,1-Dimethylethyl)amino]-1-[4-hydroxy-3-(hydroxymethyl)phenyl]ethanol.

*Content*: 98.0 per cent to 101.0 per cent (dried substance).

## CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: sparingly soluble in water, soluble in ethanol (96 per cent).

mp: about 155 °C, with decomposition.

## IDENTIFICATION

*First identification*: B.

*Second identification*: A, C, D.

A. Ultraviolet and visible absorption spectrophotometry (2.2.25).

*Test solution*. Dissolve 80.0 mg in a 10 g/L solution of hydrochloric acid R and dilute to 100.0 mL with the same acid. Dilute 10.0 mL of the solution to 100.0 mL with a 10 g/L solution of hydrochloric acid R.

*Spectral range*: 230-350 nm.

*Absorption maximum*: at 276 nm.

*Specific absorbance at the absorption maximum*: 66 to 75.

B. Infrared absorption spectrophotometry (2.2.24).

*Comparison*: salbutamol CRS.

C. Thin-layer chromatography (2.2.27).

*Test solution*. Dissolve 10 mg of the substance to be examined in methanol R and dilute to 50 mL with the same solvent.

*Reference solution*. Dissolve 10 mg of salbutamol CRS in methanol R and dilute to 50 mL with the same solvent.

*Plate:* TLC silica gel plate R.

*Mobile phase:* concentrated ammonia R, water R, ethyl acetate R, 2-propanol R, methyl isobutyl ketone R (3:18:35:45:50 V/V/V/V/V).

*Application:* 5 µL.

*Development:* over 3/4 of the plate.

*Drying:* in air.

*Detection:* spray with a 1 g/L solution of methylbenzothiazolone hydrazone hydrochloride R in a 90 per cent V/V solution of methanol R, followed by a 20 g/L solution of potassium ferricyanide R in a mixture of 1 volume of concentrated ammonia R1 and 3 volumes of water R, followed by a further spraying with a 1 g/L solution of methylbenzothiazolone hydrazone hydrochloride R in a 90 per cent V/V solution of methanol R.

*Results:* the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

- D. Dissolve about 10 mg in 50 mL of a 20 g/L solution of disodium tetraborate R. Add 1 mL of a 30 g/L solution of aminopyrazolone R, 10 mL of methylene chloride R and 10 mL of a 20 g/L solution of potassium ferricyanide R. Shake and allow to separate. An orange-red colour develops in the methylene chloride layer.

#### TESTS

**Solution S.** Dissolve 0.50 g in methanol R and dilute to 25.0 mL with the same solvent.

**Appearance of solution.** Solution S is clear (2.2.1) and not more intensely coloured than reference solution BY<sub>5</sub> (2.2.2, Method II).

**Optical rotation** (2.2.7):  $-0.10^\circ$  to  $+0.10^\circ$ , determined on solution S.

**Related substances.** Liquid chromatography (2.2.29).

*Test solution.* Dissolve 0.100 g of the substance to be examined in the mobile phase and dilute to 50.0 mL with the mobile phase.

*Reference solution (a).* Dissolve 2.0 mg of salbutamol CRS, 2 mg of salbutamol impurity B CRS, 3.0 mg of salbutamol impurity D CRS, 3.0 mg of salbutamol impurity F CRS and 3.0 mg of salbutamol impurity G CRS in the mobile phase and dilute to 10.0 mL with the mobile phase. Dilute 2.0 mL of this solution to 100.0 mL with the mobile phase.

*Reference solution (b).* Dissolve the contents of a vial of salbutamol impurity I CRS in 1.0 mL of the mobile phase.

*Reference solution (c).* Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 20.0 mL with the mobile phase.

*Column:*

- size:  $l = 0.15$  m,  $\emptyset = 3.9$  mm;
- stationary phase: spherical end-capped octylsilyl silica gel for chromatography R (5 µm) with a specific surface area of 335 m<sup>2</sup>/g, a pore size of 10 nm and a carbon loading of 11.7 per cent.

*Mobile phase:* mix 22 volumes of acetonitrile R1 and 78 volumes of a solution containing 2.87 g/L of sodium heptanesulfonate R and 2.5 g/L of potassium dihydrogen phosphate R previously adjusted to pH 3.65 with dilute phosphoric acid R.

*Flow rate:* 1 mL/min.

*Detection:* spectrophotometer at 220 nm.

*Injection:* 20 µL.

*Run time:* 25 times the retention time of salbutamol.

*Identification of impurities:* use the chromatogram obtained with reference solution (a) to identify the peaks due to impurities B, D, F and G; use the chromatogram obtained with reference solution (b) to identify the peak due to impurity I.

*Relative retention* with reference to salbutamol (retention time = about 2 min): impurity B = about 1.3; impurity A = about 1.7; impurity C = about 2.0; impurity D = about 2.7; impurity H = about 3.0; impurity E = about 3.1; impurity G = about 4.1; impurity F = about 6.2; impurity I = about 23.2.

*System suitability:* reference solution (a):

- resolution: minimum 3.0 between the peaks due to salbutamol and impurity B.

*Limits:*

- impurity D: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.3 per cent);
- impurity F: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.3 per cent);
- impurity G: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.3 per cent);
- impurities A, B, C, E, H, I: for each impurity, not more than 1.5 times the area of the peak due to salbutamol in the chromatogram obtained with reference solution (a) (0.3 per cent);
- unspecified impurities: for each impurity, not more than 0.5 times the area of the peak due to salbutamol in the chromatogram obtained with reference solution (a) (0.10 per cent);
- total: maximum 1.0 per cent;
- disregard limit: the area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent).

**Impurity J:** maximum 0.2 per cent.

Dissolve 50.0 mg in a 1 g/L solution of hydrochloric acid R and dilute to 25.0 mL with the same solvent. The absorbance (2.2.25) of the solution measured at 310 nm is not greater than 0.10.

**Boron:** maximum 50 ppm.

*Test solution.* To 50 mg of the substance to be examined add 5 mL of a solution containing 13 g/L of anhydrous sodium carbonate R and 17 g/L of potassium carbonate R. Evaporate to dryness on a water-bath and dry at 120 °C. Ignite the residue rapidly until the organic matter has been destroyed, allow to cool and add 0.5 mL of water R and 3.0 mL of a freshly prepared 1.25 g/L solution of curcumin R in glacial acetic acid R. Warm gently to effect solution, allow to cool and add 3.0 mL of a mixture prepared by adding 5 mL of sulfuric acid R, slowly and with stirring, to 5 mL of glacial acetic acid R. Mix and allow to stand for 30 min. Dilute to 100.0 mL with ethanol (96 per cent) R, filter and use the filtrate.

*Reference solution.* Dissolve 0.572 g of boric acid R in 1000.0 mL of water R. Dilute 1.0 mL of the solution to 100.0 mL with water R. To 2.5 mL of this solution add 5 mL of a solution containing 13 g/L of anhydrous sodium carbonate R and 17 g/L of potassium carbonate R, and treat this mixture in the same manner as the test solution.

Measure the absorbance (2.2.25) of the test solution and of the reference solution at the absorption maximum at about 555 nm. The absorbance of the test solution is not greater than that of the reference solution.

**Loss on drying** (2.2.32): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

#### ASSAY

Dissolve 0.200 g in 30 mL of anhydrous acetic acid R. Titrate with 0.1 M perchloric acid, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M perchloric acid is equivalent to 23.93 mg of  $C_{13}H_{21}NO_3$ .

## STORAGE

Protected from light.

## IMPURITIES

Specified impurities: A, B, C, D, E, F, G, H, I, J.

A. 5-[(1*R*)-2-[(1,1-dimethylethyl)amino]-1-methoxyethyl]-2-hydroxyphenyl]methanol,

B. (1*R*)-2-[(1,1-dimethylethyl)amino]-1-(4-hydroxyphenyl)ethanol,

C. (1*R*)-2-[(1,1-dimethylethyl)amino]-1-(4-hydroxy-3-methylphenyl)ethanol,

D. 5-[(1*R*)-2-[(1,1-dimethylethyl)amino]-1-hydroxyethyl]-2-hydroxybenzaldehyde,

E. (1*R*)-2-[benzyl(1,1-dimethylethyl)amino]-1-[4-hydroxy-3-(hydroxymethyl)phenyl]ethanol,

F. 1,1'-[oxybis[methylene(4-hydroxy-1,3-phenylene)]]bis[2-[(1,1-dimethylethyl)amino]ethanol],

G. 2-[benzyl(1,1-dimethylethyl)amino]-1-[4-hydroxy-3-(hydroxymethyl)phenyl]ethanone,

H. 4-[2-[(1,1-dimethylethyl)amino]ethyl]-2-methylphenol,

I. (1*R*)-2-[(1,1-dimethylethyl)amino]-1-[4-(benzyloxy)-3-(hydroxymethyl)phenyl]ethanol,

J. 2-[(1,1-dimethylethyl)amino]-1-[4-hydroxy-3-(hydroxymethyl)phenyl]ethanone (salbutamone).

07/2010:0687  
corrected 7.0

## SALBUTAMOL SULFATE

## Salbutamoli sulfas

$C_{26}H_{44}N_2O_{10}S$   
[51022-70-9]

$M_r$  576.7

## DEFINITION

Bis[(1*R*)-2-[(1,1-dimethylethyl)amino]-1-[4-hydroxy-3-(hydroxymethyl)phenyl]ethanol] sulfate.

*Content*: 98.0 per cent to 101.0 per cent (dried substance).

## CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: freely soluble in water, practically insoluble or very slightly soluble in ethanol (96 per cent) and in methylene chloride.

It shows polymorphism (5.9).

## IDENTIFICATION

*First identification*: B, E.

*Second identification*: A, C, D, E.

A. Ultraviolet and visible absorption spectrophotometry (2.2.25).

**Test solution.** Dissolve 80.0 mg in a 10 g/L solution of hydrochloric acid R and dilute to 100.0 mL with the same acid. Dilute 10.0 mL of the solution to 100.0 mL with a 10 g/L solution of hydrochloric acid R.

**Spectral range:** 230-350 nm.

**Absorption maximum:** at 276 nm.

**Specific absorbance at the absorption maximum:** 55 to 64.

**B. Infrared absorption spectrophotometry (2.2.24).**

**Comparison:** salbutamol sulfate CRS.

If the spectra obtained show differences, dissolve the substance to be examined and the reference substance separately in anhydrous ethanol R. Dry the residues and record new spectra using the residues.

**C. Thin-layer chromatography (2.2.27).**

**Test solution.** Dissolve 12 mg of the substance to be examined in water R and dilute to 10 mL with the same solvent.

**Reference solution.** Dissolve 12 mg of salbutamol sulfate CRS in water R and dilute to 10 mL with the same solvent.

**Plate:** TLC silica gel plate R.

**Mobile phase:** concentrated ammonia R, water R, ethyl acetate R, 2-propanol R, methyl isobutyl ketone R (3:18:35:45:50 V/V/V/V/V).

**Application:** 1 µL.

**Development:** over 2/3 of the plate.

**Drying:** in air.

**Detection:** spray with a 1 g/L solution of methylbenzothiazolone hydrazone hydrochloride R in a 90 per cent V/V solution of methanol R, followed by a 20 g/L solution of potassium ferricyanide R in a mixture of 1 volume of concentrated ammonia R1 and 3 volumes of water R, followed by a further spraying with a 1 g/L solution of methylbenzothiazolone hydrazone hydrochloride R in a 90 per cent V/V solution of methanol R.

**Results:** the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

**D. Dissolve about 10 mg in 50 mL of a 20 g/L solution of disodium tetraborate R. Add 1 mL of a 30 g/L solution of aminopyrazolone R, 10 mL of methylene chloride R and 10 mL of a 20 g/L solution of potassium ferricyanide R. Shake and allow to separate. An orange-red colour develops in the methylene chloride layer.**

**E. It gives reaction (a) of sulfates (2.3.1).**

**TESTS**

**Solution S.** Dissolve 0.250 g in carbon dioxide-free water R and dilute to 25.0 mL with the same solvent.

**Appearance of solution.** Solution S is clear (2.2.1) and not more intensely coloured than reference solution BY<sub>6</sub> (2.2.2, Method II).

**Optical rotation (2.2.7):** -0.10° to +0.10°, determined on solution S.

**Acidity or alkalinity.** To 10 mL of solution S add 0.15 mL of methyl red solution R and 0.2 mL of 0.01 M sodium hydroxide. The solution is yellow. Not more than 0.4 mL of 0.01 M hydrochloric acid is required to change the colour of the indicator to red.

**Related substances.** Liquid chromatography (2.2.29).

**Test solution.** Dissolve 20.0 mg of the substance to be examined in mobile phase A and dilute to 50.0 mL with mobile phase A.

**Reference solution (a).** Dissolve 3.0 mg each of salbutamol impurity D CRS and 3.0 mg of salbutamol impurity F CRS in mobile phase A and dilute to 50.0 mL with mobile phase A. Dilute 2.0 mL of this solution to 100.0 mL with mobile phase A.

**Reference solution (b).** Dilute 1.0 mL of the test solution to 100.0 mL with mobile phase A. Dilute 1.0 mL of this solution to 10.0 mL with mobile phase A.

**Reference solution (c).** With the aid of ultrasounds, dissolve the contents of a vial of salbutamol impurity J CRS in 1.0 mL of the test solution.

**Reference solution (d).** Dissolve 1 mg of salbutamol impurity D CRS in mobile phase A and dilute to 100.0 mL with mobile phase A.

**Reference solution (e).** Dissolve 10 mg of salbutamol sulfate for system suitability CRS (containing impurities C, F, N and O) in mobile phase A, add 1.0 mL of reference solution (d) and dilute to 50.0 mL with mobile phase A.

**Column:**

- size:  $l = 0.15$  m,  $\varnothing = 4.6$  mm;
- stationary phase: spherical end-capped octylsilyl silica gel for chromatography R (3 µm);
- temperature: 30 °C.

**Mobile phase:**

- mobile phase A: dissolve 3.45 g of sodium dihydrogen phosphate monohydrate R in 900 mL of a 0.05 per cent V/V solution of triethylamine R, adjust to pH 3.0 with dilute phosphoric acid R and dilute to 1000 mL with a 0.05 per cent V/V solution of triethylamine R;
- mobile phase B: methanol R, acetonitrile R (35:65 V/V);

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 5	95	5
5 - 30	95 → 10	5 → 90

**Flow rate:** 1.0 mL/min.

**Detection:** spectrophotometer at 273 nm.

**Injection:** 20 µl of the test solution and reference solutions (a), (b), (c) and (e).

**Relative retention** with reference to salbutamol (retention time = about 7 min): impurity J = about 0.9; impurity C = about 1.6; impurity D = about 1.69; impurity N = about 1.71; impurity F = about 1.77; impurity O = about 1.82.

**Identification of impurities:** use the chromatogram obtained with reference solution (e) to identify the peaks due to impurities C, D, F, N and O; use the chromatogram obtained with reference solution (c) to identify the peak due to impurity J.

**System suitability:**

- peak-to-valley ratio: minimum 4, where  $H_p$  = height above the baseline of the peak due to impurity D and  $H_v$  = height above the baseline of the lowest point of the curve separating this peak from the peak due to impurity N in the chromatogram obtained with reference solution (e);
- resolution: minimum 1.5 between the peaks due to impurity J and salbutamol in the chromatogram obtained with the reference solution (c).

**Limits:**

- impurities D, F: for each impurity, not more than the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.3 per cent);
- impurities C, N, O: for each impurity, not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
- unspecified impurities: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- total: not more than 9 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.9 per cent);
- disregard limit: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Boron:** maximum 50 ppm.

**Test solution.** To 50 mg of the substance to be examined add 5 mL of a solution containing 13 g/L of *anhydrous sodium carbonate R* and 17 g/L of *potassium carbonate R*. Evaporate to dryness on a water-bath and dry at 120 °C. Ignite the residue rapidly until the organic matter has been destroyed, allow to cool and add 0.5 mL of *water R* and 3.0 mL of a freshly prepared 1.25 g/L solution of *curcumin R* in *glacial acetic acid R*. Warm gently to effect solution, allow to cool and add 3.0 mL of a mixture prepared by adding 5 mL of *sulfuric acid R*, slowly and with stirring, to 5 mL of *glacial acetic acid R*. Mix and allow to stand for 30 min. Dilute to 100.0 mL with *ethanol (96 per cent) R*, filter and use the filtrate.

**Reference solution.** Dissolve 0.572 g of *boric acid R* in 1000.0 mL of *water R*. Dilute 1.0 mL of the solution to 100.0 mL with *water R*. To 2.5 mL of this solution add 5 mL of a solution containing 13 g/L of *anhydrous sodium carbonate R* and 17 g/L of *potassium carbonate R*, and treat this mixture in the same manner as the test solution.

Measure the absorbance (2.2.25) of the test solution and of the reference solution at the absorption maximum at about 555 nm. The absorbance of the test solution is not greater than that of the reference solution.

**Loss on drying (2.2.32):** maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash (2.4.14):** maximum 0.1 per cent, determined on 1.0 g.

#### ASSAY

Dissolve 0.400 g in 5 mL of *anhydrous formic acid R* and add 35 mL of *anhydrous acetic acid R*. Titrate with 0.1 M *perchloric acid*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *perchloric acid* is equivalent to 57.67 mg of  $C_{26}H_{44}N_2O_{10}S$ .

#### STORAGE

Protected from light.

#### IMPURITIES

*Specified impurities: C, D, F, N, O.*

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): A, B, E, G, I, J, K, L, M.

A. [5-[(1*R*)-2-[(1,1-dimethylethyl)amino]-1-methoxyethyl]-2-hydroxyphenyl]methanol,

B. (1*R*)-2-[(1,1-dimethylethyl)amino]-1-(4-hydroxyphenyl)ethanol,

C. (1*R*)-2-[(1,1-dimethylethyl)amino]-1-(4-hydroxy-3-methylphenyl)ethanol,

D. 5-[(1*R*)-2-[(1,1-dimethylethyl)amino]-1-hydroxyethyl]-2-hydroxybenzaldehyde,

E. (1*R*)-2-[benzyl(1,1-dimethylethyl)amino]-1-[4-hydroxy-3-(hydroxymethyl)phenyl]ethanol,

F. 1,1'-[oxybis[methylene(4-hydroxy-1,3-phenylene)]]bis[2-[(1,1-dimethylethyl)amino]ethanol],

G. 2-[benzyl(1,1-dimethylethyl)amino]-1-[4-hydroxy-3-(hydroxymethyl)phenyl]ethanone,

I. (1*R*)-2-[(1,1-dimethylethyl)amino]-1-[4-(benzyloxy)-3-(hydroxymethyl)phenyl]ethanol,

J. 2-[(1,1-dimethylethyl)amino]-1-[4-hydroxy-3-(hydroxymethyl)phenyl]ethanone (salbutamone),

K. 2-[(1,1-dimethylethyl)amino]-1-[3-chloro-4-hydroxy-5-(hydroxymethyl)phenyl]ethanone,

L. (1*R,S*)-2-[(1,1-diméthyléthyl)amino]-1-[3-chloro-4-hydroxy-5-(hydroxyméthyl)phényl]éthanol,

M. (1*R,S*)-2-[(1,1-dimethylethyl)amino]-1-[4-hydroxy-3-(methoxymethyl)phenyl]ethanol,

N. 2-[(1,1-dimethylethyl)amino]-1-[3-[[5-[2-[(1,1-dimethylethyl)amino]-1-hydroxyethyl]-2-hydroxyphenyl]methyl]-4-hydroxy-5-(hydroxymethyl)phenyl]ethanol,

O. unknown structure.

C. Dissolve about 30 mg in 5 mL of 0.05 *M* sodium hydroxide, neutralise if necessary and dilute to 20 mL with water *R*. 1 mL of the solution gives reaction (a) of salicylates (2.3.1).

#### TESTS

**Solution S.** Dissolve 2.5 g in 50 mL of boiling distilled water *R*, cool and filter.

**Appearance of solution.** The solution is clear (2.2.1) and colourless (2.2.2, Method II).

Dissolve 1 g in 10 mL of ethanol (96 per cent) *R*.

**Related substances.** Liquid chromatography (2.2.29).

**Test solution.** Dissolve 0.50 g of the substance to be examined in the mobile phase and dilute to 100.0 mL with the mobile phase.

**Reference solution (a).** Dissolve 10 mg of phenol *R* (impurity C) in the mobile phase and dilute to 100.0 mL with the mobile phase.

**Reference solution (b).** Dissolve 5 mg of salicylic acid impurity B *CRS* in the mobile phase and dilute to 20.0 mL with the mobile phase.

**Reference solution (c).** Dissolve 50 mg of 4-hydroxybenzoic acid *R* (impurity A) in the mobile phase and dilute to 100.0 mL with the mobile phase.

**Reference solution (d).** Dilute 1.0 mL of reference solution (a) to 10.0 mL with the mobile phase.

**Reference solution (e).** Dilute a mixture of 1.0 mL of each of reference solutions (a), (b) and (c) to 10.0 mL with the mobile phase.

**Reference solution (f).** Dilute a mixture of 0.1 mL of each of reference solutions (a), (b) and (c) to 10.0 mL with the mobile phase.

#### Column:

– size:  $l = 0.15$  m,  $\varnothing = 4.6$  mm;

– stationary phase: non-deactivated octadecylsilyl silica gel for chromatography *R* (5  $\mu$ m).

**Mobile phase:** glacial acetic acid *R*, methanol *R*, water *R* (1:40:60 *V/V/V*).

**Flow rate:** 0.5 mL/min.

**Detection:** spectrophotometer at 270 nm.

**Injection:** 10  $\mu$ L of the test solution and reference solutions (d), (e) and (f).

**Relative retention** with reference to impurity C: impurity A = about 0.70; impurity B = about 0.90.

**System suitability:** reference solution (e):

- the 3<sup>rd</sup> peak in the chromatogram corresponds to the peak due to phenol in the chromatogram obtained with reference solution (d);
- resolution: minimum 1.0 between the peaks due to impurities B and C; if necessary, adjust the quantity of acetic acid in the mobile phase.

#### Limits:

- impurity A: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (f) (0.1 per cent);
- impurity B: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (f) (0.05 per cent);
- impurity C: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (f) (0.02 per cent);
- any other impurity: for each impurity, not more than the area of the peak due to impurity B in the chromatogram obtained with reference solution (f) (0.05 per cent);
- total: not more than twice the area of the peak due to impurity A in the chromatogram obtained with reference solution (f) (0.2 per cent);
- disregard limit: 0.01 times the area of the principal peak in the chromatogram obtained with reference solution (f).

corrected 6.0

## SALICYLIC ACID

### Acidum salicylicum

$C_7H_6O_3$   
[69-72-7]

$M_r$  138.1

#### DEFINITION

2-Hydroxybenzenecarboxylic acid.

**Content:** 99.0 per cent to 100.5 per cent (dried substance).

#### CHARACTERS

**Appearance:** white or almost white, crystalline powder or white or colourless, acicular crystals.

**Solubility:** slightly soluble in water, freely soluble in ethanol (96 per cent), sparingly soluble in methylene chloride.

#### IDENTIFICATION

**First identification:** A, B.

**Second identification:** A, C.

A. Melting point (2.2.14): 158 °C to 161 °C.

B. Infrared absorption spectrophotometry (2.2.24).

**Comparison:** salicylic acid *CRS*.

**Chlorides** (2.4.4): maximum 100 ppm.

Dilute 10 mL of solution S to 15 mL with *water R*.

**Sulfates**: maximum 200 ppm.

Dissolve 1.0 g in 5 mL of *dimethylformamide R* and add 4 mL of *water R*. Mix thoroughly. Add 0.2 mL of *dilute hydrochloric acid R* and 0.5 mL of a 25 per cent *m/m* solution of *barium chloride R*. After 15 min any opalescence in the solution is not more intense than that in a standard prepared as follows: to 2 mL of *sulfate standard solution (100 ppm SO<sub>4</sub>) R* add 0.2 mL of *dilute hydrochloric acid R*, 0.5 mL of a 25 per cent *m/m* solution of *barium chloride R*, 3 mL of *water R* and 5 mL of *dimethylformamide R*.

**Heavy metals** (2.4.8): maximum 20 ppm.

Dissolve 2.0 g in 15 mL of *ethanol (96 per cent) R* and add 5 mL of *water R*. 12 mL of the solution complies with test B. Prepare the reference solution using lead standard solution (2 ppm Pb) prepared by diluting *lead standard solution (100 ppm Pb) R* with a mixture of 5 volumes of *water R* and 15 volumes of *ethanol (96 per cent) R*.

**Loss on drying** (2.2.32): maximum 0.5 per cent, determined on 1.000 g by drying in a desiccator.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 2.0 g.

#### ASSAY

Dissolve 0.120 g in 30 mL of *ethanol (96 per cent) R* and add 20 mL of *water R*. Titrate with 0.1 M *sodium hydroxide*, using 0.1 mL of *phenol red solution R* as indicator.

1 mL of 0.1 M *sodium hydroxide* is equivalent to 13.81 mg of C<sub>7</sub>H<sub>6</sub>O<sub>3</sub>.

#### STORAGE

Protected from light.

#### IMPURITIES

*Specified impurities: A, B, C.*

A. R = H: 4-hydroxybenzoic acid,

B. R = CO<sub>2</sub>H: 4-hydroxyisophthalic acid,

C. phenol.

01/2008:1765

## SALMETEROL XINAFOATE

### Salmeteroli xinafoas

C<sub>36</sub>H<sub>45</sub>NO<sub>7</sub>  
[94749-08-3]

M<sub>r</sub> 604

#### DEFINITION

(1*R*S)-1-[4-Hydroxy-3-(Hydroxymethyl)phenyl]-2-[[[6-(4-phenylbutoxy)hexyl]amino]ethanol 1-hydroxynaphthalene-2-carboxylate.

*Content*: 97.0 per cent to 102.0 per cent (anhydrous substance).

#### CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: practically insoluble in water, soluble in methanol, slightly soluble in anhydrous ethanol.

#### IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

*Comparison*: *salmeterol xinafoate CRS*.

#### TESTS

**Related substances.** Liquid chromatography (2.2.29). *Protect the solutions from light.*

*Solvent mixture*: *acetonitrile R*, *water R* (50:50 V/V).

*Test solution.* Dissolve 50.0 mg of the substance to be examined in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

*Reference solution (a).* Dissolve 11 mg of *salmeterol xinafoate for system suitability CRS* (salmeterol containing impurities E and G) in the solvent mixture and dilute to 2 mL with the solvent mixture.

*Reference solution (b).* Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Column*:

- *size*: *l* = 0.15 m, Ø = 4.6 mm,
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*:

- *mobile phase A*: mix 24 volumes of a 7.71 g/L solution of *ammonium acetate R* with 24 volumes of a 28.84 g/L solution of *sodium dodecyl sulfate R* and adjust to pH 2.7 with *glacial acetic acid R*; mix with 52 volumes of *acetonitrile R*;
- *mobile phase B*: *acetonitrile R*;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 16	100	0
16 - 36	100 → 30	0 → 70
36 - 45	30	70
45 - 50	30 → 100	70 → 0

*Flow rate*: 2 mL/min.

*Detection*: spectrophotometer at 278 nm.

*Injection*: 20 µL; inject the solvent mixture as a blank solution.

*Relative retention* with reference to salmeterol (retention time = about 13 min): xinafoic acid = about 0.2; impurity A = about 0.3; impurity B = about 0.5; impurity C = about 0.7; impurity D = about 0.8; impurity E = about 0.9; impurity F = about 1.6; impurity G = about 2.7.

*System suitability*: reference solution (a):

- *peak-to-valley ratio*: minimum 10, where *H<sub>p</sub>* = height above the baseline of the peak due to impurity E and *H<sub>v</sub>* = height above the baseline of the lowest point of the curve separating this peak from the peak due to salmeterol,
- the chromatogram obtained is similar to the chromatogram supplied with *salmeterol xinafoate for system suitability CRS*.

*Limits*:

- *impurity D*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent),
- *impurities A, F, G*: for each impurity, not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent),

- *impurities B, C, E*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent),
- *any other impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent),
- *total*: not more than 9 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.9 per cent),
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent); disregard the peak due to xinafoic acid and any peaks due to the blank.

**Water** (2.5.12): maximum 0.5 per cent, determined on 1.000 g. Dissolve the sample with 30 mL of *anhydrous methanol R*.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

#### ASSAY

Liquid chromatography (2.2.29).

**Test solution.** Dissolve 12.50 mg of the substance to be examined in the mobile phase and dilute to 50.0 mL with the mobile phase.

**Reference solution (a).** Dissolve 12.50 mg of *salmeterol xinafoate CRS* in the mobile phase and dilute to 50.0 mL with the mobile phase.

**Reference solution (b).** Dilute 1 mL of reference solution (a) described in the test for related substances to 20 mL with the mobile phase.

**Column:**

- *size*:  $l = 0.15$  m,  $\varnothing = 4.6$  mm,
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5  $\mu$ m).

**Mobile phase:** mix 24 volumes of a 7.71 g/L solution of *ammonium acetate R* with 24 volumes of a 28.84 g/L solution of *sodium dodecyl sulfate R* and adjust to pH 2.7 with *glacial acetic acid R*. Mix with 52 volumes of *acetonitrile R*.

**Flow rate:** 2 mL/min.

**Detection:** spectrophotometer at 278 nm.

**Injection:** 20  $\mu$ L.

**Run time:** until complete elution of the peak due to salmeterol (about 16 min).

**System suitability:** reference solution (b):

- *peak-to-valley ratio*: minimum 10, where  $H_p$  = height above the baseline of the peak due to impurity E and  $H_v$  = height above the baseline of the lowest point of the curve separating this peak from the peak due to salmeterol.

The stationary phase may be regenerated using the gradient described under the test for related substances.

Calculate the percentage content of  $C_{36}H_{45}NO_7$  using the chromatogram obtained with reference solution (a) and the declared content of  $C_{36}H_{45}NO_7$  in *salmeterol xinafoate CRS*.

#### STORAGE

Protected from light.

#### IMPURITIES

**Specified impurities:** A, B, C, D, E, F, G.

A. R =  $[CH_2]_4-C_6H_5$ , R' = OH: (1*RS*)-1-[4-hydroxy-3-(hydroxymethyl)phenyl]-2-[[4-(phenylbutyl)amino]ethanol,

- B. R =  $[CH_2]_6-O-[CH_2]_2-C_6H_5$ , R' = OH: (1*RS*)-1-[4-hydroxy-3-(hydroxymethyl)phenyl]-2-[[6-(2-phenylethoxy)hexyl]amino]ethanol,
- C. R =  $[CH_2]_6-O-[CH_2]_3-C_6H_5$ , R' = OH: (1*RS*)-1-[4-hydroxy-3-(hydroxymethyl)phenyl]-2-[[6-(3-phenylpropoxy)hexyl]amino]ethanol,
- F. R =  $[CH_2]_6-O-[CH_2]_4-C_6H_5$ , R' = H: (1*RS*)-1-(4-hydroxy-3-methylphenyl)-2-[[6-(4-phenylbutoxy)hexyl]amino]ethanol,

- D. 1-[4-[2-hydroxy-2-[4-hydroxy-3-(hydroxymethyl)phenyl]ethoxy]-3-(hydroxymethyl)phenyl]-2-[[6-(3-phenylbutoxy)hexyl]amino]ethanol,

- E. 1-[4-hydroxy-3-(hydroxymethyl)phenyl]-2-[[6-(1-methyl-3-phenylpropoxy)hexyl]amino]ethanol,

- G. 1-[4-hydroxy-3-[[[2-hydroxy-2-[4-hydroxy-3-(hydroxymethyl)phenyl]ethyl][6-(4-phenylbutoxy)hexyl]amino]methyl]phenyl]-2-[[6-(4-phenylbutoxy)hexyl]amino]ethanol.

01/2008:1910

## SALMON OIL, FARMED

### Salmonis domestici oleum

#### DEFINITION

Purified fatty oil obtained from fresh farmed *Salmo salar*. The positional distribution ( $\beta$ (2)-acyl) is 60-70 per cent for cervonic (docosahexaenoic) acid (C22:6 n-3; DHA), 25-35 per cent for timnodonic (eicosapentaenoic) acid (C20:5 n-3; EPA) and 40-55 per cent for moroctic acid (C18:4 n-3).

**Content:**

- sum of the contents of EPA and DHA (expressed as triglycerides): 10.0 per cent to 28.0 per cent.

Authorised antioxidants in concentrations not exceeding the levels specified by the competent authority may be added.

#### PRODUCTION

The fish shall only be given feed with a composition that is in accordance with the relevant EU or other applicable regulations. The oil is produced by mechanical expression of fresh raw materials, either from the whole fish, or fish where the fillets have been removed, at a temperature not exceeding 100 °C, and without using solvents. After centrifugation, solid substances may be removed from the oil by cooling and filtering (winterisation).

## CHARACTERS

**Appearance:** pale pink liquid.

**Solubility:** practically insoluble in water, very soluble in acetone and in heptane, slightly soluble in anhydrous ethanol.

## IDENTIFICATION

Examine the  $^{13}\text{C}$  NMR spectra obtained in the assay for positional distribution ( $\beta(2)$ -acyl) of fatty acids. The spectra contain peaks between 172 ppm and 173 ppm with shifts similar to those in the type spectrum (Figure 1910.-2). The oil to be examined complies with the limits of this assay.

## TESTS

**Absorbance (2.2.25):** minimum 0.10, measured at the maximum between 470 nm and 480 nm.

Dissolve 5.0 mL in 5.0 mL of *trimethylpentane R*.

**Acid value (2.5.1):** maximum 2.0.

**Anisidine value (2.5.36):** maximum 10.0.

**Peroxide value (2.5.5, Method A):** maximum 5.0.

**Unsaponifiable matter (2.5.7):** maximum 1.5 per cent, determined on 5.0 g.

**Linoleic acid (2.4.29):** maximum 11.0 per cent.

Identify the peak due to linoleic acid using the chromatogram in Figure 1910.-1. Determine the percentage content by normalisation.

## ASSAY

**Positional distribution ( $\beta(2)$ -acyl) of fatty acids (2.2.33)** Use a high resolution FT-NMR spectrometer operating at minimum 300 MHz.

**Test solution.** Dissolve 190-210 mg of fresh salmon oil in 500  $\mu\text{L}$  of *deuterated chloroform R*. Prepare at least 3 samples and examine within 3 days.

**Acquisition of  $^{13}\text{C}$  NMR spectra.** The following parameters may be used.

- *sweep width:* 200 ppm (–5 to 195 ppm),
- *irradiation frequency offset:* 95 ppm,
- *time domain:* 64 K,
- *pulse delay:* 2 s,
- *pulse program:* zgig 30 (inverse gated, 30° excitation pulse),
- *dummy scans:* 4,
- *number of scans:* 4096.

1. C14:0	5. C18:0	9. C18:3 n-3	13. C20:4 n-3	17. C22:5 n-6
2. C16:0	6. C18:1 n-9	10. C18:4 n-3	14. EPA	18. C22:5 n-3
3. C16:1 n-7	7. C18:1 n-7	11. C20:1 n-9	15. C22:1 n-11	19. DHA
4. C16:4 n-1	8. C18:2 n-6	12. C20:4 n-6	16. C21:5 n-3	

Figure 1910.-1. – Chromatogram for the composition of fatty acids in farmed salmon oil

*Processing and plotting.* The following parameters may be used:

- *size*: 64 K (zero-filling),
- *window multiplication*: exponential,
- *Lorentzian broadening factor*: 0.2 Hz.

Use the CDCl<sub>3</sub> signal for shift referencing. The shift of the central peak of the 1:1:1 triplet is set to 77.16 ppm.

Plot the spectral region δ 171.5-173.5 ppm. Compare the spectrum with the reference spectrum in Figure 1910.-2. The shift values lie within the ranges given in Table 1910.-1.

Table 1910.-1 – *Shift values*

Signal	Shift range (ppm)
β DHA	172.05 - 172.09
α DHA	172.43 - 172.47
β EPA	172.52 - 172.56
α EPA	172.90 - 172.94
β C18:4	172.56 - 172.60
α C18:4	172.95 - 172.99

*System suitability:* calculate the signal-to-noise ratio for the smallest relevant peak corresponding to α C18:4 signal (in the range δ 172.95-172.99 ppm). Measure the peak width at half-height for the central CDCl<sub>3</sub> signal (at δ 77.16 ppm). The system suitability criteria in Table 1910.-2 are fulfilled.

Table 1910.-2 – *System suitability criteria*

S/N smallest peak	Peak width (ppm)
minimum 5	maximum 0.02

*Calculation of positional distribution:* calculate the positional distribution (β(2)-acyl) using the expression:

$$\frac{\beta}{\alpha + \beta} \times 100$$

- α = peak area of the corresponding α-carbonyl peak,  
 β = peak area of β-carbonyl peak from C22:6 n-3, C20:5 n-3 or C18:4 n-3, respectively.

*Limits:*

	Positional distribution (mole %)		
	β DHA	β EPA	β C18:4
Limits	60 - 70	25 - 35	40 - 55

**EPA and DHA (2.4.29).** See Figure 1910.-1.

**STORAGE**

In an airtight, well-filled container, protected from light, under inert gas.

Figure 1910.-2. – <sup>13</sup>C NMR spectrum carbonyl region of farmed salmon oil

## SAQUINAVIR MESILATE

## Saquinaviri mesilas

$C_{39}H_{54}N_6O_8S$   
[149845-06-7]

$M_r$  767

## DEFINITION

(2*S*)-*N*<sup>1</sup>-[(1*S*,2*R*)-1-Benzyl-3-[(3*S*,4*aS*,8*aS*)-3-[(1,1-dimethylethyl)carbamoyl]octahydroisoquinolin-2(1*H*)-yl]-2-hydroxypropyl]-2-[(quinolin-2-ylcarbonyl)amino]butanediamide methanesulfonate.

*Content*: 97.5 per cent to 102.0 per cent (anhydrous substance).

## PRODUCTION

The production method must be evaluated to determine the potential for formation of alkyl mesilates, which is particularly likely to occur if the reaction medium contains lower alcohols. Where necessary, the production method is validated to demonstrate that alkyl mesilates are not detectable in the final product.

## CHARACTERS

*Appearance*: white or almost white, slightly hygroscopic powder.

*Solubility*: practically insoluble in water, sparingly soluble in methanol, slightly soluble in ethanol (96 per cent).

## IDENTIFICATION

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry (2.2.24).

*Comparison*: saquinavir mesilate CRS.

## TESTS

**Specific optical rotation** (2.2.7): –35.0 to –42.0 (anhydrous substance).

Dissolve 0.25 g in *anhydrous methanol R* and dilute to 50.0 mL with the same solvent.

**Related substances**. Liquid chromatography (2.2.29).

*Solvent mixture*: water for chromatography R, acetonitrile R1 (47:53 V/V).

*Test solution*. Dissolve 30.0 mg of the substance to be examined in the solvent mixture, using sonication, and dilute to 100.0 mL with the same solvent.

*Reference solution (a)*. Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Reference solution (b)*. Dissolve the contents of a vial of saquinavir for system suitability CRS (containing impurities A, B, C and D) in 1.0 mL of the solvent mixture and sonicate for 2 min.

*Reference solution (c)*. Dissolve 30.0 mg of saquinavir mesilate CRS in the solvent mixture, using sonication, and dilute to 100.0 mL with the same solvent.

*Column*:

– size:  $l = 0.15$  m,  $\varnothing = 4.6$  mm;

01/2009:2267 – *stationary phase*: spherical end-capped octadecylsilyl silica gel for chromatography R (3.5  $\mu$ m).

*Mobile phase*:

– *mobile phase A*: to 2.5 mL of strong sodium hydroxide solution R add 900 mL of water for chromatography R, adjust to pH 1.8 with perchloric acid R and dilute to 1000 mL with water for chromatography R;

– *mobile phase B*: mobile phase A, acetonitrile R1 (38:62 V/V);

Time (min)	Mobile phase A (per cent)	Mobile phase B (per cent)
0 - 1	50	50
1 - 31	50 → 0	50 → 100

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 210 nm.

*Injection*: 10  $\mu$ L of the test solution and reference solutions (a) and (b).

*Identification of impurities*: use the chromatogram supplied with saquinavir for system suitability CRS and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A, B, C and D.

*Relative retention* with reference to saquinavir (retention time = about 17 min): impurity A = about 0.2; impurity B = about 0.3; impurity C = about 0.5; impurity D = about 0.9.

*System suitability*: reference solution (b):

– *peak-to-valley ratio*: minimum 3, where  $H_p$  = height above the baseline of the peak due to impurity D and  $H_v$  = height above the baseline of the lowest point of the curve separating this peak from the peak due to saquinavir.

*Limits*:

– *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 0.5; impurity B = 0.5; impurity C = 2.5;

– *impurities A, B, C*: for each impurity, not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.15 per cent);

– *unspecified impurities*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent);

– *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

– *disregard limit*: not more than 0.3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.03 per cent).

**Heavy metals** (2.4.8): maximum 10 ppm.

0.50 g complies with test G. Prepare the reference solution using 0.5 mL of lead standard solution (10 ppm Pb) R. The solution may become yellow again after pH-adjustment. Filter the solutions through a membrane filter (nominal pore size 0.45  $\mu$ m).

**Water** (2.5.12): maximum 1.0 per cent, determined on 0.250 g.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

## ASSAY

Liquid chromatography (2.2.29) as described in the test for related substances with the following modification.

*Injection*: 10  $\mu$ L of the test solution and reference solution (c).

Calculate the percentage content of saquinavir mesilate from the declared content of saquinavir mesilate CRS.

## STORAGE

In an airtight container, protected from light.

## IMPURITIES

Specified impurities: A, B, C.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use* (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): D, E, F, G, H.

A. R = H: (2S)-4-amino-4-oxo-2-[(quinolin-2-ylcarbonyl)amino]butanoic acid,

B. R = C<sub>2</sub>H<sub>5</sub>: ethyl (2S)-4-amino-4-oxo-2-[(quinolin-2-ylcarbonyl)amino]butanoate,

C. (3S,4aS,8aS)-2-[(2R,3S)-3-amino-2-hydroxy-4-phenylbutyl]-N-(1,1-dimethylethyl)decahydroisoquinoline-3-carboxamide,

D. R<sub>1</sub> = CH<sub>2</sub>-CO-NH<sub>2</sub>, R<sub>2</sub> = H: (2R)-N<sup>1</sup>-[(1S,2R)-1-benzyl-3-[(3S,4aS,8aS)-3-[(1,1-dimethylethyl)carbamoyl]octahydroisoquinolin-2(1H)-yl]-2-hydroxypropyl]-2-[(quinolin-2-ylcarbonyl)amino]butanediamide (2-*epi*-saquinavir),

E. R<sub>1</sub> = H, R<sub>2</sub> = CH<sub>2</sub>-CO<sub>2</sub>H: (3S)-4-[[[(1S,2R)-1-benzyl-3-[(3S,4aS,8aS)-3-[(1,1-dimethylethyl)carbamoyl]octahydroisoquinolin-2(1H)-yl]-2-hydroxypropyl]amino]-4-oxo-3-[(quinolin-2-ylcarbonyl)amino]butanoic acid,

F. R<sub>1</sub> = H, R<sub>2</sub> = CH<sub>2</sub>-CN: N-[(1S)-2-[[[(1S,2R)-1-benzyl-3-[(3S,4aS,8aS)-3-[(1,1-dimethylethyl)carbamoyl]octahydroisoquinolin-2(1H)-yl]-2-hydroxypropyl]amino]-1-(cyanomethyl)-2-oxoethyl]quinoline-2-carboxamide,

G. R<sub>1</sub> = H, R<sub>2</sub> = CH<sub>2</sub>-CO-OCH<sub>3</sub>: methyl (3S)-4-[[[(1S,2R)-1-benzyl-3-[(3S,4aS,8aS)-3-[(1,1-dimethylethyl)carbamoyl]octahydroisoquinolin-2(1H)-yl]-2-hydroxypropyl]amino]-4-oxo-3-[(quinolin-2-ylcarbonyl)amino]butanoate,

H. N-[(3S)-1-[(1S,2R)-1-benzyl-3-[(3S,4aS,8aS)-3-[(1,1-dimethylethyl)carbamoyl]octahydroisoquinolin-2(1H)-yl]-2-hydroxypropyl]-2,5-dioxopyrrolidin-3-yl]quinoline-2-carboxamide.

## SELAMECTIN FOR VETERINARY USE

## Selamectinum ad usum veterinarium

C<sub>43</sub>H<sub>63</sub>NO<sub>11</sub>  
[165108-07-6]

M<sub>r</sub> 770

## DEFINITION

(2*aE*,2'*R*,4*E*,5'*S*,6*S*,6'*S*,7*S*,8*E*,11*R*,15*S*,17*aR*,20*Z*,20*aR*,20*bS*)-6'-cyclohexyl-7-[(2,6-dideoxy-3-*O*-methyl- $\alpha$ -L-arabino-hexopyranosyl)oxy]-20*b*-hydroxy-20-(hydroxyimino)-5',6,8,19-tetramethyl-3',4',5',6,6',7,10,11,14,15,17*a*,20,20*a*,20*b*-tetradecahydrospiro[2*H*,17*H*]-11,15-methanofuro[4,3,2-*pq*][2,6]benzodioxacyclooctadecine-13,2'-pyran]-17-one ((5*Z*,25*S*)-25-cyclohexyl-4'-*O*-de(2,6-dideoxy-3-*O*-methyl- $\alpha$ -L-arabino-hexopyranosyl)-5-demethoxy-25-de(1-methylpropyl)-22,23-dihydro-5-(hydroxyimino)avermectin A<sub>1a</sub>).

Semi-synthetic product derived from a fermentation product.

*Content*: 96.0 per cent to 102.0 per cent (anhydrous substance).

## CHARACTERS

*Appearance*: white or almost white, hygroscopic powder.

*Solubility*: practically insoluble in water, freely soluble in isopropyl alcohol, soluble in acetone and in methylene chloride, sparingly soluble in methanol.

## IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

*Comparison*: selamectin CRS.

## TESTS

**Related substances.** Liquid chromatography (2.2.29).

*Solvent mixture*: water R, acetonitrile R (40:60 V/V).

*Test solution.* Dissolve 25 mg of the substance to be examined in the solvent mixture and dilute to 50 mL with the solvent mixture.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture.

*Reference solution (b).* Dissolve 2.5 mg of selamectin for system suitability CRS (containing impurities A, B, C and D) in the solvent mixture and dilute to 5 mL with the solvent mixture.

*Column*:

– size: *l* = 0.15 m,  $\varnothing$  = 3.9 mm;

- *stationary phase: end-capped octadecylsilyl silica gel for chromatography R* (4 µm);
- *temperature: 30 °C.*

*Mobile phase:*

- *mobile phase A: water R;*
- *mobile phase B: acetonitrile R;*

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 28	40	60
28 - 45	40 → 20	60 → 80

*Flow rate: 2.0 mL/min.*

*Detection: spectrophotometer at 243 nm.*

*Injection: 20 µL.*

*Identification of impurities:* use the chromatogram supplied with *selamectin for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A, B, C and D.

*Relative retention* with reference to selamectin (retention time = about 22 min): impurity A = about 0.2; impurity B = about 0.4; impurity C = about 0.5; impurity D = about 1.7.

*System suitability: reference solution (b):*

- *resolution:* minimum 4.0 between the peaks due to impurities B and C.

*Limits:*

- *correction factor:* for the calculation of content, multiply the peak area of impurity D by 1.5;
- *impurities A, B:* for each impurity, not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (2.0 per cent);
- *impurities C, D:* for each impurity, not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (1.5 per cent);
- *any other impurity:* for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent);
- *total:* not more than 4 times the area of the principal peak in the chromatogram obtained with reference solution (a) (4.0 per cent);
- *disregard limit:* 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent).

**Heavy metals** (2.4.8): maximum 20 ppm.

Dissolve 2.0 g in *ethanol (96 per cent) R* and dilute to 20.0 mL with the same solvent. 12 mL of the solution complies with test B. Prepare the reference solution using lead standard solution (2 ppm Pb) obtained by diluting *lead standard solution (100 ppm Pb) R* with *ethanol (96 per cent) R*. Filter the solution through a membrane filter (nominal pore size 0.45 µm). Compare the spots on the filters obtained with the different solutions. Any brownish-black colour in the spot from the test solution is not more intense than that in the spot from the reference solution.

**Water** (2.5.12, *Method A*): maximum 4.0 per cent, determined on 0.20 g.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (2.2.29).

*Test solution.* Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 250.0 mL with the mobile phase.

*Reference solution.* Dissolve 50.0 mg of *selamectin CRS* in the mobile phase and dilute to 250.0 mL with the mobile phase.

*Column:*

- *size: l = 0.15 m, Ø = 3.9 mm;*

– *stationary phase: end-capped octadecylsilyl silica gel for chromatography R* (4 µm);

- *temperature: 30 °C.*

*Mobile phase: water R, acetonitrile R* (20:80 V/V).

*Flow rate: 1.0 mL/min.*

*Detection: spectrophotometer at 243 nm.*

*Injection: 20 µL.*

*Run time: twice the retention time of selamectin.*

*Retention time: selamectin = about 9 min.*

Calculate the percentage content of C<sub>43</sub>H<sub>63</sub>NO<sub>11</sub> from the declared content of *selamectin CRS*.

STORAGE

In an airtight container.

IMPURITIES

*Specified impurities: A, B, C, D.*

## SELEGILINE HYDROCHLORIDE

### Selegilini hydrochloridum

$C_{13}H_{18}ClN$   
[14611-52-0]

$M_r$  223.7

#### DEFINITION

*N*-Methyl-*N*-[(1*R*)-1-methyl-2-phenylethyl]prop-2-yn-1-amine hydrochloride.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

#### CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: freely soluble in water and in methanol, slightly soluble in acetone.

*mp*: about 143 °C.

#### IDENTIFICATION

- A. Specific optical rotation (2.2.7):  $-10.0$  to  $-12.0$  (dried substance).

Dissolve 2.000g in carbon dioxide-free water *R* and dilute to 20.0 mL with the same solvent.

- B. Infrared absorption spectrophotometry (2.2.24).

*Preparation*: discs of potassium chloride *R*.

*Comparison*: selegiline hydrochloride CRS.

- C. It gives reaction (a) of chlorides (2.3.1).

#### TESTS

**pH** (2.2.3): 3.5 to 4.5.

Dissolve 0.20 g in carbon dioxide-free water *R* and dilute to 10 mL with the same solvent.

**Related substances.** Liquid chromatography (2.2.29).

*Test solution.* Dissolve 20 mg of the substance to be examined in the mobile phase and dilute to 10.0 mL with the mobile phase.

*Reference solution (a).* Dissolve 50.0 mg of selegiline hydrochloride CRS and 10.0 mg of butyl parahydroxybenzoate *R* in the mobile phase and dilute to 50.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 20.0 mL with the mobile phase.

*Reference solution (b).* Dilute 1.0 mL of the test solution to 10.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 50.0 mL with the mobile phase.

*Column*:

– *size*:  $l = 0.25$  m,  $\varnothing = 4.6$  mm;

– *stationary phase*: octylsilyl silica gel for chromatography *R* (5  $\mu$ m).

*Mobile phase*: dilute 500 mL of acetonitrile *R* to 1000.0 mL with a butylammonium acetate buffer solution pH 6.5 prepared as follows: dissolve 4 mL of butylamine *R* in 900 mL of water *R*, adjust to pH 6.5 with acetic acid *R* and dilute to 1000.0 mL with water *R*.

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 215 nm.

*Injection*: 20  $\mu$ L.

*Run time*: 1.7 times the retention time of selegiline.

*System suitability*: reference solution (a):

– *resolution*: minimum 3 between the peaks due to selegiline and butyl parahydroxybenzoate.

*Limits*:

– *impurities A, B, C, D*: for each impurity, not more than the area of the peak in the chromatogram obtained with reference solution (b) (0.2 per cent);

– *total*: not more than 2.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

– *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.02 per cent); disregard any peak due to chlorides.

**Impurity E.** Liquid chromatography (2.2.29).

*Test solution.* Dissolve 20.0 mg of the substance to be examined in a mixture of 10  $\mu$ L of butylamine *R* and 1 mL of 2-propanol *R* and dilute to 10.0 mL with the mobile phase.

*Reference solution (a).* Dissolve 8.0 mg of (*RS*)-selegiline hydrochloride CRS in a mixture of 10  $\mu$ L of butylamine *R* and 1 mL of 2-propanol *R* and dilute to 10.0 mL with the mobile phase.

*Reference solution (b).* Dilute 0.5 mL of reference solution (a) to 20.0 mL with the mobile phase.

*Column*:

– *size*:  $l = 0.25$  m,  $\varnothing = 4.6$  mm;

– *stationary phase*: silica gel OD for chiral separations *R*.

*Mobile phase*: 2-propanol *R*, cyclohexane *R* (0.2:99.8 *V/V*).

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 220 nm.

*Injection*: 20  $\mu$ L.

*Retention time*: impurity E = about 10 min.

*System suitability*: reference solution (a):

- *resolution*: minimum 1.5 between the peaks due to impurity E and (*R*)-selegiline; if necessary, adjust the concentration of 2-propanol in the mobile phase.

*Limit*:

- *impurity E*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.5 per cent).

**Loss on drying** (2.2.32): maximum 0.5 per cent, determined on 1.000 g by drying at 60 °C at a pressure not exceeding 0.5 kPa.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

#### ASSAY

Dissolve 0.180 g in 50 mL of *acetic anhydride R*. Titrate with 0.1 M *perchloric acid*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *perchloric acid* is equivalent to 22.37 mg of C<sub>13</sub>H<sub>18</sub>N.

#### STORAGE

Protected from light.

#### IMPURITIES

*Specified impurities*: A, B, C, D, E.

- A. (2*RS*)-*N*-methyl-1-phenylpropan-2-amine [(*RS*)-metamfetamine],
- B. (2*R*)-1-phenylpropan-2-amine (amfetamine),
- C. (1*RS*,2*SR*)-2-amino-1-phenylpropan-1-ol (phenylpropanolamine),

- D. R<sub>1</sub> = R<sub>3</sub> = H, R<sub>2</sub> = CH<sub>3</sub>: *N*-[(1*R*)-1-methyl-2-phenylethyl]prop-2-yn-1-amine (demethylselegiline),
- E. R<sub>1</sub> = R<sub>3</sub> = CH<sub>3</sub>, R<sub>2</sub> = H: *N*-methyl-*N*-[(1*S*)-1-methyl-2-phenylethyl]prop-2-yn-1-amine [(*S*)-selegiline].

01/2008:1147

## SELENIUM DISULFIDE

### Selenii disulfidum

SeS<sub>2</sub>  
[7488-56-4]

*M*<sub>r</sub> 143.1

#### DEFINITION

*Content*: 52.0 per cent to 55.5 per cent of Se.

#### CHARACTERS

*Appearance*: bright orange or reddish-brown powder.

*Solubility*: practically insoluble in water.

#### IDENTIFICATION

- A. Gently boil about 50 mg with 5 mL of *nitric acid R* for 30 min. Dilute to 50 mL with *water R* and filter. To 5 mL of the filtrate add 10 mL of *water R* and 5 g of *urea R*. Heat to boiling, cool and add 1.5 mL of *potassium iodide solution R*. A yellow or orange colour is produced which darkens rapidly on standing. This solution is used in identification test B.

- B. Allow the coloured solution obtained under identification A to stand for 10 min and filter through *kieselguhr for chromatography R*. 5 mL of the filtrate gives reaction (a) of sulfates (2.3.1).

#### TESTS

**Soluble selenium compounds**: maximum 5 ppm, calculated as Se.

To 10 g add 100 mL of *water R*, mix well, allow to stand for 1 h with frequent shaking and filter. To 10 mL of the filtrate add 2 mL of a 115 g/L solution of *anhydrous formic acid R*, dilute to 50 mL with *water R* and adjust to pH 2.0-3.0 with an 115 g/L solution of *anhydrous formic acid R*. Add 2 mL of a 5 g/L solution of 3,3'-*diaminobenzidine tetrahydrochloride R*. Allow to stand for 45 min and then adjust to pH 6.0-7.0 with *dilute ammonia R1*. Shake the solution for 1 min with 10 mL of *toluene R* and allow the phases to separate. The absorbance (2.2.25) of the upper layer measured at 420 nm is not greater than that of a standard prepared at the same time and in the same manner beginning at the words "add 2 mL of an 115 g/L solution of *anhydrous formic acid R*" and using 5 mL of *selenium standard solution (1 ppm Se) R* instead of 10 mL of the filtrate.

#### ASSAY

To 0.100 g add 25 mL of *fuming nitric acid R* and heat on a water-bath for 1 h; a small insoluble residue may remain. Cool and dilute to 100.0 mL with *water R*. To 25.0 mL of this solution add 50 mL of *water R* and 5 g of *urea R* and heat to boiling. Cool, add 7 mL of *potassium iodide solution R* and 3 mL of *starch solution R*. Titrate immediately with 0.1 M *sodium thiosulfate*. Carry out a blank titration.

1 mL of 0.1 M *sodium thiosulfate* is equivalent to 1.974 mg of Se.

01/2008:0788  
corrected 6.0

## SERINE

### Serinum

C<sub>3</sub>H<sub>7</sub>NO<sub>3</sub>  
[56-45-1]

*M*<sub>r</sub> 105.1

#### DEFINITION

Serine contains not less than 98.5 per cent and not more than the equivalent of 101.0 per cent of (*S*)-2-amino-3-hydroxypropanoic acid, calculated with reference to the dried substance.

#### CHARACTERS

A white or almost white, crystalline powder or colourless crystals, freely soluble in water, practically insoluble in alcohol.

#### IDENTIFICATION

*First identification*: A, B.

*Second identification*: A, C, D.

- A. Specific optical rotation (see Tests).
- B. Examine by infrared absorption spectrophotometry (2.2.24), comparing with the spectrum obtained with *serine CRS*. Examine the substances prepared as discs.
- C. Examine the chromatograms obtained in the test for ninhydrin-positive substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

D. To 1 mL of a 10 g/L solution of the substance to be examined in a test-tube, add 5 mL of a 20 g/L solution of *sodium periodate R*. Heat on a water-bath and collect the vapour on glass wool moistened with *water R* and inserted in the opening of the test tube. After heating for 5 min, transfer the glass wool to a test-tube containing 1 mL of a 15 g/L solution of *chromotropic acid, sodium salt R* and 3 mL of *sulfuric acid R*. Heat on a water-bath for 10 min. A violet-red colour is produced.

## TESTS

**Solution S.** Dissolve 2.5 g in *distilled water R* and dilute to 50 mL with the same solvent.

**Appearance of solution.** Solution S is clear (2.2.1) and not more intensely coloured than reference solution BY<sub>6</sub> (2.2.2, Method II).

**Specific optical rotation (2.2.7).** Dissolve 2.50 g in *dilute hydrochloric acid R* and dilute to 25.0 mL with the same acid. The specific optical rotation is + 14.0 to + 16.0, calculated with reference to the dried substance.

**Ninhydrin-positive substances.** Examine by thin-layer chromatography (2.2.27), using a *TLC silica gel plate R*.

**Test solution (a).** Dissolve 0.10 g of the substance to be examined in 0.1 M *hydrochloric acid* and dilute to 10 mL with the same acid.

**Test solution (b).** Dilute 1 mL of test solution (a) to 50 mL with *water R*.

**Reference solution (a).** Dissolve 10 mg of *serine CRS* in 0.1 M *hydrochloric acid* and dilute to 50 mL with the same acid.

**Reference solution (b).** Dilute 5 mL of test solution (b) to 20 mL with *water R*.

**Reference solution (c).** Dissolve 10 mg of *methionine CRS* and 10 mg of *serine CRS* in 0.1 M *hydrochloric acid* and dilute to 25 mL with the same acid.

Apply to the plate 5 µL of each solution. Develop over a path of 15 cm using a mixture of 20 volumes of *glacial acetic acid R*, 20 volumes of *water R* and 60 volumes of *butanol R*. Allow the plate to dry in air, spray with *ninhydrin solution R* and heat at 100 °C to 105 °C for 15 min. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent). The test is not valid unless the chromatogram obtained with reference solution (c) shows two clearly separated spots.

**Chlorides (2.4.4).** Dilute 5 mL of solution S to 15 mL with *water R*. The solution complies with the limit test for chlorides (200 ppm).

**Sulfates (2.4.13).** Dilute 10 mL of solution S to 15 mL with *distilled water R*. The solution complies with the limit test for sulfates (300 ppm).

**Ammonium (2.4.1).** 50 mg complies with limit test B for ammonium (200 ppm). Prepare the standard using 0.1 mL of *ammonium standard solution (100 ppm NH<sub>4</sub>) R*.

**Iron (2.4.9).** In a separating funnel, dissolve 1.0 g in 10 mL of *dilute hydrochloric acid R*. Shake with three quantities, each of 10 mL, of *methyl isobutyl ketone RI*, shaking for 3 min each time. To the combined organic layers add 10 mL of *water R* and shake for 3 min. The aqueous layer complies with the limit test for iron (10 ppm).

**Heavy metals (2.4.8).** Dissolve 2.0 g in *water R* and dilute to 20 mL with the same solvent. 12 mL of the solution complies with limit test A for heavy metals (10 ppm). Prepare the standard using *lead standard solution (1 ppm Pb) R*.

**Loss on drying (2.2.32).** Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash (2.4.14).** Not more than 0.1 per cent, determined on 1.0 g.

## ASSAY

Dissolve 0.100 g in 3 mL of *anhydrous formic acid R*. Add 30 mL of *anhydrous acetic acid R*. Using 0.1 mL of *naphtholbenzein solution R* as indicator, titrate with 0.1 M *perchloric acid* until the colour changes from brownish-yellow to green.

1 mL of 0.1 M *perchloric acid* is equivalent to 10.51 mg of C<sub>20</sub>H<sub>16</sub>Cl<sub>3</sub>N<sub>3</sub>O<sub>4</sub>S.

## STORAGE

Store protected from light.

01/2008:1148  
corrected 6.1

## SERTAONAZOLE NITRATE

## Sertaconazoli nitras

C<sub>20</sub>H<sub>16</sub>Cl<sub>3</sub>N<sub>3</sub>O<sub>4</sub>S  
[99592-39-9]

M<sub>r</sub> 500.8

## DEFINITION

(*RS*)-1-[2-[(7-Chloro-1-benzothiophen-3-yl)methoxy]-2-(2,4-dichlorophenyl)ethyl]-1*H*-imidazole nitrate.

**Content:** 98.5 per cent to 101.0 per cent (anhydrous substance).

## CHARACTERS

**Appearance:** white or almost white powder.

**Solubility:** practically insoluble in water, soluble in methanol, sparingly soluble in ethanol (96 per cent) and in methylene chloride.

## IDENTIFICATION

**First identification:** A, C.

**Second identification:** A, B, D, E.

A. Melting point (2.2.14): 156 °C to 161 °C.

B. Ultraviolet and visible absorption spectrophotometry (2.2.25).

**Test solution.** Dissolve 0.1 g in *methanol R* and dilute to 100 mL with the same solvent. Dilute 10 mL of this solution to 100 mL with *methanol R*.

**Spectral range:** 240-320 nm.

**Absorption maxima:** at 260 nm, 293 nm and 302 nm.

**Absorbance ratio:** A<sub>302</sub>/A<sub>293</sub> = 1.16 to 1.28.

C. Infrared absorption spectrophotometry (2.2.24).

**Preparation:** dry the substances at 100-105 °C for 2 h and examine as discs of *potassium bromide R*.

**Comparison:** *sertaconazole nitrate CRS*.

D. Thin-layer chromatography (2.2.27).

**Solvent mixture:** *concentrated ammonia R*, *methanol R* (10:90 V/V).

**Test solution.** Dissolve 40 mg of the substance to be examined in the solvent mixture and dilute to 10 mL with the solvent mixture.

**Reference solution (a).** Dissolve 40 mg of *sertaconazole nitrate CRS* in the solvent mixture and dilute to 10 mL with the solvent mixture.

**Reference solution (b).** Dissolve 20 mg of *miconazole nitrate CRS* in reference solution (a) and dilute to 5 mL with reference solution (a).

**Plate:** *TLC silica gel G plate R*.

*Mobile phase: concentrated ammonia R, toluene R, dioxan R (1:40:60 V/V/V).*

*Application: 5 µL.*

*Development: over a path of 15 cm.*

*Drying: in a current of air for 15 min.*

*Detection: expose to iodine vapour for 30 min.*

*System suitability: reference solution (b):*

– the chromatogram shows 2 clearly separated spots.

*Results: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).*

E. About 1 mg gives the reaction of nitrates (2.3.1).

#### TESTS

**Appearance of solution.** The solution is clear (2.2.1) and not more intensely coloured than reference solution Y<sub>5</sub> (2.2.2, Method II).

Dissolve 0.1 g in *ethanol (96 per cent) R* and dilute to 10 mL with the same solvent.

**Related substances.** Liquid chromatography (2.2.29).

*Test solution.* Dissolve 10.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 mL with the mobile phase.

*Reference solution (a).* Dilute 5.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 20.0 mL with the mobile phase.

*Reference solution (b).* Dissolve 5.0 mg of *sertaconazole nitrate CRS* and 5.0 mg of *miconazole nitrate CRS* in the mobile phase and dilute to 20.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 50.0 mL with the mobile phase.

*Column:*

- *size: l = 0.25 m, Ø = 4.0 mm;*
- *stationary phase: nitrile silica gel for chromatography R1 (10 µm).*

*Mobile phase: acetonitrile R1, 1.5 g/L solution of sodium dihydrogen phosphate R (37:63 V/V).*

*Flow rate: 1.6 mL/min.*

*Detection: spectrophotometer at 220 nm.*

*Injection: 20 µL.*

*Run time: 1.3 times the retention time of sertaconazole.*

*Retention time: nitrate ion = about 1 min; miconazole = about 17 min; sertaconazole = about 19 min.*

*System suitability: reference solution (b):*

- *resolution: minimum 2.0 between the peaks due to miconazole and sertaconazole.*

*Limits:*

- *impurities A, B, C: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.25 per cent);*
- *total: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);*
- *disregard limit: 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent); disregard the peak due to the nitrate ion.*

**Water (2.5.12):** maximum 1.0 per cent, determined on 0.50 g.

**Sulfated ash (2.4.14):** maximum 0.1 per cent, determined on 1.0 g.

#### ASSAY

Dissolve 0.400 g in 50 mL of a mixture of equal volumes of *anhydrous acetic acid R* and *methyl ethyl ketone R*. Titrate with 0.1 M *perchloric acid*, determining the end-point potentiometrically (2.2.20). Carry out a blank titration.

1 mL of 0.1 M *perchloric acid* is equivalent to 50.08 mg of C<sub>20</sub>H<sub>16</sub>Cl<sub>2</sub>N<sub>3</sub>O<sub>4</sub>S.

#### STORAGE

Protected from light.

#### IMPURITIES

*Specified impurities: A, B, C.*

A. (1RS)-1-(2,4-dichlorophenyl)-2-(1H-imidazol-1-yl)ethanol,

B. R = Br: 3-(bromomethyl)-7-chloro-1-benzothiophen,

C. R = OH: (7-chloro-1-benzothiophen-3-yl)methanol.

## SERTRALINE HYDROCHLORIDE

### Sertralini hydrochloridum

C<sub>17</sub>H<sub>18</sub>Cl<sub>3</sub>N  
[79559-97-0]

M<sub>r</sub> 342.7

#### DEFINITION

(1S,4S)-4-(3,4-Dichlorophenyl)-N-methyl-1,2,3,4-tetrahydronaphthalen-1-amine hydrochloride.

*Content: 97.5 per cent to 102.0 per cent (anhydrous substance).*

#### CHARACTERS

*Appearance: white or almost white, crystalline powder.*

*Solubility: slightly soluble in water, sparingly soluble or slightly soluble in anhydrous ethanol, slightly soluble in acetone and in 2-propanol.*

It shows polymorphism (5.9).

#### IDENTIFICATION

Carry out either tests A, B, C or tests B, C, D.

A. Specific optical rotation (2.2.7): + 38.8 to + 43.0 (anhydrous substance), measured at 25 °C.

*Solvent mixture.* Dilute 1 volume of a 103 g/L solution of *hydrochloric acid R* to 20 volumes with *methanol R*.

Dissolve 0.250 g in the solvent mixture and dilute to 25.0 mL with the solvent mixture.

B. Infrared absorption spectrophotometry (2.2.24).

*Comparison: sertraline hydrochloride CRS.*

If the spectra obtained in the solid state show differences, record new spectra using 10 g/L solutions in *methylene chloride R*.

C. Dissolve 10 mg in 5 mL of *anhydrous ethanol R* and add 5 mL of *water R*. The solution gives reaction (a) of chlorides (2.3.1).

D. Enantiomeric purity (see Tests).

## TESTS

**Enantiomeric purity.** Liquid chromatography (2.2.29).

*Solvent mixture:* diethylamine R, hexane R, 2-propanol R (1:40:60 V/V/V).

*Test solution.* Dissolve 60.0 mg of the substance to be examined in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

*Reference solution (a).* Dissolve the contents of a vial of sertraline for system suitability CRS (containing impurity G) in 1.0 mL of the solvent mixture.

*Reference solution (b).* Dilute 0.5 mL of the test solution to 100.0 mL with the solvent mixture.

*Column:*

- size:  $l = 0.25$  m,  $\emptyset = 4.6$  mm;
- stationary phase: silica gel AD for chiral separation R (5  $\mu$ m).

*Mobile phase:* mix 30 volumes of hexane R and 70 volumes of a mixture of 1 volume of diethylamine R, 25 volumes of 2-propanol R and 975 volumes of hexane R.

*Flow rate:* 0.4 mL/min.

*Detection:* spectrophotometer at 275 nm.

*Injection:* 20  $\mu$ L.

*Run time:* 30 min.

*Elution order:* sertraline, impurity G.

*System suitability:*

- resolution: minimum 1.5 between the peaks due to sertraline and impurity G in the chromatogram obtained with reference solution (a);
- signal-to-noise ratio: minimum 10 for the peak due to sertraline in the chromatogram obtained with reference solution (b).

*Limit:*

- impurity G: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.5 per cent).

**Impurity E.** Liquid chromatography (2.2.29).

*Solvent mixture:* mobile phase A, mobile phase B (50:50 V/V).

*Test solution.* Dissolve 50.0 mg of the substance to be examined in the solvent mixture and dilute to 50.0 mL with the solvent mixture.

*Reference solution (a).* Dissolve 5.0 mg of mandelic acid CRS (impurity E) in the solvent mixture and dilute to 25.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 100.0 mL with the solvent mixture.

*Reference solution (b).* Dissolve 10 mg of benzoic acid R and 20 mg of mandelic acid R (impurity E) in the solvent mixture and dilute to 50.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 50.0 mL with the solvent mixture.

*Column:*

- size:  $l = 0.25$  m,  $\emptyset = 4.6$  mm;
- stationary phase: end-capped octadecylsilyl silica gel for chromatography R (3  $\mu$ m).

*Mobile phase:*

- mobile phase A: dissolve 1.0 g of sodium laurilsulfate R in 800 mL of water R and add 200 mL of acetonitrile RI; add 1.0 mL of phosphoric acid R and mix;
- mobile phase B: dissolve 1.0 g of sodium laurilsulfate R in 100 mL of water R and add 900 mL of acetonitrile RI; add 1.0 mL of phosphoric acid R and mix;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 8	60	40
8 - 9	60 → 10	40 → 90
9 - 16	10	90

*Flow rate:* 1 mL/min.

*Detection:* spectrophotometer at 220 nm.

*Injection:* 10  $\mu$ L.

*Relative retention* with reference to sertraline (retention time = about 18 min): impurity E = about 0.2; benzoic acid = about 0.3.

*System suitability:* reference solution (b):

- resolution: minimum 5.0 between the peaks due to impurity E and benzoic acid.

*Limit:*

- impurity E: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent).

**Related substances.** Gas chromatography (2.2.28): use the normalisation procedure.

*Test solution.* Introduce 0.250 g of the substance to be examined into a 15 mL stoppered centrifuge tube, add 2.0 mL of methanol R and 0.20 mL of a 25 per cent solution of potassium carbonate R and mix in a vortex mixer for 30 s. Add 8.0 mL of methylene chloride R, stopper the tube and mix in a vortex mixer for 60 s. Add 1 g of anhydrous sodium sulfate R, mix well and then centrifuge for about 5 min.

*Reference solution (a).* Dissolve the contents of a vial of sertraline for peak identification CRS (containing impurities A, B, C and F) in 0.2 mL of methylene chloride R.

*Reference solution (b).* Dilute 1.0 mL of the test solution to 100.0 mL with methylene chloride R. Dilute 1.0 mL of this solution to 20.0 mL with methylene chloride R.

*Column:*

- material: fused silica;
- size:  $l = 30$  m,  $\emptyset = 0.53$  mm;
- stationary phase: polymethylphenylsiloxane R (film thickness 1.0  $\mu$ m).

*Carrier gas:* helium for chromatography R.

*Flow rate:* 9 mL/min.

*Split ratio:* 1:10.

*Temperature:*

	Time (min)	Temperature (°C)
Column	0 - 1	200
	1 - 31	200 → 260
	31 - 39	260
Injection port		250
Detector		280

*Detection:* flame ionisation.

*Injection:* 1  $\mu$ L.

*Identification of impurities:* use the chromatogram supplied with sertraline for peak identification CRS and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A, B, C and F.

*Relative retention* with reference to sertraline (retention time = about 24 min): impurity B = about 0.5; impurities C and D = about 0.7; impurity A = about 1.05; impurity F = about 1.1.

**System suitability:** reference solution (a):

- **peak-to-valley ratio:** minimum 15, where  $H_p$  = height above the baseline of the peak due to impurity A and  $H_v$  = height above the baseline of the lowest point of the curve separating this peak from the peak due to sertraline.

**Limits:**

- **impurities A, B, F:** for each impurity, maximum 0.2 per cent;
- **sum of impurities C and D:** maximum 0.8 per cent;
- **unspecified impurities:** for each impurity, maximum 0.10 per cent;
- **total:** maximum 1.5 per cent;
- **disregard limit:** the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Heavy metals (2.4.8):** maximum 20 ppm.

Dissolve 1.0 g in *ethanol (96 per cent) R* and dilute to 20.0 mL with the same solvent. 12 mL of the solution complies with test B. Prepare the reference solution using lead standard solution (1 ppm Pb) obtained by diluting *lead standard solution (100 ppm Pb) R* with *ethanol (96 per cent) R*.

**Water (2.5.12):** maximum 0.5 per cent, determined on 2.00 g.

**Sulfated ash (2.4.14):** maximum 0.2 per cent, determined on 1.0 g.

## ASSAY

Liquid chromatography (2.2.29).

**Buffer solution.** To 28.6 mL of *glacial acetic acid R* slowly add, while stirring and cooling, 34.8 mL of *triethylamine R*, and dilute to 100 mL with *water R*. Dilute 10 mL of this solution to 1000 mL with *water R*.

**Test solution.** Dissolve 55.0 mg of the substance to be examined in the mobile phase and dilute to 50.0 mL with the mobile phase. Dilute 5.0 mL of this solution to 100.0 mL with the mobile phase.

**Reference solution.** Dissolve 55.0 mg of *sertraline hydrochloride CRS* in the mobile phase and dilute to 50.0 mL with the mobile phase. Dilute 5.0 mL of this solution to 100.0 mL with the mobile phase.

**Column:**

- **size:**  $l = 0.15$  m,  $\varnothing = 3.9$  mm;
- **stationary phase:** *octadecylsilyl silica gel for chromatography R* (4  $\mu$ m);
- **temperature:** 30 °C.

**Mobile phase:** *methanol R*, buffer solution, *acetonitrile R* (15:40:45 V/V/V).

**Flow rate:** 1.8 mL/min.

**Detection:** spectrophotometer at 254 nm.

**Injection:** 20  $\mu$ L.

**Run time:** twice the retention time of sertraline.

**Retention time:** sertraline = about 1.9 min.

Calculate the percentage content of  $C_{17}H_{18}Cl_3N$  from the declared content of *sertraline hydrochloride CRS*.

## STORAGE

Protected from light.

## IMPURITIES

**Specified impurities:** A, B, C, D, E, F, G.

A. (1*RS*,4*SR*)-4-(3,4-dichlorophenyl)-*N*-methyl-1,2,3,4-tetrahydronaphthalen-1-amine,

B. (1*RS*,4*RS*)-*N*-methyl-4-phenyl-1,2,3,4-tetrahydronaphthalen-1-amine,

C. (1*RS*,4*RS*)-4-(4-chlorophenyl)-*N*-methyl-1,2,3,4-tetrahydronaphthalen-1-amine,

D. (1*RS*,4*RS*)-4-(3-chlorophenyl)-*N*-methyl-1,2,3,4-tetrahydronaphthalen-1-amine,

E. (2*R*)-hydroxyphenylacetic acid ((*R*)-mandelic acid),

F. (4*R*)-4-(3,4-dichlorophenyl)-3,4-dihydronaphthalen-1(2*H*)-one,

G. (1*R*,4*R*)-4-(3,4-dichlorophenyl)-*N*-methyl-1,2,3,4-tetrahydronaphthalen-1-amine (sertraline enantiomer).

01/2010:0433  
corrected 6.7

## SESAME OIL, REFINED

### Sesami oleum raffinatum

#### DEFINITION

Fatty oil obtained from the ripe seeds of *Sesamum indicum* L. by expression or extraction. It is then refined. Improved colour and odour may be obtained by further refining. It may contain a suitable antioxidant.

#### CHARACTERS

*Appearance*: clear, light yellow liquid, almost colourless.

*Solubility*: practically insoluble in ethanol (96 per cent), miscible with light petroleum.

*Relative density*: about 0.919.

*Refractive index*: about 1.473.

It solidifies to a butter-like mass at about  $-4\text{ }^{\circ}\text{C}$ .

#### IDENTIFICATION

*First identification*: A.

*Second identification*: B.

A. Composition of triglycerides (see Tests).

B. Identification of fatty oils by thin-layer chromatography (2.3.2).

*Results*: the chromatogram obtained is similar to the corresponding chromatogram shown in Figure 2.3.2-1.

#### TESTS

**Acid value** (2.5.1): maximum 0.5, determined on 10.0 g; maximum 0.3 if intended for use in the manufacture of parenteral preparations.

**Peroxide value** (2.5.5): maximum 10.0; maximum 5.0 if intended for use in the manufacture of parenteral preparations.

**Unsaponifiable matter** (2.5.7): maximum 2.0 per cent, determined on 5.0 g.

**Alkaline impurities** (2.4.19). It complies with the test for alkaline impurities in fatty oils.

**Cottonseed oil**. Mix 5 mL in a test-tube with 5 mL of a mixture of equal volumes of *pentanol R* and a 10 g/L solution of *sulfur R* in *carbon disulfide R*. Warm the mixture carefully until the carbon disulfide is expelled, and immerse the tube to 1/3 of its depth in boiling *saturated sodium chloride solution R*. No reddish colour develops within 15 min.

**Composition of triglycerides**. Liquid chromatography (2.2.29).

*Test solution*. Dilute 50.0 mg of the substance to be examined to 10.0 mL with a mixture of equal volumes of *acetone R* and *methylene chloride R*.

*Reference solutions*. Dissolve 80.0 mg of *triolein R* in a mixture of equal volumes of *acetone R* and *methylene chloride R* and dilute to 50.0 mL with the same mixture of solvents. Prepare 5 reference solutions by dilution of this solution so as to cover concentrations ranging from the disregard limit (0.5 per cent) to the upper limit for OLL (30.0 per cent).

Plot the logarithm of the area of the peak due to triolein against the logarithm of the concentration of triolein in the reference solution.

*Column*: 2 columns coupled in series:

- *size of each column*:  $l = 0.25\text{ m}$ ,  $\varnothing = 4\text{ mm}$ ;
- *stationary phase*: octadecylsilyl silica gel for chromatography R (4  $\mu\text{m}$ ).

*Mobile phase*:

- *mobile phase A*: *acetone R*, *methylene chloride R*, *acetonitrile R* (5:15:80 V/V/V);
- *mobile phase B*: *acetone R*, *acetonitrile R*, *methylene chloride R* (20:20:60 V/V/V);

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 15	100 → 75	0 → 25
15 - 25	75	25
25 - 70	75 → 0	25 → 100
70 - 75	0 → 100	100 → 0
75 - 80	100	0

*Flow rate*: 1.0 mL/min.

*Detection*: evaporative light-scattering detector; the following settings have been found to be suitable; if the detector has different setting parameters, adjust the detector settings so as to comply with the system suitability criterion:

- *carrier gas*: *nitrogen R*;
- *flow rate*: 0.7 L/min;
- *evaporator temperature*: 85  $^{\circ}\text{C}$ ;
- *nebuliser temperature*: 45  $^{\circ}\text{C}$ .

*Injection*: 20  $\mu\text{L}$ .

*Identification of peaks*: use the chromatograms obtained with the reference solutions to identify the peak due to triolein; identify the other peaks using the chromatogram shown in Figure 0433-1. The fatty acids are designated as linolenic (Ln), linoleic (L), oleic (O), palmitic (P) and stearic (S).

*System suitability*: test solution:

- *resolution*: minimum 1.5 between the peaks due to OOO (triolein) and SOL.

Using the calibration curve obtained with the reference solutions, determine the percentage content of each peak with an area greater than that of the peak corresponding to the disregard limit (0.5 per cent). Assuming that the sum of these percentage contents is 100 per cent, normalise the percentage content of each of the 8 triglycerides specified below.

*Composition of triglycerides*:

- *LLL*: 7.0 per cent to 19.0 per cent;
- *OLL*: 13.0 per cent to 30.0 per cent;
- *PLL*: 5.0 per cent to 9.0 per cent;
- *OOL*: 12.0 per cent to 23.0 per cent;
- *POL*: 6.0 per cent to 14.0 per cent;
- *OOO*: 5.0 per cent to 14.0 per cent;
- *SOL*: 2.0 per cent to 8.0 per cent;
- *POO*: 2.0 per cent to 10.0 per cent.

**Water** (2.5.32): maximum 0.1 per cent, determined on 1.00 g.

#### STORAGE

In an airtight, well-filled container, protected from light; if intended for use in the manufacture of parenteral preparations store under an inert gas in an airtight container.

When the container has been opened, its contents are to be used as soon as possible. Any part of the contents not used at once is protected by an atmosphere of an inert gas.

#### LABELLING

The label states:

- whether the oil is obtained by expression or extraction;
- where applicable, that the substance is suitable for use in the manufacture of parenteral preparations;
- where applicable, the name of the inert gas used.

## SEVOFLURANE

### Sevofluranum

$C_4H_3F_7O$   
[28523-86-6]

$M_r$  200.1

#### DEFINITION

1,1,1,3,3,3-Hexafluoro-2-(fluoromethoxy)propane.

#### CHARACTERS

*Appearance*: clear, colourless, volatile liquid.

*Solubility*: slightly soluble in water, miscible with ethanol (96 per cent).

*Relative density*: about 1.52.

bp: about 59 °C.

It is non-flammable.

It decomposes in the presence of Lewis acids; this decomposition is inhibited by water in sufficient quantity.

#### IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

*Preparation*: examine the substance in the gaseous state or in the liquid state.

*Comparison*: sevoflurane CRS.

**Acidity or alkalinity.** Introduce 20.0 mL of the substance to be examined and 20 mL of carbon dioxide-free water R into a separating funnel, shake for 3 min and allow to stand. Collect the aqueous upper layer and add 0.2 mL of bromocresol purple solution R. Not more than 0.10 mL of 0.01 M sodium hydroxide or not more than 0.60 mL of 0.01 M hydrochloric acid is required to change the colour of the indicator.

**Refractive index (2.2.6)**: 1.2745 to 1.2760.

**Related substances.** Gas chromatography (2.2.28).

*Internal standard*: methylal R.

*Test solution.* Introduce 20.0 mL of the substance to be examined into a vial and seal with a cap and septum. Using a microsyringe, add 5 µL of the internal standard and mix thoroughly.

*Reference solution (a).* Introduce 2.0 mL of ethylene chloride R into a screw-cap vial and immediately seal with a cap and septum. Using a microsyringe, add about 20 µL of the substance to be examined. Record the quantity added, in milligrams, of the substance to be examined ( $M_2$ ). Then, using a microsyringe, add about 20 µL of the internal standard. Record the quantity added, in milligrams, of the internal standard ( $M_1$ ).

*Reference solution (b)*: sevoflurane CRS (containing impurities A and B).

*Reference solution (c).* Introduce 20.0 mL of ethylene chloride R into a vial and seal with a cap and septum. Using a microsyringe, add 20 µL of the substance to be examined and mix thoroughly. Dilute 0.5 mL of this solution to 100.0 mL with ethylene chloride R.

**Column:**

- *material*: fused silica;
- *size*:  $l = 30$  m,  $\varnothing = 0.32$  mm;
- *stationary phase*: poly[(cyanopropyl)(phenyl)]-[dimethyl]siloxane R (film thickness 3  $\mu$ m).

*Carrier gas*: helium for chromatography R.

*Flow rate*: 1.0 mL/min.

*Split ratio*: 1:20.

*Temperature*:

	Time (min)	Temperature (°C)
Column	0 - 10	40
	10 - 26	40 → 200
	26 - 40	200
Injection port		200
Detector		225

*Detection*: flame ionisation.

*Injection*: 2  $\mu$ L.

Rinse the syringe with a solution containing *ethylene chloride R* before the injection of the reference solutions. Rinse the syringe with the substance to be examined before the injection of the test solution.

*Identification of impurities*: use the chromatogram supplied with *sevoflurane CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A and B.

*Relative retention* with reference to sevoflurane (retention time = about 6.6 min): impurity A = about 0.78; impurity B = about 0.83; internal standard = about 1.35.

*System suitability*: reference solution (b):

- *resolution*: minimum 2.0 between the peaks due to impurities A and B.

Calculate the relative response factor ( $F_1$ ) for reference solution (a), using the following expression:

$$\frac{M_1 \times R}{M_2}$$

- $M_1$  = mass of the internal standard in reference solution (a), in milligrams;
- $M_2$  = mass of the substance to be examined in reference solution (a), in milligrams;
- $R$  = ratio of the area of the peak due to sevoflurane to the area of the peak due to the internal standard from the chromatogram obtained with reference solution (a).

Calculate the quantity of each impurity in the substance to be examined, in parts per million, using the following expression:

$$\frac{0.859 \times R_1 \times 250}{1.52 \times F_1}$$

- 0.859 = relative density of the internal standard;
- 1.52 = relative density of sevoflurane;
- $R_1$  = ratio of the area of the peak due to the impurity to the area of the peak due to the internal standard from the chromatogram obtained with the test solution;
- $F_1$  = relative response factor for reference solution (a).

*Limits*:

- *impurity A*: maximum 25 ppm;
- *impurity B*: maximum 100 ppm;
- *unspecified impurities*: for each impurity, maximum 100 ppm;

- *total*: maximum 300 ppm;
- *disregard limit*: the area of the peak due to sevoflurane in the chromatogram obtained with reference solution (c) (5 ppm).

**Fluorides**: maximum 2  $\mu$ g/mL.

Potentiometry (2.2.36, Method I). Use plastic utensils throughout this test.

*Buffer solution*. Dissolve 0.5 g of *sodium citrate R* and 55 g of *sodium chloride R* in 350 mL of *water R*. Carefully add 75 g of *sodium hydroxide R* and shake to dissolve. Cool to room temperature and carefully add 225 mL of *glacial acetic acid R* while stirring. Cool and add 300 mL of *isopropyl alcohol R*. Dilute with *water R* to 1000.0 mL. The apparent pH of this solution is between 5.0 and 5.5.

*Test solution*. Introduce 50.0 mL of the substance to be examined and 50.0 mL of *water R* into a separating funnel, shake vigorously for 3 min and allow the layers to separate completely. Dilute 25.0 mL of the aqueous upper layer to 50.0 mL with the buffer solution.

*Fluoride standard solution (1000 ppm F)*. Dissolve 221.0 mg of *sodium fluoride R*, previously dried at 150 °C for 4 h, in *water R*. Add 1.0 mL of 0.01 M *sodium hydroxide* and dilute to 100.0 mL with *water R*.

*Reference stock solutions*. Dilute the fluoride standard solution (1000 ppm F) diluted with *water R* to obtain solutions having known concentrations of about 5  $\mu$ g, 2  $\mu$ g, 0.5  $\mu$ g, and 0.2  $\mu$ g of fluoride per millilitre.

*Reference solutions*. Dilute 25.0 mL of each reference stock solution to 50.0 mL with the buffer solution.

*Indicator electrode*: fluoride-selective.

*Reference electrode*: glass-sleeved calomel.

*Apparatus*: voltmeter capable of a minimum reproducibility of  $\pm 0.2$  mV.

Carry out the measurements on the reference solutions and test solution. To take measurements, transfer the solution under test to a 100 mL beaker containing a polytetrafluoroethylene-coated magnetic stirring bar, and immerse the electrodes. Allow to stir on a magnetic stirrer with an insulated top until equilibrium is attained (about 2-3 min), and record the potential. Rinse the electrodes with the buffer solution and dry, taking care to avoid damaging the crystal of the specific-ion electrode.

Calculate the concentration of fluorides using the calibration curve.

**Non-volatile residue**: maximum 100 mg/L.

Transfer 10.0 mL to a tared evaporating dish, evaporate to dryness on a water-bath and dry the residue at 105 °C for 2 h. The residue weighs a maximum of 1.0 mg.

**Water (2.5.12)**: maximum 0.050 per cent *m/m*, determined on 10.0 mL.

**STORAGE**

In an airtight, stainless-steel container, protected from light.

**IMPURITIES**

*Specified impurities*: A, B.

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): C.

- A. 1,1,1,3,3,3-pentafluoro-2-(fluoromethoxy)prop-1-ene,

B. 1,1,1,3,3,3-hexafluoro-2-methoxypropane,

C. 1,1,1,3,3,3-hexafluoropropan-2-ol.

01/2008:1149

## SHELLAC

### Lacca

#### DEFINITION

Purified material obtained from the resinous secretion of the female insect *Kerria lacca* (Kerr) Lindinger (*Laccifer lacca* Kerr). There are 4 types of shellac depending on the nature of the treatment of crude secretion (seedlac): wax-containing shellac, bleached shellac, dewaxed shellac and bleached, dewaxed shellac.

Wax-containing shellac is obtained from seedlac: it is purified by filtration of the molten substance and/or by hot extraction using a suitable solvent.

Bleached shellac is obtained from seedlac by treatment with sodium hypochlorite after dissolution in a suitable alkaline solution, precipitation by dilute acid and drying.

Dewaxed shellac is obtained from wax-containing shellac or seedlac by treatment with a suitable solvent and removal of the insoluble wax by filtering.

Bleached, dewaxed shellac is obtained from wax-containing shellac or seedlac by treatment with sodium hypochlorite after dissolution in a suitable alkaline solution; the insoluble wax is removed by filtration. It is precipitated by dilute acid and dried.

#### CHARACTERS

**Appearance:** brownish-orange or yellow, shining, translucent, hard or brittle, more or less thin flakes (wax-containing shellac and dewaxed shellac), or a creamy white or brownish-yellow powder (bleached shellac and bleached, dewaxed shellac).

**Solubility:** practically insoluble in water, gives a more or less opalescent solution (wax containing shellac and bleached shellac) or a clear solution (dewaxed shellac and bleached, dewaxed shellac) in anhydrous ethanol. When warmed it is sparingly soluble or soluble in alkaline solutions.

#### IDENTIFICATION

A. Thin-layer chromatography (2.2.27).

**Test solution.** Heat 0.25 g of the powdered substance (500) (2.9.12) on a water-bath with 2 mL of *dilute sodium hydroxide solution R* for 5 min. Cool, add 5 mL of *ethyl acetate R* and slowly, with stirring, 2 mL of *dilute acetic acid R*. Shake and filter the upper layer through *anhydrous sodium sulfate R*.

**Reference solution.** Dissolve 6.0 mg of *aleuritic acid R* in 1.0 mL of *methanol R*, heating slightly if necessary.

**Plate:** TLC silica gel  $F_{254}$  plate *R*.

**Mobile phase:** *acetic acid R*, *methanol R*, *methylene chloride R*, *ethyl acetate R* (1:8:32:60 V/V/V/V).

**Application:** 10 µL, as bands.

**Development:** twice over a path of 15 cm.

**Drying:** in air.

**Detection:** spray with *anisaldehyde solution R*, heat at 100-105 °C for 5-10 min and examine in daylight.

**Results:** the chromatogram obtained with the test solution shows several coloured zones, one of which is similar in position and colour to the zone in the chromatogram obtained with the reference solution. Above this zone the chromatogram obtained with the test solution shows a pink

zone and below it several violet zones. Below the zone due to aleuritic acid, there is a light blue zone (shellolic acid) accompanied by zones of the same colour but of lower intensity. Other faint grey and violet zones may be visible.

B. Examine the chromatograms obtained in the test for colophony.

**Results:** for wax-containing shellac, in the chromatogram obtained with the test solution, a more or less strong bluish-grey zone is visible, just above the zone due to thymolphthalein in the chromatogram obtained with the reference solution; for dewaxed shellac, no such zone is visible just above the zone due to thymolphthalein in the chromatogram obtained with the reference solution.

#### TESTS

**Acid value (2.5.1):** 65 to 95 (dried substance).

Examine 1.00 g of the coarsely ground substance. Determine the end-point potentiometrically (2.2.20).

**Colophony.** Thin-layer chromatography (2.2.27) as described under identification test A with the following modifications.

**Test solution.** Dissolve 50 mg of the powdered substance (500) (2.9.12), with heating, in a mixture of 0.5 mL of *methylene chloride R* and 0.5 mL of *methanol R*.

**Reference solution.** Dissolve 2.0 mg of *thymolphthalein R* in 1.0 mL of *methanol R*.

**Detection:** examine in ultraviolet light at 254 nm; mark the quenching zones in the chromatogram obtained with the test solution that have similar  $R_f$  values to that of the quenching zone due to thymolphthalein in the chromatogram obtained with the reference solution; spray with *anisaldehyde solution R*, heat at 100-105 °C for 5-10 min and examine in daylight.

**Results:** the chromatogram obtained with the reference solution shows a principal zone with a reddish-violet colour (thymolphthalein). None of the quenching zones in the chromatogram obtained with the test solution that have an  $R_f$  value similar to the zone due to thymolphthalein in the reference solution show a more or less strong violet or brownish colour (colophony). Disregard any faint violet zone at this level that does not show quenching before spraying and heating.

**Arsenic (2.4.2, Method A):** maximum 3 ppm.

Introduce 0.33 g of the substance to be examined and 5 mL of *sulfuric acid R* into a combustion flask. Carefully add a few millilitres of *strong hydrogen peroxide solution R* and heat to boiling until a clear, colourless solution is obtained. Continue heating to eliminate the water and as much sulfuric acid as possible and dilute to 25 mL with *water R*.

**Heavy metals (2.4.8):** maximum 10 ppm.

2.0 g complies with test D. Prepare the reference solution using 2 mL of *lead standard solution (10 ppm Pb) R*.

**Loss on drying (2.2.32):** maximum 2.0 per cent for unbleached shellac and maximum 6.0 per cent for bleached shellac, determined on 1.000 g of the powdered substance (500) (2.9.12) by drying in an oven at 40-45 °C for 24 h.

#### STORAGE

Protected from light. Store bleached shellac and bleached, dewaxed shellac at a temperature not exceeding 15 °C.

#### LABELLING

The label indicates the type of shellac.

01/2011:0434

## SILICA, COLLOIDAL ANHYDROUS

### Silica colloidalis anhydrica

$\text{SiO}_2$   
[7631-86-9]

$M_r$  60.1

## DEFINITION

**Content:** 99.0 per cent to 100.5 per cent of SiO<sub>2</sub> (ignited substance).

## CHARACTERS

**Appearance:** white or almost white, light, fine, amorphous powder, with a particle size of about 15 nm.

**Solubility:** practically insoluble in water and in mineral acids except hydrofluoric acid. It dissolves in hot solutions of alkali hydroxides.

## IDENTIFICATION

About 20 mg gives the reaction of silicates (2.3.1).

## TESTS

**pH (2.2.3):** 3.5 to 5.5.

Shake 1.0 g with 30 mL of *carbon dioxide-free water R*.

**Chlorides (2.4.4):** maximum 250 ppm.

To 1.0 g add a mixture of 20 mL of *dilute nitric acid R* and 30 mL of *water R* and heat on a water-bath for 15 min, shaking frequently. Dilute to 50 mL with *water R* if necessary, filter and cool. Dilute 10 mL of the filtrate to 15 mL with *water R*.

**Heavy metals (2.4.8):** maximum 25 ppm.

Suspend 2.5 g in sufficient *water R* to produce a semi-fluid slurry. Dry at 140 °C. When the dried substance is white, break up the mass with a glass rod. Add 25 mL of 1 M *hydrochloric acid* and boil gently for 5 min, stirring frequently with the glass rod. Centrifuge for 20 min and filter the supernatant liquid through a membrane filter. To the residue in the centrifuge tube add 3 mL of *dilute hydrochloric acid R* and 9 mL of *water R* and boil. Centrifuge for 20 min and filter the supernatant liquid through the same membrane filter. Wash the residue with small quantities of *water R*, combine the filtrates and washings and dilute to 50 mL with *water R*. To 20 mL of the solution add 50 mg of *ascorbic acid R* and 1 mL of *concentrated ammonia R*. Neutralise with *dilute ammonia R2*. Dilute to 25 mL with *water R*. 12 mL of the solution complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

**Loss on ignition:** maximum 5.0 per cent, determined on 0.200 g by ignition in a platinum crucible at 900 ± 50 °C for 2 h. Allow to cool in a desiccator before weighing.

## ASSAY

To the residue obtained in the test for loss on ignition add 0.2 mL of *sulfuric acid R* and sufficient *ethanol (96 per cent) R* to moisten the residue completely. Add 6 mL of *hydrofluoric acid R* and evaporate to dryness on a hot-plate at 95-105 °C, taking care to avoid loss from sputtering. Wash down the sides of the dish with 6 mL of *hydrofluoric acid R* and evaporate to dryness. Ignite at 900 ± 50 °C, allow to cool in a desiccator and weigh.

The difference between the mass of the final residue and the mass of the residue obtained in the test for loss on ignition gives the amount of SiO<sub>2</sub> in the quantity of the substance to be examined used.

## FUNCTIONALITY-RELATED CHARACTERISTICS

*This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient (see chapter 5.15). This section is a non-mandatory part of the monograph and it is not necessary to verify the characteristics to demonstrate compliance. Control of these characteristics can however contribute to the quality of a medicinal product by improving the consistency of the manufacturing process and the performance of the medicinal product during use. Where control methods are cited, they are recognised as being suitable for the purpose, but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.*

*The following characteristic may be relevant for colloidal anhydrous silica used as glidant in tablets and capsules.*

**Specific surface area (2.9.26, Method I).** Determine the specific surface area in the  $P/P_0$  range of 0.05 to 0.30.

**Sample outgassing:** 20 min at 160 °C.

01/2008:0738  
corrected 6.0

## SILICA, COLLOIDAL HYDRATED

## Silica colloidalis hydrica

[63231-67-4]

## DEFINITION

Colloidal hydrated silica contains not less than 98.0 per cent and not more than the equivalent of 100.5 per cent of SiO<sub>2</sub> ( $M_r$  60.1), determined on the ignited substance.

## CHARACTERS

A white or almost white, light, fine, amorphous powder, practically insoluble in water and in mineral acids, with the exception of hydrofluoric acid. It dissolves in hot solutions of alkali hydroxides.

## IDENTIFICATION

A. About 20 mg gives the reaction of silicates (2.3.1).

B. When heated in an oven at 100 °C to 105 °C for 2 h, it shows a loss of mass not less than 3.0 per cent.

## TESTS

**Solution S.** To 2.5 g add 50 mL of *hydrochloric acid R* and mix. Heat on a water-bath for 30 min, stirring from time to time. Maintain the original volume by adding *dilute hydrochloric acid R*. Evaporate to dryness. Add to the residue a mixture of 8 mL of *dilute hydrochloric acid R* and 24 mL of *water R*. Heat to boiling and filter under reduced pressure through a sintered-glass filter (16) (2.1.2). Wash the residue on the filter with a hot mixture of 3 mL of *dilute hydrochloric acid R* and 9 mL of *water R*. Wash with small quantities of *water R*, combine the filtrate and washings and dilute to 50 mL with *water R*.

**pH (2.2.3).** Suspend 1.0 g in 30 mL of a 75 g/L solution of *potassium chloride R*. The pH of the suspension is 4.0 to 7.0.

**Water-absorption capacity.** In a mortar, triturate 5 g with 5 mL of *water R*, added drop by drop. The mixture remains powdery.

**Substances soluble in hydrochloric acid.** In a platinum dish, evaporate to dryness 10.0 mL of solution S and dry to constant mass at 100 °C to 105 °C. The mass of the residue is not more than 10 mg (2.0 per cent).

**Chlorides (2.4.4).** Heat 0.5 g with 50 mL of *water R* on a water-bath for 15 min. Dilute to 100 mL with *water R* and centrifuge at 1500 g for 5 min. 10 mL of the supernatant solution diluted to 15 mL with *water R* complies with the limit test for chlorides (0.1 per cent).

**Sulfates (2.4.13).** Dilute 2 mL of solution S to 100 mL with *distilled water R*. 15 mL of the solution complies with the limit test for sulfates (1 per cent).

**Iron (2.4.9).** To 2 mL of solution S add 28 mL of *water R*. 10 mL of the solution complies with the limit test for iron (300 ppm).

**Heavy metals (2.4.8).** To 20 mL of solution S add 50 mg of *hydroxylamine hydrochloride R* and 1 mL of *concentrated ammonia R*. Adjust to pH 3.5 by adding *dilute ammonia R2*, monitoring the pH potentiometrically. Dilute to 25 mL with *water R*. 12 mL of the solution complies with limit test A for heavy metals (25 ppm). Prepare the standard using *lead standard solution (1 ppm Pb) R*.

**Loss on ignition.** Not more than 20.0 per cent, determined on 0.200 g in a platinum crucible by heating at 100 °C to 105 °C for 1 h and then at 900 ± 50 °C for 2 h.

#### ASSAY

To the residue obtained in the test for loss on ignition add 0.2 mL of *sulfuric acid R* and a quantity of *alcohol R* sufficient to moisten the residue completely. Add 6 mL of *hydrofluoric acid R* and evaporate to dryness at 95 °C to 105 °C, taking care to avoid loss from sputtering. Wash the inside of the dish with 6 mL of *hydrofluoric acid R* and evaporate to dryness again. Ignite at 900 ± 50 °C, allow to cool in a desiccator and weigh. The difference between the mass of the final residue and that of the mass obtained in the test for loss on ignition corresponds to the mass of SiO<sub>2</sub> in the test sample.

01/2011:1562

## SILICA, DENTAL TYPE

### Silica ad usum dentalem

#### DEFINITION

Amorphous silica (precipitated, gel or obtained by flame hydrolysis).

*Content:* 94.0 per cent to 100.5 per cent of SiO<sub>2</sub> (ignited substance).

#### CHARACTERS

*Appearance:* white or almost white, light, fine, amorphous powder.

*Solubility:* practically insoluble in water and in mineral acids. It dissolves in hydrofluoric acid and hot solutions of alkali hydroxides.

#### IDENTIFICATION

About 20 mg gives the reaction of silicates (2.3.1).

#### TESTS

**Solution S.** To 2.5 g add 50 mL of *hydrochloric acid R* and mix. Heat on a water-bath for 30 min, stirring from time to time. Evaporate to dryness. Add to the residue a mixture of 8 mL of *dilute hydrochloric acid R* and 24 mL of *water R*. Heat to boiling and filter under reduced pressure through a sintered-glass filter (16) (2.1.2). Wash the residue on the filter with a hot mixture of 3 mL of *dilute hydrochloric acid R* and 9 mL of *water R*. Wash with small quantities of *water R*, combine the washings and the filtrate, and dilute to 50 mL with *water R*.

**pH** (2.2.3): 3.2 to 8.9.

Suspend 5 g in a mixture of 5 mL of a 7.46 g/L solution of *potassium chloride R* and 90 mL of *carbon dioxide-free water R*.

**Chlorides.** Liquid chromatography (2.2.29) as described in the test for sulfates.

*Retention time:* chlorides = about 4 min.

*Limit:*

– *chlorides:* not more than the area of the corresponding peak in the chromatogram obtained with the reference solution (0.3 per cent).

**Sulfates.** Liquid chromatography (2.2.29).

*Test solution.* To 0.625 g of the substance to be examined add 30 mL of *water R* and boil for 2 h. Allow to cool and quantitatively transfer to a 50 mL graduated flask. Dilute to 50.0 mL with *water R*. Dilute 5.0 mL of the supernatant to 50.0 mL with *water R* and filter through a membrane filter (nominal pore size 0.45 µm).

*Reference solution.* Dissolve 0.50 g of *anhydrous sodium sulfate R* and 0.062 g of *sodium chloride R* in *water R* and dilute to 1000.0 mL with *water R*. Dilute 5.0 mL of the solution to 50.0 mL with *water R*.

*Column:*

- *material:* non-metallic;
- *size:*  $l = 0.25$  m,  $\varnothing = 4.6$  mm;
- *stationary phase:* suitable anion-exchange resin (30-50 µm).

*Mobile phase:* dissolve 0.508 g of *sodium carbonate R* and 0.05 g of *sodium hydrogen carbonate R* in *water R* and dilute to 1000 mL with the same solvent.

*Flow rate:* 1.2 mL/min.

*Detection:* conductivity detector.

*Injection:* 25 µL.

*Retention time:* sulfates = about 8 min.

*Limit:*

- *sulfates:* not more than the area of the corresponding peak in the chromatogram obtained with the reference solution (4.0 per cent, expressed as sodium sulfate).

**Iron** (2.4.9): maximum 400 ppm.

Dilute 2 mL of solution S to 40 mL with *water R*.

**Heavy metals** (2.4.8): maximum 25 ppm.

To 20 mL of solution S, add 50 mg of *hydroxylamine hydrochloride R* and 1 mL of *concentrated ammonia R*. Adjust to pH 3.5 with *dilute ammonia R2*, monitoring the pH potentiometrically. Dilute to 25 mL with *water R*. 12 mL of the solution complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

**Loss on ignition:** maximum 25.0 per cent, determined on 0.200 g by heating in a platinum crucible at 100-105 °C for 1 h and then at 1000 ± 50 °C for 2 h.

#### ASSAY

To the residue obtained in the test for loss on ignition add 0.2 mL of *sulfuric acid R* and a quantity of *ethanol (96 per cent) R* sufficient to moisten the residue completely. Add 6 mL of *hydrofluoric acid R* and evaporate to dryness at 95-105 °C, taking care to avoid loss from sputtering. Wash the inside of the crucible with 6 mL of *hydrofluoric acid R* and evaporate to dryness again. Ignite at 900 ± 50 °C, allow to cool in a desiccator and weigh. The difference between the mass of the final residue and that of the mass obtained in the test for loss on ignition corresponds to the mass of SiO<sub>2</sub> in the test sample.

#### FUNCTIONALITY-RELATED CHARACTERISTICS

*This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient (see chapter 5.15). This section is a non-mandatory part of the monograph and it is not necessary to verify the characteristics to demonstrate compliance. Control of these characteristics can however contribute to the quality of a medicinal product by improving the consistency of the manufacturing process and the performance of the medicinal product during use. Where control methods are cited, they are recognised as being suitable for the purpose, but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.*

*The following characteristic may be relevant for dental type silica used as abrasive.*

**Specific surface area** (2.9.26, Method I). Determine the specific surface area in the  $P/P_0$  range of 0.05 to 0.30.

*Sample outgasing:* 60 min at 160 °C.

01/2011:2208

## SILICA, HYDROPHOBIC COLLOIDAL

### Silica hydrophobica colloidalis

#### DEFINITION

Colloidal silicon dioxide partly alkylated for hydrophobation.

*Content:* 99.0 per cent to 101.0 per cent SiO<sub>2</sub> (ignited substance).

#### CHARACTERS

*Appearance:* white or almost white, light, fine, amorphous powder, not wettable by water.

*Solubility:* practically insoluble in water and mineral acids except hydrofluoric acid. It dissolves slowly in hot solutions of alkali hydroxides.

#### IDENTIFICATION

A. About 25 mg ignited in a platinum crucible at 900 ± 50 °C for 2 h gives the reaction of silicates (2.3.1).

B. Water-dispersible fraction (see Tests).

#### TESTS

**Chlorides** (2.4.4): maximum 250 ppm.

To 1.0 g add 30 mL of *methanol R* and 20 mL of *dilute nitric acid R*. Heat on a water-bath for 15 min stirring frequently. Cool, dilute to 50 mL with *water R* and filter. Dilute 10 mL of the filtrate to 15 mL with *water R*.

**Heavy metals** (2.4.8): maximum 25 ppm.

Suspend 2.5 g in 30 mL of *methanol R*, stir and add 30 mL of *dilute ammonia R1*. With frequent stirring evaporate on a water-bath and dry the residue in an oven at 140 °C. When the dried substance is white, break up the mass with a glass rod. Reduce the residue to a powder and add 15 mL of *methanol R* and 25 mL of 1 M *hydrochloric acid*. Boil gently for 5 min, stirring frequently with the glass rod. Centrifuge for 20 min and filter the supernatant liquid through a membrane filter. To the residue in the centrifuge tube add 3 mL of *dilute hydrochloric acid R* and 9 mL of *water R* and boil. Centrifuge for 20 min and filter the supernatant liquid through the same membrane filter. Wash the residue with small quantities of *water R*, combine the filtrates and washings and dilute to 50 mL with *water R*. To 20 mL of this solution add 50 mg of *ascorbic acid R* and 1 mL of *concentrated ammonia R*. Neutralise with *dilute ammonia R2*. Dilute to 25 mL with *water R*. 12 mL of the solution complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

**Water-dispersible fraction:** maximum 3.0 per cent.

Place 0.400 g in a 500 mL separating funnel, add 100 mL of *water R* and shake for 1 min. Allow to stand for 1 h. Allow 90 mL of the aqueous phase to run out dropwise without filtration into a suitable dish dried at 140 °C and cooled in a desiccator. Evaporate to dryness at 140 °C, starting at a low temperature to avoid splashing. Cool in a desiccator. The residue weighs a maximum of 12 mg.

**Loss on ignition:** maximum 6.0 per cent, determined on 0.200 g by ignition in a platinum crucible at 900 ± 50 °C for 2 h. It is advisable to place the crucible in a cold oven and then to heat up the oven. Allow to cool in a desiccator before weighing.

#### ASSAY

To the residue obtained in the test for loss on ignition add sufficient *ethanol (96 per cent) R* to moisten the residue completely and 0.2 mL of *sulfuric acid R*. Add 6 mL of *hydrofluoric acid R* and evaporate to dryness on a hot-plate at about 100 °C, taking care to avoid loss from sputtering. Wash down the sides of the platinum crucible with 6 mL of *hydrofluoric acid R* and evaporate to dryness. Ignite at 900 ± 50 °C, allow to cool in a desiccator and weigh.

The difference between the mass of the residue obtained in the test for loss on ignition and the mass of the final residue gives the amount of SiO<sub>2</sub> in the quantity of the substance to be examined.

#### FUNCTIONALITY-RELATED CHARACTERISTICS

*This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient*

*(see chapter 5.15). This section is a non-mandatory part of the monograph and it is not necessary to verify the characteristics to demonstrate compliance. Control of these characteristics can however contribute to the quality of a medicinal product by improving the consistency of the manufacturing process and the performance of the medicinal product during use.*

*Where control methods are cited, they are recognised as being suitable for the purpose, but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.*

*The following characteristic may be relevant for hydrophobic colloidal silica used as glidant in tablets and capsules.*

**Specific surface area** (2.9.26, Method I). Determine the specific surface area in the *P/P<sub>0</sub>* range of 0.05 to 0.30.

*Sample outgassing:* 20 min at 160 °C.

01/2008:2281  
corrected 6.0

## SILVER, COLLOIDAL, FOR EXTERNAL USE

### Argentum colloidal ad usum externum

#### DEFINITION

Colloidal metallic silver containing protein.

*Content:* 70.0 per cent to 80.0 per cent of Ag (dried substance).

#### CHARACTERS

*Appearance:* green or bluish-black metallic shiny flakes or powder, hygroscopic.

*Solubility:* freely soluble or soluble in water, practically insoluble in ethanol (96 per cent) and in methylene chloride.

#### IDENTIFICATION

A. To 5 mL of the filtrate obtained in the test for alkalinity (see Tests) add 0.05 mL of *copper sulfate solution R* and 1 mL of *dilute sodium hydroxide solution R*. Shake. A violet colour appears within 15 min.

B. To 1 mL of solution S (see Tests), add 2 mL of *sodium chloride solution R*. A precipitate is formed which dissolves in an excess of water.

C. Ignite 0.05 g of the substance to be examined. Dissolve the residue in 10 mL of *nitric acid R*. The filtrate gives the reaction of silver (2.3.1).

#### TESTS

**Solution S.** Dissolve 1.25 g of the substance to be examined in *carbon dioxide-free water R* and dilute to 50.0 mL with the same solvent. Allow to stand for 5 min then shake vigorously. Filter through a tared sintered-glass filter (16) (2.1.2) after 30 min.

**Alkalinity.** To 40.0 mL of solution S add 10.0 mL of 0.05 M *sulfuric acid R* and 2.0 g of *anhydrous sodium sulfate R*. Shake and filter several times if necessary. To 25.0 mL of the clear and colourless solution add 0.1 mL of *phenolphthalein solution R*. Not less than 1.5 mL of 0.1 M *sodium hydroxide* is required to change the colour of the indicator to pink.

**Silver ions.** To 0.50 g of the substance to be examined add 5 mL of *anhydrous ethanol R*. Shake for 1 min, filter and add 2 mL of *hydrochloric acid R* to the filtrate. No precipitate is formed.

**Sensitivity to electrolytes.** Dissolve 0.1 g of the substance to be examined in 100 mL of *water R*. Transfer a part of the solution into a test tube. When examined viewing horizontally the solution appears clear and reddish-brown. When examined viewing vertically, the solution appears turbid with a greenish-brown fluorescence. To 5 mL of the solution add 5 mL of a solution of 0.50 g/L *sodium chloride R* and mix by shaking for 1 minute. When examined viewing horizontally the solution remains clear and reddish-brown.

**Water insoluble substances:** maximum 1.0 per cent.

Wash the residue obtained on the filter during preparation of solution S 5 times with 10 mL of *water R*. Dry the filter to constant mass at 100-105 °C. The residue weighs a maximum of 12.5 mg.

**Loss on drying (2.2.32):** maximum 8.0 per cent, determined on 0.500 g by drying in an oven at 80 °C.

#### ASSAY

Ignite 0.200 g of the substance to be examined at 650 ± 50 °C until the residue is white. Allow to cool, add 10 mL of a mixture of equal volumes of *nitric acid R* and *water R* and boil for 1 min. Transfer the contents of the crucible into a flask and titrate with 0.1 M *ammonium thiocyanate* using 50 mg *ferric sulfate R* as indicator, until a reddish-brown colour appears.

1 mL of 0.1 M *ammonium thiocyanate* is equivalent to 10.79 mg of Ag.

#### STORAGE

In an airtight container.

01/2008:0009  
corrected 6.0

## SILVER NITRATE

### Argenti nitras

AgNO<sub>3</sub>  
[7761-88-8]

*M<sub>r</sub>* 169.9

#### DEFINITION

**Content:** 99.0 per cent to 100.5 per cent.

#### CHARACTERS

**Appearance:** white or almost white, crystalline powder or transparent, colourless crystals.

**Solubility:** very soluble in water, soluble in ethanol (96 per cent).

#### IDENTIFICATION

- 10 mg gives the reaction of nitrates (2.3.1).
- 10 mg gives the reaction of silver (2.3.1).

#### TESTS

**Solution S.** Dissolve 2.0 g in *water R* and dilute to 50 mL with the same solvent.

**Appearance of solution.** Solution S is clear (2.2.1) and colourless (2.2.2, *Method II*).

**Acidity or alkalinity.** To 2 mL of solution S add 0.1 mL of *bromocresol green solution R*. The solution is blue. To 2 mL of solution S add 0.1 mL of *phenol red solution R*. The solution is yellow.

**Foreign salts:** maximum 0.3 per cent.

To 30 mL of solution S, add 7.5 mL of *dilute hydrochloric acid R*, shake vigorously, heat for 5 min on a water-bath and filter. Evaporate 20 mL of the filtrate to dryness on a water-bath and dry at 100-105 °C. The residue weighs a maximum of 2 mg.

**Aluminium, lead, copper and bismuth.** Dissolve 1.0 g in a mixture of 4 mL of *concentrated ammonia R* and 6 mL of *water R*. The solution is clear (2.2.1) and colourless (2.2.2, *Method II*).

#### ASSAY

Dissolve 0.300 g in 50 mL of *water R*, add 2 mL of *dilute nitric acid R* and 2 mL of *ferric ammonium sulfate solution R2*. Titrate with 0.1 M *ammonium thiocyanate* until a reddish-yellow colour is obtained.

1 mL of 0.1 M *ammonium thiocyanate* is equivalent to 16.99 mg of AgNO<sub>3</sub>.

#### STORAGE

In a non-metallic container, protected from light.

01/2008:1470

## SIMETICONE

### Simeticonum

#### DEFINITION

Simeticone is prepared by incorporation of 4 per cent to 7 per cent silica into poly(dimethylsiloxane) with a degree of polymerisation between 20 and 400.

**Content:** 90.5 per cent to 99.0 per cent of poly(dimethylsiloxane).

#### PRODUCTION

Poly(dimethylsiloxane) is obtained by hydrolysis and polycondensation of dichlorodimethylsilane and chlorotrimethylsilane and the silica is modified at the surface by incorporation of methylsilyl groups.

#### CHARACTERS

**Appearance:** viscous, greyish-white, opalescent liquid.

**Solubility:** practically insoluble in water, very slightly soluble or practically insoluble in anhydrous ethanol, practically insoluble in methanol, partly miscible with ethyl acetate, with methylene chloride, with methyl ethyl ketone and with toluene.

#### IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

**Preparation:** thin films between plates of *sodium chloride R*.  
**Absorption maxima:** at 2964 cm<sup>-1</sup>, 2905 cm<sup>-1</sup>, 1412 cm<sup>-1</sup>, 1260 cm<sup>-1</sup> and 1020 cm<sup>-1</sup>.

B. Heat 0.5 g in a test-tube over a small flame until white fumes begin to appear. Invert the tube over a 2<sup>nd</sup> tube containing 1 mL of a 1 g/L solution of *chromotropic acid, sodium salt R* in *sulfuric acid R* so that the fumes reach the solution. Shake the 2<sup>nd</sup> tube for about 10 s and heat on a water-bath for 5 min. The solution is violet.

C. The residue obtained in the test for silica under Assay, gives the reaction of silicates (2.3.1).

#### TESTS

**Acidity.** To 2.0 g add 25 mL of a mixture of equal volumes of *anhydrous ethanol R* and *ether R* previously neutralised to 0.2 mL of *bromothymol blue solution R1*, and shake. Not more than 3.0 mL of 0.01 M *sodium hydroxide* is required to change the colour of the solution to blue.

#### Defoaming activity

**Foaming solution.** Dissolve 5.0 g of *docosate sodium R* in 1 L of *water R*, warm to 50 °C if necessary.

**Defoaming solution.** To 50 mL of *methyl ethyl ketone R* add 0.250 g of the substance to be examined, warm to not more than 50 °C with shaking.

Into a 250 mL cylindrical tube about 5 cm in diameter introduce 100 mL of foaming solution and 1 mL of defoaming solution. Close tightly and fix the tube on a suitable oscillating shaker that complies with the following conditions:

- 250-300 oscillations per minute,
- angle of oscillation of about 10°,
- oscillation radius of about 10 cm.

Shake for 10 s and record the time between the end of the shaking and the instant the 1<sup>st</sup> portion of foam-free liquid surface appears.

This duration is not longer than 15 s.

**Mineral oils.** Place 2.0 g in a test-tube and examine in ultraviolet light at 365 nm. The fluorescence is not more intense than that of a solution containing 0.1 ppm of *quinine sulfate R* in 0.005 M *sulfuric acid* examined in the same conditions.

04/2009:1563

**Phenylated compounds:** the corrected absorbance (2.2.25) is not greater than 0.2.

**Test solution.** Dissolve 5.0 g with shaking in 10.0 mL of *cyclohexane R*.

**Spectral range:** 200-350 nm.

Calculate the corrected absorbance using the following expression:

$$B - C$$

$B$  = absorbance at the absorption maximum between 250 nm and 270 nm,

$C$  = absorbance at 300 nm.

**Heavy metals:** maximum 5 ppm.

Mix 1.0 g with *methylene chloride R* and dilute to 20 mL with the same solvent. Add 1.0 mL of a freshly prepared 0.02 g/L solution of *dithizone R* in *methylene chloride R*, 0.5 mL of *water R* and 0.5 mL of a mixture of 1 volume of *dilute ammonia R2* and 9 volumes of a 2 g/L solution of *hydroxylamine hydrochloride R*. At the same time, prepare the reference solution as follows: to 20 mL of *methylene chloride R* add 1.0 mL of a freshly prepared 0.02 g/L solution of *dithizone R* in *methylene chloride R*, 0.5 mL of *lead standard solution (10 ppm Pb) R* and 0.5 mL of a mixture of 1 volume of *dilute ammonia R2* and 9 volumes of a 2 g/L solution of *hydroxylamine hydrochloride R*. Immediately shake each solution vigorously for 1 min. Any red colour in the test solution is not more intense than that in the reference solution.

**Volatile matter:** maximum 1.0 per cent, determined on 1.00 g by heating in an oven at 150 °C for 2 h. Carry out the test using a dish 60 mm in diameter and 10 mm deep.

#### ASSAY

**Silica.** Heat not less than 20.0 mg to 800 °C increasing the temperature by 20 °C/min under a current of *nitrogen R* at a flow rate of 200 mL/min and weigh the residue (silica).

**Poly(dimethylsiloxane).** Infrared absorption spectrophotometry (2.2.24).

**Test solution.** Place about 50 mg ( $E$ ) in a screw-capped 125 mL cylindrical tube, add 25.0 mL of *toluene R*, swirl manually to disperse and add 50 mL of *dilute hydrochloric acid R*, close the tube and place on a vortex mixer; shake for 5 min. Transfer the contents of the tube to a separating funnel, allow to settle and transfer 5 mL of the upper layer to a screw-capped test tube containing 0.5 g of *anhydrous sodium sulfate R*. Cap and shake vigorously manually. Centrifuge to obtain a clear solution.

**Reference solution.** Introduce about 0.20 g of *dimeticone CRS* (poly(dimethylsiloxane)) into 100.0 mL of *toluene R*. Prepare the reference solution in the same way as for the test solution, using 25.0 mL of the dimeticone solution obtained above.

**Blank solution.** Shake 10 mL of *toluene R* with 1 g of *anhydrous sodium sulfate R*. Centrifuge the resulting suspension.

Record the infrared absorption spectra for the test solution and the reference solution in 0.5 mm cells, from 1330  $\text{cm}^{-1}$  to 1180  $\text{cm}^{-1}$ . Determine the absorbance of the band at 1260  $\text{cm}^{-1}$ .

Calculate the percentage content of poly(dimethylsiloxane) using the following expression:

$$\frac{25 \times C \times A_M \times 100}{A_E \times E}$$

$A_M$  = absorbance of the test solution,

$A_E$  = absorbance of the reference solution,

$C$  = concentration of the reference solution, in milligrams per millilitre,

$E$  = mass of the substance to be examined, in milligrams.

## SIMVASTATIN

### Simvastatinum

$\text{C}_{25}\text{H}_{38}\text{O}_5$   
[79902-63-9]

$M_r$  418.6

#### DEFINITION

(1*S*,3*R*,7*S*,8*S*,8*aR*)-8-[2-[(2*R*,4*R*)-4-Hydroxy-6-oxo-tetrahydro-2*H*-pyran-2-yl]ethyl]-3,7-dimethyl-1,2,3,7,8,8*a*-hexahydronaphthalen-1-yl 2,2-dimethylbutanoate.

**Content:** 97.0 per cent to 102.0 per cent (dried substance). A suitable antioxidant may be added.

#### CHARACTERS

**Appearance:** white or almost white, crystalline powder.

**Solubility:** practically insoluble in water, very soluble in methylene chloride, freely soluble in ethanol (96 per cent).

#### IDENTIFICATION

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry (2.2.24).

*Comparison: simvastatin CRS.*

#### TESTS

**Appearance of solution.** The solution is clear (2.2.1) and not more intensely coloured than reference solution BY<sub>7</sub> (2.2.2, Method II).

Dissolve 0.20 g in *methanol R* and dilute to 20 mL with the same solvent.

**Specific optical rotation (2.2.7):** + 285 to + 300 (dried substance).

Dissolve 0.125 g in *acetonitrile R* and dilute to 25.0 mL with the same solvent.

**Related substances.** Liquid chromatography (2.2.29). Prepare the solutions immediately before use.

**Solvent mixture.** Mix 40 volumes of a 1.4 g/L solution of *potassium dihydrogen phosphate R*, adjusted to pH 4.0 with *phosphoric acid R*, and 60 volumes of *acetonitrile R*. Filter.

**Test solution.** Dissolve 75.0 mg of the substance to be examined in the solvent mixture and dilute to 50.0 mL with the solvent mixture.

**Reference solution (a).** Dissolve 1.0 mg of *simvastatin CRS* and 1.0 mg of *lovastatin CRS* (impurity E) in the solvent mixture and dilute to 50.0 mL with the solvent mixture.

**Reference solution (b).** Dilute 0.5 mL of the test solution to 100.0 mL with the solvent mixture.

**Reference solution (c).** Dissolve 75.0 mg of *simvastatin CRS* in the solvent mixture and dilute to 50.0 mL with the solvent mixture.

**Reference solution (d).** Dissolve 5 mg of *simvastatin for peak identification CRS* (containing impurities A, B, C, D, E, F and G) in 5.0 mL of the solvent mixture.

#### Column:

– size:  $l = 0.033$  m,  $\varnothing = 4.6$  mm;

– stationary phase: end-capped octadecylsilyl silica gel for chromatography R (3  $\mu\text{m}$ ).

**Bacterial endotoxins** (2.6.14): less than 5 IU/g if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins.

#### ASSAY

Dissolve a quantity of the substance to be examined corresponding to 75.0 mg of sodium lactate in a mixture of 10 mL of *glacial acetic acid R* and 20 mL of *acetic anhydride R*. Allow to stand for 15 min. Add 1 mL of *naphtholbenzein solution R* and titrate with *0.1 M perchloric acid*.

1 mL of *0.1 M perchloric acid* is equivalent to 11.21 mg of  $C_3H_5NaO_3$ .

**(S)-enantiomer.** Transfer a quantity of the substance to be examined corresponding to 2.50 g of sodium lactate into a 50 mL volumetric flask, dilute with about 30 mL of *water R* and add 5.0 g of *ammonium molybdate R*. Dissolve and dilute with *water R* to 50.0 mL. Measure the angle of optical rotation (2.2.7). Calculate the percentage content of (S)-enantiomer using the expression:

$$50 + \left( 24.04 \times \alpha \times \frac{5.0}{m} \times \frac{50}{c} \right)$$

$\alpha$  = angle of optical rotation (absolute value),

$m$  = mass of the substance to be examined, in grams,

$c$  = percentage content of  $C_3H_5NaO_3$  in the substance to be examined.

The complex of sodium (S)-lactate formed under these test conditions is leavorotatory.

#### LABELLING

The label states:

- where applicable, that the substance is suitable for use in the manufacture of dialysis, haemodialysis and haemofiltration solutions,
- where applicable, that the substance is suitable for use in the manufacture of parenteral preparations,
- the declared content of sodium lactate.

01/2008:0098

## SODIUM LAURILSULFATE

### Natrii laurilsulfas

#### DEFINITION

Mixture of sodium alkyl sulfates consisting chiefly of sodium dodecyl sulfate ( $C_{12}H_{25}NaO_4S$ ;  $M_r$  288.4).

*Content:*

- *sodium alkyl sulfates*: minimum 85.0 per cent, expressed as  $C_{12}H_{25}NaO_4S$ .

#### CHARACTERS

*Appearance:* white or pale yellow, powder or crystals.

*Solubility:* freely soluble in water giving an opalescent solution, partly soluble in ethanol (96 per cent).

#### IDENTIFICATION

- Dissolve 0.1 g in 10 mL of *water R* and shake. A copious foam is formed.
- To 0.1 mL of the solution prepared for identification test A, add 0.1 mL of a 1 g/L solution of *methylene blue R* and 2 mL of *dilute sulfuric acid R*. Add 2 mL of *methylene chloride R* and shake. An intense blue colour develops in the methylene chloride layer.

- Mix about 10 mg with 10 mL of *anhydrous ethanol R*.

Heat to boiling on a water-bath, shaking frequently. Filter immediately and evaporate the ethanol. Dissolve the residue in 8 mL of *water R*, add 3 mL of *dilute hydrochloric acid R*, evaporate the solution to half its volume and allow to cool. Separate the congealed fatty alcohols by filtration. To the filtrate add 1 mL of *barium chloride solution R1*. A white, crystalline precipitate is formed.

- Ignite 0.5 g. The residue gives reaction (a) of sodium (2.3.1).

#### TESTS

**Alkalinity.** Dissolve 1.0 g in 100 mL of *carbon dioxide-free water R* and add 0.1 mL of *phenol red solution R*. Not more than 0.5 mL of *0.1 M hydrochloric acid* is required to change the colour of the indicator.

**Non-esterified alcohols:** maximum 4 per cent.

Dissolve 10 g in 100 mL of *water R*, add 100 mL of *ethanol (96 per cent) R* and shake the solution with 3 quantities, each of 50 mL, of *pentane R*, adding *sodium chloride R*, if necessary, to promote separation of the 2 layers. Wash the combined organic layers with 3 quantities, each of 50 mL, of *water R*, dry over *anhydrous sodium sulfate R*, filter and evaporate on a water-bath until the solvent has evaporated. Heat the residue at 105 °C for 15 min and cool. The residue weighs a maximum of 0.4 g.

**Sodium chloride and sodium sulfate:** maximum 8.0 per cent for the total percentage content.

**Sodium chloride.** Dissolve 5.00 g in 50 mL of *water R*, add *dilute nitric acid R* dropwise until the solution is neutral to *blue litmus paper R*, add 2 mL of *potassium chromate solution R* and titrate with *0.1 M silver nitrate*.

1 mL of *0.1 M silver nitrate* is equivalent to 5.844 mg of NaCl.

**Sodium sulfate.** Dissolve 0.500 g in 20 mL of *water R*, warming gently if necessary, then add 1 mL of a 0.5 g/L solution of *dithizone R1* in *acetone R*. If the solution is red, add *1 M nitric acid*, dropwise, until the solution becomes bluish-green. Add 2.0 mL of *dichloroacetic acid solution R* and 80 mL of *acetone R*. Titrate with *0.01 M lead nitrate* until a persistent violet-red or orange-red colour is obtained. Carry out a blank titration.

1 mL of *0.01 M lead nitrate* is equivalent to 1.420 mg of  $Na_2SO_4$ .

#### ASSAY

Dissolve 1.15 g in *water R*, warming if necessary, and dilute to 1000.0 mL with the same solvent. To 20.0 mL of the solution add 15 mL of *chloroform R* and 10 mL of *dimidium bromide-sulfan blue mixed solution R*. Titrate with *0.004 M benzethonium chloride*, shaking vigorously and allowing the layers to separate before each addition, until the pink colour of the chloroform layer is completely discharged and a greyish-blue colour is obtained.

1 mL of *0.004 M benzethonium chloride* is equivalent to 1.154 mg of sodium alkyl sulfates, expressed as  $C_{12}H_{25}NaO_4S$ .

01/2008:0849

## SODIUM METABISULFITE

### Natrii metabisulfis

$Na_2S_2O_5$   
[7681-57-4]

$M_r$  190.1

#### DEFINITION

Sodium metabisulfite also called sodium disulfite.

*Content:* 95.0 per cent to 100.5 per cent.

01/2008:0411 **Heavy metals** (2.4.8): maximum 10 ppm.**SODIUM ACETATE TRIHYDRATE**

Natrii acetat trihydricus

C<sub>2</sub>H<sub>3</sub>NaO<sub>2</sub>·3H<sub>2</sub>O  
[6131-90-4]M<sub>r</sub> 136.1

## DEFINITION

Sodium ethanoate trihydrate.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

## CHARACTERS

*Appearance*: colourless crystals.*Solubility*: very soluble in water, soluble in ethanol (96 per cent).

## IDENTIFICATION

- A. 1 mL of solution S (see Tests) gives reaction (b) of acetates (2.3.1).
- B. 1 mL of solution S gives reaction (a) of sodium (2.3.1).
- C. Loss on drying (see Tests).

## TESTS

**Solution S.** Dissolve 10.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100 mL with the same solvent.**Appearance of solution.** Solution S is clear (2.2.1) and colourless (2.2.2, *Method II*).**pH** (2.2.3): 7.5 to 9.0.Dilute 5 mL of solution S to 10 mL with *carbon dioxide-free water R*.**Reducing substances.** Dissolve 5.0 g in 50 mL of *water R*, then add 5 mL of *dilute sulfuric acid R* and 0.5 mL of 0.002 M *potassium permanganate*. The pink colour persists for at least 1 h. Prepare a blank in the same manner but without the substance to be examined.**Chlorides** (2.4.4): maximum 200 ppm.Dilute 2.5 mL of solution S to 15 mL with *water R*.**Sulfates** (2.4.13): maximum 200 ppm.Dilute 7.5 mL of solution S to 15 mL with *distilled water R*.**Aluminium** (2.4.17): maximum 0.2 ppm, if intended for use in the manufacture of dialysis solutions.*Prescribed solution.* Dissolve 20 g in 100 mL of *water R* and adjust to pH 6.0 by the addition of 1 M *hydrochloric acid* (about 10 mL).*Reference solution.* Mix 2 mL of *aluminium standard solution* (2 ppm Al) R, 10 mL of *acetate buffer solution pH 6.0 R* and 98 mL of *water R*.*Blank solution.* Mix 10 mL of *acetate buffer solution pH 6.0 R* and 100 mL of *water R*.**Arsenic** (2.4.2, *Method A*): maximum 2 ppm, determined on 0.5 g.**Calcium and magnesium:** maximum 50 ppm, calculated as Ca.To 200 mL of *water R* add 10 mL of *ammonium chloride buffer solution pH 10.0 R*, 0.1 g of *mordant black II tritrate R*, 2.0 mL of 0.05 M *zinc chloride* and, dropwise, 0.02 M *sodium edetate* until the colour changes from violet to blue. Add to the solution 10.0 g of the substance to be examined and shake to dissolve. Titrate with 0.02 M *sodium edetate* until the blue colour is restored. Not more than 0.65 mL of 0.02 M *sodium edetate* is required.12 mL of solution S complies with test A. Prepare the reference solution using *lead standard solution* (1 ppm Pb) R.**Iron** (2.4.9): maximum 10 ppm, determined on 10 mL of solution S.**Loss on drying** (2.2.32): 39.0 per cent to 40.5 per cent, determined on 1.000 g by drying in an oven at 130 °C. Introduce the substance to be examined into the oven while the latter is cold.

## ASSAY

Dissolve 0.250 g in 50 mL of *anhydrous acetic acid R*, add 5 mL of *acetic anhydride R*, mix and allow to stand for 30 min. Using 0.3 mL of *naphtholbenzein solution R* as indicator, titrate with 0.1 M *perchloric acid* until a green colour is obtained.1 mL of 0.1 M *perchloric acid* is equivalent to 8.20 mg of C<sub>2</sub>H<sub>3</sub>NaO<sub>2</sub>.

## STORAGE

In an airtight container.

## LABELLING

The label states, where applicable, that the substance is suitable for use in the manufacture of dialysis solutions.

01/2008:1564  
corrected 6.3**SODIUM ALENDRONATE**

Natrii alendronas

C<sub>4</sub>H<sub>12</sub>NNaO<sub>7</sub>P<sub>2</sub>·3H<sub>2</sub>O  
[121268-17-5]M<sub>r</sub> 325.1

## DEFINITION

Sodium alendronate contains not less than 98.0 per cent and not more than the equivalent of 102.0 per cent of (4-amino-1-hydroxybutylidene)bisphosphonic acid monosodium salt, calculated with reference to the dried substance.

## CHARACTERS

A white or almost white, crystalline powder, soluble in water, very slightly soluble in methanol, practically insoluble in methylene chloride.

## IDENTIFICATION

- A. Examine by infrared absorption spectrophotometry (2.2.24), comparing with the spectrum obtained with *sodium alendronate CRS*. Examine the substances prepared as discs.
- B. It gives reaction (a) of sodium (2.3.1).

## TESTS

**Solution S.** Dissolve 0.5 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 50 mL with the same solvent.**Appearance of solution.** Solution S is clear (2.2.1) and not more intensely coloured than reference solution B<sub>7</sub> or BY<sub>7</sub> (2.2.2, *Method II*).**pH** (2.2.3). The pH of solution S is 4.0 to 5.0.**4-aminobutanoic acid.** Examine by thin-layer chromatography (2.2.27), using a *TLC silica gel plate R*.*Test solution.* Dissolve 0.10 g of the substance to be examined in *water R* and dilute to 10 mL with the same solvent.*Reference solution (a).* Dissolve 0.10 g of *4-aminobutanoic acid R* in *water R* and dilute to 200 mL with the same solvent.

Reference solution (b). Dilute 1 mL of reference solution (a) to 10 mL with *water R*.

Apply to the plate 5 µL of the test solution and 5 µL of reference solution (b). Allow the plate to dry in air. Develop over a path of 15 cm using a mixture of 20 volumes of *water R*, 20 volumes of *glacial acetic acid R* and 60 volumes of *butanol R*. Dry the plate in a current of warm air. Spray with *ninhydrin solution R* and heat at 100 °C to 105 °C for 15 min. Any spots corresponding to 4-aminobutanoic acid in the chromatogram obtained with the test solution are not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent).

**Phosphate and phosphite.** Examine the chromatograms obtained in the assay. In the chromatogram obtained with the test solution: the area of any peak corresponding to phosphate is not greater than that of the peak due to phosphate in the chromatogram obtained with reference solution (d) (0.5 per cent); the area of any peak corresponding to phosphite is not greater than that of the peak due to phosphite in the chromatogram obtained with reference solution (d) (0.5 per cent).

**Heavy metals (2.4.8).** 1.0 g complies with limit test F for heavy metals (20 ppm). Prepare the reference solution using 2 mL of *lead standard solution (10 ppm Pb) R*.

**Loss on drying (2.2.32):** 16.1 per cent to 17.1 per cent, determined on 1.000 g by drying in an oven at 140 °C to 145 °C.

#### ASSAY

Examine by liquid chromatography (2.2.29).

**Test solution.** Dissolve 50.0 mg of the substance to be examined in *water R* and dilute to 25.0 mL with the same solvent.

**Reference solution (a).** Dissolve 50.0 mg of *sodium alendronate CRS* in *water R* and dilute to 25.0 mL with the same solvent.

**Reference solution (b).** Dissolve 3.0 g of *phosphoric acid R* in *water R* and dilute to 100.0 mL with the same solvent. Dilute 1.0 mL of the solution to 100.0 mL with *water R*.

**Reference solution (c).** Dissolve 2.5 g of *phosphorous acid R* in *water R* and dilute to 100.0 mL with the same solvent. Dilute 1.0 mL of the solution to 100.0 mL with *water R*.

**Reference solution (d).** Mix 2.0 mL of reference solution (b) and 2.0 mL of reference solution (c) and dilute to 50.0 mL with *water R*.

The chromatographic procedure may be carried out using:

- a column 0.15 m long and 4.6 mm in internal diameter packed with *anion exchange resin RI (7 µm)*,
- as mobile phase at a flow rate of 1.2 mL/min a solution of 0.2 mL of *anhydrous formic acid R* in 1000 mL of *water R*, adjusted to pH 3.5 with 2 M *sodium hydroxide R*,
- as detector a refractometer,
- a 100 µL loop injector,

maintaining the temperature of the column at 35 °C.

Inject reference solution (a) six times. The assay is not valid unless the relative standard deviation of the peak area of sodium alendronate is at most 1.0 per cent. Inject the test solution, reference solution (a) and reference solution (d). The retention time of sodium alendronate is about 16 min and the relative retention times are: phosphate about 1.3 and phosphite about 1.6. Record the chromatograms for twice the retention time of the principal peak in the chromatogram obtained with the test solution.

Calculate the percentage content of C<sub>4</sub>H<sub>12</sub>NNaO<sub>7</sub>P<sub>2</sub> from the peak areas and the declared content of *sodium alendronate CRS*.

#### IMPURITIES

- A. 4-aminobutanoic acid,
- B. phosphate,

C. phosphite.

01/2010:0625  
corrected 7.0

## SODIUM ALGINATE

### Natrii alginas

#### DEFINITION

Sodium alginate consists mainly of the sodium salt of alginic acid, which is a mixture of polyuronic acids [(C<sub>6</sub>H<sub>8</sub>O<sub>6</sub>)<sub>n</sub>] composed of units of D-mannuronic acid and L-guluronic acid. Sodium alginate is obtained mainly from algae belonging to the Phaeophyceae.

#### CHARACTERS

**Appearance:** white or pale yellowish-brown powder.

**Solubility:** slowly soluble in water forming a viscous, colloidal solution, practically insoluble in ethanol (96 per cent).

#### IDENTIFICATION

- A. Dissolve 0.2 g with shaking in 20 mL of *water R*. To 5 mL of this solution add 1 mL of *calcium chloride solution R*. A voluminous gelatinous mass is formed.
- B. To 10 mL of the solution prepared in identification test A add 1 mL of *dilute sulfuric acid R*. A gelatinous mass is formed.
- C. To 5 mg add 5 mL of *water R*, 1 mL of a freshly prepared 10 g/L solution of *1,3-dihydroxynaphthalene R* in *ethanol (96 per cent) R* and 5 mL of *hydrochloric acid R*. Boil for 3 min, cool, add 5 mL of *water R*, and shake with 15 mL of *di-isopropyl ether R*. Carry out a blank test. The upper layer obtained with the substance to be examined exhibits a deeper bluish-red colour than that obtained with the blank.
- D. Sulfated ash (see Tests). The residue obtained, dissolved in 2 mL of *water R*, gives reaction (a) of sodium (2.3.1).

#### TESTS

**Solution S.** Dissolve 0.10 g in *water R* with constant stirring, dilute to 30 mL with the same solvent and allow to stand for 1 h.

**Appearance of solution.** The solution is not more opalescent than reference suspension II (2.2.1) and not more intensely coloured than intensity 6 of the range of reference solutions of the most appropriate colour (2.2.2, *Method II*).

Dilute 1 mL of solution S to 10 mL with *water R*.

**Chlorides:** maximum 1.0 per cent.

To 2.50 g add 50 mL of *dilute nitric acid R*, shake for 1 h and dilute to 100.0 mL with *dilute nitric acid R*. Filter. To 50.0 mL of the filtrate add 10.0 mL of 0.1 M *silver nitrate* and 5 mL of *toluene R*. Titrate with 0.1 M *ammonium thiocyanate*, using 2 mL of *ferric ammonium sulfate solution R2* as indicator and shaking vigorously towards the end point.

1 mL of 0.1 M *silver nitrate* is equivalent to 3.545 mg of Cl.

**Calcium:** maximum 1.5 per cent.

Atomic absorption spectrometry (2.2.23, *Method II*).

**Test solution.** Dissolve 0.10 g in 50 mL of *dilute ammonia R2*, heating on a water-bath. Allow to cool and dilute to 100.0 mL with *distilled water R* (solution (a)). Dilute 3.0 mL of solution (a) to 100.0 mL with *distilled water R*.

**Reference solutions.** Prepare 3 reference solutions in the same manner as the test solution but add 0.75 mL, 1.0 mL and 1.5 mL respectively of *calcium standard solution (100 ppm Ca) R* to the 3.0 mL of solution (a).

Set the zero of the instrument using a mixture of 1.5 volumes of *dilute ammonia R2* and 98.5 volumes of *distilled water R*.

**Source:** calcium hollow-cathode lamp.

**Wavelength:** 422.7 nm.

**Atomisation device:** air-acetylene flame.

**Heavy metals** (2.4.8): maximum 20 ppm.

1.0 g complies with test F. Prepare the reference solution using 2 mL of *lead standard solution* (10 ppm Pb) R.

**Loss on drying** (2.2.32): maximum 15.0 per cent, determined on 0.1000 g by drying in an oven at 105 °C for 4 h.

**Sulfated ash** (2.4.14): 30.0 per cent to 36.0 per cent (dried substance), determined on 0.1000 g.

#### Microbial contamination

TAMC: acceptance criterion 10<sup>3</sup> CFU/g (2.6.12).

TYMC: acceptance criterion 10<sup>2</sup> CFU/g (2.6.12).

Absence of *Escherichia coli* (2.6.13).

Absence of *Salmonella* (2.6.13).

#### FUNCTIONALITY-RELATED CHARACTERISTICS

*This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient (see chapter 5.15). This section is a non-mandatory part of the monograph and it is not necessary to verify the characteristics to demonstrate compliance. Control of these characteristics can however contribute to the quality of a medicinal product by improving the consistency of the manufacturing process and the performance of the medicinal product during use. Where control methods are cited, they are recognised as being suitable for the purpose, but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.*

*The following characteristic may be relevant for sodium alginate used as viscosity-increasing agent or binder.*

**Apparent viscosity** (2.2.10). Carry out the test on a 10 g/L solution (dried substance). Determine the dynamic viscosity at 20 °C using a rotating viscometer at 20 r/min.

- B. Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (b).
- C. Heat 50 mg gently in a small porcelain dish over a naked flame. Violet vapour is evolved.
- D. It gives reaction (a) of sodium (2.3.1).

#### TESTS

**Solution S.** Dissolve 10 g in *carbon dioxide-free water R* and dilute to 20 mL with the same solvent.

**Appearance of solution.** Dilute 1 mL of solution S to 10 mL with *water R*. The solution is clear (2.2.1) and colourless (2.2.2, Method II).

**pH** (2.2.3). The pH of solution S is 7.5 to 9.5.

**Related substances.** Examine by thin-layer chromatography (2.2.27), using a *TLC silica gel GF<sub>254</sub> plate R*. Prepare the solutions in subdued light and develop the chromatograms protected from light.

**Test solution (a).** Dissolve 0.50 g of the substance to be examined in a 3 per cent V/V solution of *ammonia R* in *methanol R* and dilute to 10 mL with the same solution.

**Test solution (b).** Dilute 1 mL of test solution (a) to 10 mL with a 3 per cent V/V solution of *ammonia R* in *methanol R*.

**Reference solution (a).** Dilute 1 mL of test solution (b) to 50 mL with a 3 per cent V/V solution of *ammonia R* in *methanol R*.

**Reference solution (b).** Dissolve 50 mg of *sodium amidotrizoate CRS* in a 3 per cent V/V solution of *ammonia R* in *methanol R* and dilute to 10 mL with the same solution.

Apply separately to the plate 2 µL of each solution. Develop over a path of 15 cm using a mixture of 20 volumes of *anhydrous formic acid R*, 25 volumes of *methyl ethyl ketone R* and 60 volumes of *toluene R*. Allow the plate to dry until the solvents have evaporated and examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (a) (0.2 per cent).

**Free aromatic amines.** *Maintain the solutions and reagents in iced water, protected from light.* To 0.50 g in a 50 mL volumetric flask add 15 mL of *water R*. Shake and add 1 mL of *dilute sodium hydroxide solution R*. Cool in iced water, add 5 mL of a freshly prepared 5 g/L solution of *sodium nitrite R* and 12 mL of *dilute hydrochloric acid R*. Shake gently and allow to stand for exactly 2 min after adding the hydrochloric acid. Add 10 mL of a 20 g/L solution of *ammonium sulfamate R*. Allow to stand for 5 min, shaking frequently, and add 0.15 mL of a 100 g/L solution of *α-naphthol R* in *alcohol R*. Shake and allow to stand for 5 min. Add 3.5 mL of *buffer solution pH 10.9 R*, mix and dilute to 50.0 mL with *water R*. The absorbance (2.2.25), measured within 20 min at 485 nm using as the compensation liquid a solution prepared at the same time and in the same manner but omitting the substance to be examined, is not greater than 0.30.

**Free iodine and iodides.** Not more than 50 ppm. Dissolve 1.0 g in *distilled water R* and dilute to 10 mL with the same solvent. Add dropwise *dilute nitric acid R* until the precipitation is complete, then add 3 mL of *dilute nitric acid R*. Filter and wash the precipitate with 5 mL of *water R*. Collect the filtrate and washings. Add 1 mL of *strong hydrogen peroxide solution R* and 1 mL of *methylene chloride R*. Shake. The lower layer is not more intensely coloured than a reference solution prepared simultaneously and in the same manner, using a mixture of 5 mL of *iodide standard solution (10 ppm I) R*, 3 mL of *dilute nitric acid R* and 15 mL of *water R*.

01/2008:1150

## SODIUM AMIDOTRIZOATE

### Natrii amidotrizoas

C<sub>11</sub>H<sub>8</sub>I<sub>3</sub>N<sub>2</sub>NaO<sub>4</sub>  
[737-31-5]

M<sub>r</sub> 636

#### DEFINITION

Sodium amidotrizoate contains not less than 98.0 per cent and not more than the equivalent of 101.0 per cent of sodium 3,5-bis(acetylamino)-2,4,6-tri-iodobenzoate, calculated with reference to the anhydrous substance.

#### CHARACTERS

A white or almost white powder, freely soluble in water, slightly soluble in alcohol, practically insoluble in acetone.

It melts at about 261 °C with decomposition.

#### IDENTIFICATION

*First identification:* A, D.

*Second identification:* B, C, D.

- A. Examine by infrared absorption spectrophotometry (2.2.24), comparing with the spectrum obtained with *sodium amidotrizoate CRS*. Dry both the substance to be examined and the reference substance at 100 °C to 105 °C for 3 h.

**Heavy metals** (2.4.8). Dilute 4 mL of solution S to 20 mL with *water R*. 12 mL of this solution complies with limit test A for heavy metals (20 ppm). Prepare the standard using *lead standard solution (2 ppm Pb) R*.

**Water** (2.5.12). Not more than 11.0 per cent, determined on 0.400 g by the semi-micro determination of water.

#### ASSAY

To 0.150 g in a 250 mL round-bottomed flask add 5 mL of *strong sodium hydroxide solution R*, 20 mL of *water R*, 1 g of *zinc powder R* and a few glass beads. Boil under a reflux condenser for 30 min. Allow to cool and rinse the condenser with 20 mL of *water R*, adding the rinsings to the flask. Filter through a sintered-glass filter (2.1.2) and wash the filter with several quantities of *water R*. Collect the filtrate and washings. Add 40 mL of *dilute sulfuric acid R* and titrate immediately with 0.1 M *silver nitrate*. Determine the end-point potentiometrically (2.2.20), using a suitable electrode system such as silver-mercurous sulfate.

1 mL of 0.1 M *silver nitrate* is equivalent to 21.20 mg of  $C_{11}H_8I_3N_2NaO_4$ .

#### STORAGE

Store protected from light.

#### IMPURITIES

- A. R1 = NH<sub>2</sub>, R2 = I: 3-acetylamino-5-amino-2,4,6-tri-iodobenzoic acid,  
 B. R1 = NHCOCH<sub>3</sub>, R2 = H: 3,5-bis(acetylamino)-2,4-di-iodobenzoic acid.

corrected 7.0

## SODIUM AMINOSALICYLATE DIHYDRATE

Natrii aminosalicylas dihydricus

$C_7H_6NNaO_3 \cdot 2H_2O$   
[6018-19-5]

$M_r$  211.2

#### DEFINITION

Sodium 4-amino-2-hydroxybenzoate dihydrate.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

#### CHARACTERS

*Appearance*: white or almost white crystalline powder or crystals, slightly hygroscopic.

*Solubility*: freely soluble in water, sparingly soluble in alcohol, practically insoluble in methylene chloride.

#### IDENTIFICATION

*First identification*: A, E.

*Second identification*: B, C, D, E.

A. Infrared absorption spectrophotometry (2.2.24).

*Comparison*: Ph. Eur. reference spectrum of sodium aminosalicylate dihydrate.

- B. Introduce 0.3 g into a porcelain crucible. Cautiously heat on a small flame until vapour is evolved. Cover the crucible with a watch glass and collect the white sublimate. The melting point (2.2.14) of the sublimate is 120 °C to 124 °C.  
 C. To 0.1 mL of solution S (see Tests) add 5 mL of *water R* and 0.1 mL of *ferric chloride solution R1*. A reddish-brown colour develops.  
 D. 2 mL of solution S gives the reaction of primary aromatic amines (2.3.1).  
 E. 0.5 mL of solution S gives reaction (a) of sodium (2.3.1).

#### TESTS

**Solution S**. Dissolve 0.50 g in *carbon dioxide-free water R* and dilute to 25 mL with the same solvent.

**Appearance of solution**. The freshly prepared solution is clear (2.2.1) and not more intensely coloured than reference solution B<sub>5</sub> (2.2.2, *Method II*).

Dissolve 2.5 g in *water R* and dilute to 25 mL with the same solvent.

**pH** (2.2.3): 6.5 to 8.5 for solution S.

**Related substances**. Liquid chromatography (2.2.29). Use freshly prepared solutions and mobile phases.

*Test solution*. Dissolve 50.0 mg of the substance to be examined in *water R* and dilute to 50.0 mL with the same solvent.

*Reference solution (a)*. Dissolve 5.0 mg of 3-aminophenol R in *water R* and dilute to 100.0 mL with the same solvent.

*Reference solution (b)*. Dissolve 5.0 mg of mesalazine CRS in *water R* and dilute to 100.0 mL with the same solvent. To 10.0 mL of this solution add 1.0 mL of reference solution (a) and dilute to 50.0 mL with *water R*.

*Column*:

- size:  $l = 0.25$  m,  $\varnothing = 4.6$  mm,
- stationary phase: spherical base-deactivated octylsilyl silica gel for chromatography R (5  $\mu$ m).

*Mobile phase*:

- mobile phase A: dissolve 2.2 g of perchloric acid R and 1.0 g of phosphoric acid R in *water R* and dilute to 1000.0 mL with the same solvent,
- mobile phase B: dissolve 1.7 g of perchloric acid R and 1.0 g of phosphoric acid R in acetonitrile R and dilute to 1000.0 mL with the same solvent,

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 15	100	0
15 - 30	100 → 40	0 → 60

*Flow rate*: 1.25 mL/min.

*Detection*: spectrophotometer at 220 nm.

*Injection*: 10  $\mu$ L.

*Relative retention* with reference to 4-aminosalicylate (retention time = about 12 min): impurity A = about 0.30; impurity B = about 0.37.

*System suitability*: reference solution (b):

- resolution: minimum 4.0 between the peaks due to impurity A and impurity B.

*Limits*:

- impurity A: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.1 per cent),
- impurity B: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (b) (1.0 per cent),

- *any other impurity*: for each impurity, not more than 0.1 times the area of the peak due to impurity B in the chromatogram obtained with reference solution (b) (0.1 per cent),
- *total*: not more than the area of the peak due to impurity B in the chromatogram obtained with reference solution (b) (1.0 per cent),
- *disregard limit*: 0.05 times the area of the peak due to impurity B in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Heavy metals** (2.4.8): maximum 10 ppm.

2.0 g complies with limit test C. Prepare the standard using 2 mL of *lead standard solution (10 ppm Pb) R*.

**Loss on drying** (2.2.32): 16.0 per cent to 17.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Pyrogens** (2.6.8). If intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of pyrogens, it complies with the test for pyrogens. Inject per kilogram of the rabbit's mass, 10 mL of a 20 mg/mL solution of the substance to be examined in *water for injections R*.

#### ASSAY

Dissolve 0.150 g in 20 mL of *water R*. Add 10 mL of a 500 g/L solution of *sodium bromide R* and 25 mL of *glacial acetic acid R*. Add 5 mL of 0.1 M *sodium nitrite* rapidly and continue the titration with the same titrant, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *sodium nitrite* is equivalent to 17.52 mg of  $C_7H_6NNaO_3$ .

#### STORAGE

In an airtight container, protected from light. If the substance is sterile, store in a sterile, airtight, tamper-proof container.

#### IMPURITIES

*Specified impurities*: A, B.

A. R1 = R3 = H, R2 = NH<sub>2</sub>: 3-aminophenol,

B. R1 = CO<sub>2</sub>H, R2 = H, R3 = NH<sub>2</sub>: 5-amino-2-hydroxybenzoic acid (mesalazine).

01/2011:1791

## SODIUM ASCORBATE

Natrii ascorbas

$C_6H_7NaO_6$   
[134-03-2]

$M_r$  198.1

#### DEFINITION

Sodium (2*R*)-2-[(1*S*)-1,2-dihydroxyethyl]-4-hydroxy-5-oxo-2,5-dihydrofuran-3-olate.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

#### CHARACTERS

*Appearance*: white or yellowish, crystalline powder or crystals.

*Solubility*: freely soluble in water, sparingly soluble in ethanol (96 per cent), practically insoluble in methylene chloride.

#### IDENTIFICATION

*First identification*: B, D.

*Second identification*: A, C, D.

A. Specific optical rotation (2.2.7) (see Tests).

B. Infrared absorption spectrophotometry (2.2.24).

*Comparison*: *sodium ascorbate CRS*.

C. To 1 mL of solution S (see Tests) add 0.2 mL of *dilute nitric acid R* and 0.2 mL of *silver nitrate solution R2*. A grey precipitate is formed.

D. 1 mL of solution S gives reaction (a) of sodium (2.3.1).

#### TESTS

**Solution S**. Dissolve 10.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100.0 mL with the same solvent.

**Appearance of solution**. Solution S is clear (2.2.1) and not more intensely coloured than reference solution Y<sub>6</sub> or BY<sub>6</sub> (2.2.2, *Method II*); examine the colour immediately after preparation of the solution.

**pH** (2.2.3): 7.0 to 8.0 determined on freshly prepared solution S.

**Specific optical rotation** (2.2.7): + 103 to + 108 (dried substance), determined on freshly prepared solution S.

**Impurity E**: maximum 0.3 per cent.

*Test solution*. Dissolve 0.25 g in 5 mL of *water R*. Add 1 mL of *dilute acetic acid R* and 0.5 mL of *calcium chloride solution R*.

*Reference solution*. Dissolve 70 mg of *oxalic acid R* in *water R* and dilute to 500 mL with the same solvent; to 5 mL of the solution add 1 mL of *dilute acetic acid R* and 0.5 mL of *calcium chloride solution R*.

Allow the solutions to stand for 1 h. Any opalescence in the test solution is not more intense than that in the reference solution.

**Related substances**. Liquid chromatography (2.2.29). *Prepare the solutions immediately before use*.

*Phosphate buffer solution*. Dissolve 6.8 g of *potassium dihydrogen phosphate R* in *water R* and dilute to about 175 mL with the same solvent. Filter through a membrane filter (nominal pore size 0.45 µm) and dilute to 1000 mL with *water R*.

*Test solution*. Dissolve 0.500 g of the substance to be examined in the phosphate buffer solution and dilute to 10.0 mL with the phosphate buffer solution.

*Reference solution (a)*. Dissolve 10.0 mg of *ascorbic acid impurity C CRS* in the mobile phase and dilute to 5.0 mL with the mobile phase.

*Reference solution (b)*. Dissolve 5.0 mg of *ascorbic acid impurity D CRS* and 5.0 mg of *ascorbic acid CRS* in the mobile phase, add 2.5 mL of reference solution (a) and dilute to 100.0 mL with the mobile phase.

*Reference solution (c)*. Dilute 1.0 mL of the test solution to 200.0 mL with the mobile phase. Mix 1.0 mL of this solution with 1.0 mL of reference solution (a).

*Column*:

– *size*:  $l = 0.25$  m,  $\varnothing = 4.6$  mm;

– *stationary phase*: aminopropylsilyl silica gel for chromatography R (5 µm);

– *temperature*: 45 °C.

*Mobile phase*: phosphate buffer solution, *acetonitrile R1* (25:75 V/V).

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 210 nm.

*Injection*: 20 µL of the test solution and reference solutions (b) and (c).

*Run time*: 2.5 times the retention time of ascorbic acid.

*Identification of impurities*: use the chromatogram obtained with reference solution (b) to identify the peaks due to impurities C and D.

*Relative retention* with reference to ascorbic acid (retention time = about 11 min): impurity D = about 0.4; impurity C = about 1.7.

*System suitability*:

- *resolution*: minimum 3.0 between the peaks due to ascorbic acid and impurity C in the chromatogram obtained with reference solution (c);
- *signal-to-noise ratio*: minimum 20 for the peak due to impurity C in the chromatogram obtained with reference solution (b).

*Limits*:

- *impurities C, D*: for each impurity, not more than 1.5 times the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.15 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the peak due to ascorbic acid in the chromatogram obtained with reference solution (b) (0.10 per cent);
- *total of impurities other than C and D*: not more than twice the area of the peak due to ascorbic acid in the chromatogram obtained with reference solution (b) (0.2 per cent);
- *disregard limit*: 0.5 times the area of the peak due to ascorbic acid in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Sulfates** (2.4.13): maximum 150 ppm.

To 10 mL of solution S add 2 mL of *hydrochloric acid R1* and dilute to 15 mL with *distilled water R*.

**Copper**: maximum 5 ppm.

Atomic absorption spectrometry (2.2.23, *Method I*).

*Test solution*. Dissolve 2.0 g in 0.1 M *nitric acid* and dilute to 25.0 mL with the same acid.

*Reference solutions*. Prepare the reference solutions (0.2 ppm, 0.4 ppm and 0.6 ppm) by diluting *copper standard solution (10 ppm Cu) R* with 0.1 M *nitric acid*.

*Source*: copper hollow-cathode lamp.

*Wavelength*: 324.8 nm.

*Atomisation device*: air-acetylene flame.

**Iron**: maximum 2 ppm.

Atomic absorption spectrometry (2.2.23, *Method I*).

*Test solution*. Dissolve 5.0 g in 0.1 M *nitric acid* and dilute to 25.0 mL with the same acid.

*Reference solutions*. Prepare the reference solutions (0.2 ppm, 0.4 ppm and 0.6 ppm) by diluting *iron standard solution (20 ppm Fe) R* with 0.1 M *nitric acid*.

*Source*: iron hollow-cathode lamp.

*Wavelength*: 248.3 nm.

*Atomisation device*: air-acetylene flame.

**Nickel**: maximum 1 ppm.

Atomic absorption spectrometry (2.2.23, *Method I*).

*Test solution*. Dissolve 10.0 g in 0.1 M *nitric acid* and dilute to 25.0 mL with the same acid.

*Reference solutions*. Prepare the reference solutions (0.2 ppm, 0.4 ppm and 0.6 ppm) by diluting *nickel standard solution (10 ppm Ni) R* with 0.1 M *nitric acid*.

*Source*: nickel hollow-cathode lamp.

*Wavelength*: 232.0 nm.

*Atomisation device*: air-acetylene flame.

**Heavy metals** (2.4.8): maximum 10 ppm.

Dissolve 2.0 g in *water R* and dilute to 20 mL with the same solvent. 12 mL of the solution complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

**Loss on drying** (2.2.32): maximum 0.25 per cent, determined on 1.000 g by drying in an oven at 105 °C.

## ASSAY

Dissolve 80 mg in a mixture of 10 mL of *dilute sulfuric acid R* and 80 mL of *carbon dioxide-free water R*. Add 1 mL of *starch solution R*. Titrate with 0.05 M *iodine* until a persistent violet-blue colour is obtained.

1 mL of 0.05 M *iodine* is equivalent to 9.91 mg of C<sub>6</sub>H<sub>7</sub>NaO<sub>6</sub>.

## STORAGE

In a non-metallic container, protected from light.

## IMPURITIES

*Specified impurities*: C, D, E.

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): A, F, G, H.

A. 2-furaldehyde,

C. D-xylo-hex-2-ulosonic acid (D-sorbosonic acid),

D. methyl D-xylo-hex-2-ulosonate (methyl D-sorbosonate),

E. oxalic acid,

F. (5R)-5-[(1R)-1,2-dihydroxyethyl]-3,4-dihydroxyfuran-2(5H)-one,

G. (2R)-2-[(2R)-3,4-dihydroxy-5-oxo-2,5-dihydrofuran-2-yl]-2-hydroxyacetic acid,

H. methyl (2R)-2-[(2R)-3,4-dihydroxy-5-oxo-2,5-dihydrofuran-2-yl]-2-hydroxyacetate.

## SODIUM AUROTHIOMALATE

## Natrii aurothiomalatas

## DEFINITION

Mixture of monosodium and disodium salts of (2*RS*)-2-(aurosulfanyl)butanedioic acid.

## Content:

- gold (Au; *A*, 197.0): 44.5 per cent to 46.0 per cent (dried substance);
- sodium (Na; *A*, 22.99): 10.8 per cent to 11.8 per cent (dried substance).

## CHARACTERS

*Appearance*: fine, pale yellow, hygroscopic powder.

*Solubility*: very soluble in water, practically insoluble in ethanol (96 per cent) and in methylene chloride.

## IDENTIFICATION

- Dissolve 20 mg in *water R* and dilute to 2 mL with the same solvent. Add 2 mL of *strong hydrogen peroxide solution R* and 1 mL of *sodium hydroxide solution R*. Carefully heat to boiling and boil for 30 s. A precipitate is produced that appears brownish-black by reflected light and bluish-green by transmitted light.
- To 20 mg add 2 mL of *water R*. The solution gives reaction (a) of sodium (2.3.1).
- Ignite 100 mg, dissolve the residue in *hydrochloric acid R* and dilute to 10 mL with the same acid. Allow to stand. 5 mL of the clear supernatant gives reaction (a) of sulfates (2.3.1).

## TESTS

**Appearance of solution.** Dissolve 1.0 g in *water R* and dilute to 10 mL with the same solvent. Filter, seal in an ampoule and heat at 100 °C for 1 h. Cool and dilute the contents of the ampoule to 100 mL with *water R*. The solution remains clear and is not more intensely coloured than a 0.100 g/L solution of *potassium ferricyanide R*.

**pH (2.2.3):** 6.0 to 7.0.

Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 10 mL with the same solvent.

**Related substances.** Liquid chromatography (2.2.29). Prepare the solutions immediately before use.

*Test solution.* Dissolve 0.200 g of the substance to be examined in *water R* and dilute to 100.0 mL with the same solvent.

*Reference solution (a).* Dissolve 10.0 mg of *fumaric acid R* and 100.0 mg of *thiomalic acid R* in *water R* and dilute to 100.0 mL with the same solvent. Dilute 1.0 mL of this solution to 25.0 mL with *water R*.

*Reference solution (b).* Dissolve 12.0 mg of *thiomalic acid R* in *water R* and dilute to 100.0 mL with the same solvent.

*Reference solution (c).* Dissolve 10.0 mg of *maleic acid R* in *water R* and dilute to 100.0 mL with the same solvent. Dilute 1.0 mL of this solution to 25.0 mL with *water R*.

## Column:

- size:  $l = 0.25$  m,  $\varnothing = 4.6$  mm;
- stationary phase: base-deactivated end-capped octadecylsilyl silica gel for chromatography *R* (5  $\mu$ m).

*Mobile phase:* mix 90 volumes of a 10.5 g/L solution of *phosphoric acid R*, 100 volumes of *methanol R2* and 810 volumes of *water R*.

*Flow rate:* 1.0 mL/min.

*Detection:* spectrophotometer at 205 nm.

*Injection:* 10  $\mu$ L.

*Run time:* twice the retention time of impurity C.

*Relative retention* with reference to impurity C (retention time = about 8 min): impurity A = about 0.4; impurity B = about 0.6. Aurothiomalate does not elute under the chromatographic conditions described.

*System suitability:* reference solution (a):

- *resolution:* minimum 5.0 between the peaks due to impurities B and C.

## Limits:

- *impurity A:* not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.2 per cent);
- *impurity B:* not more than the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- *impurity C:* not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (6.0 per cent).

**Glycerol:** maximum 8.0 per cent.

*Test solution.* Dissolve 0.50 g of the substance to be examined in *water R* and dilute to 10 mL with the same solvent.

*Reference solution (a).* Dilute 0.80 g of *glycerol R* to 100.0 mL with *water R*.

*Reference solution (b).* To 2.5 mL of reference solution (a) add 7.5 mL of *water R*.

*Reference solution (c).* To 5.0 mL of reference solution (a) add 5.0 mL of *water R*.

*Reference solution (d).* To 7.5 mL of reference solution (a) add 2.5 mL of *water R*.

*Blank solution.* 10 mL of *water R*.

To the test solution, reference solutions (b), (c) and (d) and the blank solution, add 2.5 mL of a freshly prepared 235 g/L solution of *sodium hydroxide R* and mix. Add dropwise in 0.2 mL increments a 38.0 g/L solution of *cupric chloride R*, shaking vigorously after each addition, until the solutions become slightly turbid. Then add 0.2 mL of the 38.0 g/L solution of *cupric chloride R*. Stopper and shake vigorously for 1 min. Dilute to 25.0 mL with *water R* and mix. Centrifuge for 2 min. Measure the absorbance (2.2.25) of the supernatant solution of a 1 cm layer at 635 nm. Use the solution prepared from the blank solution as the compensation liquid. Draw a calibration curve and calculate the content of glycerol in the sample.

**Loss on drying (2.2.32):** maximum 2.0 per cent, determined on 1.000 g by drying over *diphosphorus pentoxide R* at a pressure not exceeding 0.7 kPa for 24 h.

## ASSAY

**Gold.** Heat 0.2 g with 10 mL of *sulfuric acid R* and continue to boil gently until a clear, pale yellow liquid is produced. Cool, add about 1 mL of *nitric acid R* dropwise and boil for 1 h. Cool, dilute to 70 mL with *water R*, boil for 5 min and filter. Wash the residue of gold with *water R* at 60 °C. Dry and ignite at a temperature of at least 600 °C for 3 h. Weigh the residue and calculate the percentage content of Au.

**Sodium.** Evaporate to dryness the filtrate and washings obtained in the assay for gold, moisten with *sulfuric acid R* and ignite at 600  $\pm$  50 °C for 3 h.

1.000 g of residue is equivalent to 0.324 g of Na.

## STORAGE

In an airtight container.

## IMPURITIES

*Specified impurities:* A, B, C.

A. (*Z*)-butenedioic acid (maleic acid),

B. (*E*)-butenedioic acid (fumaric acid),

C. (*2R,3S*)-2-sulfanylbutedioic acid (thiomalic acid).

01/2008:0123  
corrected 6.0

## SODIUM BENZOATE

Natrii benzoas

$C_7H_5NaO_2$   
[532-32-1]

$M_r$  144.1

### DEFINITION

Sodium benzenecarboxylate.

*Content*: 99.0 per cent to 100.5 per cent (dried substance).

### CHARACTERS

*Appearance*: white or almost white, crystalline or granular powder or flakes, slightly hygroscopic.

*Solubility*: freely soluble in water, sparingly soluble in ethanol (90 per cent *V/V*).

### IDENTIFICATION

A. It gives reactions (b) and (c) of benzoates (2.3.1).

B. It gives reaction (a) of sodium (2.3.1).

### TESTS

**Solution S.** Dissolve 10.0 g in *carbon dioxide-free water R* and dilute to 100 mL with the same solvent.

**Appearance of solution.** Solution S is clear (2.2.1) and not more intensely coloured than reference solution  $Y_6$  (2.2.2, *Method II*).

**Acidity or alkalinity.** To 10 mL of solution S add 10 mL of *carbon dioxide-free water R* and 0.2 mL of *phenolphthalein solution R*. Not more than 0.2 mL of 0.1 M *sodium hydroxide* or 0.1 M *hydrochloric acid* is required to change the colour of the indicator.

**Halogenated compounds:** maximum 200 ppm for ionised chlorine and maximum 300 ppm for total chlorine.

*All glassware used must be chloride-free and may be prepared by soaking overnight in a 500 g/L solution of nitric acid R, rinsed with water R and stored full of water R. It is recommended that glassware be reserved exclusively for this test.*

*Test solution.* To 20.0 mL of solution S add 5 mL of *water R* and dilute to 50.0 mL with *ethanol (96 per cent) R*.

#### Determination of ionised chlorine

In three 25 mL volumetric flasks, prepare the following solutions.

*Solution (a).* To 4.0 mL of the test solution add 3 mL of *dilute sodium hydroxide solution R* and 3 mL of *ethanol (96 per cent) R*. This solution is used to prepare solution A.

*Solution (b).* To 3 mL of *dilute sodium hydroxide solution R* add 2 mL of *water R* and 5 mL of *ethanol (96 per cent) R*. This solution is used to prepare solution B.

*Solution (c).* To 4.0 mL of *chloride standard solution (8 ppm Cl) R* add 6.0 mL of *water R*. This solution is used to prepare solution C.

In a fourth 25 mL volumetric flask, place 10 mL of *water R*. To each flask add 5 mL of *ferric ammonium sulfate solution R5*, mix and add dropwise and with swirling 2 mL of

*nitric acid R* and 5 mL of *mercuric thiocyanate solution R*. Shake. Dilute the contents of each flask to 25.0 mL with *water R* and allow the solutions to stand in a water-bath at 20 °C for 15 min. Measure at 460 nm in a 2 cm cell the absorbance (2.2.25) of solution A using solution B as the compensation liquid, and the absorbance of solution C using the solution obtained with 10 mL of *water R* as the compensation liquid. The absorbance of solution A is not greater than that of solution C.

#### Determination of total chlorine

*Solution (a).* To 10.0 mL of the test solution add 7.5 mL of *dilute sodium hydroxide solution R* and 0.125 g of *nickel-aluminium alloy R* and heat on a water-bath for 10 min. Allow to cool to room temperature, filter into a 25 mL volumetric flask and wash the filter with 3 quantities, each of 2 mL, of *ethanol (96 per cent) R* (a slight precipitate may form that disappears on acidification). Dilute the filtrate and washings to 25.0 mL with *water R*. This solution is used to prepare solution A.

*Solution (b).* In the same manner, prepare a similar solution replacing the test solution by a mixture of 5 mL of *ethanol (96 per cent) R* and 5 mL of *water R*. This solution is used to prepare solution B.

*Solution (c).* To 6.0 mL of *chloride standard solution (8 ppm Cl) R* add 4.0 mL of *water R*. This solution is used to prepare solution C.

In four 25 mL volumetric flasks, place separately 10 mL of solution (a), 10 mL of solution (b), 10 mL of solution (c) and 10 mL of *water R*. To each flask add 5 mL of *ferric ammonium sulfate solution R5*, mix and add dropwise and with swirling 2 mL of *nitric acid R* and 5 mL of *mercuric thiocyanate solution R*. Shake. Dilute the contents of each flask to 25.0 mL with *water R* and allow the solutions to stand in a water-bath at 20 °C for 15 min. Measure at 460 nm in a 2 cm cell the absorbance (2.2.25) of solution A using solution B as the compensation liquid, and the absorbance of solution C using the solution obtained with 10 mL of *water R* as the compensation liquid. The absorbance of solution A is not greater than that of solution C.

**Heavy metals (2.4.8):** maximum 10 ppm.

2.0 g complies with test C. Prepare the reference solution using 2 mL of *lead standard solution (10 ppm Pb) R*.

**Loss on drying (2.2.32):** maximum 2.0 per cent, determined on 1.00 g by drying in an oven at 105 °C.

### ASSAY

Dissolve 0.250 g in 20 mL of *anhydrous acetic acid R*, heating to 50 °C if necessary. Cool. Using 0.05 mL of *naphtholbenzein solution R* as indicator, titrate with 0.1 M *perchloric acid* until a green colour is obtained.

1 mL of 0.1 M *perchloric acid* is equivalent to 14.41 mg of  $C_7H_5NaO_2$ .

01/2008:0190  
corrected 6.0

## SODIUM BROMIDE

Natrii bromidum

NaBr  
[7647-15-6]

$M_r$  102.9

### DEFINITION

*Content*: 98.0 per cent to 100.5 per cent (dried substance).

### CHARACTERS

*Appearance*: white or almost white, granular powder or small, colourless, transparent or opaque crystals, slightly hygroscopic.

*Solubility*: freely soluble in water, soluble in alcohol.

## IDENTIFICATION

- A. It gives reaction (a) of bromides (2.3.1).  
 B. Solution S (see Tests) gives the reactions of sodium (2.3.1).

## TESTS

**Solution S.** Dissolve 10.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100 mL with the same solvent.

**Appearance of solution.** Solution S is clear (2.2.1) and colourless (2.2.2, *Method II*).

**Acidity or alkalinity.** To 10 mL of solution S add 0.1 mL of *bromothymol blue solution R1*. Not more than 0.5 mL of 0.01 M *hydrochloric acid* or 0.01 M *sodium hydroxide* is required to change the colour of the indicator.

**Bromates.** To 10 mL of solution S add 1 mL of *starch solution R*, 0.1 mL of a 100 g/L solution of *potassium iodide R* and 0.25 mL of 0.5 M *sulfuric acid* and allow to stand protected from light for 5 min. No blue or violet colour develops.

**Chlorides:** maximum 0.6 per cent.

In a conical flask, dissolve 1.000 g in 20 mL of *dilute nitric acid R*. Add 5 mL of *strong hydrogen peroxide solution R* and heat on a water-bath until the solution is completely decolourised. Wash down the sides of the flask with a little *water R* and heat on a water-bath for 15 min. Allow to cool, dilute to 50 mL with *water R* and add 5.0 mL of 0.1 M *silver nitrate* and 1 mL of *dibutyl phthalate R*. Shake and titrate with 0.1 M *ammonium thiocyanate*, using 5 mL of *ferric ammonium sulfate solution R2* as indicator. Not more than 1.7 mL of 0.1 M *silver nitrate* is used. Note the volume of 0.1 M *silver nitrate* used (see Assay). Carry out a blank test.

**Iodides.** To 5 mL of solution S add 0.15 mL of *ferric chloride solution R1* and 2 mL of *methylene chloride R*. Shake and allow to separate. The lower layer is colourless (2.2.2, *Method I*).

**Sulfates (2.4.13):** maximum 100 ppm.

15 mL of solution S complies with the limit test for sulfates.

**Iron (2.4.9):** maximum 20 ppm.

5 mL of solution S diluted to 10 mL with *water R* complies with the limit test for iron.

**Magnesium and alkaline-earth metals (2.4.7):** maximum 200 ppm, calculated as Ca.

10.0 g complies with the limit test for magnesium and alkaline-earth metals. The volume of 0.01 M *sodium edetate* used does not exceed 5.0 mL.

**Heavy metals (2.4.8):** maximum 10 ppm.

12 mL of solution S complies with limit test A. Prepare the standard using *lead standard solution (1 ppm Pb) R*.

**Loss on drying (2.2.32):** maximum 3.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

## ASSAY

Dissolve 2.000 g in *water R* and dilute to 100.0 mL with the same solvent. To 10.0 mL of the solution add 50 mL of *water R*, 5 mL of *dilute nitric acid R*, 25.0 mL of 0.1 M *silver nitrate* and 2 mL of *dibutyl phthalate R*. Shake. Titrate with 0.1 M *ammonium thiocyanate*, using 2 mL of *ferric ammonium sulfate solution R2* as indicator and shaking vigorously towards the end-point.

1 mL of 0.1 M *silver nitrate* is equivalent to 10.29 mg of NaBr. Calculate the percentage content of NaBr from the expression:

$$a - 2.902 b$$

- a* = percentage content of NaBr and NaCl obtained in the assay and calculated as NaBr,  
*b* = percentage content of Cl in the test for chlorides.

## STORAGE

In an airtight container.

01/2008:0231

## SODIUM CALCIUM EDETATE

## Natrii calcii edetas

$C_{10}H_{12}CaN_2Na_2O_8 \cdot xH_2O$   $M_r$  374.3 (anhydrous substance) [62-33-9]

## DEFINITION

Disodium [(ethylenedinitrilo)tetraacetato]calciate(2-).

**Content:** 98.0 per cent to 102.0 per cent (anhydrous substance). It contains a variable amount of water of crystallisation.

## CHARACTERS

**Appearance:** white or almost white, hygroscopic powder.

**Solubility:** freely soluble in water, practically insoluble in ethanol (96 per cent).

## IDENTIFICATION

**First identification:** A, C, D.

**Second identification:** B, C, D.

A. Infrared absorption spectrophotometry (2.2.24).

**Preparation:** discs.

**Comparison:** *sodium calcium edetate CRS*.

B. Dissolve 2 g in 10 mL of *water R*, add 6 mL of *lead nitrate solution R*, shake and add 3 mL of *potassium iodide solution R*. No yellow precipitate is formed. Make alkaline to *red litmus paper R* by the addition of *dilute ammonia R2* and add 3 mL of *ammonium oxalate solution R*. A white precipitate is formed.

C. Ignite. The residue gives reaction (b) of calcium (2.3.1).

D. Dissolve 0.5 g in 10 mL of *water R* and add 10 mL of *potassium pyroantimonate solution R*. A white, crystalline precipitate is formed. The formation of the precipitate is accelerated by rubbing the wall of the tube with a glass rod.

## TESTS

**Solution S.** Dissolve 5.0 g in *water R* and dilute to 100 mL with the same solvent.

**Appearance of solution.** Solution S is clear (2.2.1) and colourless (2.2.2, *Method II*).

**pH (2.2.3):** 6.5 to 8.0.

Dissolve 5.0 g in *carbon dioxide-free water R* and dilute to 25 mL with the same solvent.

**Impurity A.** Liquid chromatography (2.2.29). *Carry out the test protected from light.*

**Solvent mixture.** Dissolve 10.0 g of *ferric sulfate pentahydrate R* in 20 mL of 0.5 M *sulfuric acid* and add 780 mL of *water R*. Adjust to pH 2.0 with 1 M *sodium hydroxide* and dilute to 1000 mL with *water R*.

**Test solution.** Dissolve 0.100 g of the substance to be examined in the solvent mixture and dilute to 25.0 mL with the solvent mixture.

**Reference solution.** Dissolve 40.0 mg of *nitrilotriacetic acid R* (impurity A) in the solvent mixture and dilute to 100.0 mL with the solvent mixture. To 1.0 mL of this solution add 0.1 mL of the test solution and dilute to 100.0 mL with the solvent mixture.

**Column:**

– size:  $l = 0.10$  m,  $\varnothing = 4.6$  mm;

– *stationary phase*: spherical graphitised carbon for chromatography R1 (5 µm) with a specific surface area of 120 m<sup>2</sup>/g and a pore size of 25 nm.

*Mobile phase*: dissolve 50.0 mg of ferric sulfate pentahydrate R in 50 mL of 0.5 M sulfuric acid and add 750 mL of water R; adjust to pH 1.5 with 0.5 M sulfuric acid or 1 M sodium hydroxide, add 20 mL of ethylene glycol R and dilute to 1000 mL with water R.

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 273 nm.

*Injection*: 20 µL; filter the solutions and inject immediately.

*Run time*: 4 times the retention time of the iron complex of impurity A.

*Retention time*: iron complex of impurity A = about 5 min; iron complex of edetic acid = about 10 min.

*System suitability*: reference solution:

- *resolution*: minimum 7 between the peaks due to the iron complex of impurity A and the iron complex of edetic acid;
- *signal-to-noise ratio*: minimum 50 for the peak due to impurity A.

*Limit*:

- *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with the reference solution (0.1 per cent).

**Disodium edetate**: maximum 1.0 per cent.

Dissolve 5.0 g in 250 mL of water R. Add 10 mL of ammonium chloride buffer solution pH 10.0 R and about 50 mg of mordant black 11 triturate R. Not more than 1.5 mL of 0.1 M magnesium chloride is required to change the colour of the indicator to violet.

**Chlorides**: maximum 0.1 per cent.

Dissolve 0.7 g in water R and dilute to 20 mL with the same solvent. Add 30 mL of dilute nitric acid R, allow to stand for 30 min and filter. Dilute 10 mL of the filtrate to 50 mL with water R. Use this solution as the test solution. Prepare the reference solution using 0.40 mL of 0.01 M hydrochloric acid, add 6 mL of dilute nitric acid R and dilute to 50 mL with water R. Filter both solutions if necessary. Add 1 mL of silver nitrate solution R2 to the test solution and to the reference solution and mix. After standing for 5 min protected from light, any opalescence in the test solution is not more intense than that in the reference solution.

**Iron (2.4.9)**: maximum 80 ppm.

Dilute 2.5 mL of solution S to 10 mL with water R. Add 0.25 g of calcium chloride R to the test solution and the standard before the addition of the thioglycollic acid R.

**Heavy metals (2.4.8)**: maximum 20 ppm.

1.0 g complies with test F. Prepare the reference solution using 2 mL of lead standard solution (10 ppm Pb) R.

**Water (2.5.12)**: 5.0 per cent to 13.0 per cent, determined on 0.200 g.

**ASSAY**

Dissolve 0.500 g in water R and dilute to 200 mL with the same solvent. To 20.0 mL of this solution, add 80 mL of water R and adjust to pH 2 with dilute nitric acid R. Titrate with 0.01 M bismuth nitrate, using 0.1 mL of a 1 g/L solution of xylenol orange R as indicator. The colour of the solution changes from yellow to red.

1 mL of 0.01 M bismuth nitrate is equivalent to 3.74 mg of C<sub>10</sub>H<sub>12</sub>CaN<sub>2</sub>Na<sub>2</sub>O<sub>8</sub>.

**STORAGE**

In an airtight container, protected from light.

**IMPURITIES**

*Specified impurities*: A.

A. nitrilotriacetic acid.

01/2008:1471  
corrected 6.0

## SODIUM CAPRYLATE

Natrii caprylas

C<sub>8</sub>H<sub>15</sub>NaO<sub>2</sub>  
[1984-06-1]

*M<sub>r</sub>* 166.2

**DEFINITION**

Sodium octanoate.

*Content*: 99.0 per cent to 101.0 per cent (anhydrous substance).

**CHARACTERS**

*Appearance*: white or almost white, crystalline powder.

*Solubility*: very soluble or freely soluble in water, freely soluble in acetic acid, sparingly soluble in ethanol (96 per cent), practically insoluble in acetone.

**IDENTIFICATION**

A. Examine the chromatograms obtained in the test for related substances.

*Results*: the principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (a).

B. To 0.2 mL of solution S (see Tests) add 0.3 mL of water R. The solution gives reaction (b) of sodium (2.3.1).

**TESTS**

**Solution S**. Dissolve 2.5 g in carbon dioxide-free water R and dilute to 25 mL with the same solvent.

**Appearance of solution**. Solution S is clear (2.2.1) and colourless (2.2.2, Method II).

**pH (2.2.3)**: 8.0 to 10.5 for solution S.

**Related substances**. Gas chromatography (2.2.28): use the normalisation procedure.

*Test solution*. Dissolve 0.116 g in water R and dilute to 5 mL with the same solvent. Add 1 mL of a 2.8 per cent V/V solution of sulfuric acid R and shake with 10 mL of ethyl acetate R. Separate the organic layer and dry over anhydrous sodium sulfate R.

*Reference solution (a)*. Dissolve 0.10 g of caprylic acid CRS in ethyl acetate R and dilute to 10 mL with the same solvent.

*Reference solution (b)*. Dilute 1 mL of the test solution to 100 mL with ethyl acetate R. Dilute 5 mL of this solution to 50 mL with ethyl acetate R.

*Column*:

- *material*: fused silica;
- *size*: *l* = 30 m,  $\varnothing$  = 0.25 mm;
- *stationary phase*: macrogol 20 000 2-nitroterephthalate R (film thickness 0.25 µm).

*Carrier gas*: helium for chromatography R.

*Flow rate*: 1.5 mL/min.

*Split ratio*: 1:100.

Temperature:

01/2008:0773

	Time (min)	Temperature (°C)
Column	0 - 1	100
	1 - 25	100 → 220
	25 - 35	220
Injection port		250
Detector		250

Detection: flame ionisation.

Injection: 1 µL.

System suitability: reference solution (b):

– signal-to-noise ratio: minimum 5 for the principal peak.

Limits:

- any impurity: for each impurity, maximum 0.3 per cent;
- total: maximum 0.5 per cent;
- disregard limit: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Heavy metals (2.4.8): maximum 10 ppm.

Dissolve 2.0 g in glacial acetic acid R and dilute to 10 mL with the same acid. Add 10 mL of ethanol (96 per cent) R. 12 mL of the solution complies with test B. Prepare the reference solution using 1 mL of lead standard solution (10 ppm Pb) R and 9 mL of a mixture of equal volumes of glacial acetic acid R and ethanol (96 per cent) R.

Water (2.5.12): maximum 3.0 per cent, determined on 1.000 g.

#### ASSAY

Dissolve 0.150 g in 50 mL of anhydrous acetic acid R. Titrate with 0.1 M perchloric acid, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M perchloric acid is equivalent to 16.62 mg of C<sub>8</sub>H<sub>15</sub>NaO<sub>2</sub>.

#### IMPURITIES

- A.  $n = 4$ : hexanoic acid,
- B.  $n = 5$ : heptanoic acid,
- C.  $n = 7$ : nonanoic acid,
- D.  $n = 8$ : decanoic acid,

- E. 2-propylpentanoic acid (valproic acid),

- F. R = OCH<sub>3</sub>,  $n = 6$ : methyl octanoate,
- G. R = OC<sub>2</sub>H<sub>5</sub>,  $n = 6$ : ethyl octanoate,
- H. R = OCH<sub>3</sub>,  $n = 8$ : methyl decanoate,
- I. R = CH<sub>3</sub>,  $n = 8$ : undecan-2-one,

- J. (RS)-5-butyltetrahydrofuran-2-one (γ-hydroxyoctanoic acid lactone).

## SODIUM CARBONATE, ANHYDROUS

### Natrii carbonas anhydricus

Na<sub>2</sub>CO<sub>3</sub>  
[497-19-8]

M<sub>r</sub> 106.0

#### DEFINITION

Content: 99.5 per cent to 100.5 per cent (dried substance).

#### CHARACTERS

Appearance: white or almost white, slightly granular powder, hygroscopic.

Solubility: freely soluble in water, practically insoluble in ethanol (96 per cent).

#### IDENTIFICATION

- A. Dissolve 1 g in water R and dilute to 10 mL with the same solvent. The solution is strongly alkaline (2.2.4).
- B. The solution prepared for identification test A gives the reaction of carbonates (2.3.1).
- C. The solution prepared for identification test A gives reaction (a) of sodium (2.3.1).
- D. Loss on drying (see Tests).

#### TESTS

**Solution S.** Dissolve 2.0 g in portions in a mixture of 5 mL of hydrochloric acid R and 25 mL of distilled water R. Heat to boiling and cool. Add dilute sodium hydroxide solution R until the solution is neutral and dilute to 50 mL with distilled water R.

**Appearance of solution.** The solution is clear (2.2.1) and not more intensely coloured than reference solution Y<sub>6</sub> (2.2.2, Method I).

Dissolve 2.0 g in 10 mL of water R.

**Alkali hydroxides and bicarbonates.** Dissolve 0.4 g in 20 mL of water R. Add 20 mL of barium chloride solution R1 and filter. To 10 mL of the filtrate add 0.1 mL of phenolphthalein solution R. The solution does not become red. Boil the remainder of the filtrate for 2 min. The solution remains clear (2.2.1).

**Chlorides (2.4.4):** maximum 125 ppm.

Dissolve 0.4 g in water R, add 4 mL of dilute nitric acid R and dilute to 15 mL with water R.

**Sulfates (2.4.13):** maximum 250 ppm, determined on solution S.

**Arsenic (2.4.2, Method A):** maximum 5 ppm, determined on 5 mL of solution S.

**Iron (2.4.9):** maximum 50 ppm.

Dilute 5 mL of solution S to 10 mL with water R.

**Heavy metals (2.4.8):** maximum 50 ppm.

12 mL of solution S complies with test A. Prepare the reference solution using lead standard solution (2 ppm Pb) R.

**Loss on drying (2.2.32):** maximum 1.0 per cent, determined on 1.000 g by drying at 300 ± 15 °C.

#### ASSAY

Dissolve 1.000 g in 25 mL of water R. Add 0.2 mL of methyl orange solution R as indicator. Titrate with 1 M hydrochloric acid until the colour changes from yellow to red.

1 mL of 1 M hydrochloric acid is equivalent to 52.99 mg of Na<sub>2</sub>CO<sub>3</sub>.

#### STORAGE

In an airtight container.

01/2008:0191

01/2008:0847 TESTS

## SODIUM CETOSTEARYL SULFATE

Natrii cetylo- et stearylosulfas.

## DEFINITION

Mixture of sodium cetyl sulfate ( $C_{16}H_{33}NaO_4S$ ;  $M_r$  344.5) and sodium stearyl sulfate ( $C_{18}H_{37}NaO_4S$ ;  $M_r$  372.5). A suitable buffer may be added.

## Content:

- *sodium cetostearyl sulfate*: minimum 90.0 per cent (anhydrous substance),
- *sodium cetyl sulfate*: minimum 40.0 per cent (anhydrous substance).

## CHARACTERS

*Appearance*: white or pale yellow, amorphous or crystalline powder.

*Solubility*: soluble in hot water giving an opalescent solution, practically insoluble in cold water, partly soluble in ethanol (96 per cent).

## IDENTIFICATION

*First identification*: B, D, F.

*Second identification*: A, C, D, E, F.

## A. Thin-layer chromatography (2.2.27).

*Test solution*. Dissolve 50 mg of the substance to be examined in 10 mL of *ethanol (70 per cent V/V) R*, heating on a water-bath.

*Reference solution*. Dissolve 50 mg of *sodium cetostearyl sulfate CRS* in 10 mL of *ethanol (70 per cent V/V) R*, heating on a water-bath.

*Plate*: TLC silanised silica gel plate R.

*Mobile phase*: *water R*, *acetone R*, *methanol R* (20:40:40 V/V/V).

*Application*: 2  $\mu$ L.

*Development*: over a path of 12 cm.

*Drying*: in air.

*Detection*: spray with a 50 g/L solution of *phosphomolybdic acid R* in *ethanol (96 per cent) R*. Heat at 120 °C until the spots appear (about 3 h).

*Results*: the principal spots in the chromatogram obtained with the test solution are similar in position and colour to the principal spots in the chromatogram obtained with the reference solution.

## B. Examine the chromatograms obtained in the assay.

*Results*: the 2 principal peaks in the chromatogram obtained with test solution (c) are similar in retention time to the 2 principal peaks in the chromatogram obtained with the reference solution.

C. Dissolve 0.1 g in 10 mL of *water R* and shake. A foam is formed.

## D. It gives a yellow colour to a non-luminous flame.

E. To 0.1 mL of the solution prepared for identification test C add 0.1 mL of a 1 g/L solution of *methylene blue R* and 2 mL of *dilute sulfuric acid R*. Add 2 mL of *methylene chloride R* and shake. The methylene chloride layer has an intense blue colour.F. Mix about 10 mg with 10 mL of *anhydrous ethanol R*. Heat to boiling on a water-bath, shaking frequently. Filter immediately and evaporate to dryness. Dissolve the residue in 7 mL of *water R*, add 3 mL of *dilute hydrochloric acid R* and evaporate the solution to half its volume. Allow to cool. Filter. To the filtrate add 1 mL of *barium chloride solution RI*. A white, crystalline precipitate is formed.

**Acidity or alkalinity**. Dissolve 0.5 g with heating in a mixture of 10 mL of *water R* and 15 mL of *ethanol (90 per cent V/V) R*. Add 0.1 mL of *phenolphthalein solution RI*. The solution is colourless. Add 0.1 mL of 0.1 M *sodium hydroxide*. The solution is red.

**Sodium chloride and sodium sulfate**: maximum 8.0 per cent for the sum of the percentage contents.

*Sodium chloride*. Dissolve 5.00 g in 50 mL of *water R*, add *dilute nitric acid R* dropwise until the solution is neutral to *blue litmus paper R*. Add 2 mL of *potassium chromate solution R* and titrate with 0.1 M *silver nitrate*.

1 mL of 0.1 M *silver nitrate* is equivalent to 5.844 mg of NaCl.

*Sodium sulfate*. Dissolve 0.500 g in 20 mL of *water R*, warming gently if necessary, and add 1 mL of a 0.5 g/L solution of *dithizone R* in *acetone R*. If the solution is red, add 1 M *nitric acid*, dropwise, until a bluish-green colour is obtained. Add 2.0 mL of *dichloroacetic acid solution R* and 80 mL of *acetone R*. Titrate with 0.01 M *lead nitrate* until a persistent orange-red colour is obtained.

1 mL of 0.01 M *lead nitrate* is equivalent to 1.420 mg of  $Na_2SO_4$ .

**Free cetostearyl alcohol**: maximum 4.0 per cent.

From the chromatogram obtained with test solution (a) in the assay, calculate the percentage content of free cetostearyl alcohol in the substance to be examined, using the following expression:

$$S \frac{100 \times m_H}{S_{Ha(\text{corr})} \times m}$$

$S$  = sum of the areas of the peaks due to cetyl alcohol and stearyl alcohol in the chromatogram obtained with test solution (a),

$m_H$  = mass of the internal standard added in the preparation of test solution (a), in milligrams,

$S_{Ha(\text{corr})}$  = corrected area of the peak due to the internal standard in the chromatogram obtained with test solution (a),

$m$  = mass of sodium cetostearyl sulfate used for the preparation of test solution (a), in milligrams.

**Water (2.5.12)**: maximum 1.5 per cent, determined on 5.00 g.

## ASSAY

Gas chromatography (2.2.28).

*Internal standard solution*. Dissolve 0.20 g of *heptadecanol CRS* in *anhydrous ethanol R* and dilute to 50 mL with the same solvent.

*Test solution (a)*. Dissolve 0.300 g of the substance to be examined in 50 mL of *anhydrous ethanol R* and add 2 mL of the internal standard solution and 48 mL of *water R*. Shake with 4 quantities, each of 25 mL, of *pentane R*, adding *sodium chloride R*, if necessary, to facilitate the separation of the layers. Combine the organic layers. Reserve the hydro-alcoholic layer for the preparation of test solutions (c) and (d). Wash the organic layer with 2 quantities, each of 30 mL, of *water R*. Dry over *anhydrous sodium sulfate R* and filter.

*Test solution (b)*. Dissolve 0.300 g of the substance to be examined in 50 mL of *anhydrous ethanol R* and add 50 mL of *water R*. Shake with 4 quantities, each of 25 mL, of *pentane R*, adding *sodium chloride R*, if necessary, to facilitate the separation of the layers. Combine the organic layers, wash with 2 quantities, each of 30 mL, of *water R*. Dry over *anhydrous sodium sulfate R* and filter.

*Test solution (c)*. Transfer 25 mL of the hydro-alcoholic solution obtained in the preparation of test solution (a) to a 200 mL flask that can be fitted with a reflux condenser. Add 20 mL of *hydrochloric acid R* and 10 mL of the internal standard solution. Boil under a reflux condenser for 2 h. Allow to cool and shake with 4 quantities, each of 20 mL, of *pentane R*.

Combine the organic layers and wash with 2 quantities, each of 20 mL, of *water R*. Dry over *anhydrous sodium sulfate R* and filter.

**Test solution (d).** Transfer 25 mL of the hydro-alcoholic solution obtained in the preparation of test solution (a) to a 200 mL flask that can be fitted with a reflux condenser. Add 20 mL of *hydrochloric acid R* and 10 mL of *anhydrous ethanol R*. Boil under a reflux condenser for 2 h. Allow to cool and shake with 4 quantities, each of 20 mL, of *pentane R*. Combine the organic layers and wash with 2 quantities, each of 20 mL, of *water R*. Dry over *anhydrous sodium sulfate R* and filter.

**Reference solution.** Dissolve 50 mg of *cetyl alcohol CRS* and 50 mg of *stearyl alcohol CRS* in *anhydrous ethanol R* and dilute to 10 mL with the same solvent.

**Column:**

- **material:** fused silica,
- **size:**  $l = 25$  m,  $\varnothing = 0.25$  mm,
- **stationary phase:** *poly(dimethyl)siloxane R* or another suitable polar phase.

**Carrier gas:** *nitrogen for chromatography R*.

**Flow rate:** 1 mL/min.

**Split ratio:** 1:100.

**Temperature:**

	Time (min)	Temperature (°C)
Column	0 - 20	150 → 250
Injection port		250
Detector		250

**Detection:** flame ionisation.

**Elution order:** *cetyl alcohol*, *heptadecanol* (internal standard) and *stearyl alcohol*.

Inject 1 µL of test solution (a) and test solution (b). If the chromatogram obtained with test solution (b) shows a peak with the same retention time as the peak due to the internal standard in the chromatogram obtained with test solution (a), calculate the ratio  $r$  using the following expression:

$$\frac{S_{ci}}{S_i}$$

$S_{ci}$  = area of the peak due to *cetyl alcohol* in the chromatogram obtained with test solution (b),

$S_i$  = area of the peak with the same retention time as the peak due to the internal standard in the chromatogram obtained with test solution (a).

If  $r$  is less than 300, calculate the corrected area  $S'_{Ha(corr)}$  of the peak due to the internal standard in the chromatogram obtained with test solution (a) using the following expression:

$$S'_{Ha} - \frac{S_i \times S_c}{S_{ci}}$$

$S'_{Ha}$  = area of the peak due to the internal standard in the chromatogram obtained with test solution (a),

$S_c$  = area of the peak due to *cetyl alcohol* in the chromatogram obtained with test solution (a).

Inject 1 µL of test solution (c) and test solution (d). Carry out the correction for interference in the same manner as for test solution (a) and calculate the corrected area  $S'_{Hc(corr)}$  of the peak due to the internal standard in the chromatogram obtained with test solution (c).

Inject equal volumes of the reference solution, test solution (c) and test solution (d). Identify the peaks in the chromatograms obtained with the test solutions by comparison of their retention times with those of the peaks in the chromatogram obtained with the reference solution. Determine the area of each peak.

Calculate the percentage content of *sodium cetyl sulfate* in the substance to be examined, using the following expression:

$$\frac{(A \times 1.421) \times m'_H \times 100}{S_{Hc(corr)} \times m'}$$

$A$  = area of the peak due to *cetyl alcohol* in the chromatogram obtained with test solution (c),

$m'_H$  = mass of the internal standard added in the preparation of test solution (c), in milligrams,

$S_{Hc(corr)}$  = corrected area of the peak due to the internal standard in the chromatogram obtained with test solution (c),

$m'$  = mass of the substance to be examined in test solution (c), in milligrams.

Calculate the percentage content of *sodium stearyl sulfate* in the substance to be examined, using the following expression:

$$\frac{(B \times 1.377) \times m'_H \times 100}{S_{Hc(corr)} \times m'}$$

$B$  = area of the peak due to *stearyl alcohol* in the chromatogram obtained with test solution (c).

The percentage content of *sodium cetostearyl sulfate* corresponds to the sum of the percentage content of *sodium cetyl sulfate* and the percentage content of *sodium stearyl sulfate*.

#### LABELLING

The label states, where appropriate, the name and concentration of any added buffer.

01/2008:0193  
corrected 7.0

## SODIUM CHLORIDE

### Natrii chloridum

NaCl  
[7647-14-5]

$M_r$  58.44

#### DEFINITION

**Content:** 99.0 per cent to 100.5 per cent (dried substance).

#### CHARACTERS

**Appearance:** white or almost white, crystalline powder or colourless crystals or white or almost white pearls.

**Solubility:** freely soluble in water, practically insoluble in anhydrous ethanol.

#### IDENTIFICATION

A. It gives the reactions of chlorides (2.3.1).

B. It gives the reactions of sodium (2.3.1).

#### TESTS

*If the substance is in the form of pearls crush before use.*

**Solution S.** Dissolve 20.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100.0 mL with the same solvent.

**Appearance of solution.** Solution S is clear (2.2.1) and colourless (2.2.2, *Method II*).

**Acidity or alkalinity.** To 20 mL of solution S add 0.1 mL of *bromothymol blue solution R1*. Not more than 0.5 mL of 0.01 M *hydrochloric acid* or 0.01 M *sodium hydroxide* is required to change the colour of the indicator.

**Bromides:** maximum 100 ppm.

To 0.5 mL of solution S add 4.0 mL of *water R*, 2.0 mL of *phenol red solution R2* and 1.0 mL of a 0.1 g/L solution of

*chloramine R* and mix immediately. After exactly 2 min, add 0.15 mL of 0.1 M sodium thiosulfate, mix and dilute to 10.0 mL with *water R*. The absorbance (2.2.25) of the solution measured at 590 nm, using *water R* as the compensation liquid, is not greater than that of a standard prepared at the same time and in the same manner, using 5.0 mL of a 3.0 mg/L solution of *potassium bromide R*.

**Ferrocyanides.** Dissolve 2.0 g in 6 mL of *water R*. Add 0.5 mL of a mixture of 5 mL of a 10 g/L solution of *ferric ammonium sulfate R* in a 2.5 g/L solution of *sulfuric acid R* and 95 mL of a 10 g/L solution of *ferrous sulfate R*. No blue colour develops within 10 min.

**Iodides.** Moisten 5 g by the dropwise addition of a freshly prepared mixture of 0.15 mL of *sodium nitrite solution R*, 2 mL of 0.5 M *sulfuric acid*, 25 mL of *iodide-free starch solution R* and 25 mL of *water R*. After 5 min, examine in daylight. The mixture shows no blue colour.

**Nitrites.** To 10 mL of solution S add 10 mL of *water R*. The absorbance (2.2.25) is not greater than 0.01 at 354 nm.

**Phosphates (2.4.11):** maximum 25 ppm.

Dilute 2 mL of solution S to 100 mL with *water R*.

**Sulfates (2.4.13):** maximum 200 ppm.

Dilute 7.5 mL of solution S to 30 mL with *distilled water R*.

**Aluminium (2.4.17):** maximum 0.2 ppm, if intended for use in the manufacture of peritoneal dialysis solutions, haemodialysis solutions or haemofiltration solutions.

**Prescribed solution.** Dissolve 20.0 g in 100 mL of *water R* and add 10 mL of *acetate buffer solution pH 6.0 R*.

**Reference solution.** Mix 2 mL of *aluminium standard solution (2 ppm Al) R*, 10 mL of *acetate buffer solution pH 6.0 R* and 98 mL of *water R*.

**Blank solution.** Mix 10 mL of *acetate buffer solution pH 6.0 R* and 100 mL of *water R*.

**Arsenic (2.4.2, Method A):** maximum 1 ppm, determined on 5 mL of solution S.

**Barium.** To 5 mL of solution S add 5 mL of *distilled water R* and 2 mL of *dilute sulfuric acid R*. After 2 h, any opalescence in the solution is not more intense than that in a mixture of 5 mL of solution S and 7 mL of *distilled water R*.

**Iron (2.4.9):** maximum 2 ppm, determined on solution S.

Prepare the standard using a mixture of 4 mL of *iron standard solution (1 ppm Fe) R* and 6 mL of *water R*.

**Magnesium and alkaline-earth metals (2.4.7):** maximum 100 ppm, calculated as Ca and determined on 10.0 g.

Use 150 mg of *mordant black 11 tritrate R*. The volume of 0.01 M *sodium edetate* used is not more than 2.5 mL.

**Potassium:** maximum 500 ppm, if intended for use in the manufacture of parenteral preparations or haemodialysis, haemofiltration or peritoneal dialysis solutions.

Atomic emission spectrometry (2.2.22, Method I).

**Test solution.** Dissolve 1.00 g in *water R* and dilute to 100.0 mL with the same solvent.

**Reference solutions.** Dissolve 1.144 g of *potassium chloride R*, previously dried at 100-105 °C for 3 h, in *water R* and dilute to 1000.0 mL with the same solvent (600 µg of K per millilitre).

Dilute as required.

**Wavelength:** 766.5 nm.

**Heavy metals (2.4.8):** maximum 5 ppm.

12 mL of solution S complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

**Loss on drying (2.2.32):** maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 2 h.

**Bacterial endotoxins (2.6.14):** less than 5 IU/g, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for removal of bacterial endotoxins.

## ASSAY

Dissolve 50.0 mg in *water R* and dilute to 50 mL with the same solvent. Titrate with 0.1 M *silver nitrate* determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *silver nitrate* is equivalent to 5.844 mg of NaCl.

## LABELLING

The label states:

- where applicable, that the substance is suitable for use in the manufacture of parenteral preparations,
- where applicable, that the substance is suitable for use in the manufacture of peritoneal dialysis solutions, haemodialysis solutions or haemofiltration solutions.

01/2008:0412  
corrected 6.0

## SODIUM CITRATE

### Natrii citras

$\text{C}_6\text{H}_5\text{Na}_3\text{O}_7 \cdot 2\text{H}_2\text{O}$   
[6132-04-3]

$M_r$  294.1

## DEFINITION

Trisodium 2-hydroxypropane-1,2,3-tricarboxylate dihydrate.

**Content:** 99.0 per cent to 101.0 per cent (anhydrous substance).

## CHARACTERS

**Appearance:** white or almost white, crystalline powder or white or almost white, granular crystals, slightly deliquescent in moist air.

**Solubility:** freely soluble in water, practically insoluble in ethanol (96 per cent).

## IDENTIFICATION

A. To 1 mL of solution S (see Tests) add 4 mL of *water R*. The solution gives the reaction of citrates (2.3.1).

B. 1 mL of solution S gives reaction (a) of sodium (2.3.1).

## TESTS

**Solution S.** Dissolve 10.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100 mL with the same solvent.

**Appearance of solution.** Solution S is clear (2.2.1) and colourless (2.2.2, Method II).

**Acidity or alkalinity.** To 10 mL of solution S add 0.1 mL of *phenolphthalein solution R*. Not more than 0.2 mL of 0.1 M *hydrochloric acid* or 0.1 M *sodium hydroxide* is required to change the colour of the indicator.

**Readily carbonisable substances.** To 0.20 g of the powdered substance to be examined add 10 mL of *sulfuric acid R* and heat in a water-bath at  $90 \pm 1$  °C for 60 min. Cool rapidly. The solution is not more intensely coloured than reference solution Y<sub>2</sub> or GY<sub>2</sub> (2.2.2, Method II).

**Chlorides (2.4.4):** maximum 50 ppm.

Dilute 10 mL of solution S to 15 mL with *water R*.

**Oxalates:** maximum 300 ppm.

Dissolve 0.50 g in 4 mL of *water R*, add 3 mL of *hydrochloric acid R* and 1 g of *zinc R* in granules and heat on a water-bath for 1 min. Allow to stand for 2 min, decant the liquid into a test-tube containing 0.25 mL of a 10 g/L solution of *phenylhydrazine hydrochloride R* and heat to boiling. Cool rapidly, transfer to a graduated cylinder and add an equal volume of *hydrochloric acid R* and 0.25 mL of *potassium ferricyanide solution R*. Shake and allow to stand for 30 min. Any pink colour in the solution is not more intense than that in a standard prepared

at the same time in the same manner using 4 mL of a 50 mg/L solution of *oxalic acid R*.

**Sulfates (2.4.13):** maximum 150 ppm.

To 10 mL of solution S add 2 mL of *hydrochloric acid R1* and dilute to 15 mL with *distilled water R*.

**Heavy metals (2.4.8):** maximum 10 ppm.

12 mL of solution S complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

**Water (2.5.12):** 11.0 per cent to 13.0 per cent, determined on 0.300 g. After adding the substance to be examined, stir for 15 min before titrating.

**Pyrogens (2.6.8).** If intended for use in the manufacture of large-volume parenteral preparations, the competent authority may require that it comply with the test for pyrogens. Inject per kilogram of the rabbit's mass 10 mL of a freshly prepared solution in *water for injections R* containing per millilitre 10.0 mg of the substance to be examined and 7.5 mg of pyrogen-free *calcium chloride R*.

#### ASSAY

Dissolve 0.150 g in 20 mL of *anhydrous acetic acid R*, heating to about 50 °C. Allow to cool. Titrate with 0.1 M *perchloric acid*, using 0.25 mL of *naphtholbenzein solution R* as indicator until a green colour is obtained.

1 mL of 0.1 M *perchloric acid* is equivalent to 8.602 mg of  $C_{23}H_{14}Na_2O_{11}$ .

#### STORAGE

In an airtight container.

01/2008:0562  
corrected 6.0

## SODIUM CROMOGLICATE

### Natrii cromoglicas

$C_{23}H_{14}Na_2O_{11}$   
[15826-37-6]

$M_r$  512.3

#### DEFINITION

Sodium cromoglicate contains not less than 98.0 per cent and not more than the equivalent of 101.0 per cent of disodium 5,5'-[(2-hydroxypropane-1,3-diyl)bis(oxy)]bis(4-oxo-4H-1-benzopyran-2-carboxylate, calculated with reference to the dried substance.

#### CHARACTERS

A white or almost white, crystalline powder, hygroscopic, soluble in water, practically insoluble in alcohol.

#### IDENTIFICATION

*First identification:* B, D.

*Second identification:* A, C, D.

A. Dissolve 10.0 mg in *phosphate buffer solution pH 7.4 R* and dilute to 100.0 mL with the same solvent. Dilute 10.0 mL of this solution to 100.0 mL with the same solvent. Examined between 230 nm and 350 nm (2.2.25), the solution shows

two absorption maxima, at 239 nm and 327 nm. The ratio of the absorbance at the maximum at 327 nm to that at the maximum at 239 nm is 0.25 to 0.30.

B. Examine by infrared absorption spectrophotometry (2.2.24), comparing with the spectrum obtained with *sodium cromoglicate CRS*. Examine the substances prepared as discs.

C. Dissolve about 5 mg in 0.5 mL of *methanol R*. Add 3 mL of a solution in *methanol R* containing 5 g/L of *aminopyrazolone R* and 1 per cent V/V of *hydrochloric acid R*. Allow to stand for 5 min. The solution shows an intense yellow colour.

D. It gives reaction (a) of sodium (2.3.1).

#### TESTS

**Solution S.** Dissolve 0.5 g in *carbon dioxide-free water R* and dilute to 25 mL with the same solvent.

**Appearance of solution.** Solution S is not more opalescent than reference suspension II (2.2.1) and not more intensely coloured than reference solution BY<sub>5</sub> (2.2.2, Method II).

**Acidity or alkalinity.** To 10 mL of solution S add 0.1 mL of *phenolphthalein solution R*. The solution is colourless. Add 0.2 mL of 0.01 M *sodium hydroxide*. The solution is pink. Add 0.4 mL of 0.01 M *hydrochloric acid*. The solution is colourless. Add 0.25 mL of *methyl red solution R*. The solution is red.

**Related substances.** Examine by thin-layer chromatography (2.2.27), using *silica gel GF<sub>254</sub> R* as the coating substance.

**Test solution.** Dissolve 0.2 g of the substance to be examined in a mixture of 1 volume of *acetone R*, 4 volumes of *tetrahydrofuran R* and 6 volumes of *water R* and dilute to 10 mL with the same mixture of solvents.

**Reference solution.** Dissolve 10 mg of *1,3-bis(2-acetyl-3-hydroxyphenoxy)-2-propanol CRS* in *chloroform R* and dilute to 100 mL with the same solvent.

Apply separately to the plate 5 µL of each solution. Develop over a path of 10 cm using a mixture of 5 volumes of *glacial acetic acid R*, 50 volumes of *ethyl acetate R* and 50 volumes of *toluene R*. Allow the plate to dry in air and examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with the test solution, apart from the principal spot (which remains at the point of application), is not more intense than the spot in the chromatogram obtained with the reference solution (0.5 per cent).

**Oxalate.** Dissolve 0.10 g in 20 mL of *water R*, add 5.0 mL of *iron salicylate solution R* and dilute to 50.0 mL with *water R*. Determine the absorbance (2.2.25) at 480 nm. The absorbance is not less than that of a standard prepared in the same manner using 0.35 mg of *oxalic acid R* instead of the substance to be examined.

**Heavy metals (2.4.8).** 1.0 g complies with limit test C for heavy metals (20 ppm). Prepare the standard using 2 mL of *lead standard solution (10 ppm Pb) R*.

**Loss on drying (2.2.32).** Not more than 10.0 per cent, determined on 1.000 g by drying over *diphosphorus pentoxide R* at 105 °C and at a pressure of 300 Pa to 600 Pa.

#### ASSAY

Dissolve 0.200 g with heating in a mixture of 5 mL of *2-propanol R* and 25 mL of *ethylene glycol R*. Cool and add 30 mL of *dioxan R*. Titrate with 0.1 M *perchloric acid*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *perchloric acid* is equivalent to 25.62 mg of  $C_{23}H_{14}Na_2O_{11}$ .

#### STORAGE

Store in an airtight container, protected from light.

01/2008:0774 Application: 2 µL.

corrected 6.0 Development: over a path of 12 cm.

Drying: in a current of warm air, then heat at 105 °C for 5 min.

Detection: spray the hot plate with *strong sodium hypochlorite solution R* diluted to a concentration of 5 g/L of active chlorine. Place in a current of cold air until an area of coating below the points of application gives at most a faint blue colour with a drop of *potassium iodide and starch solution R*; avoid prolonged exposure to cold air. Spray with *potassium iodide and starch solution R* and examine the chromatograms within 5 min.

Limit: test solution (a):

- *impurity A*: any spot due to impurity A is not more intense than the corresponding spot in the chromatogram obtained with reference solution (b) (0.1 per cent).

**Impurities B, C and D.** Gas chromatography (2.2.28).

*Internal standard solution.* Dissolve 2 µL of *tetradecane R* in *methylene chloride R* and dilute to 100 mL with the same solvent.

*Test solution.* Dissolve 2.00 g of the substance to be examined in 20 mL of *water R*, add 0.5 mL of *strong sodium hydroxide solution R* and shake with 30 mL of *toluene R*. Shake 20 mL of the upper layer with 4 mL of a mixture of equal volumes of *dilute acetic acid R* and *water R*. Separate the lower layer, add 0.5 mL of *strong sodium hydroxide solution R* and 0.5 mL of the internal standard solution and shake. Use the lower layer immediately after separation.

*Reference solution.* Dissolve 10.0 mg (about 12 µL) of *cyclohexylamine R* (impurity C), 1.0 mg (about 1.1 µL) of *dicyclohexylamine R* (impurity D) and 1.0 mg (about 1 µL) of *aniline R* (impurity B) in *water R*, then dilute to 1000 mL with the same solvent. Dilute 10.0 mL of this solution to 100.0 mL with *water R* (solution A). To 20.0 mL of solution A, add 0.5 mL of *strong sodium hydroxide solution R* and extract with 30 mL of *toluene R*. Shake 20 mL of the upper layer with 4 mL of a mixture of equal volumes of *dilute acetic acid R* and *water R*. Separate the lower layer, add 0.5 mL of *strong sodium hydroxide solution R* and 0.5 mL of the internal standard solution and shake. Use the lower layer immediately after separation.

Column:

- *material*: fused silica;
- *size*:  $l = 25$  m,  $\varnothing = 0.32$  mm;
- *stationary phase*: *poly(dimethyl)(diphenyl)siloxane R* (film thickness 0.51 µm).

Carrier gas: helium for chromatography R.

Flow rate: 1.8 mL/min.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 1	85
	1 - 9	85 → 150
	9 - 13	150
Injection port		250
Detector		270

Detection: flame ionisation.

Injection: 1.5 µL; use a split vent at a flow rate of 20 mL/min.

Relative retention with reference to impurity C (retention time = about 2.3 min): impurity B = about 1.4; tetradecane = about 4.3; impurity D = about 4.5.

Limits:

- *impurity C*: maximum 10 ppm;
- *impurities B, D*: for each impurity, maximum 1 ppm.

**Sulfates** (2.4.13): maximum 0.1 per cent.Dilute 1.5 mL of solution S to 15 mL with *distilled water R*.

## SODIUM CYCLAMATE

## Natrii cyclamas

C<sub>6</sub>H<sub>12</sub>NNaO<sub>3</sub>S  
[139-05-9]M<sub>r</sub> 201.2

## DEFINITION

Sodium *N*-cyclohexylsulfamate.

Content: 98.5 per cent to 101.0 per cent (dried substance).

## CHARACTERS

Appearance: white or almost white, crystalline powder or colourless crystals.

Solubility: freely soluble in water, slightly soluble in ethanol (96 per cent).

## IDENTIFICATION

First identification: A, E.

Second identification: B, C, D, E.

A. Infrared absorption spectrophotometry (2.2.24).

Comparison: *sodium cyclamate CRS*.

B. Examine the chromatograms obtained in the test for impurity A.

Results: the principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. To 1 mL of solution S (see Tests), add 1 mL of *water R* and 2 mL of *silver nitrate solution RI*, then shake. A white, crystalline precipitate is formed.D. To 1 mL of solution S add 5 mL of *water R*, 2 mL of *dilute hydrochloric acid R* and 4 mL of *barium chloride solution RI* and mix. The solution is clear. Add 2 mL of *sodium nitrite solution R*. A voluminous white precipitate is formed and gas is given off.E. A mixture of 1 mL of solution S and 1 mL of *water R* gives reaction (a) of sodium (2.3.1).

## TESTS

**Solution S.** Dissolve 5 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 50 mL with the same solvent.

**Appearance of solution.** Solution S is clear (2.2.1) and colourless (2.2.2, Method II).

pH (2.2.3): 5.5 to 7.5 for solution S.

**Absorbance** (2.2.25): maximum 0.10, determined at 270 nm on solution S.

**Impurity A.** Thin-layer chromatography (2.2.27).

Test solution (a). Solution S.

Test solution (b). Dilute 1 mL of test solution (a) to 10 mL with *water R*.

Reference solution (a). Dissolve 0.10 g of *sodium cyclamate CRS* in *water R* and dilute to 10 mL with the same solvent.

Reference solution (b). Dissolve 10 mg of *sulfamic acid R* (impurity A) in *water R* and dilute to 100 mL with the same solvent.

Plate: TLC silica gel G plate R.

Mobile phase: concentrated ammonia R, water R, ethyl acetate R, propanol R (10:10:20:70 V/V/V/V).

**Heavy metals** (2.4.8): maximum 10 ppm.

12 mL of solution S complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

**Loss on drying** (2.2.32): maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 4 h.

#### ASSAY

Dissolve without heating 0.150 g in 60 mL of *anhydrous acetic acid R*. Titrate with 0.1 M *perchloric acid*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *perchloric acid* is equivalent to 20.12 mg of  $C_6H_{12}NNaO_3S$ .

#### IMPURITIES

*Specified impurities: A, B, C, D.*

A. sulfamic acid,

B. aniline (phenylamine),

C. cyclohexanamine,

D. *N*-cyclohexylcyclohexanamine.

**Reducing substances.** To 5 mL of solution S add 0.25 mL of 0.02 M *potassium permanganate* and 5 mL of *dilute sulfuric acid R* and heat in a water-bath for 5 min. The solution retains a slight red colour.

**Chlorides** (2.4.4): maximum 200 ppm.

Dilute 2.5 mL of solution S to 15 mL with *water R*.

**Sulfates** (2.4.13): maximum 300 ppm.

To 5 mL of solution S add 0.5 mL of *hydrochloric acid R* and dilute to 15 mL with *distilled water R*.

**Arsenic** (2.4.2, *Method A*): maximum 2 ppm, determined on 0.5 g.

**Iron** (2.4.9): maximum 10 ppm, determined on solution S.

**Heavy metals** (2.4.8): maximum 10 ppm.

12 mL of solution S complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

**Loss on drying** (2.2.32): 21.5 per cent to 24.0 per cent, determined on 0.50 g by drying in an oven at 130 °C.

#### ASSAY

Dissolve 2.500 g in 40 mL of *water R*. Titrate with carbonate-free 1 M *sodium hydroxide*, determining the end-point potentiometrically (2.2.20).

1 mL of 1 M *sodium hydroxide* is equivalent to 0.120 g of  $NaH_2PO_4$ .

01/2008:0514

## SODIUM FLUORIDE

### Natrii fluoridum

NaF  
[7681-49-4]

$M_r$  41.99

01/2008:0194  
corrected 6.0

## SODIUM DIHYDROGEN PHOSPHATE DIHYDRATE

### Natrii dihydrogenophosphas dihydricus

$NaH_2PO_4 \cdot 2H_2O$   $M_r$  156.0  
[13472-35-0]

#### DEFINITION

*Content*: 98.0 per cent to 100.5 per cent (dried substance).

#### CHARACTERS

*Appearance*: white or almost white powder or colourless crystals.

*Solubility*: very soluble in water, very slightly soluble in ethanol (96 per cent).

#### IDENTIFICATION

- Solution S (see Tests) is slightly acid (2.2.4).
- Solution S gives the reactions of phosphates (2.3.1).
- Solution S previously neutralised using a 100 g/L solution of *potassium hydroxide R* gives reaction (a) of sodium (2.3.1).

#### TESTS

**Solution S.** Dissolve 10.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100 mL with the same solvent.

**Appearance of solution.** Solution S is clear (2.2.1) and colourless (2.2.2, *Method II*).

**pH** (2.2.3): 4.2 to 4.5.

To 5 mL of solution S add 5 mL of *carbon dioxide-free water R*.

#### DEFINITION

*Content*: 98.5 per cent to 100.5 per cent (dried substance).

#### CHARACTERS

*Appearance*: white or almost white powder or colourless crystals.

*Solubility*: soluble in water, practically insoluble in ethanol (96 per cent).

#### IDENTIFICATION

- To 2 mL of solution S (see Tests) add 0.5 mL of *calcium chloride solution R*. A gelatinous white precipitate is formed that dissolves on adding 5 mL of *ferric chloride solution R1*.
- To about 4 mg add a mixture of 0.1 mL of *alizerin S solution R* and 0.1 mL of *zirconyl nitrate solution R* and mix. The colour changes from red to yellow.
- Solution S gives reaction (a) of sodium (2.3.1).

#### TESTS

**Solution S.** Dissolve 2.5 g in *carbon dioxide-free water R* without heating and dilute to 100 mL with the same solvent.

**Appearance of solution.** Solution S is clear (2.2.1) and colourless (2.2.2, *Method II*).

**Acidity or alkalinity.** Dissolve 2.5 g of *potassium nitrate R* in 40 mL of solution S and dilute to 50 mL with *carbon dioxide-free water R*. Cool to 0 °C and add 0.2 mL of *phenolphthalein solution R*. If the solution is colourless, not more than 1.0 mL of 0.1 M *sodium hydroxide* is required to produce a red colour that persists for at least 15 s. If the solution is red, not more than 0.25 mL of 0.1 M *hydrochloric acid* is required to change the colour of the indicator.

**Chlorides** (2.4.4): maximum 200 ppm.

Dilute 10 mL of solution S to 15 mL with *water R*.

**Fluorosilicates.** Heat to boiling the neutralised solution obtained in the test for acidity or alkalinity and titrate whilst hot. Not more than 0.75 mL of 0.1 M sodium hydroxide is required to change the colour of the indicator to red.

**Sulfates** (2.4.13): maximum 200 ppm.

Dissolve 0.25 g in 10 mL of a saturated solution of boric acid R in distilled water R. Add 5 mL of distilled water R and 0.6 mL of hydrochloric acid R1. Prepare the standard by mixing 0.6 mL of hydrochloric acid R1, 5 mL of sulfate standard solution (10 ppm SO<sub>4</sub>) R and 10 mL of a saturated solution of boric acid R in distilled water R.

**Loss on drying** (2.2.32): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 130 °C for 3 h.

#### ASSAY

Dissolve 0.100 g in water R and dilute to 60 mL with the same solvent. Titrate with 0.1 M lanthanum nitrate, determining the end-point potentiometrically (2.2.20) using a fluoride-selective indicator electrode and a silver-silver chloride reference electrode.

1 mL of 0.1 M lanthanum nitrate is equivalent to 12.60 mg of NaF.

01/2008:0848

## SODIUM FUSIDATE

### Natrii fusidas

C<sub>31</sub>H<sub>47</sub>NaO<sub>6</sub>  
[751-94-0]

M<sub>r</sub> 538.7

#### DEFINITION

Sodium (*Z*)-*ent*-16 $\alpha$ -(acetyloxy)-3 $\beta$ ,11 $\beta$ -dihydroxy-4 $\beta$ ,8,14-trimethyl-18-nor-5 $\beta$ ,10 $\alpha$ -cholesta-17(20),24-dien-21-oate.

Antimicrobial substance produced by the growth of certain strains of *Fusidium coccineum* or by any other means.

**Content:** 97.5 per cent to 101.0 per cent (anhydrous substance).

#### CHARACTERS

**Appearance:** white or almost white, crystalline powder, slightly hygroscopic.

**Solubility:** freely soluble in water and in ethanol (96 per cent).

#### IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

**Preparation:** dissolve 0.1 g in 5 mL of water R, add 5 mL of chloroform R and 0.1 mL of dilute phosphoric acid R. Shake vigorously for 1 min, allow to separate and filter the lower layer through absorbent cotton covered with anhydrous sodium sulfate R. Repeat the extraction with 2 quantities, each of 5 mL, of chloroform R and evaporate the combined extracts to dryness under reduced pressure. Dry the residue over diphosphorus pentoxide R under reduced pressure for 2 h, dissolve in 1 mL of chloroform R.

**Comparison:** Ph. Eur. reference spectrum of fusidic acid.

B. Thin-layer chromatography (2.2.27).

**Test solution.** Dissolve 20 mg of the substance to be examined in methanol R and dilute to 10 mL with the same solvent.

**Reference solution.** Dissolve 24 mg of diethanolamine fusidate CRS in methanol R and dilute to 10 mL with the same solvent.

**Plate:** TLC silica gel F<sub>254</sub> plate R.

**Mobile phase:** methanol R, cyclohexane R, glacial acetic acid R, chloroform R (2.5:10:10:80 V/V/V/V).

**Application:** 10  $\mu$ L.

**Development:** over a path of 15 cm.

**Drying:** in a current of warm air.

**Detection:** examine in ultraviolet light at 254 nm.

**Results:** the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

C. Ignite 1 g. The residue gives reaction (a) of sodium (2.3.1).

#### TESTS

**Appearance of solution.** The solution is not more intensely coloured than reference solution B<sub>6</sub> (2.2.2, Method II).

Dissolve 1.5 g in 10 mL of water R.

**pH** (2.2.3): 7.5 to 9.0.

Dissolve 0.125 g in 10 mL of carbon dioxide-free water R.

**Related substances.** Liquid chromatography (2.2.29).

**Test solution.** Dissolve 50 mg of the substance to be examined in the mobile phase and dilute to 10.0 mL with the mobile phase.

**Reference solution (a).** Dissolve 5 mg of 3-ketofusidic acid CRS in 5 mL of the mobile phase. To 1.0 mL of this solution add 0.20 mL of the test solution and dilute to 20.0 mL with the mobile phase.

**Reference solution (b).** Dilute 20  $\mu$ L of the test solution to 100.0 mL with the mobile phase.

**Column:**

- size:  $l = 0.125\text{--}0.15$  m,  $\varnothing = 4\text{--}5$  mm;
- stationary phase: octadecylsilyl silica gel for chromatography R (5  $\mu$ m).

**Mobile phase:** methanol R, 10 g/L solution of phosphoric acid R, water R, acetonitrile R (10:20:20:50 V/V/V/V).

**Flow rate:** 2 mL/min.

**Detection:** spectrophotometer at 235 nm.

**Injection:** 20  $\mu$ L.

**Run time:** 3.5 times the retention time of sodium fusidate.

**System suitability:**

- resolution: minimum 2.5 between the peaks due to 3-ketofusidic acid and sodium fusidate in the chromatogram obtained with reference solution (a);
- signal-to-noise ratio: minimum 3 for the principal peak in the chromatogram obtained with reference solution (b).

**Limits:**

- total: not more than twice the area of the peak due to sodium fusidate in the chromatogram obtained with reference solution (a) (2.0 per cent);
- disregard limit: the area of the principal peak in the chromatogram obtained with reference solution (b) (0.02 per cent).

**Water** (2.5.12): maximum 2.0 per cent, determined on 0.50 g.

#### ASSAY

Dissolve 0.500 g in 30 mL of water R and add 40 mL of ethanol (96 per cent) R. Titrate with 0.1 M hydrochloric acid, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M hydrochloric acid is equivalent to 53.87 mg of C<sub>31</sub>H<sub>47</sub>NaO<sub>6</sub>.

#### STORAGE

In an airtight container, protected from light, at a temperature of 2 °C to 8 °C.

01/2009:1995  
corrected 6.6**SODIUM GLYCEROPHOSPHATE,  
HYDRATED**

Natrii glycerophosphas hydricus

 $C_3H_7Na_2O_6P, xH_2O$  $M_r$  216.0 (anhydrous substance)

## DEFINITION

Mixture of variable proportions of sodium (2*RS*)-2,3-dihydroxypropyl phosphate and sodium 2-hydroxy-1-(hydroxymethyl)ethyl phosphate. The mixture may contain various amounts of other glycerophosphate esters. The degree of hydration is 4 to 6.

*Content*: 98.0 per cent to 105.0 per cent (anhydrous substance).

## CHARACTERS

*Appearance*: white or almost white, crystalline powder or crystals.

*Solubility*: freely soluble in water, practically insoluble in acetone and in ethanol (96 per cent).

## IDENTIFICATION

- Solution S (see Tests) gives reaction (a) of sodium (2.3.1).
- To 0.1 g add 5 mL of *dilute nitric acid R*. Heat to boiling and boil for 1 min. Cool. The solution gives reaction (b) of phosphates (2.3.1).
- In a test-tube fitted with a glass tube, mix 0.1 g with 5 g of *potassium hydrogen sulfate R*. Heat strongly and direct the white vapour into 5 mL of *decolorised fuchsin solution R*. A violet-red colour develops which becomes violet upon heating for 30 min on a water-bath.

## TESTS

**Solution S.** Dissolve 10.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100 mL with the same solvent.

**Appearance of solution.** Solution S is not more opalescent than reference suspension II (2.2.1) and not more intensely coloured than reference solution Y<sub>6</sub> (2.2.2, *Method II*).

**Alkalinity.** To 10 mL of solution S add 0.2 mL of *phenolphthalein solution R*. Not more than 1.0 mL of 0.1 *M hydrochloric acid* is required to change the colour of the indicator ( $n_2$ ).

**Glycerol and ethanol (96 per cent)-soluble substances:** maximum 1.0 per cent.

Shake 1.000 g with 25 mL of *ethanol (96 per cent) R* for 10 min. Filter. Evaporate the filtrate on a water-bath and dry the residue at 70 °C for 1 h. The residue weighs not more than 10 mg.

**Chlorides (2.4.4):** maximum 200 ppm.

Dilute 2.5 mL of solution S to 15 mL with *water R*.

**Phosphates (2.4.11):** maximum 0.1 per cent.

Dilute 1 mL of solution S to 10 mL with *water R*. Dilute 1 mL of this solution to 100 mL with *water R*.

**Sulfates (2.4.13):** maximum 500 ppm.

Dilute 3 mL of solution S to 15 mL with *water R*.

**Iron (2.4.9):** maximum 20 ppm.

Dilute 5 mL of solution S to 10 mL with *water R*.

**Heavy metals (2.4.8):** maximum 20 ppm.

Dilute 10 mL of solution S to 20 mL with *water R*. 12 mL of the solution complies with test A. Prepare the reference solution using 10 mL of *lead standard solution (1 ppm Pb) R*.

**Water (2.5.12):** 25.0 per cent to 35.0 per cent, determined on 0.100 g.

## ASSAY

Dissolve 0.250 g in 30 mL of *water R*. Titrate with 0.05 *M sulfuric acid*, determining the end-point potentiometrically (2.2.20), ( $n_1$ ).

Calculate the percentage content of sodium glycerophosphate (anhydrous substance) using the following expression:

$$\frac{216.0 \left( n_1 - \frac{n_2}{4} \right)}{m (100 - a)}$$

$a$  = percentage content of water;

$n_1$  = volume of 0.05 *M sulfuric acid* used in the assay, in millilitres;

$n_2$  = volume of 0.1 *M hydrochloric acid* used in the test for alkalinity, in millilitres;

$m$  = mass of the substance to be examined, in grams.

01/2011:1472

**SODIUM HYALURONATE**

Natrii hyaluronas

 $(C_{14}H_{20}NNaO_{11})_n$   
[9067-32-7]

## DEFINITION

Sodium salt of hyaluronic acid, a glycosaminoglycan consisting of D-glucuronic acid and N-acetyl-D-glucosamine disaccharide units. It is extracted from cocks' combs or obtained by fermentation from *Streptococci*, Lancefield Groups A and C.

*Content*: 95.0 per cent to 105.0 per cent (dried substance).

*Intrinsic viscosity*: 90 per cent to 120 per cent of the value stated on the label.

## PRODUCTION

Where applicable, the animals from which sodium hyaluronate is derived must fulfil the requirements for the health of animals suitable for human consumption.

When produced by fermentation of gram-positive bacteria, the process must be shown to reduce or eliminate pyrogenic or inflammatory components of the cell wall.

## CHARACTERS

*Appearance*: white or almost white, very hygroscopic powder or fibrous aggregate.

*Solubility*: sparingly soluble or soluble in water, practically insoluble in acetone and in anhydrous ethanol.

## IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

*Comparison*: Ph. Eur. reference spectrum of sodium hyaluronate.

B. It gives reaction (a) of sodium (2.3.1).

#### TESTS

**Solution S.** Weigh a quantity of the substance to be examined equivalent to 0.10 g of the dried substance and add 30.0 mL of a 9 g/L solution of *sodium chloride R*. Mix gently on a shaker until dissolved (about 12 h).

**Appearance of solution.** Solution S is clear (2.2.1) and its absorbance (2.2.25) at 600 nm is not greater than 0.01.

**pH (2.2.3):** 5.0 to 8.5.

Dissolve the substance to be examined in *carbon dioxide-free water R* to obtain a solution containing a quantity equivalent to 5 mg of the dried substance per millilitre.

**Intrinsic viscosity.** *Sodium hyaluronate is very hygroscopic and must be protected from moisture during weighing.*

**Buffer solution (0.15 M sodium chloride in 0.01 M phosphate buffer solution pH 7.0).** Dissolve 0.78 g of *sodium dihydrogen phosphate R* and 4.50 g of *sodium chloride R* in *water R* and dilute to 500.0 mL with the same solvent (solution A). Dissolve 1.79 g of *disodium hydrogen phosphate R* and 4.50 g of *sodium chloride R* in *water R* and dilute to 500.0 mL with the same solvent (solution B). Mix solutions A and B until a pH of 7.0 is reached. Filter through a sintered-glass filter (4) (2.1.2).

**Test solution (a).** Weigh 0.200 g ( $m_{0p}$ ) (*NOTE: this value is only indicative and should be adjusted after an initial measurement of the viscosity of test solution (a)*) of the substance to be examined and dilute with 50.0 g ( $m_{0s}$ ) of buffer solution at 4 °C. Mix the solution by shaking at 4 °C during 24 h. Weigh 5.00 g ( $m_{1p}$ ) of the solution and dilute with 100.0 g ( $m_{1s}$ ) of buffer solution at 25 °C. Mix this solution by shaking for 20 min. Filter the solution through a sintered-glass filter (100) (2.1.2), and discard the first 10 mL.

**Test solution (b).** Weigh 30.0 g ( $m_{2p}$ ) of test solution (a) and dilute with 10.0 g ( $m_{2s}$ ) of buffer solution at 25 °C. Mix this solution by shaking for 20 min. Filter the solution through a sintered-glass filter (100) (2.1.2) and discard the first 10 mL.

**Test solution (c).** Weigh 20.0 g ( $m_{3p}$ ) of test solution (a) and dilute with 20.0 g ( $m_{3s}$ ) of buffer solution at 25 °C. Mix this solution by shaking for 20 min. Filter the solution through a sintered-glass filter (100) (2.1.2) and discard the first 10 mL.

**Test solution (d).** Weigh 10.0 g ( $m_{4p}$ ) of test solution (a) and dilute with 30.0 g ( $m_{4s}$ ) of buffer solution at 25 °C. Mix this solution by shaking for 20 min. Filter the solution through a sintered-glass filter (100) (2.1.2) and discard the first 10 mL.

Determine the flow-times (2.2.9) for the buffer solution ( $t_0$ ) and for the 4 test solutions ( $t_1$ ,  $t_2$ ,  $t_3$  and  $t_4$ ), at  $25.00 \pm 0.03$  °C.

Use an appropriate suspended level viscometer (specifications: viscometer constant about  $0.005 \text{ mm}^2/\text{s}^2$ , kinematic viscosity of 1-5  $\text{mm}^2/\text{s}$ , internal diameter of tube *R* 0.53 mm, volume of bulb *C* 5.6 mL, internal diameter of tube *N* 2.8-3.2 mm) with a funnel-shaped lower capillary end. Use the same viscometer for all measurements; measure all outflow times in triplicate. The test is not valid unless the results do not differ by more than 0.35 per cent from the mean and if the flow time  $t_1$  is not less than 1.6 and not more than 1.8 times  $t_0$ . If this is not the case, adjust the value of  $m_{0p}$  and repeat the procedure.

#### Calculation of the relative viscosities

Since the densities of the sodium hyaluronate solutions and of the solvent are almost equal, the relative viscosities  $\eta_{ri}$  (being  $\eta_{r1}$ ,  $\eta_{r2}$ ,  $\eta_{r3}$  and  $\eta_{r4}$ ) can be calculated from the ratio of the flow times for the respective solutions  $t_i$  (being  $t_1$ ,  $t_2$ ,  $t_3$  and  $t_4$ ) to the flow time of the solvent  $t_0$ , but taking into account the kinetic energy correction factor for the capillary ( $B = 30\,800 \text{ s}^3$ ), using the following expression:

$$\frac{t_i - \frac{B}{t_i^2}}{t_0 - \frac{B}{t_0^2}}$$

#### Calculation of the concentrations

Calculate the concentration  $c_1$  (expressed in  $\text{kg}/\text{m}^3$ ) of sodium hyaluronate in test solution (a) using the following expression:

$$\frac{m_{0p} \times x \times (100 - h) \times m_{1p} \times \rho_{25}}{100 \times 100 \times (m_{0p} + m_{0s}) \times (m_{1p} + m_{1s})}$$

$x$  = percentage content of sodium hyaluronate as determined under Assay;

$h$  = percentage loss on drying;

$\rho_{25}$  =  $1005 \text{ kg}/\text{m}^3$  (density of the test solution at 25 °C).

Calculate the concentration  $c_2$  (expressed in  $\text{kg}/\text{m}^3$ ) of sodium hyaluronate in test solution (b) using the following expression:

$$c_1 \times \frac{m_{2p}}{m_{2s} + m_{2p}}$$

Calculate the concentration  $c_3$  (expressed in  $\text{kg}/\text{m}^3$ ) of sodium hyaluronate in test solution (c) using the following expression:

$$c_1 \times \frac{m_{3p}}{m_{3s} + m_{3p}}$$

Calculate the concentration  $c_4$  (expressed in  $\text{kg}/\text{m}^3$ ) of sodium hyaluronate in test solution (d) using the following expression:

$$c_1 \times \frac{m_{4p}}{m_{4s} + m_{4p}}$$

#### Calculation of the intrinsic viscosity

Calculate the intrinsic viscosity  $[\eta]$  by linear least-squares regression analysis using the Martin equation:

$$\log \left( \frac{\eta_r - 1}{c} \right) = \log [\eta] + k [\eta] c$$

The decimal antilogarithm of the intercept is the intrinsic viscosity expressed in  $\text{m}^3/\text{kg}$ .

**Sulfated glycosaminoglycans:** maximum 1 per cent, if the product is extracted from cocks' combs.

*Appropriate safety precautions are to be taken when handling perchloric acid at elevated temperature.*

**Test solution.** Introduce a quantity of the substance to be examined equivalent to 50.0 mg of the dried substance into a test-tube 150 mm long and 16 mm in internal diameter and dissolve in 1.0 mL of *perchloric acid R*.

**Reference solution.** Dissolve 0.149 g of *anhydrous sodium sulfate R* in *water R* and dilute to 100.0 mL with the same solvent. Dilute 10.0 mL of this solution to 100.0 mL with *water R*. Evaporate 1.0 mL in a test-tube 150 mm long and 16 mm in internal diameter in a heating block at 90-95 °C, and dissolve the residue in 1.0 mL of *perchloric acid R*.

Plug each test-tube with a piece of glass wool. Place the test-tubes in a heating block or a silicone oil bath maintained at 180 °C and heat until clear, colourless solutions are obtained (about 12 h). Remove the test-tubes and cool to room temperature. Add to each test-tube 3.0 mL of a 33.3 g/L solution of *barium chloride R*, cap and shake vigorously. Allow the test-tubes to stand for 30 min. Shake each test-tube once again, and determine the absorbance (2.2.25) at 660 nm, using *water R* as a blank.

The absorbance obtained with the test solution is not greater than the absorbance obtained with the reference solution.

**Nucleic acids.** The absorbance (2.2.25) of solution S at 260 nm is maximum 0.5.

**Protein:** maximum 0.3 per cent; maximum 0.1 per cent, if intended for use in the manufacture of parenteral preparations.

**Test solution (a).** Dissolve the substance to be examined in *water R* to obtain a solution containing a quantity equivalent to about 10 mg of the dried substance per millilitre.

**Test solution (b).** Mix equal volumes of test solution (a) and *water R*.

**Reference solutions.** Prepare a 0.5 mg/mL stock solution of *bovine albumin R* in *water R*. Prepare 5 dilutions of the stock solution containing between 5 µg/mL and 50 µg/mL of *bovine albumin R*.

Add 2.5 mL of freshly prepared *cupri-tartaric solution R3* to test-tubes containing 2.5 mL of *water R* (blank), 2.5 mL of the test solutions (a) or (b) or 2.5 mL of the reference solutions. Mix after each addition. After about 10 min, add to each test-tube 0.50 mL of a mixture of equal volumes of *phosphomolybdotungstic reagent R* and *water R* prepared immediately before use. Mix after each addition. After 30 min, measure the absorbance (2.2.25) of each solution at 750 nm against the blank. From the calibration curve obtained with the 5 reference solutions determine the content of protein in the test solutions.

**Chlorides (2.4.4):** maximum 0.5 per cent.

Dissolve 67 mg in 100 mL of *water R*.

**Iron:** maximum 80 ppm.

Atomic absorption spectrometry (2.2.23, *Method II*).

**Test solution.** Dissolve a quantity of the substance to be examined equivalent to 0.25 g of the dried substance in 1 mL of *nitric acid R* by heating on a water-bath. Cool and dilute to 10.0 mL with *water R*.

**Reference solutions.** Prepare 2 reference solutions in the same manner as the test solution, adding 1.0 mL and 2.0 mL respectively of *iron standard solution (10 ppm Fe) R* to the dissolved substance to be examined.

**Source:** iron hollow-cathode lamp using a transmission band of 0.2 nm.

**Wavelength:** 248.3 nm.

**Atomisation device:** air-acetylene flame.

**Heavy metals (2.4.8):** maximum 20 ppm; maximum 10 ppm if intended for use in the manufacture of parenteral preparations.

1.0 g complies with test F. Prepare the reference solution using 2.0 mL of *lead standard solution (10 ppm Pb) R*.

**Loss on drying (2.2.32):** maximum 20.0 per cent, determined on 0.500 g by drying at 100-110 °C over *diphosphorus pentoxide R* for 6 h.

#### Microbial contamination

TAMC: acceptance criterion 10<sup>2</sup> CFU/g (2.6.12). Use 1 g of the substance to be examined.

**Bacterial endotoxins (2.6.14):** less than 0.5 IU/mg, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins; less than 0.05 IU/mg, if intended for use in the manufacture of intra-ocular preparations or intra-articular preparations without a further appropriate procedure for the removal of bacterial endotoxins.

#### ASSAY

Determine the glucuronic acid content by reaction with carbazole as described below.

**Reagent A.** Dissolve 0.95 g of *disodium tetraborate R* in 100.0 mL of *sulfuric acid R*.

**Reagent B.** Dissolve 0.125 g of *carbazole R* in 100.0 mL of *anhydrous ethanol R*.

**Test solution.** Prepare this solution in triplicate. Dissolve 0.170 g of the substance to be examined in *water R* and dilute to 100.0 g with the same solvent. Dilute 10.0 g of this solution to 200.0 g with *water R*.

**Reference stock solution.** Dissolve 0.100 g of *D-glucuronic acid R*, previously dried to constant mass in vacuum over *diphosphorus pentoxide R (2.2.32)*, in *water R* and dilute to 100.0 g with the same solvent.

**Reference solutions.** Prepare 5 dilutions of the reference stock solution containing between 6.5 µg/g and 65 µg/g of *D-glucuronic acid R*.

Place 25 test-tubes, numbered 1 to 25, in iced water. Add 1.0 mL of the 5 reference solutions in triplicate to the test-tubes 1 to 15 (reference tubes), 1.0 mL of the 3 test solutions in triplicate to the test-tubes 16 to 24 (sample tubes), and 1.0 mL of *water R* to test-tube 25 (blank). Add to each test-tube 5.0 mL of freshly prepared reagent A, previously cooled in iced water. Tightly close the test-tubes with plastic caps, shake the contents, and place on a water bath for exactly 15 min. Cool in iced water, and add to each test tube 0.20 mL of reagent B. Recap the tubes, shake, and put them again on a water-bath for exactly 15 min. Cool to room temperature and measure the absorbance (2.2.25) of the solutions at 530 nm, against the blank.

From the calibration curve obtained with the mean absorbances read for each reference solution, determine the mean concentrations of D-glucuronic acid in the test solutions.

Calculate the percentage content of sodium hyaluronate using the following expression:

$$\frac{c_g}{c_s} \times Z \times \frac{100}{100 - h} \times \frac{401.3}{194.1}$$

$c_g$  = mean of concentrations of D-glucuronic acid in the test solutions, in milligrams per gram;

$c_s$  = mean of concentrations of the substance to be examined in the test solutions, in milligrams per gram;

$Z$  = determined percentage content of C<sub>6</sub>H<sub>10</sub>O<sub>7</sub> in *D-glucuronic acid R*;

$h$  = percentage loss on drying;

401.3 = relative molecular mass of the disaccharide fragment;

194.1 = relative molecular mass of glucuronic acid.

#### STORAGE

In an airtight container, protected from light and humidity. If the substance is sterile, store in a sterile, airtight, tamper-proof container.

#### LABELLING

The label states:

- the intrinsic viscosity;
- the origin of the substance;
- the intended use of the substance;
- where applicable, that the substance is suitable for parenteral administration other than intra-articular administration;
- where applicable, that the substance is suitable for parenteral administration, including intra-articular administration;
- where applicable that the material is suitable for intra-ocular use.

corrected 6.0

## SODIUM HYDROGEN CARBONATE

Natrii hydrogenocarbonas

NaHCO<sub>3</sub>  
[144-55-8]

$M_r$  84.0

#### DEFINITION

**Content:** 99.0 per cent to 101.0 per cent.

## CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: soluble in water, practically insoluble in ethanol (96 per cent).

When heated in the dry state or in solution, it gradually changes into sodium carbonate.

## IDENTIFICATION

- A. To 5 mL of solution S (see Tests) add 0.1 mL of *phenolphthalein solution R*. A pale pink colour is produced. Heat; gas is evolved and the solution becomes red.
- B. It gives the reaction of carbonates and bicarbonates (2.3.1).
- C. Solution S gives reaction (a) of sodium (2.3.1).

## TESTS

**Solution S.** Dissolve 5.0 g in 90 mL of *carbon dioxide-free water R* and dilute to 100.0 mL with the same solvent.

**Appearance of solution.** Solution S is clear (2.2.1) and colourless (2.2.2, *Method II*).

**Carbonates.** The pH (2.2.3) of freshly prepared solution S is not greater than 8.6.

**Chlorides** (2.4.4): maximum 150 ppm.

To 7 mL of solution S add 2 mL of *nitric acid R* and dilute to 15 mL with *water R*.

**Sulfates** (2.4.13): maximum 150 ppm.

To a suspension of 1.0 g in 10 mL of *distilled water R* add *hydrochloric acid R* until neutral and about 1 mL in excess. Dilute to 15 mL with *distilled water R*.

**Ammonium** (2.4.1): maximum 20 ppm.

Dilute 10 mL of solution S to 15 mL with *water R*. Prepare the standard using a mixture of 5 mL of *water R* and 10 mL of *ammonium standard solution (1 ppm NH<sub>4</sub>) R*.

**Arsenic** (2.4.2, *Method A*): maximum 2 ppm, determined on 0.5 g.

**Calcium** (2.4.3): maximum 100 ppm.

To a suspension of 1.0 g in 10 mL of *distilled water R* add *hydrochloric acid R* until neutral and dilute to 15 mL with *distilled water R*.

**Iron** (2.4.9): maximum 20 ppm.

Dissolve 0.5 g in 5 mL of *dilute hydrochloric acid R* and dilute to 10 mL with *water R*.

**Heavy metals** (2.4.8): maximum 10 ppm.

Dissolve 2.0 g in a mixture of 2 mL of *hydrochloric acid R* and 18 mL of *water R*. 12 mL of the solution complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

## ASSAY

Dissolve 1.500 g in 50 mL of *carbon dioxide-free water R*. Titrate with *1 M hydrochloric acid*, using 0.2 mL of *methyl orange solution R* as indicator.

1 mL of *1 M hydrochloric acid* is equivalent to 84.0 mg of NaHCO<sub>3</sub>.

01/2008:0677  
corrected 6.0

## SODIUM HYDROXIDE

## Natrii hydroxidum

NaOH  
[1310-73-2]

*M<sub>r</sub>* 40.00

## DEFINITION

*Content*: 97.0 per cent to 100.5 per cent.

## CHARACTERS

*Appearance*: white or almost white, crystalline masses, supplied as pellets, sticks or slabs, deliquescent, readily absorbing carbon dioxide.

*Solubility*: very soluble in water, freely soluble in ethanol (96 per cent).

## IDENTIFICATION

A. pH (2.2.3): minimum 11.0.

Dissolve 0.1 g in 10 mL of *water R*. Dilute 1 mL of the solution to 100 mL with *water R*.

B. 2 mL of solution S (see Tests) gives reaction (a) of sodium (2.3.1).

## TESTS

**Solution S.** Carry out the procedure described below with caution. Dissolve 5.0 g in 12 mL of *distilled water R*. Add 17 mL of *hydrochloric acid R1*, adjust to pH 7 with *1 M hydrochloric acid* and dilute to 50 mL with *distilled water R*.

**Appearance of solution.** The solution is clear (2.2.1) and colourless (2.2.2, *Method II*).

Dissolve 1.0 g in 10 mL of *water R*.

**Carbonates:** maximum 2.0 per cent, calculated as Na<sub>2</sub>CO<sub>3</sub> as determined in the assay.

**Chlorides** (2.4.4): maximum 50 ppm.

Dissolve 1.0 g in 5 mL of *water R*, acidify the solution with about 4 mL of *nitric acid R* and dilute to 15 mL with *water R*. The solution, without addition of *dilute nitric acid R*, complies with the test.

**Sulfates** (2.4.13): maximum 50 ppm.

Dissolve 3.0 g in 6 mL of *distilled water R*, adjust to pH 7 with *hydrochloric acid R* (about 7.5 mL) and dilute to 15 mL with *distilled water R*.

**Iron** (2.4.9): maximum 10 ppm, determined on solution S.

**Heavy metals** (2.4.8): maximum 20 ppm.

12 mL of solution S complies with test A. Prepare the reference solution using *lead standard solution (2 ppm Pb) R*.

## ASSAY

Dissolve 2.000 g in about 80 mL of *carbon dioxide-free water R*. Add 0.3 mL of *phenolphthalein solution R* and titrate with *1 M hydrochloric acid*. Add 0.3 mL of *methyl orange solution R* and continue the titration with *1 M hydrochloric acid*.

1 mL of *1 M hydrochloric acid* used in the 2<sup>nd</sup> part of the titration is equivalent to 0.1060 g of Na<sub>2</sub>CO<sub>3</sub>.

1 mL of *1 M hydrochloric acid* used in the combined titrations is equivalent to 40.00 mg of total alkali, calculated as NaOH.

## STORAGE

In an airtight, non-metallic container.

01/2008:0196  
corrected 6.0

## SODIUM IODIDE

## Natrii iodidum

NaI  
[7681-82-5]

*M<sub>r</sub>* 149.9

## DEFINITION

*Content*: 99.0 per cent to 100.5 per cent (dried substance).

## CHARACTERS

*Appearance*: white or almost white, crystalline powder or colourless crystals, hygroscopic.

*Solubility*: very soluble in water, freely soluble in ethanol (96 per cent).

## IDENTIFICATION

- A. Solution S (see Tests) gives the reactions of iodides (2.3.1).  
 B. Solution S gives the reactions of sodium (2.3.1).

## TESTS

**Solution S.** Dissolve 10.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100 mL with the same solvent.

**Appearance of solution.** Solution S is clear (2.2.1) and colourless (2.2.2, *Method II*).

**Alkalinity.** To 12.5 mL of solution S add 0.1 mL of *bromothymol blue solution R1*. Not more than 0.7 mL of 0.01 M *hydrochloric acid* is required to change the colour of the indicator.

**Iodates.** To 10 mL of solution S add 0.25 mL of *iodide-free starch solution R* and 0.2 mL of *dilute sulfuric acid R* and allow to stand protected from light for 2 min. No blue colour develops.

**Sulfates** (2.4.13): maximum 150 ppm.

Dilute 10 mL of solution S to 15 mL with *distilled water R*.

**Thiosulfates.** To 10 mL of solution S add 0.1 mL of *starch solution R* and 0.1 mL of 0.005 M *iodine*. A blue colour is produced.

**Iron** (2.4.9): maximum 20 ppm.

Dilute 5 mL of solution S to 10 mL with *water R*.

**Heavy metals** (2.4.8): maximum 10 ppm.

12 mL of solution S complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

**Loss on drying** (2.2.32): maximum 3.0 per cent, determined on 1.00 g by drying in an oven at 105 °C for 3 h.

## ASSAY

Dissolve 1.300 g in *water R* and dilute to 100.0 mL with the same solvent. To 20.0 mL of the solution add 40 mL of *hydrochloric acid R* and titrate with 0.05 M *potassium iodate* until the colour changes from red to yellow. Add 5 mL of *chloroform R* and continue the titration, shaking vigorously, until the chloroform layer is decolorised.

1 mL of 0.05 M *potassium iodate* is equivalent to 14.99 mg of NaI.

## STORAGE

Protected from light.

## TESTS

**Solution S.** Dilute a quantity of the substance to be examined corresponding to 40.0 g of sodium lactate to 200 mL with *distilled water R*.

**Appearance of solution.** The substance to be examined is clear (2.2.1) and not more intensely coloured than reference solution BY<sub>7</sub> (2.2.2, *Method II*).

**pH** (2.2.3): 6.5 to 9.0 for the substance to be examined.

**Reducing sugars and sucrose.** To 5 mL of the substance to be examined add 0.2 mL of *copper sulfate solution R* and 2 mL of *dilute sodium hydroxide solution R*. The solution is clear and blue and remains so on boiling. Add to the hot solution 4 mL of *hydrochloric acid R*. Boil for 1 min. Add 6 mL of *strong sodium hydroxide solution R* and heat to boiling again. The solution is clear and blue.

**Methanol.** Gas chromatography (2.4.24).

## Limit:

- *methanol*: maximum 50 ppm, calculated with reference to sodium lactate, if intended for use in the manufacture of parenteral preparations, dialysis, haemodialysis or haemofiltration solutions.

**Chlorides** (2.4.4): maximum 50 ppm calculated with reference to sodium lactate.

Dilute 5 mL of solution S to 15 mL with *water R*. The solution complies with the test for chlorides.

**Oxalates and phosphates.** To 1 mL of the substance to be examined add 15 mL of *ethanol (96 per cent) R* and 2 mL of *calcium chloride solution R*. Heat at 75 °C for 5 min. Any opalescence in the solution is not more intense than that of a standard prepared at the same time and in the same manner using a mixture of 1 mL of the substance to be examined, 15 mL of *ethanol (96 per cent) R* and 2 mL of *water R*.

**Sulfates** (2.4.13): maximum 100 ppm calculated with reference to sodium lactate.

To 7.5 mL of solution S, add 1.9 mL of *hydrochloric acid R1* and dilute to 15 mL with *distilled water R*. The solution complies with the test for sulfates without addition of 0.5 mL of *acetic acid R*. Acidify the standard solution with 0.05 mL of *hydrochloric acid R1* instead of 0.5 mL of *acetic acid R*.

**Aluminium:** maximum 0.1 ppm, if intended for use in the manufacture of parenteral preparations, dialysis, haemodialysis or haemofiltration solutions.

Atomic absorption spectrometry (2.2.23, *Method I*). For the preparation of the solutions, use equipment that is aluminium-free or that will not release aluminium under the conditions of use (glass, polyethylene, etc).

**Modifier solution.** Dissolve 100.0 g of *ammonium nitrate R* in a mixture of 4 mL of *nitric acid R* and 50 mL of *water R* and dilute to 200 mL with *water R*.

**Blank solution.** Dilute to 2.0 mL of the modifier solution to 25.0 mL with *water R*.

**Test solution.** To 5.0 g add 2.0 mL of the modifier solution and dilute to 25.0 mL with *water R*.

**Reference solutions.** Prepare the reference solutions immediately before use (0.010 ppm to 0.050 ppm of aluminium) using *aluminium standard solution (200 ppm Al) R*.

**Source:** aluminium hollow-cathode lamp.

**Wavelength:** 309.3 nm.

**Atomisation device:** a graphite furnace.

**Carrier gas:** argon R.

**Conditions:** the device is equipped with a non-specific absorption correction system. Heat the oven to 120 °C for as many seconds as there are microlitres of solution introduced into the apparatus, then heat at 1000 °C for 30 s and finally at 2700 °C for 6 s.

01/2011:1151

## SODIUM LACTATE SOLUTION

## Natrii lactatis solutio

## DEFINITION

Solution of a mixture of the enantiomers of sodium 2-hydroxypropanoate in approximately equal proportions.

**Content:** minimum declared content 50 per cent *m/m* of sodium 2-hydroxypropanoate (C<sub>3</sub>H<sub>5</sub>NaO<sub>3</sub>; *M<sub>r</sub>* 112.1); 96.0 per cent to 104.0 per cent of the content of sodium lactate stated on the label.

## CHARACTERS

**Appearance:** clear, colourless, slightly syrupy liquid.

**Solubility:** miscible with water and with ethanol (96 per cent).

## IDENTIFICATION

- A. To 0.1 mL add 10 mL of *water R*. 5 mL of the solution gives the reaction of lactates (2.3.1).  
 B. It gives reaction (a) of sodium (2.3.1).

**Barium.** To 10 mL of solution S add 10 mL of *calcium sulfate solution R*. Allow to stand for 30 min. Any opalescence (2.2.1) in the solution is not more intense than that of a standard prepared at the same time and in the same manner using a mixture of 10 mL of solution S and 10 mL of *distilled water R*.

**Iron (2.4.9):** maximum 10 ppm calculated with reference to sodium lactate.

Dilute 5 mL of solution S to 10 mL with *water R*. The solution complies with the test for iron.

**Heavy metals (2.4.8):** maximum 10 ppm calculated with reference to sodium lactate.

12 mL of solution S complies with test A. Prepare the reference solution using *lead standard solution (2 ppm Pb) R*.

**Bacterial endotoxins (2.6.14):** less than 5 IU/g, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins.

#### ASSAY

Dissolve a quantity of the substance to be examined corresponding to 75.0 mg of sodium lactate in a mixture of 10 mL of *glacial acetic acid R* and 20 mL of *acetic anhydride R*. Allow to stand for 15 min. Add 1 mL of *naphtholbenzein solution R* and titrate with *0.1 M perchloric acid*.

1 mL of *0.1 M perchloric acid* is equivalent to 11.21 mg of  $C_3H_5NaO_3$ .

#### LABELLING

The label states:

- where applicable, that the substance is suitable for use in the manufacture of dialysis, haemodialysis and haemofiltration solutions,
- where applicable, that the substance is suitable for use in the manufacture of parenteral preparations,
- the declared content of sodium lactate.

01/2008:2033

## SODIUM (S)-LACTATE SOLUTION

### Natrii (S)-lactatis solutio

#### DEFINITION

**Content:** minimum 50.0 per cent *m/m* of sodium (S)-2-hydroxypropanoate ( $C_3H_5NaO_3$ ;  $M_r$  112.1); 96.0 per cent to 104.0 per cent of the content of sodium lactate stated on the label, not less than 95.0 per cent of which is the (S)-enantiomer.

#### CHARACTERS

**Appearance:** clear, colourless, slightly syrupy liquid.

**Solubility:** miscible with water and with alcohol.

#### IDENTIFICATION

- To 0.1 mL add 10 mL of *water R*. 5 mL of the solution gives the reaction of lactates (2.3.1).
- It gives reaction (a) of sodium (2.3.1).
- It complies with the limits of the assay.

#### TESTS

**Solution S.** Dilute a quantity of the substance to be examined corresponding to 40.0 g of sodium lactate to 200 mL with *distilled water R*.

**Appearance of solution.** The substance to be examined is clear (2.2.1) and not more intensely coloured than reference solution BY<sub>7</sub> (2.2.2, *Method II*).

**pH (2.2.3):** 6.5 to 9.0 for the substance to be examined.

**Reducing sugars and sucrose.** To 5 mL of the substance to be examined add 2 mL of *dilute sodium hydroxide solution R* and 0.2 mL of *copper sulfate solution R*. The solution is clear and

blue and remains so on boiling. Add to the hot solution 4 mL of *hydrochloric acid R*. Boil for 1 min. Add 6 mL of *strong sodium hydroxide solution R* and heat to boiling again. The solution is clear and blue.

**Methanol.** Gas chromatography (2.4.24).

**Limit:**

- *methanol:* maximum 50 ppm, calculated with reference to sodium lactate, if intended for use in the manufacture of parenteral preparations, dialysis, haemodialysis or haemofiltration solutions.

**Chlorides (2.4.4):** maximum 50 ppm calculated with reference to sodium lactate.

Dilute 5 mL of solution S to 15 mL with *water R*. The solution complies with the limit test for chlorides.

**Oxalates and phosphates.** To 1 mL of the substance to be examined add 15 mL of *alcohol R* and 2 mL of *calcium chloride solution R*. Heat at 75 °C for 5 min. Any opalescence in the solution is not more intense than that of a standard prepared at the same time and in the same manner using a mixture of 1 mL of the substance to be examined, 15 mL of *alcohol R* and 2 mL of *water R*.

**Sulfates (2.4.13):** maximum 100 ppm calculated with reference to sodium lactate.

To 7.5 mL of solution S, add 1.9 mL of *hydrochloric acid R1* and dilute to 15 mL with *distilled water R*. The solution complies with the limit test for sulfates without addition of 0.5 mL of *acetic acid R*. Acidify the standard solution with 0.05 mL of *hydrochloric acid R1* instead of 0.5 mL of *acetic acid R*.

**Aluminium:** maximum 0.1 ppm, if intended for use in the manufacture of parenteral preparations, dialysis, haemodialysis or haemofiltration solutions.

Atomic absorption spectrometry (2.2.23, *Method I*). For the preparation of the solutions, use equipment that is aluminium-free or that will not release aluminium under the conditions of use (glass, polyethylene, etc).

**Modifier solution.** Dissolve 100.0 g of *ammonium nitrate R* in a mixture of 50 mL of *water R* and 4 mL of *nitric acid R* and dilute to 200 mL with *water R*.

**Blank solution.** Dilute 2.0 mL of the modifier solution to 25.0 mL with *water R*.

**Test solution.** To 1.25 g add 2.0 mL of the modifier solution and dilute to 25.0 mL with *water R*.

**Reference solutions.** Prepare the reference solutions immediately before use (0.010 ppm to 0.050 ppm of aluminium) using *aluminium standard solution (200 ppm Al) R*.

**Source:** aluminium hollow-cathode lamp.

**Wavelength:** 309.3 nm.

**Atomisation device:** a graphite furnace.

**Carrier gas:** argon R.

**Conditions:** the device is equipped with a non-specific absorption correction system. Heat the oven to 120 °C for as many seconds as there are microlitres of solution introduced into the apparatus, then heat at 1000 °C for 30 s and finally at 2700 °C for 6 s.

**Barium.** To 10 mL of solution S add 10 mL of *calcium sulfate solution R*. Allow to stand for 30 min. Any opalescence (2.2.1) in the solution is not more intense than that of a standard prepared at the same time and in the same manner using a mixture of 10 mL of solution S and 10 mL of *distilled water R*.

**Iron (2.4.9):** maximum 10 ppm calculated with reference to sodium lactate.

Dilute 5 mL of solution S to 10 mL with *water R*. The solution complies with the limit test for iron.

**Heavy metals (2.4.8):** maximum 10 ppm calculated with reference to sodium lactate.

12 mL of solution S complies with limit test A. Prepare the standard using *lead standard solution (2 ppm Pb) R*.

**Bacterial endotoxins** (2.6.14): less than 5 IU/g if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins.

#### ASSAY

Dissolve a quantity of the substance to be examined corresponding to 75.0 mg of sodium lactate in a mixture of 10 mL of *glacial acetic acid R* and 20 mL of *acetic anhydride R*. Allow to stand for 15 min. Add 1 mL of *naphtholbenzein solution R* and titrate with *0.1 M perchloric acid*.

1 mL of *0.1 M perchloric acid* is equivalent to 11.21 mg of  $C_3H_5NaO_3$ .

**(S)-enantiomer.** Transfer a quantity of the substance to be examined corresponding to 2.50 g of sodium lactate into a 50 mL volumetric flask, dilute with about 30 mL of *water R* and add 5.0 g of *ammonium molybdate R*. Dissolve and dilute with *water R* to 50.0 mL. Measure the angle of optical rotation (2.2.7). Calculate the percentage content of (S)-enantiomer using the expression:

$$50 + \left( 24.04 \times \alpha \times \frac{5.0}{m} \times \frac{50}{c} \right)$$

$\alpha$  = angle of optical rotation (absolute value),

$m$  = mass of the substance to be examined, in grams,

$c$  = percentage content of  $C_3H_5NaO_3$  in the substance to be examined.

The complex of sodium (S)-lactate formed under these test conditions is leavorotatory.

#### LABELLING

The label states:

- where applicable, that the substance is suitable for use in the manufacture of dialysis, haemodialysis and haemofiltration solutions,
- where applicable, that the substance is suitable for use in the manufacture of parenteral preparations,
- the declared content of sodium lactate.

01/2008:0098

## SODIUM LAURILSULFATE

### Natrii laurilsulfas

#### DEFINITION

Mixture of sodium alkyl sulfates consisting chiefly of sodium dodecyl sulfate ( $C_{12}H_{25}NaO_4S$ ;  $M_r$  288.4).

*Content:*

- *sodium alkyl sulfates*: minimum 85.0 per cent, expressed as  $C_{12}H_{25}NaO_4S$ .

#### CHARACTERS

*Appearance:* white or pale yellow, powder or crystals.

*Solubility:* freely soluble in water giving an opalescent solution, partly soluble in ethanol (96 per cent).

#### IDENTIFICATION

- Dissolve 0.1 g in 10 mL of *water R* and shake. A copious foam is formed.
- To 0.1 mL of the solution prepared for identification test A, add 0.1 mL of a 1 g/L solution of *methylene blue R* and 2 mL of *dilute sulfuric acid R*. Add 2 mL of *methylene chloride R* and shake. An intense blue colour develops in the methylene chloride layer.

- Mix about 10 mg with 10 mL of *anhydrous ethanol R*.

Heat to boiling on a water-bath, shaking frequently. Filter immediately and evaporate the ethanol. Dissolve the residue in 8 mL of *water R*, add 3 mL of *dilute hydrochloric acid R*, evaporate the solution to half its volume and allow to cool. Separate the congealed fatty alcohols by filtration. To the filtrate add 1 mL of *barium chloride solution R1*. A white, crystalline precipitate is formed.

- Ignite 0.5 g. The residue gives reaction (a) of sodium (2.3.1).

#### TESTS

**Alkalinity.** Dissolve 1.0 g in 100 mL of *carbon dioxide-free water R* and add 0.1 mL of *phenol red solution R*. Not more than 0.5 mL of *0.1 M hydrochloric acid* is required to change the colour of the indicator.

**Non-esterified alcohols:** maximum 4 per cent.

Dissolve 10 g in 100 mL of *water R*, add 100 mL of *ethanol (96 per cent) R* and shake the solution with 3 quantities, each of 50 mL, of *pentane R*, adding *sodium chloride R*, if necessary, to promote separation of the 2 layers. Wash the combined organic layers with 3 quantities, each of 50 mL, of *water R*, dry over *anhydrous sodium sulfate R*, filter and evaporate on a water-bath until the solvent has evaporated. Heat the residue at 105 °C for 15 min and cool. The residue weighs a maximum of 0.4 g.

**Sodium chloride and sodium sulfate:** maximum 8.0 per cent for the total percentage content.

**Sodium chloride.** Dissolve 5.00 g in 50 mL of *water R*, add *dilute nitric acid R* dropwise until the solution is neutral to *blue litmus paper R*, add 2 mL of *potassium chromate solution R* and titrate with *0.1 M silver nitrate*.

1 mL of *0.1 M silver nitrate* is equivalent to 5.844 mg of NaCl.

**Sodium sulfate.** Dissolve 0.500 g in 20 mL of *water R*, warming gently if necessary, then add 1 mL of a 0.5 g/L solution of *dithizone R1* in *acetone R*. If the solution is red, add *1 M nitric acid*, dropwise, until the solution becomes bluish-green. Add 2.0 mL of *dichloroacetic acid solution R* and 80 mL of *acetone R*. Titrate with *0.01 M lead nitrate* until a persistent violet-red or orange-red colour is obtained. Carry out a blank titration.

1 mL of *0.01 M lead nitrate* is equivalent to 1.420 mg of  $Na_2SO_4$ .

#### ASSAY

Dissolve 1.15 g in *water R*, warming if necessary, and dilute to 1000.0 mL with the same solvent. To 20.0 mL of the solution add 15 mL of *chloroform R* and 10 mL of *dimidium bromide-sulfan blue mixed solution R*. Titrate with *0.004 M benzethonium chloride*, shaking vigorously and allowing the layers to separate before each addition, until the pink colour of the chloroform layer is completely discharged and a greyish-blue colour is obtained.

1 mL of *0.004 M benzethonium chloride* is equivalent to 1.154 mg of sodium alkyl sulfates, expressed as  $C_{12}H_{25}NaO_4S$ .

01/2008:0849

## SODIUM METABISULFITE

### Natrii metabisulfis

$Na_2S_2O_5$   
[7681-57-4]

$M_r$  190.1

#### DEFINITION

Sodium metabisulfite also called sodium disulfite.

*Content:* 95.0 per cent to 100.5 per cent.

## CHARACTERS

*Appearance*: white or almost white, crystalline powder or colourless crystals.

*Solubility*: freely soluble in water, slightly soluble in ethanol (96 per cent).

## IDENTIFICATION

- A. pH (see Tests).  
 B. To 0.4 mL of *iodinated potassium iodide solution R* add 8 mL of *distilled water R* and 1 mL of solution S diluted 1 to 10 in *distilled water R*. The solution is colourless and gives reaction (a) of sulfates (2.3.1).  
 C. Solution S gives reaction (a) of sodium (2.3.1).

## TESTS

**Solution S.** Dissolve 5.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100 mL with the same solvent.

**Appearance of solution.** Solution S is clear (2.2.1) and colourless (2.2.2, *Method II*).

**pH** (2.2.3): 3.5 to 5.0 for solution S.

**Thiosulfates.** To 5 mL of solution S add 5 mL of *dilute hydrochloric acid R*. The solution remains clear (2.2.1) for at least 15 min.

**Arsenic** (2.4.2, *Method A*): maximum 5 ppm.

Mix 0.20 g with 2 mL of *water R* in a dish. Add, drop by drop, 1.5 mL of *nitric acid R*. Evaporate the mixture to dryness on a water-bath. Heat over a flame until no more vapour is evolved. Take up the residue in 25 mL of *water R*.

**Iron** (2.4.9): maximum 20 ppm, determined on solution S.

**Heavy metals** (2.4.8): maximum 20 ppm.

To 40 mL of solution S in a silica crucible, add 10 mL of *hydrochloric acid R* and evaporate to dryness. Dissolve the residue in 19 mL of *water R* and add 1 mL of a 40 g/L solution of *sodium fluoride R*. 12 mL of the solution complies with test A. Prepare the reference solution using *lead standard solution* (2 ppm Pb) *R*.

## ASSAY

Dissolve 0.200 g in 50.0 mL of 0.05 M *iodine*. Add 5 mL of *dilute hydrochloric acid R*. Titrate with 0.1 M *sodium thiosulfate* using 1 mL of *starch solution R*, added towards the end of the titration, as indicator.

1 mL of 0.05 M *iodine* is equivalent to 4.753 mg of Na<sub>2</sub>S<sub>2</sub>O<sub>5</sub>.

## STORAGE

Protected from light.

07/2010:1262

## SODIUM METHYL PARAHYDROXYBENZOATE

Methylis parahydroxybenzoas natricus

C<sub>8</sub>H<sub>7</sub>NaO<sub>3</sub>  
[5026-62-0]

M<sub>r</sub> 174.1

## DEFINITION

Sodium 4-(methoxycarbonyl)phenolate.

*Content*: 95.0 per cent to 102.0 per cent (anhydrous substance).

## CHARACTERS

*Appearance*: white or almost white, hygroscopic crystalline powder.

*Solubility*: freely soluble in water, sparingly soluble in ethanol (96 per cent), practically insoluble in methylene chloride.

## IDENTIFICATION

*First identification*: B, D.

*Second identification*: A, C, D.

A. Dissolve 0.5 g in 50 mL of *water R*. Immediately add 5 mL of *hydrochloric acid R1*. Filter and wash the precipitate with *water R*. Dry under vacuum at 80 °C for 2 h. The precipitate obtained melts (2.2.14) at 125 °C to 128 °C.

B. Infrared absorption spectrophotometry (2.2.24).

*Preparation*: precipitate obtained in identification test A.

*Comparison*: *methyl parahydroxybenzoate CRS*.

C. Thin-layer chromatography (2.2.27).

*Test solution (a)*. Dissolve 0.10 g in 10 mL of *water R*.

Immediately add 2 mL of *hydrochloric acid R* and shake with 50 mL of *ether R*. Evaporate the upper layer to dryness and take up the residue with 10 mL of *acetone R*.

*Test solution (b)*. Dilute 1 mL of test solution (a) to 10 mL with *acetone R*.

*Reference solution (a)*. Dissolve 10 mg of *methyl parahydroxybenzoate CRS* in *acetone R* and dilute to 10 mL with the same solvent.

*Reference solution (b)*. Dissolve 10 mg of *ethyl parahydroxybenzoate CRS* in 1 mL of test solution (a) and dilute to 10 mL with *acetone R*.

*Plate*: TLC octadecylsilyl silica gel F<sub>254</sub> plate *R*.

*Mobile phase*: *glacial acetic acid R*, *water R*, *methanol R* (1:30:70 V/V/V).

*Application*: 5 µL of test solution (b) and reference solutions (a) and (b).

*Development*: over 2/3 of the plate.

*Drying*: in air.

*Detection*: examine in ultraviolet light at 254 nm.

*System suitability*: reference solution (b):

– the chromatogram shows 2 clearly separated principal spots.

*Results*: the principal spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

D. To 1 mL of solution S (see Tests) add 1 mL of *water R*. The solution gives reaction (a) of sodium (2.3.1).

## TESTS

**Solution S.** Dissolve 5.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 50 mL with the same solvent.

**Appearance of solution.** Solution S examined immediately after preparation is clear (2.2.1) and not more intensely coloured than reference solution BY<sub>6</sub> (2.2.2, *Method II*).

**pH** (2.2.3). Dilute 1 mL of solution S to 100 mL with *carbon dioxide-free water R*. The pH of the solution is 9.5 to 10.5.

**Related substances.** Liquid chromatography (2.2.29).

*Test solution.* Dissolve 50.0 mg of the substance to be examined in 2.5 mL of *methanol R* and dilute to 50.0 mL with the mobile phase. Dilute 10.0 mL of this solution to 100.0 mL with the mobile phase.

*Reference solution (a).* Dissolve 5 mg of *4-hydroxybenzoic acid R* (impurity A) and 5 mg of the substance to be examined in the mobile phase and dilute to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Reference solution (b).* Dissolve 50.0 mg of *methyl parahydroxybenzoate CRS* in 2.5 mL of *methanol R* and dilute to 50.0 mL with the mobile phase. Dilute 10.0 mL of this solution to 100.0 mL with the mobile phase.

**Reference solution (c).** Dilute 1.0 mL of the test solution to 20.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

**Column:**

- size:  $l = 0.15$  m,  $\varnothing = 4.6$  mm;
- stationary phase: end-capped octadecylsilyl silica gel for chromatography R (5  $\mu$ m).

**Mobile phase:** 6.8 g/L solution of potassium dihydrogen phosphate R, methanol R (35:65 V/V).

**Flow rate:** 1.3 mL/min.

**Detection:** spectrophotometer at 272 nm.

**Injection:** 10  $\mu$ L of the test solution and reference solutions (a) and (c).

**Run time:** 5 times the retention time of methyl parahydroxybenzoate.

**Relative retention** with reference to methyl parahydroxybenzoate (retention time = about 2.3 min): impurity A = about 0.6.

**System suitability:** reference solution (a):

- resolution: minimum 2.0 between the peaks due to impurity A and methyl parahydroxybenzoate.

**Limits:**

- correction factor: for the calculation of content, multiply the peak area of impurity A by 1.4;
- impurity A: not more than 6 times the area of the principal peak in the chromatogram obtained with reference solution (c) (3.0 per cent);
- unspecified impurities: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.5 per cent);
- sum of impurities other than A: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (c) (1.0 per cent);
- disregard limit: 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.1 per cent).

**Chlorides (2.4.4):** maximum 350 ppm.

To 10 mL of solution S, add 30 mL of water R and 1 mL of nitric acid R and dilute to 50 mL with water R. Shake and filter. Dilute 10 mL of the filtrate to 15 mL with water R. Prepare the standard using 14 mL of chloride standard solution (5 ppm Cl) R to which 1 mL of water R has been added.

**Sulfates (2.4.13):** maximum 300 ppm.

To 25 mL of solution S, add 5 mL of distilled water R and 10 mL of hydrochloric acid R and dilute to 50 mL with distilled water R. Shake and filter. Dilute 10 mL of the filtrate to 15 mL with distilled water R.

**Heavy metals (2.4.8):** maximum 10 ppm.

2.0 g complies with test C. Prepare the reference solution using 2 mL of lead standard solution (10 ppm Pb) R.

**Water (2.5.12):** maximum 5.0 per cent, determined on 0.500 g.

**ASSAY**

Liquid chromatography (2.2.29) as described in the test for related substances with the following modification.

**Injection:** test solution and reference solution (b).

Calculate the percentage content of  $C_8H_7NaO_3$  using the declared content of methyl parahydroxybenzoate CRS and multiplying by a correction factor of 1.145.

**STORAGE**

In an airtight container.

**IMPURITIES**

**Specified impurities: A.**

**Other detectable impurities** (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general

acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): B, C, D.

A. 4-hydroxybenzoic acid,

B. ethyl 4-hydroxybenzoate (ethyl parahydroxybenzoate),

C. propyl 4-hydroxybenzoate (propyl parahydroxybenzoate),

D. butyl 4-hydroxybenzoate (butyl parahydroxybenzoate).

corrected 6.3

## SODIUM MOLYBDATE DIHYDRATE

Natrii molybdati dihydricus

$MoNa_2O_4 \cdot 2H_2O$   
[10102-40-6]

$M_r$  241.9

**DEFINITION**

**Content:** 98.0 per cent to 100.5 per cent (dried substance).

**CHARACTERS**

**Appearance:** white or almost white powder or colourless crystals.

**Solubility:** freely soluble in water.

**IDENTIFICATION**

- Loss on drying (see Tests).
- Dissolve 0.2 g in 5 mL of a mixture of equal volumes of nitric acid R and water R and add 0.1 g of ammonium chloride R. Add 0.3 mL of disodium hydrogen phosphate solution R and heat slowly at 50-60 °C. A yellow precipitate is formed.
- Dissolve 0.15 g in 2 mL of water R, the solution gives reaction (a) of sodium (2.3.1).

**TESTS**

**Solution S.** Dissolve 10.0 g in water R and dilute to 50 mL with the same solvent.

**Appearance of solution.** Solution S is clear (2.2.1) and colourless (2.2.2, Method II).

**Chlorides:** maximum 50 ppm.

To 10 mL of a mixture of equal volumes of nitric acid R and water R add 10 mL of solution S with shaking. Add 1 mL of 0.1 M silver nitrate. Any opalescence in the solution is not more intense after 5 min than that of a standard solution prepared at the same time in the same manner with 2 mL of chloride standard solution (50 ppm Cl) R.

**Phosphates:** maximum 200 ppm.

Dissolve 2.0 g by heating in 13 mL of *water R*. In the still-hot solution, dissolve 8.0 g of *ammonium nitrate RI*. Add this solution to 27 mL of a mixture of equal volumes of *nitric acid R* and *water R*. Any yellow colour or opalescence in the solution is not more intense within 3 h than that in a standard solution prepared at the same time in the same manner as follows: dissolve 1.0 g in 12 mL of *water R* and add 1 mL of *phosphate standard solution (200 ppm PO<sub>4</sub>) R*.

**Ammonium (2.4.1, Method B):** maximum 10 ppm, determined on 0.10 g.

Prepare the standard using 1 mL of *ammonium standard solution (1 ppm NH<sub>4</sub>) R*.

**Heavy metals:** maximum 10 ppm.

To 10 mL of solution S, add 2 mL of *water R*, 6 mL of a 168 g/L solution of *sodium hydroxide R* and 2 mL of *concentrated ammonia R* (solution A). To 0.5 mL of *thioacetamide reagent R* add a mixture of 15 mL of solution A and 5 mL of *water R*. Any coloration of the solution is not more intense after 2 min than that of a reference solution prepared at the same time as follows: to 0.5 mL of *thioacetamide reagent R* add a mixture of 5 mL of solution A, 1 mL of *lead standard solution (10 ppm Pb) R* and 14 mL of *water R*.

**Loss on drying (2.2.32):** 14.0 per cent to 16.0 per cent, determined on 1.000 g by drying in an oven at 140 °C for 3 h.

#### ASSAY

Dissolve 0.100 g in 30 mL of *water R*, add 0.5 g of *hexamethylenetetramine R* and 0.1 mL of a 250 g/L solution of *nitric acid R*. Heat to 60 °C. Titrate with 0.05 M *lead nitrate* using 4-(2-pyridylazo)resorcinol monosodium salt *R* as indicator.

1 mL of 0.05 M *lead nitrate* is equivalent to 10.30 mg of Na<sub>2</sub>MoO<sub>4</sub>.

01/2008:1996

## SODIUM NITRITE

### Natrii nitris

NaNO<sub>2</sub> *M<sub>r</sub>* 69.0  
[7632-00-0]

#### DEFINITION

*Content:* 98.5 per cent to 100.5 per cent (dried substance).

#### CHARACTERS

*Appearance:* colourless crystals or mass or yellowish rods, hygroscopic.

*Solubility:* freely soluble in water, soluble in alcohol.

#### IDENTIFICATION

- Dilute 1 mL of solution S1 (see Tests) to 25 mL with *water R*. To 0.1 mL of the solution add 1 mL of *sulfanilic acid solution RI*. Allow to stand for 2-3 min. Add 1 mL of *β-naphthol solution R* and 1 mL of *dilute sodium hydroxide solution R*. An intense red colour develops.
- To 1 mL of the solution prepared for identification test A add 3 mL of a 20 g/L solution of *phenazone R* and 0.4 mL of *dilute sulfuric acid R*. An intense green colour develops.
- To 0.15 mL of solution S1, add 0.35 mL of *water R*. The solution gives reaction (b) of sodium (2.3.1).

#### TESTS

**Solution S1.** Dissolve 2.5 g in *carbon dioxide-free water R* and dilute to 50 mL with the same solvent.

**Solution S2.** Dissolve 3 g in *distilled water R*. Cautiously add 10 mL of *nitric acid R* and evaporate to dryness. Dissolve the residue in 10 mL of *distilled water R*, neutralise with *dilute sodium hydroxide solution R* and dilute to 30 mL with *distilled water R*.

**Appearance of solution.** Solution S1 is clear (2.2.1) and not more intensely coloured than reference solution B<sub>6</sub> (2.2.2, Method II).

**Acidity or alkalinity.** To 10 mL of solution S1, add 0.05 mL of *phenol red solution R*. Add 0.1 mL of 0.01 M *sodium hydroxide*. The solution is red. Add 0.3 mL of 0.01 M *hydrochloric acid*. The solution is yellow.

**Chlorides (2.4.4):** maximum 50 ppm.

Dilute 10 mL of solution S2 to 15 mL with *water R*. The solution complies with the limit test for chlorides.

**Sulfates (2.4.13):** maximum 200 ppm.

Dilute 7.5 mL of solution S2 to 15 mL with *distilled water R*. The solution complies with the limit test for sulfates.

**Heavy metals (2.4.8):** maximum 20 ppm.

Dilute 10 mL of solution S2 to 20 mL with *water R*. 12 mL of the solution complies with limit test A. Prepare the standard using *lead standard solution (1 ppm Pb) R*.

**Loss on drying (2.2.32):** maximum 1.0 per cent, determined on 1.000 g by drying *in vacuo*.

#### ASSAY

Dissolve 0.400 g in 100.0 mL of *water R*. Introduce 20.0 mL of the solution, while stirring continuously and keeping the tip of the pipette below the surface of the liquid, into a conical flask containing 30.0 mL of 0.1 M *cerium sulfate*. Immediately stopper the flask and allow to stand for 2 min. Add 10 mL of a 200 g/L solution of *potassium iodide R* and 2 mL of *starch solution R*.

While stirring continuously, titrate with 0.1 M *sodium thiosulfate* until the blue colour disappears. Carry out a blank titration.

1 mL of 0.1 M *cerium sulfate* is equivalent to 3.45 mg of NaNO<sub>2</sub>.

#### STORAGE

In an airtight container.

## SODIUM NITROPRUSSIDE

### Natrii nitroprussias

Na<sub>2</sub>[Fe(CN)<sub>5</sub>(NO)]·2H<sub>2</sub>O *M<sub>r</sub>* 298.0  
[13755-38-9]

#### DEFINITION

Sodium pentacyanonitrosylferrate (III) dihydrate.

*Content:* 99.0 per cent to 100.5 per cent (anhydrous substance).

#### CHARACTERS

*Appearance:* reddish-brown powder or crystals.

*Solubility:* freely soluble in water, slightly soluble in ethanol (96 per cent).

#### IDENTIFICATION

- Ultraviolet and visible absorption spectrophotometry (2.2.25).

*Test solution.* Dissolve 0.700 g in *water R* and dilute to 100.0 mL with the same solvent. Examine the solution immediately after preparation.

*Spectral range:* 350-600 nm.

*Absorption maximum:* at 395 nm.

*Shoulder:* at about 510 nm.

*Absorption minimum*: at 370 nm.

*Specific absorbance at the absorption maximum*: 0.65 to 0.80.

- B. Dissolve about 20 mg in 2 mL of *water R* and add 0.1 mL of *sodium sulfide solution R*. A deep violet-red colour is produced.
- C. Dissolve 50 mg in 1 mL of *water R* and acidify the solution by the addition of *hydrochloric acid R*. Place a drop of the solution in an oxidising flame. A persistent yellow colour is produced.

#### TESTS

**Insoluble matter**: maximum 100 ppm.

Dissolve 10 g without heating in 50 mL of *water R*. Allow to stand for 30 min and filter through a sintered-glass filter (16) (2.1.2). Wash the filter with cold *water R* until the filtrate is colourless. Dry the residue on the filter at 105 °C. The residue weighs a maximum of 1 mg.

**Chlorides** (2.4.4): maximum 200 ppm.

In a metallic crucible (nickel) mix 1.0 g with 8 mL of a 200 g/L solution of *sodium hydroxide R*. Heat slowly and evaporate carefully to dryness over a small flame, then heat to a dull red colour for 30 min. Allow to cool and transfer the solid residue with 3 quantities, each of 8 mL, of *dilute sulfuric acid R*.

Filter the sulfuric acid extracts on a filter paper and collect the filtrates. Render the filtrate acid to *litmus paper R* by adding, if necessary, a few drops of *dilute sulfuric acid R*. Wash the crucible and the filter paper with 3 quantities, each of 10 mL, of *water R*, add the washings to the main sulfuric acid solution and dilute to 60 mL with *water R*. Mix.

**Ferricyanides**: maximum 200 ppm.

Dissolve 1.25 g in *acetate buffer solution pH 4.6 R* and dilute to 50.0 mL with the same buffer solution. Use three 50 mL volumetric flasks (A, B, C). To flask B add 1.0 mL of *ferricyanide standard solution (50 ppm Fe(CN)<sub>6</sub><sup>3-</sup> R*. To flasks A and B add 1 mL of a 5 g/L solution of *ferrous ammonium sulfate R*. To the 3 flasks add 10.0 mL of the solution of the substance to be examined. Dilute the contents of each flask to 50.0 mL with *water R*. Allow to stand for 30 min. The absorbance (2.2.25) of the solution in flask A measured at 720 nm using the solution in flask C as the compensation liquid is not greater than the absorbance of the solution in flask B measured at 720 nm using the solution in flask A as the compensation liquid.

**Ferrocyanides**: maximum 200 ppm.

Dissolve 4.0 g in *water R* and dilute to 100.0 mL with the same solvent. Use three 50 mL volumetric flasks (A, B, C). To flask B add 2.0 mL of *ferrocyanide standard solution (100 ppm Fe(CN)<sub>6</sub><sup>4-</sup> R*. To flasks A and B add 1 mL of *ferric chloride solution R2*. To the 3 flasks add 25.0 mL of the solution of the substance to be examined. Dilute the contents of each flask to 50.0 mL with *water R*. Allow to stand for 30 min. The absorbance (2.2.25) of the solution in flask A measured at 695 nm using the solution in flask C as the compensation liquid is not greater than the absorbance of the solution in flask B measured at 695 nm using the solution in flask A as the compensation liquid.

**Sulfates**: maximum 100 ppm.

*Test solution*. Dissolve 3.6 g in 120 mL of *distilled water R*, add with mixing 4 mL of *sulfate standard solution (10 ppm SO<sub>4</sub><sup>2-</sup> R* and 20 mL of a 250 g/L solution of *cupric chloride R* and dilute to 150.0 mL with *distilled water R*. Allow to stand for 16 h and filter or centrifuge until a clear light-blue solution is obtained.

*Reference solution*. To 40 mL of *sulfate standard solution (10 ppm SO<sub>4</sub><sup>2-</sup> R* add 80 mL of *distilled water R* and 12-13 mL of a 250 g/L solution of *cupric chloride R*. Dilute to 150.0 mL with *distilled water R*. The volume of cupric chloride solution added is such that the colour of the final solution matches that of the test solution.

Allow the solutions to stand. Filter both solutions, discarding the first 25 mL of filtrate. To 100 mL of each filtrate, add 0.5 mL of *acetic acid R*. Mix and add 2 mL of a 250 g/L solution of *barium chloride R* and mix again. The test solution is not more opalescent than the reference solution.

**Water** (2.5.12): 9.0 per cent to 15.0 per cent, determined on 0.250 g.

#### ASSAY

Dissolve 0.250 g in 100 mL of *water R* and add 0.1 mL of *dilute sulfuric acid R*. Titrate with 0.1 M *silver nitrate*, determining the end-point potentiometrically (2.2.20) with a silver-mercurous sulfate electrode system.

1 mL of 0.1 M *silver nitrate* is equivalent to 13.10 mg of Na<sub>2</sub>[Fe(CN)<sub>5</sub>(NO)].

#### STORAGE

Protected from light.

01/2008:1997  
corrected 6.0

## SODIUM PERBORATE, HYDRATED

### Natrii perboras hydricus

NaBO<sub>3</sub>·4H<sub>2</sub>O or NaBO<sub>2</sub>·H<sub>2</sub>O<sub>2</sub>·3H<sub>2</sub>O

*M<sub>r</sub>* 153.9

#### DEFINITION

*Content*: 96.0 per cent to 103.0 per cent.

#### CHARACTERS

*Appearance*: colourless, prismatic crystals or white or almost white powder, stable in the crystalline form.

*Solubility*: sparingly soluble in water, with slow decomposition. It dissolves in dilute mineral acids.

#### IDENTIFICATION

- A. Mix 1 mL of a saturated solution with a mixture of 1 mL of *dilute sulfuric acid R* and 0.2 mL of a 70 g/L solution of *potassium dichromate R*, shake with 2 mL of *ether R* and allow to stand. A blue colour is produced in the ether layer.
- B. The mixture obtained by treating about 100 mg with 0.1 mL of *sulfuric acid R* and 5 mL of *methanol R* burns with a greenish flame when ignited.
- C. It gives reaction (a) of sodium (2.3.1).

#### TESTS

**Chlorides** (2.4.4): maximum 330 ppm.

Dissolve 0.15 g in 15 mL of *water R*. The solution complies with the limit test for chlorides.

**Sulfates** (2.4.13): maximum 1.2 per cent.

Dissolve 0.13 g in 150 mL of *distilled water R*. 15 mL of the solution complies with the limit test for sulfates.

**Iron** (2.4.9): maximum 20 ppm.

Dissolve 2.5 g in 10 mL of *dilute hydrochloric acid R* with heating, evaporate to dryness, with stirring, and dissolve the residue in 25 mL of hot *water R*. Dilute 5 mL of the obtained solution to 10 mL with *water R*. The solution complies with the limit test for iron.

**Heavy metals** (2.4.8): maximum 10 ppm.

12 mL of the solution obtained in the test for iron complies with limit test A. Prepare the standard using *lead standard solution (1 ppm Pb) R*.

## ASSAY

Dissolve 0.300 g in 50.0 mL of *water R*. Dilute 10.0 mL of the solution to 50 mL with *water R* and add 10 mL of *dilute sulfuric acid R*. Titrate with 0.02 M *potassium permanganate*.

1 mL of 0.02 M *potassium permanganate* is equivalent to 7.693 mg of  $\text{NaH}_8\text{BO}_7$ .

## STORAGE

In an airtight container.

04/2008:2183

## SODIUM PHENYL BUTYRATE

## Natrii phenylbutyras

$\text{C}_{10}\text{H}_{11}\text{NaO}_2$   
[1716-12-7]

$M_r$  186.2

## DEFINITION

Sodium 4-phenylbutanoate.

*Content*: 99.0 per cent to 101.0 per cent (anhydrous substance).

## CHARACTERS

*Appearance*: white or yellowish-white powder.

*Solubility*: freely soluble in water and in methanol, practically insoluble in methylene chloride.

## IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

*Comparison*: *sodium phenylbutyrate CRS*.

B. Dissolve 0.15 g in 2 mL of *water R*. The solution gives reaction (a) of sodium (2.3.1).

## TESTS

**pH** (2.2.3): 6.5 to 7.5.

Dissolve 0.20 g in *carbon dioxide-free water R* and dilute to 10 mL with the same solvent.

**Impurity C**. Gas chromatography (2.2.28).

*Silylation solution*. To 2 mL of *N,O-bis(trimethylsilyl)tri-fluoroacetamide R* add 0.04 mL of *chlorotrimethylsilane R* and mix.

*Test solution*. Dissolve 50.0 mg of the substance to be examined in 3 mL of *water R* and add 0.5 mL of *hydrochloric acid R*. Extract with 2 quantities, each of 5 mL, of *methylene chloride R*. Evaporate the combined methylene chloride extracts to dryness in a vial with a screw cap and add 0.5 mL of the silylation solution. Seal the vial and heat at  $70 \pm 5$  °C for 20 min.

*Reference solution (a)*. Dissolve 5.0 mg of *sodium phenylbutyrate impurity C CRS* in *methylene chloride R* and dilute to 10.0 mL with the same solvent.

*Reference solution (b)*. Dilute 1.0 mL of reference solution (a) to 10.0 mL with *methylene chloride R*. Place 1.0 mL of this solution in a vial with a screw cap, evaporate to dryness and add 0.5 mL of the silylation solution. Seal the vial and heat at  $70 \pm 5$  °C for 20 min.

*Reference solution (c)*. Dissolve 10 mg of the substance to be examined in 25 mL of *water R*. To 3 mL of this solution add 0.1 mL of *hydrochloric acid R*. Extract with 2 quantities, each of 5 mL, of *methylene chloride R*. Combine the methylene chloride extracts in a vial with a screw cap and add 2 mL of reference solution (a). Evaporate to dryness and add 0.5 mL of the silylation solution. Seal the vial and heat at  $70 \pm 5$  °C for 20 min.

## Column:

- *material*: fused silica;
- *size*:  $l = 25$  m,  $\varnothing = 0.25$  mm;
- *stationary phase*: *poly(dimethyl)(diphenyl)siloxane R* (film thickness 1.0  $\mu\text{m}$ ).

*Carrier gas*: *helium for chromatography R*.

*Flow rate*: 0.9 mL/min.

*Split ratio*: 1:100.

## Temperature:

	Time (min)	Temperature (°C)
Column	0 - 5	50
	5 - 27	50 → 270
	27 - 32	270
Injection port		270
Detector		270

*Detection*: flame ionisation.

*Injection*: 1  $\mu\text{L}$ .

*Relative retention* with reference to phenylbutyrate (retention time = about 20 min): *impurity C* = about 0.98.

*System suitability*: reference solution (c):

- *resolution*: minimum 3.0 between the peaks due to *impurity C* and phenylbutyrate.

## Limit:

- *impurity C*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.1 per cent).

**Related substances**. Liquid chromatography (2.2.29).

*Test solution*. Dissolve 0.20 g of the substance to be examined in 10 mL of *methanol R* and dilute to 50.0 mL with *water R*.

*Reference solution (a)*. Dissolve 4.0 mg of  *$\alpha$ -tetralone R* (*impurity B*) in 10 mL of *methanol R* and dilute to 200.0 mL with the same solvent.

*Reference solution (b)*. Dissolve 0.20 g of the substance to be examined in 10 mL of *methanol R*, add 1 mL of reference solution (a) and dilute to 50 mL with *water R*.

*Reference solution (c)*. Dilute 1.0 mL of reference solution (a) to 50.0 mL with *water R*.

*Reference solution (d)*. Dissolve 5.0 mg of *3-benzoylpropionic acid R* (*impurity A*) in 2.5 mL of *methanol R* and dilute to 50.0 mL with the same solvent. Dilute 1.0 mL of this solution to 50.0 mL with *water R*.

## Column:

- *size*:  $l = 0.25$  m,  $\varnothing = 4.6$  mm;
- *stationary phase*: *base-deactivated end-capped octadecylsilyl silica gel for chromatography R* (5  $\mu\text{m}$ ).

*Mobile phase*: *glacial acetic acid R*, *methanol R*, *water R* (1:49:50 V/V/V).

*Flow rate*: 1.3 mL/min.

*Detection*: spectrophotometer at 245 nm.

*Injection*: 20  $\mu\text{L}$  of the test solution and reference solutions (b), (c) and (d).

*Run time*: twice the retention time of phenylbutyrate.

*Relative retention* with reference to phenylbutyrate (retention time = about 17 min): *impurity A* = about 0.3; *impurity B* = about 0.7.

*System suitability*: reference solution (b):

- *resolution*: minimum 6 between the peaks due to *impurity B* and phenylbutyrate.

## Limits:

- *impurity A*: not more than twice the area of the corresponding peak in the chromatogram obtained with reference solution (d) (0.1 per cent);

- *impurity B*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.01 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (d) (0.05 per cent);
- *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (d) (0.1 per cent);
- *disregard limit of impurities other than B*: 0.6 times the area of the principal peak in the chromatogram obtained with reference solution (d) (0.03 per cent).

**Heavy metals** (2.4.8): maximum 10 ppm.

Dissolve 2.0 g in a mixture of 25 volumes of *water R* and 75 volumes of *ethanol (96 per cent) R* and dilute to 20 mL with the same mixture of solvents. 12 mL of the solution complies with test B. Prepare the reference solution using lead standard solution (1 ppm Pb) obtained by diluting *lead standard solution (100 ppm Pb) R* with a mixture of 25 volumes of *water R* and 75 volumes of *ethanol (96 per cent) R*.

**Water** (2.5.12): maximum 0.5 per cent, determined on 2.00 g.

#### ASSAY

Disperse 0.150 g in 50 mL of *anhydrous acetic acid R*. The opalescence of the solution disappears during the titration. Titrate with 0.1 M *perchloric acid*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *perchloric acid* is equivalent to 18.62 mg of  $C_{10}H_{11}NaO_2$ .

#### IMPURITIES

*Specified impurities: A, B, C.*

A. 4-oxo-4-phenylbutanoic acid (3-benzoylpropionic acid),

B. 3,4-dihydronaphthalen-1(2H)-one ( $\alpha$ -tetralone),

C. 4-cyclohexylbutanoic acid.

*Solubility*: freely soluble in water, slightly soluble in ethanol 96 per cent.

#### IDENTIFICATION

*First identification: A, E.*

*Second identification: B, C, D, E.*

A. Infrared absorption spectrophotometry (2.2.24).

*Comparison: sodium picosulfate CRS.*

B. Thin-layer chromatography (2.2.27).

*Test solution.* Dissolve 20 mg of the substance to be examined in *methanol R* and dilute to 5 mL with the same solvent.

*Reference solution.* Dissolve 20 mg of *sodium picosulfate CRS* in *methanol R* and dilute to 5 mL with the same solvent.

*Plate: TLC silica gel GF<sub>254</sub> plate R.*

*Mobile phase: anhydrous formic acid R, water R, methanol R, ethyl acetate R (2.5:12.5:25:60 V/V/V/V).*

*Application: 5  $\mu$ L.*

*Development: over half of the plate.*

*Drying: in a current of hot air for 15 min.*

*Detection: examine in ultraviolet light at 254 nm.*

*Results:* the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

C. To 5 mL of solution S (see Tests) add 1 mL of *dilute hydrochloric acid R* and heat to boiling. Add 1 mL of *barium chloride solution R1*. A white precipitate is formed.

D. To about 10 mg add 3 mL of *sulfuric acid R* and 0.1 mL of *potassium dichromate solution R1*. A violet colour develops.

E. Solution S gives reaction (a) of sodium (2.3.1).

#### TESTS

**Solution S.** Dissolve 2.5 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 50 mL with the same solvent.

**Appearance of solution.** Solution S is clear (2.2.1) and not more intensely coloured than reference solution GY<sub>7</sub> (2.2.2, *Method II*).

**Acidity or alkalinity.** To 10 mL of solution S add 0.05 mL of *phenolphthalein solution R*. The solution is colourless. Not more than 0.25 mL of 0.01 M *sodium hydroxide* is required to change the colour of the indicator to pink.

**Related substances.** Liquid chromatography (2.2.29).

*Test solution.* Dissolve 50 mg of the substance to be examined in the mobile phase and dilute to 100.0 mL with the mobile phase.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 10.0 mL of this solution to 100.0 mL with the mobile phase.

*Reference solution (b).* Dissolve the contents of a vial of *picosulfate for system suitability CRS* (containing impurities A and B) in 1.0 mL of the mobile phase.

*Column:*

– *size: l* = 0.25 m,  $\varnothing$  = 4.0 mm;

– *stationary phase:* spherical *end-capped octadecylsilyl silica gel for chromatography R1* (5  $\mu$ m);

– *temperature:* 40 °C.

*Mobile phase:* dissolve 2.3 g of *disodium hydrogen phosphate dihydrate R* in 800 mL of *water for chromatography R*, add 0.2 g of *cetyltrimethylammonium bromide R*, adjust to pH 7.5 with *phosphoric acid R* and dilute to 1000 mL with *water for chromatography R*; mix 550 mL of this solution and 450 mL of *acetonitrile R* (if necessary vary the buffer/acetonitrile proportion in 10 mL increments in order to fulfil the resolution requirement).

07/2009:1031

## SODIUM PICOSULFATE

### Natrii picosulfas

$C_{18}H_{13}NNa_2O_8S_2 \cdot H_2O$

$M_r$  499.4

#### DEFINITION

4,4'-(Pyridin-2-yl)methylene]diphenyl bis(sodium sulfate) monohydrate.

*Content:* 98.5 per cent to 100.5 per cent (anhydrous substance).

#### CHARACTERS

*Appearance:* white or almost white, crystalline powder.

Flow rate: 1.0 mL/min.

Detection: spectrophotometer at 263 nm.

Injection: 40 µL.

Run time: twice the retention time of picosulfate.

Identification of impurities: use the chromatogram supplied with *picosulfate for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A and B.

Relative retention with reference to picosulfate (retention time = about 7.4 min): impurity B = about 0.5; impurity A = about 0.7.

System suitability: reference solution (b):

- resolution: minimum 4.0 between the peaks due to impurities B and A.

Limits:

- correction factors: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 0.7; impurity B = 0.5;
- impurities A, B: for each impurity, not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- unspecified impurities: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- total: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- disregard limit: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Chlorides** (2.4.4): maximum 200 ppm.

Dilute 5 mL of solution S to 15 mL with *water R*.

**Sulfates** (2.4.13): maximum 400 ppm.

Dilute 7.5 mL of solution S to 15 mL with *distilled water R*.

**Water** (2.5.12): 3.0 per cent to 5.0 per cent, determined on 0.500 g.

ASSAY

Dissolve 0.400 g in 80 mL of *methanol R*. Titrate with 0.1 M *perchloric acid*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *perchloric acid* is equivalent to 48.14 mg of  $C_{18}H_{13}NNa_2O_8S_2$ .

IMPURITIES

Specified impurities: A, B.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use* (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): C.

A. R =  $SO_3Na$ : 4-[(*RS*)-(4-hydroxyphenyl)(pyridin-2-yl)methyl]phenyl sodium sulfate,

B. R = H: 4,4'-[(pyridin-2-yl)methylene]diphenol,

C. 2-[(*RS*)-(pyridin-2-yl)[4-(sulfonatoxy)phenyl]methyl]phenyl disodium sulfate.

01/2009:1909

## SODIUM POLYSTYRENE SULFONATE

### Natrii polystyrenesulfonas

#### DEFINITION

Polystyrene sulfonate resin prepared in the sodium form.

*Exchange capacity*: 2.8 mmol to 3.4 mmol of potassium per gram (dried substance).

*Content*: 9.4 per cent to 11.0 per cent of Na (dried substance).

#### CHARACTERS

*Appearance*: almost white or light brown powder.

*Solubility*: practically insoluble in water, in ethanol (96 per cent) and in methylene chloride.

#### IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

*Preparation*: discs using finely ground substance.

*Comparison*: *Ph. Eur. reference spectrum of sodium polystyrene sulfonate*.

B. Suspend 0.1 g in *water R*, add 2 mL of a 150 g/L solution of *potassium carbonate R*, and heat to boiling. Allow to cool and filter. To the filtrate add 4 mL of *potassium pyroantimonate solution R* and heat to boiling. Allow to cool in iced water and if necessary rub the inside of the test-tube with a glass rod. A dense white precipitate is formed.

#### TESTS

**Styrene**. Liquid chromatography (2.2.29).

*Test solution*. Shake 10.0 g of the substance to be examined with 10 mL of *acetone R* for 30 min, centrifuge and use the supernatant liquid.

*Reference solution*. Dissolve 10 mg of *styrene R* in *acetone R* and dilute to 100 mL with the same solvent. Dilute 1 mL of this solution to 100 mL with *acetone R*.

*Column*:

- size:  $l = 0.25$  m,  $\varnothing = 4$  mm;
- stationary phase: octadecylsilyl silica gel for chromatography R (5 µm).

*Mobile phase*: *acetonitrile R*, *water R* (1:1 V/V).

*Flow rate*: 2 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 20 µL.

*Limit*:

- *styrene*: not more than the area of the principal peak in the chromatogram obtained with the reference solution (1 ppm).

**Calcium**: maximum 0.10 per cent.

Atomic emission spectrometry (2.2.22, *Method I*).

*Test solution*. To 1.10 g add 5 mL of *hydrochloric acid R*, heat to boiling, cool and add 10 mL of *water R*. Filter, wash the filter and residue with *water R* and dilute the filtrate and washing to 25.0 mL with *water R*.

*Reference solutions*. Prepare the reference solutions using *calcium standard solution (400 ppm Ca) R*, diluted as necessary with *water R*.

*Wavelength*: 422.7 nm.

01/2008:2041  
corrected 6.0**Potassium:** maximum 0.10 per cent.

Atomic emission spectrometry (2.2.22, Method I).

**Test solution.** To 1.10 g add 5 mL of *hydrochloric acid R*, heat to boiling, cool and add 10 mL of *water R*. Filter, wash the filter and residue with *water R* and dilute the filtrate and washings to 25.0 mL with *water R*.

**Reference solutions.** Prepare the reference solutions using *potassium standard solution (100 ppm K) R*, diluted as necessary with *water R*.

Wavelength: 766.5 nm.

**Heavy metals (2.4.8):** maximum 10 ppm.

Treat 1.0 g as described in limit test F. After the addition of the *buffer solution pH 3.5 R* and of the *thioacetamide reagent R*, dilute to 50 mL with *water R* and continue as described in limit test E, beginning at the words "mix and allow to stand for 10 min...".

Prepare the standard using 10 mL of *lead standard solution (1 ppm Pb) R*.

**Loss on drying (2.2.32):** maximum 7.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Microbial contamination (2.6.13)**

Bile-tolerant gram-negative bacteria: acceptance criterion less than 10<sup>2</sup> CFU/g.

## ASSAY

**Sodium.** Atomic emission spectrometry (2.2.22, Method I).

**Test solution.** In a platinum crucible moisten 0.90 g with a few drops of *sulfuric acid R*, ignite very gently and allow to cool. Moisten with a few drops of *sulfuric acid R* again, ignite at 800 ± 50 °C until a carbon-free ash is obtained and allow to cool.

Add 20 mL of *water R* to the crucible, warm gently on a water-bath until dissolution, cool, transfer quantitatively to a 100 mL graduated flask and dilute to 100.0 mL with *water R*. Dilute 5 mL of this solution to 1000.0 mL with *water R*.

**Reference solutions.** Prepare the reference solutions using *sodium standard solution (200 ppm Na) R*, diluted as necessary with *water R*.

Wavelength: 589 nm.

**Exchange capacity.** Atomic emission spectrometry (2.2.22, Method I).Solution A. 9.533 g/L solution of *potassium chloride R*.

**Test solution.** To 1.6 g of the substance to be examined in a dry 250 mL ground-glass-stoppered flask add 100 mL of solution A, stopper and shake for 15 min. Filter, discard the first 20 mL of the filtrate and dilute 4 mL of the filtrate to 1000 mL with *water R*.

**Reference solutions.** Prepare the reference solutions by diluting 0, 1, 2, 3 and 4 mL of solution A respectively and 4, 3, 2, 1 and 0 mL of a 7.63 g/L solution of *sodium chloride R* to 1000 mL with *water R*.

Wavelength: 766.5 nm.

Prepare a calibration curve using the reference solutions and calculate the potassium exchange capacity of the substance to be examined in millimoles per gram taking the concentration of potassium in solution A as 128 mmol/L of K per litre.

## STORAGE

In an airtight container.

## IMPURITIES

Specified impurities: A.

A. styrene.

## SODIUM PROPIONATE

Natrii propionas

C<sub>3</sub>H<sub>5</sub>NaO<sub>2</sub>  
[137-40-6]M<sub>r</sub> 96.1

## DEFINITION

Sodium propanoate.

Content: 99.0 per cent to 101.0 per cent (dried substance).

## CHARACTERS

**Appearance:** colourless crystals or, white or almost white powder, slightly hygroscopic.

**Solubility:** freely soluble in water, sparingly soluble in alcohol, practically insoluble in methylene chloride.

## IDENTIFICATION

First identification: A, D.

Second identification: B, C, D.

A. Infrared absorption spectrophotometry (2.2.24).

Comparison: Ph. Eur. reference spectrum of sodium propionate.

B. Dissolve 0.1 g in a mixture of 2 mL of *copper sulfate solution R* and 2 mL of *methylene chloride R*. Shake vigorously and allow to stand. Both the upper and the lower layer show a blue colour.

C. To 5 mL of solution S (see Tests) add 2 mL of 0.1 M *silver nitrate*. A white precipitate is formed.

D. Solution S gives reaction (a) of sodium (2.3.1).

## TESTS

**Solution S.** Dissolve 10 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100 mL with the same solvent.

**Appearance of solution.** Solution S is clear (2.2.1) and colourless (2.2.2, Method II).

pH (2.2.3): 7.8 to 9.2.

Dilute 1 mL of solution S to 5 mL with *water R*.**Related substances.** Liquid chromatography (2.2.29).

**Test solution.** Dissolve 0.250 g of the substance to be examined in *water R* and dilute to 100 mL with the same solvent.

**Reference solution (a).** Dissolve 10 mg of the substance to be examined and 10 mg of *sodium acetate R* in *water R* and dilute to 100 mL with the same solvent.

**Reference solution (b).** Dilute 1.0 mL of the test solution to 100 mL with *water R*.

Column:

– size: l = 0.25 m, Ø = 4.6 mm,

– stationary phase: octadecylsilyl silica gel for chromatography R (5 µm).

Mobile phase: dilute 1 mL of *phosphoric acid R* to 1000 mL with *water R*.

Flow rate: 1 mL/min.

Detection: spectrophotometer at 210 nm.

Injection: 20 µL.

System suitability: reference solution (a):

– resolution: minimum 5 between the peaks due to sodium acetate and sodium propionate.

**Limits:**

- **any impurity:** not more than 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent),
- **total:** not more than half the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent),
- **disregard limit:** 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Readily oxidisable substances.** In a ground-glass-stoppered conical flask introduce 10 g of the substance to be examined. Add 100 mL of *water R* and stir to dissolve. Add 25 mL of *sodium hypobromite solution R* and 10 mL of a 200 g/L solution of *sodium acetate R*, stopper the flask and allow to stand for 15 min. Add 10 mL of *potassium iodide solution R* and 20 mL of *hydrochloric acid R* while cooling. Titrate with 0.2 M *sodium thiosulfate*, adding 2 mL of *starch solution R* towards the end of the titration. Carry out a blank titration. The difference between the volumes used in the 2 titrations is not greater than 2.2 mL.

**Iron (2.4.9):** maximum 10 ppm.

10 mL of solution S complies with the limit test for iron.

**Heavy metals (2.4.8):** maximum 10 ppm.

12 mL of solution S complies with limit test A. Prepare the standard using *lead standard solution (1 ppm Pb) R*.

**Loss on drying (2.2.32):** maximum 0.5 per cent, determined on 1.000 g by heating in an oven at 105 °C for 3 h.

**ASSAY**

Dissolve 80.0 mg in 30 mL of *anhydrous acetic acid R*. Titrate with 0.1 M *perchloric acid*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *perchloric acid* is equivalent to 9.61 mg of C<sub>3</sub>H<sub>5</sub>NaO<sub>2</sub>.

**STORAGE**

In an airtight container.

01/2011:1263

## SODIUM PROPYL PARAHYDROXYBENZOATE

Propylis parahydroxybenzoas natricus

C<sub>10</sub>H<sub>11</sub>NaO<sub>3</sub>  
[35285-69-9]

M<sub>r</sub> 202.2

**DEFINITION**

Sodium 4-(propoxycarbonyl)phenolate.

**Content:** 94.0 per cent to 102.0 per cent (anhydrous substance).

**CHARACTERS**

**Appearance:** white or almost white, hygroscopic, crystalline powder.

**Solubility:** freely soluble in water, sparingly soluble in ethanol (96 per cent), practically insoluble in methylene chloride.

**IDENTIFICATION**

**First identification:** B, D.

**Second identification:** A, C, D.

A. Dissolve 0.5 g in 50 mL of *water R*. Immediately add 5 mL of *hydrochloric acid R1*. Filter and wash the precipitate with *water R*. Dry in *vacuo* at 80 °C for 2 h. The melting point (2.2.14) of the precipitate is 96 °C to 99 °C.

B. Infrared absorption spectrophotometry (2.2.24).

**Preparation:** precipitate obtained in identification test A.

**Comparison:** *propyl parahydroxybenzoate CRS*.

C. Thin-layer chromatography (2.2.27).

**Test solution (a).** Dissolve 0.10 g of the substance to be examined in 10 mL of *water R*. Immediately add 2 mL of *hydrochloric acid R* and shake with 50 mL of *ether R*. Evaporate the upper layer to dryness and take up the residue with 10 mL of *acetone R*.

**Test solution (b).** Dilute 1 mL of test solution (a) to 10 mL with *acetone R*.

**Reference solution (a).** Dissolve 10 mg of *propyl parahydroxybenzoate CRS* in *acetone R* and dilute to 10 mL with the same solvent.

**Reference solution (b).** Dissolve 10 mg of *ethyl parahydroxybenzoate CRS* in 1 mL of test solution (a) and dilute to 10 mL with *acetone R*.

**Plate:** *TLC octadecylsilyl silica gel F<sub>254</sub> plate R*.

**Mobile phase:** *glacial acetic acid R, water R, methanol R* (1:30:70 V/V/V).

**Application:** 5 µL of test solution (b) and reference solutions (a) and (b).

**Development:** over 2/3 of the plate.

**Drying:** in air.

**Detection:** examine in ultraviolet light at 254 nm.

**System suitability:** reference solution (b):

- the chromatogram shows 2 clearly separated principal spots.

**Results:** the principal spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

D. To 1 mL of solution S (see Tests) add 1 mL of *water R*. The solution gives reaction (a) of sodium (2.3.1).

**TESTS**

**Solution S.** Dissolve 5.0 g in *carbon dioxide-free water R* prepared from *distilled water R*, and dilute to 50 mL with the same solvent.

**Appearance of solution.** Solution S, examined immediately after preparation, is clear (2.2.1) and not more intensely coloured than reference solution BY<sub>6</sub> (2.2.2, *Method II*).

**pH (2.2.3):** 9.5 to 10.5.

Dilute 1 mL of solution S to 100 mL with *carbon dioxide-free water R*.

**Related substances.** Liquid chromatography (2.2.29).

**Test solution.** Dissolve 50.0 mg of the substance to be examined in 2.5 mL of *methanol R* and dilute to 50.0 mL with the mobile phase. Dilute 10.0 mL of the solution to 100.0 mL with the mobile phase.

**Reference solution (a).** Dissolve 5 mg of *ethyl parahydroxybenzoate CRS (impurity C)*, 5 mg of *4-hydroxybenzoic acid R (impurity A)* and 5 mg of the substance to be examined in the mobile phase and dilute to 100.0 mL with the mobile phase. Dilute 1.0 mL of the solution to 10.0 mL with the mobile phase.

**Reference solution (b).** Dissolve 50.0 mg of *propyl parahydroxybenzoate CRS* in 2.5 mL of *methanol R* and dilute to 50.0 mL with the mobile phase. Dilute 10.0 mL of the solution to 100.0 mL with the mobile phase.

**Reference solution (c).** Dilute 1.0 mL of the test solution to 20.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

**Column:**

- size:  $l = 0.15$  m,  $\varnothing = 4.6$  mm;
- stationary phase: end-capped octadecylsilyl silica gel for chromatography R (5  $\mu$ m).

Mobile phase: 6.8 g/L solution of potassium dihydrogen phosphate R, methanol R (35:65 V/V).

Flow rate: 1.3 mL/min.

Detection: spectrophotometer at 272 nm.

Injection: 10  $\mu$ L of the test solution and reference solutions (a) and (c).

Run time: 2.5 times the retention time of propyl parahydroxybenzoate.

Relative retention with reference to propyl parahydroxybenzoate (retention time = about 4.5 min): impurity A = about 0.3; impurity C = about 0.7.

System suitability: reference solution (a):

- resolution: minimum 5.0 between the peaks due to impurity C and propyl parahydroxybenzoate.

**Limits:**

- correction factor: for the calculation of content, multiply the peak area of impurity A by 1.4;
- impurity A: not more than 8 times the area of the principal peak in the chromatogram obtained with reference solution (c) (4.0 per cent);
- unspecified impurities: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.5 per cent);
- sum of impurities other than A: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (c) (1.0 per cent);
- disregard limit: 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.1 per cent).

**Chlorides** (2.4.4): maximum 350 ppm.

To 10 mL of solution S add 1 mL of nitric acid R and 30 mL of water R and dilute to 50 mL with water R. Shake and filter. Dilute 10 mL of the filtrate to 15 mL with water R. Prepare the standard using 14 mL of chloride standard solution (5 ppm Cl) R to which 1 mL of water R has been added.

**Sulfates** (2.4.13): maximum 300 ppm.

To 25 mL of solution S add 5 mL of distilled water R and 10 mL of hydrochloric acid R and dilute to 50 mL with distilled water R. Shake and filter. Dilute 10 mL of the filtrate to 15 mL with distilled water R.

**Heavy metals** (2.4.8): maximum 10 ppm.

2.0 g complies with test C. Prepare the reference solution using 2 mL of lead standard solution (10 ppm Pb) R.

**Water** (2.5.12): maximum 5.0 per cent, determined on 0.500 g.

**ASSAY**

Liquid chromatography (2.2.29) as described in the test for related substances with the following modification.

Injection: test solution and reference solution (b).

Calculate the percentage content of  $C_{10}H_{11}NaO_3$  from the declared content of propyl parahydroxybenzoate CRS, multiplied by a correction factor of 1.122.

**STORAGE**

In an airtight container.

**IMPURITIES**

Specified impurities: A.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph Substances for pharmaceutical use

(2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use): B, C, D.

A. 4-hydroxybenzoic acid,

B. methyl 4-hydroxybenzoate (methyl parahydroxybenzoate),

C. ethyl 4-hydroxybenzoate (ethyl parahydroxybenzoate),

D. butyl 4-hydroxybenzoate (butyl parahydroxybenzoate).

01/2008:0413  
corrected 6.0

**SODIUM SALICYLATE****Natrii salicylas**

$C_7H_5NaO_3$   
[54-21-7]

$M_r$ , 160.1

**DEFINITION**

Sodium 2-hydroxybenzenecarboxylate.

Content: 99.0 per cent to 101.0 per cent (dried substance).

**CHARACTERS**

Appearance: white or almost white, crystalline powder or small, colourless crystals or shiny flakes.

Solubility: freely soluble in water, sparingly soluble in ethanol (96 per cent).

**IDENTIFICATION**

First identification: A, C.

Second identification: B, C.

A. Infrared absorption spectrophotometry (2.2.24).

Comparison: sodium salicylate CRS.

B. Solution S (see Tests) gives the reactions of salicylates (2.3.1).

C. It gives reaction (b) of sodium (2.3.1).

**TESTS**

**Solution S.** Dissolve 5.0 g in carbon dioxide-free water R prepared from distilled water R and dilute to 50 mL with the same solvent.

**Appearance of solution.** Solution S is clear (2.2.1) and not more intensely coloured than reference solution BY<sub>6</sub> (2.2.2, Method II).

**Acidity.** To 20 mL of solution S add 0.1 mL of phenol red solution R. The solution is yellow. Not more than 2.0 mL of 0.01 M sodium hydroxide is required to change the colour of the indicator to violet-red.

**Chlorides** (2.4.4): maximum 200 ppm.

To 5 mL of solution S add 5 mL of *water R* and 10 mL of *dilute nitric acid R* and filter. Dilute 10 mL of the filtrate to 15 mL with *water R*.

**Sulfates** (2.4.13): maximum 600 ppm.

Dilute 2.5 mL of solution S to 15 mL with *distilled water R*.

**Heavy metals** (2.4.8): maximum 20 ppm.

Dissolve 1.6 g in 16 mL of a mixture of 5 volumes of *water R* and 10 volumes of *ethanol (96 per cent) R*. 12 mL of the solution complies with test B. Prepare the reference solution using lead standard solution (2 ppm Pb) obtained by diluting *lead standard solution (100 ppm Pb) R* with a mixture of 5 volumes of *water R* and 10 volumes of *ethanol (96 per cent) R*.

**Loss on drying** (2.2.32): maximum 0.5 per cent, determined on 1.00 g by drying in an oven at 105 °C.

#### ASSAY

Dissolve 0.130 g in 30 mL of *anhydrous acetic acid R*. Titrate with 0.1 M *perchloric acid*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *perchloric acid* is equivalent to 16.01 mg of  $C_7H_5NaO_3$ .

#### STORAGE

In an airtight container, protected from light.

01/2008:1677

## SODIUM SELENITE PENTAHYDRATE

### Natrii selenis pentahydricus

$Na_2SeO_3 \cdot 5H_2O$   
[26970-82-1]

*M*, 263.0

#### DEFINITION

*Content*: 98.5 per cent to 101.5 per cent.

#### CHARACTERS

*Appearance*: white or almost white, crystalline powder, hygroscopic.

*Solubility*: freely soluble in water, practically insoluble in ethanol (96 per cent).

#### IDENTIFICATION

- Dissolve 50 mg in 5 mL of a mixture of equal volumes of *dilute hydrochloric acid R* and *water R* and heat to boiling. Add 0.05 g of *ascorbic acid R*; a red precipitate is formed which may become black.
- Dissolve 50 mg in a mixture of 1 mL of *dilute hydrochloric acid R* and 5 mL of *water R*. Add 1 mL of *barium chloride solution R1*; the solution remains clear.
- It gives reaction (a) of sodium (2.3.1).
- It complies with the limits of the assay.

#### TESTS

**Solution S.** Dissolve 5.0 g in *carbon dioxide-free water R* and dilute to 50.0 mL with the same solvent.

**Appearance of solution.** Solution S is clear (2.2.1) and colourless (2.2.2, *Method II*).

**pH** (2.2.3): 9.8 to 10.8 for solution S.

**Chlorides** (2.4.4): maximum 50 ppm.

To 10 mL of solution S add 2 mL of *nitric acid R* and dilute to 15 mL with *water R*.

**Sulfates and selenates** (2.4.13): maximum 300 ppm (determined as sulfates).

Dissolve 0.5 g in 10 mL of *distilled water R*. Add 0.5 mL of *hydrochloric acid R1* and dilute to 15 mL with *distilled water R*.

**Iron**: maximum 50 ppm.

To 2 mL of solution S add 2 mL of a 200 g/L solution of *sulfosalicylic acid R*, 5 mL of *concentrated ammonia R* and dilute to 10 mL with *water R*. The solution is not more intensely coloured than a reference solution prepared in the same manner using 1 mL of *iron standard solution (10 ppm Fe) R*.

#### ASSAY

Dissolve 0.120 g in 50 mL of *water R*, add 7 mL of *glacial acetic acid R*, 25.0 mL of 0.1 M *sodium thiosulfate* and 0.5 g of *potassium iodide R*. Titrate immediately with 0.05 M *iodine solution* using *starch solution R* as indicator.

1 mL of 0.1 M *sodium thiosulfate* is equivalent to 6.575 mg of  $Na_2SeO_3 \cdot 5H_2O$ .

#### STORAGE

In an airtight container.

01/2008:0983

## SODIUM STARCH GLYCOLATE (TYPE A)

### Carboxymethylamylum natricum A

#### DEFINITION

Sodium salt of a cross-linked partly *O*-carboxymethylated potato starch.

*Content*: 2.8 per cent to 4.2 per cent of Na (*A*, 22.99) (substance washed with ethanol (80 per cent *V/V*) and dried).

#### CHARACTERS

*Appearance*: white or almost white, fine, free-flowing powder, very hygroscopic.

*Solubility*: practically insoluble in methylene chloride. It gives a translucent suspension in water.

*Examined under a microscope* it is seen to consist of: granules, irregularly shaped, ovoid or pear-shaped, 30-100 µm in size, or rounded, 10-35 µm in size; compound granules consisting of 2-4 components occur occasionally; the granules have an eccentric hilum and clearly visible concentric striations; between crossed nicol prisms, the granules show a distinct black cross intersecting at the hilum; small crystals are visible at the surface of the granules. The granules show considerable swelling in contact with water.

#### IDENTIFICATION

- pH (see Tests).
- Prepare with shaking and without heating a mixture of 4.0 g of the substance to be examined and 20 mL of *carbon dioxide-free water R*. The mixture has the appearance of a gel. Add 100 mL of *carbon dioxide-free water R* and shake. A suspension forms that settles after standing.
- To an acidified solution, add *iodinated potassium iodide solution R1*. The solution becomes blue or violet.
- Solution S2 (see Tests) gives reaction (a) of sodium (2.3.1).

#### TESTS

**Solution S1.** Centrifuge the suspension obtained in identification test B at 2500 *g* for 10 min. Collect carefully the supernatant liquid.

**Solution S2.** Place 2.5 g in a silica or platinum crucible and add 2 mL of a 500 g/L solution of *sulfuric acid R*. Heat on a water-bath, then cautiously over a naked flame, raising the temperature progressively, then incinerate in a muffle furnace at  $600 \pm 25$  °C. Continue heating until all black particles have disappeared. Allow to cool, add a few drops of *dilute sulfuric acid R*, heat and incinerate as above. Allow to cool, add a few drops of *ammonium carbonate solution R*, evaporate to dryness and incinerate cautiously. Allow to cool and dissolve the residue in 50 mL of *water R*.

01/2008:0984

**Appearance of solution S1.** Solution S1 is clear (2.2.1) and colourless (2.2.2, Method II).

**pH (2.2.3):** 5.5 to 7.5.

Disperse 1.0 g in 30 mL of *water R*.

**Sodium glycolate:** maximum 2.0 per cent. Carry out the test protected from light.

**Test solution.** Place 0.20 g in a beaker. Add 5 mL of *acetic acid R* and 5 mL of *water R*. Stir until dissolution is complete (about 10 min). Add 50 mL of *acetone R* and 1 g of *sodium chloride R*. Filter through a fast filter paper impregnated with *acetone R*, rinse the beaker and filter with *acetone R*. Combine the filtrate and washings and dilute to 100.0 mL with *acetone R*. Allow to stand for 24 h without shaking. Use the clear supernatant liquid.

**Reference solution.** Dissolve 0.310 g of *glycollic acid R*, previously dried *in vacuo* over *diphosphorus pentoxide R* at room temperature overnight, in *water R* and dilute to 500.0 mL with the same solvent. To 5.0 mL of this solution add 5 mL of *acetic acid R* and allow to stand for about 30 min. Add 50 mL of *acetone R* and 1 g of *sodium chloride R*. Filter through a fast filter paper impregnated with *acetone R*, rinse the beaker and filter with *acetone R*. Combine the filtrate and washings and dilute to 100.0 mL with *acetone R*. Allow to stand for 24 h without shaking. Use the clear supernatant liquid.

Heat 2.0 mL of the test solution on a water-bath for 20 min. Cool to room temperature and add 20.0 mL of *2,7-dihydroxynaphthalene solution R*. Shake and heat in a water-bath for 20 min. Cool under running water, transfer to a volumetric flask and dilute to 25.0 mL with *sulfuric acid R*, maintaining the flask under running water. Within 10 min, measure the absorbance at 540 nm (2.2.25) using *water R* as the compensation liquid. The absorbance of the solution prepared with the test solution is not greater than that of a solution prepared at the same time and in the same manner with 2.0 mL of the reference solution.

**Sodium chloride:** maximum 7.0 per cent.

Place 0.500 g in a beaker and suspend in 100 mL of *water R*. Add 1 mL of *nitric acid R*. Titrate with *0.1 M silver nitrate*, determining the end-point potentiometrically (2.2.20), using a silver indicator electrode.

1 mL of *0.1 M silver nitrate* is equivalent to 5.844 mg of NaCl.

**Iron (2.4.9):** maximum 20 ppm determined on 10 mL of solution S2.

**Heavy metals (2.4.8):** maximum 20 ppm.

1.0 g complies with test D. Prepare the reference solution using 2 mL of *lead standard solution (10 ppm Pb) R*.

**Loss on drying (2.2.32):** maximum 10.0 per cent, determined on 1.000 g by drying in an oven at 130 °C for 1.5 h.

**Microbial contamination.** It complies with the test for *Escherichia coli* and *Salmonella* (2.6.13).

#### ASSAY

Shake 1.000 g with 20 mL of *ethanol (80 per cent V/V) R*, stir for 10 min and filter. Repeat the operation until chloride has been completely extracted and verify the absence of chloride using *silver nitrate solution R2*. Dry the residue at 105 °C to constant mass. To 0.700 g of the dried residue, add 80 mL of *glacial acetic acid R* and heat under a reflux condenser for 2 h. Cool the solution to room temperature. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (2.2.20). Carry out a blank titration.

1 mL of *0.1 M perchloric acid* is equivalent to 2.299 mg of Na.

#### STORAGE

In an airtight container, protected from light.

## SODIUM STARCH GLYCOLATE (TYPE B)

### Carboxymethylamylum natricum B

#### DEFINITION

Sodium salt of a cross-linked partly *O*-carboxymethylated potato starch.

**Content:** 2.0 per cent to 3.4 per cent of Na (A, 22.99) (substance washed with ethanol (80 per cent V/V) and dried).

#### CHARACTERS

**Appearance:** white or almost white, fine, free-flowing powder, very hygroscopic.

**Solubility:** practically insoluble in methylene chloride. It gives a translucent suspension in water.

**Examined under a microscope** it is seen to consist of: granules, irregularly shaped, ovoid or pear shaped, 30-100 µm in size, or rounded, 10-35 µm in size; compound granules consisting of 2-4 components occur occasionally; the granules have an eccentric hilum and clearly visible concentric striations; between crossed nicol prisms, the granules show a distinct black cross intersecting at the hilum; small crystals are visible at the surface of the granules. The granules show considerable swelling in contact with water.

#### IDENTIFICATION

- pH (see Tests).
- Prepare with shaking and without heating a mixture of 4.0 g of the substance to be examined and 20 mL of *carbon dioxide-free water R*. The mixture has the appearance of a gel. Add 100 mL of *carbon dioxide-free water R* and shake. A suspension forms that settles after standing.
- To an acidified solution, add *iodinated potassium iodide solution R1*. The solution becomes blue or violet.
- Solution S2 (see Tests) gives reaction (a) of sodium (2.3.1).

#### TESTS

**Solution S1.** Centrifuge the suspension obtained in identification test B at 2500 *g* for 10 min. Collect carefully the supernatant liquid.

**Solution S2.** Place 2.5 g in a silica or platinum crucible and add 2 mL of a 500 g/L solution of *sulfuric acid R*. Heat on a water-bath, then cautiously over a naked flame, raising the temperature progressively, and then incinerate in a muffle furnace at 600 ± 25 °C. Continue heating until all black particles have disappeared. Allow to cool, add a few drops of *dilute sulfuric acid R* and heat and incinerate as above. Allow to cool, add a few drops of *ammonium carbonate solution R*, evaporate to dryness and incinerate cautiously. Allow to cool and dissolve the residue in 50 mL of *water R*.

**Appearance of solution S1.** Solution S1 is clear (2.2.1) and colourless (2.2.2, Method II).

**pH (2.2.3):** 3.0 to 5.0.

Disperse 1.0 g in 30 mL of *water R*.

**Sodium glycolate:** maximum 2.0 per cent. Carry out the test protected from light.

**Test solution.** Place 0.20 g in a beaker. Add 5 mL of *acetic acid R* and 5 mL of *water R*. Stir until dissolution is complete (about 10 min). Add 50 mL of *acetone R* and 1 g of *sodium chloride R*. Filter through a fast filter paper impregnated with *acetone R*, rinse the beaker and filter with *acetone R*. Combine the filtrate and washings and dilute to 100.0 mL with *acetone R*. Allow to stand for 24 h without shaking. Use the clear supernatant liquid.

**Reference solution.** Dissolve 0.310 g of *glycollic acid R*, previously dried *in vacuo* over *diphosphorus pentoxide R* at room temperature overnight, in *water R* and dilute to 500.0 mL with the same solvent. To 5.0 mL of this solution add 5 mL of

*acetic acid R* and allow to stand for about 30 min. Add 50 mL of *acetone R* and 1 g of *sodium chloride R*. Filter through a fast filter paper impregnated with *acetone R*, rinse the beaker and filter with *acetone R*. Combine the filtrate and washings and dilute to 100.0 mL with *acetone R*. Allow to stand for 24 h without shaking. Use the clear supernatant liquid.

Heat 2.0 mL of the test solution on a water-bath for 20 min. Cool to room temperature and add 20.0 mL of *2,7-dihydroxynaphthalene solution R*. Shake and heat in a water-bath for 20 min. Cool under running water, transfer quantitatively to a volumetric flask and dilute to 25.0 mL with *sulfuric acid R*, maintaining the flasks under running water. Within 10 min, measure the absorbance at 540 nm (2.2.25) using *water R* as the compensation liquid. The absorbance of the solution prepared with the test solution is not greater than that of a solution prepared at the same time and in the same manner with 2.0 mL of the reference solution.

**Sodium chloride:** maximum 7.0 per cent.

Place 0.500 g in a beaker and suspend in 100 mL of *water R*. Add 1 mL of *nitric acid R*. Titrate with *0.1 M silver nitrate*, determining the end-point potentiometrically (2.2.20) using a silver indicator electrode.

1 mL of *0.1 M silver nitrate* is equivalent to 5.844 mg of NaCl.

**Iron (2.4.9):** maximum 20 ppm determined on 10 mL of solution S2.

**Heavy metals (2.4.8):** maximum 20 ppm.

1.0 g complies with test D. Prepare the reference solution using 2 mL of *lead standard solution (10 ppm Pb) R*.

**Loss on drying (2.2.32):** maximum 10.0 per cent, determined on 1.000 g by drying in an oven at 130 °C for 1.5 h.

**Microbial contamination.** It complies with the test for *Escherichia coli* and *Salmonella* (2.6.13).

#### ASSAY

Shake 1.000 g with 20 mL of *ethanol (80 per cent V/V) R*, stir for 10 min and filter. Repeat the operation until chloride has been completely extracted and verify the absence of chloride using *silver nitrate R2*. Dry the residue at 105 °C to constant mass. To 0.700 g of the dried residue, add 80 mL of *glacial acetic acid R* and heat under a reflux condenser for 2 h. Cool the solution to room temperature. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (2.2.20). Carry out a blank titration.

1 mL of *0.1 M perchloric acid* is equivalent to 2.299 mg of Na.

#### STORAGE

In an airtight container, protected from light.

01/2008:1566  
corrected 6.0

## SODIUM STARCH GLYCOLATE (TYPE C)

### Carboxymethylamylum natricum C

#### DEFINITION

Sodium salt of a partly *O*-carboxymethylated starch, cross-linked by physical dehydration.

**Content:** 2.8 per cent to 5.0 per cent of Na (*A*, 22.99) (substance washed with ethanol (80 per cent *V/V*) and dried).

#### CHARACTERS

**Appearance:** white or almost white, fine, free-flowing powder, very hygroscopic.

**Microscopic examination:** it is seen to consist of granules, irregularly shaped, ovoid or pear-shaped, 30-100 µm in size, or rounded, 10-35 µm in size; compound granules consisting of 2-4 components occur occasionally; the granules have an eccentric hilum and clearly visible concentric striations; between crossed nicol prisms, the granules show a distinct

black cross intersecting at the hilum; small crystals are visible at the surface of the granules. The granules show considerable swelling in contact with water.

**Solubility:** soluble in water, practically insoluble in methylene chloride. It gives a translucent gel-like product in water.

#### IDENTIFICATION

A. pH (see Tests).

B. Prepare with shaking and without heating a mixture of 4.0 g of the substance to be examined and 20 mL of *carbon dioxide-free water R*. The mixture has the appearance of a gel. Add 100 mL of *carbon dioxide-free water R* and shake: the gel remains stable (difference from types A and B). Keep the gel for the tests for appearance of gel and pH.

C. To 5 mL of the gel obtained in identification test B add 0.05 mL of *iodine solution R1*. A dark blue colour is produced.

D. Solution S (see Tests) gives reaction (a) of sodium (2.3.1).

#### TESTS

**Solution S.** Place 2.5 g in a silica or platinum crucible and add 2 mL of a 500 g/L solution of *sulfuric acid R*. Heat on a water-bath, then cautiously over a naked flame, raising the temperature progressively, and then incinerate in a muffle furnace at 600 ± 25 °C. Continue heating until all black particles have disappeared. Allow to cool, add a few drops of *sulfuric acid R*, heat and incinerate as above. Allow to cool, add a few drops of *ammonium carbonate solution R*, evaporate to dryness and incinerate cautiously. Allow to cool and dissolve the residue in 50 mL of *water R*.

**Appearance of gel.** The gel obtained in identification test B is colourless (2.2.2, *Method II*).

**pH (2.2.3):** 5.5 to 7.5 for the gel obtained in identification test B.

**Sodium glycolate:** maximum 2.0 per cent. Carry out the test protected from light.

**Test solution.** Place 0.20 g in a beaker. Add 5 mL of *acetic acid R* and 5 mL of *water R*. Stir until dissolution is complete (about 10 min). Add 50 mL of *acetone R* and 1 g of *sodium chloride R*. Filter through a fast filter paper impregnated with *acetone R*, rinse the beaker and filter with *acetone R*. Combine the filtrate and washings and dilute to 100.0 mL with *acetone R*. Allow to stand for 24 h without shaking. Use the clear supernatant liquid.

**Reference solution.** Dissolve 0.310 g of *glycollic acid R*, previously dried *in vacuo* over *diphosphorus pentoxide R*, in *water R* and dilute to 500.0 mL with the same solvent. To 5.0 mL of this solution, add 5 mL of *acetic acid R* and allow to stand for about 30 min. Add 50 mL of *acetone R* and 1 g of *sodium chloride R* and dilute to 100.0 mL with *acetone R*.

Heat 2.0 mL of the test solution on a water-bath for 20 min. Cool to room temperature and add 20.0 mL of *2,7-dihydroxynaphthalene solution R*. Shake and heat on a water-bath for 20 min. Cool under running water, transfer to a volumetric flask and dilute to 25.0 mL with *sulfuric acid R*, maintaining the flask under running water. Within 10 min, measure the absorbance (2.2.25) at 540 nm using *water R* as the compensation liquid. The absorbance of the solution prepared with the test solution is not greater than that of a solution prepared at the same time and in the same manner with 2.0 mL of the reference solution.

**Sodium chloride:** maximum 1 per cent.

Shake 1.00 g with 20 mL of *ethanol (80 per cent V/V) R* for 10 min and filter. Repeat the operation 4 times. Dry the residue to constant mass at 100 °C and set aside for the assay. Combine the filtrates. Evaporate to dryness, take up the residue with *water R* and dilute to 25.0 mL with the same solvent. To 10.0 mL of the solution add 30 mL of *water R* and 5 mL of *dilute nitric acid R*. Titrate with *0.1 M silver nitrate*, determining the end-point potentiometrically (2.2.20), using a silver indicator electrode.

1 mL of 0.1 M silver nitrate is equivalent to 5.844 mg of NaCl.

**Iron** (2.4.9): maximum 20 ppm, determined on solution S.

**Heavy metals** (2.4.8): maximum 20 ppm.

1.0 g complies with test D. Prepare the reference solution using 2 mL of lead standard solution (10 ppm Pb) R.

**Loss on drying** (2.2.32): maximum 7.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 4 h.

**Microbial contamination.** It complies with the test for *Escherichia coli* and *Salmonella* (2.6.13).

#### ASSAY

To 0.500 g of the dried and crushed residue obtained in the test for sodium chloride add 80 mL of anhydrous acetic acid R and heat under a reflux condenser for 2 h. Cool the solution to room temperature. Titrate with 0.1 M perchloric acid, determining the end-point potentiometrically (2.2.20). Carry out a blank test.

1 mL of 0.1 M perchloric acid is equivalent to 2.299 mg of Na.

#### STORAGE

In an airtight container, protected from light.

corrected 7.0

## SODIUM STEARATE

### Natrii stearas

#### DEFINITION

Mixture of sodium salts of different fatty acids consisting mainly of stearic (octadecanoic) acid [C<sub>17</sub>H<sub>35</sub>COONa; M<sub>r</sub> 306.5] and palmitic (hexadecanoic) acid [C<sub>15</sub>H<sub>31</sub>COONa; M<sub>r</sub> 278.4].

#### Content:

- sodium: 7.4 per cent to 8.5 per cent (A, 22.99) (dried substance);
- stearic acid in the fatty acid fraction: minimum 40 per cent;
- sum of stearic acid and palmitic acid in the fatty acid fraction: minimum 90 per cent.

#### CHARACTERS

**Appearance:** white or yellowish, fine powder, greasy to the touch.

**Solubility:** slightly soluble in water and in ethanol (96 per cent).

#### IDENTIFICATION

**First identification:** C, D.

**Second identification:** A, B, D.

- A. Freezing point (2.2.18): minimum 53 °C for the residue obtained in the preparation of solution S (see Tests).
- B. Acid value (2.5.1): 195 to 210, determined on 0.200 g of the residue obtained in the preparation of solution S dissolved in 25 mL of the prescribed mixture of solvents.
- C. Examine the chromatograms obtained in the assay of stearic acid and palmitic acid.

**Results:** the 2 principal peaks in the chromatogram obtained with the test solution are similar in retention time and size to the 2 principal peaks in the chromatogram obtained with the reference solution.

- D. Solution S gives reaction (b) of sodium (2.3.1).

#### TESTS

**Solution S.** To 10.0 g add 100 mL of peroxide-free ether R and 80 mL of acetic acid R. Boil under a reflux condenser until dissolution is complete. Allow to cool. In a separating funnel, separate the aqueous layer and shake the ether layer with 2 quantities, each of 8 mL, of acetic acid R. Combine the aqueous layers, wash with 30 mL of peroxide-free ether R and dilute

to 100 mL with distilled water R (solution S). Evaporate the ether layers to dryness on a water-bath and dry the residue at 100-105 °C.

**Acidity or alkalinity.** Suspend 2.0 g in 50 mL of previously neutralised ethanol (96 per cent) R. Heat under reflux to dissolve and add 3 drops of phenolphthalein solution R; the solution is colourless. Not less than 0.60 mL and not more than 0.85 mL of 0.1 M sodium hydroxide is required to change the colour of the indicator.

**Chlorides** (2.4.4): maximum 0.2 per cent.

Dilute 0.25 mL of solution S to 15 mL with water R.

**Sulfates** (2.4.13): maximum 0.3 per cent.

Dilute 0.5 mL of solution S to 15 mL with distilled water R.

**Nickel:** maximum 5 ppm.

Atomic absorption spectrometry (2.2.23, Method II).

**Test solution.** Place 50.0 mg of the substance to be examined in a polytetrafluoroethylene digestion flask and add 0.5 mL of a mixture of 1 volume of heavy metal-free hydrochloric acid R and 5 volumes of heavy metal-free nitric acid R. Allow to digest at 170 °C for 5 h. Allow to cool. Dissolve the residue in water R and dilute to 5.0 mL with the same solvent.

**Reference solutions.** Prepare the reference solutions using nickel standard solution (10 ppm Ni) R, diluted as necessary with water R.

**Source:** nickel hollow-cathode lamp.

**Wavelength:** 232.0 nm.

**Atomisation device:** air-acetylene flame.

**Loss on drying** (2.2.32): maximum 5.0 per cent.

In a weighing glass introduce 1.0 g of previously washed sand R, dry at 105 °C and weigh. Add 0.500 g of the substance to be examined and 10 mL of ethanol (96 per cent) R. Evaporate at 80 °C and dry the residue at 105 °C for 4 h.

#### Microbial contamination

TAMC: acceptance criterion 10<sup>3</sup> CFU/g (2.6.12).

TYMC: acceptance criterion 10<sup>2</sup> CFU/g (2.6.12).

Absence of *Escherichia coli* (2.6.13).

Absence of *Salmonella* (2.6.13).

#### ASSAY

**Sodium.** Dissolve 0.250 g with gentle heating in a mixture of 5 mL of acetic anhydride R and 20 mL of anhydrous acetic acid R. Cool and add 20 mL of dioxan R. Titrate with 0.1 M perchloric acid, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M perchloric acid is equivalent to 2.299 mg of Na.

**Stearic acid and palmitic acid.** Gas chromatography (2.2.28): use the normalisation procedure.

**Test solution.** In a conical flask fitted with a reflux condenser, dissolve 0.10 g of the substance to be examined in 5 mL of boron trifluoride-methanol solution R. Boil under a reflux condenser for 10 min. Add 4 mL of heptane R through the condenser and boil again under a reflux condenser for 10 min. Allow to cool. Add 20 mL of saturated sodium chloride solution R. Shake and allow the layers to separate. Remove about 2 mL of the organic layer and dry over 0.2 g of anhydrous sodium sulfate R. Dilute 1.0 mL of the solution to 100.0 mL with heptane R.

**Reference solution.** Prepare the reference solution in the same manner as the test solution using 50.0 mg of palmitic acid CRS and 50.0 mg of stearic acid CRS instead of the substance to be examined.

#### Column:

- material: fused silica;
- size: l = 30 m, Ø = 0.32 mm;
- stationary phase: macrogol 20 000 R (film thickness 0.5 µm).

**Carrier gas:** helium for chromatography R.

Flow rate: 2.4 mL/min.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 2	70
	2 - 36	70 → 240
	36 - 41	240
Injection port		220
Detector		260

Detection: flame ionisation.

Injection: 1 µL.

Relative retention with reference to methyl stearate (retention time = about 40 min): methyl palmitate = about 0.88.

System suitability: reference solution:

– resolution: minimum 5.0 between the peaks due to methyl stearate and methyl palmitate.

Calculate the content of stearic acid and palmitic acid.

#### STORAGE

In an airtight container, protected from light.

07/2010:1567

## SODIUM STEARYL FUMARATE

### Natrii stearylis fumaras

C<sub>22</sub>H<sub>39</sub>NaO<sub>4</sub>  
[4070-80-8]

M<sub>r</sub> 390.5

#### DEFINITION

Sodium octadecyl (*E*)-butenedioate.

Content: 99.0 per cent to 101.5 per cent (anhydrous substance).

#### CHARACTERS

Appearance: white or almost white, fine powder with agglomerates of flat, circular particles.

Solubility: practically insoluble in water, slightly soluble in methanol, practically insoluble in acetone and in anhydrous ethanol.

#### IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

Comparison: sodium stearyl fumarate CRS.

#### TESTS

**Related substances.** Gas chromatography (2.2.28): use the normalisation procedure.

**Silylation solution.** To 2 mL of *N,O*-bis(trimethylsilyl)trifluoroacetamide *R* add 0.02 mL of chlorotrimethylsilane *R* and mix.

**Test solution.** Introduce 15.0 mg of the substance to be examined in a vial with a screw cap and add 1 mL of the silylation solution. Seal the vial and heat at about 70 °C for 1 h. After the reaction a precipitate remains in the vial; filter the solution through a nylon filter (pore size 0.45 µm).

**Reference solution.** Introduce 1.0 mg of sodium stearyl maleate CRS and 1.0 mg of sodium stearyl fumarate CRS into a vial with a screw cap and add 1 mL of the silylation solution. Seal the vial and heat at about 70 °C for 1 h.

Column:

- material: fused silica;
- size: *l* = 15 m, Ø = 0.53 mm;

– stationary phase: poly(dimethyl)siloxane *R* (film thickness 0.15 µm).

Carrier gas: helium for chromatography *R*.

Flow rate: 2 mL/min.

Split ratio: 1:25.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 1	180
	1 - 21	180 → 320
	21 - 26	320
Injection port		250
Detector		320

Detection: flame ionisation.

Injection: 2 µL.

Relative retention with reference to stearyl trimethylsilyl fumarate (retention time = about 9 min): stearyl alcohol = 0.30; stearyl trimethylsilyl ether = 0.35; palmityl trimethylsilyl fumarate = 0.80; heptadecyl trimethylsilyl fumarate = 0.85; stearyl trimethylsilyl maleate = 0.90; nonadecyl trimethylsilyl fumarate = 1.05; eicos-11-enyl trimethylsilyl fumarate = 1.15; distearyl fumarate = 2.25.

System suitability:

– resolution: minimum 1.5 between the peaks in the chromatogram obtained with the reference solution.

Limits:

- any impurity: maximum 0.5 per cent;
- total: maximum 5.0 per cent.

**Water** (2.5.12): maximum 5.0 per cent, determined on 0.250 g.

#### ASSAY

Dissolve 0.250 g, accurately weighed, in 10 mL of methylene chloride *R* and add 30 mL of anhydrous acetic acid *R*. Titrate with 0.1 M perchloric acid, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M perchloric acid is equivalent to 39.05 mg of C<sub>22</sub>H<sub>39</sub>NaO<sub>4</sub>.

#### FUNCTIONALITY-RELATED CHARACTERISTICS

This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient (see chapter 5.15). This section is a non-mandatory part of the monograph and it is not necessary to verify the characteristics to demonstrate compliance. Control of these characteristics can however contribute to the quality of a medicinal product by improving the consistency of the manufacturing process and the performance of the medicinal product during use. Where control methods are cited, they are recognised as being suitable for the purpose, but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.

The following characteristics may be relevant for sodium stearyl fumarate used as a lubricant in tablets and capsules.

**Particle-size distribution** (2.9.31).

**Specific surface area** (2.9.26, Method I).

01/2008:0099  
corrected 6.0

## SODIUM SULFATE, ANHYDROUS

### Natrii sulfas anhydricus

Na<sub>2</sub>SO<sub>4</sub>  
[7757-82-6]

M<sub>r</sub> 142.0

## DEFINITION

*Content*: 98.5 per cent to 101.0 per cent (dried substance).

01/2008:0100  
corrected 6.0

## CHARACTERS

*Appearance*: white or almost white powder, hygroscopic.

*Solubility*: freely soluble in water.

## IDENTIFICATION

A. It gives the reactions of sulfates (2.3.1).

B. It gives the reactions of sodium (2.3.1).

C. Loss on drying (see Tests).

## TESTS

**Solution S.** Dissolve 2.2 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100 mL with the same solvent.

**Appearance of solution.** Solution S is clear (2.2.1) and colourless (2.2.2, *Method II*).

**Acidity or alkalinity.** To 10 mL of solution S add 0.1 mL of *bromothymol blue solution RI*. Not more than 0.5 mL of 0.01 M *hydrochloric acid* or 0.01 M *sodium hydroxide* is required to change the colour of the indicator.

**Chlorides** (2.4.4): maximum 450 ppm.

5 mL of solution S diluted to 15 mL with *water R* complies with the limit test for chlorides.

**Calcium** (2.4.3): maximum 450 ppm, if intended for use in the manufacture of parenteral preparations.

10 mL of solution S diluted to 15 mL with *distilled water R* complies with the limit test for calcium.

**Iron** (2.4.9): maximum 90 ppm, if intended for use in the manufacture of parenteral preparations.

5 mL of solution S diluted to 10 mL with *water R* complies with the limit test for iron.

**Magnesium:** maximum 200 ppm, if intended for use in the manufacture of parenteral preparations.

To 10 mL of solution S add 1 mL of *glycerol (85 per cent) R*, 0.15 mL of *titan yellow solution R*, 0.25 mL of *ammonium oxalate solution R* and 5 mL of *dilute sodium hydroxide solution R* and shake. Any pink colour in the test solution is not more intense than that in a standard prepared at the same time in the same manner using a mixture of 5 mL of *magnesium standard solution (10 ppm Mg) R* and 5 mL of *water R*.

**Heavy metals** (2.4.8): maximum 45 ppm.

12 mL of solution S complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

**Loss on drying** (2.2.32): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 130 °C.

## ASSAY

Dissolve 0.100 g in 40 mL of *water R*. Add a mixture of 0.2 mL of 0.1 M *hydrochloric acid* and 80 mL of *methanol R*. Carry out a potentiometric titration (2.2.20), using 0.1 M *lead nitrate* and as indicator electrode a lead-selective electrode and as reference electrode a silver-silver chloride electrode.

1 mL of 0.1 M *lead nitrate* is equivalent to 14.20 mg of Na<sub>2</sub>SO<sub>4</sub>.

## STORAGE

Store in an airtight container.

## LABELLING

The label states, where applicable, that the substance is suitable for use in the manufacture of parenteral preparations.

## SODIUM SULFATE DECAHYDRATE

## Natrii sulfas decahydricus

Na<sub>2</sub>SO<sub>4</sub>·10H<sub>2</sub>O  
[7727-73-3]

M<sub>r</sub> 322.2

## DEFINITION

*Content*: 98.5 per cent to 101.0 per cent (dried substance).

## CHARACTERS

*Appearance*: white or almost white, crystalline powder or colourless, transparent crystals.

*Solubility*: freely soluble in water, practically insoluble in alcohol. It partly dissolves in its own water of crystallisation at about 33 °C.

## IDENTIFICATION

A. It gives the reactions of sulfates (2.3.1).

B. It gives the reactions of sodium (2.3.1).

C. Loss on drying (see Tests).

## TESTS

**Solution S.** Dissolve 5.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100 mL with the same solvent.

**Appearance of solution.** Solution S is clear (2.2.1) and colourless (2.2.2, *Method II*).

**Acidity or alkalinity.** To 10 mL of solution S add 0.1 mL of *bromothymol blue solution RI*. Not more than 0.5 mL of 0.01 M *hydrochloric acid* or 0.01 M *sodium hydroxide* is required to change the colour of the indicator.

**Chlorides** (2.4.4): maximum 200 ppm.

5 mL of solution S diluted to 15 mL with *water R* complies with the limit test for chlorides.

**Calcium** (2.4.3): maximum 200 ppm, if intended for use in the manufacture of parenteral preparations.

10 mL of solution S diluted to 15 mL with *distilled water R* complies with the limit test for calcium.

**Iron** (2.4.9): maximum 40 ppm, if intended for use in the manufacture of parenteral preparations.

5 mL of solution S diluted to 10 mL with *water R* complies with the limit test for iron.

**Magnesium:** maximum 100 ppm, if intended for use in the manufacture of parenteral preparations.

To 10 mL of solution S add 1 mL of *glycerol (85 per cent) R*, 0.15 mL of *titan yellow solution R*, 0.25 mL of *ammonium oxalate solution R* and 5 mL of *dilute sodium hydroxide solution R* and shake. Any pink colour in the test solution is not more intense than that in a standard prepared at the same time in the same manner using a mixture of 5 mL of *magnesium standard solution (10 ppm Mg) R* and 5 mL of *water R*.

**Heavy metals** (2.4.8): maximum 20 ppm.

12 mL of solution S complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

**Loss on drying** (2.2.32): 52.0 per cent to 57.0 per cent, determined on 1.000 g by drying at 30 °C for 1 h, then at 130 °C.

## ASSAY

Dissolve 0.250 g in 40 mL of *water R*. Add a mixture of 0.2 mL of 0.1 M hydrochloric acid and 80 mL of *methanol R*. Carry out a potentiometric titration (2.2.20), using 0.1 M lead nitrate and as indicator electrode a lead-selective electrode and as reference electrode a silver-silver chloride electrode.

1 mL of 0.1 M lead nitrate is equivalent to 14.20 mg of Na<sub>2</sub>SO<sub>4</sub>.

## LABELLING

The label states, where applicable, that the substance is suitable for use in the manufacture of parenteral preparations.

01/2008:0775  
corrected 7.0

## SODIUM SULFITE, ANHYDROUS

## Natrii sulfis anhydricus

Na<sub>2</sub>SO<sub>3</sub>  
[7757-83-7]

M<sub>r</sub> 126.0

## DEFINITION

*Content*: 95.0 per cent to 100.5 per cent of Na<sub>2</sub>SO<sub>3</sub>.

## CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: freely soluble in water, very slightly soluble in ethanol (96 per cent).

## IDENTIFICATION

- Solution S (see Tests) is slightly alkaline (2.2.4).
- To 5 mL of solution S add 0.5 mL of 0.05 M iodine. The solution is colourless and gives reaction (a) of sulfates (2.3.1).
- Solution S gives reaction (a) of sodium (2.3.1).
- It complies with the limits of the assay.

## TESTS

**Solution S.** Dissolve 5 g in *water R* and dilute to 100 mL with the same solvent.

**Solution S1.** To 10.0 g add 25 mL of *water R*. Shake until mostly dissolved, carefully and progressively add 15 mL of *hydrochloric acid R*. Heat to boiling. Cool and dilute to 100.0 mL with *water R*.

**Appearance of solution.** Solution S is clear (2.2.1) and colourless (2.2.2, *Method I*).

**Thiosulfates:** maximum 0.1 per cent.

To 2.00 g add 100 mL of *water R*. Shake, add 10 mL of *formaldehyde solution R* and 10 mL of *acetic acid R*. Allow to stand for 5 min. Add 0.5 mL of *starch solution R* and titrate with 0.05 M iodine. Carry out a blank titration. The difference between the volumes used in the titrations is not more than 0.15 mL.

**Iron (2.4.9):** maximum 10 ppm, determined on solution S1.

**Selenium:** maximum 10 ppm.

To 3.0 g add 10 mL of *formaldehyde solution R*, carefully and progressively add 2 mL of *hydrochloric acid R*. Heat on a water-bath for 20 min. Any pink colour in the solution is not more intense than that of a standard prepared at the same time and in the same manner using 1.0 g of the substance to be examined to which 0.2 mL of *selenium standard solution (100 ppm Se) R* has been added.

**Zinc:** maximum 25 ppm.

Atomic absorption spectrometry (2.2.23, *Method I*).

*Test solution.* Dilute 2.0 mL of solution S1 to 10.0 mL with *water R*.

*Reference solutions.* Prepare the reference solutions using *zinc standard solution (100 ppm Zn) R*, diluting with *water R*.

*Source:* zinc hollow-cathode lamp.

*Wavelength:* 213.9 nm.

*Atomisation device:* air-acetylene flame.

**Heavy metals (2.4.8):** maximum 10 ppm.

Evaporate 20 mL of solution S1 almost to dryness. Add 10 mL of *water R*, neutralise with *concentrated ammonia R* and dilute to 20 mL with *water R*. 12 mL of this solution complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

## ASSAY

Introduce 0.250 g into a 500 mL conical flask containing 50.0 mL of 0.05 M iodine. Shake until completely dissolved. Add 1 mL of *starch solution R* and titrate the excess of iodine with 0.1 M sodium thiosulfate. Carry out a blank titration. 1 mL of 0.05 M iodine is equivalent to 6.30 mg of Na<sub>2</sub>SO<sub>3</sub>.

01/2008:0776  
corrected 7.0

## SODIUM SULFITE HEPTAHYDRATE

## Natrii sulfis heptahydricus

Na<sub>2</sub>SO<sub>3</sub>·7H<sub>2</sub>O  
[10102-15-5]

M<sub>r</sub> 252.2

## DEFINITION

*Content*: 48.0 per cent to 52.5 per cent of Na<sub>2</sub>SO<sub>3</sub>.

## CHARACTERS

*Appearance*: colourless crystals.

*Solubility*: freely soluble in water, very slightly soluble in ethanol (96 per cent).

## IDENTIFICATION

- Solution S (see Tests) is slightly alkaline (2.2.4).
- To 5 mL of solution S add 0.5 mL of 0.05 M iodine. The solution is colourless and gives reaction (a) of sulfates (2.3.1).
- Solution S gives reaction (a) of sodium (2.3.1).
- It complies with the limits of the assay.

## TESTS

**Solution S.** Dissolve 10 g in *water R* and dilute to 100 mL with the same solvent.

**Solution S1.** To 20.0 g add 25 mL of *water R*. Shake until mostly dissolved, and carefully and progressively, add 15 mL of *hydrochloric acid R*. Heat to boiling. Cool and dilute to 100.0 mL with *water R*.

**Appearance of solution.** Solution S is clear (2.2.1) and colourless (2.2.2, *Method I*).

**Thiosulfates:** maximum 0.05 per cent.

To 4.00 g add 100 mL of *water R*. Shake to dissolve, add 10 mL of *formaldehyde solution R* and 10 mL of *acetic acid R*. Allow to stand for 5 min, then add 0.5 mL of *starch solution R* and titrate with 0.05 M iodine. Carry out a blank titration. The difference between the volumes used in the titrations is not more than 0.15 mL.

**Iron (2.4.9):** maximum 5 ppm, determined on solution S1.

**Selenium:** maximum 5 ppm.

To 6.0 g add 10 mL of *formaldehyde solution R*, carefully and progressively add 2 mL of *hydrochloric acid R*. Heat on a water-bath for 20 min. Any pink colour in the solution is not more intense than that of a standard prepared at the same time and in the same manner using 2.0 g of the substance to be examined to which 0.2 mL of *selenium standard solution (100 ppm Se) R* has been added.

**Zinc:** maximum 12 ppm.

Atomic absorption spectrometry (2.2.23, *Method I*).

*Test solution.* Dilute 2.0 mL of solution S1 to 10.0 mL with *water R*.

*Reference solutions.* Prepare the reference solutions using *zinc standard solution (100 ppm Zn) R*, diluting with *water R*.

*Source:* zinc hollow-cathode lamp.

*Wavelength:* 213.9 nm.

*Atomisation device:* air-acetylene flame.

**Heavy metals (2.4.8):** maximum 5 ppm.

Evaporate 20 mL of solution S1 almost to dryness. Add 10 mL of *water R*, neutralise with *concentrated ammonia R* and dilute to 20 mL with *water R*. 12 mL of this solution complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

ASSAY

Introduce 0.500 g into a 500 mL conical flask containing 50.0 mL of 0.05 M *iodine*. Shake until completely dissolved. Add 1 mL of *starch solution R* and titrate the excess of iodine with 0.1 M *sodium thiosulfate*. Carry out a blank titration.

1 mL of 0.05 M *iodine* is equivalent to 6.30 mg of Na<sub>2</sub>S<sub>2</sub>O<sub>3</sub>.

01/2008:0414

## SODIUM THIOSULFATE

### Natrii thiosulfas

Na<sub>2</sub>S<sub>2</sub>O<sub>3</sub>·5H<sub>2</sub>O  
[10102-17-7]

*M*<sub>r</sub> 248.2 C<sub>8</sub>H<sub>15</sub>NaO<sub>2</sub>  
[1069-66-5]

DEFINITION

*Content:* 99.0 per cent to 101.0 per cent of Na<sub>2</sub>S<sub>2</sub>O<sub>3</sub>·5H<sub>2</sub>O.

CHARACTERS

*Appearance:* transparent, colourless crystals, efflorescent in dry air.

*Solubility:* very soluble in water, practically insoluble in ethanol 96 per cent. It dissolves in its water of crystallisation at about 49 °C.

IDENTIFICATION

- It decolourises *iodinated potassium iodide solution R*.
- To 0.5 mL of solution S (see Tests) add 0.5 mL of *water R* and 2 mL of *silver nitrate solution R2*. A white precipitate is formed which rapidly becomes yellowish and then black.
- To 2.5 mL of solution S add 2.5 mL of *water R* and 1 mL of *hydrochloric acid R*. A precipitate of sulfur is formed and gas is evolved which gives a blue colour to *starch iodate paper R*.
- 1 mL of solution S gives reaction (a) of sodium (2.3.1).

TESTS

**Solution S.** Dissolve 10.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100 mL with the same solvent.

**Appearance of solution.** The freshly prepared solution is clear (2.2.1) and colourless (2.2.2, *Method II*).

Dissolve 10.0 g in 50 mL of *distilled water R*, add 1 mL of 0.1 M *sodium hydroxide* and dilute to 100 mL with the same solvent.

**pH (2.2.3):** 6.0 to 8.4 for the freshly prepared solution S.

**Sulfates and sulfites (2.4.13):** maximum 0.2 per cent.

Dilute 2.5 mL of freshly prepared solution S to 10 mL with *distilled water R*. To 3 mL of this solution first add 2 mL of *iodinated potassium iodide solution R* and continue the addition dropwise until a very faint persistent yellow colour appears. Dilute to 15 mL with *distilled water R*.

**Sulfides.** To 10 mL of solution S add 0.05 mL of a freshly prepared 50 g/L solution of *sodium nitroprusside R*. The solution does not become violet.

**Heavy metals:** maximum 10 ppm.

To 10 mL of solution S add 0.05 mL of *sodium sulfide solution R*. After 2 min, any brown colour in the solution is not more intense than that in a reference solution prepared at the same time and in the same manner using 10 mL of *lead standard solution (1 ppm Pb) R*.

ASSAY

Dissolve 0.500 g in 20 mL of *water R* and titrate with 0.05 M *iodine*, using 1 mL of *starch solution R*, added towards the end of the titration, as indicator.

1 mL of 0.05 M *iodine* is equivalent to 24.82 mg of Na<sub>2</sub>S<sub>2</sub>O<sub>3</sub>·5H<sub>2</sub>O.

STORAGE

In an airtight container.

01/2008:0678  
corrected 6.0

## SODIUM VALPROATE

### Natrii valproas

*M*<sub>r</sub> 166.2

DEFINITION

Sodium 2-propylpentanoate.

*Content:* 98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance:* white or almost white, crystalline, hygroscopic powder.

*Solubility:* very soluble in water, slightly or freely soluble in ethanol (96 per cent).

IDENTIFICATION

- Infrared absorption spectrophotometry (2.2.24).

*Comparison:* *sodium valproate CRS*.

If the spectra obtained in the solid state show differences, record new spectra using discs prepared by placing 50 µL of a 100 g/L solution in *methanol R* on a disc of *potassium bromide R* and evaporating the solvent *in vacuo*. Examine immediately.

- Examine the chromatograms obtained in the test for related substances.

*Results:* the principal peak in the chromatogram obtained with test solution (b) is similar in retention time to the principal peak in the chromatogram obtained with reference solution (b).

- 2 mL of solution S (see Tests) gives reaction (a) of sodium (2.3.1).

TESTS

**Solution S.** Dissolve 1.25 g in 20 mL of *distilled water R* in a separating funnel, add 5 mL of *dilute nitric acid R* and shake. Allow the mixture to stand for 12 h. Use the lower layer.

**Appearance of solution.** The solution is not more opalescent than reference suspension II (2.2.1) and not more intensely coloured than reference solution Y<sub>6</sub> (2.2.2, *Method II*).

Dissolve 2.0 g in *water R* and dilute to 10 mL with the same solvent.

**Acidity or alkalinity.** Dissolve 1.0 g in 10 mL of *water R*. Add 0.1 mL of *phenolphthalein solution R*. Not more than 0.75 mL of 0.1 M *hydrochloric acid* or 0.1 M *sodium hydroxide* is required to change the colour of the indicator.

**Related substances.** Gas chromatography (2.2.28).

**Internal standard solution.** Dissolve 10 mg of *butyric acid R* in *heptane R* and dilute to 200 mL with the same solvent.

**Test solution (a).** Dissolve 0.500 g of the substance to be examined in 10 mL of *water R*. Add 5 mL of *dilute sulfuric acid R* and shake with 3 quantities, each of 20 mL, of *heptane R*. Add 10.0 mL of the internal standard solution to the combined upper layers, shake with *anhydrous sodium sulfate R*, filter and evaporate the filtrate, at a temperature not exceeding 30 °C, using a rotary evaporator. Take up the residue with *heptane R* and dilute to 10.0 mL with the same solvent. Dilute 1.0 mL of this solution to 10.0 mL with *heptane R*.

**Test solution (b).** Dissolve 40 mg of the substance to be examined in 100 mL of *water R*. To 10 mL of this solution add 0.5 mL of *dilute sulfuric acid R* and shake with 3 quantities, each of 5 mL, of *heptane R*. Shake with *anhydrous sodium sulfate R*, filter and evaporate the filtrate, at a temperature not exceeding 30 °C, to a volume of about 10 mL, using a rotary evaporator.

**Reference solution (a).** Dissolve 20 mg of 2-(1-methylethyl)pentanoic acid CRS (impurity C) in 5.0 mL of test solution (b) and dilute to 10 mL with *heptane R*. Dilute 1 mL of this solution to 10 mL with *heptane R*.

**Reference solution (b).** Prepare as prescribed for test solution (b), using *sodium valproate CRS* instead of the substance to be examined.

**Column:**

- *material:* wide-bore fused silica;
- *size:*  $l = 30$  m,  $\varnothing = 0.53$  mm;
- *stationary phase:* *macrogol 20 000 2-nitrotetraphthalate R* (film thickness 0.5  $\mu$ m).

**Carrier gas:** *helium for chromatography R*.

**Flow rate:** 8 mL/min.

**Temperature:**

	Time (min)	Temperature (°C)
Column	0 - 10	130
	10 - 30	130 → 190
Injection port		220
Detector		220

**Detection:** flame ionisation.

**Injection:** 1  $\mu$ L.

**System suitability:** reference solution (a):

- *resolution:* minimum 3.0 between the peaks due to impurity C and valproic acid.

**Limits:** test solution (a):

- *any impurity:* for each impurity, not more than the area of the peak due to the internal standard (0.1 per cent);
- *total:* not more than 3 times the area of the peak due to the internal standard (0.3 per cent);
- *disregard limit:* 0.1 times the area of the peak due to the internal standard (0.01 per cent).

**Chlorides (2.4.4):** maximum 200 ppm.

To 5 mL of solution S add 10 mL of *water R*.

**Sulfates (2.4.13):** maximum 200 ppm, determined on Solution S.

**Heavy metals (2.4.8):** maximum 20 ppm.

1.0 g complies with test C. Prepare the reference solution using 2 mL of *lead standard solution (10 ppm Pb) R*.

**Loss on drying (2.2.32):** maximum 2.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**ASSAY**

Dissolve 0.1500 g in 25 mL of *anhydrous acetic acid R*. Titrate with 0.1 M *perchloric acid*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *perchloric acid* is equivalent to 16.62 mg of  $C_8H_{15}NaO_2$ .

**STORAGE**

In an airtight container.

**IMPURITIES**

- A. R = R' = H: pentanoic acid (valeric acid),
- B. R = H, R' =  $CH_2-CH_3$ : (2*RS*)-2-ethylpentanoic acid,
- C. R = H, R' =  $CH(CH_3)_2$ : (2*RS*)-2-(1-methylethyl)pentanoic acid,
- D. R = R' =  $CH_2-CH_2-CH_3$ : 2,2-dipropylpentanoic acid,

- E. R = R' = H: pentanamide (valeramide),
- F. R = H, R' =  $CH_2-CH_2-CH_3$ : 2-propylpentanamide,
- G. R = R' =  $CH_2-CH_2-CH_3$ : 2,2-dipropylpentanamide,

- H. R = R' = H: pentanenitrile (valeronitrile),
- I. R = H, R' =  $CH_2-CH_2-CH_3$ : 2-propylpentanenitrile,
- J. R = R' =  $CH_2-CH_2-CH_3$ : 2,2-dipropylpentanenitrile.

01/2008:1264

## SOLUTIONS FOR ORGAN PRESERVATION

### Solutiones ad conservationem partium corporis

**DEFINITION**

Solutions for organ preservation are sterile, aqueous preparations, intended for storage, protection and/or perfusion of mammalian body organs that are in particular destined for transplantation.

They contain electrolytes that are typically at a concentration close to the intracellular electrolyte composition.

They may contain carbohydrates (such as glucose or mannitol), amino acids, calcium-complexing agents (such as citrate or phosphate), hydrocolloids (such as starch or gelatin derivatives) and other excipients, for example to make the preparation isotonic with blood, to adjust or buffer the pH, to prevent deterioration of the ingredients, but not to adversely affect the intended action of the preparation or, at the concentration used, to cause toxicity or undue local irritation. Solutions for organ preservation may also contain active substances or these may be added immediately before use.

Solutions for organ preservation, examined under suitable conditions of visibility, are clear and practically free from particles.

Solutions for organ preservation may also be presented as concentrated solutions. They are diluted to the prescribed volume with a prescribed liquid immediately before use. After dilution, they comply with the requirements for solutions for organ preservation.

Before use, the solutions for organ preservation are cooled below room temperature, typically to 2 °C to 6 °C, to reduce the temperature of the body organ and its metabolism.

Where applicable, the containers for solutions for organ preservation comply with the requirements for *Materials used for the manufacture of containers* (3.1 and subsections) and *Containers* (3.2 and subsections). Solutions for organ preservation are supplied in glass containers (3.2.1) or in other containers such as plastic containers (3.2.2 and 3.2.8). The tightness of the container is ensured by suitable means. Closures ensure a good seal, prevent the access of micro-organisms and other contaminants and usually permit the withdrawal of a part or the whole of the contents without removal of the closure. The plastic materials or elastomers of which the closure is composed are sufficiently firm and elastic to allow the passage of a needle with the least possible shedding of particles.

#### PRODUCTION

Solutions for organ preservation are prepared using materials and methods designed to ensure their sterility and to avoid the introduction of contaminants and the growth of micro-organisms; recommendations on this aspect are provided in the text on *Methods of preparation of sterile products* (5.1.1). Unless otherwise justified and authorised, solutions for organ preservation are prepared from *water for injections R* and do not contain antimicrobial preservatives.

#### TESTS

**pH** (2.2.3). Carry out the test at room temperature. The pH of the solution is 5.0 to 8.0.

**Osmolality** (2.2.35). The osmolality of the solution is 250 mosmol/kg to 380 mosmol/kg.

**Hydroxymethylfurfural**. If the solution contains glucose, it complies with the following test: to a volume of the preparation to be examined containing the equivalent of 25 mg of glucose, add 5.0 mL of a 100 g/L solution of *p-toluidine R* in *2-propanol R* containing 10 per cent V/V of *glacial acetic acid R* and 1.0 mL of a 5 g/L solution of *barbituric acid R*. The absorbance (2.2.25), determined at 550 nm after allowing the mixture to stand for 2 min to 3 min, is not greater than that of a standard prepared at the same time in the same manner using a solution containing 10 µg of *hydroxymethylfurfural R* in the same volume as the preparation to be examined.

**Particulate contamination**. Carry out the test for sub-visible particles (2.9.19) using 50 mL of preparation to be examined. The solution contains not more than 50 particles per millilitre larger than 10 µm and not more than 5 particles per millilitre larger than 25 µm.

Products for which the label states that the product is to be used with a final filter are exempted from these requirements.

**Sterility** (2.6.1). The solution complies with the test for sterility.

**Bacterial endotoxins** (2.6.14): less than 0.5 IU/mL.

**Pyrogens** (2.6.8). Solutions for which a validated test for bacterial endotoxins cannot be carried out comply with the test for pyrogens. Inject per kilogram of the rabbit's mass 10 mL of the solution, unless otherwise justified and authorised.

#### LABELLING

The label states:

- that the solution is not to be used for injection,
- the formula of the solution for organ preservation expressed in grams per litre and in millimoles per litre,
- the nominal volume of the solution for organ preservation in the container,
- the osmolality, expressed in milliosmoles per kilogram,
- that any unused portion of the ready-to-use solution, of the concentrated solution or of the diluted solution must be discarded,
- the storage conditions,
- if applicable, that the solution is to be used in conjunction with a final filter.

In addition, for concentrated solutions the label states that the solution must be diluted with a suitable liquid immediately before use.

01/2011:0949

## SOMATOSTATIN

### Somatostatinum

$\text{C}_{76}\text{H}_{104}\text{N}_{18}\text{O}_{19}\text{S}_2$   $M_r$  1638  
[38916-34-6]

#### DEFINITION

L-Alanylglycyl-L-cysteinyll-L-lysyl-L-asparaginyl-L-phenylalanyl-L-phenylalanyl-L-tryptophyll-L-lysyl-L-threonyll-L-phenylalanyl-L-threonyll-L-seryl-L-cysteine cyclic (3→14)-disulfide.

Synthetic cyclic tetradecapeptide having the structure of the hypothalamic hormone that inhibits the release of human growth hormone. It contains a variable amount of acetic acid. It is available in the freeze-dried form.

**Content:** 95.0 per cent to 104.0 per cent (anhydrous and acetic acid-free substance).

#### CHARACTERS

**Appearance:** white or almost white, amorphous powder.

**Solubility:** freely soluble in water and in acetic acid, practically insoluble in methylene chloride.

#### IDENTIFICATION

A. Thin-layer chromatography (2.2.27).

**Test solution.** Dissolve 1.0 mg of the substance to be examined in 1.0 mL of *water R*.

**Reference solution.** Dissolve the contents of a vial of *somatostatin CRS* in *water R* and dilute with the same solvent to obtain a final concentration of 1 mg/mL.

**Plate:** TLC silica gel plate R.

**Mobile phase:** *glacial acetic acid R*, *pyridine R*, *water R*, *butanol R* (10:15:20:45 V/V/V/V).

**Application:** 20 µL.

**Development:** over a path of 15 cm.

**Drying:** in a current of warm air.

**Detection:** spray with a 1 g/L solution of *ninhydrin R* and heat in an oven at 110 °C for about 5 min.

**Results:** the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

B. Examine the chromatograms obtained in the assay.

**Results:** the principal peak in the chromatogram obtained with the test solution is similar in retention time to the principal peak in the chromatogram obtained with the reference solution.

C. Amino acid analysis (2.2.56). For hydrolysis use Method 1 and for analysis use Method 1.

Express the content of each amino acid in moles. Calculate the relative proportions of the amino acids taking 1/8 of the sum of the number of moles of aspartic acid, alanine, lysine, glycine and phenylalanine as equal to 1. The values fall within the following limits: aspartic acid: 0.90 to 1.10; glycine: 0.90 to 1.10; alanine: 0.90 to 1.10; phenylalanine: 2.7 to 3.3; serine: 0.7 to 1.05; threonine: 1.4 to 2.1; half-cystine: 1.4 to 2.1; lysine: 1.8 to 2.2. Not more than traces of other amino acids are present.

## TESTS

01/2008:0951  
corrected 7.0

**Specific optical rotation** (2.2.7): –37 to –47 (anhydrous and acetic acid-free substance).

Dissolve 2.0 mg in 1.0 mL of a 1 per cent *V/V* solution of *glacial acetic acid R*.

**Absorbance** (2.2.25): maximum 0.20 at 280 nm (calculated with reference to the peptide content as determined in the assay).

Dissolve 5.0 mg in a 9 g/L solution of *sodium chloride R* and dilute to 100.0 mL with the same solvent.

**Related substances.** Liquid chromatography (2.2.29): use the normalisation procedure.

**Test solution.** Dissolve 5.0 mg of the substance to be examined in *water R* and dilute to 10.0 mL with the same solvent.

**Column:**

- size:  $l = 0.05$  m,  $\varnothing = 4.6$  mm;
- stationary phase: octadecylsilyl silica gel for chromatography *R* (5  $\mu$ m).

**Mobile phase:**

- mobile phase A: dilute 11 mL of *phosphoric acid R* with *water R*, adjust to pH 2.3 with *triethylamine R* and dilute to 1000 mL with *water R*;
- mobile phase B: *acetonitrile for chromatography R*;

Time (min)	Mobile phase A (per cent <i>V/V</i> )	Mobile phase B (per cent <i>V/V</i> )
0 - 18	79 → 60	21 → 40
18 - 20	60	40
20 - 21	60 → 79	40 → 21
21 - 26	79	21

**Flow rate:** 1.5 mL/min.

**Detection:** spectrophotometer at 215 nm.

**Injection:** 25  $\mu$ L.

**Limits:**

- any impurity: maximum 1 per cent;
- total: maximum 2 per cent;
- disregard limit: 0.03 per cent.

**Acetic acid** (2.5.34): 3.0 per cent to 15.0 per cent.

**Test solution.** Dissolve 7.0 mg of the substance to be examined in a mixture of 5 volumes of mobile phase B and 95 volumes of mobile phase A, then dilute to 10.0 mL with the same mixture of mobile phases.

**Water** (2.5.12): maximum 8.0 per cent, determined on 10.0 mg.

**Bacterial endotoxins** (2.6.14): less than 10 IU/mg, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins.

## ASSAY

Liquid chromatography (2.2.29) as described in the test for related substances with the following modifications.

**Reference solution.** Dissolve the contents of a vial of *somatostatin CRS* in *water R* and dilute with the same solvent to obtain a final concentration of 0.5 mg/mL.

**Mobile phase:** mobile phase B, mobile phase A (25:75 *V/V*).

**Run time:** 15 min.

Calculate the content of somatostatin ( $C_{76}H_{104}N_{18}O_{19}S_2$ ) from the declared content of  $C_{76}H_{104}N_{18}O_{19}S_2$  in *somatostatin CRS*.

## STORAGE

In an airtight container protected from light, at a temperature of 2 °C to 8 °C. If the substance is sterile, store in a sterile, airtight, tamper-proof container.

## SOMATROPIN

## Somatotropinum

## DEFINITION

Protein having the structure (191 amino-acid residues) of the major component of growth hormone produced by the human pituitary.

**Content:** 91.0 per cent to 105.0 per cent (anhydrous substance).

By convention, for the purpose of labelling somatotropin preparations, 1 mg of anhydrous somatotropin ( $C_{990}H_{1528}N_{262}O_{300}S_7$ ) is equivalent to 3.0 IU of biological activity.

## PRODUCTION

Somatropin is produced by a method based on recombinant DNA (rDNA) technology. During the course of product development, it must be demonstrated that the manufacturing process produces a product having a biological activity of not less than 2.5 IU/mg, using a validated bioassay based on growth promotion and approved by the competent authority.

Somatropin complies with the following additional requirements.

**Host-cell-derived proteins.** The limit is approved by the competent authority.

**Host-cell- and vector-derived DNA.** The limit is approved by the competent authority.

## CHARACTERS

**Appearance:** white or almost white powder.

## IDENTIFICATION

A. Capillary electrophoresis (2.2.47) as described in the test for charged variants with the following modifications.

**Injection:** test solution (b); under pressure or vacuum, using the following sequence: sample injection for at least 3 s then CZE buffer injection for 1 s.

**Results:** in the electropherogram obtained, only 1 principal peak, corresponding to somatotropin, is detected: no doubling of this peak is observed.

B. Examine the chromatograms obtained in the test for related proteins.

**Results:** the principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with the reference solution.

C. Peptide mapping (2.2.55).

## SELECTIVE CLEAVAGE OF THE PEPTIDE BONDS

**Test solution.** Prepare a solution of the substance to be examined in 0.05 M *tris-hydrochloride buffer solution pH 7.5 R* to obtain a solution containing 2.0 mg/mL of somatotropin and transfer about 1.0 mL to a tube made from a suitable material such as polypropylene. Prepare a 1 mg/mL solution of *trypsin for peptide mapping R* in 0.05 M *tris-hydrochloride buffer solution pH 7.5 R* and add 30  $\mu$ L to the solution of the substance to be examined. Cap the tube and place in a water-bath at 37 °C for 4 h. Remove from the water-bath and stop the reaction immediately, for example by freezing. If analysed immediately using an automatic injector, maintain at 2–8 °C.

**Reference solution.** Prepare at the same time and in the same manner as for the test solution, but using *somatropin CRS* instead of the substance to be examined.

**CHROMATOGRAPHIC SEPARATION.** Liquid chromatography (2.2.29).

**Column:**

- size:  $l = 0.25$  m,  $\varnothing = 4.6$  mm;
- stationary phase: octylsilyl silica gel for chromatography R (5–10  $\mu$ m) with a pore size of 30 nm;
- temperature: 30 °C.

**Mobile phase:**

- mobile phase A: dilute 1 mL of trifluoroacetic acid R to 1000 mL with water R;
- mobile phase B: to 100 mL of water R, add 1 mL of trifluoroacetic acid R and dilute to 1000 mL with acetonitrile for chromatography R;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 20	100 → 80	0 → 20
20 - 40	80 → 75	20 → 25
40 - 65	75 → 50	25 → 50
65 - 70	50 → 20	50 → 80

**Flow rate:** 1 mL/min.

**Detection:** spectrophotometer at 214 nm.

**Injection:** 100  $\mu$ L.

**System suitability:** the chromatograms obtained with the test solution and the reference solution are similar to the chromatogram of somatropin digest supplied with *somatropin CRS*.

**Results:** the profile of the chromatogram obtained with the test solution corresponds to that of the chromatogram obtained with the reference solution.

**D.** Examine the chromatograms obtained in the assay.

**Results:** the principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with the reference solution.

**TESTS**

**Related proteins.** Liquid chromatography (2.2.29): use the normalisation procedure. *Maintain the solutions at 2–8 °C and use within 24 h. If an automatic injector is used, maintain it at 2–8 °C.*

**Test solution.** Prepare a solution of the substance to be examined in 0.05 M tris-hydrochloride buffer solution pH 7.5 R, containing 2.0 mg/mL of somatropin.

**Reference solution.** Prepare a solution of *somatropin CRS* in 0.05 M tris-hydrochloride buffer solution pH 7.5 R, containing 2.0 mg/mL of somatropin.

**Resolution solution.** Dissolve the contents of a vial of *somatropin/desamidomatropin resolution mixture CRS* in 0.05 M tris-hydrochloride buffer solution pH 7.5 R to obtain a concentration of 2 mg/mL of somatropin.

**Column:**

- size:  $l = 0.25$  m,  $\varnothing = 4.6$  mm;
- stationary phase: a suitable singly end-capped butylsilyl silica gel, with a granulometry of 5  $\mu$ m and a porosity of 30 nm; a silica saturation column is placed between the pump and the injector valve;
- temperature: 45 °C.

**Mobile phase:** propanol R, 0.05 M tris-hydrochloride buffer solution pH 7.5 R (29:71 V/V).

**Flow rate:** 0.5 mL/min.

**Detection:** spectrophotometer at 220 nm.

**Preconditioning of the column:** rinse with 200–500 mL of a 0.1 per cent V/V solution of trifluoroacetic acid R in a 50 per cent V/V solution of acetonitrile R; repeat as necessary, to improve column performance.

**Injection:** 20  $\mu$ L.

**Relative retention** with reference to somatropin (retention time = about 33 min; if necessary adjust the concentration of propanol R in the mobile phase): desamidomatropin = about 0.85.

**System suitability:** resolution solution:

- resolution: minimum 1.0 between the peaks due to desamidomatropin and somatropin;
- symmetry factor: 0.9 to 1.8 for the peak due to somatropin.

**Limit:**

- total: maximum 6.0 per cent.

**Dimer and related substances of higher molecular mass.**

Size-exclusion chromatography (2.2.30): use the normalisation procedure.

**Test solution.** Prepare a solution of the substance to be examined in 0.025 M phosphate buffer solution pH 7.0 R, containing 1.0 mg/mL of somatropin.

**Reference solution.** Dissolve the contents of a vial of *somatropin CRS* in 0.025 M phosphate buffer solution pH 7.0 R and dilute with the same solution to obtain a concentration of 1.0 mg/mL.

**Resolution solution.** Place 1 vial of *somatropin CRS* in an oven at 50 °C for a period sufficient to generate 1–2 per cent of dimer (typically 12–24 h). Dissolve its contents in 0.025 M phosphate buffer solution pH 7.0 R and dilute with the same solution to obtain a concentration of 1.0 mg/mL.

**Column:**

- size:  $l = 0.30$  m,  $\varnothing = 7.8$  mm;
- stationary phase: hydrophilic silica gel for chromatography R of a grade suitable for fractionation of globular proteins in the relative molecular mass range of 5000 to 150 000.

**Mobile phase:** 2-propanol R, 0.063 M phosphate buffer solution pH 7.0 R (3:97 V/V); filter and degas.

**Flow rate:** 0.6 mL/min.

**Detection:** spectrophotometer at 214 nm.

**Injection:** 20  $\mu$ L.

**Relative retention** with reference to somatropin monomer (retention time = 12 min to 17 min): related substances of higher molecular mass = about 0.65; somatropin dimer = about 0.9.

**System suitability:** resolution solution:

- peak-to-valley ratio: minimum 2.5, where  $H_p$  = height above the baseline of the peak due to the dimer and  $H_v$  = height above the baseline of the lowest point of the curve separating this peak from the peak due to the monomer.

**Limit:**

- sum of the peaks with retention times less than that of the principal peak: maximum 4.0 per cent.

**Charged variants.** Capillary electrophoresis (2.2.47).

**Test solution (a).** Prepare a solution of the substance to be examined containing 1 mg/mL of somatropin.

**Test solution (b).** Mix equal volumes of test solution (a) and the reference solution.

**Reference solution.** Dissolve the contents of a vial of *somatropin CRS* in water R and dilute with the same solvent to obtain a concentration of 1 mg/mL.

**Capillary:**

- material: uncoated fused silica;
  - size: effective length = at least 70 cm,  $\varnothing = 50$   $\mu$ m.
- Temperature:** 30 °C.

**CZE buffer:** 13.2 g/L solution of ammonium phosphate R adjusted to pH 6.0 with phosphoric acid R and filtered.

**Detection:** spectrophotometer at 200 nm.

Set the autosampler to store the samples at 4 °C during analysis.

**Preconditioning of the capillary:** rinse with 1 M sodium hydroxide for 20 min, with water R for 10 min and with the CZE buffer for 20 min.

**Between-run rinsing:** rinse with 0.1 M sodium hydroxide for 2 min and with the CZE buffer for 6 min.

**Note:** rinsing times may be adapted according to the length of the capillary and the equipment used.

**Injection:** test solution (a) and the reference solution; under pressure or vacuum, using the following sequence: sample injection for at least 3 s then CZE buffer injection for 1 s.

The injection time and pressure may be adapted in order to meet the system suitability criteria.

**Migration:** apply a field strength of 217 V/cm (20 kV for capillaries of 92 cm total length) for 80 min, using the CZE buffer as the electrolyte in both buffer reservoirs.

**Relative migration** with reference to somatotropin: deamidated forms = 1.02 to 1.11.

**System suitability:** reference solution:

- the electropherogram obtained is similar to the electropherogram of somatotropin supplied with somatotropin CRS; 2 peaks ( $I_1$ ,  $I_2$ ) eluting prior to the principal peak and at least 2 peaks ( $I_3$ ,  $I_4$ ) eluting after the principal peak are clearly visible.

**Note:** peak  $I_2$  corresponds to the cleaved form and peak  $I_4$  corresponds to the deamidated forms, eluting as a doublet.

**Limits:**

- deamidated forms: maximum 5.0 per cent;
- any other impurity: for each impurity, maximum 2.0 per cent;
- total: maximum 10.0 per cent.

**Water (2.5.32):** maximum 10.0 per cent.

**Bacterial endotoxins (2.6.14):** less than 5 IU/mg, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for removal of bacterial endotoxins.

#### ASSAY

Size-exclusion chromatography (2.2.30) as described in the test for dimer and related substances of higher molecular mass.

Calculate the content of somatotropin ( $C_{990}H_{1528}N_{262}O_{300}S_7$ ) from the declared content of  $C_{990}H_{1528}N_{262}O_{300}S_7$  in somatotropin CRS.

#### STORAGE

In an airtight container, at a temperature of 2 °C to 8 °C. If the substance is sterile, store in a sterile, airtight, tamper-proof container.

#### DEFINITION

Solution containing a protein having the structure (191 amino-acid residues) of the major component of growth hormone produced by the human pituitary. It may contain buffer salts and other auxiliary substances.

**Content:** 91.0 per cent to 105.0 per cent of the amount of somatotropin stated on the label.

By convention, for the purpose of labelling somatotropin preparations, 1 mg of anhydrous somatotropin ( $C_{990}H_{1528}N_{262}O_{300}S_7$ ) is equivalent to 3.0 IU of biological activity.

#### PRODUCTION

Somatotropin concentrated solution is produced by a method based on recombinant DNA (rDNA) technology. During the course of product development, it must be demonstrated that the manufacturing process produces a product having a biological activity of at least 2.5 IU/mg, using a validated bioassay based on growth promotion and approved by the competent authority.

Somatotropin concentrated solution complies with the following additional requirements.

**Host-cell-derived proteins.** The limit is approved by the competent authority.

**Host-cell- and vector-derived DNA.** The limit is approved by the competent authority.

#### CHARACTERS

**Appearance:** clear or slightly turbid, colourless solution.

#### IDENTIFICATION

A. Capillary electrophoresis (2.2.47) as described in the test for charged variants with the following modifications.

**Injection:** test solution (b); under pressure or vacuum, using the following sequence: sample injection for at least 3 s then CZE buffer injection for 1 s.

**Results:** in the electropherogram obtained, only 1 principal peak, corresponding to somatotropin, is detected: no doubling of this peak is observed.

B. Examine the chromatograms obtained in the test for related proteins.

**Results:** the principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with the reference solution.

C. Peptide mapping (2.2.55).

##### SELECTIVE CLEAVAGE OF THE PEPTIDE BONDS

**Test solution.** Dilute the solution to be examined with 0.05 M tris-hydrochloride buffer solution pH 7.5 R so that it contains 2.0 mg/mL of somatotropin and transfer about 1.0 mL to a tube made from a suitable material such as polypropylene. Prepare a 1 mg/mL solution of trypsin for peptide mapping R in 0.05 M tris-hydrochloride buffer solution pH 7.5 R and add 30 µL to the solution of the substance to be examined. Cap the tube and place in a water-bath at 37 °C for 4 h. Remove from the water-bath and stop the reaction immediately, for example by freezing. If analysed immediately using an automatic injector, maintain at 2-8 °C.

**Note:** If a 2 mg/mL somatotropin concentration is not obtainable, a similar digest relationship (micrograms of trypsin per milligram of somatotropin) may be used.

**Reference solution.** Prepare at the same time and in the same manner as for the test solution, but using somatotropin CRS instead of the substance to be examined.

**CHROMATOGRAPHIC SEPARATION.** Liquid chromatography (2.2.29).

01/2008:0950  
corrected 7.0

- *any other impurity*: for each impurity, maximum 2.0 per cent;
- *total*: maximum 10.0 per cent.

**Bacterial endotoxins (2.6.14):** less than 5 IU in the volume that contains 1 mg of somatropin, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for removal of bacterial endotoxins.

#### ASSAY

Size-exclusion chromatography (2.2.30) as described in the test for dimer and related substances of higher molecular mass.

Calculate the content of somatropin ( $C_{990}H_{1528}N_{262}O_{300}S_7$ ) from the declared content of  $C_{990}H_{1528}N_{262}O_{300}S_7$  in *somatropin CRS*.

#### STORAGE

In an airtight container at a temperature of –20 °C. Avoid repeated freezing and thawing. If the solution is sterile, store in a sterile, airtight, tamper-proof container.

#### LABELLING

The label states:

- the content of somatropin in milligrams per millilitre;
- the name and concentration of any auxiliary substance.

$C_{990}H_{1528}N_{262}O_{300}S_7$

$M_r$  22 125

#### DEFINITION

Freeze-dried, sterile preparation of a protein having the structure (191 amino-acid residues) of the major component of growth hormone produced by the human pituitary.

**Content:** 89.0 per cent to 105.0 per cent of the amount of somatropin stated on the label.

By convention, for the purpose of labelling somatropin preparations, 1 mg of anhydrous somatropin ( $C_{990}H_{1528}N_{262}O_{300}S_7$ ) is equivalent to 3.0 IU of biological activity.

Somatropin for injection complies with the requirements of the monograph *Parenteral preparations (0520)*.

#### PRODUCTION

Somatropin for injection is prepared either from *Somatropin (0951)* or from *Somatropin concentrated solution (0950)*, or by a method based on recombinant DNA (rDNA) technology in which the injectable preparation is produced without the isolation of an intermediate solid or liquid bulk. In the latter case, during the course of product development, it must be demonstrated that the manufacturing process produces a product having a biological activity of not less than 2.5 IU/mg, using a validated bioassay based on growth promotion and approved by the competent authority. The purified preparation, to which buffers and stabilisers may be added, is filtered through a bacteria-retentive filter, aseptically distributed in sterile containers of glass type I (3.2.1) and freeze-dried. The containers are immediately sealed so as to exclude microbial contamination and moisture.

Somatropin for injection complies with the following additional requirements.

**Host-cell-derived proteins.** The limit is approved by the competent authority.

**Host-cell- and vector-derived DNA.** The limit is approved by the competent authority.

Where somatropin for injection is prepared from *Somatropin (0951)* or from *Somatropin concentrated solution (0950)*, compliance with the requirements for *host-cell-derived proteins, host-cell- and vector-derived DNA, identification test A, identification test C and charged variants need not be reconfirmed by the manufacturer during subsequent production of somatropin for injection*.

#### CHARACTERS

**Appearance:** white or almost white powder.

#### IDENTIFICATION

A. Capillary electrophoresis (2.2.47) as described in the test for charged variants with the following modifications.

**Injection:** test solution (b); under pressure or vacuum, using the following sequence: sample injection for at least 3 s then CZE buffer injection for 1 s.

**Results:** in the electropherogram obtained, only 1 principal peak, corresponding to somatropin, is detected: no doubling of this peak is observed.

B. Examine the chromatograms obtained in the test for related proteins.

**Results:** the principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with the reference solution.

C. Peptide mapping (2.2.55).

#### SELECTIVE CLEAVAGE OF THE PEPTIDE BONDS

**Test solution.** Prepare a solution of the substance to be examined in 0.05 M *tris-hydrochloride buffer solution pH 7.5 R* to obtain a solution containing 2.0 mg/mL of somatropin and transfer about 1.0 mL to a tube made from a suitable material such as polypropylene. Prepare a 1 mg/mL solution of *trypsin for peptide mapping R* in 0.05 M *tris-hydrochloride buffer solution pH 7.5 R* and add 30 µL to the solution of the substance to be examined. Cap

the tube and place in a water-bath at 37 °C for 4 h. Remove from the water-bath and stop the reaction immediately, for example by freezing. If analysed immediately using an automatic injector, maintain at 2-8 °C.

**Reference solution.** Prepare at the same time and in the same manner as for the test solution, but using *somatropin CRS* instead of the substance to be examined.

**CHROMATOGRAPHIC SEPARATION.** Liquid chromatography (2.2.29).

**Column:**

- size:  $l = 0.25$  m,  $\varnothing = 4.6$  mm;
- stationary phase: octylsilyl silica gel for chromatography R (5-10  $\mu$ m) with a pore size of 30 nm;
- temperature: 30 °C.

**Mobile phase:**

- mobile phase A: dilute 1 mL of trifluoroacetic acid R to 1000 mL with water R;
- mobile phase B: to 100 mL of water R add 1 mL of trifluoroacetic acid R and dilute to 1000 mL with acetonitrile for chromatography R;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 20	100 → 80	0 → 20
20 - 40	80 → 75	20 → 25
40 - 65	75 → 50	25 → 50
65 - 70	50 → 20	50 → 80

**Flow rate:** 1 mL/min.

**Detection:** spectrophotometer at 214 nm.

**Injection:** 100  $\mu$ L.

**System suitability:** the chromatograms obtained with the test solution and the reference solution are similar to the chromatogram of somatropin digest supplied with *somatropin CRS*.

**Results:** the profile of the chromatogram obtained with the test solution corresponds to that of the chromatogram obtained with the reference solution.

#### D. Examine the chromatograms obtained in the assay.

**Results:** the principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with the reference solution.

## TESTS

**Related proteins.** Liquid chromatography (2.2.29): use the normalisation procedure. Maintain the solutions at 2-8 °C and use within 24 h. If an automatic injector is used, maintain at 2-8 °C.

**Test solution.** Prepare a solution of the substance to be examined in 0.05 M tris-hydrochloride buffer solution pH 7.5 R, containing 2.0 mg/mL of somatropin.

**Reference solution.** Prepare a solution of *somatropin CRS* in 0.05 M tris-hydrochloride buffer solution pH 7.5 R, containing 2.0 mg/mL of somatropin.

**Resolution solution.** Dissolve the contents of a vial of *somatropin/desamidomatropin resolution mixture CRS* in 0.05 M tris-hydrochloride buffer solution pH 7.5 R to obtain a concentration of 2 mg/mL of somatropin.

**Column:**

- size:  $l = 0.25$  m,  $\varnothing = 4.6$  mm;
- stationary phase: a suitable singly end-capped butylsilyl silica gel, with a granulometry of 5  $\mu$ m and a porosity of 30 nm; a silica saturation column is placed between the pump and the injector valve;

– temperature: 45 °C.

**Mobile phase:** propanol R, 0.05 M tris-hydrochloride buffer solution pH 7.5 R (29:71 V/V).

**Flow rate:** 0.5 mL/min.

**Detection:** spectrophotometer at 220 nm.

**Preconditioning of the column:** rinse with 200-500 mL of a 0.1 per cent V/V solution of trifluoroacetic acid R in a 50 per cent V/V solution of acetonitrile R; repeat as necessary, to improve column performance.

**Injection:** 20  $\mu$ L.

**Relative retention** with reference to somatropin (retention time = about 33 min; if necessary adjust the concentration of propanol R in the mobile phase): desamidomatropin = about 0.85.

**System suitability:** resolution solution:

- resolution: minimum 1.0 between the peaks due to desamidomatropin and somatropin;
- symmetry factor: 0.9 to 1.8 for the peak due to somatropin.

**Limit:**

- total: maximum 13.0 per cent.

### Dimer and related substances of higher molecular mass.

Size-exclusion chromatography (2.2.30): use the normalisation procedure.

**Test solution.** Prepare a solution of the substance to be examined in 0.025 M phosphate buffer solution pH 7.0 R, containing 1.0 mg/mL of somatropin.

**Reference solution.** Dissolve the contents of a vial of *somatropin CRS* in 0.025 M phosphate buffer solution pH 7.0 R and dilute with the same solution to obtain a concentration of 1.0 mg/mL.

**Resolution solution.** Place 1 vial of *somatropin CRS* in an oven at 50 °C for a period sufficient to generate 1-2 per cent of dimer (typically 12-24 h). Dissolve its contents in 0.025 M phosphate buffer solution pH 7.0 R and dilute with the same solution to obtain a concentration of 1.0 mg/mL.

**Column:**

- size:  $l = 0.30$  m,  $\varnothing = 7.8$  mm;
- stationary phase: hydrophilic silica gel for chromatography R of a grade suitable for fractionation of globular proteins in the relative molecular mass range of 5000 to 150 000.

**Mobile phase:** 2-propanol R, 0.063 M phosphate buffer solution pH 7.0 R (3:97 V/V); filter and degas.

**Flow rate:** 0.6 mL/min.

**Detection:** spectrophotometer at 214 nm.

**Injection:** 20  $\mu$ L.

**Relative retention** with reference to somatropin monomer (retention time = 12 min to 17 min): related substances of higher molecular mass = about 0.65; somatropin dimer = about 0.9.

**System suitability:** resolution solution:

- peak-to-valley ratio: minimum 2.5, where  $H_p$  = height above the baseline of the peak due to the dimer and  $H_v$  = height above the baseline of the lowest point of the curve separating this peak from the peak due to the monomer.

**Limit:**

- sum of the peaks with retention times less than that of the principal peak: maximum 6.0 per cent.

### Charged variants.

Capillary electrophoresis (2.2.47).

**Test solution (a).** Prepare a solution of the substance to be examined containing 1 mg/mL of somatropin.

**Test solution (b).** Mix equal volumes of test solution (a) and the reference solution.

**Reference solution.** Dissolve the contents of a vial of *somatropin CRS* in water R and dilute with the same solvent to obtain a concentration of 1 mg/mL.

01/2008:0592

**Capillary:**

- *material*: uncoated fused silica;
- *size*: effective length = at least 70 cm,  $\varnothing = 50 \mu\text{m}$ .

*Temperature*: 30 °C.*CZE buffer*: 13.2 g/L solution of ammonium phosphate R adjusted to pH 6.0 with phosphoric acid R and filtered.*Detection*: spectrophotometer at 200 nm.

Set the autosampler to store the samples at 4 °C during analysis.

*Preconditioning of the capillary*: rinse with 1 M sodium hydroxide for 20 min, with water R for 10 min and with the CZE buffer for 20 min.*Between-run rinsing*: rinse with 0.1 M sodium hydroxide for 2 min and with the CZE buffer for 6 min.*Note*: rinsing times may be adapted according to the length of the capillary and the equipment used.*Injection*: test solution (a) and the reference solution; under pressure or vacuum, using the following sequence: sample injection for at least 3 s then CZE buffer injection for 1 s.

The injection time and pressure may be adapted in order to meet the system suitability criteria.

*Migration*: apply a field strength of 217 V/cm (20 kV for capillaries of 92 cm total length) for 80 min, using CZE buffer as the electrolyte in both buffer reservoirs.*Relative migration* with reference to somatropin: deamidated forms = 1.02 to 1.11.*System suitability*: reference solution:

- the electropherogram obtained is similar to the electropherogram of somatropin supplied with somatropin CRS; 2 peaks ( $I_1, I_2$ ) eluting prior to the principal peak and at least 2 peaks ( $I_3, I_4$ ) eluting after the principal peak are clearly visible.

*Note*: peak  $I_2$  corresponds to the cleaved form and peak  $I_4$  corresponds to the deamidated forms, eluting as a doublet.*Limits*:

- *deamidated forms*: maximum 6.5 per cent;
- *any other impurity*: for each impurity, maximum 2.0 per cent;
- *total*: maximum 11.5 per cent.

**Water** (2.5.32): maximum 3.0 per cent, unless otherwise justified and authorised.**Bacterial endotoxins** (2.6.14): less than 5 IU/mg.**ASSAY**

Size-exclusion chromatography (2.2.30) as described in the test for dimer and related substances of higher molecular mass.

Calculate the content of somatropin ( $\text{C}_{990}\text{H}_{1528}\text{N}_{262}\text{O}_{300}\text{S}_7$ ) from the declared content of  $\text{C}_{990}\text{H}_{1528}\text{N}_{262}\text{O}_{300}\text{S}_7$  in somatropin CRS.**STORAGE**

In a sterile, airtight, tamper-proof container, at a temperature of 2 °C to 8 °C.

**LABELLING**

The label states:

- the content of somatropin in the container, in milligrams;
- the composition and volume of the liquid to be added for reconstitution;
- the time within which the reconstituted solution shall be used and the storage conditions during this period;
- the name and quantity of any excipient;
- the storage temperature;
- that the preparation shall not be shaken during reconstitution.

**SORBIC ACID****Acidum sorbicum** $\text{C}_6\text{H}_8\text{O}_2$   
[110-44-1] $M_r$  112.1**DEFINITION***(E,E)*-Hexa-2,4-dienoic acid.*Content*: 99.0 per cent to 101.0 per cent (anhydrous substance).**CHARACTERS***Appearance*: white or almost white, crystalline powder.*Solubility*: slightly soluble in water, freely soluble in ethanol (96 per cent).**IDENTIFICATION***First identification*: A, C.*Second identification*: A, B, D.

A. Melting point (2.2.14): 132 °C to 136 °C.

B. Ultraviolet and visible absorption spectrophotometry (2.2.25).

*Test solution*. Dissolve 50.0 mg in water R and dilute to 250.0 mL with the same solvent. Dilute 2.0 mL of this solution to 200.0 mL with 0.1 M hydrochloric acid.*Spectral range*: 230-350 nm.*Absorption maximum*: at 264 nm.*Specific absorbance at the absorption maximum*: 2150 to 2550.

C. Infrared absorption spectrophotometry (2.2.24).

*Comparison*: sorbic acid CRS.

D. Dissolve 0.2 g in 2 mL of ethanol (96 per cent) R and add 0.2 mL of bromine water R. The solution is decolorised.

**TESTS****Solution S**. Dissolve 1.25 g in ethanol (96 per cent) R and dilute to 25 mL with the same solvent.**Appearance of solution**. Solution S is clear (2.2.1) and colourless (2.2.2, Method II).**Aldehydes**: maximum 0.15 per cent, calculated as  $\text{C}_2\text{H}_4\text{O}$ .Dissolve 1.0 g in a mixture of 30 mL of water R and 50 mL of 2-propanol R, adjust to pH 4 with 0.1 M hydrochloric acid or 0.1 M sodium hydroxide and dilute to 100 mL with water R. To 10 mL of this solution add 1 mL of decolorised fuchsin solution R and allow to stand for 30 min. Any colour in the solution is not more intense than that in a standard prepared at the same time by adding 1 mL of decolorised fuchsin solution R to a mixture of 1.5 mL of acetaldehyde standard solution (100 ppm  $\text{C}_2\text{H}_4\text{O}$ ) R, 4 mL of 2-propanol R and 4.5 mL of water R.**Heavy metals** (2.4.8): maximum 10 ppm.

12 mL of solution S complies with test B. Prepare the reference solution using 5 mL of lead standard solution (1 ppm Pb) R and 5 mL of ethanol (96 per cent) R.

**Water** (2.5.12): maximum 1.0 per cent, determined on 2.000 g.**Sulfated ash** (2.4.14): maximum 0.2 per cent, determined on 1.0 g.**ASSAY**

Dissolve 0.1000 g in 20 mL of ethanol (96 per cent) R. Using 0.2 mL of phenolphthalein solution R as indicator, titrate with 0.1 M sodium hydroxide until a pink colour is obtained.

1 mL of 0.1 M sodium hydroxide is equivalent to 11.21 mg of  $\text{C}_6\text{H}_8\text{O}_2$ .

## STORAGE

Protected from light.

## SORBITAN OLEATE

## Sorbitani oleas

01/2008:1040

## SORBITAN LAURATE

## Sorbitani lauras

## DEFINITION

Mixture usually obtained by partial esterification of sorbitol and its mono- and di-anhydrides with lauric (dodecanoic) acid.

## CHARACTERS

*Appearance*: brownish-yellow, viscous liquid.

*Solubility*: practically insoluble, but dispersible in water, miscible with alcohol.

*Relative density*: about 0.98.

## IDENTIFICATION

A. Hydroxyl value (see Tests).

B. Iodine value (see Tests).

C. Composition of fatty acids (see Tests).

## TESTS

**Acid value** (2.5.1): maximum 7.0, determined on 5.0 g.

**Hydroxyl value** (2.5.3, Method A): 330 to 358.

**Iodine value** (2.5.4): maximum 10.

**Peroxide value** (2.5.5): maximum 5.0.

**Saponification value** (2.5.6): 158 to 170.

Carry out the saponification for 1 h.

**Composition of fatty acids**. Gas chromatography (2.4.22, Method C).

Prepare reference solution (a) as indicated in tables 2.4.22.-1 and 2.4.22.-2.

*Composition of the fatty acid fraction of the substance*:

- *caproic acid*: maximum 1.0 per cent,
- *caprylic acid*: maximum 10.0 per cent,
- *capric acid*: maximum 10.0 per cent,
- *lauric acid*: 40.0 per cent to 60.0 per cent,
- *myristic acid*: 14.0 per cent to 25.0 per cent,
- *palmitic acid*: 7.0 per cent to 15.0 per cent,
- *stearic acid*: maximum 7.0 per cent,
- *oleic acid*: maximum 11.0 per cent,
- *linoleic acid*: maximum 3.0 per cent.

**Heavy metals** (2.4.8): maximum 10 ppm.

2.0 g complies with test D. Prepare the reference solution using 2 mL of lead standard solution (10 ppm Pb) R.

**Water** (2.5.12): maximum 1.5 per cent, determined on 1.00 g.

**Total ash** (2.4.16): maximum 0.5 per cent.

## STORAGE

Protected from light.

## DEFINITION

Mixture usually obtained by esterification of 1 mole of sorbitol and its mono- and di-anhydrides per mole of oleic (*cis*-9-octadecenoic) acid. A suitable antioxidant may be added.

## CHARACTERS

*Appearance*: brownish-yellow, viscous liquid.

*Solubility*: practically insoluble but dispersible in water, soluble in fatty oils producing a hazy solution, miscible with alcohol.

*Relative density*: about 0.99.

## IDENTIFICATION

A. Hydroxyl value (see Tests).

B. Iodine value (see Tests).

C. Composition of fatty acids (see Tests).

*Margaric acid*: maximum 0.2 per cent for oleic acid of vegetable origin and maximum 4.0 per cent for oleic acid of animal origin.

## TESTS

**Acid value** (2.5.1): maximum 8.0, determined on 5.0 g.

**Hydroxyl value** (2.5.3, Method A): 190 to 210.

**Iodine value** (2.5.4): 62 to 76.

**Peroxide value** (2.5.5): maximum 10.0.

**Saponification value** (2.5.6): 145 to 160.

Carry out the saponification for 1 h.

**Composition of fatty acids**. Gas chromatography (2.4.22, Method C).

*Composition of the fatty acid fraction of the substance*:

- *myristic acid*: maximum 5.0 per cent,
- *palmitic acid*: maximum 16.0 per cent,
- *palmitoleic acid*: maximum 8.0 per cent,
- *stearic acid*: maximum 6.0 per cent,
- *oleic acid*: 65.0 per cent to 88.0 per cent,
- *linoleic acid*: maximum 18.0 per cent,
- *linolenic acid*: maximum 4.0 per cent,
- *fatty acids with chain length greater than C<sub>18</sub>*: maximum 4.0 per cent.

**Heavy metals** (2.4.8): maximum 10 ppm.

2.0 g complies with test D. Prepare the reference solution using 2 mL of lead standard solution (10 ppm Pb) R.

**Water** (2.5.12): maximum 1.5 per cent, determined on 1.000 g.

**Total ash** (2.4.16): maximum 0.5 per cent, determined on 1.5 g.

## STORAGE

Protected from light.

## LABELLING

The label states the origin of the oleic acid used (animal or vegetable).

01/2008:1042 C. Composition of fatty acids (see Tests).

*Margaric acid*: maximum 0.2 per cent for oleic acid of vegetable origin and maximum 4.0 per cent for oleic acid of animal origin.

## SORBITAN PALMITATE

### Sorbitani palmitas

#### DEFINITION

Mixture usually obtained by partial esterification of sorbitol and its mono- and di-anhydrides with palmitic (hexadecanoic) acid.

#### CHARACTERS

*Appearance*: yellow or yellowish powder, waxy flakes or hard masses.

*Solubility*: practically insoluble in water, soluble in fatty oils, slightly soluble in alcohol.

#### IDENTIFICATION

A. Melting point (2.2.15): 44 °C to 51 °C.

Introduce the melted substance into the glass capillary tubes and allow to stand at a temperature below 10 °C for 24 h.

B. Hydroxyl value (see Tests).

C. Composition of fatty acids (see Tests).

#### TESTS

**Acid value** (2.5.1): maximum 8.0, determined on 5.0 g.

**Hydroxyl value** (2.5.3, Method A): 270 to 305.

**Peroxide value** (2.5.5): maximum 5.0.

**Saponification value** (2.5.6): 140 to 155.

Carry out the saponification for 1 h.

**Composition of fatty acids**. Gas chromatography (2.4.22, Method C).

*Composition of the fatty acid fraction of the substance*:

- *palmitic acid*: minimum 92.0 per cent,
- *stearic acid*: maximum 6.0 per cent.

**Heavy metals** (2.4.8): maximum 10 ppm.

2.0 g complies with test D. Prepare the reference solution using 2 mL of *lead standard solution (10 ppm Pb) R*.

**Water** (2.5.12): maximum 1.5 per cent, determined on 1.00 g.

**Total ash** (2.4.16): maximum 0.5 per cent.

#### STORAGE

Protected from light.

## SORBITAN SESQUIOLEATE

### Sorbitani sesquioleas

#### DEFINITION

Mixture usually obtained by esterification of 2 moles of sorbitol and its mono- and di-anhydrides per 3 moles of oleic (*cis*-9-octadecenoic) acid. A suitable antioxidant may be added.

#### CHARACTERS

*Appearance*: pale yellow or slightly brownish-yellow paste, which becomes a viscous, oily, brownish-yellow liquid at about 25 °C.

*Solubility*: dispersible in water, soluble in fatty oils, slightly soluble in ethanol.

*Relative density*: about 0.99.

#### IDENTIFICATION

A. Hydroxyl value (see Tests).

B. Iodine value (see Tests).

#### TESTS

**Acid value** (2.5.1): maximum 16.0, determined on 5.0 g.

**Hydroxyl value** (2.5.3, Method A): 180 to 215.

**Iodine value** (2.5.4): 70 to 95.

**Peroxide value** (2.5.5): maximum 10.0.

**Saponification value** (2.5.6): 145 to 166.

Carry out the saponification for 1 h.

**Composition of fatty acids**. Gas chromatography (2.4.22, Method C).

*Composition of the fatty acid fraction of the substance*:

- *myristic acid*: maximum 5.0 per cent,
- *palmitic acid*: maximum 16.0 per cent,
- *palmitoleic acid*: maximum 8.0 per cent,
- *stearic acid*: maximum 6.0 per cent,
- *oleic acid*: 65.0 per cent to 88.0 per cent,
- *linoleic acid*: maximum 18.0 per cent,
- *linolenic acid*: maximum 4.0 per cent,
- *fatty acids with chain length greater than C<sub>18</sub>*: maximum 4.0 per cent.

**Heavy metals** (2.4.8): maximum 10 ppm.

2.0 g complies with test D. Prepare the reference solution using 2 mL of *lead standard solution (10 ppm Pb) R*.

**Water** (2.5.12): maximum 1.5 per cent, determined on 1.000 g.

**Total ash** (2.4.16): maximum 0.5 per cent, determined on 1.5 g.

#### STORAGE

Protected from light.

#### LABELLING

The label states the origin of the oleic acid used (animal or vegetable).

01/2008:1043

## SORBITAN STEARATE

### Sorbitani stearas

#### DEFINITION

Mixture usually obtained by partial esterification of sorbitol and its mono- and di-anhydrides with *Stearic acid 50 (1474)* or *Stearic acid 70 (1474)*.

#### CHARACTERS

*Appearance*: pale yellow, waxy solid.

*Solubility*: practically insoluble, but dispersible in water, slightly soluble in alcohol.

#### IDENTIFICATION

A. Melting point (2.2.15): 50 °C to 60 °C.

Introduce the melted substance into the capillary tubes and allow to stand at a temperature below 10 °C for 24 h.

B. Hydroxyl value (see Tests).

C. Composition of fatty acids (see Tests).

#### TESTS

**Acid value** (2.5.1): maximum 10.0, determined on 5.0 g.

**Hydroxyl value** (2.5.3, Method A): 235 to 260.

**Peroxide value** (2.5.5): maximum 5.0.

**Saponification value** (2.5.6): 147 to 157.

Carry out the saponification for 1 h.

**Composition of fatty acids.** Gas chromatography (2.4.22, Method C).

*Composition of the fatty acid fraction of the substance:*

	Type of fatty acid used	Composition of fatty acids
Sorbitan stearate (type I)	Stearic acid 50	<i>Stearic acid:</i> 40.0 per cent to 60.0 per cent, <i>Sum of the contents of palmitic and stearic acids:</i> minimum 90.0 per cent.
Sorbitan stearate (type II)	Stearic acid 70	<i>Stearic acid:</i> 60.0 per cent to 80.0 per cent, <i>Sum of the contents of palmitic and stearic acids:</i> minimum 90.0 per cent.

**Heavy metals** (2.4.8): maximum 10 ppm.

2.0 g complies with test D. Prepare the reference solution using 2 mL of *lead standard solution (10 ppm Pb) R*.

**Water** (2.5.12): maximum 1.5 per cent, determined on 1.00 g.

**Total ash** (2.4.16): maximum 0.5 per cent.

STORAGE

Protected from light.

LABELLING

The label states the type of sorbitan stearate.

01/2008:1044

## SORBITAN TRIOLEATE

### Sorbitani trioleas

DEFINITION

Mixture usually obtained by esterification of 1 mole of sorbitol and its mono-anhydride per 3 moles of oleic (*cis*-9-octadecenoic) acid. A suitable antioxidant may be added.

CHARACTERS

*Appearance:* pale yellow, light yellowish or brown solid, which becomes a viscous, oily, brownish-yellow liquid at about 25 °C.

*Solubility:* practically insoluble but dispersible in water, soluble in fatty oils, slightly soluble in alcohol.

*Relative density:* about 0.98.

IDENTIFICATION

A. Hydroxyl value (see Tests).

B. Iodine value (see Tests).

C. Composition of fatty acids (see Tests).

*Margaric acid:* maximum 0.2 per cent for oleic acid of vegetable origin and maximum 4.0 per cent for oleic acid of animal origin.

TESTS

**Acid value** (2.5.1): maximum 16.0, determined on 5.0 g.

**Hydroxyl value** (2.5.3, Method A): 55 to 75.

**Iodine value** (2.5.4): 76 to 90.

**Peroxide value** (2.5.5): maximum 10.0.

**Saponification value** (2.5.6): 170 to 190.

Carry out the saponification for 1 h.

**Composition of fatty acids.** Gas chromatography (2.4.22, Method C).

*Composition of the fatty acid fraction of the substance:*

- *myristic acid:* maximum 5.0 per cent,
- *palmitic acid:* maximum 16.0 per cent,
- *palmitoleic acid:* maximum 8.0 per cent,
- *stearic acid:* maximum 6.0 per cent,
- *oleic acid:* 65.0 per cent to 88.0 per cent,

- *linoleic acid:* maximum 18.0 per cent,
- *linolenic acid:* maximum 4.0 per cent,
- *fatty acids with chain length greater than C<sub>18</sub>:* maximum 4.0 per cent.

**Heavy metals** (2.4.8): maximum 10 ppm.

2.0 g complies with test D. Prepare the reference solution using 2 mL of *lead standard solution (10 ppm Pb) R*.

**Water** (2.5.12): maximum 1.5 per cent, determined on 1.000 g.

**Total ash** (2.4.16): maximum 0.5 per cent, determined on 1.5 g.

STORAGE

Protected from light.

LABELLING

The label states the origin of the oleic acid used (animal or vegetable).

04/2009:0435

## SORBITOL

### Sorbitolum

C<sub>6</sub>H<sub>14</sub>O<sub>6</sub>  
[50-70-4]

M<sub>r</sub> 182.2

DEFINITION

D-Glucitol (D-sorbitol).

*Content:* 97.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance:* white or almost white, crystalline powder.

*Solubility:* very soluble in water, practically insoluble in ethanol (96 per cent).

It shows polymorphism (5.9).

IDENTIFICATION

*First identification:* A.

*Second identification:* B, C, D.

A. Examine the chromatograms obtained in the assay.

*Results:* the principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (a).

B. Dissolve 0.5 g with heating in a mixture of 0.5 mL of *pyridine R* and 5 mL of *acetic anhydride R*. After 10 min, pour the solution into 25 mL of *water R* and allow to stand in iced water for 2 h. The precipitate, recrystallised from a small volume of *ethanol (96 per cent) R* and dried *in vacuo*, melts (2.2.14) at 98 °C to 104 °C.

C. Thin-layer chromatography (2.2.27).

*Test solution.* Dissolve 25 mg of the substance to be examined in *water R* and dilute to 10 mL with the same solvent.

*Reference solution (a).* Dissolve 25 mg of *sorbitol CRS* in *water R* and dilute to 10 mL with the same solvent.

*Reference solution (b).* Dissolve 25 mg of *mannitol CRS* and 25 mg of *sorbitol CRS* in *water R* and dilute to 10 mL with the same solvent.

*Plate:* TLC silica gel G plate R.

*Mobile phase:* *water R*, *ethyl acetate R*, *propanol R* (10:20:70 V/V/V).

*Application:* 2 µL.

*Development:* over a path of 17 cm.

**Drying:** in air.

**Detection:** spray with 4-aminobenzoic acid solution R; dry in a current of cold air until the acetone is removed; heat at 100 °C for 15 min; allow to cool and spray with a 2 g/L solution of sodium periodate R; dry in a current of cold air; heat at 100 °C for 15 min.

**System suitability:** reference solution (b):

– the chromatogram shows 2 clearly separated spots.

**Results:** the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

**D. Specific optical rotation (2.2.7):** + 4.0 to + 7.0 (anhydrous substance).

Dissolve 5.00 g of the substance to be examined and 6.4 g of disodium tetraborate R in 40 mL of water R. Allow to stand for 1 h, shaking occasionally, and dilute to 50.0 mL with water R. Filter if necessary.

**TESTS**

**Appearance of solution.** The solution is clear (2.2.1) and colourless (2.2.2, Method II).

Dissolve 5 g in water R and dilute to 50 mL with the same solvent.

**Conductivity (2.2.38):** maximum 20  $\mu\text{S}\cdot\text{cm}^{-1}$ .

Dissolve 20.0 g in carbon dioxide-free water R prepared from distilled water R and dilute to 100.0 mL with the same solvent. Measure the conductivity of the solution while gently stirring with a magnetic stirrer.

**Reducing sugars:** maximum 0.2 per cent, expressed as glucose equivalent.

Dissolve 5.0 g in 6 mL of water R with the aid of gentle heat. Cool and add 20 mL of cupri-citric solution R and a few glass beads. Heat so that boiling begins after 4 min and maintain boiling for 3 min. Cool rapidly and add 100 mL of a 2.4 per cent V/V solution of glacial acetic acid R and 20.0 mL of 0.025 M iodine. With continuous shaking, add 25 mL of a mixture of 6 volumes of hydrochloric acid R and 94 volumes of water R and, when the precipitate has dissolved, titrate the excess of iodine with 0.05 M sodium thiosulfate using 1 mL of starch solution R, added towards the end of the titration, as indicator. Not less than 12.8 mL of 0.05 M sodium thiosulfate is required.

**Related substances.** Liquid chromatography (2.2.29).

**Test solution.** Dissolve 5.0 g of the substance to be examined in 20 mL of water R and dilute to 100.0 mL with the same solvent.

**Reference solution (a).** Dissolve 0.50 g of sorbitol CRS in 2 mL of water R and dilute to 10.0 mL with the same solvent.

**Reference solution (b).** Dilute 2.0 mL of the test solution to 100.0 mL with water R.

**Reference solution (c).** Dilute 5.0 mL of reference solution (b) to 100.0 mL with water R.

**Reference solution (d).** Dissolve 0.5 g of sorbitol R and 0.5 g of mannitol R (impurity A) in 5 mL of water R and dilute to 10.0 mL with the same solvent.

**Column:**

- size:  $l = 0.3$  m,  $\varnothing = 7.8$  mm;
- stationary phase: strong cation exchange resin (calcium form) R (9  $\mu\text{m}$ );
- temperature:  $85 \pm 1$  °C.

**Mobile phase:** degassed water R.

**Flow rate:** 0.5 mL/min.

**Detection:** refractometer maintained at a constant temperature.

**Injection:** 20  $\mu\text{L}$  of the test solution and reference solutions (b), (c) and (d).

**Run time:** 3 times the retention time of sorbitol.

**Relative retention** with reference to sorbitol (retention time = about 27 min): impurity C = about 0.6; impurity A = about 0.8; impurity B = about 1.1.

**System suitability:** reference solution (d):

– resolution: minimum 2 between the peaks due to impurity A and sorbitol.

**Limits:**

- any impurity: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (2 per cent);
- total: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (3 per cent);
- disregard limit: the area of the principal peak in the chromatogram obtained with reference solution (c) (0.1 per cent).

**Lead (2.4.10):** maximum 0.5 ppm.

**Nickel (2.4.15):** maximum 1 ppm.

Dissolve the substance to be examined in 150.0 mL of the prescribed mixture of solvents.

**Water (2.5.12):** maximum 1.5 per cent, determined on 1.00 g.

**Microbial contamination**

If intended for use in the manufacture of parenteral preparations:

– TAMC: acceptance criterion  $10^2$  CFU/g (2.6.12).

If not intended for use in the manufacture of parenteral preparations:

- TAMC: acceptance criterion  $10^3$  CFU/g (2.6.12);
- TYMC: acceptance criterion  $10^2$  CFU/g (2.6.12);
- absence of *Escherichia coli* (2.6.13);
- absence of *Salmonella* (2.6.13).

**Bacterial endotoxins (2.6.14).** If intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins:

- less than 4 IU/g for parenteral preparations having a concentration of less than 100 g/L of sorbitol;
- less than 2.5 IU/g for parenteral preparations having a concentration of 100 g/L or more of sorbitol.

**ASSAY**

Liquid chromatography (2.2.29) as described in the test for related substances with the following modification.

**Injection:** test solution and reference solution (a).

Calculate the percentage content of D-sorbitol from the declared content of sorbitol CRS.

**LABELLING**

The label states:

- where applicable, the maximum concentration of bacterial endotoxins;
- where applicable, that the substance is suitable for use in the manufacture of parenteral preparations.

**IMPURITIES**

A. D-mannitol,

B. D-idoitol,

C. 4-*O*-α-D-glucopyranosyl-D-glucitol (D-maltitol).

FUNCTIONALITY-RELATED CHARACTERISTICS

This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient (see chapter 5.15). This section is a non-mandatory part of the monograph and it is not necessary to verify the characteristics to demonstrate compliance. Control of these characteristics can however contribute to the quality of a medicinal product by improving the consistency of the manufacturing process and the performance of the medicinal product during use. Where control methods are cited, they are recognised as being suitable for the purpose, but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.

The following characteristics may be relevant for sorbitol used as filler and binder in tablets.

**Particle-size distribution** (2.9.31 or 2.9.38).

**Powder flow** (2.9.36).

01/2008:0436

## SORBITOL, LIQUID (CRYSTALLISING)

### Sorbitolum liquidum cristallisabile

DEFINITION

Aqueous solution of a hydrogenated, partly hydrolysed starch.

**Content:**

- anhydrous substance: 68.0 per cent *m/m* to 72.0 per cent *m/m*,
- D-glucitol (D-sorbitol, C<sub>6</sub>H<sub>14</sub>O<sub>6</sub>): 92.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

**Appearance:** clear, colourless, syrupy liquid, miscible with water.

IDENTIFICATION

A. Examine the chromatograms obtained in the assay.

**Results:** the principal peak in the chromatogram obtained with the test solution is similar in retention time to the principal peak in the chromatogram obtained with reference solution (a).

B. To 7.0 g add 40 mL of *water R* and 6.4 g of *disodium tetraborate R*, allow to stand for 1 h, shaking occasionally, and dilute to 50.0 mL with *water R*. Filter if necessary. The angle of rotation (2.2.7) is 0° to + 1.5°.

C. It is a clear, syrupy liquid at a temperature of 25 °C.

TESTS

**Appearance of solution.** The solution is clear (2.2.1) and colourless (2.2.2, *Method II*).

Dilute 7.0 g to 50 mL with *water R*.

**Conductivity** (2.2.38): maximum 10 μS·cm<sup>-1</sup> measured on the undiluted liquid sorbitol (crystallising) while gently stirring with a magnetic stirrer.

**Reducing sugars:** maximum 0.2 per cent calculated as glucose equivalent.

To 5.0 g add 6 mL of *water R*, 20 mL of *cupri-citric solution R* and a few glass beads. Heat so that boiling begins after 4 min

and maintain boiling for 3 min. Cool rapidly and add 100 mL of a 2.4 per cent *V/V* solution of *glacial acetic acid R* and 20.0 mL of 0.025 *M* iodine. With continuous shaking, add 25 mL of a mixture of 6 volumes of *hydrochloric acid R* and 94 volumes of *water R* and, when the precipitate has dissolved, titrate the excess of iodine with 0.05 *M* sodium thiosulfate using 1 mL of *starch solution R*, added towards the end of the titration, as indicator. Not less than 12.8 mL of 0.05 *M* sodium thiosulfate is required.

**Lead** (2.4.10): maximum 0.5 ppm.

**Nickel** (2.4.15): maximum 1 ppm.

**Water** (2.5.12): 28.0 per cent to 32.0 per cent *m/m*, determined on 0.1 g.

ASSAY

Liquid chromatography (2.2.29).

**Test solution.** Mix 1.00 g of the substance to be examined with 20 mL of *water R* and dilute to 50.0 mL with the same solvent.

**Reference solution (a).** Dissolve 65.0 mg of *sorbitol CRS* in 2 mL of *water R* and dilute to 5.0 mL with the same solvent.

**Reference solution (b).** Dissolve 65 mg of *mannitol R* and 65 mg of *sorbitol R* in 2 mL of *water R* and dilute to 5.0 mL with the same solvent.

**Column:**

- size: *l* = 0.3 m, Ø = 7.8 mm,
- stationary phase: strong cation exchange resin (calcium form) *R* (9 μm),
- temperature: 85 ± 1 °C.

**Mobile phase:** degassed *water R*.

**Flow rate:** 0.5 mL/min.

**Detection:** refractometer maintained at a constant temperature.

**Injection:** 20 μL.

**Run time:** 3 times the retention time of sorbitol.

**Relative retention** with reference to sorbitol (retention time = about 27 min): mannitol = about 0.8.

**System suitability:** reference solution (b):

- resolution: minimum 2 between the peaks due to mannitol and to sorbitol.

Calculate the percentage content of D-sorbitol from the areas of the peaks and the declared content of *sorbitol CRS*.

01/2008:0437

## SORBITOL, LIQUID (NON-CRYSTALLISING)

### Sorbitolum liquidum non cristallisabile

DEFINITION

Aqueous solution of a hydrogenated, partly hydrolysed starch.

**Content:**

- anhydrous substance: 68.0 per cent *m/m* to 72.0 per cent *m/m*,
- D-glucitol (D-sorbitol, C<sub>6</sub>H<sub>14</sub>O<sub>6</sub>): 72.0 per cent to 92.0 per cent (anhydrous substance).

CHARACTERS

**Appearance:** clear, colourless, syrupy liquid, miscible with water.

IDENTIFICATION

A. Examine the chromatograms obtained in the assay.

**Results:** the principal peak in the chromatogram obtained with the test solution is similar in retention time to the principal peak in the chromatogram obtained with reference solution (a).

- B. To 7.0 g add 40 mL of *water R* and 6.4 g of *disodium tetraborate R*. Allow to stand for 1 h, shaking occasionally, and dilute to 50.0 mL with *water R*. Filter if necessary. The angle of rotation (2.2.7) is + 1.5° to + 3.5°.
- C. It is a clear, syrupy liquid at 25 °C.

## TESTS

**Appearance of solution.** The solution is clear (2.2.1) and colourless (2.2.2, *Method II*).

Dilute 7.0 g to 50 mL with *water R*.

**Conductivity** (2.2.38): maximum 10  $\mu\text{S}\cdot\text{cm}^{-1}$  measured on the undiluted liquid sorbitol (non crystallising) while gently stirring with a magnetic stirrer.

**Reducing sugars:** maximum 0.2 per cent calculated as glucose equivalent.

To 5.0 g add 6 mL of *water R*, 20 mL of *cupri-citric solution R* and a few glass beads. Heat so that boiling begins after 4 min and maintain boiling for 3 min. Cool rapidly and add 100 mL of a 2.4 per cent *V/V* solution of *glacial acetic acid R* and 20.0 mL of 0.025 *M* iodine. With continuous shaking, add 25 mL of a mixture of 6 volumes of *hydrochloric acid R* and 94 volumes of *water R* and, when the precipitate has dissolved, titrate the excess of iodine with 0.05 *M* sodium thiosulfate using 1 mL of *starch solution R*, added towards the end of the titration, as indicator. Not less than 12.8 mL of 0.05 *M* sodium thiosulfate is required.

**Reducing sugars after hydrolysis:** maximum 9.3 per cent calculated as glucose equivalent.

To 6.0 g add 35 mL of *water R*, 40 mL of 1 *M* *hydrochloric acid* and a few glass beads. Boil under a reflux condenser for 4 h. Cool and neutralise with *dilute sodium hydroxide solution R* using 0.2 mL of *bromothymol blue solution RI* as indicator. Cool and dilute to 100.0 mL with *water R*. To 3.0 mL of the solution add 5 mL of *water R*, 20 mL of *cupri-citric solution R* and a few glass beads. Heat so that boiling begins after 4 min and maintain boiling for 3 min. Cool rapidly and add 100 mL of a 2.4 per cent *V/V* solution of *glacial acetic acid R* and 20.0 mL of 0.025 *M* iodine. With continuous shaking, add 25 mL of a mixture of 6 volumes of *hydrochloric acid R* and 94 volumes of *water R*. When the precipitate has dissolved, titrate the excess of iodine with 0.05 *M* sodium thiosulfate using 1 mL of *starch solution R*, added towards the end of the titration, as indicator. Not less than 8.0 mL of 0.05 *M* sodium thiosulfate is required.

**Lead** (2.4.10): maximum 0.5 ppm.

**Nickel** (2.4.15): maximum 1 ppm.

**Water** (2.5.12): 28.0 per cent to 32.0 per cent *m/m*, determined on 0.1 g.

## ASSAY

Liquid chromatography (2.2.29).

**Test solution.** Mix 1.00 g of the substance to be examined with 20 mL of *water R* and dilute to 50.0 mL with the same solvent.

**Reference solution (a).** Dissolve 55.0 mg of *sorbitol CRS* in 2 mL of *water R* and dilute to 5.0 mL with the same solvent.

**Reference solution (b).** Dissolve 55 mg of *mannitol R* and 55 mg of *sorbitol R* in 2 mL of *water R* and dilute to 5.0 mL with the same solvent.

**Column:**

- size:  $l = 0.3$  m,  $\varnothing = 7.8$  mm,
- stationary phase: strong cation exchange resin (calcium form) *R* (9  $\mu\text{m}$ ),
- temperature:  $85 \pm 1$  °C.

**Mobile phase:** degassed *water R*.

**Flow rate:** 0.5 mL/min.

**Detection:** refractometer maintained at a constant temperature.

**Injection:** 20  $\mu\text{L}$ .

**Run time:** 3 times the retention time of sorbitol.

**Relative retention** with reference to sorbitol (retention time = about 27 min): mannitol = about 0.8.

**System suitability:** reference solution (b):

- resolution: minimum 2 between the peaks due to mannitol and to sorbitol.

Calculate the percentage content of D-sorbitol from the areas of the peaks and the declared content of *sorbitol CRS*.

01/2009:2048

## SORBITOL, LIQUID, PARTIALLY DEHYDRATED

## Sorbitolum liquidum partim deshydricum

## DEFINITION

Partially dehydrated liquid sorbitol is obtained by acid-catalysed partial internal dehydration of liquid sorbitol. It contains not less than 68.0 per cent *m/m* and not more than 85.0 per cent *m/m* of anhydrous substances, composed of a mixture of mainly D-sorbitol and 1,4-sorbitan, with mannitol, hydrogenated oligo- and disaccharides, and sorbitans.

**Content** (nominal value):

- 1,4-sorbitan ( $\text{C}_6\text{H}_{12}\text{O}_5$ ): minimum 15.0 per cent (anhydrous substance);
- D-sorbitol ( $\text{C}_6\text{H}_{14}\text{O}_6$ ): minimum 25.0 per cent (anhydrous substance).

The contents of 1,4-sorbitan and D-sorbitol are within 95.0 per cent to 105.0 per cent of the nominal values.

## CHARACTERS

**Appearance:** clear, colourless, syrupy liquid.

**Solubility:** miscible with water, practically insoluble in mineral oils and vegetable oils.

## IDENTIFICATION

Examine the chromatograms obtained in the assay.

**Results:** the 2 principal peaks in the chromatogram obtained with the test solution are similar in retention time and size to the peaks in the chromatogram obtained with reference solution (a).

## TESTS

**Solution S.** Dilute the substance to be examined with *carbon dioxide-free water R* prepared from *distilled water R* to obtain a solution containing 50.0 per cent *m/m* of anhydrous substance.

**Appearance of solution.** Solution S is clear (2.2.1) and colourless (2.2.2, *Method II*).

**Conductivity** (2.2.38): maximum 20  $\mu\text{S}\cdot\text{cm}^{-1}$ .

Measure the conductivity of solution S, while gently stirring with a magnetic stirrer.

**Reducing sugars:** maximum 0.3 per cent, calculated as glucose (anhydrous substance).

To an amount of the substance to be examined equivalent to 3.3 g of anhydrous substance, add 3 mL of *water R*, 20.0 mL of *cupri-citric solution R* and a few glass beads. Heat so that boiling begins after 4 min. Maintain boiling for 3 min. Cool rapidly and add 100 mL of a 2.4 per cent *V/V* solution of *glacial acetic acid R* and 20.0 mL of 0.025 *M* iodine. With continuous shaking, add 25 mL of a mixture of 6 mL of *hydrochloric acid R* and 94 mL of *water R*. When the precipitate has dissolved, titrate the excess of iodine with 0.05 *M* sodium thiosulfate using 2 mL of *starch solution R*, added towards the end of the titration, as indicator. Not less than 12.8 mL of 0.05 *M* sodium thiosulfate is required.

**Nickel** (2.4.15): maximum 1 ppm (anhydrous substance).

**Water** (2.5.12): 15.0 per cent to 32.0 per cent, determined on 0.10 g.

**Microbial contamination**

TAMC: acceptance criterion  $10^3$  CFU/g (2.6.12).

TYMC: acceptance criterion  $10^2$  CFU/g (2.6.12).

Absence of *Escherichia coli* (2.6.13).

Absence of *Salmonella* (2.6.13).

**ASSAY**

Liquid chromatography (2.2.29).

**Test solution.** Dissolve 0.400 g of the substance to be examined in water R and dilute to 20.0 mL with the same solvent.

**Reference solution (a).** Dissolve 50.0 mg of sorbitol CRS and 20.0 mg of 1,4-sorbitan CRS in water R and dilute to 5.0 mL with the same solvent.

**Reference solution (b).** Dissolve 0.100 g of mannitol R and 0.100 g of sorbitol R in water R and dilute to 10.0 mL with the same solvent.

**Column:**

- size:  $l = 0.3$  m,  $\emptyset = 7.8$  mm;
- stationary phase: strong cation exchange resin (calcium form) R (9  $\mu$ m);
- temperature:  $80 \pm 5$  °C.

**Mobile phase:** degassed water R.

**Flow rate:** 0.5 mL/min.

**Detection:** refractometer maintained at a constant temperature of about 30-35 °C.

**Injection:** 40  $\mu$ L.

**Relative retention** with reference to D-sorbitol (retention time = about 25 min): 1,4-sorbitan = about 0.5; mannitol = about 0.8.

**System suitability:** reference solution (b):

- resolution: minimum 2.0 between the peaks due to mannitol and D-sorbitol.

Calculate the percentage contents of 1,4-sorbitan and D-sorbitol using the chromatogram obtained with reference solution (a) and the declared contents of 1,4-sorbitan CRS and of sorbitol CRS.

**LABELLING**

The label states the content of D-sorbitol and the content of 1,4-sorbitan (= nominal values).

01/2008:2004  
corrected 6.0

**SOTALOL HYDROCHLORIDE**

## Sotaloli hydrochloridum

$C_{12}H_{21}ClN_2O_3S$   
[959-24-0]

$M_r$  308.8

**DEFINITION**

*N*[4-[(1*R*S)-1-hydroxy-2-[(1-methylethyl)amino]ethyl]phenyl]methanesulfonamide hydrochloride.

**Content:** 99.0 per cent to 101.0 per cent (dried substance).

**CHARACTERS**

**Appearance:** white or almost white powder.

**Solubility:** freely soluble in water, soluble in alcohol, practically insoluble in methylene chloride.

**IDENTIFICATION**

A. Infrared absorption spectrophotometry (2.2.24).

*Comparison:* sotalol hydrochloride CRS.

B. It gives reaction (a) of chlorides (2.3.1).

**TESTS**

**Solution S.** Dissolve 5.0 g in carbon dioxide-free water R and dilute to 50.0 mL with the same solvent.

**Appearance of solution.** Solution S is not more opalescent than reference suspension III (2.2.1) and not more intensely coloured than reference solution  $Y_6$  (2.2.2, Method II).

**pH** (2.2.3): 4.0 to 5.0.

Dilute 5.0 mL of solution S to 10.0 mL with carbon dioxide-free water R.

**Optical rotation** (2.2.7):  $-0.10^\circ$  to  $+0.10^\circ$ .

Dilute 25.0 mL of solution S to 50.0 mL with water R.

**Related substances.** Liquid chromatography (2.2.29).

**Test solution.** Dissolve 20.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 mL with the mobile phase.

**Reference solution (a).** Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 3.0 mL of this solution to 10.0 mL with the mobile phase.

**Reference solution (b).** Dissolve 8.0 mg of sotalol impurity B CRS in the mobile phase and dilute to 10.0 mL with the mobile phase.

**Reference solution (c).** Dilute 1.0 mL of reference solution (b) to 100.0 mL with the mobile phase.

**Reference solution (d).** Dilute 1.5 mL of reference solution (b) to 100 mL with the mobile phase. To 1 mL of this solution add 1 mL of reference solution (a).

**Column:**

- size:  $l = 0.25$  m,  $\emptyset = 4.6$  mm,
- stationary phase: octadecylsilyl silica gel for chromatography R (5  $\mu$ m).

**Mobile phase:** dissolve 2 g of sodium octanesulfonate R in 790 mL of water R. Adjust to pH 3.0 with phosphoric acid R and add 210 mL of acetonitrile R.

**Flow rate:** 1 mL/min.

**Detection:** spectrophotometer at 228 nm.

**Injection:** 10  $\mu$ L; inject the test solution and reference solutions (a), (c) and (d).

**Run time:** 2.5 times the retention time of sotalol.

**System suitability:** reference solution (d):

- resolution: minimum 4.0 between the peaks due to sotalol and to impurity B.

**Limits:**

- impurity B: not more than 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.1 per cent),
- any other impurity: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent), and not more than 1 such peak has an area greater than 0.3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent),
- total of other impurities: not more than 1.65 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent),
- disregard limit: 0.17 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Palladium:** maximum 0.5 ppm.

Atomic absorption spectrometry (2.2.23, Method I).

**Test solution.** Dissolve 1.00 g in a mixture of 0.25 volumes of *nitric acid R*, 0.75 volumes of *hydrochloric acid R* and 99.0 volumes of *water R* and dilute to 20.0 mL with the same mixture of solvents.

**Reference solutions.** Use solutions containing 0.02 µg, 0.03 µg and 0.05 µg of palladium per millilitre, freshly prepared by dilution of *palladium standard solution (0.5 ppm Pd) R* with a mixture of 0.25 volumes of *nitric acid R*, 0.75 volumes of *hydrochloric acid R* and 99.0 volumes of *water R*.

**Source:** palladium hollow-cathode lamp.

**Wavelength:** 247.6 nm.

Use a graphite tube.

**Heavy metals (2.4.8):** maximum 20 ppm.

To 10 mL of solution S add 10 mL of *water R*. 12 mL of the solution complies with limit test A. Prepare the standard using *lead standard solution (1 ppm Pb) R*.

**Loss on drying (2.2.32):** maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash (2.4.14):** maximum 0.1 per cent, determined on 1.0 g.

#### ASSAY

*In order to avoid overheating during the titration, mix thoroughly throughout and stop the titration immediately after the end-point has been reached.*

Dissolve 0.250 g in 10 mL of *anhydrous formic acid R*, if necessary with the aid of ultrasound. Add 40 mL of *acetic anhydride R* and titrate immediately with 0.1 M *perchloric acid*. Determine the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *perchloric acid* is equivalent to 30.88 mg of C<sub>12</sub>H<sub>21</sub>ClN<sub>2</sub>O<sub>3</sub>S.

#### STORAGE

Protected from light.

#### IMPURITIES

- A. R = CH<sub>2</sub>-CH<sub>2</sub>-NH-CH(CH<sub>3</sub>)<sub>2</sub>: *N*-[4-[2-[(1-methylethyl)amino]ethyl]phenyl]methanesulfonamide,
- B. R = CO-CH<sub>2</sub>-NH-CH(CH<sub>3</sub>)<sub>2</sub>: *N*-[4-[[1-(1-methylethyl)amino]acetyl]phenyl]methanesulfonamide,
- C. R = CHO: *N*-(4-formylphenyl)methanesulfonamide,

- D. *N*-[4-[(1*R*,2*S*)-2-hydroxy-1-[(1-methylethyl)amino]ethyl]phenyl]methanesulfonamide.

corrected 7.0

## SOYA-BEAN OIL, HYDROGENATED

### Soiae oleum hydrogenatum

#### DEFINITION

Product obtained by refining, bleaching, hydrogenation and deodorisation of oil obtained from seeds of *Glycine max* (L.) Merr. (*G. hispida* (Moench) Maxim.). The product consists mainly of triglycerides of palmitic and stearic acids.

#### CHARACTERS

**Appearance:** white or almost white mass or powder which melts to a clear, pale yellow liquid when heated.

**Solubility:** practically insoluble in water, freely soluble in methylene chloride, in light petroleum (bp: 65-70 °C) after heating and in toluene, very slightly soluble in ethanol (96 per cent).

#### IDENTIFICATION

A. Melting point (see Tests).

B. Composition of fatty acids (see Tests).

#### TESTS

**Melting point (2.2.15):** 66 °C to 72 °C.

**Acid value (2.5.1):** maximum 0.5.

Dissolve 10.0 g in 50 mL of a hot mixture of equal volumes of *ethanol (96 per cent) R* and *toluene R*, previously neutralised with 0.1 M *potassium hydroxide* using 0.5 mL of *phenolphthalein solution R1* as indicator. Titrate the solution immediately while still hot.

**Peroxide value (2.5.5, Method A):** maximum 5.0.

**Unsaponifiable matter (2.5.7):** maximum 1.0 per cent, determined on 5.0 g.

**Alkaline impurities (2.4.19).** Dissolve 2.0 g with gentle heating in a mixture of 1.5 mL of *ethanol (96 per cent) R* and 3 mL of *toluene R*. Add 0.05 mL of a 0.4 g/L solution of *bromophenol blue R* in *ethanol (96 per cent) R*. Not more than 0.4 mL of 0.01 M *hydrochloric acid* is required to change the colour to yellow.

**Composition of fatty acids (2.4.22, Method A).** Use the mixture of calibrating substances in Table 2.4.22.-3.

**Column:**

- *material:* fused silica;
- *size:* *l* = 25 m, Ø = 0.25 mm;
- *stationary phase:* *poly(cyanopropyl)siloxane R* (film thickness 0.2 µm).

**Carrier gas:** *helium for chromatography R*.

**Flow rate:** 0.65 mL/min.

**Split ratio:** 1:100.

**Temperature:**

- *column:* 180 °C for 20 min;
- *injection port and detector:* 250 °C.

**Detection:** flame ionisation.

**Composition of the fatty-acid fraction of the oil:**

- *saturated fatty acids of chain length less than C<sub>14</sub>:* maximum 0.1 per cent;
- *myristic acid:* maximum 0.5 per cent;
- *palmitic acid:* 9.0 per cent to 16.0 per cent;
- *stearic acid:* 79.0 per cent to 89.0 per cent;
- *oleic acid and isomers:* maximum 4.0 per cent;
- *linoleic acid and isomers:* maximum 1.0 per cent;
- *linolenic acid and isomers:* maximum 0.2 per cent;
- *arachidic acid:* maximum 1.0 per cent;
- *behenic acid:* maximum 1.0 per cent.

**Nickel:** maximum 1 ppm.

**Atomic absorption spectrometry (2.2.23, Method II).**

**Test solution.** Introduce 5.0 g into a platinum or silica crucible, previously tared after calcination. Cautiously heat and introduce into the substance a wick formed from twisted ashless filter paper. Light the wick. When the substance is alight stop heating. After combustion, ignite in a muffle furnace at about 600 ± 50 °C. Continue the ignition until white ash is obtained. After cooling, take up the residue with 2 quantities, each of 2 mL, of *dilute hydrochloric acid R* and transfer into a 25 mL graduated flask. Add 0.3 mL of *nitric acid R* and dilute to 25.0 mL with *water R*.

**Reference solutions.** Prepare 3 reference solutions by adding 1.0 mL, 2.0 mL and 4.0 mL of *nickel standard solution* (0.2 ppm Ni) *R* to 2.0 mL of the test solution and diluting to 10.0 mL with *water R*.

**Source:** nickel hollow-cathode lamp.

**Wavelength:** 232 nm.

**Atomisation device:** graphite furnace.

**Carrier gas:** argon *R*.

#### STORAGE

Protected from light.

01/2010:1473  
corrected 6.7

## SOYA-BEAN OIL, REFINED

### Soiae oleum raffinatum

#### DEFINITION

Fatty oil obtained from seeds of *Glycine max* (L.) Merr. (*Glycine hispida* (Moench) Maxim.) by extraction and subsequent refining. It may contain a suitable antioxidant.

#### CHARACTERS

**Appearance:** clear, pale yellow liquid.

**Solubility:** practically insoluble in ethanol (96 per cent), miscible with light petroleum (bp: 50-70 °C).

**Relative density:** about 0.922.

**Refractive index:** about 1.475.

#### IDENTIFICATION

Identification of fatty oils by thin-layer chromatography (2.3.2).

**Results:** the chromatogram obtained is similar to the corresponding chromatogram shown in Figure 2.3.2-1.

#### TESTS

**Acid value** (2.5.1): maximum 0.5.

**Peroxide value** (2.5.5, *Method A*): maximum 10.0, and maximum 5.0 if intended for use in the manufacture of parenteral preparations.

**Unsaponifiable matter** (2.5.7): maximum 1.5 per cent, determined on 5.0 g.

**Alkaline impurities** (2.4.19). It complies with the test.

**Composition of fatty acids** (2.4.22, *Method A*). Use the mixture of calibrating substances in Table 2.4.22-3.

**Composition of the fatty-acid fraction of the oil:**

- saturated fatty acids of chain length less than  $C_{14}$ : maximum 0.1 per cent;
- *myristic acid*: maximum 0.2 per cent;
- *palmitic acid*: 9.0 per cent to 13.0 per cent;
- *palmitoleic acid*: maximum 0.3 per cent;
- *stearic acid*: 2.5 per cent to 5.0 per cent;
- *oleic acid*: 17.0 per cent to 30.0 per cent;
- *linoleic acid*: 48.0 per cent to 58.0 per cent;
- *linolenic acid*: 5.0 per cent to 11.0 per cent;
- *arachidic acid*: maximum 1.0 per cent;
- *eicosenoic acid*: maximum 1.0 per cent;
- *behenic acid*: maximum 1.0 per cent.

**Brassicasterol** (2.4.23): maximum 0.3 per cent in the sterol fraction of the oil.

**Water** (2.5.32): maximum 0.1 per cent, determined on 1.00 g.

#### STORAGE

In a well-filled container, protected from light, at a temperature not exceeding 25 °C.

#### LABELLING

The label states, where applicable, that the substance is suitable for use in the manufacture of parenteral preparations.

01/2008:1152

## SPECTINOMYCIN DIHYDROCHLORIDE PENTAHYDRATE

### Spectinomycini dihydrochloridum pentahydricum

Compound	R	R'	Molec. Formula	$M_r$
spectinomycin	R + R' = O		$C_{14}H_{26}Cl_2N_2O_7 \cdot 5H_2O$	495.4
(4 <i>R</i> )-dihydro-spectinomycin	OH	H	$C_{14}H_{28}Cl_2N_2O_7 \cdot 5H_2O$	497.4

#### DEFINITION

Mixture of (2*R*,4*aR*,5*aR*,6*S*,7*S*,8*R*,9*S*,9*aR*,10*aS*)-4*a*,7,9-trihydroxy-2-methyl-6,8-bis(methylamino)decahydro-4*H*-pyrano[2,3-*b*][1,4]benzodioxin-4-one dihydrochloride pentahydrate (spectinomycin dihydrochloride pentahydrate) and of (2*R*,4*R*,4*aS*,5*aR*,6*S*,7*S*,8*R*,9*S*,9*aR*,10*aS*)-2-methyl-6,8-bis(methylamino)decahydro-2*H*-pyrano[2,3-*b*][1,4]benzodioxine-4,4*a*,7,9-tetrol dihydrochloride pentahydrate ((4*R*)-dihydro-spectinomycin dihydrochloride pentahydrate). It is produced by *Streptomyces spectabilis* or by any other means.

#### Content:

- (4*R*)-dihydro-spectinomycin dihydrochloride: maximum 9.0 per cent (anhydrous substance);
- sum of the contents of spectinomycin dihydrochloride and (4*R*)-dihydro-spectinomycin dihydrochloride: 93.0 per cent to 102.0 per cent (anhydrous substance).

#### CHARACTERS

**Appearance:** white or almost white, slightly hygroscopic powder.

**Solubility:** freely soluble in water, very slightly soluble in ethanol (96 per cent).

#### IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

*Comparison:* spectinomycin hydrochloride *CRS*.

B. Dilute 1.0 mL of solution S (see Tests) to 10 mL with *water R*. The solution gives reaction (a) of chlorides (2.3.1).

#### TESTS

**Solution S.** Dissolve 2.50 g in carbon dioxide-free *water R* and dilute to 25.0 mL with the same solvent.

**Appearance of solution.** The solution is clear (2.2.1) and colourless (2.2.2, *Method II*).

Dilute 2.0 mL of solution S to 20.0 mL with *water R*.

**pH** (2.2.3): 3.8 to 5.6 for solution S.

**Specific optical rotation** (2.2.7): + 15.0 to + 21.0 (anhydrous substance), determined on solution S within 20 min of preparation.

**Related substances.** Liquid chromatography (2.2.29). In order to avoid formation of anomers, prepare the solutions immediately before use.

**Test solution.** Dissolve 15.0 mg of the substance to be examined in the mobile phase and dilute to 100.0 mL with the mobile phase.

**Reference solution (a).** Dissolve 3 mg of spectinomycin for system suitability CRS in the mobile phase and dilute to 20 mL with the mobile phase.

**Reference solution (b).** Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase.

**Reference solution (c).** Dilute 3.0 mL of reference solution (b) to 10.0 mL with the mobile phase.

**Column:**

- size:  $l = 0.25$  m,  $\varnothing = 4.6$  mm;
- stationary phase: octylsilyl silica gel for chromatography R (5  $\mu$ m);
- temperature: ambient and constant.

**Mobile phase:** dissolve 4.2 g of oxalic acid R and 2.0 mL of heptafluorobutyric acid R in water R and dilute to 1000 mL with water R; adjust to pH 3.2 with sodium hydroxide solution R, add 105 mL of acetonitrile R and mix; filter through a 0.45  $\mu$ m filter and degas with helium for chromatography R for 10 min.

**Flow rate:** 1.0 mL/min.

**Post-column solution:** carbonate-free sodium hydroxide solution R diluted with carbon dioxide-free water R to obtain a final concentration of NaOH of 21 g/L. Degas the solution with helium for chromatography R for 10 min before use. Add it pulse-less to the column effluent using a 375  $\mu$ L polymeric mixing coil.

**Post-column flow rate:** 0.5 mL/min.

**Detection:** pulsed amperometric detection or equivalent with a gold indicator electrode having preferably a diameter of 1.4 mm or greater, a suitable reference electrode and a stainless steel counter electrode, held at + 0.12 V detection, + 0.70 V oxidation and – 0.60 V reduction potentials respectively, with pulse durations according to the instrument used. Keep the detection cell at ambient and constant temperature. Clean the gold indicator electrode with an eraser and damp precision wipe prior to start-up of the system to enhance the detector sensitivity and increase the signal-to-noise ratio.

**Injection:** 20  $\mu$ L.

**Run time:** 1.5 times the retention time of spectinomycin.

**Identification of impurities:** use the chromatogram supplied with spectinomycin for system suitability CRS and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A, D and E.

**Relative retention** with reference to spectinomycin (retention time = 11 min to 20 min): impurity A = about 0.5; impurity F = about 0.53; impurity G = about 0.6; impurity D = about 0.7; impurity E = about 0.9; (4R)-dihydrospectinomycin = about 1.3; impurity C = about 1.4.

**System suitability:** reference solution (a):

- resolution: minimum 1.5 between the peaks due to impurity E and spectinomycin.

**Limits:**

- correction factor: for the calculation of content, multiply the peak area of impurity A by 0.4;
- impurities A, C, F, G: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);

- impurities D, E: for each impurity, not more than 4 times the area of the principal peak in the chromatogram obtained with reference solution (b) (4.0 per cent);
- any other impurity: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);
- total: not more than 6 times the area of the principal peak in the chromatogram obtained with reference solution (b) (6.0 per cent);
- disregard limit: the area of the principal peak in the chromatogram obtained with reference solution (c) (0.3 per cent); disregard the peak due to (4R)-dihydrospectinomycin.

**Water** (2.5.12): 16.0 per cent to 20.0 per cent, determined on 0.100 g.

**Sulfated ash** (2.4.14): maximum 1.0 per cent, determined on 1.0 g.

**Bacterial endotoxins** (2.6.14): less than 0.09 IU/mg, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins. Prepare the solutions using a 0.42 per cent *m/m* solution of sodium hydrogen carbonate R.

**ASSAY**

Liquid chromatography (2.2.29) as described in the test for related substances with the following modifications.

**Test solution.** Dissolve 40.0 mg of the substance to be examined in water R and dilute to 50.0 mL with the same solvent. Allow to stand for not less than 15 h and not more than 72 h (formation of anomers). Dilute 5.0 mL of this solution to 50.0 mL with the mobile phase.

**Reference solution.** Dissolve 40.0 mg of spectinomycin hydrochloride CRS (containing (4R)-dihydrospectinomycin) in water R and dilute to 50.0 mL with the same solvent. Allow to stand for the same period of time as the test solution (formation of anomers). Dilute 5.0 mL of this solution to 50.0 mL with the mobile phase.

**System suitability:**

- repeatability: maximum relative standard deviation of 3.0 per cent for the principal peak after 6 injections of the reference solution.

Calculate the sum of the percentage contents of spectinomycin dihydrochloride and (4R)-dihydrospectinomycin dihydrochloride from the declared contents of  $C_{14}H_{26}Cl_2N_2O_7$  and  $C_{14}H_{28}Cl_2N_2O_7$  in spectinomycin hydrochloride CRS.

**STORAGE**

In an airtight container. If the substance is sterile, store in a sterile, airtight, tamper-proof container.

**IMPURITIES**

**Specified impurities:** A, C, D, E, F, G.

**Other detectable impurities** (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use* (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): B.

A. 1,3-dideoxy-1,3-bis(methylamino)-myo-inositol (actinamine),

- B. (2*S*,3*R*,5*R*)-3-hydroxy-5-methyl-2-[[1*r*,2*R*,3*S*,4*r*,5*R*,6*S*)-2,4,6-trihydroxy-3,5-bis(methylamino)cyclohexyl]oxy]-tetrahydrofuran-3-carboxylic acid (actinospectinoic acid),

- C. R1 = CH<sub>3</sub>, R2 = R4 = H, R3 = OH: (2*R*,4*S*,4*aS*,5*aR*,6*S*,7*S*,8*R*,9*S*,9*aR*,10*aS*)-2-methyl-6,8-bis(methylamino)decahydro-2*H*-pyran[2,3-*b*][1,4]benzodioxine-4,4*a*,7,9-tetrol ((4*S*)-dihydro-spectinomycin),

## SPECTINOMYCIN SULFATE TETRAHYDRATE FOR VETERINARY USE

Spectinomycini sulfas tetrahydricus ad usum  
veterinarium

Compound	R	R'	Molec. Formula	M <sub>r</sub>
spectinomycin	R + R' = O		C <sub>14</sub> H <sub>26</sub> N <sub>2</sub> O <sub>11</sub> S, 4H <sub>2</sub> O	502.5
(4 <i>R</i> )-dihydro-spectinomycin	OH	H	C <sub>14</sub> H <sub>28</sub> N <sub>2</sub> O <sub>11</sub> S, 4H <sub>2</sub> O	504.5

### DEFINITION

Mixture of (2*R*,4*aR*,5*aR*,6*S*,7*S*,8*R*,9*S*,9*aR*,10*aS*)-4*a*,7,9-trihydroxy-2-methyl-6,8-bis(methylamino)decahydro-4*H*-pyran[2,3-*b*][1,4]benzodioxin-4-one sulfate tetrahydrate

(spectinomycin sulfate tetrahydrate) and (2*R*,4*R*,4*aS*,5*aR*,6*S*,7*S*,8*R*,9*S*,9*aR*,10*aS*)-2-methyl-6,8-bis(methylamino)decahydro-2*H*-pyran[2,3-*b*][1,4]benzodioxine-4,4*a*,7,9-tetrol sulfate tetrahydrate ((4*R*)-dihydro-spectinomycin sulfate tetrahydrate). It is produced by *Streptomyces spectabilis* or by any other means.

### Content:

- (4*R*)-dihydro-spectinomycin sulfate: maximum 2.0 per cent (anhydrous substance);
- sum of the contents of spectinomycin sulfate and (4*R*)-dihydro-spectinomycin sulfate: 93.0 per cent to 102.0 per cent (anhydrous substance).

### CHARACTERS

**Appearance:** white or almost white powder.

**Solubility:** freely soluble in water, insoluble in ethanol (96 per cent).

### IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

*Comparison:* spectinomycin sulfate tetrahydrate CRS.

B. Dilute 1.0 mL of solution S (see Tests) to 10 mL with water R. The solution gives reaction (a) of sulfates (2.3.1).

### TESTS

**Solution S.** Dissolve 2.50 g in carbon dioxide-free water R and dilute to 25.0 mL with the same solvent.

**Appearance of solution.** Solution S is clear (2.2.1) and colourless (2.2.2, Method II).

**pH** (2.2.3): 3.8 to 5.6 for solution S.

**Specific optical rotation** (2.2.7): + 10.0 to + 14.0 (anhydrous substance).

Dissolve 2.50 g in an 8 mL/L solution of concentrated ammonia R1 and dilute to 25.0 mL with the same solvent. Allow the solution to stand at room temperature for not less than 30 min and not more than 2 h prior to determination.

**Related substances.** Liquid chromatography (2.2.29). In order to avoid the formation of anomers, prepare the solutions immediately before use.

**Test solution.** Dissolve 15.0 mg of the substance to be examined in the mobile phase and dilute to 100.0 mL with the mobile phase.

**Reference solution (a).** Dissolve 3 mg of spectinomycin for system suitability CRS in the mobile phase and dilute to 20 mL with the mobile phase.

**Reference solution (b).** Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase.

**Reference solution (c).** Dilute 3.0 mL of reference solution (b) to 10.0 mL with the mobile phase.

**Column:**

- size:  $l = 0.25$  m,  $\varnothing = 4.6$  mm;
- stationary phase: octylsilyl silica gel for chromatography R (5  $\mu$ m);
- temperature: ambient and constant.

**Mobile phase:** dissolve 4.2 g of oxalic acid R and 2.0 mL of heptafluorobutyric acid R in water R and dilute to 1000 mL with water R; adjust to pH 3.2 with sodium hydroxide solution R; add 105 mL of acetonitrile R and mix; filter through a 0.45  $\mu$ m filter and degas with helium for chromatography R for 10 min.

**Flow rate:** 1.0 mL/min.

**Post-column solution:** carbonate-free sodium hydroxide solution R diluted with carbon dioxide-free water R to obtain a final concentration of NaOH of 21 g/L. Degas the solution with helium for chromatography R for 10 min before use. Add it pulse-less to the column effluent using a 375  $\mu$ L polymeric mixing coil.

**Post-column flow rate:** 0.5 mL/min.

**Detection:** pulsed amperometric detection or equivalent with a gold indicator electrode having preferably a diameter of 1.4 mm or greater, a suitable reference electrode and a stainless steel counter electrode, held at + 0.12 V detection, + 0.70 V oxidation and – 0.60 V reduction potentials respectively, with pulse durations according to the instrument used. Keep the detection cell at ambient and constant temperature. Clean the gold indicator electrode with an eraser and damp precision wipe prior to start-up of the system to enhance the detector sensitivity and increase the signal-to-noise ratio.

**Injection:** 20 µL.

**Run time:** 1.5 times the retention time of spectinomycin.

**Identification of impurities:** use the chromatogram supplied with *spectinomycin for system suitability CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A, D and E.

**Relative retention** with reference to spectinomycin (retention time = 11 min to 20 min): impurity A = about 0.5; impurity D = about 0.7; impurity E = about 0.9; (4*R*)-dihydrospectinomycin = about 1.3.

**System suitability:** reference solution (a):

- **resolution:** minimum 1.5 between the peaks due to impurity E and spectinomycin.

**Limits:**

- **correction factor:** for the calculation of content, multiply the peak area of impurity A by 0.4;
- **impurities A, E:** for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);
- **impurity D:** not more than 4 times the area of the principal peak in the chromatogram obtained with reference solution (b) (4.0 per cent);
- **any other impurity:** for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);
- **total:** not more than 6 times the area of the principal peak in the chromatogram obtained with reference solution (b) (6.0 per cent);
- **disregard limit:** the area of the principal peak in the chromatogram obtained with reference solution (c) (0.3 per cent); disregard the peak due to (4*R*)-dihydrospectinomycin.

**Water (2.5.12):** 12.0 per cent to 16.5 per cent, determined on 0.100 g.

**Sulfated ash (2.4.14):** maximum 1.0 per cent, determined on 1.0 g.

**Bacterial endotoxins (2.6.14):** less than 0.17 IU/mg, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins. Prepare the solutions using a 0.42 per cent *m/m* solution of *sodium hydrogen carbonate R*.

#### ASSAY

Liquid chromatography (2.2.29) as described in the test for related substances with the following modifications.

**Test solution.** Dissolve 40.0 mg of the substance to be examined in *water R* and dilute to 50.0 mL with the same solvent. Allow to stand for not less than 15 h and not more than 72 h (formation of anomers). Dilute 5.0 mL of this solution to 50.0 mL with the mobile phase.

**Reference solution.** Dissolve 40.0 mg of *spectinomycin hydrochloride CRS* (containing (4*R*)-dihydrospectinomycin) in *water R* and dilute to 50.0 mL with the same solvent. Allow to stand for the same period of time as the test solution (formation of anomers). Dilute 5.0 mL of this solution to 50.0 mL with the mobile phase.

**System suitability:**

- **repeatability:** maximum relative standard deviation of 3.0 per cent for the principal peak after 6 injections of the reference solution.

Calculate the sum of the percentage contents of spectinomycin sulfate and (4*R*)-dihydrospectinomycin sulfate from the declared contents of C<sub>14</sub>H<sub>26</sub>Cl<sub>2</sub>N<sub>2</sub>O<sub>7</sub> and C<sub>14</sub>H<sub>28</sub>Cl<sub>2</sub>N<sub>2</sub>O<sub>7</sub> in *spectinomycin hydrochloride CRS*, applying a correction factor of 1.062.

#### STORAGE

In an airtight container. If the substance is sterile, store in a sterile, airtight, tamper-proof container.

#### IMPURITIES

**Specified impurities:** A, D, E.

**Other detectable impurities** (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): B, C, F, G.

A. 1,3-dideoxy-1,3-bis(methylamino)-*myo*-inositol (actinamine),

B. (2*S*,3*RS*,5*R*)-3-hydroxy-5-methyl-2-[(1*r*,2*R*,3*S*,4*r*,5*R*,6*S*)-2,4,6-trihydroxy-3,5-bis(methylamino)cyclohexyl]oxy]tetrahydrofuran-3-carboxylic acid (actinospectinoic acid),

C. R<sub>1</sub> = CH<sub>3</sub>, R<sub>2</sub> = R<sub>4</sub> = H, R<sub>3</sub> = OH: (2*R*,4*S*,4*aS*,5*aR*,6*S*,7*S*,8*R*,9*S*,9*aR*,10*aS*)-2-methyl-6,8-bis(methylamino)decahydro-2*H*-pyrano[2,3-*b*][1,4]benzodioxine-4,4*a*,7,9-tetrol ((4*S*)-dihydrospectinomycin),

D. R<sub>1</sub> = CH<sub>3</sub>, R<sub>2</sub> = H, R<sub>3</sub> = R<sub>4</sub> = OH: (2*R*,3*R*,4*S*,4*aS*,5*aR*,6*S*,7*S*,8*R*,9*S*,9*aR*,10*aS*)-2-methyl-6,8-bis(methylamino)decahydro-2*H*-pyrano[2,3-*b*][1,4]benzodioxine-3,4,4*a*,7,9-pentol (dihydroxyspectinomycin),

E. R<sub>1</sub> = R<sub>4</sub> = H, R<sub>2</sub> + R<sub>3</sub> = O: (2*R*,4*aR*,5*aR*,6*S*,7*R*,8*R*,9*S*,9*aR*,10*aS*)-6-amino-4*a*,7,9-trihydroxy-2-methyl-8-(methylamino)decahydro-4*H*-pyrano[2,3-*b*][1,4]benzodioxin-4-one (*N*-desmethylspectinomycin),

G. R<sub>1</sub> = CH<sub>3</sub>, R<sub>2</sub> + R<sub>3</sub> = O, R<sub>4</sub> = OH: (2*R*,3*S*,4*aR*,5*aR*,6*S*,7*S*,8*R*,9*S*,9*aR*,10*aS*)-3,4*a*,7,9-tetrahydroxy-2-methyl-6,8-bis(methylamino)decahydro-4*H*-pyrano[2,3-*b*][1,4]benzodioxin-4-one (tetrahydroxyspectinomycin),

- F. (2*S*,4*S*,6*R*)-4-hydroxy-6-methyl-2-[[[1*r*,2*R*,3*S*,4*r*,5*R*,6*S*)-2,4,6-trihydroxy-3,5-bis(methylamino)cyclohexyl]oxy]dihydro-2*H*-pyran-3(4*H*)-one (triol spectinomycin).

## SPIRAMYCIN

## Spiramycinum

Compound	R	Molec Formula	<i>M<sub>r</sub></i>
Spiramycin I	H	C <sub>43</sub> H <sub>74</sub> N <sub>2</sub> O <sub>14</sub>	843.1
Spiramycin II	CO-CH <sub>3</sub>	C <sub>45</sub> H <sub>76</sub> N <sub>2</sub> O <sub>15</sub>	885.1
Spiramycin III	CO-CH <sub>2</sub> -CH <sub>3</sub>	C <sub>46</sub> H <sub>78</sub> N <sub>2</sub> O <sub>15</sub>	899.1

## DEFINITION

Macrolide antibiotic produced by the growth of certain strains of *Streptomyces ambofaciens* or obtained by any other means. The main component is (4*R*,5*S*,6*S*,7*R*,9*R*,10*R*,11*E*,13*E*,16*R*)-6-[[[3,6-dideoxy-4-*O*-(2,6-dideoxy-3-*C*-methyl- $\alpha$ -*L*-ribo-hexopyranosyl)-3-(dimethylamino)- $\beta$ -*D*-glucopyranosyl]oxy]-4-hydroxy-5-methoxy-9,16-dimethyl-7-(2-oxoethyl)-10-[[[2,3,4,6-tetraoxy-4-(dimethylamino)-*D*-erythro-hexopyranosyl]oxy]oxacyclohexadeca-11,13-dien-2-one (spiramycin I; *M<sub>r</sub>* 843). Spiramycin II (4-*O*-acetylspiramycin I) and spiramycin III (4-*O*-propanoylspiramycin I) are also present.

*Potency*: minimum 4100 IU/mg (dried substance).

## CHARACTERS

*Appearance*: white or slightly yellowish powder, slightly hygroscopic.

*Solubility*: slightly soluble in water, freely soluble in acetone, in ethanol (96 per cent) and in methanol.

## IDENTIFICATION

- A. Ultraviolet and visible absorption spectrophotometry (2.2.25).

*Test solution*. Dissolve 0.10 g of the substance to be examined in *methanol R* and dilute to 100.0 mL with the same solvent. Dilute 1.0 mL of this solution to 100.0 mL with *methanol R*.

*Spectral range*: 220-350 nm.

*Absorption maximum*: at 232 nm.

*Specific absorbance at the absorption maximum*: about 340.

- B. Thin-layer chromatography (2.2.27).

*Test solution*. Dissolve 40 mg of the substance to be examined in *methanol R* and dilute to 10 mL with the same solvent.

*Reference solution (a)*. Dissolve 40 mg of *spiramycin CRS* in *methanol R* and dilute to 10 mL with the same solvent.

*Reference solution (b)*. Dissolve 40 mg of *erythromycin A CRS* in *methanol R* and dilute to 10 mL with the same solvent.

*Plate*: TLC silica gel G plate *R*.

*Mobile phase*: the upper layer of a mixture of 4 volumes of 2-propanol *R*, 8 volumes of a 150 g/L solution of ammonium acetate *R* previously adjusted to pH 9.6 with strong sodium hydroxide solution *R*, and 9 volumes of ethyl acetate *R*.

*Application*: 5  $\mu$ L.

*Development*: over 3/4 of the plate.

*Drying*: in air.

*Detection*: spray with anisaldehyde solution *R1* and heat at 110 °C for 5 min.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a). If in the chromatogram obtained with the test solution 1 or 2 spots occur with *R<sub>F</sub>* values slightly higher than that of the principal spot, these spots are similar in position and colour to the secondary spots in the chromatogram obtained with reference solution (a) and differ from the spots in the chromatogram obtained with reference solution (b).

- C. Dissolve 0.5 g in 10 mL of 0.05 *M* sulfuric acid and add 25 mL of water *R*. Adjust to about pH 8 with 0.1 *M* sodium hydroxide and dilute to 50 mL with water *R*. To 5 mL of this solution add 2 mL of a mixture of 1 volume of water *R* and 2 volumes of sulfuric acid *R*. A brown colour develops.

## TESTS

*pH* (2.2.3): 8.5 to 10.5.

Dissolve 0.5 g in 5 mL of *methanol R* and dilute to 100 mL with carbon dioxide-free water *R*.

*Specific optical rotation* (2.2.7): -80 to -85 (dried substance).

Dissolve 1.00 g in a 10 per cent *V/V* solution of dilute acetic acid *R* and dilute to 50.0 mL with the same acid solution.

*Composition*. Liquid chromatography (2.2.29) as described in the test for related substances.

*Injection*: test solution and reference solution (a).

Calculate the percentage content using the declared content of spiramycins I, II and III in *spiramycin CRS*.

*Composition of spiramycins* (dried substance):

- *spiramycin I*: minimum 80.0 per cent,
- *spiramycin II*: maximum 5.0 per cent,
- *spiramycin III*: maximum 10.0 per cent,
- *sum of spiramycins I, II and III*: minimum 90.0 per cent.

*Related substances*. Liquid chromatography (2.2.29). Prepare the solutions immediately before use.

*Solvent mixture*: *methanol R*, *water R* (30:70 *V/V*).

*Test solution*. Dissolve 25.0 mg of the substance to be examined in the solvent mixture and dilute to 25.0 mL with the solvent mixture.

*Reference solution (a)*. Dissolve 25.0 mg of *spiramycin CRS* in the solvent mixture and dilute to 25.0 mL with the solvent mixture.

*Reference solution (b)*. Dilute 2.0 mL of reference solution (a) to 100.0 mL with the solvent mixture.

*Reference solution (c)*. Dissolve 5 mg of *spiramycin CRS* in 15 mL of buffer solution pH 2.2 *R* and dilute to 25 mL with water *R*, then heat in a water-bath at 60 °C for 5 min and cool under cold water.

*Blank solution*. The solvent mixture.

## Column:

- size:  $l = 0.25$  m,  $\varnothing = 4.6$  mm;
- stationary phase: end-capped polar-embedded octadecylsilyl amorphous organosilica polymer R (5  $\mu$ m) (polar-embedded octadecylsilyl methylsilica gel), with a pore size of 12.5 nm and a carbon loading of 15 per cent;
- temperature: 70 °C.

Mobile phase: mix 5 volumes of a 34.8 g/L solution of dipotassium hydrogen phosphate R adjusted to pH 6.5 with a 27.2 g/L solution of potassium dihydrogen phosphate R, 40 volumes of acetonitrile R and 55 volumes of water R.

Flow rate: 1.0 mL/min.

Detection: spectrophotometer at 232 nm.

Injection: 20  $\mu$ L of the blank solution, the test solution and reference solutions (b) and (c).

Run time: 3 times the retention time of spiramycin I.

Identification of spiramycins: use the chromatogram supplied with spiramycin CRS and the chromatogram obtained with reference solution (a) to identify the peaks due to spiramycins I, II and III.

Relative retention with reference to spiramycin I (retention time = 20 min to 30 min): impurity F = about 0.41; impurity A = about 0.45; impurity D = about 0.50; impurity G = about 0.66; impurity B = about 0.73; impurity H = about 0.87; spiramycin II = about 1.4; spiramycin III = about 2.0; impurity E = about 2.5.

If necessary adjust the composition of the mobile phase by changing the amount of acetonitrile.

System suitability: reference solution (c):

- resolution: minimum 10.0 between the peaks due to impurity A and spiramycin I.

## Limits:

- impurities A, B, D, E, F, G, H: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (2.0 per cent);
- any other impurity: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (2.0 per cent);
- total: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (10.0 per cent);
- disregard limit: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent); disregard any peak due to the blank and the peaks due to spiramycins I, II and III.

Heavy metals (2.4.8): maximum 20 ppm.

1.0 g complies with test F. Prepare the reference solution using 2 mL of lead standard solution (10 ppm Pb) R.

Loss on drying (2.2.32): maximum 3.5 per cent, determined on 0.500 g by drying at 80 °C over diphosphorus pentoxide R at a pressure not exceeding 0.67 kPa for 6 h.

Sulfated ash (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

## ASSAY

Carry out the microbiological assay of antibiotics (2.7.2).

## STORAGE

In an airtight container.

## IMPURITIES

Specified impurities: A, B, D, E, F, G, H.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): C.

- A. ### SPIRAPRIL HYDROCHLORIDE MONOHYDRATE

Spirapril hydrochloridum monohydricum

C<sub>22</sub>H<sub>31</sub>ClN<sub>2</sub>O<sub>5</sub>S<sub>2</sub>·H<sub>2</sub>O

M<sub>r</sub> 521.1

**DEFINITION**

(8*S*)-7-[(2*S*)-2-[[1*S*]-1-(Ethoxycarbonyl)-3-phenylpropyl]amino]propanoyl]-1,4-dithia-7-azaspiro[4.4]nonane-8-carboxylic acid hydrochloride monohydrate.

*Content*: 97.0 per cent to 102.0 per cent (anhydrous substance).

**CHARACTERS**

*Appearance*: white or almost white, fine crystalline powder.

*Solubility*: very slightly soluble in water, soluble in methanol, slightly soluble in acetonitrile, practically insoluble in methylene chloride.

**IDENTIFICATION**

- A. Specific optical rotation (see Tests).
- B. Infrared absorption spectrophotometry (2.2.24).  
*Preparation*: discs of *potassium bromide R*.  
*Comparison*: *spirapril hydrochloride monohydrate CRS*.
- C. It gives the reactions of chlorides (2.3.1).

**TESTS**

**Specific optical rotation** (2.2.7): – 11.0 to – 13.0 (anhydrous substance).  
Dissolve 0.200 g in *dimethylformamide R* and dilute to 20.0 mL with the same solvent.

**Related substances**. Liquid chromatography (2.2.29).

*Solvent mixture*: *acetonitrile R1*, *water R* (2:8 V/V).  
*Test solution*. Dissolve 50.0 mg of the substance to be examined in the solvent mixture and dilute to 20.0 mL with the solvent mixture.

*Reference solution (a)*. Dissolve 6 mg of *spirapril for system suitability CRS* (containing impurities B and D) in the solvent mixture and dilute to 20 mL with the solvent mixture.

*Reference solution (b)*. Dilute 5.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 5.0 mL of this solution to 50.0 mL with the solvent mixture.

*Reference solution (c)*. Dilute 1.0 mL of reference solution (b) to 10.0 mL with the solvent mixture.

**Column**:

- *size*: *l* = 0.125 m,  $\varnothing$  = 4.6 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5  $\mu$ m);
- *temperature*: 70 °C.

**Mobile phase**:

- *mobile phase A*: dissolve 4.5 g of *tetramethylammonium hydroxide R* in 900 mL of *water R*, add 100 mL of *acetonitrile R1* and adjust to pH 2.2 with *phosphoric acid R*;
- *mobile phase B*: dissolve 4.5 g of *tetramethylammonium hydroxide R* in 400 mL of *water R*, add 600 mL of *acetonitrile R1* and adjust to pH 2.2 with *phosphoric acid R*;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 4	90	10
4 - 14	90 → 10	10 → 90
14 - 20	10	90

*Flow rate*: 2.0 mL/min.

*Detection*: spectrophotometer at 210 nm.

*Injection*: 20  $\mu$ L.

*Relative retention* with reference to spirapril (retention time = about 10 min): impurity C = about 0.6; impurity B = about 0.7; impurity A = about 1.26; impurity D = about 1.38.

*System suitability*: reference solution (a):

- *resolution*: minimum 3.5 between the peaks due to impurity B and spirapril, and minimum 5.5 between the peaks due to spirapril and impurity D.

**Limits**:

- *impurity D*: not more than 0.8 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.4 per cent);
- *impurity B*: not more than 0.6 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);

- *impurities A, C*: for each impurity, not more than 0.4 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
- *unspecified impurities*: for each impurity, not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);
- *disregard limit*: area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent); disregard any peak due to the blank (solvent mixture).

**Water (2.5.12)**: 3.0 per cent to 4.0 per cent, determined on 0.200 g.

**Sulfated ash (2.4.14)**: maximum 0.1 per cent, determined on 1.0 g.

**ASSAY**

Liquid chromatography (2.2.29).

*Solvent mixture*. Mix equal volumes of *acetonitrile R1* and *water R*.

*Test solution*. Dissolve 20.0 mg of the substance to be examined in the solvent mixture and dilute to 100.0 mL with the solvent mixture.

*Reference solution (a)*. Dissolve 20.0 mg of *spirapril hydrochloride monohydrate CRS* in the solvent mixture and dilute to 100.0 mL with the solvent mixture.

*Reference solution (b)*. Dissolve 6.0 mg of *spirapril for system suitability CRS* (spirapril spiked with impurity B and impurity D) in a mixture of 2 volumes of *acetonitrile R* and 8 volumes of *water R* and dilute to 20 mL with the same mixture of solvents.

*Solution A*. Dissolve 4.5 g of *tetramethylammonium hydroxide R* in 900 mL of *water R*, adjust to pH 1.75 with *phosphoric acid R* and add 100 mL of *acetonitrile R1*.

*Solution B*. Dissolve 4.5 g of *tetramethylammonium hydroxide R* in 400 mL of *water R*, adjust to pH 1.75 with *phosphoric acid R* and add 600 mL of *acetonitrile R1*.

*Column*:

- *size*:  $l = 0.125$  m,  $\varnothing = 4.6$  mm;
- *stationary phase*: octadecylsilyl silica gel for chromatography R (5  $\mu$ m);
- *temperature*: 70 °C.

*Mobile phase*: solution A, solution B (45:55 V/V).

*Flow rate*: 2.0 mL/min.

*Detection*: spectrophotometer at 210 nm.

*Injection*: 20  $\mu$ L.

*Retention time*: spirapril = 1.6 min to 2.9 min; impurity D = about 13 min. Adjust the proportion of solution B in the mobile phase if necessary.

*System suitability*: reference solution (b):

- *resolution*: minimum 15 between the peaks due to spirapril and impurity D.

Calculate the percentage content of  $C_{22}H_{31}ClN_2O_5S_2$  from the chromatograms obtained with the test solution and reference solution (a) and the declared content of *spirapril hydrochloride monohydrate CRS*.

**STORAGE**

In an airtight container, protected from light.

**IMPURITIES**

*Specified impurities*: A, B, C, D.

A. ethyl (2S)-2-[(3'S,8'aS)-3'-methyl-1',4'-dioxohexahydrospiro[1,3-dithiolane-2,7'(6'H)-pyrrolo[1,2-a]pyrazin]-2'-yl]-4-phenylbutanoate,

B. R1 = R2 = H: (8S)-7-[(2S)-2-[(1S)-1-carboxy-3-phenylpropyl]amino]propanoyl]-1,4-dithia-7-azaspiro[4.4]nonane-8-carboxylic acid (spiraprilat),

D. R1 = C<sub>2</sub>H<sub>5</sub>, R2 = CH(CH<sub>3</sub>)<sub>2</sub>: 1-methylethyl (8S)-7-[(2S)-2-[[[(1S)-1-(ethoxycarbonyl)-3-phenylpropyl]amino]propanoyl]-1,4-dithia-7-azaspiro[4.4]nonane-8-carboxylate,

C. (2S)-2-[[[(1S)-1-(ethoxycarbonyl)-3-phenylpropyl]amino]propanoic acid.

01/2011:0688

**SPIRONOLACTONE**

Spirolactonum

C<sub>24</sub>H<sub>32</sub>O<sub>4</sub>S  
[52-01-7]

M<sub>r</sub> 416.6

**DEFINITION**

(2'R)-7 $\alpha$ -(Acetylsulfanyl)-3',4'-dihydro-5'H-spiro[androst-4-ene-17,2'-furan]-3,5'-dione.

*Content*: 97.5 per cent to 102.0 per cent (dried substance).

**CHARACTERS**

*Appearance*: white or yellowish-white powder.

*Solubility*: practically insoluble in water, soluble in ethanol (96 per cent).

It shows polymorphism (5.9).

**IDENTIFICATION**

*First identification*: A.

*Second identification*: B, C.

A. Infrared absorption spectrophotometry (2.2.24).

*Comparison*: spirinolactone CRS.

If the spectra obtained in the solid state shows differences, dissolve the substance to be examined and the reference substance separately in the minimum volume of *methanol R*, evaporate to dryness and record new spectra using the residues.

#### B. Thin-layer chromatography (2.2.27).

**Test solution.** Dissolve 20 mg of the substance to be examined in *methylene chloride R* and dilute to 10 mL with the same solvent.

**Reference solution.** Dissolve 20 mg of *spironolactone CRS* in *methylene chloride R* and dilute to 10 mL with the same solvent.

**Plate:** *TLC silica gel F<sub>254</sub> plate R*.

**Mobile phase:** *water R, cyclohexane R, ethyl acetate R* (1:24:75 V/V/V).

**Application:** 5 µL.

**Development:** over 3/4 of the plate.

**Drying:** in air.

**Detection:** examine in ultraviolet light at 254 nm.

**Results:** the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

- C. To about 10 mg add 2 mL of a 50 per cent V/V solution of *sulfuric acid R* and shake. An orange solution with an intense yellowish-green fluorescence is produced. Heat the solution gently; the colour becomes deep red and hydrogen sulfide, which blackens *lead acetate paper R*, is evolved. Add the solution to 10 mL of *water R*; a greenish-yellow solution is produced, showing opalescence or a precipitate.

#### TESTS

**Specific optical rotation (2.2.7):** –41 to –46 (dried substance). Dissolve 0.100 g in *ethanol (96 per cent) R* and dilute to 10.0 mL with the same solvent.

**Related substances.** Liquid chromatography (2.2.29). Prepare the solutions immediately before use.

**Solvent mixture:** *acetonitrile R, water R* (50:50 V/V).

**Test solution (a).** Dissolve 50.0 mg of the substance to be examined in 2.5 mL of *tetrahydrofuran R* and dilute to 25.0 mL with the solvent mixture.

**Test solution (b).** Dilute 1.0 mL of test solution (a) to 100.0 mL with the solvent mixture.

**Reference solution (a).** Dilute 1.0 mL of test solution (b) to 10.0 mL with the solvent mixture.

**Reference solution (b).** Dissolve with the aid of ultrasound the contents of a vial of *spironolactone for system suitability CRS* (containing impurities A, C, D, E and I) in 1.0 mL of the solvent mixture.

**Reference solution (c).** Dissolve 50.0 mg of *spironolactone CRS* in 2.5 mL of *tetrahydrofuran R* and dilute to 25.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 100.0 mL with the solvent mixture.

**Reference solution (d).** Dissolve 5.0 mg of *canrenone CRS* (impurity F) in 2.5 mL of *tetrahydrofuran R* and dilute to 25.0 mL with the solvent mixture. Dilute 3.0 mL of this solution to 100.0 mL with the solvent mixture.

**Column:**

- size:  $l = 0.15$  m,  $\varnothing = 4.6$  mm;
- stationary phase: *end-capped octadecylsilyl silica gel for chromatography R* (3 µm);
- temperature: 40 °C.

**Mobile phase:** *acetonitrile R, tetrahydrofuran R, methanol R1, water R* (15:20:425:540 V/V/V/V).

**Flow rate:** 1.0 mL/min.

**Detection:** spectrophotometer at 254 nm.

**Injection:** 20 µL of test solution (a) and reference solutions (a), (b) and (d).

**Run time:** 2.5 times the retention time of spironolactone.

**Identification of impurities:** use the chromatogram supplied with *spironolactone for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A, C, D, E and I; use the chromatogram obtained with reference solution (d) to identify the peak due to impurity F.

**Relative retention** with reference to spironolactone (retention time = about 26 min): impurity A = about 0.95; impurity F = about 1.2; impurity C = about 1.5; impurity D = about 1.6; impurity E = about 1.7; impurity I = about 1.9.

**System suitability:** reference solution (b):

- **peak-to-valley ratio:** minimum 1.5, where  $H_p$  = height above the baseline of the peak due to impurity A and  $H_v$  = height above the baseline of the lowest point of the curve separating this peak from the peak due to spironolactone.

**Limits:**

- **correction factor:** for the calculation of content, multiply the peak area of impurity F by 2.3;
- **impurity I:** not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- **impurities E, F:** for each impurity, not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);
- **impurities A, C:** for each impurity, not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- **impurity D:** not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.15 per cent);
- **unspecified impurities:** for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- **total:** not more than 7 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.7 per cent);
- **disregard limit:** 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Free thiol compounds.** To 2.0 g add 20 mL of *water R*, shake for 1 min and filter. To 10 mL of the filtrate add 0.05 mL of 0.01 M *iodine* and 0.1 mL of *starch solution R* and mix. A blue colour develops.

**Chromium:** maximum 50 ppm.

To 0.20 g in a platinum crucible add 1 g of *potassium carbonate R* and 0.3 g of *potassium nitrate R*. Heat gently until fused, and ignite at 600-650 °C until carbon is removed. Cool, dissolve the residue as completely as possible in 10 mL of *water R* with the aid of gentle heat, filter, and dilute to 20 mL with *water R*. To 10 mL of this solution add 0.5 g of *urea R*, and add a 14 per cent V/V solution of *sulfuric acid R* until the solution is just acid. When effervescence ceases, add a further 1 mL of the 14 per cent V/V solution of *sulfuric acid R*, dilute to 20 mL with *water R* and add 0.5 mL of *diphenylcarbazide solution R*. The solution is not more intensely coloured than a standard prepared by adding 1 mL of a 14 per cent V/V solution of *sulfuric acid R* to 0.50 mL of a freshly prepared 28.3 mg/L solution of *potassium dichromate R*, diluting to 20 mL with *water R* and adding 0.5 mL of *diphenylcarbazide solution R*.

**Loss on drying (2.2.32):** maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

**Sulfated ash (2.4.14):** maximum 0.1 per cent, determined on 1.0 g.

## ASSAY

Liquid chromatography (2.2.29) as described in the test for related substances with the following modification.

*Injection*: test solution (b) and reference solution (c).

Calculate the percentage content of  $C_{24}H_{32}O_4S$  from the declared content of *spironolactone CRS*.

## STORAGE

Protected from light.

## IMPURITIES

*Specified impurities*: A, C, D, E, F, I.

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): B, G, H.

A. (2'R)-7α-(acetylsulfanyl)-5'H-spiro[androst-4-ene-17,2'-furan]-3,5'-dione (Δ20-spirolactone),

B. (2'R)-7α-(acetylsulfanyl)-4-bromo-3',4'-dihydro-5'H-spiro[androst-4-ene-17,2'-furan]-3,5'-dione (4-bromospironolactone),

C. (2'R)-3',4'-dihydro-5'H-spiro[androst-4-ene-17,2'-furan]-3,5'-dione (aldone),

D. (2'R)-7α-(acetyldisulfanyl)-3',4'-dihydro-5'H-spiro[androst-4-ene-17,2'-furan]-3,5'-dione (disulfanyl-spirolactone),

E. (2'R)-7β-(acetylsulfanyl)-3',4'-dihydro-5'H-spiro[androst-4-ene-17,2'-furan]-3,5'-dione (7β-spirolactone),

F. (2'R)-3',4'-dihydro-5'H-spiro[androst-4,6-diene-17,2'-furan]-3,5'-dione (canrenone),

G. (2'R)-7α-(acetylsulfanyl)-6β-hydroxy-3',4'-dihydro-5'H-spiro[androst-4-ene-17,2'-furan]-3,5'-dione (6β-hydroxy-spirolactone),

H. (2'S)-spiro[androst-4,6-diene-17,2'-oxiran]-3-one,

I. S-[17α-(ethoxymethyl)-17-hydroxy-3-oxoandrost-4-en-7α-yl] ethanethioate.

01/2008:1630

## SQUALANE

## Squalanum

$C_{30}H_{62}$   
[111-01-3]

$M_r$  422.8

## DEFINITION

2,6,10,15,19,23-Hexamethyltetracosane (perhydrosqualene). It may be of vegetable (unsaponifiable matter of olive oil) or animal (shark liver oil) origin.

*Content*: 96.0 per cent to 103.0 per cent.

## CHARACTERS

**Appearance:** clear, colourless, oily liquid.

**Solubility:** practically insoluble in water, miscible with most fats and oils, freely soluble in acetone and in cyclohexane, practically insoluble in ethanol (96 per cent).

**Relative density:** about 0.815.

## IDENTIFICATION

## A. Infrared absorption spectrophotometry (2.2.24).

**Comparison:** *squalane CRS*.

## B. Refractive index (see Tests).

## C. Examine the chromatograms obtained in the assay.

**Results:** the principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (a).

The chromatogram obtained with squalane of vegetable origin shows a peak corresponding to cyclosqualane (Figure 1630.-1 and Figure 1630.-2).

## TESTS

**Appearance.** The substance to be examined is clear (2.2.1) and colourless (2.2.2, Method II).

**Refractive index (2.2.6):** 1.450 to 1.454.

**Acid value (2.5.1):** maximum 0.2.

**Iodine value (2.5.4, Method A):** maximum 4.0.

**Saponification value (2.5.6):** maximum 3.0.

**Nickel (2.4.31):** maximum 1 ppm.

**Total ash (2.4.16):** maximum 0.5 per cent, determined on 1.000 g.

## ASSAY

Gas chromatography (2.2.28).

**Internal standard solution.** To 1.0 mL of *dimethylacetamide R*, add 100.0 mL of *heptane R*.

**Test solution.** Dissolve 0.100 g in the internal standard solution and dilute to 25.0 mL with the same solution.

**Reference solution (a).** Dissolve 0.100 g of *squalane CRS* in the internal standard solution and dilute to 25.0 mL with the same solution.

**Reference solution (b).** To 0.1 mL of *methyl erucate R* add 0.100 g of the substance to be examined, dissolve in the internal standard solution and dilute to 25.0 mL with the same solution.

**Column:**

- **material:** fused silica;
- **size:**  $l = 30$  m,  $\varnothing = 0.32$  mm;
- **stationary phase:** *poly(dimethyl)siloxane R* (film thickness 1  $\mu$ m).

**Carrier gas:** *helium for chromatography R*.

**Flow rate:** 1.7 mL/min.

**Split ratio:** 1:12.

**Temperature:**

	Time (min)	Temperature (°C)
Column	0 - 39	60 - 290
	39 - 50	290
Injection port		275
Detector		300

**Detection:** flame ionisation.

**Injection:** 1  $\mu$ L.

**Relative retentions** with reference to squalane (retention time = about 41 min): internal standard = about 0.2; methyl erucate = about 0.9; cyclosqualane = 1.05.

**System suitability:** reference solution (b):

- **resolution:** minimum 5 between the peaks due to methyl erucate and squalane.

Calculate the percentage content of squalane from the declared content of *squalane CRS*.

Figure 1630.-1. – Chromatogram of squalane of animal origin

Figure 1630.-2. – Chromatogram of squalane of vegetable origin

## LABELLING

The label states the origin of squalane (vegetable or animal).

01/2008:1266  
corrected 6.0

## STANNOUS CHLORIDE DIHYDRATE

## Stannosi chloridum dihydricum

$\text{SnCl}_2 \cdot 2\text{H}_2\text{O}$   
[10025-69-1]

$M_r$  225.6

## DEFINITION

Content: 98.0 per cent to 102.0 per cent.

## CHARACTERS

**Appearance:** white or almost white, crystalline powder or colourless crystals, efflorescent in air.

**Solubility:** freely soluble in water (the solution becomes cloudy after standing or on dilution), freely soluble in ethanol (96 per cent). It dissolves in dilute hydrochloric acid.

## IDENTIFICATION

- To 1 mL of solution S1 (see Tests) add 5 mL of *water R* and 0.05 mL of *mercuric chloride solution R*. A blackish-grey precipitate is formed.
- Dissolve 1.0 g in 3.0 mL of *water R*. Add 0.5 mL of *dilute sodium hydroxide solution R* to the cloudy solution; a yellowish flocculent precipitate is formed. Add 6.5 mL of *water R*. To 1.0 mL of the previously shaken suspension add 1.0 mL of *strong sodium hydroxide solution R*; the precipitate dissolves and the resulting solution is clear and colourless.
- Dissolve 10 mg in 2 mL of *dilute nitric acid R*. The solution gives reaction (a) of chlorides (2.3.1).

## TESTS

**Solution S1.** To 0.40 g add 1 mL of *dilute hydrochloric acid R* and dilute to 20 mL with *distilled water R*.

**Solution S2.** Dissolve 1.0 g in *dilute hydrochloric acid R* and dilute to 30 mL with the same acid. Heat to boiling. Add 30 mL of *thioacetamide solution R* and boil for 15 min (solution A). Take 5 mL, filter and heat the filtrate to boiling. Add 5 mL of *thioacetamide solution R* and boil for 15 min. If a precipitate is formed, add the remainder of solution A (solution A') to the mixture. Add 10 mL of *thioacetamide solution R* and boil. Repeat the series of operations from "Take 5 mL" until a precipitate is no longer formed on addition of *thioacetamide solution R* to the filtrate obtained from the 5 mL of solution A (solution A', solution A'', etc. respectively). If no precipitate is formed or if no more precipitate is formed combine the solution obtained with the remainder of solution A (solution A', solution A'', etc. respectively), filter and wash the precipitate with 10 mL of *water R*. Heat the filtrate until the resulting vapour no longer turns a moistened piece of *lead acetate paper R* blackish-grey. Allow to cool and dilute to 50 mL with *water R*.

**Appearance of solution.** The solution is clear (2.2.1) and colourless (2.2.2, Method II).

Dissolve 10.0 g in *dilute hydrochloric acid R* and dilute to 20 mL with the same acid.

**Substances not precipitated by thioacetamide:** maximum 0.2 per cent.

Evaporate 25 mL of solution S2 to dryness and ignite at  $600 \pm 50$  °C. The residue weighs a maximum of 1 mg.

**Sulfates (2.4.13):** maximum 500 ppm, determined on solution S1.

**Iron (2.4.9):** maximum 100 ppm.

Dilute 5 mL of solution S2 to 10 mL with *water R*.

**Heavy metals:** maximum 50 ppm.

Dissolve 1.0 g in 2 mL of a mixture of 1 volume of *nitric acid R* and 3 volumes of *hydrochloric acid R*. Heat on a water-bath until nitrous vapour is no longer evolved. Dissolve the residue in *water R* and dilute to 25 mL with the same solvent. To 5 mL of this solution add 3 mL of *strong sodium hydroxide solution R* and 2 mL of *water R*. Heat until a clear solution is obtained, then cool and add 0.5 mL of *thioacetamide reagent R*. After 2 min, any colour in the solution is not more intense than that of a mixture of 1.0 mL of *lead standard solution (10 ppm Pb) R*, 6 mL of *water R*, 3 mL of *strong sodium hydroxide solution R* and 0.5 mL of *thioacetamide reagent R*.

#### ASSAY

Dissolve 0.100 g in 50 mL of *water R*, freed from oxygen by purging with carbon dioxide or nitrogen for 15 min. Add 1.5 mL of *hydrochloric acid R1*, 5 g of *sodium potassium tartrate R*, 10 g of *sodium hydrogen carbonate R* and 1 mL of *starch solution R*. Titrate immediately with 0.05 M *iodine*. Carry out a blank titration.

1 mL of 0.05 M *iodine* is equivalent to 11.28 mg of  $\text{SnCl}_2 \cdot 2\text{H}_2\text{O}$ .

#### STORAGE

In an airtight container.

01/2008:1568

## STANOZOLOL

### Stanozololum

$\text{C}_{21}\text{H}_{32}\text{N}_2\text{O}$   
[10418-03-8]

$M_r$  328.5

#### DEFINITION

Stanozolol contains not less than 98.5 per cent and not more than the equivalent of 101.0 per cent of 17-methyl-2'H-5 $\alpha$ -androst-2-eno[3,2-c]pyrazol-17 $\beta$ -ol, calculated with reference to the dried substance.

#### CHARACTERS

A white or almost white crystalline powder, hygroscopic, practically insoluble in water, soluble in dimethylformamide, slightly soluble in ethanol (96 per cent), very slightly soluble in methylene chloride.

It shows polymorphism (5.9).

#### IDENTIFICATION

- Examine by infrared spectrophotometry (2.2.24), comparing with the spectrum obtained with *stanozolol CRS*. If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in the minimum volume of methylene chloride, evaporate to dryness at room temperature under an air-stream and record new spectra using the residues.
- Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (c).

#### TESTS

**Specific optical rotation** (2.2.7). Dissolve 0.10 g in *chloroform R* and dilute to 10.0 mL with the same solvent. The specific optical rotation is + 34 to + 40, calculated with reference to the dried substance.

**Related substances.** Examine by thin-layer chromatography (2.2.27), using a *TLC silica gel F<sub>254</sub> plate R*.

**Test solution (a).** Dissolve 0.10 g of the substance to be examined in a mixture of 1 volume of *methanol R* and 9 volumes of *methylene chloride R* and dilute to 5 mL with the same mixture of solvents.

**Test solution (b).** Dilute 1 mL of test solution (a) to 10 mL with a mixture of 1 volume of *methanol R* and 9 volumes of *methylene chloride R*.

**Reference solution (a).** Dilute 1.0 mL of test solution (a) to 200 mL with a mixture of 1 volume of *methanol R* and 9 volumes of *methylene chloride R*.

**Reference solution (b).** Dissolve 5 mg of *stanozolol impurity A CRS* in reference solution (a) and dilute to 50 mL with the same solution.

**Reference solution (c).** Dissolve 10 mg of *stanozolol CRS* in a mixture of 1 volume of *methanol R* and 9 volumes of *methylene chloride R* and dilute to 5 mL with the same mixture of solvents.

Apply to the plate 5  $\mu\text{L}$  of each solution. Develop over a path corresponding to two thirds of the plate height using a mixture of 10 volumes of *methanol R* and 90 volumes of *methylene chloride R*. Allow the plate to dry in air, spray with *alcoholic solution of sulfuric acid R*, heat at 105 °C for 15 min and examine under ultraviolet light at 365 nm. Any secondary spot in the chromatogram obtained with test solution (a) is not more intense than the spot in the chromatogram obtained with reference solution (a) (0.5 per cent). The test is not valid unless the chromatogram obtained with reference solution (b) shows two clearly separated spots.

**Loss on drying** (2.2.32). Not more than 1.0 per cent, determined on 1.000 g by drying at 100 °C at a pressure not exceeding 0.7 kPa.

#### ASSAY

Dissolve 0.250 g in 50 mL of *anhydrous acetic acid R*. Titrate with 0.1 M *perchloric acid*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *perchloric acid* is equivalent to 32.85 mg of  $\text{C}_{21}\text{H}_{32}\text{N}_2\text{O}$ .

#### STORAGE

Store in an airtight container, protected from light.

#### IMPURITIES

- R = H<sub>2</sub>: 17 $\beta$ -hydroxy-17-methyl-5 $\alpha$ -androst-3-one (mestanolone),
- R = CH-OH: 17 $\beta$ -hydroxy-2-(hydroxymethylene)-17-methyl-5 $\alpha$ -androst-3-one (oxymetholone).

01/2011:2165

## STARCH, HYDROXYPROPYL

### Amylum hydroxypropylum

[9049-76-7]

#### DEFINITION

Hydroxypropyl starch is a partially substituted 2-hydroxypropylether of *Maize starch (0344)*, *Potato starch (0355)*, cassava starch, *Rice starch (0349)* or *Pea starch (2403)* chemically modified by of etherification with the reagent

propylene oxide. In addition, this starch may be partially hydrolysed using acids or enzymes to obtain 'thinned starch' with reduced viscosity.

Hydroxypropyl starches obtained from different botanical sources may not have identical properties with respect to their use for specific pharmaceutical purposes. Therefore, types of hydroxypropyl starch must not be interchanged unless performance equivalency has been ascertained and the agreement of the competent authority has been given.

Mixing of starches from different botanical sources prior to chemical modification is not allowed.

#### PRODUCTION

The production of the hydroxypropyl starch shall be in compliance with the requirements of the European legislation for food additives.

#### CHARACTERS

*Appearance*: white or slightly yellowish powder.

*Solubility*: practically insoluble in cold water and in ethanol (96 per cent).

#### IDENTIFICATION

A. Examined under a microscope, using not less than 20 × magnification and using a mixture of equal volumes of *glycerol R* and *water R*, it appears as follows according to the botanical source stated on the label.

- *Maize-based hydroxypropyl starch*: it presents either angular polyhedral granules of irregular sizes with diameters of about 2-23 µm or as rounded or spheroidal granules of irregular sizes with diameters of about 25-35 µm. The central hilum consists of a distinct cavity or 2-to-5-rayed cleft and there are no concentric striations. Between orthogonally orientated polarising plates or prisms, the starch granules show a distinct black cross intersecting at the hilum.
- *Potato-based hydroxypropyl starch*: it presents granules, either irregularly shaped, ovoid or pear-shaped, usually 30-100 µm in size but occasionally exceeding 100 µm, or rounded, 10-35 µm in size. There are occasional compound granules having 2-4 components. The ovoid and pear-shaped granules have an eccentric hilum and the rounded granules a centric or slightly eccentric hilum. All granules show clearly visible concentric striations. Between orthogonally orientated polarising plates or prisms, the starch granules show a distinct black cross intersecting at the hilum.
- *Cassava-based hydroxypropyl starch*: it presents spherical granules with one truncated side, typically 5-35 µm in diameter and having a circular or several-rayed central cleft. Some granules may also be egg-shaped or cap-shaped. The hilum is centric, sometimes slightly fissured. Between orthogonally orientated polarising plates or prisms, the starch granules show a distinct black cross intersecting at the hilum.
- *Rice-based hydroxypropyl starch*: it presents polyhedral, simple granules 1-10 µm, mostly 4-6 µm, in size. These simple granules often gather in ellipsoidal, compound granules 50-100 µm in diameter. The granules have a poorly visible central hilum and there are no concentric striations. Between orthogonally orientated polarising plates or prisms, the starch granules show a distinct black cross intersecting at the hilum.
- *Pea-based hydroxypropyl starch*: it presents a majority of large elliptical granules, 25-45 µm in size, sometimes irregular or reniform. It also presents a minority of small rounded granules, 5-8 µm in size. Granules can present cracks or irregularities. Sometimes, granules show barely visible concentric striations. Exceptionally, granules

show a slit along the main axis. Between orthogonally orientated polarising plates or prisms, the starch granules show a distinct black cross.

- B. Suspend 1 g in 50 mL of *water R*, boil for 1 min and cool. A translucent or clear mucilage is formed.
- C. To 1 mL of the mucilage obtained in identification test B add 0.05 mL of *iodine solution R1*. An orange-red or dark blue colour is produced, which disappears on heating.
- D. Introduce 0.1 g into a 100 mL volumetric flask and add 12.5 mL of *dilute sulfuric acid R*. Place the flask in a water-bath and heat until the sample is dissolved. Cool and dilute to 100 mL with *water R*. Introduce 1 mL of this solution into a 25 mL graduated test-tube with glass stopper and, with the tube immersed in cold water, add drop-wise 8 mL of *sulfuric acid R*. Mix well and place the tube in a boiling water-bath for exactly 3 min. Immediately transfer the tube to an ice-bath until the solution is chilled. Add 0.6 mL of *ninhydrin solution R2*, carefully allowing the reagent to run down the walls of the test-tube. Immediately shake well, and place the tube in a water-bath at 25 °C for 100 min. Dilute to 25 mL with *sulfuric acid R* and mix by inverting the tube several times. Do not shake. A violet colour develops within 5 min.

#### TESTS

*pH* (2.2.3): 4.5 to 8.0.

Shake 5.0 g with 25.0 mL of *carbon dioxide-free water R* for 60 s. Allow to stand for 15 min.

**Foreign matter.** Examined under a microscope using a mixture of equal volumes of *glycerol R* and *water R*, not more than traces of matter other than starch granules are present.

**Hydroxypropyl groups.** Nuclear magnetic resonance spectrometry (2.2.33).

*Internal standard solution.* Disperse 50.0 mg of *3-trimethylsilyl-1-propane sulfonic acid sodium salt R* in about 5 g of *deuterium oxide R1*, weighed to the nearest 0.1 mg. Store in a sealed bottle.

*Test solution.* Disperse 20 g of the substance to be examined in 200.0 mL of *carbon dioxide-free water R* at room temperature. Agitate for 15 min and filter. Repeat the operation twice. If problems of poor dispersibility or slow filtration are encountered, use cooled *carbon dioxide-free water R* for the washing operation. Dry the washed starch for at least 4 h in an oven *in vacuo* at 30 ± 5 °C. Determine the moisture content (*W*) on 5 g of this washed and dried sample using the loss on drying test. Weigh 12.0 mg (dry basis) of the washed and dried sample in a 5 mm NMR tube. Add 0.75 mL of *deuterium oxide R1* and 0.1 mL of *deuterium chloride solution R*. Cap the tube, mix, and place it in a boiling water-bath until a clear solution is obtained (3 min to 1 h maximum). When a clear solution is obtained, allow to cool to room temperature. Dry the exterior of the tube and weigh to the nearest 0.1 mg. Add 0.05 mL of internal standard solution and weigh to the nearest 0.1 mg. Determine the mass of the internal standard solution introduced. Mix thoroughly.

*Apparatus*: FT-NMR spectrometer at minimum 300 MHz.

*Acquisition of <sup>1</sup>H NMR spectra.* The following parameters may be used:

- *sweep width*: 8 ppm (– 1.0 to + 7 ppm);
- *irradiation frequency offset*: none;
- *time domain*: 64 K at least;
- *pulse width*: 90°;
- *pulse delay*: 10 s;
- *dummy scans*: 0;
- *number of scans*: 8.

Use the CH<sub>3</sub> signal of the internal standard for shift referencing. The shift of the central peak of the multiplet is set to 0 ppm. Record the FID signal.

01/2010:1267

Call the integration sub-routine after phase corrections and baseline correction between  $-0.5$  ppm and  $+6$  ppm.

Measure the peak areas of the doublet from the methyl groups of the hydroxypropyl function at  $+1.2$  ppm ( $A_2$ ), and of the methyl groups at  $0$  ppm of the internal standard ( $A_1$ ) without  $^{13}\text{C}$ -satellites.

The signal from the 3 protons of the methyl group in the hydroxypropyl function is measured. Calculate the content of hydroxypropyl groups as a percentage  $m/m$  (dried substance) using the following expression:

$$\frac{3A_2}{A_1} \times \frac{W_1 \times m_1}{218} \times 59 \times \frac{100}{m} \times \frac{100}{100 - W}$$

- 3 = numerical value representing the 3 methyl groups in the internal standard;
- $A_1$  = area of the methyl groups in the internal standard;
- $A_2$  = area of the methyl groups of hydroxypropyl;
- $W_1$  = mass fraction of the internal standard in the internal standard solution, in milligrams per gram;
- $m_1$  = mass of the internal standard solution in the NMR tube, in grams;
- 218 = molar mass of the internal standard, in grams per mol;
- 59 = molar mass of hydroxypropyl group, in grams per mol;
- $m$  = mass of the washed and dried test sample in the NMR tube, in milligrams;
- $W$  = moisture content, as a percentage ( $m/m$ ).

**Limit:**

– *hydroxypropyl groups*: maximum 7.0 per cent.

**Oxidising substances (2.5.30)**: maximum 20 ppm, calculated as  $\text{H}_2\text{O}_2$ .

**Sulfur dioxide (2.5.29)**: maximum 50 ppm.

**Iron (2.4.9)**

- For hydroxypropyl starch obtained from maize, potato, cassava or rice: maximum 20 ppm.  
Shake 1.0 g with 20 mL of *dilute hydrochloric acid R*. Filter. The filtrate complies with the test for iron.
- For hydroxypropyl starch obtained from pea: maximum 50 ppm.  
Shake 1.0 g with 50 mL of *dilute hydrochloric acid R*. Filter. The filtrate complies with the test for iron.

**Loss on drying (2.2.32)** determined on 1.000 g by drying in an oven at  $130^\circ\text{C}$  for 90 min:

- maximum 15.0 per cent for hydroxypropyl starch obtained from maize, cassava, rice or pea;
- maximum 20.0 per cent for hydroxypropyl starch obtained from potato.

**Sulfated ash (2.4.14)**: maximum 0.6 per cent, determined on 1.0 g.

**Microbial contamination**

TAMC: acceptance criterion  $10^3$  CFU/g (2.6.12).

TYMC: acceptance criterion  $10^2$  CFU/g (2.6.12).

Absence of *Escherichia coli* (2.6.13).

Absence of *Salmonella* (2.6.13).

**LABELLING**

The label states the botanical source of the starch and the type of modification.

## STARCH, PREGELATINISED

### *Amylum pregelificatum*

**DEFINITION**

Pregelatinised starch is prepared from *Maize starch (0344)*, *Potato starch (0355)* or *Rice starch (0349)* by mechanical processing in the presence of water, with or without heat, to rupture all or part of the starch granules, and subsequent drying. It contains no added substances but it may be modified to render it compressible and to improve its flow characteristics.

**CHARACTERS**

*Appearance*: white or yellowish-white powder.

It swells in cold water.

**IDENTIFICATION**

- A. Examined under a microscope using a mixture of equal volumes of *glycerol R* and *water R* it presents irregular, translucent, white or yellowish-white flakes or pieces with an uneven surface. Under polarised light (between crossed nicol prisms), starch granules with a distinct black cross intersecting at the hilum may be seen.
- B. Disperse 0.5 g in 2 mL of *water R* without heating and add 0.05 mL of *iodine solution R1*. A reddish-violet or blue colour is produced.

**TESTS**

**pH (2.2.3)**: 4.5 to 7.0.

Progressively add 3.0 g to 100.0 mL of *carbon dioxide-free water R*, stirring continuously. Determine the pH when a homogeneous solution is obtained.

**Oxidising substances (2.5.30)**. It complies with the test for oxidising substances. Use a mixture of equal volumes of *methanol R* and *water R* as solvent.

**Sulfur dioxide (2.5.29)**: maximum 50 ppm.

**Iron (2.4.9)**: maximum 20 ppm.

Dissolve the residue obtained in the test for sulfated ash in 20 mL of *dilute hydrochloric acid R*. Filter. The filtrate complies with the test.

**Foreign matter**. Examined under a microscope using a mixture of equal volumes of *glycerol R* and *water R*, not more than traces of matter other than starch granules are present.

**Loss on drying (2.2.32)**: maximum 15.0 per cent, determined on 1.000 g by drying in an oven at  $130^\circ\text{C}$  for 90 min.

**Sulfated ash (2.4.14)**: maximum 0.6 per cent, determined on 1.0 g.

**Microbial contamination**

TAMC: acceptance criterion  $10^3$  CFU/g (2.6.12).

TYMC: acceptance criterion  $10^2$  CFU/g (2.6.12).

Absence of *Escherichia coli* (2.6.13).

Absence of *Salmonella* (2.6.13).

**LABELLING**

The label states the type of starch used as starting material.

**FUNCTIONALITY-RELATED CHARACTERISTICS**

*This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient (see chapter 5.15). This section is a non-mandatory part of the monograph and it is not necessary to verify the characteristics to demonstrate compliance. Control of these characteristics can however contribute to the quality of a medicinal product by improving the consistency of the manufacturing process and the performance of the medicinal product during use. Where control methods are cited, they are recognised as being*

suitable for the purpose, but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.

The following characteristics may be relevant for pregelatinised starch used as filler, binder or disintegrant in tablets and in hard capsules.

**Cold-water-soluble matter.** Transfer 100 mL of water *R* at  $25 \pm 1$  °C into a beaker and add 1.000-3.000 g of the substance to be examined while stirring. Continue to stir for 10 min. Transfer 35 mL of the dispersion to a centrifuge tube and centrifuge at 3000 *g* for 15 min. Transfer 25 mL of the supernatant to a crucible that has previously been dried in an oven at  $120 \pm 2$  °C for 4 h and weighed to the nearest 0.1 mg. Evaporate to dryness on a water-bath, then place the crucible in an oven at  $120 \pm 2$  °C for 4 h. Allow to cool in a desiccator. Weigh the crucible to the nearest 0.1 mg again.

Determine the percentage of cold-water-soluble matter using the following expression:

$$\frac{(B - A) \times \frac{100}{25} \times 100}{S \times \frac{100 - C}{100}}$$

*A* = initial crucible mass, in grams;

*B* = final crucible mass, in grams;

*C* = loss on drying, in per cent;

*S* = sample mass, in grams.

**Particle-size distribution** (2.9.31 or 2.9.38).

**Powder flow** (2.9.36).

01/2011:1785

## STARCHES, HYDROXYETHYL

### Amyla hydroxyethyla

$[\text{C}_6\text{H}_{10}\text{O}_5(\text{C}_2\text{H}_4\text{O})_x]_n$  with *x* = molar substitution [9005-27-0]

#### DEFINITION

Hydroxyethyl starches are partially substituted poly(2-hydroxyethyl)ethers of waxy maize starch or potato starch, which primarily consist of amylopectine. The type of hydroxyethyl starch is defined by 2 numbers: the mean molecular weight (*Mw*) and the number of hydroxyethyl groups per anhydroglucose unit expressed as the molar substitution (*MS*). Hydroxyethyl starch is also characterised by the number of hydroxyethyl groups located at the C2 group over the number of hydroxyethyl groups located at C6, expressed as the C2/C6 ratio. The parameters *Mw*, *MS* and C2/C6 ratio are determined by the reaction conditions of the production.

#### PRODUCTION

Hydroxyethyl starches are produced from waxy maize starch or potato starch by acidic hydrolysis and reaction with ethylene oxide and purified by ultrafiltration.

#### CHARACTERS

**Appearance:** white or almost white powder.

**Solubility:** freely soluble in water and in dimethyl sulfoxide, practically insoluble in anhydrous ethanol.

Hydroxyethyl starches are hygroscopic until they reach a water content of about 12 per cent to 15 per cent.

#### IDENTIFICATION

**First identification:** A, C.

**Second identification:** B, C.

A. Infrared absorption spectrophotometry (2.2.24).

**Comparison:** medium *Mw* hydroxyethyl starch CRS.

**Results:** the spectrum obtained shows the same absorption bands as the spectrum obtained with medium *Mw* hydroxyethyl starch CRS. Due to the difference in the substitution of the substance, the intensity of some absorption bands can vary.

B. To 5 mL of solution S (see Tests), add 0.1 mL of 0.05 *M* iodine. A reddish-brown or blue-violet colour appears.

C. Molecular weight (see Tests).

#### TESTS

**Solution S.** Dissolve 5.0 g of the substance to be examined (dried substance) in carbon dioxide-free water *R* and dilute to 100.0 mL with the same solvent.

**Appearance of solution.** Solution S is not more opalescent than reference suspension II (2.2.1).

**pH** (2.2.3): 4.5 to 7.0.

To 25 mL of solution S, add 0.2 mL of a saturated solution of potassium chloride *R*.

**Absorbance** (2.2.25): maximum 0.025, determined at 400 nm on solution S filtered through a 0.2 µm filter.

**Molecular weight (*Mw*) and molecular weight distribution.**

Size-exclusion chromatography (2.2.30).

**Buffer solution.** Dissolve 54.34 g of sodium acetate *R* in water *R*, add 100.0 mL of glacial acetic acid *R* and dilute to 1000.0 mL with water *R*.

**Test stock solution.** Dissolve 2.0 g of the substance to be examined (dried substance) in water *R* and dilute to 50 mL with the same solvent. Add 10.0 mL of the buffer solution and dilute to 100.0 mL with water *R*.

**Reference solution (a).** To prepare the reference solution (a),

- if the nominal *Mw* of the substance to be examined is below 300 000, use medium *Mw* hydroxyethyl starch CRS;
- if the nominal *Mw* of the substance to be examined is above 300 000, use high *Mw* hydroxyethyl starch CRS.

Dissolve 0.4 g of medium *Mw* hydroxyethyl starch CRS or high *Mw* hydroxyethyl starch CRS in 10 mL of water *R*. Add 2.0 mL of the buffer solution and dilute to 20.0 mL with water *R*.

**Reference solution (b).** Dilute 10.0 mL of reference solution (a) to 20.0 mL with the mobile phase.

**Reference solution (c).** Dilute 10.0 mL of reference solution (b) to 20.0 mL with the mobile phase.

**Reference solution (d).** Dilute 10.0 mL of reference solution (c) to 20.0 mL with the mobile phase.

**Column:**

- stationary phase: hydroxylated polymethacrylate gel *R*,
- 4 columns to be connected in series:

Length in m	Internal diameter in mm	Particle size in µm	Pore size in nm
0.30	7.5	17	> 100
0.30	7.5	17	100
0.30	7.5	10	20
0.30	7.5	10	12.5

**Mobile phase.** Dilute 100.0 mL of the buffer solution to 1 L with water R.

**Flow rate:** 0.5-1.0 mL/min.

**Detection:** multiple-angle laser light scattering detector and refractometer maintained at a constant temperature, connected in series.

**Injection volume:** 50 µL.

Determine the suitable working solution as follows: inject reference solutions (a) and (b), the mean *M<sub>w</sub>* determined with reference solution (b) does not deviate by more than 3 per cent from the mean *M<sub>w</sub>* determined with reference solution (a). If the deviation meets the requirement, use reference solution (a) to check the system suitability criterion.

If the deviation is higher, inject reference solution (c) and determine the mean *M<sub>w</sub>*. The mean *M<sub>w</sub>* determined with reference solution (c) does not deviate by more than 3 per cent from the mean *M<sub>w</sub>* determined with reference solution (b). If the deviation meets the requirement, use reference solution (b) to check the system suitability criterion.

If the deviation is higher, inject reference solution (d) and determine the mean *M<sub>w</sub>*. The mean *M<sub>w</sub>* determined with reference solution (d) does not deviate by more than 3 per cent from the mean *M<sub>w</sub>* determined with reference solution (c). If the deviation meets the requirement, use reference solution (c) to check the system suitability criterion.

**System suitability:**

- **mean *M<sub>w</sub>*:** within 5 per cent of the value assigned to the *medium *M<sub>w</sub>* hydroxyethyl starch CRS* or *high *M<sub>w</sub>* hydroxyethyl starch CRS*.

If necessary, dilute the test stock solution in order to have the same concentration as that of the reference solution used to check the system suitability.

**Results:** use a suitable integrator to determine the mean *M<sub>w</sub>* and the *M<sub>w</sub>* of the lowest and highest 10 per cent mass fraction.

Low <i>M<sub>w</sub></i> 2000 - 100 000	Medium <i>M<sub>w</sub></i> 100 000 - 300 000	High <i>M<sub>w</sub></i> 300 000 - 900 000
Determined <i>M<sub>w</sub></i> = nominal <i>M<sub>w</sub></i> ± 15 per cent		
<i>M<sub>w</sub></i> at 10 per cent lowest fraction > 10 per cent of nominal <i>M<sub>w</sub></i>	<i>M<sub>w</sub></i> at 10 per cent lowest fraction > 15 000	<i>M<sub>w</sub></i> at 10 per cent lowest fraction > 15 000
<i>M<sub>w</sub></i> at 10 per cent highest fraction < 300 per cent of nominal <i>M<sub>w</sub></i>	<i>M<sub>w</sub></i> at 10 per cent highest fraction < 300 per cent of nominal <i>M<sub>w</sub></i>	<i>M<sub>w</sub></i> at 10 per cent highest fraction < 500 per cent of nominal <i>M<sub>w</sub></i>

**C2/C6 ratio.** Gas chromatography (2.2.28).

**Solution A.** Mix equal volumes of dilute sulfuric acid R and water R.

**Test solution.** Introduce 0.18 g of the substance to be examined into a 5 mL vial. Add 3.0 mL of solution A, cap, seal the vial and shake until dissolution. Heat the vials for 4 h in a heating block already preheated to 100 °C, shaking them from time to time. Cool to room temperature. Open the vial and carefully add 0.9 g of barium carbonate R. Shake carefully and then centrifuge at about 9000 *g* for about 15 min. Test the clear supernatant for neutral pH with pH paper. If the solution is still acid, add more barium carbonate R in portions of 0.2 g until the solution is neutral. Filter the clear supernatant (pore size 0.45 µm). Introduce 0.5 mL of the filtrate into a autosampler vial and evaporate to dryness at 40 °C (several hours are usually needed). Take up the residue with 0.50 mL of pyridine R, 0.25 mL of *N,O*-bis(trimethylsilyl)acetamide R and 25 µL of chlorotrimethylsilane R. Seal the vial and heat to 40 °C for 1 h shaking from time to time. Cool to room temperature. Place the vial into the autosampler and perform 3 injections from each vial. Prepare in duplicate.

**Reference solution.** Prepare as prescribed for the test solution but using *medium *M<sub>w</sub>* hydroxyethyl starch CRS* instead of the substance to be examined.

**Column:**

- **size:** *l* = 15 m, Ø = 0.32 mm;
- **stationary phase:** poly(dimethyl)siloxane R (film thickness 0.25 µm).

**Carrier gas:** hydrogen for chromatography R at a constant pressure of 69 kPa.

**Split ratio:** 1:20.

	Time (min)	Temperature (°C)
Column	0 - 1	150
	1 - 25	150 → 270
	25 - 28	270
Injection port		250
Detector		300

**Detection:** flame ionisation.

**Injection:** 1 µL.

**Identification of peaks:** use the chromatogram supplied with *medium *M<sub>w</sub>* hydroxyethyl starch CRS* and the chromatogram obtained with the reference solution to identify the peaks due to derivatised product 1, derivatised product 2, derivatised product 3, 2-*O*-hydroxyethyl-α-D-glucose, 6-*O*-hydroxyethyl-α-D-glucose, 2-*O*-hydroxyethyl-β-D-glucose and 6-*O*-hydroxyethyl-β-D-glucose.

**System suitability:** reference solution:

- **resolution:** minimum 1.5 between the peaks due to 2-*O*-hydroxyethyl-β-D-glucose and 6-*O*-hydroxyethyl-β-D-glucose;
- **symmetry factor:** 0.6 to 1.5 for the peak due to derivatised product 1;
- **repeatability:** maximum relative standard deviation of 5.0 per cent for derivatised product 1 after 3 injections.

Calculate the C2/C6 ratio using the following expression:

$$\frac{A_1 + A_2 + A_3 + A_4 + A_5}{A_6 + A_7}$$

- A*<sub>1</sub> = area of the peak due to derivatised product 1;
- A*<sub>2</sub> = area of the peak due to derivatised product 2;
- A*<sub>3</sub> = area of the peak due to derivatised product 3;
- A*<sub>4</sub> = area of the peak due to 2-*O*-hydroxyethyl-α-D-glucose;
- A*<sub>5</sub> = area of the peak due to 2-*O*-hydroxyethyl-β-D-glucose;
- A*<sub>6</sub> = area of the peak due to 6-*O*-hydroxyethyl-α-D-glucose;
- A*<sub>7</sub> = area of the peak due to 6-*O*-hydroxyethyl-β-D-glucose.

Calculate the mean C2/C6 ratio from the values obtained with the 2 test solutions.

The test is not valid unless the difference of the 2 values is not more than 5 per cent.

**Limit:** within 20.0 per cent of the nominal value.

**Molar substitution (MS).** Gas chromatography (2.2.28).

The content of hydroxyethyl groups is determined after hydrolysis with hydriodic acid as iodoethane.

**Internal standard solution.** Dilute 1.0 mL of toluene R to 200.0 mL with xylene R.

**Test solution.** Introduce 50.0 mg of the substance to be examined and about 0.10-0.15 g of adipic acid R in a 5 mL vial. Add 1.0 mL of the internal standard solution and 2.0 mL of hydriodic acid R. Tightly seal and cap the vial with a septum and an aluminium, centre tear-off seal. Prepare the test solution 5 times.

**Reference solutions.** In each of 7 vials of 5 mL, introduce about 0.10-0.15 g of adipic acid R. To each vial add 1.0 mL of the internal standard solution and 2.0 mL of hydriodic acid R. Tightly seal and cap the vials with a septum and an aluminium,

centre tear-off seal. Weigh the vials with an accuracy of 0.01 mg. Introduce respectively 10 mg, 20 mg, 30 mg, 40 mg, 50 mg, 60 mg and 70 mg of *iodoethane R* with a 100 µL syringe piercing the septa carefully. Weigh the vials again with an accuracy of 0.01 mg and calculate the exact amount of *iodoethane R* added.

Determine the mass of the vials to the nearest 1 mg. Place the vials for 10 h into a heating block already preheated to 150 °C. After cooling to room temperature, determine the mass of each vial to the nearest 1 mg. Disregard any vial with a loss in mass of more than 5 mg. From 4 vials of the test solution and 5 of the reference solutions, take-up 100 µL of the upper layer. Introduce in an autosampler vial and dilute with 1.0 mL of *xylene R*. Seal immediately the vials and shortly shake.

**Column:**

- *material*: fused silica;
- *size*:  $l = 30$  m,  $\varnothing = 0.53$  mm;
- *stationary phase*: poly[(cyanopropyl)(phenyl)]dimethylsiloxane *R* (film thickness 3 µm).

*Carrier gas*: helium for chromatography *R*.

*Flow rate*: 8 mL/min.

*Split ratio*: 1:20.

	Time (min)	Temperature (°C)
Column	0 - 4	50
	4 - 16	50 → 230
	16 - 20	230
Injection port		200
Detector		280

*Detection*: flame ionisation.

*Injection volume*: 1 µL; inject each solution twice.

*Elution order*: iodoethane, toluene.

*System suitability*: reference solutions:

- *resolution*: minimum 1.5 between the peaks due to iodoethane and toluene.
- calculate the ratio of the area of the peak due to *iodoethane R* to the area of the peak due to the internal standard for each chromatogram. Calculate the linear regression curve plotting the ratios calculated for the reference solutions against the quantity of *iodoethane R* added (in milligrams). The coefficient of determination  $R^2$  is not less than 0.990.

*Results*: calculate the quantity ( $T$ ) of iodoethane in milligrams present in the test solution using the following expression:

$$\frac{A - B}{M}$$

$A$  = ratio of the area of the peak due to iodoethane to the area of the peak due to the internal standard in the chromatogram obtained with the test solution;

$B$  = y-intercept of the curve;

$M$  = slope of the curve.

Then calculate the percentage content of ethylene oxide ( $C$ ) using the following expression:

$$\frac{44.05 \times T \times 100}{155.97 \times m}$$

$m$  = mass of the substance to be examined, in milligrams;

44.05 = molecular mass of ethylene oxide;

155.97 = molecular mass of iodoethane.

Then calculate the  $MS$  using the following expression:

$$\frac{C \times 162.14}{(100 - C) \times 44.05}$$

162.14 = molecular mass of anhydroglucose;

44.05 = molecular mass of ethylene oxide.

Calculate the mean  $MS$  from the values obtained with the 4 test solutions.

*Limit*: 0.05 to 2.4, and within 8.0 per cent of the nominal value.

**Ethylene glycol.** Liquid chromatography (2.2.29).

*Test solution.* Dissolve 1.0 g of the substance to be examined (dried substance) in *water R* and dilute to 50.0 mL with the same solvent.

*Reference solution.* Dissolve 0.800 g of *ethylene glycol R* in *water R* and dilute to 100.0 mL with the same solvent. Dilute 2.0 mL of this solution to 200.0 mL with *water R*. Dilute 2.0 mL of this solution to 200.0 mL with *water R*.

**Precolumn:**

- *size*:  $l = 0.01$  m,  $\varnothing = 4.0$  mm;
- *stationary phase*: octadecylsilyl silica gel for chromatography *R* (5 µm).

**Column:**

- *size*:  $l = 0.25$  m,  $\varnothing = 4.6$  mm;
- *stationary phase*: octadecylsilyl silica gel for chromatography *R* (5 µm);
- *temperature*: 30 °C.

*Mobile phase*: *water R*.

*Flow rate*: 1.0 mL/min.

*Post-column solution.* Dilute 750 mL of 2 *M sodium hydroxide R* to 1000 mL with *water R*.

*Flow rate of post-column solution*: 0.2 mL/min.

*Detection*: pulsed amperometric detector.

*Injection*: 20 µL;

*Run time*: 2.5 times the retention time of ethylene glycol.

*Retention time*: ethylene glycol = about 4 min.

*System suitability*: reference solution:

- *signal-to-noise ratio*: minimum 10 for the principal peak;
- *repeatability*: maximum relative standard deviation of 10.0 per cent after 6 injections.

After a maximum of 8 sample injections, wash the column using the following program.

*Rinsing solution*: acetonitrile for chromatography *R*, *water R* (20:80 V/V).

Time (min)	Mobile phase (per cent V/V)	Rinsing solution (per cent V/V)
0 - 15	75	25
15 - 20	75 → 0	25 → 100
20 - 25	0	100
25 - 30	0 → 100	100 → 0
30 - 100	100	0

**Limit:**

- *ethylene glycol*: not more than the area of the corresponding peak in the chromatogram obtained with the reference solution (40 ppm).

**2-Chloroethanol.** Gas chromatography (2.2.28).

*Solvent mixture*: *methanol R*, *acetonitrile R* (25:75 V/V).

*Internal standard solution.* Dissolve 0.250 g of *2,6-dimethylaniline R* in the solvent mixture and dilute to 50.0 mL with the solvent mixture. Dilute 0.5 mL of this solution to 50.0 mL with the solvent mixture.

*Test solution.* Introduce 1.0 g of the substance to be examined in a 20 mL vial. Add 10.0 mL of the solvent mixture. Close tightly. Treat in an ultrasonic bath for 3.5 h. Allow to cool at room temperature. To 1.0 mL of this solution, add 0.8 mL of the internal standard solution.

**Reference solution.** Dissolve 0.250 g of 2-chloroethanol R in water R and dilute to 50.0 mL with the same solvent. Dilute 1.0 mL of this solution to 100.0 mL with water R. Dilute 1.0 mL of this solution to 100.0 mL with water R. To 1.0 mL of this solution, add 0.8 mL of the internal standard solution.

**Precolumn:**

- material: fused silica;
- size:  $l = 10$  m,  $\varnothing = 0.53$  mm;
- stationary phase: polar-deactivated polyethyleneglycol R.

**Column:**

- material: fused silica;
- size:  $l = 30$  m,  $\varnothing = 0.32$  mm;
- stationary phase: macrogol 20 000 R (film thickness 0.25  $\mu\text{m}$ )

**Carrier gas:** hydrogen for chromatography R.

**Flow rate:** 2.9 mL/min.

**Split program:**

Time (min)	Split state	Split ratio
initial	on	1:20
0.01	off	1:20
0.50	on	1:20

**Temperature:**

	Time (min)	Temperature (°C)
Column	0 - 4	45
	4 - 23.5	45 → 240
	23.5 - 28.5	240
Injection port		250
Detector		270

**Detection:** flame ionisation.

**Injection:** 1  $\mu\text{L}$ .

**System suitability:** reference solution:

- signal-to-noise ratio: minimum 10 for the peak due to 2-chloroethanol;
- repeatability: maximum relative standard deviation of 10.0 per cent after 6 injections.

**Limit:**

- 2-chloroethanol: calculate the ratio ( $R$ ) of the area of the peak due to 2-chloroethanol to the area of the peak due to the internal standard from the chromatogram obtained with the reference solution; calculate the ratio of the area of the peak due to 2-chloroethanol to the area of the peak due to the internal standard from the chromatogram obtained with the test solution: this ratio is not greater than  $R$  (5 ppm).

**Ethylene oxide.** Head-space gas chromatography (2.2.28).

**Test solution.** Dissolve 1.0 g of the substance to be examined in 1.0 mL of water R. Close the vial tightly. Prepare in duplicate.

**Reference stock solution.** Introduce 80 mL of water R in a 100 mL volumetric flask. Cool at about 4°C for at least 30 min. Place the flask on an analytical balance and slowly introduce 1.0 g of ethylene oxide R. Determine the precise quantity of ethylene oxide by differential weighing. Dilute to 100.0 mL with water R. Store in the refrigerator and use within 4 weeks.

**Reference solution (a).** Dilute 1.0 mL of the reference stock solution to 100.0 mL with water R. Dilute 1.0 mL of this solution to 100.0 mL with water R. Use within 24 h.

**Reference solution (b).** Dissolve 1.0 g of the substance to be examined in 1.0 mL of reference solution (a). Close the vial tightly. Prepare in duplicate.

**Column:**

- material: quartz;
- size:  $l = 30$  m,  $\varnothing = 0.32$  mm;
- stationary phase: poly[(cyanopropyl)(phenyl)][dimethylsiloxane R (film thickness 1.5  $\mu\text{m}$ ).

**Carrier gas:** helium for chromatography R at a pressure of 110.3 kPa.

**Split ratio:** 1:35.

**Static head-space conditions which may be used:**

- equilibration temperature: 80 °C;
- equilibration time: 40 min;
- transfer-line temperature: 150 °C;
- pressurisation time: 2.0 min;
- injection time: 3 s.

**Temperature:**

	Time (min)	Temperature (°C)
Column	0 - 20	40
	20 - 30	40 → 240
	30 - 40	240
Injection port		140
Detector		250

**Detection:** flame ionisation.

**Injection:** inject a suitable volume of the gaseous phase of the test solution and reference solution (b).

**System suitability:**

- signal-to-noise ratio: minimum 10 for the peak due to ethylene oxide in the chromatogram obtained with reference solution (b).

**Limit:**

- ethylene oxide: not more than 0.5 times the area of the corresponding peak in the chromatogram obtained with reference solution (b) (1 ppm).

**Sodium chloride:** maximum 0.1 per cent.

**Test solution.** In a 250 mL conical flask, dissolve 10.0 g of the substance to be examined in 100 mL of water R. Add 2 mL of dilute nitric acid R and 5.0 mL of a 9 g/L solution of sodium chloride R.

**Reference solution.** In a 250 mL conical flask, dilute 5.0 mL of a 9 g/L solution of sodium chloride R with 100 mL of water R. Add 2 mL of dilute nitric acid R.

Carry out a potentiometric titration (2.2.20) with 0.1 M silver nitrate. Calculate the percentage content of sodium chloride using the following expression:

$$\frac{(n_1 - n_2) \times 5.844 \times 100}{m}$$

- $n_1$  = volume of 0.1 M silver nitrate used for the test solution, in millilitres;
- $n_2$  = volume of 0.1 M silver nitrate used for the reference solution, in millilitres;
- $m$  = mass of the substance to be examined in the test solution, in milligrams.

**Heavy metals (2.4.8):** maximum 10 ppm.

Dissolve 2 g in water R and dilute to 20 mL with the same solvent. 12 mL complies with test A. Prepare the reference solution using lead standard solution (1 ppm Pb) R.

**Loss on drying (2.2.32):** maximum 15.0 per cent, determined on 1.000 g by drying at 105 °C.

**Bacterial endotoxins (2.6.14):** less than 2.5 IU/g.

**Microbial contamination**

TAMC: acceptance criterion 10<sup>2</sup> CFU/g (2.6.12).

## LABELLING

The label states the mean molecular weight, molar substitution and C2/C6 ratio (nominal values).

01/2008:2130  
corrected 7.0

## STAVUDINE

## Stavudinum

C<sub>10</sub>H<sub>12</sub>N<sub>2</sub>O<sub>4</sub>  
[3056-17-5]

M<sub>r</sub> 224.2

## DEFINITION

1-(2,3-Dideoxy-β-D-glycero-pent-2-enofuranosyl)-5-methylpyrimidine-2,4(1H,3H)-dione.

Content: 97.0 per cent to 102.0 per cent (anhydrous substance).

## CHARACTERS

Appearance: white or almost white powder.

Solubility: soluble in water, sparingly soluble in ethanol (96 per cent), slightly soluble in methylene chloride.

It shows polymorphism (5.9).

## IDENTIFICATION

A. Specific optical rotation (2.2.7): –39.5 to –45.9 (anhydrous substance).

Dissolve 0.100 g in water R and dilute to 10.0 mL with the same solvent.

B. Infrared absorption spectrophotometry (2.2.24).

Comparison: stavudine CRS.

If the spectra obtained show differences, dissolve the substance to be examined and the reference substance separately in anhydrous ethanol R, evaporate to dryness and record new spectra using the residues.

## TESTS

**Related substances.** Liquid chromatography (2.2.29). Prepare the solutions immediately before use or maintain at 2–8 °C until use.

**Test solution.** Dissolve 25.0 mg of the substance to be examined in water R and dilute to 50.0 mL with the same solvent.

**Reference solution (a).** Dilute 0.5 mL of the test solution to 100.0 mL with water R.

**Reference solution (b).** Dilute 20 mL of reference solution (a) to 100.0 mL with water R.

**Reference solution (c).** Dissolve 5 mg of stavudine for system suitability CRS (containing impurities A to H) in water R and dilute to 10.0 mL with the same solvent.

Column:

- size:  $l = 0.25$  m,  $\emptyset = 4.6$  mm;
- stationary phase: octadecylsilyl silica gel for chromatography R (5 μm).

Mobile phase:

- mobile phase A: mix 35 volumes of acetonitrile for chromatography R and 965 volumes of a 0.77 g/L solution of ammonium acetate R;
- mobile phase B: mix 250 volumes of acetonitrile for chromatography R and 750 volumes of a 0.77 g/L solution of ammonium acetate R;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 10	100	0
10 - 20	100 → 0	0 → 100
20 - 30	0	100

Flow rate: 2 mL/min.

Detection: spectrophotometer at 254 nm.

Injection: 10 μL.

Identification of impurities: use the chromatogram supplied with stavudine for system suitability CRS to identify the peaks due to impurities A to H.

Relative retention with reference to stavudine (retention time = 9.5–12.5 min): impurity A = about 0.3; impurity B = about 0.50; impurity C = about 0.53; impurity E = about 1.1.

System suitability: reference solution (c):

- peak-to-valley ratio: minimum 1.5, where  $H_p$  = height above the baseline of the peak due to impurity C and  $H_v$  = height above the baseline of the lowest point of the curve separating this peak from the peak due to impurity B; minimum 1.5, where  $H_p$  = height above the baseline of the peak due to impurity E and  $H_v$  = height above the baseline of the lowest point of the curve separating this peak from the peak due to stavudine.

Limits:

- correction factor: for the calculation of content, multiply the peak area of impurity A by 0.7;
- impurity A: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- unspecified impurities: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- total: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent);
- disregard limit: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Water (2.5.12): maximum 0.5 per cent, determined on 0.500 g.

Sulfated ash (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

## ASSAY

Liquid chromatography (2.2.29). Prepare the solutions immediately before use or maintain at 2–8 °C until use.

**Test solution.** Dissolve 10.0 mg of the substance to be examined in water R and dilute to 100.0 mL with the same solvent. Dilute 10.0 mL of the solution to 50.0 mL with water R.

**Reference solution (a).** Dissolve 10.0 mg of stavudine CRS in water R and dilute to 100.0 mL with the same solvent. Dilute 10.0 mL of the solution to 50.0 mL with water R.

**Reference solution (b).** Dissolve 5 mg of thymine R and 7.5 mg of thymidine R in water R and dilute to 100 mL with the same solvent. Dilute 10 mL of the solution to 50 mL with water R.

Column:

- size:  $l = 0.033$  m,  $\emptyset = 4.0$  mm;
- stationary phase: octadecylsilyl silica gel for chromatography R (3 μm).

Mobile phase: mix 5 volumes of acetonitrile for chromatography R and 95 volumes of a 0.77 g/L solution of ammonium acetate R.

Flow rate: 0.7 mL/min.

Detection: spectrophotometer at 254 nm.

Injection: 25 μL.

*Retention time*: stavudine = 2.8 min to 5.0 min.

*System suitability*:

- *symmetry factor*: maximum 1.6 for the peak due to stavudine in the chromatogram obtained with reference solution (a);
- *resolution*: minimum 3.5 between the peaks due to impurity A and impurity C in the chromatogram obtained with reference solution (b).

Calculate the percentage content of  $C_{10}H_{12}N_2O_4$  using the chromatograms obtained with the test solution and reference solution (a) and the declared content of *stavudine CRS*.

**STORAGE**

Protected from light and humidity.

**IMPURITIES**

*Specified impurities*: A.

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): B, C, D, E, F, G, H.

A. 5-methylpyrimidine-2,4(1*H*,3*H*)-dione (thymine),

B. R1 = R3 = H, R2 = OH: 1-(2-deoxy- $\beta$ -D-*threo*-pentofuranosyl)-5-methylpyrimidine-2,4(1*H*,3*H*)-dione (3'-epithymidine),

C. R1 = OH, R2 = R3 = H: 1-(2-deoxy- $\beta$ -D-*erythro*-pentofuranosyl)-5-methylpyrimidine-2,4(1*H*,3*H*)-dione (thymidine),

H. R1 = H, R2 = OH, R3 =  $CH(CH_3)_2$ : 1-[2-deoxy-5-*O*-(1-methylethyl)- $\beta$ -D-*erythro*-pentofuranosyl]-5-methylpyrimidine-2,4(1*H*,3*H*)-dione,

D. 1-[(2*R*)-5-oxo-2,5-dihydrofuran-2-yl]-5-methylpyrimidine-2,4(1*H*,3*H*)-dione,

E. 1-(2,3-dideoxy- $\alpha$ -D-*glycero*-pent-2-enofuranosyl)-5-methylpyrimidine-2,4(1*H*,3*H*)-dione (stavudine anomer  $\alpha$ ),

G. 5'-O-[(2*S*,5*R*)-5-(5-methyl-2,4-dioxo-3,4-dihydropyrimidine-1(2*H*)-yl)-2,5-dihydrofuran-2-yl]methyl]-3'-epithymidine.

07/2010:1474

## STEARIC ACID

### Acidum stearicum

**DEFINITION**

Mixture consisting mainly of stearic (octadecanoic) acid ( $C_{18}H_{36}O_2$ ;  $M_r$  284.5) and palmitic (hexadecanoic) acid ( $C_{16}H_{32}O_2$ ;  $M_r$  256.4) obtained from fats or oils of vegetable or animal origin.

*Content*:

Stearic acid 50	<i>Stearic acid</i> : 40.0 per cent to 60.0 per cent. <i>Sum of the contents of stearic and palmitic acids</i> : minimum 90.0 per cent.
Stearic acid 70	<i>Stearic acid</i> : 60.0 per cent to 80.0 per cent. <i>Sum of the contents of stearic and palmitic acids</i> : minimum 90.0 per cent.
Stearic acid 95	<i>Stearic acid</i> : minimum 90.0 per cent. <i>Sum of the contents of stearic and palmitic acids</i> : minimum 96.0 per cent.

**CHARACTERS**

*Appearance*: white or almost white, waxy, flaky crystals, white or almost white hard masses, or white or yellowish-white powder.

*Solubility*: practically insoluble in water, soluble in ethanol (96 per cent) and in light petroleum (bp: 50-70 °C).

**IDENTIFICATION**

A. Freezing point (see Tests).

B. Acid value (2.5.1): 194 to 212, determined on 0.5 g.

C. Examine the chromatograms obtained in the assay.

*Results*: the principal peaks in the chromatogram obtained with the test solution are similar in retention time to those in the chromatogram obtained with the reference solution.

**TESTS**

**Appearance**. Heat the substance to be examined to about 75 °C. The resulting liquid is not more intensely coloured than reference solution  $Y_7$  or  $BY_7$  (2.2.2, *Method I*).

**Acidity**. Melt 5.0 g, shake for 2 min with 10 mL of hot *carbon dioxide-free water R*, cool slowly and filter. To the filtrate add 0.05 mL of *methyl orange solution R*. No red colour develops.

**Iodine value** (2.5.4). See Table 1474.-1.

**Freezing point** (2.2.18). See Table 1474.-1.

Table 1474.-1.

Type	Iodine value	Freezing point (°C)
Stearic acid 50	maximum 4.0	53 - 59
Stearic acid 70	maximum 4.0	57 - 64
Stearic acid 95	maximum 1.5	64 - 69

**Nickel** (2.4.31): maximum 1 ppm.

#### ASSAY

Gas chromatography (2.2.28): use the normalisation procedure.

**Test solution.** In a conical flask fitted with a reflux condenser, dissolve 0.100 g of the substance to be examined in 5 mL of *boron trifluoride-methanol solution R*. Boil under reflux for 10 min. Add 4.0 mL of *heptane R* through the condenser and boil again under reflux for 10 min. Allow to cool. Add 20 mL of a saturated solution of *sodium chloride R*. Shake and allow the layers to separate. Remove about 2 mL of the organic layer and dry it over 0.2 g of *anhydrous sodium sulfate R*. Dilute 1.0 mL of this solution to 10.0 mL with *heptane R*.

**Reference solution.** Prepare the reference solution in the same manner as the test solution using 50 mg of *palmitic acid CRS* and 50 mg of *stearic acid CRS* instead of the substance to be examined.

**Column:**

- *material*: fused silica;
- *size*:  $l = 30$  m,  $\varnothing = 0.32$  mm;
- *stationary phase*: *macrogol 20 000 R* (film thickness 0.5  $\mu$ m).

**Carrier gas:** *helium for chromatography R*.

**Flow rate:** 2.4 mL/min.

**Temperature:**

	Time (min)	Temperature (°C)
Column	0 - 2	70
	2 - 36	70 → 240
	36 - 41	240
Injection port		220
Detector		260

**Detection:** flame ionisation.

**Injection:** 1  $\mu$ L.

**Relative retention** with reference to methyl stearate: methyl palmitate = about 0.9.

**System suitability:** reference solution:

- **resolution**: minimum 5.0 between the peaks due to methyl palmitate and methyl stearate;
- **repeatability**: maximum relative standard deviation of 3.0 per cent for the areas of the peaks due to methyl palmitate and methyl stearate, after 6 injections; maximum 1.0 per cent for the ratio of the areas of the peaks due to methyl palmitate to the areas of the peaks due to methyl stearate, after 6 injections.

#### LABELLING

The label states the type of stearic acid (50, 70, 95).

#### FUNCTIONALITY-RELATED CHARACTERISTICS

*This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient (see chapter 5.15). This section is a non-mandatory part of the monograph and it is not necessary to verify the characteristics*

*to demonstrate compliance. Control of these characteristics can however contribute to the quality of a medicinal product by improving the consistency of the manufacturing process and the performance of the medicinal product during use. Where control methods are cited, they are recognised as being suitable for the purpose, but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.*

*The following characteristics may be relevant for stearic acid used as a lubricant in tablets and capsules.*

**Particle-size distribution** (2.9.31).

**Specific surface area** (2.9.26, Method I).

01/2008:1268  
corrected 6.0

## STEAROYL MACROGOLGLYCERIDES

### Macrogolglyceridorum stearates

#### DEFINITION

Mixtures of monoesters, diesters and triesters of glycerol and monoesters and diesters of macrogols with a mean relative molecular mass between 300 and 4000.

They are obtained by partial alcoholysis of saturated oils containing mainly triglycerides of stearic (octadecanoic) acid, using macrogol, or by esterification of glycerol and macrogol with saturated fatty acids, or by mixture of glycerol esters and condensates of ethylene oxide with the fatty acids of these hydrogenated oils.

The hydroxyl value is within 15 units of the nominal value. The saponification value is within 10 units of the nominal value.

#### CHARACTERS

**Appearance:** pale yellow waxy solid.

**Solubility:** dispersible in warm water and in warm liquid paraffin, freely soluble in methylene chloride, soluble in warm anhydrous ethanol.

#### IDENTIFICATION

A. Thin-layer chromatography (2.2.27).

**Test solution.** Dissolve 1.0 g of the substance to be examined in *methylene chloride R* and dilute to 20 mL with the same solvent.

**Plate:** *TLC silica gel plate R*.

**Mobile phase:** *hexane R, ether R* (30:70 V/V).

**Application:** 10  $\mu$ L.

**Development:** over a path of 15 cm.

**Drying:** in air.

**Detection:** spray with a 0.1 g/L solution of *rhodamine B R* in *ethanol (96 per cent) R* and examine in ultraviolet light at 365 nm.

**Results:** the chromatogram shows a spot due to triglycerides with an  $R_f$  value of about 0.9 ( $R_{st}$  1) and spots due to 1,3-diglycerides ( $R_{st}$  0.7), to 1,2-diglycerides ( $R_{st}$  0.6), to monoglycerides ( $R_{st}$  0.1) and to esters of macrogol ( $R_{st}$  0).

B. Hydroxyl value (see Tests).

C. Saponification value (see Tests).

D. Fatty acid composition (see Tests).

#### TESTS

**Acid value** (2.5.1): maximum 2.0, determined on 2.0 g.

**Hydroxyl value** (2.5.3, Method A): within 15 units of the nominal value, determined on 1.0 g.

**Peroxide value** (2.5.5, Method A): maximum 6.0, determined on 2.0 g.

**Saponification value** (2.5.6): within 10 units of the nominal value, determined on 2.0 g.

**Alkaline impurities.** Into a test-tube introduce 5.0 g and carefully add a mixture, neutralised if necessary with 0.01 M hydrochloric acid or with 0.01 M sodium hydroxide, of 0.05 mL of a 0.4 g/L solution of bromophenol blue R in ethanol (96 per cent) R, 0.3 mL of water R and 10 mL of ethanol (96 per cent) R. Shake and allow to stand. Not more than 1.0 mL of 0.01 M hydrochloric acid is required to change the colour of the upper layer to yellow.

**Free glycerol:** maximum 3.0 per cent.

Dissolve 1.20 g in 25.0 mL of methylene chloride R. Heat if necessary. After cooling, add 100 mL of water R. Shake and add 25.0 mL of periodic acetic acid solution R. Shake and allow to stand for 30 min. Add 40 mL of a 75 g/L solution of potassium iodide R. Allow to stand for 1 min. Add 1 mL of starch solution R. Titrate the iodine with 0.1 M sodium thiosulfate. Carry out a blank titration.

1 mL of 0.1 M sodium thiosulfate is equivalent to 2.3 mg of glycerol.

**Composition of fatty acids.** Gas chromatography (2.4.22, Method A).

*Composition of the fatty-acid fraction of the substance:*

- lauric acid: maximum 5.0 per cent;
- myristic acid: maximum 5.0 per cent;
- stearic acid and palmitic acid: different nominal amounts and minimum 90.0 per cent for the sum of C<sub>18</sub>H<sub>36</sub>O<sub>2</sub> and C<sub>16</sub>H<sub>32</sub>O<sub>2</sub>.

**Ethylene oxide and dioxan (2.4.25):** maximum 1 ppm of ethylene oxide and maximum 10 ppm of dioxan.

**Heavy metals (2.4.8):** maximum 10 ppm.

2.0 g complies with test C. Prepare the reference solution using 2 mL of lead standard solution (10 ppm Pb) R.

**Water (2.5.12):** maximum 1.0 per cent, determined on 1.0 g. Use a mixture of 30 volumes of anhydrous methanol R and 70 volumes of methylene chloride R as solvent.

**Total ash (2.4.16):** maximum 0.2 per cent.

#### LABELLING

The label states:

- the nominal hydroxyl value;
- the nominal saponification value;
- the type of the macrogol used (mean relative molecular mass) or the number of moles of ethylene oxide reacted per mole of substance (nominal value).

01/2008:0753

## STEARYL ALCOHOL

### Alcohol stearylcus

#### DEFINITION

Mixture of solid alcohols, mainly octadecan-1-ol (C<sub>18</sub>H<sub>38</sub>O; M<sub>r</sub> 270.5), of animal or vegetable origin.

*Content:* minimum 95.0 per cent of C<sub>18</sub>H<sub>38</sub>O.

#### CHARACTERS

*Appearance:* white or almost white, unctuous flakes, granules or mass.

*Solubility:* practically insoluble in water, soluble in ethanol (96 per cent). When melted, it is miscible with fatty oils, with liquid paraffin and with melted wool fat.

#### IDENTIFICATION

Examine the chromatograms obtained in the assay.

*Results:* the principal peak in the chromatogram obtained with the test solution is similar in retention time to the principal peak in the chromatogram obtained with reference solution (b).

#### TESTS

**Appearance of solution.** The solution is clear (2.2.1) and not more intensely coloured than reference solution B<sub>6</sub> (2.2.2, Method II).

Dissolve 0.50 g in 20 mL of boiling ethanol (96 per cent) R. Allow to cool.

**Melting point (2.2.14):** 57 °C to 60 °C.

**Acid value (2.5.1):** maximum 1.0.

**Hydroxyl value (2.5.3, Method A):** 197 to 217.

**Iodine value (2.5.4, Method A):** maximum 2.0.

Dissolve 2.00 g in methylene chloride R, warming if necessary and dilute to 25 mL with the same solvent.

**Saponification value (2.5.6):** maximum 2.0.

#### ASSAY

Gas chromatography (2.2.28): use the normalisation procedure. *Test solution.* Dissolve 0.100 g of the substance to be examined in ethanol (96 per cent) R and dilute to 10.0 mL with the same solvent.

*Reference solution (a).* Dissolve 50 mg of cetyl alcohol R in ethanol (96 per cent) R and dilute to 10 mL with the same solvent.

*Reference solution (b).* Dissolve 50 mg of stearyl alcohol CRS in ethanol (96 per cent) R and dilute to 5 mL with the same solvent.

*Reference solution (c).* Mix 1 mL of reference solution (a) and 1 mL of reference solution (b) and dilute to 10 mL with ethanol (96 per cent) R.

*Column:*

- size:  $l = 30$  m,  $\varnothing = 0.32$  mm,
- stationary phase: poly(dimethyl)siloxane R (1 µm).

*Carrier gas:* helium for chromatography R.

*Flow rate:* 1 mL/min.

*Split ratio:* 1:100.

*Temperature:*

	Time (min)	Temperature (°C)
Column	0 - 20	150 → 250
	20 - 40	250
Injection port		250
Detector		250

*Detection:* flame ionisation.

*Injection:* 1 µL of the test solution and reference solutions (b) and (c).

*System suitability:* reference solution (c):

- resolution: minimum 5.0 between the peaks due to cetyl alcohol and stearyl alcohol.

Calculate the percentage content of C<sub>18</sub>H<sub>38</sub>O.

07/2008:0356

## STREPTOKINASE CONCENTRATED SOLUTION

### Streptokinasi solutio concentrata

#### DEFINITION

Streptokinase concentrated solution is a preparation of a protein obtained from culture filtrates of certain strains of haemolytic *Streptococcus* group C; it has the property of combining with human plasminogen to form plasminogen activator. It may contain buffer salts and other excipients. The potency is not less than 510 IU per microgram of nitrogen.

## PRODUCTION

The method of manufacture is validated to demonstrate that the product, if tested, would comply with the following test.

**Abnormal toxicity** (2.6.9). Inject into each mouse a quantity of the preparation to be examined (if necessary, dilute with *water for injections R*) equivalent to 50 000 IU of streptokinase activity, the injection lasting 15-20 s.

## CHARACTERS

*Appearance*: clear, colourless liquid.

## IDENTIFICATION

- A. Place 0.5 mL of citrated human plasma in a polystyrene tube maintained in a water-bath at 37 °C. Add 0.1 mL of a dilution of the preparation to be examined containing 10 000 IU of streptokinase activity per millilitre in *phosphate buffer solution pH 7.2 R* and 0.1 mL of a solution of *human thrombin R* containing 20 IU/mL in *phosphate buffer solution pH 7.2 R*. Mix immediately. A clot forms and lyses within 30 min. Repeat the procedure using citrated bovine plasma. The clot does not lyse within 60 min.
- B. Perform an immunochemical test using double immunodiffusion techniques (2.7.1). Place in the central cavity about 80 µL of goat or rabbit antistreptokinase serum containing about 10 000 units of antistreptokinase activity per millilitre; place in each of the surrounding cavities about 80 µL of a dilution of the preparation to be examined containing 125 000 IU of streptokinase activity per millilitre. Allow the plates to stand in a humidified tank for 24 h. Only one precipitation arc appears and it is well defined.

## TESTS

**pH** (2.2.3): 6.8 to 7.5.

Dilute the preparation to be examined in *carbon dioxide-free water R* to obtain a solution containing at least 1000 000 IU of streptokinase activity per millilitre.

**Streptodornase**: maximum 10 IU of streptodornase activity per 100 000 IU of streptokinase activity.

*Test solution*. Dilute the preparation to be examined in *imidazole buffer solution pH 6.5 R* to obtain a solution containing 150 000 IU of streptokinase activity per millilitre.

*Reference solution*. Dissolve in *imidazole buffer solution pH 6.5 R* a reference preparation of streptodornase, calibrated in International Units against the International Standard of streptodornase, to obtain a solution containing 20 IU of streptodornase activity per millilitre. The equivalence in International Units of the International Standard is stated by the World Health Organisation.

To each of 8 numbered centrifuge tubes, add 0.5 mL of a 1 g/L solution of *sodium deoxyribonucleate R* in *imidazole buffer solution pH 6.5 R*. To tube number 1 and tube number 2 add 0.25 mL of *imidazole buffer solution pH 6.5 R*, 0.25 mL of the test solution and, immediately, 3.0 mL of perchloric acid (25 g/L HClO<sub>4</sub>). Mix, centrifuge at about 3000 *g* for 5 min and measure the absorbances (2.2.25) of the supernatant liquids at 260 nm, using as the compensation liquid a mixture of 1.0 mL of *imidazole buffer solution pH 6.5 R* and 3.0 mL of perchloric acid (25 g/L HClO<sub>4</sub>) (absorbances A<sub>1</sub> and A<sub>2</sub>). To the other 6 tubes (numbers 3 to 8) add 0.25 mL, 0.25 mL, 0.125 mL, 0.125 mL, 0 mL and 0 mL respectively of *imidazole buffer solution pH 6.5 R*; add to each tube 0.25 mL of the test solution and 0 mL, 0 mL, 0.125 mL, 0.125 mL, 0.25 mL and 0.25 mL respectively of the reference solution. Mix the contents of each tube and heat at 37 °C for 15 min. To each tube add 3.0 mL of perchloric acid (25 g/L HClO<sub>4</sub>), mix and centrifuge. Measure the absorbances (2.2.25) of the supernatant liquids at 260 nm using the compensation liquid described above (absorbances A<sub>3</sub> to A<sub>8</sub>). The absorbances comply with the following requirement:

$$(A_3 + A_4) - (A_1 + A_2) < \frac{(A_5 + A_6 + A_7 + A_8)}{2} - (A_3 + A_4)$$

**Streptolysin**. In a polystyrene tube, use a quantity of the preparation to be examined equivalent to 500 000 IU of streptokinase activity and dilute to 0.5 mL with a mixture of 1 volume of *phosphate buffer solution pH 7.2 R* and 9 volumes of a 9 g/L solution of *sodium chloride R*. Add 0.4 mL of a 23 g/L solution of *sodium thioglycollate R*. Heat in a water-bath at 37 °C for 10 min. Add 0.1 mL of a solution of a reference preparation of human antistreptolysin O containing 5 IU/mL. Heat at 37 °C for 5 min. Add 1 mL of *rabbit erythrocyte suspension R*. Heat at 37 °C for 30 min. Centrifuge at about 1000 *g*. In the same manner, prepare a polystyrene tube in which the solution of the preparation to be examined has been replaced by 0.5 mL of a mixture of 1 volume of *phosphate buffer solution pH 7.2 R* and 9 volumes of a 9 g/L solution of *sodium chloride R*. Measure the absorbances (2.2.25) of the supernatant liquids at 550 nm. The absorbance of the test solution is not more than 50 per cent greater than that of the reference solution.

**Related substances**. Liquid chromatography (2.2.29): use the normalisation procedure.

*Test solution*. Dilute the preparation to be examined with *water R* to obtain a concentration of about 0.5-1 g/L, depending on the chromatographic system used.

*Reference solution*. Dilute 1 volume of *streptokinase for system suitability CRS* with 49 volumes of *water R*.

*Column*:

- *size*: *l* = 0.10 m, Ø = 4.6 mm;
- *stationary phase*: *styrene-divinylbenzene copolymer R* (10 µm) with a pore size of 200 nm;
- *temperature*: 25 °C.

*Mobile phase*:

- *mobile phase A*: *trifluoroacetic acid R*, *water for injections R* (1:1000 V/V); degas;
- *mobile phase B*: *trifluoroacetic acid R*, *acetonitrile for chromatography R* (1:1000 V/V); degas;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 1	68	32
1 - 4	68 → 52	32 → 48
4 - 5	52	48
5 - 7	0	100
7 - 10	68	32

The above conditions may be modified to improve the separation efficiency of the chromatographic system.

*Flow rate*: 5 mL/min.

*Detection*: spectrophotometer at 280 nm.

*Injection*: 20 µL.

*Retention time*: streptokinase = 2.3 min to 2.8 min.

*System suitability*: reference solution:

- *symmetry factor*: maximum 1.9 for the peak due to streptokinase;
- *peak-to-valley ratio*: minimum 2, where *H<sub>p</sub>* = height above the baseline of the 1<sup>st</sup> peak eluting after the principal peak and *H<sub>v</sub>* = height above the baseline of the lowest point of the curve separating this peak from the 2<sup>nd</sup> peak eluting after the principal peak;
- the chromatogram obtained with the reference solution is similar to the chromatogram supplied with *streptokinase for system suitability CRS*.

*Limit*:

- *total*: maximum 5 per cent.

01/2008:0053

**Bacterial endotoxins (2.6.14):** less than 0.02 IU per 100 IU of streptokinase activity, if intended for use without a further appropriate procedure for the removal of bacterial endotoxins.

## ASSAY

**Nitrogen (2.5.9).**

**Potency**

The potency of streptokinase is determined by comparing its capacity to activate plasminogen to form plasmin with the same capacity of a reference preparation of streptokinase calibrated in International Units; the formation of plasmin is determined using a suitable chromogenic substrate.

The International Unit is the activity of a stated amount of the International Standard for streptokinase. The equivalence in International Units of the International Standard is stated by the World Health Organisation.

*Reference and test solutions*

Prepare 2 independent series of at least 3 dilutions of each of the preparation to be examined and of the reference preparation of streptokinase in *tris(hydroxymethyl)aminomethane sodium chloride buffer solution pH 7.4 R1*, in the linear range of the assay (a range of 0.5–4.0 IU/mL has been found suitable).

Prepare and maintain all solutions at 37 °C.

*Substrate solution*

Mix 1.0 mL of *tris(hydroxymethyl)aminomethane buffer solution pH 7.4 R* with 1.0 mL of *chromogenic substrate R3*. Add 5 µL of a 100 g/L solution of *polysorbate 20 R*. Keep at 37 °C in a water-bath. Immediately before commencing the activation assay, add 45 µL of a 1 mg/mL solution of *human plasminogen R*.

*Method*

Analyse each streptokinase dilution, maintained at 37 °C, in duplicate. Initiate the activation reaction by adding 60 µL of each dilution to 40 µL of substrate solution. For blank wells, use 60 µL of *tris(hydroxymethyl)aminomethane sodium chloride buffer solution pH 7.4 R1* instead of the reference and test solutions. Allow the reaction to proceed at 37 °C for 20 min and read the absorbance (2.2.25) at 405 nm. If a suitable thermostatted plate reader is available, this may be used to monitor the reaction. Alternatively, it may be necessary to stop the reaction after 20 min using 50 µL of a 50 per cent *V/V* solution of *glacial acetic acid R*. Best results are obtained when the absorbance for the highest streptokinase concentration is between 0.1 and 0.2 (after blank subtraction). If necessary, adjust the time of incubation in order to reach this range of absorbances.

Calculate the regression of the absorbance on log concentrations of the solutions of the preparation to be examined and of the reference preparation of streptokinase and calculate the potency of the preparation to be examined using a suitable statistical method, for example the parallel-line assay (5.3).

The estimated potency is not less than 90 per cent and not more than 111 per cent of the stated potency. The confidence limits ( $P = 0.95$ ) are not less than 80 per cent and not more than 125 per cent of the estimated potency.

## STORAGE

In an airtight container, protected from light and at a temperature of –20 °C. If the preparation is sterile, store in a sterile, airtight, tamper-proof container.

## LABELLING

The label states:

- the number of International Units of streptokinase activity per milligram, calculated with reference to the dried preparation;
- that the preparation is suitable for use in the manufacture of parenteral preparations.

## STREPTOMYCIN SULFATE

## Streptomycini sulfas

$C_{42}H_{84}N_{14}O_{36}S_3$   
[3810-74-0]

$M_r$  1457

## DEFINITION

Streptomycin sulfate is bis[*N,N*-bis(aminoiminomethyl)-4-*O*-[5-deoxy-2-*O*-[2-deoxy-2-(methylamino)- $\alpha$ -*L*-glucopyranosyl]-3-*C*-formyl- $\alpha$ -*L*-lyxofuranosyl]-*D*-streptamine] trisulfate, a substance produced by the growth of certain strains of *Streptomyces griseus* or obtained by any other means. Stabilisers may be added. The potency is not less than 720 IU/mg, calculated with reference to the dried substance.

## PRODUCTION

It is produced by methods of manufacture designed to eliminate or minimise substances lowering blood pressure.

The method of manufacture is validated to demonstrate that the product if tested would comply with the following test:

**Abnormal toxicity (2.6.9).** Inject into each mouse 1 mg of the substance to be examined dissolved in 0.5 mL of *water for injections R*.

## CHARACTERS

A white or almost white powder, hygroscopic, very soluble in water, practically insoluble in ethanol.

## IDENTIFICATION

A. Examine by thin-layer chromatography (2.2.27), using a plate coated with a 0.75 mm layer of the following mixture: mix 0.3 g of *carbomer R* with 240 mL of *water R* and allow to stand, with moderate shaking, for 1 h; adjust to pH 7 by the gradual addition, with continuous shaking, of *dilute sodium hydroxide solution R* and add 30 g of *silica gel H R*.

Heat the plate at 110 °C for 1 h, allow to cool and use immediately.

**Test solution.** Dissolve 10 mg of the substance to be examined in *water R* and dilute to 10 mL with the same solvent.

**Reference solution (a).** Dissolve 10 mg of *streptomycin sulfate CRS* in *water R* and dilute to 10 mL with the same solvent.

**Reference solution (b).** Dissolve 10 mg of *kanamycin monosulfate CRS*, 10 mg of *neomycin sulfate CRS* and 10 mg of *streptomycin sulfate CRS* in *water R* and dilute to 10 mL with the same solvent.

Apply separately to the plate 10 µL of each solution. Develop over a path of 12 cm using a 70 g/L solution of *potassium dihydrogen phosphate R*. Dry the plate in a current of warm air, and spray with a mixture of equal volumes of a 2 g/L solution of *1,3-dihydroxynaphthalene R* in *alcohol R* and a 460 g/L solution of *sulfuric acid R*. Heat at 150 °C for 5 min

to 10 min. The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the spot in the chromatogram obtained with reference solution (a). The test is not valid unless the chromatogram obtained with reference solution (b) shows three clearly separated spots.

- B. Dissolve 5 mg to 10 mg in 4 mL of *water R* and add 1 mL of 1 M *sodium hydroxide*. Heat in a water-bath for 4 min. Add a slight excess of *dilute hydrochloric acid R* and 0.1 mL of *ferric chloride solution RI*. A violet colour develops.
- C. Dissolve 0.1 g in 2 mL of *water R*, add 1 mL of  $\alpha$ -*naphthol solution R* and 2 mL of a mixture of equal volumes of *strong sodium hypochlorite solution R* and *water R*. A red colour develops.
- D. Dissolve about 10 mg in 5 mL of *water R* and add 1 mL of 1 M *hydrochloric acid*. Heat in a water-bath for 2 min. Add 2 mL of a 5 g/L solution of  $\alpha$ -*naphthol R* in 1 M *sodium hydroxide* and heat in a water-bath for 1 min. A faint yellow colour develops.
- E. It gives the reactions of sulfates (2.3.1).

#### TESTS

**Solution S.** Dissolve 2.5 g in *carbon dioxide-free water R* and dilute to 10 mL with the same solvent.

**Appearance of solution.** Solution S is not more intensely coloured than intensity 3 of the range of reference solutions of the most appropriate colour (2.2.2, *Method II*). Allow to stand protected from light, at a temperature of about 20 °C for 24 h. Solution S is not more opalescent than reference suspension II (2.2.1).

**pH** (2.2.3). The pH of solution S is 4.5 to 7.0.

**Methanol.** Examine by gas chromatography (2.2.28).

**Test solution.** Dissolve 1.00 g of the substance to be examined in *water R* and dilute to 25.0 mL with the same solvent.

**Reference solution.** Dilute 12.0 mg of *methanol R* to 100 mL with *water R*.

The chromatographic procedure may be carried out using:

- a column 1.5 m to 2.0 m long and 2 mm to 4 mm in internal diameter, packed with *ethylvinylbenzene-divinylbenzene copolymer R* (150 µm to 180 µm),
- *nitrogen for chromatography R* as the carrier gas at a constant flow rate of 30 mL to 40 mL per minute,
- a flame-ionisation detector.

Maintain the column at a constant temperature between 120 °C and 140 °C and the injection port and the detector at a temperature at least 50 °C higher than that of the column. Inject the test solution and the reference solution. The area of the peak corresponding to methanol in the chromatogram obtained with the test solution is not greater than the area of the peak in the chromatogram obtained with the reference solution (0.3 per cent).

**Streptomycin B.** Examine by thin-layer chromatography (2.2.27), using *silica gel G R* as the coating substance.

**Test solution.** Dissolve 0.2 g of the substance to be examined in a freshly prepared mixture of 3 volumes of *sulfuric acid R* and 97 volumes of *methanol R* and dilute to 5 mL with the same mixture of solvents. Heat under a reflux condenser for 1 h, cool, rinse the condenser with *methanol R* and dilute to 20 mL with the same solvent (10 g/L solution).

**Reference solution.** Dissolve 36 mg of *mannose R* in a freshly prepared mixture of 3 volumes of *sulfuric acid R* and 97 volumes of *methanol R* and dilute to 5 mL with the same mixture of solvents. Heat under a reflux condenser for 1 h, cool, rinse the condenser with *methanol R* and dilute to 50 mL with the same solvent. Dilute 5 mL of the solution to 50 mL with *methanol R* (0.3 g/L solution expressed as streptomycin B; 1 mg of *mannose R* is equivalent to 4.13 mg of streptomycin B).

Apply separately to the plate 10 µL of each solution. Develop over a path of 13 cm to 15 cm using a mixture of 25 volumes of *glacial acetic acid R*, 25 volumes of *methanol R* and 50 volumes of *toluene R*. Allow the plate to dry in air and spray with a freshly prepared mixture of equal volumes of a 2 g/L solution of *1,3-dihydroxynaphthalene R* in *alcohol R* and a 20 per cent V/V solution of *sulfuric acid R* and heat at 110 °C for 5 min. Any spot corresponding to streptomycin B in the chromatogram obtained with the test solution is not more intense than the spot in the chromatogram obtained with the reference solution (3.0 per cent).

**Loss on drying** (2.2.32). Not more than 7.0 per cent, determined on 1.000 g by drying at 60 °C over *diphosphorus pentoxide R* at a pressure not exceeding 0.1 kPa for 24 h.

**Sulfated ash** (2.4.14). Not more than 1.0 per cent, determined on 1.000 g.

**Sulfate.** 18.0 per cent to 21.5 per cent of sulfate (SO<sub>4</sub>), calculated with reference to the dried substance. Dissolve 0.250 g in 100 mL of *water R* and adjust the solution to pH 11 using *concentrated ammonia R*. Add 10.0 mL of 0.1 M *barium chloride* and about 0.5 mg of *phthalein purple R*. Titrate with 0.1 M *sodium edetate* adding 50 mL of *alcohol R* when the colour of the solution begins to change and continue the titration until the violet-blue colour disappears. 1 mL of 0.1 M *barium chloride* is equivalent to 9.606 mg of sulfate (SO<sub>4</sub>).

**Colorimetric test.** Dry the substance to be examined and *streptomycin sulfate CRS* at 60 °C over *diphosphorus pentoxide R* at a pressure not exceeding 0.1 kPa for 24 h. Dissolve 0.100 g of the dried substance to be examined in *water R* and dilute to 100.0 mL with the same solvent. Prepare a reference solution in the same manner using 0.100 g of the dried *streptomycin sulfate CRS*. Place 5.0 mL of each solution separately in two volumetric flasks and in a third flask place 5 mL of *water R*. To each flask add 5.0 mL of 0.2 M *sodium hydroxide* and heat for exactly 10 min in a water-bath. Cool in ice for exactly 5 min, add 3 mL of a 15 g/L solution of *ferric ammonium sulfate R* in 0.5 M *sulfuric acid*, dilute to 25.0 mL with *water R* and mix. Exactly 20 min after the addition of the ferric ammonium sulfate solution measure the absorbance (2.2.25) of the test solution and the reference solution in a 2 cm cell at the maximum at 525 nm, using as compensation liquid the solution prepared from 5 mL of *water R*. The absorbance of the test solution is not less than 90.0 per cent of that of the reference solution.

**Bacterial endotoxins** (2.6.14): less than 0.25 IU/mg, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for removal of bacterial endotoxins.

#### ASSAY

Carry out the microbiological assay of antibiotics (2.7.2).

#### STORAGE

Store in an airtight container. If the substance is sterile, store in a sterile, airtight, tamper-proof container.

01/2008:0357  
corrected 6.0

## SUCCINYL-SULFATHIAZOLE

### Succinylsulfathiazolum

C<sub>13</sub>H<sub>13</sub>N<sub>3</sub>O<sub>5</sub>S<sub>2</sub>·H<sub>2</sub>O  
[116-43-8]

M<sub>r</sub> 373.4

## DEFINITION

4-Oxo-4-[[4-(thiazol-2-ylsulfamoyl)phenyl]amino]butanoic acid monohydrate.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

## CHARACTERS

*Appearance*: white or yellowish-white, crystalline powder.

*Solubility*: very slightly soluble in water, slightly soluble in acetone and in ethanol (96 per cent). It dissolves in solutions of alkali hydroxides and carbonates.

## IDENTIFICATION

*First identification*: A, D.

*Second identification*: B, C, D, E.

## A. Infrared absorption spectrophotometry (2.2.24).

*Comparison*: succinylsulfathiazole CRS.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in hot *water R*, allow to crystallise, dry the crystals carefully between 2 sheets of filter paper and prepare new discs.

B. To 2 g add 10 mL of *water R* and 10 mL of strong sodium hydroxide solution *R* and boil for 10 min. Cool and adjust to pH 3.0 with *hydrochloric acid R1*. Cool, adjust to pH 7.0 with *sodium hydrogen carbonate solution R* and filter. The precipitate, washed with *water R* and dried at 100-105 °C, melts (2.2.14) at 196 °C to 204 °C. Introduce the capillary containing the precipitate into the bath at a temperature of 190 °C.C. Heat 0.1 g in a test-tube over a small flame. Fumes are evolved which blacken *lead acetate paper R*.D. Place 0.1 g in a borosilicate-glass tube of about 30 mL, add 0.5 g of *hydroquinone R* and 1 mL of *sulfuric acid R*. Heat in a glycerin bath at 135 °C for 10 min, mixing at the beginning of heating to obtain a homogeneous liquid phase. Allow to cool and place in iced water. Add carefully and with shaking 15 mL of *water R*. Add 5 mL of *toluene R*, shake for 5-10 s and allow to stand for 2 min; promote separation of the 2 layers using a stirrer. The upper layer (toluene) is intense pink.E. Dissolve about 10 mg of the precipitate obtained in identification test B in 200 mL of 0.1 M *hydrochloric acid*. 2 mL of this solution gives the reaction of primary aromatic amines (2.3.1) with formation of an orange precipitate.

## TESTS

**Appearance of solution.** The solution is clear (2.2.1) and not more intensely coloured than reference solution Y<sub>4</sub> or BY<sub>4</sub> (2.2.2, *Method II*).

Dissolve 1.0 g in a mixture of 5 mL of *dilute sodium hydroxide solution R* and 15 mL of *water R*.

**Acidity.** To 2.0 g add 20 mL of *water R*, shake continuously for 30 min and filter. To 10 mL of the filtrate add 0.1 mL of *phenolphthalein solution R*. Not more than 2 mL of 0.1 M *sodium hydroxide* is required to change the colour of the indicator.

**Sulfathiazole and other primary aromatic amines:** maximum 0.75 per cent.

Dissolve 20 mg in a mixture of 3.5 mL of *water R*, 6 mL of *dilute hydrochloric acid R* and 25 mL of *ethanol (96 per cent) R*, previously cooled to 15 °C. Place immediately in iced water and add 1 mL of a 2.5 g/L solution of *sodium nitrite R*. Allow to stand for 3 min, add 2.5 mL of a 40 g/L solution of *sulfamic acid R* and allow to stand for 5 min. Add 1 mL of a 4 g/L solution of *naphthylethylenediamine dihydrochloride R* and dilute to 50 mL with *water R*. The absorbance (2.2.25) measured at 550 nm is not greater than that of a standard prepared at the same time and in the same manner using a mixture of 1.5 mL of a 100 mL aqueous solution containing 10 mg of *sulfathiazole R* and 0.5 mL of *hydrochloric acid R*;

2 mL of *water R*; 6 mL of *dilute hydrochloric acid R*; and 25 mL of *ethanol (96 per cent) R*.

**Heavy metals** (2.4.8): maximum 20 ppm.

1.0 g complies with test D. Prepare the reference solution using 2 mL of *lead standard solution (10 ppm Pb) R*.

**Loss on drying** (2.2.32): 4.0 per cent to 5.5 per cent, determined on 1.00 g by drying in an oven at 105 °C.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

## ASSAY

Dissolve 0.300 g in 100 mL of a mixture of 1 volume of *hydrochloric acid R* and 2 volumes of *water R*. Heat under a reflux condenser for 1 h. Carry out the determination of primary aromatic amino-nitrogen (2.5.8), determining the end-point electrometrically.

1 mL of 0.1 M *sodium nitrite* is equivalent to 35.54 mg of C<sub>13</sub>H<sub>13</sub>N<sub>3</sub>O<sub>5</sub>S<sub>2</sub>.

## STORAGE

Protected from light.

01/2011:1796

## SUCRALFATE

## Sucralfatum

in which  $n = 8$  to 10 and  $n' = 22$  to 31

## DEFINITION

β-D-Fructofuranosyl-α-D-glucopyranoside octakis(dihydroxyaluminium sulfate) with 8-10 molecules of aluminium hydroxide and 22-31 molecules of water.

*Content*:

- β-D-fructofuranosyl-α-D-glucopyranoside octakis sulfate (sucrose octasulfate) (C<sub>12</sub>H<sub>14</sub>O<sub>35</sub>S<sub>8</sub><sup>8-</sup>; M<sub>r</sub> 975): 30.0 per cent to 36.0 per cent;
- aluminium (Al; A, 26.98): 16.5 per cent to 18.5 per cent.

## CHARACTERS

*Appearance*: white or almost white, amorphous powder.

*Solubility*: practically insoluble in water, in ethanol (96 per cent) and in methylene chloride. It dissolves in dilute solutions of mineral acids and alkali hydroxides.

## IDENTIFICATION

## A. Infrared absorption spectrophotometry (2.2.24).

*Comparison*: sucralfate CRS.

B. To 2 g add 10 mL of 0.1 M *hydrochloric acid* and boil. Cool and neutralise with 0.1 M *sodium hydroxide*. To 5 mL of the solution add 0.15 mL of freshly prepared *copper sulfate solution R* and 2 mL of freshly prepared *dilute sodium hydroxide solution R*. The solution is blue and clear and remains so after boiling. To the hot solution add 4 mL of

dilute hydrochloric acid R and boil for 1 min. Add 4 mL of dilute sodium hydroxide solution R; an orange precipitate is formed immediately.

- C. Dissolve about 15 mg in a mixture of 0.5 mL of dilute hydrochloric acid R and 2 mL of water R. The solution gives the reaction of aluminium (2.3.1).

TESTS

**Impurity A.** Liquid chromatography (2.2.29).

**Test solution.** Dissolve 450.0 mg of the substance to be examined in a mixture of equal volumes of an 88 g/L solution of sodium hydroxide R and a 196.2 g/L solution of sulfuric acid R and dilute to 10.0 mL with the same mixture of solvents. Without delay, while shaking at a moderate rate, add a volume (V), accurately measured in millilitres, of a 4 g/L solution of sodium hydroxide R to adjust the solution to approximately pH 2.3. Dilute the solution with (15.0 - V) mL of water R. Shake for 1 min. If the pH is not between 2.3 and 3.5, repeat the test using a different volume of a 4 g/L solution of sodium hydroxide R.

**Reference solution (a).** Dissolve 40.0 mg of potassium sucrose octasulfate CRS in the mobile phase and dilute to 5.0 mL with the mobile phase.

**Reference solution (b).** Dilute 1.0 mL of reference solution (a) to 10.0 mL with the mobile phase.

**Column:**

- size:  $l = 0.25$  m,  $\varnothing = 4.0$  mm;
- stationary phase: aminopropylsilyl silica gel for chromatography R (5  $\mu$ m).

**Mobile phase:** 70 g/L solution of ammonium sulfate R, adjusted to pH 3.5 with concentrated phosphoric acid R.

**Flow rate:** 1 mL/min.

**Detection:** differential refractometer.

**Injection:** 50  $\mu$ L of the test solution and reference solution (b).

**Relative retention** with reference to sucrose octasulfate (retention time = about 6 min): impurity A = about 0.6.

**System suitability:** reference solution (b):

- number of theoretical plates: minimum 400;
- symmetry factor: maximum 4.0.

**Limit:**

- impurity A: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (5.0 per cent).

**Neutralising capacity.** Disperse 0.25 g in 100.0 mL of 0.1 M hydrochloric acid, previously heated at 37 °C, stir continuously for 1 h in a water-bath at 37 °C and cool. Titrate 20.0 mL of this solution with 0.1 M sodium hydroxide to pH 3.5; not more than 14.0 mL of 0.1 M sodium hydroxide is required.

**Chlorides (2.4.4):** maximum 0.50 per cent.

Dissolve 0.10 g in 5 mL of dilute nitric acid R and dilute to 50 mL with water R. Dilute 5 mL of this solution to 15 mL with water R.

**Arsenic (2.4.2, Method A):** maximum 4 ppm.

Introduce 0.25 g of the substance to be examined and 5 mL of sulfuric acid R into a combustion flask. Carefully add a few millilitres of strong hydrogen peroxide solution R and heat to boiling until a clear, colourless solution is obtained. Continue heating to eliminate the water and as much sulfuric acid as possible and dilute to 25 mL with water R.

**Heavy metals (2.4.8):** maximum 10 ppm.

2.0 g complies with test F. Prepare the reference solution using 2 mL of lead standard solution (10 ppm Pb) R.

ASSAY

**Aluminium.** Disperse 1.0 g in 10 mL of 6 M hydrochloric acid R. Heat with continuous stirring in a water-bath at 70 °C for 5 min. Cool to room temperature, transfer quantitatively to

a volumetric flask, dilute to 250.0 mL with water R, and mix. Filter the solution, discarding the 1<sup>st</sup> portion of the filtrate. To 10.0 mL of the solution, add 10.0 mL of 0.1 M sodium edetate and 30 mL of a mixture of equal volumes of ammonium acetate solution R and dilute acetic acid R. Heat in a water-bath at 70 °C for 5 min, then cool. Add 25 mL of ethanol (96 per cent) R and 1 mL of a freshly prepared 0.25 g/L solution of dithizone R in ethanol (96 per cent) R. Titrate the excess of sodium edetate with 0.1 M zinc sulfate until the colour changes to pink.

1 mL of 0.1 M sodium edetate is equivalent to 2.698 mg of Al.

**Sucrose octasulfate.** Liquid chromatography (2.2.29) as described in the test for impurity A with the following modifications.

**Mobile phase:** 132 g/L solution of ammonium sulfate R, adjusted to pH 3.5 with concentrated phosphoric acid R.

**Injection:** test solution and reference solution (a).

Calculate the percentage content of C<sub>12</sub>H<sub>14</sub>O<sub>35</sub>S<sub>8</sub> from the declared content of potassium sucrose octasulfate CRS and by multiplying the potassium sucrose octasulfate content by 0.757.

IMPURITIES

**Specified impurities: A.**

R = SO<sub>3</sub>H

and H in a 7 to 1 ratio

- A.  $\beta$ -D-fructofuranosyl- $\alpha$ -D-glucopyranoside heptakis (hydrogensulfate).

SUCROSE

Saccharum

C<sub>12</sub>H<sub>22</sub>O<sub>11</sub>  
[57-50-1]

M<sub>r</sub>, 342.3

DEFINITION

$\beta$ -D-Fructofuranosyl  $\alpha$ -D-glucopyranoside.

It contains no additives.

CHARACTERS

**Appearance:** white or almost white, crystalline powder, or lustrous, colourless or white or almost white crystals.

**Solubility:** very soluble in water, slightly soluble in ethanol (96 per cent), practically insoluble in anhydrous ethanol.

IDENTIFICATION

**First identification: A.**

**Second identification: B, C.**

## A. Infrared absorption spectrophotometry (2.2.24).

*Comparison: sucrose CRS.*

## B. Thin-layer chromatography (2.2.27).

*Test solution.* Dissolve 10 mg of the substance to be examined in a mixture of 2 volumes of *water R* and 3 volumes of *methanol R* and dilute to 20 mL with the same mixture of solvents.

*Reference solution (a).* Dissolve 10 mg of *sucrose CRS* in a mixture of 2 volumes of *water R* and 3 volumes of *methanol R* and dilute to 20 mL with the same mixture of solvents.

*Reference solution (b).* Dissolve 10 mg each of *fructose CRS*, *glucose CRS*, *lactose CRS* and *sucrose CRS* in a mixture of 2 volumes of *water R* and 3 volumes of *methanol R* and dilute to 20 mL with the same mixture of solvents.

*Plate: TLC silica gel G plate R.*

*Mobile phase: cold saturated boric acid solution R*, 60 per cent *V/V* solution of *glacial acetic acid R*, *ethanol R*, *acetone R*, *ethyl acetate R* (10:15:20:60:60 *V/V/V/V/V*).

*Application: 2 µL.*

*Development: in an unsaturated tank over a path of 15 cm.*

*Drying: in a current of warm air.*

*Detection: spray with a solution of 0.5 g of thymol R in a mixture of 5 mL of sulfuric acid R and 95 mL of alcohol R. Heat the plate at 130 °C for 10 min.*

*System suitability: the chromatogram obtained with reference solution (b) shows 4 clearly separated spots.*

*Results: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).*

- C. Dilute 1 mL of solution S (see Tests) to 100 mL with *water R*. To 5 mL of the solution add 0.15 mL of freshly prepared *copper sulfate solution R* and 2 mL of freshly prepared *dilute sodium hydroxide solution R*. The solution is blue and clear and remains so after boiling. To the hot solution add 4 mL of *dilute hydrochloric acid R* and boil for 1 min. Add 4 mL of *dilute sodium hydroxide solution R*. An orange precipitate is formed immediately.

## TESTS

**Solution S.** Dissolve 50.0 g in *water R* and dilute to 100 mL with the same solvent.

**Appearance of solution.** Solution S is clear (2.2.1).

**Conductivity** (2.2.38): maximum 35 µS·cm<sup>-1</sup> at 20 °C.

Dissolve 31.3 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100 mL with the same solvent. Measure the conductivity of the solution (*C*<sub>1</sub>), while gently stirring with a magnetic stirrer, and that of the water used for preparing the solution (*C*<sub>2</sub>). The readings must be stable within 1 per cent over a period of 30 s. Calculate the conductivity of the solution of the substance to be examined from the following expression:

$$C_1 - 0.35 C_2$$

**Specific optical rotation** (2.2.7): + 66.3 to + 67.0.

Dissolve 26.0 g in *water R* and dilute to 100.0 mL with the same solvent.

**Colour value:** maximum 45.

Dissolve 50.0 g in 50.0 mL of *water R*. Mix, filter (diameter of pores 0.45 µm) and degas. Measure the absorbance (2.2.25) at 420 nm, using a cell of minimum 4 cm (a cell length of 10 cm or more is preferred).

Calculate the colour value using the following expression:

$$\frac{A \times 1000}{b \times c}$$

*A* = absorbance measured at 420 nm;

*b* = path length in centimetres;

*c* = concentration of the solution, in grams per millilitre, calculated from the refractive index (2.2.6) of the solution; use Table 0204.-1 and interpolate the values if necessary.

Table 0204.-1

<sup>20</sup> <i>n</i> <sub>D</sub>	<i>c</i> (g/mL)
1.4138	0.570
1.4159	0.585
1.4179	0.600
1.4200	0.615
1.4221	0.630
1.4243	0.645
1.4264	0.661

*System suitability:*

– *repeatability:* the absolute difference between 2 results is not greater than 3.

**Dextrins.** If intended for use in the manufacture of large-volume parenteral preparations, it complies with the test for dextrins. To 2 mL of solution S add 8 mL of *water R*, 0.05 mL of *dilute hydrochloric acid R* and 0.05 mL of 0.05 *M iodine*. The solution remains yellow.

**Reducing sugars.** To 5 mL of solution S in a test-tube about 150 mm long and 16 mm in diameter add 5 mL of *water R*, 1.0 mL of 1 *M sodium hydroxide* and 1.0 mL of a 1 g/L solution of *methylene blue R*. Mix and place in a water-bath. After exactly 2 min, take the tube out of the bath and examine the solution immediately. The blue colour does not disappear completely. Ignore any blue colour at the air/solution interface.

**Sulfites:** maximum 10 ppm, calculated as SO<sub>2</sub>.

Determine the sulfites content by a suitable enzymatic method based on the following reactions. Sulfite is oxidised by sulfite oxidase to sulfate and hydrogen peroxide which in turn is reduced by nicotinamide-adenine dinucleotide-peroxidase in the presence of reduced nicotinamide-adenine dinucleotide (NADH). The amount of NADH oxidised is proportional to the amount of sulfite.

*Test solution.* Dissolve 4.0 g of the substance to be examined in freshly prepared *distilled water R* and dilute to 10.0 mL with the same solvent.

*Reference solution.* Dissolve 4.0 g of the substance to be examined in freshly prepared *distilled water R*, add 0.5 mL of *sulfite standard solution (80 ppm SO<sub>2</sub>) R* and dilute to 10.0 mL with freshly prepared *distilled water R*.

*Blank solution.* Freshly prepared *distilled water R*.

Separately introduce 2.0 mL each of the test solution, the reference solution and the blank in 10 mm cuvettes and add the reagents as described in the instructions in the kit for sulfite determination. Measure the absorbance (2.2.25) at the absorption maximum at about 340 nm before and at the end of the reaction time and subtract the value obtained with the blank.

The absorbance difference of the test solution is not greater than half the absorbance difference of the reference solution.

**Loss on drying** (2.2.32): maximum 0.1 per cent, determined on 2.000 g by drying in an oven at 105 °C for 3 h.

**Bacterial endotoxins (2.6.14):** less than 0.25 IU/mg, if intended for use in the manufacture of large-volume parenteral preparations.

**LABELLING**

The label states, where applicable, that the substance is suitable for use in the manufacture of large-volume parenteral preparations.

07/2009:2319

**SUCROSE MONOPALMITATE**

Sacchari monopalmitas

**DEFINITION**

Mixture of sucrose monoesters, mainly sucrose monopalmitate, obtained by transesterification of palmitic acid methyl esters of vegetable origin with *Sucrose (0204)*. The manufacture of the fatty acid methyl esters includes a distillation step.

It contains variable quantities of mono-, di-, tri- and polyesters.

**Content:**

- *monoesters*: minimum 55.0 per cent;
- *diesters*: maximum 40.0 per cent;
- *sum of triesters and polyesters*: maximum 20.0 per cent.

**CHARACTERS**

**Appearance:** white or almost white, unctuous powder.

**Solubility:** very slightly soluble in water, sparingly soluble in ethanol (96 per cent).

**IDENTIFICATION**

- A. Composition of fatty acids (see Tests).
- B. It complies with the limits of the assay.

**TESTS**

**Acid value (2.5.1):** maximum 6.0, determined on 3.00 g.

Use a freshly neutralised mixture of 1 volume of *water R* and 2 volumes of *2-propanol R* as solvent and heat gently.

**Composition of fatty acids (2.4.22, Method C).** Use the mixture of calibrating substances in Table 2.4.22.-1.

**Composition of the fatty-acid fraction of the substance:**

- *lauric acid*: maximum 3.0 per cent;
- *myristic acid*: maximum 3.0 per cent;
- *palmitic acid*: 70.0 per cent to 85.0 per cent;
- *stearic acid*: 10.0 per cent to 25.0 per cent;
- *sum of the contents of palmitic acid and stearic acid*: minimum 90.0 per cent.

**Free sucrose.** Liquid chromatography (2.2.29).

**Solvent mixture:** *water for chromatography R*, *tetrahydrofuran for chromatography R* (12.5:87.5 V/V).

**Test solution.** Dissolve 0.200 g of the substance to be examined in the solvent mixture and dilute to 4.0 mL with the solvent mixture.

**Reference solution (a).** Dissolve 20.0 mg of *sucrose CRS* in the solvent mixture and dilute to 10.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

**Reference solution (b).** In 4 volumetric flasks, introduce respectively 5.0 mg, 10.0 mg, 20.0 mg and 25.0 mg of *sucrose CRS*, dissolve in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

**Column:**

- *size*:  $l = 0.25$  m,  $\varnothing = 4.6$  mm;

– *stationary phase*: spherical *aminopropylsilyl silica gel for chromatography R* (4  $\mu$ m).

**Mobile phase:**

- *mobile phase A*: 0.01 g/L solution of *ammonium acetate R* in *acetonitrile for chromatography R*;
- *mobile phase B*: 0.01 g/L solution of *ammonium acetate R* in a mixture of 10 volumes of *water for chromatography R* and 90 volumes of *tetrahydrofuran for chromatography R*;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)	Flow rate (mL/min)
0 - 1	100	0	1.0
1 - 9	100 → 0	0 → 100	1.0
9 - 16	0	100	1.0
16 - 16.01	0	100	1.0 → 2.5
16.01 - 32	0	100	2.5
32 - 33	0 → 100	100 → 0	2.5
33 - 36	100	0	2.5 → 1.0

**Detection:** evaporative light-scattering detector; the following settings have been found to be suitable; if the detector has different setting parameters, adjust the detector settings so as to comply with the system suitability criterion:

- *carrier gas*: *nitrogen R*;
- *flow rate*: 1.0 mL/min;
- *evaporator temperature*: 45 °C;
- *nebuliser temperature*: 40 °C.

**Injection:** 20  $\mu$ L.

**Retention time:** about 26 min.

**System suitability:** reference solution (a):

- *signal-to-noise ratio*: minimum 10.

**Limit:** maximum 4.0 per cent.

**Water (2.5.12):** maximum 4.0 per cent, determined on 0.20 g.

**Total ash (2.4.16):** maximum 1.5 per cent.

**ASSAY**

Size-exclusion chromatography (2.2.30): use the normalisation procedure.

**Test solution.** Dissolve 60.0 mg of the substance to be examined in *tetrahydrofuran R* and dilute to 4.0 mL with the same solvent.

**Column:**

- *size*:  $l = 0.6$  m,  $\varnothing = 7$  mm;
- *stationary phase*: *styrene-divinylbenzene copolymer R* (5  $\mu$ m) with a pore size of 10 nm.

**Mobile phase:** *tetrahydrofuran R*.

**Flow rate:** 1.2 mL/min.

**Detection:** differential refractometer.

**Injection:** 20  $\mu$ L.

**Relative retention** with reference to monoesters (retention time = about 10 min): diesters = about 0.92; triesters and polyesters = about 0.90.

**Calculations:**

- *disregard limit*: disregard the peaks having a signal-to-noise ratio less than 10;
- *free fatty acids (D)*: calculate the percentage content of free fatty acids, using the following expression:

$$\frac{I_A \times 256}{561.1}$$

$I_A$  = acid value.

- *monoesters*: calculate the percentage content of monoesters using the following expression:

$$\frac{A \times (100 - D - S - E)}{100}$$

- *diesters*: calculate the percentage content of diesters using the following expression:

$$\frac{B \times (100 - D - S - E)}{100}$$

- *sum of triesters and polyesters*: calculate the sum of the percentage contents of triesters and polyesters using the following expression:

$$\frac{C \times (100 - D - S - E)}{100}$$

- A* = percentage content of monoesters determined by the normalisation procedure;  
*S* = percentage content of free sucrose (see Tests);  
*E* = percentage content of water (see Tests);  
*B* = percentage content of diesters determined by the normalisation procedure;  
*C* = sum of the percentage contents of triesters and polyesters determined by the normalisation procedure.

#### STORAGE

Protected from humidity.

## SUCROSE STEARATE

### Sacchari stearas

#### DEFINITION

Mixture of sucrose esters, mainly sucrose stearate, obtained by transesterification of stearic acid methyl esters of vegetable origin with *sucrose* (0204). The manufacture of the fatty acid methyl esters includes a distillation step.

It contains variable quantities of mono-, di-, tri- and polyesters.

#### Content:

##### Sucrose stearate type I:

- *monoesters*: minimum 50.0 per cent;
- *diesters*: maximum 40.0 per cent;
- *sum of triesters and polyesters*: maximum 25.0 per cent;

##### Sucrose stearate type II:

- *monoesters*: 20.0 per cent to 45.0 per cent;
- *diesters*: 30.0 per cent to 40.0 per cent;
- *sum of triesters and polyesters*: maximum 30.0 per cent;

##### Sucrose stearate type III:

- *monoesters*: 15.0 per cent to 25.0 per cent;
- *diesters*: 30.0 per cent to 45.0 per cent;
- *sum of triesters and polyesters*: 35.0 per cent to 50.0 per cent.

#### CHARACTERS

*Appearance*: white or almost white, unctuous powder.

*Solubility*: very slightly soluble in water, sparingly soluble in ethanol (96 per cent).

#### IDENTIFICATION

- A. Composition of fatty acids (see Tests).
- B. It complies with the limits of the assay.

#### TESTS

**Acid value** (2.5.1): maximum 6.0, determined on 3.00 g.

Use a freshly neutralised mixture of 1 volume of *water R* and 2 volumes of *2-propanol R* as solvent and heat gently.

**Composition of fatty acids** (2.4.22, Method C). Use the mixture of calibrating substances in Table 2.4.22-1.

*Composition of the fatty-acid fraction of the substance*:

- *lauric acid*: maximum 3.0 per cent;
- *myristic acid*: maximum 3.0 per cent;
- *palmitic acid*: 25.0 per cent to 40.0 per cent;
- *stearic acid*: 55.0 per cent to 75.0 per cent;
- *sum of the contents of palmitic acid and stearic acid*: minimum 90.0 per cent.

**Free sucrose**. Liquid chromatography (2.2.29).

*Solvent mixture*: *water for chromatography R*, *tetrahydrofuran for chromatography R* (12.5:87.5 V/V).

*Test solution*. Dissolve 0.200 g of the substance to be examined in the solvent mixture and dilute to 4.0 mL with the solvent mixture.

*Reference solution (a)*. Dissolve 20.0 mg of *sucrose CRS* in the solvent mixture and dilute to 10.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Reference solution (b)*. In 4 volumetric flasks, introduce respectively 5.0 mg, 10.0 mg, 20.0 mg and 25.0 mg of *sucrose CRS*, dissolve in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

#### Column:

- *size*:  $l = 0.25$  m,  $\varnothing = 4.6$  mm;
- *stationary phase*: spherical *aminopropylsilyl silica gel for chromatography R* (4  $\mu$ m).

#### Mobile phase:

- *mobile phase A*: 0.01 g/L solution of *ammonium acetate R* in *acetonitrile for chromatography R*;
- *mobile phase B*: 0.01 g/L solution of *ammonium acetate R* in a mixture of 10 volumes of *water for chromatography R* and 90 volumes of *tetrahydrofuran for chromatography R*;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)	Flow rate (mL/min)
0 - 1	100	0	1.0
1 - 9	100 → 0	0 → 100	1.0
9 - 16	0	100	1.0
16 - 16.01	0	100	1.0 → 2.5
16.01 - 32	0	100	2.5
32 - 33	0 → 100	100 → 0	2.5
33 - 36	100	0	2.5 → 1.0

*Detection*: evaporative light-scattering detector; the following settings have been found to be suitable; if the detector has different setting parameters, adjust the detector settings so as to comply with the system suitability criterion:

- *carrier gas*: *nitrogen R*;
- *flow rate*: 1.0 mL/min;
- *evaporator temperature*: 45 °C;
- *nebuliser temperature*: 40 °C.

*Injection*: 20  $\mu$ L.

*Retention time*: about 26 min.

*System suitability*: reference solution (a):

- *signal-to-noise ratio*: minimum 10.

#### Limit:

- *sucrose*: maximum 4.0 per cent.

**Water** (2.5.12): maximum 4.0 per cent, determined on 0.20 g.

**Total ash** (2.4.16): maximum 1.5 per cent.

## ASSAY

01/2008:1569

Size-exclusion chromatography (2.2.30): use the normalisation procedure.

**Test solution.** Dissolve 60.0 mg of the substance to be examined in *tetrahydrofuran R* and dilute to 4.0 mL with the same solvent.

**Column:**

- size:  $l = 0.6$  m,  $\emptyset = 7$  mm;
- stationary phase: *styrene-divinylbenzene copolymer R* (5  $\mu$ m) with a pore size of 10 nm.

**Mobile phase:** *tetrahydrofuran R*.

**Flow rate:** 1.2 mL/min.

**Detection:** differential refractometer.

**Injection:** 20  $\mu$ L.

**Relative retention** with reference to monoesters (retention time = about 10 min): diesters = about 0.92; triesters and polyesters = about 0.90.

**Calculations:**

- **disregard limit:** disregard the peaks having a signal-to-noise ratio less than 10;
- **free fatty acids (D):** calculate the percentage content of free fatty acids, using the following expression:

$$\frac{I_A \times 284.5}{561.1}$$

$I_A$  = acid value;

- **monoesters:** calculate the percentage content of monoesters using the following expression:

$$\frac{A \times (100 - D - S - E)}{100}$$

- **diesters:** calculate the percentage content of diesters using the following expression:

$$\frac{B \times (100 - D - S - E)}{100}$$

- **sum of triesters and polyesters:** calculate the sum of the percentage contents of triesters and polyesters using the following expression:

$$\frac{C \times (100 - D - S - E)}{100}$$

$A$  = percentage content of monoesters determined by the normalisation procedure;

$S$  = percentage content of free sucrose (see Tests);

$E$  = percentage content of water (see Tests);

$B$  = percentage content of diesters determined by the normalisation procedure;

$C$  = sum of the percentage contents of triesters and polyesters determined by the normalisation procedure.

## LABELLING

The label states the type of sucrose stearate (type I, II or III).

## STORAGE

Protected from humidity.

## SUFENTANIL

## Sufentanilum

$C_{22}H_{30}N_2O_2S$   
[56030-54-7]

$M_r$  386.6

## DEFINITION

*N*-[4-(Methoxymethyl)-1-[2-(thiophen-2-yl)ethyl]piperidin-4-yl]-*N*-phenylpropanamide.

**Content:** 99.0 per cent to 101.0 per cent (dried substance).

## CHARACTERS

**Appearance:** white or almost white powder.

**Solubility:** practically insoluble in water, freely soluble in ethanol (96 per cent) and in methanol.

mp: about 98 °C.

## IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

**Comparison:** *Ph. Eur. reference spectrum of sufentanil.*

## TESTS

**Appearance of solution.** The solution is clear (2.2.1) and colourless (2.2.2, *Method II*).

Dissolve 0.10 g in *methanol R* and dilute to 20 mL with the same solvent.

**Related substances.** Liquid chromatography (2.2.29).

**Test solution.** Dissolve 0.100 g of the substance to be examined in *methanol R* and dilute to 10.0 mL with the same solvent.

**Reference solution (a).** In order to produce impurity E *in situ*, dissolve 10 mg of the substance to be examined in 10.0 mL of *dilute hydrochloric acid R*. Heat on a water-bath under a reflux condenser for 4 h. Add 10.0 mL of *dilute sodium hydroxide solution R*. Evaporate to dryness on a water-bath. Cool and take up the residue in 10 mL of *methanol R*. Filter.

**Reference solution (b).** Dilute 1.0 mL of the test solution to 100.0 mL with *methanol R*. Dilute 5.0 mL of this solution to 20.0 mL with *methanol R*.

**Column:**

- size:  $l = 0.1$  m,  $\emptyset = 4.6$  mm;
- stationary phase: *octadecylsilyl silica gel for chromatography R* (3  $\mu$ m).

**Mobile phase:**

- **mobile phase A:** 5 g/L solution of *ammonium carbonate R* in a mixture of 10 volumes of *tetrahydrofuran R* and 90 volumes of *water R*;
- **mobile phase B:** *acetonitrile R*;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 15	90 → 40	10 → 60
15 - 20	40	60

**Flow rate:** 1.5 mL/min.

**Detection:** spectrophotometer at 220 nm.

**Equilibration:** with *acetonitrile R* for at least 30 min and then with the mobile phase at the initial composition for at least 5 min.

**Injection:** 10  $\mu$ L; inject *methanol R* as a blank.

**Retention time:** impurity E = about 12 min; sufentanil = about 13 min.

**System suitability:** reference solution (a):

- **resolution:** minimum 4.0 between the peaks due to impurity E and sufentanil; if necessary, adjust the concentration of acetonitrile in the mobile phase or adjust the time programme for the linear gradient elution.

**Limits:**

- **impurities D, F, H:** for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.25 per cent);
- **total:** not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- **disregard limit:** 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Loss on drying (2.2.32):** maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* at 60 °C for 2 h.

#### ASSAY

Dissolve 0.300 g in 50 mL of a mixture of 1 volume of *anhydrous acetic acid R* and 7 volumes of *methyl ethyl ketone R* and titrate with 0.1 M *perchloric acid*, using 0.2 mL of *naphtholbenzein solution R* as indicator.

1 mL of 0.1 M *perchloric acid* is equivalent to 38.66 mg of  $C_{22}H_{30}N_2O_2S$ .

#### STORAGE

Protected from light.

#### IMPURITIES

**Specified impurities:** D, F, H.

**Other detectable impurities** (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. **Control of impurities in substances for pharmaceutical use**): A, B, C, E, G, I.

A. *N*-[4-(methoxymethyl)piperidin-4-yl]-*N*-phenylpropanamide,

B. *cis*-4-(methoxymethyl)-4-(phenylpropanoylamino)-1-[2-(thiophen-2-yl)ethyl]piperidine 1-oxide,

C. R = R' = H: [4-(phenylamino)-1-[2-(thiophen-2-yl)ethyl]piperidin-4-yl]methanol,

D. R = CO-CH<sub>3</sub>, R' = CH<sub>3</sub>: *N*-[4-(methoxymethyl)-1-[2-(thiophen-2-yl)ethyl]piperidin-4-yl]-*N*-phenylacetamide,

E. R = H, R' = CH<sub>3</sub>: 4-(methoxymethyl)-*N*-phenyl-1-[2-(thiophen-2-yl)ethyl]piperidin-4-amine,

G. R = R' = CO-CH<sub>2</sub>-CH<sub>3</sub>: [4-(phenylpropanoylamino)-1-[2-(thiophen-2-yl)ethyl]piperidin-4-yl]methyl propanoate,

H. R = CO-CH<sub>2</sub>-CH<sub>2</sub>-CH<sub>3</sub>, R' = CH<sub>3</sub>: *N*-[4-(methoxymethyl)-1-[2-(thiophen-2-yl)ethyl]piperidin-4-yl]-*N*-phenylbutanamide,

F. *N*-[4-(methoxymethyl)-1-[2-(thiophen-3-yl)ethyl]piperidin-4-yl]-*N*-phenylpropanamide,

I. *trans*-4-(methoxymethyl)-4-(phenylpropanoylamino)-1-[2-(thiophen-2-yl)ethyl]piperidine 1-oxide.

## SUFENTANIL CITRATE

### Sufentanili citras

$C_{28}H_{38}N_2O_9S$   
[60561-17-3]

$M_r$  578.7

#### DEFINITION

*N*-[4-(Methoxymethyl)-1-[2-(thiophen-2-yl)ethyl]piperidin-4-yl]-*N*-phenylpropanamide citrate.

**Content:** 99.0 per cent to 101.0 per cent (dried substance).

#### CHARACTERS

**Appearance:** white or almost white powder.

**Solubility:** soluble in water and in ethanol (96 per cent), freely soluble in methanol.

mp: about 140 °C, with decomposition.

#### IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

**Comparison:** *Ph. Eur. reference spectrum of sufentanil citrate.*

#### TESTS

**Appearance of solution.** The solution is clear (2.2.1) and colourless (2.2.2, *Method II*).

Dissolve 0.2 g in *water R* and dilute to 20 mL with the same solvent.

**Related substances.** Liquid chromatography (2.2.29).

**Test solution.** Dissolve 0.100 g of the substance to be examined in *methanol R* and dilute to 10.0 mL with the same solvent.

**Reference solution (a).** In order to produce impurity E *in situ*, dissolve 10 mg of the substance to be examined in 10.0 mL of *dilute hydrochloric acid R*. Heat on a water-bath under a reflux condenser for 4 h. Add 10.0 mL of *dilute sodium hydroxide solution R*. Evaporate to dryness on a water-bath. Cool and take up the residue in 10 mL of *methanol R*. Filter.

*Reference solution (b).* Dilute 5.0 mL of the test solution to 100.0 mL with *methanol R*. Dilute 1.0 mL of this solution to 10.0 mL with *methanol R*.

*Column:*

- size:  $l = 0.1$  m,  $\emptyset = 4.6$  mm;
- stationary phase: octadecylsilyl silica gel for chromatography R (3  $\mu$ m).

*Mobile phase:*

- mobile phase A: 5 g/L solution of ammonium carbonate R in a mixture of 10 volumes of tetrahydrofuran R and 90 volumes of water R;
- mobile phase B: acetonitrile R;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 15	90 → 40	10 → 60
15 - 20	40	60

*Flow rate:* 1.5 mL/min.

*Detection:* spectrophotometer at 220 nm.

*Equilibration:* with acetonitrile R for at least 30 min and then with the mobile phase at the initial composition for at least 5 min.

*Injection:* 10  $\mu$ L; inject *methanol R* as a blank.

*Retention time:* impurity E = about 12 min; sufentanil = about 13 min.

*System suitability:* reference solution (a):

- resolution: minimum 4.0 between the peaks due to impurity E and sufentanil; if necessary, adjust the concentration of acetonitrile in the mobile phase or adjust the time programme for the linear gradient elution.

*Limits:*

- impurities A, B, C, D, E, F, G, H, I: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- total: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (1 per cent);
- disregard limit: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent); disregard any peak with a retention time relative to sufentanil of 0.05 or less.

**Loss on drying (2.2.32):** maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* at 60 °C.

**ASSAY**

Dissolve 0.400 g in 50 mL of a mixture of 1 volume of *anhydrous acetic acid R* and 7 volumes of *methyl ethyl ketone R* and titrate with 0.1 M *perchloric acid*, using 0.2 mL of *naphtholbenzein solution R* as indicator.

1 mL of 0.1 M *perchloric acid* is equivalent to 57.87 mg of  $C_{28}H_{38}N_2O_9S$ .

**STORAGE**

Protected from light.

**IMPURITIES**

*Specified impurities:* A, B, C, D, E, F, G, H, I.

A. *N*-[4-(methoxymethyl)piperidin-4-yl]-*N*-phenylpropanamide,

B. *cis*-4-(methoxymethyl)-4-(phenylpropanoylamino)-1-[2-(thiophen-2-yl)ethyl]piperidine 1-oxide,

C. R = R' = H: [4-(phenylamino)-1-[2-(thiophen-2-yl)ethyl]piperidin-4-yl]methanol,

D. R = CO-CH<sub>3</sub>, R' = CH<sub>3</sub>: *N*-[4-(methoxymethyl)-1-[2-(thiophen-2-yl)ethyl]piperidin-4-yl]-*N*-phenylacetamide,

E. R = H, R' = CH<sub>3</sub>: 4-(methoxymethyl)-*N*-phenyl-1-[2-(thiophen-2-yl)ethyl]piperidin-4-amine,

G. R = R' = CO-CH<sub>2</sub>-CH<sub>3</sub>: [4-(phenylpropanoylamino)-1-[2-(thiophen-2-yl)ethyl]piperidin-4-yl]methyl propanoate,

H. R = CO-CH<sub>2</sub>-CH<sub>2</sub>-CH<sub>3</sub>, R' = CH<sub>3</sub>: *N*-[4-(methoxymethyl)-1-[2-(thiophen-2-yl)ethyl]piperidin-4-yl]-*N*-phenylbutanamide,

F. *N*-[4-(methoxymethyl)-1-[2-(thiophen-3-yl)ethyl]piperidin-4-yl]-*N*-phenylpropanamide,

I. *trans*-4-(methoxymethyl)-4-(phenylpropanoylamino)-1-[2-(thiophen-2-yl)ethyl]piperidine 1-oxide.

01/2009:1570

## SUGAR SPHERES

### Sacchari sphaerae

**DEFINITION**

Sugar spheres contain not more than 92 per cent of sucrose, calculated on the dried basis. The remainder consists of maize starch and may also contain starch hydrolysates and colour additives. The diameter of sugar spheres varies usually from 200  $\mu$ m to 2000  $\mu$ m and the upper and lower limits of the size of the sugar spheres are stated on the label.

**IDENTIFICATION**

A. Examine by thin-layer chromatography (2.2.27), using a *TLC silica gel G plate R*.

*Solvent mixture:* water R, *methanol R* (2:3 V/V).

*Test solution.* Mix 2 mL of solution S (see Tests) with 3 mL of *methanol R* and dilute to 20 mL with the solvent mixture.

*Reference solution (a).* Dissolve 10 mg of *sucrose CRS* in the solvent mixture and dilute to 20 mL with the solvent mixture.

*Reference solution (b).* Dissolve 10 mg of *fructose CRS*, 10 mg of *glucose CRS*, 10 mg of *lactose CRS* and 10 mg of *sucrose CRS* in the solvent mixture and dilute to 20 mL with the solvent mixture.

Apply to the plate 2 µL of each solution and thoroughly dry the points of application. Develop over a path of 15 cm using a mixture of 10 volumes of *water R*, 15 volumes of *methanol R*, 25 volumes of *anhydrous acetic acid R* and 50 volumes of *ethylene chloride R*, measured accurately as a slight excess of water causes cloudiness of the solution. Dry the plate in a current of warm air. Repeat the development immediately after renewing the mobile phase. Dry the plate in a current of warm air and spray evenly with a 5 g/L solution of *thymol R* in a mixture of 5 volumes of *sulfuric acid R* and 95 volumes of *ethanol (96 per cent) R*. Heat at 130 °C for 10 min. The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a). The test is not valid unless the chromatogram obtained with reference solution (b) shows 4 clearly separated spots.

B. To a water slurry of the insoluble portion obtained in the assay, add 0.05 mL of *iodine solution RI*. A dark-blue colour is produced, which disappears on heating.

C. To 5 mL of solution S add 0.15 mL of freshly prepared *copper sulfate solution R* and 2 mL of freshly prepared *dilute sodium hydroxide solution R*. The solution is blue and clear and remains so after boiling. To the hot solution add 4 mL of *dilute hydrochloric acid R* and boil for 1 min. Add 4 mL of *dilute sodium hydroxide solution R*. An orange precipitate is formed immediately.

#### TESTS

**Solution S.** To 0.5 g in a 100 mL volumetric flask add 80 mL of *water R* and shake until the sucrose is dissolved. Dilute to 100.0 mL with *water R*. Filter under vacuum to obtain a clear solution.

**Fineness (2.9.35):** not less than 90 per cent *m/m* of the sugar spheres are between the lower and the upper limits of the size of the sugar spheres stated on the label.

**Heavy metals (2.4.8):** maximum 5 ppm.

2.0 g complies with test C. Prepare the reference solution using 1.0 mL of *lead standard solution (10 ppm Pb) R*.

**Loss on drying (2.2.32):** maximum 5.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 4 h.

**Sulfated ash (2.4.14):** maximum 0.2 per cent, determined on 2 g.

#### Microbial contamination

TAMC: acceptance criterion 10<sup>3</sup> CFU/g (2.6.12).

TYMC: acceptance criterion 10<sup>2</sup> CFU/g (2.6.12).

Absence of *Escherichia coli* (2.6.13).

Absence of *Salmonella* (2.6.13).

#### ASSAY

##### Sucrose content

Weigh 10.000 g of ground sugar spheres in a 100 mL flask and make up to 100.0 mL with *water R*. Stir and decant. Filter under vacuum to obtain a clear solution (the insoluble portion is used for identification test B). Measure the angle of optical rotation (2.2.7) and calculate the sucrose percentage content using the following expression:

$$\frac{10^6 \times \alpha}{66.5 \times l \times m \times (100 - H)}$$

$\alpha$  = angle of rotation;

$l$  = length of the polarimeter tube, in decimetres;

$m$  = exact mass of the sample, in grams;

$H$  = loss on drying.

#### LABELLING

The label states the upper and the lower limits of the size of the sugar spheres.

01/2008:2209  
corrected 6.2

## SULBACTAM SODIUM

### Sulbactamum natrium

C<sub>9</sub>H<sub>10</sub>NNaO<sub>5</sub>S  
[69388-84-7]

*M*<sub>r</sub> 255.2

#### DEFINITION

Sodium (2*S*,5*R*)-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate 4,4-dioxide.

Semi-synthetic product derived from a fermentation product.

*Content:* 97.0 per cent to 102.0 per cent (anhydrous substance).

#### CHARACTERS

*Appearance:* white or almost white, hygroscopic, crystalline powder.

*Solubility:* freely soluble in water, sparingly soluble in ethyl acetate, very slightly soluble in ethanol (96 per cent). It is freely soluble in dilute acids.

#### IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

*Comparison:* *sulbactam sodium CRS*.

B. It gives reaction (a) of sodium (2.3.1).

#### TESTS

**Appearance of solution.** The solution is clear (2.2.1).

Dissolve 2.0 g in *water R* and dilute to 20 mL with the same solvent.

**Absorbance (2.2.25):** maximum 0.10 at 430 nm.

Dissolve 1.0 g in *water R* and dilute to 100.0 mL with the same solvent.

**pH (2.2.3):** 4.5 to 7.2; if the substance is sterile: 5.2 to 7.2.

Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 20 mL with the same solvent.

**Specific optical rotation (2.2.7):** + 219 to + 233 (anhydrous substance).

Dissolve 0.500 g in *water R* and dilute to 50.0 mL with the same solvent.

**Related substances.** Liquid chromatography (2.2.29).

*Solution A.* 2.72 g/L solution of *potassium dihydrogen phosphate R* adjusted to pH 4.0 with *dilute phosphoric acid R*.

*Solution B.* Dilute 2 mL of *acetonitrile RI* to 100.0 mL with solution A.

*Test solution.* Suspend 77.0 mg of the substance to be examined in 2 mL of *acetonitrile RI* and sonicate for about 5 min. Dilute to 100.0 mL with solution A.

*Reference solution (a).* Suspend 70.0 mg of *sulbactam CRS* in 2 mL of *acetonitrile RI* and sonicate for about 5 min. Dilute to 100.0 mL with solution A.

**Reference solution (b).** Dilute 1.0 mL of reference solution (a) to 100.0 mL with solution B. Dilute 1.0 mL of this solution to 10.0 mL with solution B.

**Reference solution (c).** Dissolve 15.0 mg of 6-aminopenicillanic acid *R* in solution A and dilute to 50.0 mL with solution A.

**Reference solution (d).** Mix 1 mL of reference solution (a) and 1 mL of reference solution (c) and dilute to 25.0 mL with solution B.

**Reference solution (e).** Dissolve 8 mg of *sulbactam for peak identification CRS* (containing impurities A, C, D, E and F) in 1 mL of acetonitrile *R1*, sonicate for about 5 min and dilute to 10 mL with solution B.

**Column:**

- size:  $l = 0.10$  m,  $\varnothing = 4.0$  mm;
- stationary phase: octadecylsilyl silica gel for chromatography *R* (3.0  $\mu$ m);
- temperature: 40 °C.

**Mobile phase:**

- mobile phase A: 5.44 g/L solution of potassium dihydrogen phosphate *R* adjusted to pH 4.0 with dilute phosphoric acid *R*;
- mobile phase B: acetonitrile *R1*;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 7.5	98 → 50	2 → 50
7.5 - 8.5	50	50
8.5 - 9.0	50 → 98	50 → 2
9.0 - 12.5	98	2

**Flow rate:** 1.0 mL/min.

**Detection:** spectrophotometer at 215 nm.

**Injection:** 20  $\mu$ L of the test solution, solution B and reference solutions (b), (d) and (e).

**Relative retention** with reference to *sulbactam* (retention time = about 2.5 min): impurity A = about 0.4; impurity B = about 0.6; impurity C = about 1.6; impurity D = about 2.0; impurity E = about 2.1; impurity F = about 2.5.

**Identification of impurities:** use the chromatogram supplied with *sulbactam for peak identification CRS* and the chromatogram obtained with reference solution (e) to identify the peaks due to impurities A, C, D, E and F.

**System suitability:** reference solution (d):

- resolution: minimum 7.0 between the peaks due to impurity B and *sulbactam*.

**Limits:**

- correction factors: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 0.6; impurity B = 0.5; impurity D = 0.5; impurity F = 0.6;
- impurity A: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- impurities B, D, F: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);
- impurities C, E: for each impurity, not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
- unspecified impurities: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);

- total: not more than 10 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);
- disregard limit: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**2-Ethylhexanoic acid (2.4.28):** maximum 0.5 per cent *m/m*.

**Heavy metals (2.4.8):** maximum 20 ppm.

Dissolve 1.0 g in *water R* and dilute to 20 mL with the same solvent. 12 mL of the solution complies with test A. Prepare the reference solution using 10.0 mL of *lead standard solution (2 ppm Pb) R*.

**Water (2.5.12):** maximum 1.0 per cent, determined on 1.00 g.

**Bacterial endotoxins (2.6.14, Method A):** less than 0.17 IU/mg, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins.

## ASSAY

Liquid chromatography (2.2.29) as described in the test for related substances with the following modification.

**Injection:** test solution and reference solution (a).

Calculate the percentage content of *sulbactam sodium* by multiplying the percentage content of *sulbactam* by 1.094 and using the declared content of *sulbactam CRS*.

## STORAGE

In an airtight container. If the substance is sterile, store in a sterile, airtight, tamper-proof container.

## IMPURITIES

**Specified impurities:** A, B, C, D, E, F.

**Other detectable impurities** (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): G.

A. (2*S*)-2-amino-3-methyl-3-sulfinobutanoic acid,

B. R = NH<sub>2</sub>, R' = H: (2*S*,5*R*,6*R*)-6-amino-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid (6-aminopenicillanic acid),

D. R = Br, R' = H: (2*S*,5*R*,6*R*)-6-bromo-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid (6-bromopenicillanic acid),

F. R = R' = Br: (2*S*,5*R*)-6,6-dibromo-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid (6,6-dibromopenicillanic acid),

C. R = Br, R' = H: (2*S*,5*R*,6*R*)-6-bromo-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid 4,4-dioxide (6-bromopenicillanic acid sulfone),

E. R = R' = Br: (2*S*,5*R*)-6,6-dibromo-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid 4,4-dioxide (6,6-dibromopenicillanic acid sulfone),

G. (2*E*)-3-[(1*S*)-1-carboxy-2-methyl-2-sulfinopropyl]amino]prop-2-enoic acid.

## SULFACETAMIDE SODIUM

### Sulfacetamidum natrium

$C_8H_9N_2NaO_3S \cdot H_2O$

$M_r$  254.2

#### DEFINITION

Sodium acetyl[(4-aminophenyl)sulfonyl]azanide.

*Content*: 99.0 per cent to 101.0 per cent (anhydrous substance).

#### CHARACTERS

*Appearance*: white or yellowish-white, crystalline powder.

*Solubility*: freely soluble in water, slightly soluble in anhydrous ethanol.

#### IDENTIFICATION

*First identification*: B, F.

*Second identification*: A, C, E, F.

A. Ultraviolet and visible absorption spectrophotometry (2.2.25).

*Test solution*. Dissolve 0.1 g in *phosphate buffer solution pH 7.0 R* and dilute to 100.0 mL with the same buffer solution. Dilute 1.0 mL of this solution to 100.0 mL with *phosphate buffer solution pH 7.0 R*.

*Spectral range*: 230-350 nm.

*Absorption maximum*: at 255 nm.

*Specific absorbance at the absorption maximum*: 660 to 720 (anhydrous substance).

B. Infrared absorption spectrophotometry (2.2.24).

*Comparison*: *sulfacetamide sodium CRS*.

C. Melting point (2.2.14): 181 °C to 185 °C.

Dissolve 1 g in 10 mL of *water R*, add 6 mL of *dilute acetic acid R* and filter. Wash the precipitate with a small quantity of *water R* and dry at 100-105 °C for 4 h.

E. Dissolve about 1 mg of the precipitate obtained in identification C, with heating, in 1 mL of *water R*. The solution gives the reaction of primary aromatic amines (2.3.1) with formation of an orange-red precipitate.

F. Solution S (see Tests) gives the reactions of sodium (2.3.1).

#### TESTS

**Solution S**. Dissolve 1.25 g in *carbon dioxide-free water R* and dilute to 25 mL with the same solvent.

**Appearance of solution**. Solution S is clear (2.2.1) and not more intensely coloured than reference solution GY<sub>4</sub> (2.2.2, *Method II*).

**pH** (2.2.3): 8.0 to 9.5 for solution S.

**Related substances**. Liquid chromatography (2.2.29). *Prepare the solutions immediately before use and carry out the test protected from light*.

*Test solution*. Dissolve 0.200 g of the substance to be examined in the mobile phase and dilute to 10.0 mL with the mobile phase.

*Reference solution (a)*. Dissolve 5 mg of *sulfacetamide sodium CRS* and 5 mg of *sulfanilamide R* (impurity A) in 1.0 mL of the mobile phase.

*Reference solution (b)*. Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Column*:

– *size*:  $l = 0.125$  m,  $\varnothing = 4$  mm;

– *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: *glacial acetic acid R*, *methanol R*, *water for chromatography R* (1:10:89 V/V/V).

*Flow rate*: 0.8 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 10 µL.

*Run time*: 7 times the retention time of sulfacetamide.

*Relative retention* with reference to sulfacetamide (retention time = about 5 min): impurity A = about 0.5.

*System suitability*: reference solution (a):

– *resolution*: minimum 5.0 between the peaks due to impurity A and sulfacetamide.

*Limits*:

– *correction factor*: for the calculation of the content, multiply the peak area of impurity A by 0.5;

– *impurity A*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);

– *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);

– *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Sulfates** (2.4.13): maximum 200 ppm.

Dissolve 2.5 g in *distilled water R* and dilute to 25 mL with the same solvent. Add 25 mL of *dilute acetic acid R*, shake for 30 min and filter. 15 mL of the filtrate complies with the limit test for sulfates.

**Heavy metals** (2.4.8): maximum 20 ppm.

12 mL of the filtrate obtained in the test for sulfates complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

**Water** (2.5.12). 6.0 per cent to 8.0 per cent, determined on 0.200 g.

#### ASSAY

Dissolve 0.500 g in a mixture of 50 mL of *water R* and 20 mL of *dilute hydrochloric acid R*. Cool the solution in a bath of iced water and carry out the determination of primary aromatic amino-nitrogen (2.5.8), determining the end-point electrometrically.

1 mL of 0.1 M *sodium nitrite* is equivalent to 23.62 mg of  $C_8H_9N_2NaO_3S$ .

## STORAGE

Protected from light.

## IMPURITIES

*Specified impurities:* A.

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): B, C, D.

A. 4-aminobenzenesulfonamide (sulfanilamide),

B. R = CO-CH<sub>3</sub>, R' = H: *N*-(4-sulfamoylphenyl)acetamide,

C. R = R' = CO-CH<sub>3</sub>: *N*-[[4-(acetamino)phenyl]sulfonyl]-acetamide,

D. 4,4'-sulfonyldianiline (dapson).

corrected 6.0

## SULFADIAZINE

## Sulfadiazinum

C<sub>10</sub>H<sub>10</sub>N<sub>4</sub>O<sub>2</sub>S  
[68-35-9]

*M<sub>r</sub>* 250.3

## DEFINITION

Sulfadiazine contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of 4-amino-*N*-pyrimidin-2-ylbenzenesulfonamide, calculated with reference to the dried substance.

## CHARACTERS

White, yellowish-white or pinkish-white, crystalline powder or crystals, practically insoluble in water, slightly soluble in acetone, very slightly soluble in alcohol. It dissolves in solutions of alkali hydroxides and in dilute mineral acids.

It melts at about 255 °C, with decomposition.

## IDENTIFICATION

*First identification:* A, B.

*Second identification:* B, C, D.

A. Examine by infrared absorption spectrophotometry (2.2.24), comparing with the spectrum obtained with *sulfadiazine CRS*. Examine the substances prepared as discs.

B. Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with test solution (a) corresponds in position and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Place 3 g in a dry tube. Immerse the lower part of the tube, inclined at 45°, in a silicone oil bath and heat to about 270 °C. The substance to be examined decomposes and a white or yellowish-white sublimate is formed which, after recrystallisation from *toluene R* and drying at 100 °C, melts (2.2.14) at 123 °C to 127 °C.

D. Dissolve about 5 mg in 10 mL of 1 *M hydrochloric acid*. Dilute 1 mL of the solution to 10 mL with *water R*. The solution, without further acidification, gives the reaction of primary aromatic amines (2.3.1).

## TESTS

**Appearance of solution.** Dissolve 0.8 g in a mixture of 5 mL of *dilute sodium hydroxide solution R* and 5 mL of *water R*. The solution is not more intensely coloured than reference solution Y<sub>5</sub>, BY<sub>5</sub> or GY<sub>5</sub> (2.2.2, *Method II*).

**Acidity.** To 1.25 g, finely powdered, add 25 mL of *carbon dioxide-free water R*. Heat at about 70 °C for 5 min. Cool in iced water for about 15 min and filter. To 20 mL of the filtrate add 0.1 mL of *bromothymol blue solution R1*. Not more than 0.2 mL of 0.1 *M sodium hydroxide* is required to change the colour of the indicator.

**Related substances.** Examine by thin-layer chromatography (2.2.27), using *silica gel GF<sub>254</sub> R* as the coating substance.

*Test solution (a).* Dissolve 20 mg of the substance to be examined in 3 mL of a mixture of 2 volumes of *concentrated ammonia R* and 48 volumes of *methanol R* and dilute to 5.0 mL with the same mixture of solvents.

*Test solution (b).* Dissolve 0.10 g of the substance to be examined in 0.5 mL of *concentrated ammonia R* and dilute to 5.0 mL with *methanol R*. If the solution is not clear, heat gently until dissolution is complete.

*Reference solution (a).* Dissolve 20 mg of *sulfadiazine CRS* in 3 mL of a mixture of 2 volumes of *concentrated ammonia R* and 48 volumes of *methanol R* and dilute to 5.0 mL with the same mixture of solvents.

*Reference solution (b).* Dilute 1.25 mL of test solution (a) to 50 mL with a mixture of 2 volumes of *concentrated ammonia R* and 48 volumes of *methanol R*.

Apply to the plate 5 µL of each solution. Develop over a path of 15 cm using a mixture of 3 volumes of *dilute ammonia R1*, 5 volumes of *water R*, 40 volumes of *nitromethane R* and 50 volumes of *dioxan R*. Dry the plate at 100 °C to 105 °C and examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with test solution (b), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent).

**Heavy metals** (2.4.8). 1.0 g complies with limit test D for heavy metals (20 ppm). Prepare the standard using 2 mL of *lead standard solution (10 ppm Pb) R*.

**Loss on drying** (2.2.32). Not more than 0.5 per cent, determined on 1.00 g by drying in an oven at 105 °C.

**Sulfated ash** (2.4.14). Not more than 0.1 per cent, determined on 1.0 g.

## ASSAY

Dissolve 0.200 g in a mixture of 20 mL of *dilute hydrochloric acid R* and 50 mL of *water R*. Cool the solution in iced water. Carry out the determination of primary aromatic amino-nitrogen (2.5.8), determining the end-point electrometrically.

1 mL of 0.1 *M sodium nitrite* is equivalent to 25.03 mg of C<sub>10</sub>H<sub>10</sub>N<sub>4</sub>O<sub>2</sub>S.

## STORAGE

Store protected from light.

corrected 6.0

## SULFADIMIDINE

## Sulfadimidinum

$C_{12}H_{14}N_4O_2S$   
[57-68-1]

$M_r$  278.3

## DEFINITION

Sulfadimidine contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of 4-amino-*N*-(4,6-dimethylpyrimidin-2-yl)benzenesulfonamide, calculated with reference to the dried substance.

## CHARACTERS

White or almost white powder or crystals, very slightly soluble in water, soluble in acetone, slightly soluble in alcohol. It dissolves in solutions of alkali hydroxides and in dilute mineral acids.

It melts at about 197 °C, with decomposition.

## IDENTIFICATION

First identification: A, B.

Second identification: B, C, D.

- Examine by infrared absorption spectrophotometry (2.2.24), comparing with the spectrum obtained with *sulfadimidine CRS*. Examine the substances prepared as discs.
- Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with test solution (a) corresponds in position and size to the principal spot in the chromatogram obtained with reference solution (a).
- Place 3 g in a dry tube. Immerse the lower part of the tube, inclined at 45°, in a silicone oil bath and heat to about 270 °C. The substance to be examined decomposes and a white or yellowish-white sublimate is formed which, after recrystallisation from *toluene R* and drying at 100 °C, melts (2.2.14) at 150 °C to 154 °C.
- Dissolve about 5 mg in 10 mL of 1 M hydrochloric acid. Dilute 1 mL of the solution to 10 mL with *water R*. The solution, without further acidification, gives the reaction of primary aromatic amines (2.3.1).

## TESTS

**Appearance of solution.** Dissolve 0.5 g in a mixture of 5 mL of *dilute sodium hydroxide solution R* and 5 mL of *water R*. The solution is not more intensely coloured than reference solution  $Y_5$ ,  $BY_5$  or  $GY_5$  (2.2.2, Method II).

**Acidity.** To 1.25 g, finely powdered, add 25 mL of *carbon dioxide-free water R*. Heat at about 70 °C for 5 min. Cool in iced water for about 15 min and filter. To 20 mL of the filtrate add 0.1 mL of *bromothymol blue solution R1*. Not more than 0.2 mL of 0.1 M sodium hydroxide is required to change the colour of the indicator.

**Related substances.** Examine by thin-layer chromatography (2.2.27), using *silica gel GF<sub>254</sub> R* as the coating substance.

**Test solution (a).** Dissolve 20 mg of the substance to be examined in 3 mL of a mixture of 2 volumes of *concentrated*

*ammonia R* and 48 volumes of *methanol R* and dilute to 5.0 mL with the same mixture of solvents.

**Test solution (b).** Dissolve 0.10 g of the substance to be examined in 0.5 mL of *concentrated ammonia R* and dilute to 5.0 mL with *methanol R*. If the solution is not clear, heat gently until dissolution is complete.

**Reference solution (a).** Dissolve 20 mg of *sulfadimidine CRS* in 3 mL of a mixture of 2 volumes of *concentrated ammonia R* and 48 volumes of *methanol R* and dilute to 5.0 mL with the same mixture of solvents.

**Reference solution (b).** Dilute 1.25 mL of test solution (a) to 50 mL with a mixture of 2 volumes of *concentrated ammonia R* and 48 volumes of *methanol R*.

Apply to the plate 5 µL of each solution. Develop over a path of 15 cm using a mixture of 3 volumes of *dilute ammonia R1*, 5 volumes of *water R*, 40 volumes of *nitromethane R* and 50 volumes of *dioxan R*. Dry the plate at 100 °C to 105 °C and examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with test solution (b), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent).

**Heavy metals (2.4.8).** 1.0 g complies with limit test D for heavy metals (20 ppm). Prepare the standard using 2 mL of *lead standard solution (10 ppm Pb) R*.

**Loss on drying (2.2.32).** Not more than 0.5 per cent, determined on 1.00 g by drying in an oven at 105 °C.

**Sulfated ash (2.4.14).** Not more than 0.1 per cent, determined on 1.0 g.

## ASSAY

Dissolve 0.250 g in a mixture of 20 mL of *dilute hydrochloric acid R* and 50 mL of *water R*. Cool the solution in iced water. Carry out the determination of primary aromatic amino-nitrogen (2.5.8), determining the end-point electrometrically.

1 mL of 0.1 M sodium nitrite is equivalent to 27.83 mg of  $C_{12}H_{14}N_4O_2S$ .

corrected 6.0

## SULFADOXINE

## Sulfadoxinum

$C_{12}H_{14}N_4O_4S$   
[2447-57-6]

$M_r$  310.3

## DEFINITION

Sulfadoxine contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of 4-amino-*N*-(5,6-dimethoxypyrimidin-4-yl)benzenesulfonamide, calculated with reference to the dried substance.

## CHARACTERS

White or yellowish-white crystalline powder or crystals, very slightly soluble in water, slightly soluble in alcohol and in methanol. It dissolves in solutions of alkali hydroxides and in dilute mineral acids.

It melts at about 198 °C, with decomposition.

## IDENTIFICATION

*First identification:* A, C.

*Second identification:* B, C, D.

- A. Examine by infrared absorption spectrophotometry (2.2.24), comparing with the spectrum obtained with *sulfadoxine CRS*. Examine the substances prepared as discs.
- B. Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).
- C. Dissolve 0.5 g in 1 mL of a 40 per cent V/V solution of *sulfuric acid R*, heating gently. Continue heating until a crystalline precipitate appears (about 2 min). Allow to cool and add 10 mL of *dilute sodium hydroxide solution R*. Cool again. Add 25 mL of *ether R* and shake for 5 min. Separate the ether layer, dry over *anhydrous sodium sulfate R* and filter. Evaporate the solvent by heating in a water-bath. The residue melts (2.2.14) at 80 °C to 82 °C or at 90 °C to 92 °C.
- D. Dissolve about 5 mg in 10 mL of *1 M hydrochloric acid*. Dilute 1 mL of the solution to 10 mL with *water R*. The solution, without further acidification, gives the reaction of primary aromatic amines (2.3.1).

## TESTS

**Appearance of solution.** Dissolve 1.0 g in a mixture of 5 mL of *dilute sodium hydroxide solution R* and 5 mL of *water R*. The solution is not more intensely coloured than reference solution Y<sub>5</sub>, BY<sub>5</sub> or GY<sub>5</sub> (2.2.2, Method II).

**Acidity.** To 1.25 g, finely powdered, add 25 mL of *carbon dioxide-free water R*. Heat at 70 °C for 5 min. Cool in a bath of iced water for about 15 min and filter. To 20 mL of the filtrate add 0.1 mL of *bromothymol blue solution R1*. Not more than 0.2 mL of *0.1 M sodium hydroxide* is required to change the colour of the indicator.

**Related substances.** Examine by thin-layer chromatography (2.2.27), using *silica gel GF<sub>254</sub> R* as the coating substance.

*Test solution (a).* Dissolve 0.10 g of the substance to be examined in 3 mL of a mixture of 2 volumes of *concentrated ammonia R* and 48 volumes of *methanol R* and dilute to 5 mL with the same mixture of solvents.

*Test solution (b).* Dilute 1 mL of test solution (a) to 5 mL with a mixture of 2 volumes of *concentrated ammonia R* and 48 volumes of *methanol R*.

*Reference solution (a).* Dissolve 20 mg of *sulfadoxine CRS* in 3 mL of a mixture of 2 volumes of *concentrated ammonia R* and 48 volumes of *methanol R* and dilute to 5 mL with the same mixture of solvents.

*Reference solution (b).* Dilute 2.5 mL of test solution (b) to 100 mL with a mixture of 2 volumes of *concentrated ammonia R* and 48 volumes of *methanol R*.

Apply to the plate 5 µL of each solution. Develop over a path of 15 cm using a mixture of 3 volumes of *dilute ammonia R1*, 5 volumes of *water R*, 40 volumes of *nitromethane R* and 50 volumes of *dioxan R*. Dry the plate at 100 °C to 105 °C and examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent).

**Heavy metals** (2.4.8). 1.0 g complies with limit test D for heavy metals (20 ppm). Prepare the standard using 2 mL of *lead standard solution (10 ppm Pb) R*.

**Loss on drying** (2.2.32). Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (2.4.14). Not more than 0.1 per cent, determined on 1.0 g.

## ASSAY

Carry out the determination of primary aromatic amino-nitrogen (2.5.8), using 0.250 g and determining the end-point electrometrically.

1 mL of *0.1 M sodium nitrite* is equivalent to 31.03 mg of C<sub>12</sub>H<sub>14</sub>N<sub>4</sub>O<sub>4</sub>S.

## STORAGE

Store protected from light.

01/2008:0741  
corrected 6.0

## SULFAFURAZOLE

## Sulfafurazolum

C<sub>11</sub>H<sub>13</sub>N<sub>3</sub>O<sub>3</sub>S  
[127-69-5]

M<sub>r</sub> 267.3

## DEFINITION

Sulfafurazole contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of 4-amino-*N*-(3,4-dimethylisoxazol-5-yl)benzenesulfonamide, calculated with reference to the dried substance.

## CHARACTERS

White or yellowish-white, crystalline powder or crystals, practically insoluble in water, sparingly soluble in alcohol, slightly soluble in methylene chloride. It dissolves in solutions of alkali hydroxides and in dilute mineral acids.

It melts at about 197 °C, with decomposition.

## IDENTIFICATION

*First identification:* A, C.

*Second identification:* B, C, D.

- A. Examine by infrared absorption spectrophotometry (2.2.24), comparing with the spectrum obtained with *sulfafurazole CRS*. Examine the substances prepared as discs.
- B. Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).
- C. To 0.5 g add 1 mL of a 40 per cent V/V solution of *sulfuric acid R* and heat over a low flame to dissolve. Continue heating until a crystalline precipitate appears (about 2 min). Allow to cool and add 10 mL of *dilute sodium hydroxide solution R*. Cool. Shake the solution for 5 min with 25 mL of *ether R*. Separate the ether layer, dry over *anhydrous sodium sulfate R* and filter. Evaporate the solvent by heating on a water-bath. The residue melts (2.2.14) at 119 °C to 123 °C.
- D. Dissolve about 5 mg in 10 mL of *1 M hydrochloric acid*. Dilute 1 mL of the solution to 10 mL with *water R*. The solution, without further acidification, gives the reaction of primary aromatic amines (2.3.1).

## TESTS

**Appearance of solution.** Dissolve 0.4 g in a mixture of 5 mL of *dilute sodium hydroxide solution R* and 5 mL of *water R*, with gently warming if necessary. The solution is not more intensely coloured than reference solution Y<sub>6</sub>, BY<sub>6</sub> or GY<sub>6</sub> (2.2.2, Method II).

**Sulfated ash** (2.4.14): not more than 0.1 per cent, determined on 1.0 g.

#### ASSAY

Dissolve 0.175 g in 50 mL of *dilute hydrochloric acid R*. Cool the solution in iced water. Carry out the determination of primary aromatic amino-nitrogen (2.5.8), determining the end-point electrometrically.

1 mL of 0.1 M sodium nitrite is equivalent to 21.42 mg of  $C_7H_{10}N_4O_2S$ .

#### STORAGE

Store protected from light.

#### IMPURITIES

A. 4-aminobenzenesulfonamide (sulfanilamide),

B. *N*-[(4-aminophenyl)sulfonyl]urea (sulfacarbamide).

01/2008:0358  
corrected 6.0

## SULFAMERAZINE

### Sulfamerazinum

$C_{11}H_{12}N_4O_2S$   
[127-79-7]

$M_r$  264.3

#### DEFINITION

Sulfamerazine contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of 4-amino-*N*-(4-methyl-2-pyrimidinyl)benzenesulfonamide, calculated with reference to the dried substance.

#### CHARACTERS

White, yellowish-white or pinkish-white, crystalline powder or crystals, very slightly soluble in water, sparingly soluble in acetone, slightly soluble in alcohol, very slightly soluble in methylene chloride. It dissolves in solutions of alkali hydroxides and in dilute mineral acids.

It melts at about 235 °C, with decomposition.

#### IDENTIFICATION

*First identification*: A, B.

*Second identification*: B, C, D.

A. Examine by infrared absorption spectrophotometry (2.2.24), comparing with the spectrum obtained with *sulfamerazine CRS*. Examine the substances as discs.

B. Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Place 3 g in a dry tube. Incline the tube by about 45°, immerse the bottom of the tube in a silicone-oil bath and heat to about 270 °C. The substance decomposes, producing a white or yellowish-white sublimate which, after recrystallisation from *toluene R* and drying at 100 °C, melts (2.2.14) at 157 °C to 161 °C.

D. Dissolve about 20 mg in 0.5 mL of *dilute hydrochloric acid R* and add 1 mL of *water R*. The solution gives, without further addition of acid, the identification reaction of primary aromatic amines (2.3.1).

#### TESTS

**Appearance of solution.** Dissolve 0.8 g in a mixture of 5 mL of *dilute sodium hydroxide solution R* and 5 mL of *water R*. The solution is not more intensely coloured than reference solution  $Y_4$ ,  $BY_4$  or  $GY_4$  (2.2.2, *Method II*).

**Acidity.** To 1.25 g, finely powdered, add 40 mL of *carbon dioxide-free water R* and heat at about 70 °C for 5 min. Cool for about 15 min in iced water and filter. To 20 mL of the filtrate add 0.1 mL of *bromothymol blue solution R1*. Not more than 0.2 mL of 0.1 M sodium hydroxide is required to change the colour of the indicator.

**Related substances.** Examine by thin-layer chromatography (2.2.27) using *silica gel GF<sub>254</sub> R* as the coating substance.

*Test solution (a).* Dissolve 0.10 g of the substance to be examined in 3 mL of a mixture of 2 volumes of *concentrated ammonia R* and 48 volumes of *methanol R* and dilute to 5 mL with the same mixture of solvents.

*Test solution (b).* Dilute 1 mL of test solution (a) to 10 mL with a mixture of 2 volumes of *concentrated ammonia R* and 48 volumes of *methanol R*.

*Reference solution (a).* Dissolve 10 mg of *sulfamerazine CRS* in 3 mL of a mixture of 2 volumes of *concentrated ammonia R* and 48 volumes of *methanol R* and dilute to 5 mL with the same mixture of solvents.

*Reference solution (b).* Dilute 2.5 mL of test solution (b) to 50 mL with a mixture of 2 volumes of *concentrated ammonia R* and 48 volumes of *methanol R*.

Apply to the plate 5 µL of each solution. Develop over a path of 15 cm with a mixture of 3 volumes of *dilute ammonia R1*, 5 volumes of *water R*, 40 volumes of *nitromethane R* and 50 volumes of *dioxan R*. Dry the plate at 100 °C to 105 °C and examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent).

**Heavy metals** (2.4.8). 1.0 g complies with limit test C for heavy metals (20 ppm). Prepare the standard using 2 mL of *lead standard solution (10 ppm Pb) R*.

**Loss on drying** (2.2.32). Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (2.4.14). Not more than 0.1 per cent, determined on 1.0 g.

#### ASSAY

Dissolve 0.2500 g in a mixture of 20 mL of *dilute hydrochloric acid R* and 50 mL of *water R*. Cool the solution in iced water. Carry out the determination of primary aromatic amino-nitrogen (2.5.8), determining the end-point electrometrically. 1 mL of 0.1 M sodium nitrite is equivalent to 26.43 mg of  $C_{11}H_{12}N_4O_2S$ .

#### STORAGE

Store protected from light.

**01/2008:0637** *Reference solution (b).* Dilute 1 mL of test solution (b) to 20 mL with *acetone R*.

**corrected 6.0**

## SULFAMETHIZOLE

### Sulfamethizolum

$C_9H_{10}N_4O_2S_2$   
[144-82-1]

$M_r$  270.3

#### DEFINITION

Sulfamethizole contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of 4-amino-*N*-(5-methyl-1,3,4-thiadiazol-2-yl)benzenesulfonamide, calculated with reference to the dried substance.

#### CHARACTERS

White or yellowish-white crystalline powder or crystals, very slightly soluble in water, soluble in acetone, sparingly soluble in alcohol. It dissolves in dilute solutions of alkali hydroxides and in dilute mineral acids.

It melts at about 210 °C.

#### IDENTIFICATION

*First identification:* A, B.

*Second identification:* B, C, D.

- Examine by infrared absorption spectrophotometry (2.2.24), comparing with the spectrum obtained with *sulfamethizole CRS*. Examine the substances prepared as discs.
- Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).
- Dissolve 50 mg in 4 mL of *methanol R* and add 0.2 mL of a 40 g/L solution of *copper acetate R*. A flocculent, yellowish-green precipitate is formed, changing to dark green.
- Dissolve about 5 mg in 1 M *hydrochloric acid* and dilute to 10 mL with the same solvent. Dilute 1 mL of this solution to 10 mL with *water R*. The solution, without further acidification, gives the reaction of primary aromatic amines (2.3.1).

#### TESTS

**Appearance of solution.** Dissolve 1.0 g in a mixture of 5 mL of *dilute sodium hydroxide solution R* and 5 mL of *water R*. The solution is not more intensely coloured than reference solution  $Y_5$ ,  $BY_5$  or  $GY_5$  (2.2.2, *Method II*).

**Acidity.** To 1.25 g add 25 mL of *carbon dioxide-free water R* and heat at 70 °C for 5 min. Cool for about 15 min in iced water and filter. To 20 mL of the filtrate add 0.1 mL of *bromothymol blue solution R1*. Not more than 0.5 mL of 0.1 M *sodium hydroxide* is required to change the colour of the indicator.

**Related substances.** Examine by thin-layer chromatography (2.2.27), using *silica gel GF<sub>254</sub> R* as the coating substance.

*Test solution (a).* Dissolve 0.30 g of the substance to be examined in *acetone R* and dilute to 10 mL with the same solvent.

*Test solution (b).* Dilute 1 mL of test solution (a) to 10 mL with *acetone R*.

*Reference solution (a).* Dissolve 30 mg of *sulfamethizole CRS* in *acetone R* and dilute to 10 mL with the same solvent.

Apply to the plate 2 µL of each solution. Develop over a path of 15 cm using a mixture of 15 volumes of *methanol R* and 80 volumes of *chloroform R*. Dry the plate at 100 °C to 105 °C and examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent).

**Heavy metals** (2.4.8). 1.0 g complies with limit test D for heavy metals (20 ppm). Prepare the standard using 2 mL of *lead standard solution (10 ppm Pb) R*.

**Loss on drying** (2.2.32). Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (2.4.14). Not more than 0.1 per cent, determined on 1.0 g.

#### ASSAY

Carry out the determination of primary aromatic amino-nitrogen (2.5.8), using 0.2500 g and determining the end-point electrometrically.

1 mL of 0.1 M *sodium nitrite* is equivalent to 27.03 mg of  $C_9H_{10}N_4O_2S_2$ .

#### STORAGE

Store protected from light.

**01/2008:0108**

**corrected 6.0**

## SULFAMETHOXAZOLE

### Sulfamethoxazololum

$C_{10}H_{11}N_3O_3S$   
[723-46-6]

$M_r$  253.3

#### DEFINITION

4-Amino-*N*-(5-methylisoxazol-3-yl)benzenesulfonamide.

*Content:* 99.0 per cent to 101.0 per cent (dried substance).

#### CHARACTERS

*Appearance:* white or almost white, crystalline powder.

*Solubility:* practically insoluble in water, freely soluble in acetone, sparingly soluble in ethanol (96 per cent). It dissolves in dilute solutions of sodium hydroxide and in dilute acids.

#### IDENTIFICATION

*First identification:* A, B.

*Second identification:* A, C, D.

- Melting point (2.2.14): 169 °C to 172 °C.
- Infrared absorption spectrophotometry (2.2.24).  
*Comparison:* *sulfamethoxazole CRS*.
- Thin-layer chromatography (2.2.27).

*Test solution.* Dissolve 20 mg of the substance to be examined in 3 mL of a mixture of 2 volumes of *concentrated ammonia R* and 48 volumes of *methanol R* and dilute to 5 mL with the same mixture of solvents.

*Reference solution.* Dissolve 20 mg of *sulfamethoxazole CRS* in 3 mL of a mixture of 2 volumes of *concentrated ammonia R* and 48 volumes of *methanol R* and dilute to 5 mL with the same mixture of solvents.

*Plate:* TLC silica gel  $F_{254}$  plate *R*.

*Mobile phase:* dilute ammonia R1, water R, nitromethane R, dioxan R (3:5:41:51 V/V/V/V).

*Application:* 5 µL.

*Development:* over 3/4 of the plate.

*Drying:* at 100-105 °C.

*Detection:* examine in ultraviolet light at 254 nm.

*Results:* the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

- D. Dissolve about 5 mg in 10 mL of 1 M hydrochloric acid. Dilute 1 mL of the solution to 10 mL with water R. The solution, without further acidification, gives the reaction of primary aromatic amines (2.3.1).

## TESTS

**Appearance of solution.** The solution is clear (2.2.1) and not more intensely coloured than reference solution Y<sub>5</sub>, BY<sub>5</sub> or GY<sub>5</sub> (2.2.2, Method II).

Dissolve 1.0 g in a mixture of 5 mL of dilute sodium hydroxide solution R and 5 mL of water R.

**Acidity.** To 1.25 g, finely powdered, add 25 mL of water R. Heat at 70 °C for 5 min. Cool in iced water for about 15 min and filter. To 20 mL of the filtrate add 0.1 mL of bromothymol blue solution R1. Not more than 0.3 mL of 0.1 M sodium hydroxide is required to change the colour of the indicator.

**Related substances.** Liquid chromatography (2.2.29).

*Test solution.* Dissolve 50.0 mg of the substance to be examined in 45 mL of the mobile phase, sonicate at about 45 °C for 10 min, cool and dilute to 50.0 mL with the mobile phase.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 10.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 100.0 mL with the mobile phase.

*Reference solution (b).* Dissolve 1 mg of the substance to be examined and 1 mg of sulfamethoxazole impurity A CRS in the mobile phase and dilute to 10.0 mL with the mobile phase.

*Reference solution (c).* Dissolve 1.0 mg of sulfamethoxazole impurity F CRS in the mobile phase and dilute to 10.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 100.0 mL with the mobile phase.

*Column:*

- size:  $l = 0.25$  m,  $\varnothing = 4.0$  mm,
- stationary phase: octylsilyl silica gel for chromatography R (5 µm),
- temperature: 30 °C.

*Mobile phase:* mix 35 volumes of methanol R2 and 65 volumes of a 13.6 g/L solution of potassium dihydrogen phosphate R previously adjusted to pH 5.3 with a 20 g/L solution of potassium hydroxide R.

*Flow rate:* 0.9 mL/min.

*Detection:* spectrophotometer at 210 nm.

*Injection:* 20 µL.

*Run time:* 3 times the retention time of sulfamethoxazole.

*Relative retention* with reference to sulfamethoxazole (retention time = about 10 min): impurity D = about 0.3; impurity E = about 0.35; impurity F = about 0.45; impurity C = about 0.5; impurity A = about 1.2; impurity B = about 2.0.

*System suitability:* reference solution (b):

- resolution: minimum 3.5 between the peaks due to sulfamethoxazole and impurity A.

*Limits:*

- impurities A, B, C, D, E: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent),
- impurity F: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.1 per cent),
- any other impurity: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent),
- total: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent),
- disregard limit: 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.025 per cent).

**Heavy metals (2.4.8):** maximum 20 ppm.

1.0 g complies with test D. Prepare the reference solution using 2 mL of lead standard solution (10 ppm Pb) R.

**Loss on drying (2.2.32):** maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash (2.4.14):** maximum 0.1 per cent, determined on 1.0 g.

## ASSAY

Carry out the assay of primary aromatic amino-nitrogen (2.5.8), using 0.200 g and determining the end-point electrometrically.

1 mL of 0.1 M sodium nitrite is equivalent to 25.33 mg of C<sub>10</sub>H<sub>11</sub>N<sub>3</sub>O<sub>3</sub>S.

## STORAGE

Protected from light.

## IMPURITIES

*Specified impurities:* A, B, C, D, E, F.

A. R = CO-CH<sub>3</sub>: N-[4-[(5-methylisoxazol-3-yl)sulfamoyl]phenyl]acetamide,

B. R = SO<sub>2</sub>-C<sub>6</sub>H<sub>4</sub>-pNH<sub>2</sub>: 4-[[[(4-aminophenyl)sulfonyl]amino]-N-(5-methylisoxazol-3-yl)benzenesulfonamide],

C. 5-methylisoxazol-3-amine,

D. R = OH: 4-aminobenzenesulfonic acid (sulfanilic acid),

E. R = NH<sub>2</sub>: 4-aminobenzenesulfonamide (sulfanilamide),

F. 4-amino-N-(3-methylisoxazol-5-yl)benzenesulfonamide.

01/2008:0638  
corrected 6.0**SULFAMETHOXYPYRIDAZINE FOR  
VETERINARY USE****Sulfamethoxypyridazinum  
ad usum veterinarium**C<sub>11</sub>H<sub>12</sub>N<sub>4</sub>O<sub>3</sub>S  
[80-35-3]M<sub>r</sub> 280.3**DEFINITION**

Sulfamethoxypyridazine for veterinary use contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of 4-amino-*N*-(6-methoxypyridazin-3-yl)benzenesulfonamide, calculated with reference to the dried substance.

**CHARACTERS**

A white or slightly yellowish, crystalline powder, colouring slowly on exposure to light, practically insoluble in water, sparingly soluble in acetone, slightly soluble in alcohol, very slightly soluble in methylene chloride. It dissolves in solutions of alkali hydroxides and in dilute mineral acids.

It melts at about 180 °C, with decomposition.

**IDENTIFICATION**

*First identification:* A, B.

*Second identification:* B, C, D.

- A. Examine by infrared absorption spectrophotometry (2.2.24), comparing with the spectrum obtained with *sulfamethoxypyridazine CRS*. Examine the substances prepared as discs.
- B. Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).
- C. Dissolve 0.5 g in 1 mL of a 40 per cent *V/V* solution of *sulfuric acid R*, heating gently. Continue heating until a crystalline precipitate appears (about 2 min). Cool and add 10 mL of *dilute sodium hydroxide solution R*. Cool again, add 25 mL of *ether R* and shake the solution for 5 min. Separate the ether layer, dry over *anhydrous sodium sulfate R* and filter. Evaporate the ether by heating in a water-bath. An oily residue is obtained which becomes crystalline on cooling; if necessary, scratch the wall of the container with a glass rod. The residue melts (2.2.14) at 102 °C to 106 °C.
- D. Dissolve about 5 mg in 10 mL of 1 *M* *hydrochloric acid*. Dilute 1 mL of the solution to 10 mL with *water R*. The solution, without further acidification, gives the reaction of primary aromatic amines (2.3.1).

**TESTS**

**Appearance of solution.** Dissolve 1.0 g in a mixture of 10 mL of 1 *M* *sodium hydroxide* and 15 mL of *water R*. The solution is clear (2.2.1) and not more intensely coloured than reference solution Y<sub>4</sub> or BY<sub>4</sub> (2.2.2, *Method II*).

**Acidity.** To 1.25 g, finely powdered, add 25 mL of *carbon dioxide-free water R*. Heat at 70 °C for 5 min. Cool in iced water for about 15 min and filter. To 20 mL of the filtrate add 0.1 mL of *bromothymol blue solution R1*. Not more than 0.5 mL of 0.1 *M* *sodium hydroxide* is required to change the colour of the indicator.

**Related substances.** Examine by thin layer chromatography (2.2.27), using *TLC silica gel GF<sub>254</sub> plate R*.

**Test solution (a).** Dissolve 0.10 g of the substance to be examined in *acetone R* and dilute to 5 mL with the same solvent.

**Test solution (b).** Dilute 1 mL of test solution (a) to 10 mL with *acetone R*.

**Reference solution (a).** Dissolve 20 mg of *sulfamethoxypyridazine CRS* in *acetone R* and dilute to 10 mL with the same solvent.

**Reference solution (b).** Dilute 2.5 mL of test solution (b) to 50 mL with *acetone R*.

Apply separately to the plate 5 µL of each solution. Develop over a path of 15 cm using a mixture of 1 volume of *dilute ammonia R1*, 9 volumes of *water R*, 30 volumes of 2-*propanol R* and 50 volumes of *ethyl acetate R*. Dry the plate at 100-105 °C and examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent).

**Heavy metals** (2.4.8). 1.0 g complies with limit test D for heavy metals (20 ppm). Prepare the standard using 2 mL of *lead standard solution (10 ppm Pb) R*.

**Loss on drying** (2.2.32). Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (2.4.14). Not more than 0.1 per cent, determined on 1.0 g.

**ASSAY**

Carry out the assay of primary aromatic amino-nitrogen (2.5.8), using 0.2500 g, determining the end-point electrometrically.

1 mL of 0.1 *M* *sodium nitrite* is equivalent to 28.03 mg of C<sub>11</sub>H<sub>12</sub>N<sub>4</sub>O<sub>3</sub>S.

[63-74-1]M<sub>r</sub> 172.2**DEFINITION**

Sulfanilamide contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of 4-aminobenzenesulfonamide, calculated with reference to the dried substance.

**CHARACTERS**

White or yellowish-white crystals or fine powder, slightly soluble in water, freely soluble in acetone, sparingly soluble in alcohol, practically insoluble in methylene chloride. It dissolves in solutions of alkali hydroxides and in dilute mineral acids.

**IDENTIFICATION**

*First identification:* B.

*Second identification:* A, C, D.

A. Melting point (2.2.14): 164.5 °C to 166.0 °C.

- B. Examine by infrared absorption spectrophotometry (2.2.24), comparing with the spectrum obtained with *sulfanilamide CRS*. Examine the substances prepared as discs.
- C. Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with test solution (a) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).
- D. Dissolve about 5 mg in 10 mL of 1 M hydrochloric acid. Dilute 1 mL of the solution to 10 mL with *water R*. The solution, without further acidification, gives the reaction of primary aromatic amines (2.3.1).

## TESTS

**Solution S.** To 2.5 g add 50 mL of *carbon dioxide-free water R*. Heat at about 70 °C for about 5 min. Cool in iced water for about 15 min and filter.

**Acidity.** To 20 mL of solution S add 0.1 mL of *bromothymol blue solution R1*. Not more than 0.2 mL of 0.1 M *sodium hydroxide* is required to change the colour of the indicator.

**Related substances.** Examine by thin-layer chromatography (2.2.27), using a *TLC silica gel F<sub>254</sub> plate R*.

**Test solution (a).** Dissolve 20 mg of the substance to be examined in 3 mL of a mixture of 2 volumes of *concentrated ammonia R* and 48 volumes of *methanol R* and dilute to 5 mL with the same mixture of solvents.

**Test solution (b).** Dissolve 0.10 g of the substance to be examined in 0.5 mL of *concentrated ammonia R* and dilute to 5 mL with *methanol R*. If the solution is not clear, heat gently until dissolution is complete.

**Reference solution (a).** Dissolve 20 mg of *sulfanilamide CRS* in 3 mL of a mixture of 2 volumes of *concentrated ammonia R* and 48 volumes of *methanol R* and dilute to 5 mL with the same mixture of solvents.

**Reference solution (b).** Dilute 1.25 mL of test solution (a) to 50 mL with a mixture of 2 volumes of *concentrated ammonia R* and 48 volumes of *methanol R*.

**Reference solution (c).** Dissolve 20 mg of the substance to be examined and 20 mg of *sulfamerazine CRS* in 3 mL of a mixture of 2 volumes of *concentrated ammonia R* and 48 volumes of *methanol R* and dilute to 5 mL with the same mixture of solvents.

Apply to the plate 5 µL of each solution. Develop over a path corresponding to two-thirds of the plate height using a mixture of 3 volumes of *dilute ammonia R1*, 5 volumes of *water R*, 40 volumes of *nitromethane R* and 50 volumes of *dioxan R*. Dry the plate at 100 °C to 105 °C and examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with test solution (b), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent). The test is not valid unless the chromatogram obtained with reference solution (c) shows two clearly separated principal spots.

**Heavy metals (2.4.8).** 12 mL of solution S complies with limit test A for heavy metals (20 ppm). Prepare the standard using *lead standard solution (1 ppm Pb) R*.

**Loss on drying (2.2.32).** Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash (2.4.14).** Not more than 0.1 per cent, determined on 1.0 g.

## ASSAY

Carry out the determination of primary aromatic amino-nitrogen (2.5.8), using 0.140 g and determining the end-point electrometrically.

1 mL of 0.1 M *sodium nitrite* is equivalent to 17.22 mg of C<sub>18</sub>H<sub>14</sub>N<sub>4</sub>O<sub>5</sub>S.

## STORAGE

## Sulfasalazinum

C<sub>18</sub>H<sub>14</sub>N<sub>4</sub>O<sub>5</sub>S  
[599-79-1]

M<sub>r</sub> 398.4

## DEFINITION

2-Hydroxy-5-[2-[4-(pyridin-2-ylsulfamoyl)phenyl]diazanyl]benzoic acid.

**Content:** 97.0 per cent to 101.5 per cent (dried substance).

## CHARACTERS

**Appearance:** bright yellow or brownish-yellow, fine powder.

**Solubility:** practically insoluble in water, very slightly soluble in ethanol (96 per cent), practically insoluble in methylene chloride. It dissolves in dilute solutions of alkali hydroxides.

## IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

**Preparation:** discs.

**Comparison:** *sulfasalazine CRS*.

## TESTS

**Related substances.** Liquid chromatography (2.2.29).

**Test solution.** Dissolve 25.0 mg of the substance to be examined in *dilute ammonia R3* and dilute to 25.0 mL with the same solvent.

**Reference solution (a).** Dilute 1.0 mL of the test solution to 100.0 mL with *dilute ammonia R3*.

**Reference solution (b).** Dissolve 1.0 mg of *sulfasalazine derivative for resolution CRS* in 10.0 mL of reference solution (a). Dilute 1.0 mL of this solution to 10.0 mL with reference solution (a).

**Column:**

- **size:** *l* = 0.25 m, Ø = 4.6 mm;
- **stationary phase:** *octadecylsilyl silica gel for chromatography R* (5 µm).

**Mobile phase:**

- **mobile phase A:** in a 1000 mL volumetric flask dissolve 1.13 g of *sodium dihydrogen phosphate R* and 2.5 g of *sodium acetate R* in 900 mL of *water R*; adjust to pH 4.8 with *glacial acetic acid R* and dilute to 1000 mL with *water R*;
- **mobile phase B:** mobile phase A, *methanol R* (10:40 V/V);

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 15	60 → 45	40 → 55
15 - 25	45	55
25 - 60	45 → 0	55 → 100
60 - 65	0	100

**Flow rate:** 1 mL/min.

**Detection:** spectrophotometer at 320 nm.

**Injection:** 20 µL.

**Relative retention** with reference to sulfasalazine:  
impurity H = about 0.16; impurity I = about 0.28;  
impurity C = about 0.80; impurity F = about 0.85;  
impurity G = about 1.39; impurity E = about 1.63;  
impurity B = about 1.85; impurity D = about 1.90;  
impurity A = about 2.00.

**System suitability:** reference solution (b):

- **resolution:** minimum 3.0 between the peaks due to sulfasalazine and sulfasalazine derivative for resolution.

**Limits:**

- **impurities A, B, C, D, E, F, G, I:** for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (1 per cent);
- **total:** not more than 4 times the area of the principal peak in the chromatogram obtained with reference solution (a) (4 per cent);
- **disregard limit:** 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent); disregard any peak with a retention time less than 6 min (due to impurities H and J).

**Impurities H and J.** Liquid chromatography (2.2.29).

**Test solution.** Dissolve 25.0 mg of the substance to be examined in *dilute ammonia R3* and dilute to 25.0 mL with the same solvent.

**Reference solution (a).** Dissolve 5.0 mg of *salicylic acid R* (impurity H) and 5.0 mg of *sulfapyridine CRS* (impurity J) in *dilute ammonia R3* and dilute to 10.0 mL with the same solvent.

**Reference solution (b).** Dilute 2.0 mL of reference solution (a) to 100.0 mL with *dilute ammonia R3*.

**Column:**

- **size:**  $l = 0.25$ ,  $\emptyset = 4.6$  mm;
- **stationary phase:** *octadecylsilyl silica gel for chromatography R* (5 µm).

**Mobile phase:** mobile phase B (described in the test for related substances), mobile phase A (described in the test for related substances) (30:70 V/V).

**Flow rate:** 1 mL/min.

**Detection:** spectrophotometer at 300 nm.

**Injection:** 20 µL of the test solution and reference solution (b).

**Run time:** 10 min.

**Retention time:** impurity H = about 6 min; impurity J = about 7 min.

**System suitability:** reference solution (b):

- **resolution:** minimum 2 between the peaks due to impurities H and J.

**Limits:**

- **impurities H, J:** for each impurity, not more than 0.5 times the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- **disregard limit:** 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Chlorides (2.4.4):** maximum 140 ppm.

To 1.25 g add 50 mL of *distilled water R*. Heat at about 70 °C for 5 min. Cool and filter. To 20 mL of the filtrate add 1 mL of *nitric acid R*, allow to stand for 5 min and filter to obtain a clear solution.

**Sulfates (2.4.13):** maximum 400 ppm.

To 20 mL of the filtrate prepared for the test for chlorides add 1 mL of *dilute hydrochloric acid R*, allow to stand for 5 min and filter.

**Heavy metals (2.4.8):** maximum 10 ppm.

2.0 g complies with test D. Prepare the reference solution using 2 mL of *lead standard solution (10 ppm Pb) R*.

**Loss on drying (2.2.32):** maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 2 h.

**Sulfated ash (2.4.14):** maximum 0.5 per cent, determined on 1.0 g.

**ASSAY**

Dissolve 0.150 g in 0.1 M *sodium hydroxide* and dilute to 100.0 mL with the same solvent. Transfer 5.0 mL of this solution to a 1000 mL volumetric flask containing about 750 mL of *water R*. Add 20.0 mL of 0.1 M *acetic acid* and dilute to 1000.0 mL with *water R*. Prepare a standard solution at the same time and in the same manner using 0.150 g of *sulfasalazine CRS*. Measure the absorbance (2.2.25) of the 2 solutions at the absorption maximum at 359 nm.

Calculate the content of  $C_{18}H_{14}N_4O_5S$  from the absorbances measured and the concentration of the solutions.

**STORAGE**

Protected from light.

**IMPURITIES**

**Specified impurities:** A, B, C, D, E, F, G, H, I, J.

A. 4,4'-[(4-hydroxy-1,3-phenylene)bis(diazenediyl)]bis[N-(pyridin-2-yl)benzenesulfonamide],

B. 2-hydroxy-3,5-bis[2-[4-(pyridin-2-yl)sulfamoyl]phenyl]diazanyl]benzoic acid,

C. 2-hydroxy-5-[2-[4-(2-iminopyridin-1(2H)-yl)phenyl]diazanyl]benzoic acid,

D. 4-[2-(2-hydroxyphenyl)diazanyl]-N-(pyridin-2-yl)benzenesulfonamide,

E. 2-hydroxy-4'-(pyridin-2-ylsulfamoyl)-5-[2-[4-(pyridin-2-yl)sulfamoyl]phenyl]diazanyl]biphenyl-3-carboxylic acid,

F. 2-hydroxy-3-[2-[4-(pyridin-2-yl)sulfamoyl]phenyl]diazanyl]benzoic acid,

- G. 5-[2-[4',5-bis(pyridin-2-ylsulfamoyl)biphenyl-2-yl]diazenyl]-2-hydroxybenzoic acid,

- H. 2-hydroxybenzenecarboxylic acid (salicylic acid),

- I. 2-hydroxy-5-[2-(4-sulfophenyl)diazenyl]benzoic acid,  
 J. H<sub>2</sub>N-R: 4-amino-*N*-(pyridin-2-yl)benzenesulfonamide (sulfapyridine).

01/2008:0742  
corrected 6.0

## SULFATHIAZOLE

### Sulfathiazolum

C<sub>9</sub>H<sub>9</sub>N<sub>3</sub>O<sub>2</sub>S<sub>2</sub>  
[72-14-0]

*M<sub>r</sub>* 255.3

#### DEFINITION

Sulfathiazole contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of 4-amino-*N*-(thiazol-2-yl)benzenesulfonamide, calculated with reference to the dried substance.

#### CHARACTERS

A white or slightly yellowish, crystalline powder, practically insoluble in water, slightly soluble in alcohol, practically insoluble in methylene chloride. It dissolves in dilute solutions of alkali hydroxides and in dilute mineral acids.

#### IDENTIFICATION

*First identification:* A, B.

*Second identification:* A, C, D, E.

- A. Melting point (2.2.14): 200 °C to 203 °C. Melting may occur at about 175 °C, followed by solidification and a second melting between 200 °C and 203 °C.
- B. Examine by infrared absorption spectrophotometry (2.2.24), comparing with the spectrum obtained with *sulfathiazole CRS*. Examine the substances prepared as discs. If the spectra obtained show differences, dissolve the substance to be examined and the reference substance separately in *alcohol R*, evaporate to dryness *in vacuo* and record the spectra again using the residues.

- C. Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).
- D. Dissolve about 10 mg in a mixture of 10 mL of *water R* and 2 mL of 0.1 *M sodium hydroxide* and add 0.5 mL of *copper sulfate solution R*. A greyish-blue or purple precipitate is formed.
- E. Dissolve about 5 mg in 10 mL of 1 *M hydrochloric acid*. Dilute 1 mL of the solution to 10 mL with *water R*. The solution, without further addition of acid, gives the reaction of primary aromatic amines (2.3.1).

#### TESTS

**Appearance of solution.** Dissolve 1.0 g in 10 mL of 1 *M sodium hydroxide*. The solution is clear (2.2.1) and not more intensely coloured than reference solution GY<sub>4</sub> (2.2.2, *Method II*).

**Acidity.** To 1.0 g add 50 mL of *carbon dioxide-free water R*. Heat to 70 °C for 5 min. Cool rapidly to 20 °C and filter. To 25 mL of the filtrate add 0.1 mL of *bromothymol blue solution R1*. Not more than 0.1 mL of 0.1 *M sodium hydroxide* is required to change the colour of the indicator.

**Related substances.** Examine by thin-layer chromatography (2.2.27), using *silica gel HR* as the coating substance.

*Test solution (a).* Dissolve 0.10 g of the substance to be examined in a mixture of 1 volume of *concentrated ammonia R* and 9 volumes of *alcohol R* and dilute to 10 mL with the same mixture of solvents.

*Test solution (b).* Dilute 1 mL of test solution (a) to 5 mL with a mixture of 1 volume of *concentrated ammonia R* and 9 volumes of *alcohol R*.

*Reference solution (a).* Dissolve 20 mg of *sulfathiazole CRS* in a mixture of 1 volume of *concentrated ammonia R* and 9 volumes of *alcohol R* and dilute to 10 mL with the same mixture of solvents.

*Reference solution (b).* Dissolve 50 mg of *sulfanilamide R* in a mixture of 1 volume of *concentrated ammonia R* and 9 volumes of *alcohol R* and dilute to 100 mL with the same mixture of solvents. Dilute 1 mL of this solution to 10 mL with the same mixture of solvents.

Apply to the plate 10 µL of each solution. Develop over a path of 15 cm using a mixture of 18 volumes of *ammonia R* and 90 volumes of *butanol R*. Dry the plate at 100 °C to 105 °C for 10 min and spray with a 1 g/L solution of *dimethylaminobenzaldehyde R* in *alcohol R* containing 1 per cent *V/V* of *hydrochloric acid R*. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent).

**Heavy metals** (2.4.8). 1.0 g complies with limit test C for heavy metals (20 ppm). Prepare the standard using 2 mL of *lead standard solution (10 ppm Pb) R*.

**Loss on drying** (2.2.32). Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (2.4.14). Not more than 0.1 per cent, determined on 1.0 g.

#### ASSAY

Carry out the determination of primary aromatic amino-nitrogen (2.5.8), using 0.200 g, determining the end-point electrometrically.

1 mL of 0.1 *M sodium nitrite* is equivalent to 25.53 mg of C<sub>9</sub>H<sub>9</sub>N<sub>3</sub>O<sub>2</sub>S<sub>2</sub>.

#### STORAGE

Store protected from light.

**01/2011:0790** *Reference solution (b).* Dissolve 5.0 mg of *sulfinpyrazone impurity A CRS* and 5.0 mg of *sulfinpyrazone impurity B CRS* in the solvent mixture and dilute to 5.0 mL with the solvent mixture.

## SULFINPYRAZONE

### Sulfinpyrazonum

$C_{23}H_{20}N_2O_3S$   
[57-96-5]

$M_r$  404.5

#### DEFINITION

1,2-Diphenyl-4-[2-(phenylsulfinyl)ethyl]pyrazolidine-3,5-dione.

*Content:* 99.0 per cent to 101.0 per cent (dried substance).

#### CHARACTERS

*Appearance:* white or almost white powder.

*Solubility:* very slightly soluble in water, sparingly soluble in ethanol (96 per cent). It dissolves in dilute solutions of alkali hydroxides.

#### IDENTIFICATION

*First identification:* A, C.

*Second identification:* A, B, D.

A. Melting point (2.2.16): 131 °C to 135 °C.

B. Ultraviolet and visible absorption spectrophotometry (2.2.25).

*Test solution.* Dissolve 30.0 mg in 0.01 M sodium hydroxide and dilute to 100.0 mL with the same alkaline solution. Dilute 1.0 mL of this solution to 20.0 mL with 0.01 M sodium hydroxide.

*Spectral range:* 230-350 nm.

*Absorption maximum:* at 260 nm.

*Specific absorbance at the absorption maximum:* 530 to 580.

C. Infrared absorption spectrophotometry (2.2.24).

*Comparison:* *sulfinpyrazone CRS*.

D. Dissolve about 10 mg in 3 mL of *acetone R* and add a mixture of 0.2 mL of *ferric chloride solution R2* and 3 mL of *water R*. A red to violet colour develops.

#### TESTS

**Appearance of solution in acetone.** The solution is clear (2.2.1) and its absorbance (2.2.25) at 420 nm using a path length of 4 cm is not greater than 0.10.

Dissolve 1.25 g in *acetone R* and dilute to 25 mL with the same solvent.

**Appearance of solution in 1 M sodium hydroxide.** The solution is clear (2.2.1) and its absorbance (2.2.25) at 420 nm using a path length of 4 cm is not greater than 0.15.

Dissolve 1.25 g, heating gently if necessary, in 25 mL of 1 M sodium hydroxide.

**Related substances.** Liquid chromatography (2.2.29). Prepare the solutions immediately before use.

*Solvent mixture:* *water R*, *acetonitrile R* (10:40 V/V).

*Test solution.* Dissolve 10.0 mg of the substance to be examined in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture.

*Reference solution (c).* Dilute 1.0 mL of reference solution (b) to 100.0 mL with the solvent mixture.

*Reference solution (d).* Dissolve the contents of a vial of *sulfinpyrazone for system suitability CRS* (containing impurity C) in 1.0 mL of the solvent mixture.

*Reference solution (e).* Dilute 1.0 mL of reference solution (a) to 10.0 mL with the solvent mixture.

*Column:*

– *size:*  $l = 0.125$  m,  $\varnothing = 4.6$  mm;

– *stationary phase:* end-capped octadecylsilyl silica gel for chromatography R (5  $\mu$ m).

*Mobile phase:* tetrahydrofuran for chromatography R, acetonitrile R, 0.3 per cent V/V solution of phosphoric acid R (7:35:58 V/V/V).

*Flow rate:* 2.0 mL/min.

*Detection:* spectrophotometer at 235 nm.

*Injection:* 20  $\mu$ l.

*Run time:* 7 times the retention time of sulfinpyrazone.

*Identification of impurities:* use the chromatogram supplied with *sulfinpyrazone for system suitability CRS* and the chromatogram obtained with reference solution (d) to identify the peak due to impurity C; use the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A and B.

*Relative retention* with reference to sulfinpyrazone (retention time = about 3.5 min): impurity C = about 0.8; impurity A = about 1.6; impurity B = about 4.8.

*System suitability:* reference solution (d):

– *resolution:* minimum 2.0 between the peaks due to impurity C and sulfinpyrazone.

*Limits:*

– *impurities A, B:* for each impurity, not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (1.0 per cent);

– *impurity C:* not more than twice the area of the principal peak in the chromatogram obtained with reference solution (e) (0.2 per cent);

– *unspecified impurities:* for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (e) (0.10 per cent);

– *total:* not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (2.0 per cent);

– *disregard limit:* 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (e) (0.05 per cent).

**Heavy metals** (2.4.8): maximum 10 ppm.

*Solvent mixture:* *acetone R*, *ethanol (96 per cent) R* (50:50 V/V).

0.250 g complies with test H. Prepare the reference solution using 2.5 mL of *lead standard solution (1 ppm Pb) R*.

To each solution, add 10 mL of *water R* and 2 mL of *buffer solution pH 3.5 R*.

**Loss on drying** (2.2.32): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

#### ASSAY

Dissolve 0.300 g in 25 mL of *acetone R*. Add 0.5 mL of *bromothymol blue solution R1*. Titrate with 0.1 M sodium hydroxide until the colour changes from yellow to blue.

1 mL of 0.1 M sodium hydroxide is equivalent to 40.45 mg of  $C_{23}H_{20}N_2O_3S$ .

## STORAGE

Protected from light.

## IMPURITIES

Specified impurities: A, B, C.

A. 1,2-diphenyl-4-[2-(phenylsulfonyl)ethyl]pyrazolidine-3,5-dione,

B. 1,2-diphenyl-4-[2-(phenylsulfanyl)ethyl]pyrazolidine-3,5-dione,

C. 4-hydroxy-1,2-diphenyl-4-[2-(phenylsulfinyl)ethyl]pyrazolidine-3,5-dione.

01/2008:0639  
corrected 6.0

## SULFISOMIDINE

## Sulfisomidinum

$C_{12}H_{14}N_4O_2S$   
[515-64-0]

$M_r$  278.3

## DEFINITION

Sulfisomidine contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of 4-amino-*N*-(2,6-dimethylpyrimidin-4-yl)benzenesulfonamide, calculated with reference to the dried substance.

## CHARACTERS

White or yellowish-white powder or crystals, very slightly soluble in water, slightly soluble in acetone and in alcohol. It dissolves in dilute solutions of the alkali hydroxides and in dilute mineral acids.

It melts at about 240 °C with decomposition.

## IDENTIFICATION

First identification: A, B.

Second identification: B, C, D.

A. Examine by infrared absorption spectrophotometry (2.2.24), comparing with the spectrum obtained with *sulfisomidine CRS*. Examine the substances prepared as discs.

B. Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Dissolve 50 mg with heating in 4 mL of *methanol R*. Cool and filter. Add to the filtrate 0.2 mL of a 40 g/L solution of *copper acetate R*. The solution becomes yellowish-green.

D. Dissolve about 5 mg in 10 mL of 1 M *hydrochloric acid*. Dilute 1 mL of the solution to 10 mL with *water R*. The solution, without further acidification, gives the reaction of primary aromatic amines (2.3.1).

## TESTS

**Appearance of solution.** Dissolve 1.0 g in a mixture of 5 mL of *dilute sodium hydroxide solution R* and 5 mL of *water R*. The solution is not more intensely coloured than reference solution  $Y_5$ ,  $BY_5$  or  $GY_5$  (2.2.2, *Method II*).

**Acidity.** To 1.25 g, finely powdered, add 25 mL of *carbon dioxide-free water R*. Heat at 70 °C for 5 min. Cool in a bath of iced water for about 15 min and filter. To 20 mL of the filtrate add 0.1 mL of *bromothymol blue solution R1*. Not more than 0.2 mL of 0.1 M *sodium hydroxide* is required to change the colour of the indicator.

**Related substances.** Examine by thin-layer chromatography (2.2.27), using *silica gel GF<sub>254</sub> R* as the coating substance.

**Test solution (a).** Dissolve 0.10 g of the substance to be examined in 3 mL of a mixture of 2 volumes of *concentrated ammonia R* and 48 volumes of *methanol R* and dilute to 5 mL with the same mixture of solvents.

**Test solution (b).** Dilute 1 mL of test solution (a) to 5 mL with a mixture of 2 volumes of *concentrated ammonia R* and 48 volumes of *methanol R*.

**Reference solution (a).** Dissolve 20 mg of *sulfisomidine CRS* in 3 mL of a mixture of 2 volumes of *concentrated ammonia R* and 48 volumes of *methanol R* and dilute to 5 mL with the same mixture of solvents.

**Reference solution (b).** Dilute 1.25 mL of test solution (b) to 50 mL with a mixture of 2 volumes of *concentrated ammonia R* and 48 volumes of *methanol R*.

Apply to the plate 5 µL of each solution. Develop over a path of 15 cm using a mixture of 3 volumes of *dilute ammonia R1*, 5 volumes of *water R*, 40 volumes of *nitromethane R* and 50 volumes of *dioxan R*. Dry the plate at 100 °C to 105 °C and examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent).

**Heavy metals** (2.4.8). 1.0 g complies with limit test D for heavy metals (20 ppm). Prepare the standard using 2 mL of *lead standard solution (10 ppm Pb) R*.

**Loss on drying** (2.2.32). Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (2.4.14). Not more than 0.1 per cent, determined on 1.0 g.

## ASSAY

Carry out the determination of primary aromatic amino-nitrogen (2.5.8), using 0.2500 g and determining the end-point electrometrically.

1 mL of 0.1 M *sodium nitrite* is equivalent to 27.83 mg of  $C_{12}H_{14}N_4O_2S$ .

## STORAGE

Store protected from light.

01/2008:0953 1 mL of 0.1 M sodium hydroxide is equivalent to 1.603 mg of S.

## SULFUR FOR EXTERNAL USE

### Sulfur ad usum externum

S A<sub>r</sub> 32.07  
[7704-34-9]

#### DEFINITION

*Content:* 99.0 per cent to 101.0 per cent.

#### CHARACTERS

*Appearance:* yellow powder.

*Solubility:* practically insoluble in water, soluble in carbon disulfide, slightly soluble in vegetable oils.

mp: about 120 °C.

The size of most of the particles is not greater than 20 µm and that of almost all the particles is not greater than 40 µm.

#### IDENTIFICATION

- A. Heated in the presence of air, it burns with a blue flame, emitting sulfur dioxide which changes the colour of moistened *blue litmus paper R* to red.
- B. Heat 0.1 g with 0.5 mL of *bromine water R* until decolourised. Add 5 mL of *water R* and filter. The solution gives reaction (a) of sulfates (2.3.1).

#### TESTS

**Solution S.** To 5 g add 50 mL of *carbon dioxide-free water R* prepared from *distilled water R*. Allow to stand for 30 min with frequent shaking and filter.

**Appearance of solution.** Solution S is colourless (2.2.2, *Method II*).

**Odour** (2.3.4). It has no perceptible odour of hydrogen sulfide.

**Acidity or alkalinity.** To 5 mL of solution S add 0.1 mL of *phenolphthalein solution R1*. The solution is colourless. Add 0.2 mL of 0.01 M sodium hydroxide. The solution is red. Add 0.3 mL of 0.01 M hydrochloric acid. The solution is colourless. Add 0.15 mL of *methyl red solution R*. The solution is orange-red.

**Chlorides** (2.4.4): maximum 100 ppm.

Dilute 5 mL of solution S to 15 mL with *water R*.

**Sulfates** (2.4.13): maximum 100 ppm, determined on solution S.

**Sulfides.** To 10 mL of solution S add 2 mL of *buffer solution pH 3.5 R* and 1 mL of a freshly prepared 1.6 g/L solution of *lead nitrate R* in *carbon dioxide-free water R*. Shake. After 1 min any colour in the solution is not more intense than that in a reference solution prepared at the same time using 1 mL of *lead standard solution (10 ppm Pb) R*, 9 mL of *carbon dioxide-free water R*, 2 mL of *buffer solution pH 3.5 R* and 1.2 mL of *thioacetamide reagent R*.

**Sulfated ash** (2.4.14): maximum 0.2 per cent, determined on 1.0 g.

#### ASSAY

Carry out the oxygen-flask method (2.5.10), using 60.0 mg in a 1000 mL combustion flask. Absorb the combustion products in a mixture of 5 mL of *dilute hydrogen peroxide solution R* and 10 mL of *water R*. Heat to boiling, boil gently for 2 min and cool. Using 0.2 mL of *phenolphthalein solution R* as indicator, titrate with 0.1 M sodium hydroxide until the colour changes from colourless to red. Carry out a blank titration under the same conditions.

#### STORAGE

Protected from light.

01/2008:1572

## SULFURIC ACID

### Acidum sulfuricum

H<sub>2</sub>SO<sub>4</sub> M<sub>r</sub> 98.1  
[7664-93-9]

#### DEFINITION

*Content:* 95.0 per cent *m/m* to 100.5 per cent *m/m*.

#### CHARACTERS

*Appearance:* colourless, oily liquid, very hygroscopic.

*Solubility:* miscible with water and with ethanol (96 per cent) producing intense heat.

*Relative density:* about 1.84.

#### IDENTIFICATION

- A. Carefully add 1 mL to 100 mL of *water R*. The solution is strongly acid (2.2.4).
- B. The solution obtained in identification test A gives reaction (a) of sulfates (2.3.1).

#### TESTS

**Appearance of solution.** The solution is clear (2.2.1) and colourless (2.2.2, *Method II*).

Carefully pour, while cooling, 5 mL into 30 mL of *water R* and dilute to 50 mL with the same solvent.

**Chlorides** (2.4.4): maximum 50 ppm.

Mix carefully, while cooling, 3.3 g with 30 mL of *water R*. Neutralise with *ammonia R* and dilute to 50 mL with *water R*.

**Nitrates.** Add 5 mL to 5 mL of *water R*. Cool to room temperature and add 0.5 mL of *indigo carmine solution R*. The blue colour persists for at least 1 min.

**Arsenic** (2.4.2, *Method A*): maximum 1 ppm.

Mix, while cooling, 1 g with 20 mL of *water R* and dilute to 25 mL with the same solvent.

**Iron** (2.4.9): maximum 25 ppm.

Cautiously evaporate 10.0 g and ignite to dull redness. Dissolve the ignition residue in 1 mL of *dilute hydrochloric acid R* with gentle heating and dilute to 25 mL with *water R*. Dilute 1 mL of this solution to 10 mL with *water R*.

**Heavy metals** (2.4.8): maximum 5 ppm.

4.0 g complies with test F. Prepare the reference solution using 2 mL of *lead standard solution (10 ppm Pb) R*.

#### ASSAY

Weigh accurately a ground-glass-stoppered flask containing 30 mL of *water R*. Introduce 0.2 mL, cool and weigh again. Titrate with 1 M sodium hydroxide, determining the end-point potentiometrically (2.2.20).

1 mL of 1 M sodium hydroxide is equivalent to 49.04 mg of H<sub>2</sub>SO<sub>4</sub>.

#### STORAGE

In an airtight container.

corrected 6.0

## SULINDAC

## Sulindacum

C<sub>20</sub>H<sub>17</sub>FO<sub>3</sub>S  
[38194-50-2]M<sub>r</sub> 356.4

## DEFINITION

(Z)-[5-Fluoro-2-methyl-1-[4-(methylsulfinyl)benzylidene]-1H-inden-3-yl]acetic acid.

Content: 99.0 per cent to 101.0 per cent (dried substance).

## CHARACTERS

*Appearance*: yellow, crystalline powder.*Solubility*: very slightly soluble in water, soluble in methylene chloride, sparingly soluble in ethanol (96 per cent). It dissolves in dilute solutions of alkali hydroxides.

It shows polymorphism (5.9).

## IDENTIFICATION

*First identification*: C.*Second identification*: A, B, D, E.

A. Melting point (2.2.14): 182 °C to 186 °C.

B. Ultraviolet and visible absorption spectrophotometry (2.2.25).

*Test solution*. Dissolve 50 mg in a 0.3 per cent V/V solution of hydrochloric acid R in methanol R and dilute to 100 mL with the same acid solution. Dilute 2 mL of this solution to 50 mL with a 0.3 per cent V/V solution of hydrochloric acid R in methanol R.*Spectral range*: 230-350 nm.*Absorption maxima*: at 284 nm and 327 nm.*Shoulder*: at about 258 nm.*Absorbance ratio*:  $A_{284}/A_{327} = 1.10$  to 1.20.

C. Infrared absorption spectrophotometry (2.2.24).

*Preparation*: discs.*Comparison*: sulindac CRS.

If the spectra obtained show differences, dissolve the substance to be examined and the reference substance separately in the minimum volume of hot methanol R, evaporate to dryness and record new spectra using the residues.

D. Thin-layer chromatography (2.2.27).

*Test solution*. Dissolve 10 mg of the substance to be examined in methylene chloride R and dilute to 10 mL with the same solvent.*Reference solution (a)*. Dissolve 10 mg of sulindac CRS in methylene chloride R and dilute to 10 mL with the same solvent.*Reference solution (b)*. Dissolve 10 mg of diflunisal CRS in methylene chloride R and dilute to 10 mL with the same solvent. Dilute 1 mL of this solution to 2 mL with reference solution (a).*Plate*: TLC silica gel GF<sub>254</sub> plate R.*Mobile phase*: glacial acetic acid R, methylene chloride R, acetone R (1:49:50 V/V/V).*Application*: 5 µL.*Development*: over a path of 15 cm.*Drying*: in a current of warm air.*Detection*: examine in ultraviolet light at 254 nm.*System suitability*: reference solution (b):

– the chromatogram shows 2 clearly separated principal spots.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

E. Mix about 5 mg with 45 mg of heavy magnesium oxide R and ignite in a crucible until an almost white residue is obtained (usually less than 5 min). Allow to cool, add 1 mL of water R, 0.05 mL of phenolphthalein solution R1 and about 1 mL of dilute hydrochloric acid R to render the solution colourless. Filter. Add 1.0 mL of the filtrate to a freshly prepared mixture of 0.1 mL of alizarin S solution R and 0.1 mL of zirconyl nitrate solution R. Mix, allow to stand for 5 min and compare the colour of the solution with that of a blank prepared in the same manner. The test solution is yellow and the blank is red.

## TESTS

**Related substances**. Liquid chromatography (2.2.29).*Test solution*. Dissolve 0.10 g of the substance to be examined in the mobile phase and dilute to 50.0 mL with the mobile phase.*Reference solution (a)*. Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 5.0 mL of this solution to 10.0 mL with the mobile phase.*Reference solution (b)*. Dissolve 20.0 mg of sulindac CRS (which has an assigned content of E-isomer) in the mobile phase and dilute to 10.0 mL with the mobile phase.*Column*:– size:  $l = 0.25$  m,  $\varnothing = 4.6$  mm;

– stationary phase: silica gel for chromatography R (10 µm).

*Mobile phase*: glacial acetic acid R, ethanol (96 per cent) R, ethyl acetate R, ethanol-free chloroform R (1:4:100:400 V/V/V/V).*Flow rate*: 2 mL/min.*Detection*: spectrophotometer at 280 nm.*Injection*: 20 µL.*Run time*: twice the retention time of sulindac.*Identification of peaks*: the chromatogram obtained with reference solution (b) shows a principal peak due to sulindac and a peak due to the E-isomer.*Relative retention* with reference to sulindac: E-isomer = about 1.75.

From the chromatograms obtained with the test solution and reference solution (b), determine the percentage content of E-isomer, taking into account the assigned content of this isomer in sulindac CRS.

*Limits*:

– E-isomer: maximum 0.5 per cent;

– impurities A, B, C: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

– total: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (1 per cent).

**Heavy metals** (2.4.8): maximum 10 ppm.

2.0 g complies with test D. Prepare the reference solution using 2 mL of lead standard solution (10 ppm Pb) R.

**Loss on drying** (2.2.32): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C at a pressure not exceeding 0.7 kPa.**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

## ASSAY

Dissolve 0.300 g in 50 mL of *methanol R*. Titrate with 0.1 M *sodium hydroxide*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *sodium hydroxide* is equivalent to 35.64 mg of  $C_{20}H_{17}FO_3S$ .

## STORAGE

Protected from light.

## IMPURITIES

Specified impurities: A, B, C.

A. (*E*)-[5-fluoro-2-methyl-1-[4-(methylsulfinyl)benzylidene]-1H-inden-3-yl]acetic acid,

B. X = SO<sub>2</sub>: (*Z*)-[5-fluoro-2-methyl-1-[4-(methylsulfonyl)benzylidene]-1H-inden-3-yl]acetic acid,

C. X = S: (*Z*)-[5-fluoro-2-methyl-1-[4-methylsulfanyl)benzylidene]-1H-inden-3-yl]acetic acid.

01/2008:1045  
corrected 6.0

## SULPIRIDE

## Sulpiridum

$C_{15}H_{23}N_3O_4S$   
[15676-16-1]

$M_r$  341.4

## DEFINITION

(*RS*)-*N*-[(1-Ethylpyrrolidin-2-yl)methyl]-2-methoxy-5-sulfamoylbenzamide.

Content: 98.5 per cent to 101.0 per cent (dried substance).

## CHARACTERS

Appearance: white or almost white, crystalline powder.

Solubility: practically insoluble in water, sparingly soluble in methanol, slightly soluble in ethanol (96 per cent) and in methylene chloride. It dissolves in dilute solutions of mineral acids and alkali hydroxides.

## IDENTIFICATION

First identification: A, B.

Second identification: A, C, D.

A. Melting point (2.2.14): 177 °C to 181 °C.

B. Infrared absorption spectrophotometry (2.2.24).

Preparation: discs.

Comparison: *sulpiride CRS*.

C. Examine the chromatograms obtained in test A for related substances.

Detection: examine in ultraviolet light at 254 nm.

Results: the principal spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

D. To about 1 mg in a porcelain dish, add 0.5 mL of *sulfuric acid R* and 0.05 mL of *formaldehyde solution R*. Examined in ultraviolet light at 365 nm, the solution shows blue fluorescence.

## TESTS

Appearance of solution. The solution is clear (2.2.1) and not more intensely coloured than reference solution Y<sub>6</sub> (2.2.2, Method I).

Dissolve 1.0 g in *dilute acetic acid R* and dilute to 10 mL with the same acid.

## Related substances

A. Thin-layer chromatography (2.2.27).

Test solution (a). Dissolve 0.20 g of the substance to be examined in *methanol R* and dilute to 10 mL with the same solvent. Sonicate until complete dissolution.

Test solution (b). Dilute 1 mL of test solution (a) to 10 mL with *methanol R*.

Reference solution (a). Dissolve 20 mg of *sulpiride CRS* in *methanol R* and dilute to 10 mL with the same solvent.

Reference solution (b). Dissolve 5 mg of *sulpiride impurity A CRS* in *methanol R* and dilute to 25 mL with the same solvent.

Reference solution (c). Dilute 1.0 mL of reference solution (b) to 10 mL with *methanol R*.

Plate: TLC silica gel F<sub>254</sub> plate R.

Mobile phase: concentrated ammonia R, dioxan R, methanol R, methylene chloride R (2:10:14:90 V/V/V/V).

Application: 10 µL.

Development: over a path of 10 cm.

Drying: in air.

Detection: examine in ultraviolet light at 254 nm for identification test C and then spray with *ninhydrin solution R*; heat at 100-105 °C for 15 min and examine in daylight.

Limit: test solution (a):

– *impurity A*: any spot due to *impurity A* is not more intense than the corresponding spot in the chromatogram obtained with reference solution (c) (0.1 per cent).

B. Liquid chromatography (2.2.29).

Test solution. Dissolve 0.100 g of the substance to be examined in the mobile phase and dilute to 100.0 mL with the mobile phase.

Reference solution (a). Dilute 3.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

Reference solution (b). Dissolve 10 mg of *sulpiride CRS* and 10 mg of *sulpiride impurity B CRS* in the mobile phase and dilute to 100.0 mL with the mobile phase.

Column:

– size:  $l = 0.25$  m,  $\varnothing = 4.6$  mm;

– stationary phase: octylsilyl silica gel for chromatography R (5 µm) in spherical micro-particles.

Mobile phase: mix 10 volumes of *acetonitrile R*, 10 volumes of *methanol R* and 80 volumes of a solution containing 6.8 g/L of *potassium dihydrogen phosphate R* and 1 g/L of *sodium octanesulfonate R*, adjusted to pH 3.3 using *phosphoric acid R*.

Flow rate: 1.5 mL/min.

**Detection:** spectrophotometer at 240 nm.

**Injection:** 10 µL.

**Run time:** 2.5 times the retention time of sulpiride.

**System suitability:** reference solution (b):

- **resolution:** minimum 2.5 between the peaks due to impurity B and sulpiride.

**Limit:**

- **total:** not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent).

**Chlorides (2.4.4):** maximum 100 ppm.

Shake 1.0 g with 20 mL of *water R*. Filter through a sintered-glass filter (40) (2.1.2). To 10 mL of the filtrate add 5 mL of *water R*.

**Iron (2.4.9):** maximum 10 ppm.

Ignite 1.0 g in a silica crucible. To the residue add 1 mL of 1 *M hydrochloric acid*, 3 mL of *water R* and 0.1 mL of *nitric acid R*. Heat on a water-bath for a few minutes. Place the solution in a test-tube. Rinse the crucible with 4 mL of *water R*. Collect the rinsings in the test-tube and dilute to 10 mL with *water R*.

**Heavy metals (2.4.8):** maximum 10 ppm.

1.0 g complies with test C. Prepare the reference solution using 1 mL of *lead standard solution (10 ppm Pb) R*.

**Loss on drying (2.2.32):** maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash (2.4.14):** maximum 0.1 per cent, determined on 1.0 g.

#### ASSAY

Dissolve 0.250 g in 80 mL of *anhydrous acetic acid R*. Titrate with 0.1 *M perchloric acid*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 *M perchloric acid* is equivalent to 34.14 mg of C<sub>15</sub>H<sub>23</sub>N<sub>3</sub>O<sub>4</sub>S.

#### IMPURITIES

**Specified impurities:** A.

**Other detectable impurities** (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. **Control of impurities in substances for pharmaceutical use**): B, C, D, E, F, G.

A. [(2*RS*)-1-ethylpyrrolidin-2-yl]methanamine,

B. R = O-CH<sub>3</sub>: methyl 2-methoxy-5-sulfamoylbenzoate,

C. R = O-C<sub>2</sub>H<sub>5</sub>: ethyl 2-methoxy-5-sulfamoylbenzoate,

D. R = OH: 2-methoxy-5-sulfamoylbenzoic acid,

E. R = NH<sub>2</sub>: 2-methoxy-5-sulfamoylbenzamide,

F. 1-ethyl-2-[(2-methoxy-5-sulfamoylbenzoyl)amino]methylpyrrolidine 1-oxide,

G. (*RS*)-*N*-[(1-ethylpyrrolidin-2-yl)methyl]-2-hydroxy-5-sulfamoylbenzamide.

## SULTAMICILLIN

### Sultamicillinum

C<sub>25</sub>H<sub>30</sub>N<sub>4</sub>O<sub>9</sub>S<sub>2</sub>  
[76497-13-7]

M<sub>r</sub> 594.7

#### DEFINITION

Methylene (2*S*,5*R*,6*R*)-6-[[[(2*R*)-aminophenylacetyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate (2*S*,5*R*)-3,3-dimethyl-4,4,7-trioxo-4λ<sup>6</sup>-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate.

Semi-synthetic product derived from a fermentation product.

**Content:** 96.0 per cent to 102.0 per cent (anhydrous substance).

#### CHARACTERS

**Appearance:** white or almost white, slightly hygroscopic, crystalline powder.

**Solubility:** practically insoluble in water, very slightly soluble in methanol, practically insoluble in ethanol (96 per cent).

#### IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

**Comparison:** *sultamicillin CRS*.

#### TESTS

**Specific optical rotation (2.2.7):** + 190 to + 210 (anhydrous substance).

Dissolve 0.500 g in *dimethylformamide R* and dilute to 50.0 mL with the same solvent.

**Related substances.** Liquid chromatography (2.2.29). *Prepare the solutions immediately before use or keep at 2-8 °C for not more than 6 h.*

**Solution A:** *methanol R1, acetonitrile R1* (20:80 *V/V*).

**Solution B.** Dissolve 1.56 g of *sodium dihydrogen phosphate R* in 900 mL of *water R*. Add 7.0 mL of *phosphoric acid R* and dilute to 1000 mL with *water R*.

**Blank solution:** solution B, solution A (30:70 *V/V*).

**Test solution.** Dissolve 50.0 mg of the substance to be examined in 35 mL of solution A and sonicate for about 1 min. Add 13 mL of solution B, mix and sonicate for about 1 min. Dilute to 50.0 mL with solution B and mix.

**Reference solution (a).** Dissolve 70.0 mg of *sultamicillin tosilate CRS* in 35 mL of solution A and sonicate for about 1 min. Add 13 mL of solution B, mix and sonicate for about 1 min. Dilute to 50.0 mL with solution B and mix.

**Reference solution (b).** Suspend 15 mg of *sultamicillin tosilate CRS* in 20 mL of a 0.4 g/L solution of *sodium hydroxide R* and sonicate in an ultrasonic bath for about 5 min. Add 20 mL of a 0.36 g/L solution of *hydrochloric acid R* and dilute to 100 mL with *water R*.

**Reference solution (c).** Dilute 1.0 mL of reference solution (a) to 100.0 mL with the blank solution.

**Reference solution (d).** Dissolve 17.3 mg of *ampicillin trihydrate CRS* (impurity C) and 15.0 mg of *subactam CRS* (impurity A) in *water R* and dilute to 50.0 mL with the same solvent. Dilute 1.0 mL of this solution to 100.0 mL with *water R*.

**Reference solution (e).** Dissolve 5 mg of *sultamicillin for peak identification CRS* (containing impurity G) in 7.0 mL of solution A and sonicate for about 1 min. Dilute to 10.0 mL with solution B, mix and sonicate for about 1 min.

**Column:**

- size:  $l = 0.10$  m,  $\varnothing = 4.6$  mm;
- stationary phase: *octadecylsilyl silica gel for chromatography R* (3.5  $\mu\text{m}$ );
- temperature: 25 °C.

**Mobile phase:**

- mobile phase A: 4.68 g/L solution of *sodium dihydrogen phosphate R* adjusted to pH 3.0 with *phosphoric acid R*;
- mobile phase B: *acetonitrile R1*;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 15	95 → 30	5 → 70
15 - 16	30	70
16 - 16.5	30 → 95	70 → 5
16.5 - 20	95	5

**Flow rate:** 1.0 mL/min.

**Detection:** spectrophotometer at 215 nm.

**Injection:** 5  $\mu\text{L}$  of the blank solution, the test solution and reference solutions (b), (c), (d) and (e).

**Identification of impurities:** use the chromatogram supplied with *sultamicillin for peak identification CRS* and the chromatogram obtained with reference solution (e) to identify the peak due to impurity G.

**Relative retention** with reference to *sultamicillin* (retention time = about 9.3 min): impurity A = about 0.41; *ampicillin penicilloic acid* = about 0.47; impurity B = about 0.50; impurity C = about 0.55; impurity D = about 0.94; impurity E = about 1.09; impurity F = about 1.26; impurity G = about 1.42.

**System suitability:** reference solution (b):

- resolution: minimum 2.5 between the peaks due to *ampicillin penicilloic acid* and impurity B and minimum 2.5 between the peaks due to impurities B and C.

**Limits:**

- impurity G: not more than the area of the peak due to *sultamicillin* in the chromatogram obtained with reference solution (c) (1.0 per cent);
- impurity A: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (d) (0.3 per cent);
- impurity B: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.3 per cent);
- impurity C: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (d) (0.3 per cent);

- impurities D, E, F: for each impurity, not more than 0.3 times the area of the peak due to *sultamicillin* in the chromatogram obtained with reference solution (c) (0.3 per cent);
- any other impurity: for each impurity, not more than 0.3 times the area of the peak due to *sultamicillin* in the chromatogram obtained with reference solution (c) (0.3 per cent);
- total: not more than 3 times the area of the peak due to *sultamicillin* in the chromatogram obtained with reference solution (c) (3.0 per cent);
- disregard limit: 0.1 times the area of the peak due to *sultamicillin* in the chromatogram obtained with reference solution (c) (0.1 per cent).

**Ethyl acetate.** Head-space gas chromatography (2.2.28).

**Test solution.** Dissolve 0.200 g in 7.0 mL of a mixture of 1 volume of *water R* and 99 volumes of *dimethylformamide R*.

**Reference solution.** Dissolve 0.200 g of *ethyl acetate R* in 240 mL of a mixture of 1 volume of *water R* and 99 volumes of *dimethylformamide R* and dilute to 250.0 mL with the same mixture of solvents. Dilute 5.0 mL of this solution to 7.0 mL with a mixture of 1 volume of *water R* and 99 volumes of *dimethylformamide R*.

Close the vials immediately with a tight rubber membrane stopper coated with *polytetrafluoroethylene* and secure with an aluminium crimped cap. Shake to obtain a homogeneous solution.

**Column:**

- material: fused silica;
- size:  $l = 50$  m,  $\varnothing = 0.32$  mm;
- stationary phase: *poly(dimethyl)siloxane R* (film thickness: 1.8  $\mu\text{m}$  or 3  $\mu\text{m}$ ).

**Carrier gas:** *helium for chromatography R*.

**Linear velocity:** 35 cm/s.

**Split ratio:** 1:5.

**Static head-space conditions that may be used:**

- equilibration temperature: 105 °C;
- equilibration time: 45 min;
- transfer-line temperature: 110 °C;
- pressurisation time: 30 s.

**Temperature:**

	Time (min)	Temperature (°C)
Column	0 - 6	70
	6 - 16	70 → 220
	16 - 18	220
Injection port		140
Detector		250

**Detection:** flame ionisation.

**Injection:** 1 mL.

**Relative retention** with reference to *dimethylformamide* (retention time = about 14 min): *ethyl acetate* = about 0.7.

**Limit:**

- *ethyl acetate*: maximum 2.5 per cent.

**Heavy metals** (2.4.8): maximum 20 ppm.

Dissolve 2.0 g in a mixture of 40 volumes of *methanol R* and 60 volumes of *acetonitrile R* and dilute to 20.0 mL with the same mixture of solvents. 12 mL of the solution complies with test B. Prepare the reference solution using lead standard solution (2 ppm Pb) obtained by diluting *lead standard solution (100 ppm Pb) R* with a mixture of 40 volumes of *methanol R* and 60 volumes of *acetonitrile R*.

**Water** (2.5.12): maximum 1.0 per cent, determined on 0.50 g.

**Sulfated ash (2.4.14):** maximum 0.1 per cent, determined on 1.0 g.

#### ASSAY

Liquid chromatography (2.2.29) as described in the test for related substances with the following modifications.

**Injection:** test solution and reference solution (a).

Calculate the percentage content of sultamicillin ( $C_{25}H_{30}N_4O_9S_2$ ) from the declared content of  $C_{25}H_{30}N_4O_9S_2$  in *sultamicillin tosilate CRS* and by multiplying the sultamicillin tosilate content by 0.7752.

#### STORAGE

In an airtight container.

#### IMPURITIES

**Specified impurities:** A, B, C, D, E, F, G.

- A. (2*S*,5*R*)-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid 4,4-dioxide (sulbactam),

- B. 4-methylbenzenesulfonic acid (*p*-toluenesulfonic acid),

- C. (2*S*,5*R*,6*R*)-6-[[[(2*R*)-2-amino-2-phenylacetyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid (ampicillin),

- D. [[(2*R*)-aminophenylacetyl]amino] [(4*S*)-4-[[[(2*S*,5*R*)-3,3-dimethyl-4,4,7-trioxo-4λ<sup>6</sup>-thia-1-azabicyclo[3.2.0]hept-2-yl]carbonyl]oxy]methoxy]carbonyl]-5,5-dimethylthiazolidin-2-yl]acetic acid (penicilloic acids of sultamicillin),

- E. methylene (2*S*,5*R*,6*R*)-3,3-dimethyl-6-[[[(2*R*)-[(1-methyl-4-oxopentylidene)amino]phenylacetyl]amino]-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate (2*S*,5*R*)-3,3-dimethyl-7-oxo-4-oxa-1-azabicyclo[3.2.0]heptane-2-carboxylate,

- F. methylene (2*S*,5*R*,6*R*)-6-[[[(2*R*)-[[[(2*S*,5*R*,6*R*)-6-[[[(2*R*)-aminophenylacetyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]hept-2-yl]carbonyl]amino]phenylacetyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate (2*S*,5*R*)-3,3-dimethyl-4,4,7-trioxo-4λ<sup>6</sup>-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate (ampicillin sultamicillin amide),

- G. methylene (2*S*,5*R*,6*R*)-6-[[[(2*R*)-[[[(2*R*)-aminophenylacetyl]amino] [(4*S*)-4-[[[(2*S*,5*R*)-3,3-dimethyl-4,4,7-trioxo-4λ<sup>6</sup>-thia-1-azabicyclo[3.2.0]hept-2-yl]carbonyl]oxy]methoxy]carbonyl]-5,5-dimethylthiazolidin-2-yl]acetyl]amino]phenylacetyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate (2*S*,5*R*)-3,3-dimethyl-4,4,7-trioxo-4λ<sup>6</sup>-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate (sultamicillin dimer).

## SULTAMICILLIN TOSILATE DIHYDRATE

### Sultamicillini tosilas dihydricus

$C_{32}H_{38}N_4O_{12}S_3 \cdot 2H_2O$

$M_r$  803

#### DEFINITION

4-Methylbenzenesulfonate of methylene (2*S*,5*R*,6*R*)-6-[[[(2*R*)-aminophenylacetyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate (2*S*,5*R*)-3,3-dimethyl-4,4,7-trioxo-4λ<sup>6</sup>-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate dihydrate.

Semi-synthetic product derived from a fermentation product.

**Content:** 95.0 per cent to 102.0 per cent (anhydrous substance).

#### CHARACTERS

**Appearance:** white or almost white, crystalline powder.

**Solubility:** practically insoluble in water, sparingly soluble in ethanol (96 per cent).

#### IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

Comparison: sultamicillin tosilate CRS.

#### TESTS

**Specific optical rotation** (2.2.7): + 178 to + 195 (anhydrous substance).

Dissolve 1.000 g in *dimethylformamide R* and dilute to 50.0 mL with the same solvent.

**Related substances.** Liquid chromatography (2.2.29). Prepare the solutions immediately before use or keep at 2-8 °C for not more than 6 h.

**Solution A:** *methanol R1*, *acetonitrile R1* (20:80 V/V).

**Solution B.** Dissolve 1.56 g of *sodium dihydrogen phosphate R* in 900 mL of *water R*. Add 7.0 mL of *phosphoric acid R* and dilute to 1000 mL with *water R*.

**Blank solution:** solution B, solution A (30:70 V/V).

**Test solution.** Dissolve 70.0 mg of the substance to be examined in 35 mL of solution A and sonicate for about 1 min. Add 13 mL of solution B, mix and sonicate for about 1 min. Dilute to 50.0 mL with solution B and mix.

**Reference solution (a).** Dissolve 70.0 mg of *sultamicillin tosilate CRS* in 35 mL of solution A and sonicate for about 1 min. Add 13 mL of solution B, mix and sonicate for about 1 min. Dilute to 50.0 mL with solution B and mix.

**Reference solution (b).** Suspend 15 mg of the substance to be examined in 20 mL of a 0.4 g/L solution of *sodium hydroxide R* and sonicate in an ultrasonic bath for about 5 min. Add 20 mL of a 0.36 g/L solution of *hydrochloric acid R* and dilute to 100.0 mL with *water R*.

**Reference solution (c).** Dissolve 0.200 g of the substance to be examined in 70.0 mL of solution A and sonicate for about 1 min. Add 25.0 mL of solution B, mix and sonicate for about 1 min. Dilute to 100.0 mL with solution B and mix. Dilute 1.0 mL of this solution to 100.0 mL with the blank solution.

**Reference solution (d).** Dissolve 32.3 mg of *ampicillin trihydrate CRS* (impurity B) and 7.0 mg of *subactam CRS* (impurity A) in *water R* and dilute to 1000 mL with the same solvent.

**Column:**

- size:  $l = 0.10$  m,  $\varnothing = 4.6$  mm;
- stationary phase: *octadecylsilyl silica gel for chromatography R* (3.5  $\mu$ m);
- temperature: 25 °C.

**Mobile phase:**

- mobile phase A: 4.68 g/L solution of *sodium dihydrogen phosphate R* adjusted to pH 3.0 with *phosphoric acid R*;
- mobile phase B: *acetonitrile R1*;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 15	95 → 30	5 → 70
15 - 16	30	70
16 - 16.5	30 → 95	70 → 5
16.5 - 20	95	5

**Flow rate:** 1.0 mL/min.

**Detection:** spectrophotometer at 215 nm.

**Injection:** 5  $\mu$ L of the blank solution, the test solution and reference solutions (b), (c) and (d).

**Relative retention** with reference to sultamicillin (retention time = about 9.3 min): impurity A = about 0.41; ampicillin penicilloic acid = about 0.47; tosilate = about 0.50; impurity B = about 0.55; impurity C = about 0.94; impurity D = about 1.09; impurity F = about 1.23; impurity E = about 1.26; impurity G = about 1.42.

**System suitability:** reference solution (b):

- resolution: minimum 2.5 between the peaks due to ampicillin penicilloic acid and tosilate and minimum 2.5 between the peaks due to tosilate and impurity B.

**Limits:**

- impurity B: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (d) (2.0 per cent);
- impurity A: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (d) (0.5 per cent);
- impurities C, D, E, F, G: for each impurity, not more than 0.5 times the area of the peak due to sultamicillin in the chromatogram obtained with reference solution (c) (0.5 per cent);
- any other impurity: for each impurity, not more than 0.5 times the area of the peak due to sultamicillin in the chromatogram obtained with reference solution (c) (0.5 per cent);
- total: not more than 4 times the area of the peak due to sultamicillin in the chromatogram obtained with reference solution (c) (4.0 per cent);
- disregard limit: 0.1 times the area of the peak due to sultamicillin in the chromatogram obtained with reference solution (c) (0.1 per cent).

**Ethyl acetate.** Head space gas chromatography (2.2.28).

**Test solution.** Dissolve 0.200 g in 7.0 mL of a mixture of 1 volume of *water R* and 99 volumes of *dimethylformamide R*.

**Reference solution.** Dissolve 0.200 g of *ethyl acetate R* in 240 mL of a mixture of 1 volume of *water R* and 99 volumes of *dimethylformamide R* and dilute to 250.0 mL with the same mixture of solvents. Dilute 5.0 mL of this solution to 7.0 mL with a mixture of 1 volume of *water R* and 99 volumes of *dimethylformamide R*.

Immediately close the vials with a tight rubber membrane stopper coated with polytetrafluoroethylene and secure with an aluminium crimped cap. Shake to obtain a homogeneous solution.

**Column:**

- material: fused silica;
- size:  $l = 50$  m,  $\varnothing = 0.32$  mm;
- stationary phase: *poly(dimethyl)siloxane R* (film thickness: 1.8  $\mu$ m or 3  $\mu$ m).

**Carrier gas:** helium for chromatography R.

**Linear velocity:** 35 cm/s.

**Split ratio:** 1:5.

**Static head-space conditions that may be used:**

- equilibration temperature: 105 °C;
- equilibration time: 45 min;
- transfer-line temperature: 110 °C;
- pressurisation time: 30 s.

**Temperature:**

	Time (min)	Temperature (°C)
Column	0 - 6	70
	6 - 16	70 → 220
	16 - 18	220
Injection port		140
Detector		250

**Detection:** flame ionisation.

**Injection:** 1 mL.

**Relative retention** with reference to dimethylformamide (retention time = about 14 min): ethyl acetate = about 0.7.

**Limit:**

– *ethyl acetate*: maximum 2.0 per cent.

**Heavy metals (2.4.8):** maximum 20 ppm.

Dissolve 2.0 g in a mixture of 40 volumes of *methanol R* and 60 volumes of *acetonitrile R* and dilute to 20.0 mL with the same mixture of solvents. 12 mL of the solution complies with test B. Prepare the reference solution using lead standard solution (2 ppm Pb) obtained by diluting *lead standard solution (100 ppm Pb) R* with a mixture of 40 volumes of *methanol R* and 60 volumes of *acetonitrile R*.

**Water (2.5.12):** 4.0 per cent to 6.0 per cent, determined on 0.200 g.

**Sulfate ash (2.4.14):** maximum 0.2 per cent, determined on 1.0 g.

**ASSAY**

Liquid chromatography (2.2.29) as described in the test for related substances with the following modification.

**Injection:** test solution and reference solution (a).

Calculate the percentage content of sultamicillin tosylate ( $C_{32}H_{38}N_4O_{12}S_3$ ) from the declared content of *sultamicillin tosylate CRS*.

**STORAGE**

In an airtight container.

**IMPURITIES**

**Specified impurities:** A, B, C, D, E, F, G.

A. (2*S*,5*R*)-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid 4,4-dioxide (sulbactam),

B. (2*S*,5*R*,6*R*)-6-[(2*R*)-2-amino-2-phenylacetyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid (ampicillin),

C. [(2*R*)-aminophenylacetyl]amino][(4*S*)-4-[[[(2*S*,5*R*)-3,3-dimethyl-4,4,7-trioxo-4λ<sup>6</sup>-thia-1-azabicyclo[3.2.0]hept-2-yl]carbonyl]oxy]methoxy]carbonyl]-5,5-dimethylthiazolidin-2-yl]acetic acid (penicilloic acids of sultamicillin),

D. methylene (2*S*,5*R*,6*R*)-3,3-dimethyl-6-[(2*R*)-[(1-methyl-4-oxopentylidene)amino]phenylacetyl]amino]-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate (2*S*,5*R*)-3,3-dimethyl-7-oxo-4-oxa-1-azabicyclo[3.2.0]heptane-2-carboxylate,

E. methylene bis[(2*S*,5*R*)-3,3-dimethyl-4,4,7-trioxo-4λ<sup>6</sup>-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate] (sulbactam methylene ester),

F. methylene (2*S*,5*R*,6*R*)-6-[(2*R*)-[[[(2*S*,5*R*,6*R*)-6-[(2*R*)-aminophenylacetyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]hept-2-yl]carbonyl]amino]phenylacetyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate (2*S*,5*R*)-3,3-dimethyl-4,4,7-trioxo-4λ<sup>6</sup>-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate (ampicillin sultamicillin amide),

G. methylene (2*S*,5*R*,6*R*)-6-[(2*R*)-[[[(2*R*)-amino-phenylacetyl]amino][(4*S*)-4-[[[(2*S*,5*R*)-3,3-dimethyl-4,4,7-trioxo-4λ<sup>6</sup>-thia-1-azabicyclo[3.2.0]hept-2-yl]carbonyl]oxy]methoxy]carbonyl]-5,5-dimethylthiazolidin-2-yl]acetyl]amino]phenylacetyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate (2*S*,5*R*)-3,3-dimethyl-4,4,7-trioxo-4λ<sup>6</sup>-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate (sultamicillin dimer).

01/2009:1573

**SUMATRIPTAN SUCCINATE**

## Sumatriptani succinas

$C_{18}H_{27}N_3O_6S$   
[103628-48-4]

$M_r$  413.5

**DEFINITION**

[3-[2-(Dimethylamino)ethyl]-1*H*-indol-5-yl]-*N*-methylmethanesulfonamide hydrogen butanedioate.

**Content:** 97.5 per cent to 102.0 per cent (anhydrous substance).

**CHARACTERS**

**Appearance:** white or almost white powder.

**Solubility:** freely soluble in water, sparingly soluble in methanol, practically insoluble in methylene chloride.

## IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

Preparation: discs.

Comparison: sumatriptan succinate CRS.

## TESTS

**Solution S.** Dissolve 1.0 g in carbon dioxide-free water R and dilute to 25.0 mL with the same solvent.

**pH** (2.2.3): 4.5 to 5.3.

Dilute 2.5 mL of solution S to 10 mL with carbon dioxide-free water R.

**Absorbance** (2.2.25): maximum 0.10, measured at 440 nm on solution S.

**Impurities A and H.** Liquid chromatography (2.2.29).

**Test solution.** Dissolve 30.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 mL with the mobile phase.

**Reference solution (a).** Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

**Reference solution (b).** Dissolve the contents of a vial of sumatriptan for system suitability CRS (containing impurities A and H) in the mobile phase and dilute to 1 mL with the mobile phase.

**Column:**

- size:  $l = 0.25$  m,  $\emptyset = 4.6$  mm;
- stationary phase: silica gel for chromatography R (5  $\mu$ m).

**Mobile phase:** mix 10 volumes of a 771 g/L solution of ammonium acetate R and 90 volumes of methanol R.

**Flow rate:** 2.0 mL/min.

**Detection:** spectrophotometer at 282 nm.

**Injection:** 20  $\mu$ L.

**Run time:** 5 times the retention time of sumatriptan.

**Relative retention** with reference to sumatriptan (retention time = about 2.5 min): impurity A = about 2.2; impurity H = about 3.0.

**System suitability:** reference solution (b):

- the chromatogram is similar to the chromatogram supplied with sumatriptan for system suitability CRS;
- resolution: minimum 3.0 between the peaks due to impurities A and H.

**Limits:**

- correction factor: for the calculation of content, multiply the peak area of impurity A by 0.6;
- impurity A: not more than 6 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.6 per cent);
- impurity H: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent).

**Related substances.** Liquid chromatography (2.2.29).

**Solution A.** Dissolve 2.925 g of sodium dihydrogen phosphate R in 600 mL of water R, adjust to pH 6.5 with strong sodium hydroxide solution R, dilute to 750 mL with water R, add 250 mL of acetonitrile R and mix.

**Test solution (a).** Dissolve 30.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 mL with the mobile phase.

**Test solution (b).** Dissolve 15.0 mg of the substance to be examined in solution A and dilute to 100.0 mL with solution A.

**Reference solution (a).** Dilute 1.0 mL of test solution (a) to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

**Reference solution (b).** Dissolve the contents of a vial of sumatriptan impurity mixture CRS (containing impurities B, C, D and E) in the mobile phase and dilute to 1 mL with the mobile phase.

**Reference solution (c).** Dissolve 15.0 mg of sumatriptan succinate CRS in solution A and dilute to 100.0 mL with solution A.

**Column:**

- size:  $l = 0.25$  m,  $\emptyset = 4$  mm;
- stationary phase: octadecylsilyl silica gel for chromatography R (5  $\mu$ m).

**Mobile phase:** mix 25 volumes of acetonitrile R with 75 volumes of a solution prepared as follows: dissolve 0.970 g of dibutylamine R, 0.735 g of phosphoric acid R and 2.93 g of sodium dihydrogen phosphate R in 750 mL of water R, adjust to pH 6.5 with strong sodium hydroxide solution R and dilute to 1000 mL with water R.

**Flow rate:** 1.5 mL/min.

**Detection:** spectrophotometer at 282 nm.

**Injection:** 10  $\mu$ L of test solution (a) and reference solutions (a) and (b).

**Run time:** 4 times the retention time of sumatriptan.

**Identification of impurities:** use the chromatogram obtained with reference solution (b) and the chromatogram supplied with sumatriptan impurity mixture CRS to identify the peaks due to impurities B, C, D and E.

**Relative retention** with reference to sumatriptan (retention time = about 7 min): impurity E = about 0.5; impurity B = about 0.6; impurity D = about 0.7; impurity C = about 0.8.

**System suitability:** reference solution (b):

- resolution: minimum 1.5 between the peaks due to impurity C and sumatriptan;
- the chromatogram shows 5 clearly separated peaks.

**Limits:**

- impurities B, C, D: for each impurity, not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- impurity E: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- unspecified impurities: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- total: not more than 6 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.6 per cent);
- disregard limit: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Water** (2.5.12): maximum 1.0 per cent, determined on 0.500 g.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

## ASSAY

Liquid chromatography (2.2.29) as described in the test for related substances with the following modification.

**Injection:** test solution (b) and reference solution (c).

Calculate the percentage content of  $C_{18}H_{27}N_3O_6S$  from the declared content of sumatriptan succinate CRS.

## STORAGE

Protected from light.

## IMPURITIES

**Specified impurities:** A, B, C, D, E, H.

**Other detectable impurities** (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use*

(2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*: F, G.

01/2010:1371

## SUNFLOWER OIL, REFINED

## Helianthi annui oleum raffinatum

## DEFINITION

Fatty oil obtained from the seeds of *Helianthus annuus* L. by mechanical expression or by extraction. It is then refined. A suitable antioxidant may be added.

## CHARACTERS

*Appearance*: clear, light yellow liquid.

*Solubility*: practically insoluble in water and in ethanol (96 per cent), miscible with light petroleum (bp: 40-60 °C).

*Relative density*: about 0.921.

*Refractive index*: about 1.474.

## IDENTIFICATION

Identification of fatty oils by thin-layer chromatography (2.3.2).

*Results*: the chromatogram obtained is similar to the corresponding chromatogram shown in Figure 2.3.2.-1.

## TESTS

**Acid value** (2.5.1): maximum 0.5, determined on 10.0 g.

**Peroxide value** (2.5.5, Method A): maximum 10.0.

**Unsaponifiable matter** (2.5.7): maximum 1.5 per cent, determined on 5.0 g.

**Alkaline impurities** (2.4.19). It complies with the test.

**Composition of fatty acids** (2.4.22, Method A). Use the mixture of calibrating substances in Table 2.4.22.-3.

*Composition of the fatty-acid fraction of the oil*:

- *palmitic acid*: 4.0 per cent to 9.0 per cent,
- *stearic acid*: 1.0 per cent to 7.0 per cent,
- *oleic acid*: 14.0 per cent to 40.0 per cent,
- *linoleic acid*: 48.0 per cent to 74.0 per cent.

**Water** (2.5.32): maximum 0.1 per cent, determined on 1.00 g.

## STORAGE

In an airtight, well-filled container, protected from light.

## LABELLING

The label states whether the oil is obtained by mechanical expression or by extraction.

01/2008:0248

## SUXAMETHONIUM CHLORIDE

## Suxamethonii chloridum

$C_{14}H_{30}Cl_2N_2O_4 \cdot 2H_2O$   
[6101-15-1]

$M_r$  397.3

## DEFINITION

Suxamethonium chloride contains not less than 98.0 per cent and not more than the equivalent of 102.0 per cent of 2,2'-[butanedioylbis(oxy)]bis(*N,N,N*-trimethylethanaminium) dichloride, calculated with reference to the anhydrous substance.

## CHARACTERS

A white or almost white, crystalline powder, hygroscopic, freely soluble in water, slightly soluble in alcohol.

It melts at about 160 °C, determined without previous drying.

- A. [3-[2-(dimethylamino)ethyl]-2-[[3-[2-(dimethylamino)ethyl]-1H-indol-5-yl]methyl]-1H-indol-5-yl]-N-methylmethanesulfonamide,

- B. R1 = R2 = H: *N*-methyl[3-[2-(methylamino)ethyl]-1H-indol-5-yl]methanesulfonamide,

- C. R1 = CH<sub>2</sub>-OH, R2 = CH<sub>3</sub>: [3-[2-(dimethylamino)ethyl]-1-(hydroxymethyl)-1H-indol-5-yl]-N-methylmethanesulfonamide,

- D. *N,N*-dimethyl-2-[5-[(methylsulfamoyl)methyl]-1H-indol-3-yl]ethanamine *N*-oxide,

- E. [3-(2-aminoethyl)-1H-indol-5-yl]-N-methylmethanesulfonamide,

- F. R = H: *N*-methyl(2,3,4,9-tetrahydro-1H-pyrido[3,4-*b*]indol-6-yl)methanesulfonamide,

- G. R = CH<sub>3</sub>: *N*-methyl(2-methyl-2,3,4,9-tetrahydro-1H-pyrido[3,4-*b*]indol-6-yl)methanesulfonamide,

- H. [3-[2-(dimethylamino)ethyl]-1-[[3-[2-(dimethylamino)ethyl]-1H-indol-5-yl]methyl]-1H-indol-5-yl]-N-methylmethanesulfonamide.

01/2008:1574  
corrected 6.0

## IDENTIFICATION

First identification: A, D.

Second identification: B, C, D.

A. Examine by infrared absorption spectrophotometry (2.2.24), comparing with the spectrum obtained with *suxamethonium chloride* CRS. Examine the substances prepared as discs.

B. To 1 mL of solution S (see Tests) add 9 mL of *water R*, 10 mL of *dilute sulfuric acid R* and 30 mL of *ammonium reineckate solution R*. A pink precipitate is formed. Allow to stand for 30 min, filter, wash with *water R*, with *alcohol R* and then with *ether R* and dry at 80 °C. The melting point (2.2.14) of the precipitate is 180 °C to 185 °C.

C. Dissolve about 25 mg in 1 mL of *water R* and add 0.1 mL of a 10 g/L solution of *cobalt chloride R* and 0.1 mL of *potassium ferrocyanide solution R*. A green colour is produced.

D. About 20 mg gives reaction (a) of chlorides (2.3.1).

## TESTS

**Solution S.** Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 20 mL with the same solvent.

**Appearance of solution.** Solution S is clear (2.2.1). Dilute 4 mL of solution S to 10 mL with *water R*. The solution is colourless (2.2.2, *Method II*).

**pH** (2.2.3). Dilute 1 mL of solution S to 10 mL with *carbon dioxide-free water R*. The pH of the solution is 4.0 to 5.0.

**Choline chloride.** Examine by thin-layer chromatography (2.2.27), using *cellulose for chromatography R1* as the coating substance.

**Test solution.** Dissolve 0.4 g of the substance to be examined in *methanol R* and dilute to 10 mL with the same solvent.

**Reference solution.** Dissolve 0.4 g of *suxamethonium chloride* CRS and 2 mg of *choline chloride R* in *methanol R* and dilute to 10 mL with the same solvent.

Apply to the plate 5 µL of each solution. Prepare the mobile phase as follows: shake together for 10 min, 10 volumes of *anhydrous formic acid R*, 40 volumes of *water R* and 50 volumes of *butanol R*; allow to stand and use the upper layer. Develop over a path of 15 cm. Dry the plate in a current of air and spray with *potassium iodobismuthate solution R*. Any spot in the chromatogram obtained with the test solution, apart from the principal spot, is not more intense than the spot corresponding to choline chloride in the chromatogram obtained with the reference solution (0.5 per cent). The test is not valid unless the chromatogram obtained with the reference solution shows two clearly separated spots.

**Water** (2.5.12). 8.0 per cent to 10.0 per cent, determined on 0.30 g by the semi-micro determination of water.

**Sulfated ash** (2.4.14). Not more than 0.1 per cent, determined on 1.0 g.

## ASSAY

Dissolve 0.150 g in 50 mL of *acetic anhydride R*. Titrate with 0.1 M *perchloric acid*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *perchloric acid* is equivalent to 18.07 mg of  $C_{14}H_{30}Cl_2N_2O_4$ .

## STORAGE

Store in an airtight container, protected from light.

## SUXIBUZONE

## Suxibuzonum

$C_{24}H_{26}N_2O_6$   
[27470-51-5]

$M_r$  438.5

## DEFINITION

4-[(4-Butyl-3,5-dioxo-1,2-diphenylpyrazolidin-4-yl)methoxy]-4-oxobutanoic acid.

**Content:** 99.0 per cent to 101.0 per cent (dried substance).

## CHARACTERS

**Appearance:** white or almost white, crystalline powder.

**Solubility:** practically insoluble in water, freely soluble in acetone, soluble in ethanol (96 per cent), practically insoluble in cyclohexane.

## IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

**Comparison:** *suxibuzone* CRS.

## TESTS

**Appearance of solution.** The solution is clear (2.2.1) and colourless (2.2.2, *Method II*).

Dissolve 1 g in *anhydrous ethanol R* and dilute to 20 mL with the same solvent.

**Related substances.** Liquid chromatography (2.2.29).

**Test solution.** Dissolve 0.10 g of the substance to be examined in *acetonitrile R* and dilute to 25.0 mL with the same solvent.

**Reference solution (a).** Dissolve 2.8 mg of *phenylbutazone* CRS (impurity A), 2.8 mg of *suxibuzone impurity B* CRS and 2.8 mg of *suxibuzone impurity C* CRS in *acetonitrile R* and dilute to 10.0 mL with the same solvent. Dilute 1.0 mL of the solution to 10.0 mL with *acetonitrile R*.

**Reference solution (b).** Dissolve 4 mg of *phenylbutazone* CRS (impurity A) in *acetonitrile R* and dilute to 100.0 mL with the same solvent. Dilute 1.0 mL of the solution to 10.0 mL with *acetonitrile R*.

**Reference solution (c).** Dissolve 10 mg of *phenylbutazone* CRS (impurity A) in *acetonitrile R* and dilute to 25.0 mL with the same solvent. Mix 10.0 mL of this solution with 1.0 mL of the test solution and dilute the mixture to 25.0 mL with *acetonitrile R*.

**Column:**

- size:  $l = 0.125$  m,  $\varnothing = 4.0$  mm;
- stationary phase: octadecylsilyl silica gel for chromatography R (5 µm).

**Mobile phase:** mix 44 volumes of *acetonitrile R* and 56 volumes of a solution prepared as follows: dissolve 6.7 g of *citric acid R* and 2.4 g of *tris(hydroxymethyl)aminomethane R* in 950 mL of *water R*, adjust to pH 3.0 with *citric acid R* and dilute to 1000 mL with *water R*.

**Flow rate:** 1 mL/min.

**Detection:** spectrophotometer at 250 nm.

**Injection:** 10 µL.

**Relative retention** with reference to *suxibuzone* (retention time = about 7 min): impurity C = 0.7; impurity A = 1.4; impurity B = 3.3.

*System suitability*: reference solution (c):

- *resolution*: minimum of 2.0 between the peaks due to suxibuzone and impurity A.

*Limits*:

- *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.7 per cent);
- *impurity B*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.7 per cent);
- *impurity C*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.7 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- *total*: not more than 10 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);
- *disregard limit*: 0.1 times the area of the peak due to impurity A in the chromatogram obtained with reference solution (a) (0.07 per cent).

**Heavy metals** (2.4.8): maximum 10 ppm.

2.0 g complies with test C. Prepare the reference solution using 2 mL of *lead standard solution* (10 ppm Pb) R.

**Loss on drying** (2.2.32): maximum 0.5 per cent, determined on 1.000 g by drying in an oven *in vacuo* at 60 °C.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

#### ASSAY

Dissolve 0.400 g in previously neutralised *anhydrous ethanol* R and dilute to 10 mL with the same solvent. Carry out a potentiometric titration (2.2.20) using 0.1 M sodium hydroxide. 1 mL of 0.1 M sodium hydroxide is equivalent to 43.85 mg of  $C_{24}H_{26}N_2O_6$ .

#### STORAGE

Protected from light.

#### IMPURITIES

*Specified impurities*: A, B, C.

A. 4-butyl-1,2-diphenylpyrazolidine-3,5-dione (phenylbutazone),

B. R = CO-CH<sub>2</sub>-CH<sub>2</sub>-CO-O-CH<sub>2</sub>-CH<sub>3</sub>: (4-butyl-3,5-dioxo-1,2-diphenylpyrazolidin-4-yl)methyl ethyl butanedioate,

C. R = H: 4-butyl-4-(hydroxymethyl)-1,2-diphenyl-1,2-dihydro-4H-pyrazole-3,5-dione.

01/2011:0438 *Solubility*: practically insoluble in water, in ethanol (96 per cent) and in dilute solutions of acids and alkali hydroxides.

## TALC

### Talcum

[14807-96-6]

#### DEFINITION

Powdered, selected, natural, hydrated magnesium silicate. Pure talc has the formula  $\text{Mg}_3\text{Si}_4\text{O}_{10}(\text{OH})_2$  ( $M_r$  379.3). It may contain variable amounts of associated minerals among which chlorites (hydrated aluminium and magnesium silicates), magnesite (magnesium carbonate), calcite (calcium carbonate) and dolomite (calcium and magnesium carbonate) are predominant.

#### PRODUCTION

Talc derived from deposits that are known to contain associated asbestos is not suitable for pharmaceutical use. The manufacturer is responsible for demonstrating by the test for amphiboles and serpentines that the product is free from asbestos. The presence of amphiboles and of serpentines is revealed by X-ray diffraction or by infrared spectrophotometry (see A and B). If detected, the specific morphological criteria of asbestos are investigated by a suitable method of optical microscopy to determine whether tremolite asbestos or chrysotile is present, as described below.

##### A. Infrared absorption spectrophotometry (2.2.24).

*Preparation*: discs of *potassium bromide R*.

In the range  $740\text{ cm}^{-1}$  to  $760\text{ cm}^{-1}$  using scale expansion, any absorption band at  $758 \pm 1\text{ cm}^{-1}$  may indicate the presence of tremolite or of chlorite. If the absorption band remains after ignition of the substance to be examined at  $850 \pm 50\text{ }^\circ\text{C}$  for at least 30 min, it indicates the presence of the tremolite. In the range  $600\text{ cm}^{-1}$  to  $650\text{ cm}^{-1}$  using scale expansion, any absorption band or shoulder may indicate the presence of serpentines.

##### B. X-ray diffraction.

*Preparation*: place the sample on the sample holder; pack and smooth its surface with a polished glass microscope slide.

*Radiation*: Cu  $K\alpha$  monochromatic, 40 kV, 24-30 mA.

*Incident slit*:  $1^\circ$ .

*Detection slit*:  $0.2^\circ$ .

*Goniometer speed*:  $1/10^\circ$   $2\theta/\text{min}$ .

*Scanning range*:  $10\text{-}13^\circ$   $2\theta$  and  $24\text{-}26^\circ$   $2\theta$ .

*Sample*: not oriented.

*Results*: the presence of amphiboles is detected by a diffraction peak at  $10.5 \pm 0.1^\circ$   $2\theta$ , the presence of serpentines is detected by diffraction peaks at  $24.3 \pm 0.1^\circ$   $2\theta$  and at  $12.1 \pm 0.1^\circ$   $2\theta$ .

If, by one of the 2 methods, amphiboles and/or serpentine are detected, examine by a suitable method of optical microscopy to determine the asbestos character.

The presence of asbestos is shown if the following 2 criteria are met:

- a range of length to width ratios of 20:1 to 100:1, or higher for fibres longer than  $5\text{ }\mu\text{m}$ ;
  - capability of splitting into very thin fibrils;
- and if at least 2 of the following 4 criteria are met:
- parallel fibres occurring in bundles;
  - fibre bundles displaying frayed ends;
  - fibres in the form of thin needles;
  - matted masses of individual fibres and/or fibres showing curvature.

#### CHARACTERS

*Appearance*: light, homogeneous, white or almost white powder, greasy to the touch (non abrasive).

#### IDENTIFICATION

*First identification*: A.

*Second identification*: B, C.

##### A. Infrared absorption spectrophotometry (2.2.24).

*Preparation*: discs of *potassium bromide R*.

*Absorption bands*: at  $3677 \pm 2\text{ cm}^{-1}$ ,  $1018 \pm 2\text{ cm}^{-1}$  and  $669 \pm 2\text{ cm}^{-1}$ .

B. In a platinum crucible, melt a mixture of 0.2 g of *anhydrous sodium carbonate R* and 2.0 g of *potassium carbonate R*. To the melted mass add 0.1 g of the substance to be examined and heat until the mixture is completely melted. Allow to cool and transfer the melted mass into an evaporating dish with 50 mL of hot *water R*. Add *hydrochloric acid R* until effervescence ceases. Add 10 mL of *hydrochloric acid R* and evaporate to dryness on a water-bath. Allow to cool. Add 20 mL of *water R*, heat to boiling and filter (the residue is used for identification test C). To 5 mL of the filtrate add 1 mL of *ammonia R* and 1 mL of *ammonium chloride solution R* and filter. To the filtrate add 1 mL of *disodium hydrogen phosphate solution R*. A white, crystalline precipitate is formed.

C. The residue obtained in identification test B gives the reaction of silicates (2.3.1).

#### TESTS

**Solution S1.** Weigh 10.0 g into a conical flask fitted with a reflux condenser, add 50 mL of *0.5 M hydrochloric acid* gradually while stirring and heat on a water-bath for 30 min. Allow to cool. Transfer the mixture to a beaker and allow the undissolved material to settle. Filter the supernatant through medium-speed filter paper into a 100 mL volumetric flask, retaining as much as possible of the insoluble material in the beaker. Wash the residue and the beaker with 3 quantities, each of 10 mL, of hot *water R*. Wash the filter with 15 mL of hot *water R*, allow the filtrate to cool and dilute to 100.0 mL with the same solvent.

**Solution S2.** *Perchlorates mixed with heavy metals are known to be explosive. Take proper precautions while performing this procedure.* Weigh 0.5 g in a 100 mL polytetrafluoroethylene dish, add 5 mL of *hydrochloric acid R*, 5 mL of *lead-free nitric acid R* and 5 mL of *perchloric acid R*. Stir gently then add 35 mL of *hydrofluoric acid R* and evaporate slowly to dryness on a hot plate. To the residue, add 5 mL of *hydrochloric acid R*, cover with a watch-glass, heat to boiling and allow to cool. Rinse the watch-glass and the dish with *water R*. Transfer into a volumetric flask, rinse the dish with *water R* and dilute to 50.0 mL with the same solvent.

**Acidity or alkalinity.** Boil 2.5 g with 50 mL of *carbon dioxide-free water R* under reflux. Filter *in vacuo*. To 10 mL of the filtrate add 0.1 mL of *bromothymol blue solution R1*; not more than 0.4 mL of *0.01 M hydrochloric acid* is required to change the colour of the indicator to green. To 10 mL of the filtrate add 0.1 mL of *phenolphthalein solution R1*; not more than 0.3 mL of *0.01 M sodium hydroxide* is required to change the colour of the indicator to pink.

**Water-soluble substances**: maximum 0.2 per cent.

To 10.0 g add 50 mL of *carbon dioxide-free water R*, heat to boiling and maintain boiling under a reflux condenser for 30 min. Allow to cool, filter through a medium-speed filter paper and dilute to 50.0 mL with *carbon dioxide-free water R*. Take 25.0 mL of the filtrate, evaporate to dryness and heat at  $105\text{ }^\circ\text{C}$  for 1 h. The residue weighs a maximum of 10 mg.

**Aluminium**: maximum 2.0 per cent.

Atomic absorption spectrometry (2.2.23, *Method I*).

*Test solution.* To 5.0 mL of solution S2 add 10 mL of a 25.34 g/L solution of *caesium chloride R*, 10.0 mL of *hydrochloric acid R* and dilute to 100.0 mL with *water R*.

**Reference solutions.** Into 4 identical volumetric flasks, each containing 10.0 mL of *hydrochloric acid R* and 10 mL of a 25.34 g/L solution of *caesium chloride R*, introduce respectively 5.0 mL, 10.0 mL, 15.0 mL and 20.0 mL of *aluminium standard solution (100 ppm Al) R* and dilute to 100.0 mL with *water R*.

**Source:** aluminium hollow-cathode lamp.

**Wavelength:** 309.3 nm.

**Atomisation device:** nitrous oxide-acetylene flame.

**Calcium:** maximum 0.9 per cent.

Atomic absorption spectrometry (2.2.23, *Method I*).

**Test solution.** To 5.0 mL of solution S2 add 10.0 mL of *hydrochloric acid R*, 10 mL of *lanthanum chloride solution R* and dilute to 100.0 mL with *water R*.

**Reference solutions.** Into 4 identical volumetric flasks, each containing 10.0 mL of *hydrochloric acid R* and 10 mL of *lanthanum chloride solution R*, introduce respectively 1.0 mL, 2.0 mL, 3.0 mL and 5.0 mL of *calcium standard solution (100 ppm Ca) R1* and dilute to 100.0 mL with *water R*.

**Source:** calcium hollow-cathode lamp.

**Wavelength:** 422.7 nm.

**Atomisation device:** nitrous oxide-acetylene flame.

**Iron:** maximum 0.25 per cent.

Atomic absorption spectrometry (2.2.23, *Method I*).

**Test solution.** To 2.5 mL of solution S1, add 50.0 mL of 0.5 M *hydrochloric acid* and dilute to 100.0 mL with *water R*.

**Reference solutions.** Into 4 identical volumetric flasks, each containing 50.0 mL of 0.5 M *hydrochloric acid*, introduce respectively 2.0 mL, 2.5 mL, 3.0 mL and 4.0 mL of *iron standard solution (250 ppm Fe) R* and dilute to 100.0 mL with *water R*.

**Source:** iron hollow-cathode lamp.

**Wavelength:** 248.3 nm.

**Atomisation device:** air-acetylene flame.

**Correction:** deuterium lamp.

**Lead:** maximum 10 ppm.

Atomic absorption spectrometry (2.2.23, *Method I*).

**Test solution.** Use solution S1.

**Reference solutions.** Into 4 identical volumetric flasks, each containing 50.0 mL of 0.5 M *hydrochloric acid*, introduce respectively 5.0 mL, 7.5 mL, 10.0 mL and 12.5 mL of *lead standard solution (10 ppm Pb) R1* and dilute to 100.0 mL with *water R*.

**Source:** lead hollow-cathode lamp.

**Wavelength:** 217.0 nm.

**Atomisation device:** air-acetylene flame.

**Magnesium:** 17.0 per cent to 19.5 per cent.

Atomic absorption spectrometry (2.2.23, *Method I*).

**Test solution.** Dilute 0.5 mL of solution S2 to 100.0 mL with *water R*. To 4.0 mL of the solution, add 10.0 mL of *hydrochloric acid R*, 10 mL of *lanthanum chloride solution R* and dilute to 100.0 mL with *water R*.

**Reference solutions.** Into 4 identical volumetric flasks, each containing 10.0 mL of *hydrochloric acid R* and 10 mL of *lanthanum chloride solution R*, introduce respectively 2.5 mL, 3.0 mL, 4.0 mL and 5.0 mL of *magnesium standard solution (10 ppm Mg) R1* and dilute to 100.0 mL with *water R*.

**Source:** magnesium hollow-cathode lamp.

**Wavelength:** 285.2 nm.

**Atomisation device:** air-acetylene flame.

**Loss on ignition:** maximum 7.0 per cent, determined on 1.00 g by ignition to constant weight at 1050-1100 °C.

#### Microbial contamination

If intended for cutaneous administration:

- TAMC: acceptance criterion 10<sup>2</sup> CFU/g (2.6.12).

If intended for oral administration:

- TAMC: acceptance criterion 10<sup>3</sup> CFU/g (2.6.12);
- TYMC: acceptance criterion 10<sup>2</sup> CFU/g (2.6.12).

#### LABELLING

The label states, where applicable, that the substance is suitable for oral or cutaneous administration.

#### FUNCTIONALITY-RELATED CHARACTERISTICS

*This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient (see chapter 5.15). This section is a non-mandatory part of the monograph and it is not necessary to verify the characteristics to demonstrate compliance. Control of these characteristics can however contribute to the quality of a medicinal product by improving the consistency of the manufacturing process and the performance of the medicinal product during use. Where control methods are cited, they are recognised as being suitable for the purpose, but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.*

*The following characteristics may be relevant for talc used as lubricant or glidant in tablets and capsules or as antiadhesive in coated and film-coated tablets.*

**Particle-size distribution** (2.9.31).

**Specific surface area** (2.9.26).

01/2008:1046

## TAMOXIFEN CITRATE

Tamoxifeni citras

C<sub>32</sub>H<sub>37</sub>NO<sub>8</sub>  
[54965-24-1]

M<sub>r</sub> 563.6

#### DEFINITION

2-[4-[(Z)-1,2-Diphenylbut-1-enyl]phenoxy]-N,N-dimethylethanamine dihydrogen 2-hydroxypropane-1,2,3-tricarboxylate.

**Content:** 99.0 per cent to 101.0 per cent (dried substance).

#### CHARACTERS

**Appearance:** white or almost white, crystalline powder.

**Solubility:** slightly soluble in water, soluble in methanol, slightly soluble in acetone.

It shows polymorphism (5.9).

#### IDENTIFICATION

**First identification:** B.

**Second identification:** A, C, D.

A. Ultraviolet and visible absorption spectrophotometry (2.2.25).

**Test solution.** Dissolve 20 mg in *methanol R* and dilute to 50.0 mL with the same solvent. Dilute 5.0 mL of this solution to 100.0 mL with *methanol R*.

**Spectral range:** 220-350 nm.

**Absorption maxima:** at 237 nm and 275 nm.

**Absorption ratio:** A<sub>237</sub>/A<sub>275</sub> = 1.45 to 1.65.

## B. Infrared absorption spectrophotometry (2.2.24).

*Preparation:* discs.

*Comparison:* tamoxifen citrate CRS.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in *acetone R*, evaporate to dryness and record new spectra using the residues.

## C. Thin-layer chromatography (2.2.27).

*Test solution.* Dissolve 10 mg of the substance to be examined in *methanol R* and dilute to 10 mL with the same solvent.

*Reference solution (a).* Dissolve 10 mg of *tamoxifen citrate CRS* in *methanol R* and dilute to 10 mL with the same solvent.

*Reference solution (b).* Dissolve 10 mg of *tamoxifen citrate CRS* and 10 mg of *clomifene citrate CRS* in *methanol R* and dilute to 10 mL with the same solvent.

*Plate:* TLC silica gel  $F_{254}$  plate *R*.

*Mobile phase:* triethylamine *R*, toluene *R* (10:90 V/V).

*Application:* 5  $\mu$ L.

*Development:* over a path of 15 cm.

*Drying:* in air.

*Detection:* examine in ultraviolet light at 254 nm.

*System suitability:* reference solution (b):

- the chromatogram shows 2 clearly separated spots.

*Results:* the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

D. Dissolve about 10 mg in 4 mL of *pyridine R* with shaking and add 2 mL of *acetic anhydride R*; a yellow colour is produced. Heat on a water-bath for 2 min; a pink or red colour is produced.

## TESTS

**Related substances.** Liquid chromatography (2.2.29). Prepare the solutions immediately before use and protect from light.

*Test solution.* Dissolve 15.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 mL with the mobile phase.

*Reference solution (a).* Dissolve 15.0 mg of *tamoxifen citrate for performance test CRS* in the mobile phase and dilute to 10.0 mL with the mobile phase.

*Reference solution (b).* Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase.

*Column:*

- size:  $l = 0.25$  m,  $\varnothing = 4.6$  mm;
- stationary phase: octadecylsilyl silica gel for chromatography *R* (5  $\mu$ m).

*Mobile phase:* mix 40 volumes of *acetonitrile R* and 60 volumes of *water R* containing 0.9 g/L of *sodium dihydrogen phosphate R* and 4.8 g/L of *N,N-dimethyloctylamine R*; adjust to pH 3.0 with *phosphoric acid R*.

*Flow rate:* 1.2 mL/min.

*Detection:* spectrophotometer at 240 nm.

*Equilibration:* with the mobile phase for about 30 min.

*Injection:* 10  $\mu$ L.

*Run time:* twice the retention time of tamoxifen.

*System suitability:* reference solution (a):

- the chromatogram obtained is similar to the chromatogram supplied with *tamoxifen citrate for performance test CRS*; there is baseline separation of the peak due to impurity F from the following peak of the principal component;
- resolution: minimum 3 between the peaks due to impurities A and F.

*Limits:*

- impurities A, B, C, D, E, F, G, H: for each impurity, not more than 0.3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);
- sum of impurities other than A: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- disregard limit: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent); disregard any peak due to the citrate (retention time = about 2.5 min).

**Loss on drying** (2.2.32): maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* at 65 °C for 4 h.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

## ASSAY

Dissolve 0.400 g in 75 mL of *anhydrous acetic acid R*. Titrate with 0.1 M *perchloric acid* using 0.1 mL of *naphtholbenzein solution R* as indicator.

1 mL of 0.1 M *perchloric acid* is equivalent to 56.36 mg of  $C_{32}H_{37}NO_8$ .

## IMPURITIES

*Specified impurities:* A, B, C, D, E, F, G, H.

A. 2-[4-[(*E*)-1,2-diphenylbut-1-enyl]phenoxy]-*N,N*-dimethylethanamine (*E*-isomer),

B. R = OH, R' =  $C_6H_5$ : 1-[4-[2-(dimethylamino)ethoxy]phenyl]-1,2-diphenylbutan-1-ol,

G. R + R' = O: (2*RS*)-1-[4-[2-(dimethylamino)ethoxy]phenyl]-2-phenylbutan-1-one,

C. R = R2 = H, R4 =  $O-CH_2-CH_2-N(CH_3)_2$ : 2-[4-[(*EZ*)-1,2-diphenylethenyl]phenoxy]-*N,N*-dimethylethanamine,

D. R =  $CH_3$ , R2 = H, R4 =  $O-CH_2-CH_2-N(CH_3)_2$ : 2-[4-[(*EZ*)-1,2-diphenylprop-1-enyl]phenoxy]-*N,N*-dimethylethanamine,

E. R =  $C_2H_5$ , R2 =  $O-CH_2-CH_2-N(CH_3)_2$ , R4 = H: 2-[2-[(*EZ*)-1,2-diphenylbut-1-enyl]phenoxy]-*N,N*-dimethylethanamine,

F. 2-[4-[(*Z*)-1,2-diphenylbut-1-enyl]phenoxy]-*N*-methylethanamine,

H. 2-[4-[(Z)-1-[4-[(RS)-[4-[2-(dimethylamino)ethoxy]-phenyl]phenylmethyl]phenyl]-2-phenylbut-1-enyl]-phenoxy]-N,N-dimethylethanamine.

01/2008:2131  
corrected 6.5

## TAMSULOSIN HYDROCHLORIDE

### Tamsulosini hydrochloridum

$C_{20}H_{26}ClN_2O_5S$   
[106463-17-6]

$M_r$  445.0

#### DEFINITION

5-[(2R)-2-[[2-(2-Ethoxyphenoxy)ethyl]amino]propyl]-2-methoxybenzenesulfonamide hydrochloride.

*Content*: 98.5 per cent to 101.0 per cent (dried substance).

#### CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: slightly soluble in water, freely soluble in formic acid, slightly soluble in anhydrous ethanol.

mp: about 230 °C.

#### IDENTIFICATION

Carry out either tests A, C, D or tests A, B, D.

A. Infrared absorption spectrophotometry (2.2.24).

*Comparison*: tamsulosin hydrochloride CRS.

B. Specific optical rotation (2.2.7): – 17.5 to – 20.5 (dried substance).

Dissolve with heating 0.15 g in *water R* and dilute to 20.0 mL with the same solvent.

C. Enantiomeric purity (see Tests).

D. Dissolve with heating 0.75 g in *water R* and dilute to 100.0 mL with the same solvent. Take 5 mL of the solution and cool in an ice-bath. Add 3 mL of *dilute nitric acid R* and shake. Allow to stand at room temperature for 30 min and filter. The filtrate gives reaction (a) of chlorides (2.3.1).

#### TESTS

##### Related substances.

A. Impurities eluting before tamsulosin. Liquid chromatography (2.2.29).

*Test solution*. Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 mL with the mobile phase.

*Reference solution (a)*. Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Reference solution (b)*. Dissolve 4 mg of *tamsulosin impurity D CRS* and 4 mg of the substance to be examined in the mobile phase and dilute to 20.0 mL with the mobile phase. Dilute 2.0 mL of this solution to 20.0 mL with the mobile phase.

*Reference solution (c)*. Dissolve 4 mg of *tamsulosin impurity H CRS* and 4 mg of the substance to be examined in the mobile phase and dilute to 20.0 mL with the mobile phase. Dilute 2.0 mL of this solution to 20.0 mL with the mobile phase.

##### Column:

- *size*:  $l = 0.15$  m,  $\varnothing = 4.6$  mm;
- *stationary phase*: octadecylsilyl silica gel for chromatography R (5  $\mu$ m);
- *temperature*: 40 °C.

*Mobile phase*: dissolve 3.0 g of *sodium hydroxide R* in a mixture of 8.7 mL of *perchloric acid R* and 1.9 L of *water R*; adjust to pH 2.0 with 0.5 M *sodium hydroxide* and dilute to 2 L with *water R*; to 1.4 L of this solution, add 600 mL of *acetonitrile R*.

*Flow rate*: 1.3 mL/min.

*Detection*: spectrophotometer at 225 nm.

*Injection*: 10  $\mu$ L of the test solution and reference solutions (a) and (b).

*Run time*: 1.5 times the retention time of tamsulosin (retention time = about 6 min).

*System suitability*: reference solution (b):

- *resolution*: minimum 6 between the peaks due to impurity D and tamsulosin.

##### Limits:

- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

B. Impurities eluting after tamsulosin. Liquid chromatography (2.2.29) as described in test A with the following modifications.

*Mobile phase*: dissolve 3.0 g of *sodium hydroxide R* in a mixture of 8.7 mL of *perchloric acid R* and 1.9 L of *water R*; adjust to pH 2.0 with 0.5 M *sodium hydroxide* and dilute to 2 L with *water R*; add 2 L of *acetonitrile R*.

*Flow rate*: 1.0 mL/min.

*Injection*: 10  $\mu$ L of the test solution and reference solutions (a) and (c).

*Run time*: 5 times the retention time of tamsulosin (retention time = about 2.5 min).

*System suitability*: reference solution (c):

- *resolution*: minimum 2 between the peaks due to tamsulosin and impurity H.

##### Limits:

- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *sum of impurities eluting before tamsulosin in test A and after tamsulosin in test B*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Enantiomeric purity.** Liquid chromatography (2.2.29).

*Test solution*. Dissolve 50.0 mg of the substance to be examined in *methanol R* and dilute to 25.0 mL with the same solvent.

**Reference solution (a).** Dilute 1.0 mL of the test solution to 100.0 mL with *methanol R*. Dilute 1.0 mL of this solution to 10.0 mL with *methanol R*.

**Reference solution (b).** Dissolve 5.0 mg of *tamsulosin racemate CRS* in *methanol R* and dilute to 25.0 mL with the same solvent. Dilute 2.0 mL of this solution to 10.0 mL with *methanol R*.

**Column:**

- size:  $l = 0.25$  m,  $\varnothing = 4.6$  mm;
- stationary phase: silica gel AD for chiral separation R;
- temperature: 40 °C.

**Mobile phase:** *diethylamine R*, *methanol R*, *anhydrous ethanol R*, *hexane R* (1:150:200:650 V/V/V/V).

**Flow rate:** 0.5 mL/min.

**Detection:** spectrophotometer at 225 nm.

**Injection:** 10 µL.

**Relative retention** with reference to tamsulosin (retention time = about 14 min): impurity G = about 0.8.

**System suitability:** reference solution (b):

- resolution: minimum 2 between the peaks due to impurity G and tamsulosin.

**Limit:**

- impurity G: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent).

**Heavy metals (2.4.8):** maximum 20 ppm.

1.0 g complies with test C. Prepare the reference solution using 2 mL of *lead standard solution (10 ppm Pb) R*.

**Loss on drying (2.2.32):** maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 2 h.

**Sulfated ash (2.4.14):** maximum 0.1 per cent, determined on 1.0 g.

**ASSAY**

Dissolve 0.350 g in 5.0 mL of *anhydrous formic acid R*, add 75 mL of a mixture of 2 volumes of *acetic anhydride R* and 3 volumes of *glacial acetic acid R*. Titrate immediately with 0.1 M *perchloric acid*, determining the end-point potentiometrically (2.2.20). Carry out a blank titration.

1 mL of 0.1 M *perchloric acid* is equivalent to 44.50 mg of  $C_{20}H_{29}ClN_2O_5S$ .

**IMPURITIES**

**Specified impurities: G.**

**Other detectable impurities** (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): A, B, C, D, E, F, H, I.

A. 5-[(2R)-2-bis[2-(2-ethoxyphenoxy)ethyl]amino]propyl]-2-methoxybenzenesulfonamide,

B. 5-[(2R)-2-aminopropyl]-2-methoxybenzenesulfonamide,

C. R1 =  $SO_2NH_2$ , R2 = H: 2-methoxy-5-[(2R)-2-[(2-phenoxyethyl)amino]propyl]benzenesulfonamide,

D. R1 =  $SO_2NH_2$ , R2 =  $OCH_3$ : 2-methoxy-5-[(2R)-2-[[2-(2-methoxyphenoxy)ethyl]amino]propyl]benzenesulfonamide,

H. R1 = H, R2 =  $OC_2H_5$ : (2R)-N-[2-(2-ethoxyphenoxy)ethyl]-1-(4-methoxyphenyl)propan-2-amine,

E. 5-formyl-2-methoxybenzenesulfonamide,

F. R =  $NH_2$ : 2-(2-ethoxyphenoxy)ethanamine,

I. R = Br: 1-(2-bromoethoxy)-2-ethoxybenzene,

G. 5-[(2S)-2-[[2-(2-ethoxyphenoxy)ethyl]amino]propyl]-2-methoxybenzenesulfonamide.

corrected 6.0

## TANNIC ACID

### Tanninum

**DEFINITION**

Mixture of esters of glucose with gallic acid and 3-galloylgallic acid.

**CHARACTERS**

**Appearance:** yellowish-white or slightly brown amorphous light powder or shiny plates.

**Solubility:** very soluble in water, freely soluble in acetone, in ethanol (96 per cent) and in glycerol (85 per cent), practically insoluble in methylene chloride.

**IDENTIFICATION**

A. Dilute 0.1 mL of solution S (see Tests) to 5 mL with *water R*. Add 0.1 mL of *ferric chloride solution R1*. A blackish-blue colour is produced which becomes green on the addition of 1 mL of *dilute sulfuric acid R*.

B. To 1 mL of solution S, add 3 mL of a 1 g/L solution of *gelatin R*. The mixture becomes turbid and a flocculent precipitate is formed.

C. Dilute 0.1 mL of solution S to 5 mL with *water R*. Add 0.3 mL of *barium hydroxide solution R*. A greenish-blue precipitate is formed.

## TESTS

**Solution S.** Dissolve 4.0 g in *carbon dioxide-free water R* and dilute to 20 mL with the same solvent.

**Appearance of solution.** Solution S is not more opalescent than reference suspension II (2.2.1).

**Dextrins, gum, salts, sugars.** To 2 mL of solution S, add 2 mL of *ethanol (96 per cent) R*. The solution is clear. Add 1 mL of *ether R*. The solution remains clear for at least 10 min.

**Resins.** To 5 mL of solution S, add 5 mL of *water R*. The mixture remains clear (2.2.1) for at least 15 min.

**Loss on drying (2.2.32):** maximum 12.0 per cent, determined on 0.200 g by drying at 105 °C.

**Sulfated ash (2.4.14):** maximum 0.1 per cent, determined on 1.0 g.

## STORAGE

Protected from light.

01/2008:0460  
corrected 6.0

## TARTARIC ACID

Acidum tartaricum

C<sub>4</sub>H<sub>6</sub>O<sub>6</sub>  
[87-69-4]

M<sub>r</sub> 150.1

## DEFINITION

(2*R*,3*R*)-2,3-Dihydroxybutanedioic acid.

**Content:** 99.5 per cent to 101.0 per cent (dried substance).

## CHARACTERS

**Appearance:** white or almost white, crystalline powder or colourless crystals.

**Solubility:** very soluble in water, freely soluble in ethanol (96 per cent).

## IDENTIFICATION

A. Solution S (see Tests) is strongly acid (2.2.4).

B. It gives the reactions of tartrates (2.3.1).

## TESTS

**Solution S.** Dissolve 5.0 g in *distilled water R* and dilute to 50 mL with the same solvent.

**Appearance of solution.** Solution S is clear (2.2.1) and not more intensely coloured than reference solution Y<sub>6</sub> (2.2.2, *Method II*).

**Specific optical rotation (2.2.7):** + 12.0 to + 12.8 (dried substance).

Dissolve 5.00 g in *water R* and dilute to 25.0 mL with the same solvent.

**Oxalic acid:** maximum 350 ppm, calculated as anhydrous oxalic acid.

Dissolve 0.80 g in 4 mL of *water R*. Add 3 mL of *hydrochloric acid R* and 1 g of *zinc R* in granules and boil for 1 min. Allow to stand for 2 min. Collect the liquid in a test-tube containing 0.25 mL of a 10 g/L solution of *phenylhydrazine hydrochloride R* and heat to boiling. Cool rapidly, transfer to a graduated cylinder and add an equal volume of *hydrochloric acid R* and 0.25 mL of a 50 g/L solution of *potassium ferricyanide R*. Shake and allow to stand for 30 min. Any pink colour in the solution is not more intense than that in a standard prepared at the same time in the same manner using 4 mL of a 0.1 g/L solution of *oxalic acid R*.

**Chlorides (2.4.4):** maximum 100 ppm.

Dilute 5 mL of solution S to 15 mL with *water R*.

**Sulfates (2.4.13):** maximum 150 ppm.

Dilute 10 mL of solution S to 15 mL with *distilled water R*.

**Calcium (2.4.3):** maximum 200 ppm.

To 5 mL of solution S add 10 mL of a 50 g/L solution of *sodium acetate R* in *distilled water R*.

**Heavy metals (2.4.8):** maximum 10 ppm.

2.0 g complies with test C. Prepare the reference solution using 2 mL of *lead standard solution (10 ppm Pb) R*.

**Loss on drying (2.2.32):** maximum 0.2 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash (2.4.14):** maximum 0.1 per cent, determined on 1.0 g.

## ASSAY

Dissolve 0.650 g in 25 mL of *water R*. Titrate with 1 M *sodium hydroxide* using 0.5 mL of *phenolphthalein solution R* as indicator, until a pink colour is obtained.

1 mL of 1 M *sodium hydroxide* is equivalent to 75.05 mg of C<sub>4</sub>H<sub>6</sub>O<sub>6</sub>.

01/2009:2358  
corrected 6.6

## TEICOPLANIN

Teicoplaninum

Teicoplanin	R	R'
A <sub>2</sub> -1 C <sub>88</sub> H <sub>95</sub> Cl <sub>2</sub> N <sub>9</sub> O <sub>33</sub> M. W.: 1878

A <sub>3</sub> -1 C <sub>72</sub> H <sub>68</sub> Cl <sub>2</sub> N <sub>6</sub> O <sub>28</sub> M. W.: 1564	H	

## DEFINITION

Mixture of glycopeptides produced by certain strains of *Actinoplanes teichomyceticus* sp.; the 6 principal components of the mixture are teicoplanin A<sub>2-1</sub> to A<sub>2-5</sub> and teicoplanin A<sub>3-1</sub>.

Fermentation product.

**Potency:** minimum 900 IU/mg (anhydrous and sodium chloride-free substance).

## CHARACTERS

**Appearance:** yellowish, amorphous powder.

**Solubility:** freely soluble in water, sparingly soluble in dimethylformamide, practically insoluble in ethanol (96 per cent V/V).

## IDENTIFICATION

## A. Infrared absorption spectrophotometry (2.2.24).

**Comparison:** teicoplanin for identification CRS.

## B. Examine the chromatograms obtained in the test for composition and related substances.

**Results:** the principal peaks (teicoplanins A<sub>3-1</sub>, A<sub>2-1</sub>, A<sub>2-2</sub>, A<sub>2-3</sub>, A<sub>2-4</sub> and A<sub>2-5</sub>) in the chromatogram obtained with the test solution are similar in retention time and size to the principal peaks in the chromatogram obtained with reference solution (a).

## TESTS

**Appearance of solution.** The solution is clear (2.2.1) and not more intensely coloured than reference solution BY<sub>3</sub> or B<sub>4</sub> (2.2.2, Method I).

Dissolve 0.8 g in 10 mL of water R.

**pH** (2.2.3): 6.5 to 7.5.

Dissolve 0.50 g in carbon dioxide-free water R and dilute to 10 mL with the same solvent.

**Composition and related substances.** Liquid chromatography (2.2.29): use the normalisation procedure.

**Test solution.** Dissolve 0.100 g of the substance to be examined in water R and dilute to 50.0 mL with the same solvent.

**Reference solution (a).** Dissolve 20 mg of teicoplanin for identification CRS in water R and dilute to 10.0 mL with the same solvent.

**Reference solution (b).** Dilute 1.0 mL of reference solution (a) to 10.0 mL with water R. Dilute 1.0 mL of this solution to 20.0 mL with water R.

**Reference solution (c).** Dissolve 50.0 mg of mesityl oxide CRS in water R and dilute to 25.0 mL with the same solvent. Dilute 1.0 mL of the solution to 10.0 mL with water R. Dilute 1.0 mL of this solution to 100.0 mL with water R.

**Column:**

- size:  $l = 0.25$  m,  $\varnothing = 4.6$  mm;
- stationary phase: spherical end-capped octadecylsilyl silica gel for chromatography R (5  $\mu$ m).

**Mobile phase:**

- mobile phase A: mix 900 mL of a 3.0 g/L solution of anhydrous sodium dihydrogen phosphate R, adjusted to pH 6.0 with 1 M sodium hydroxide, and 100 mL of acetonitrile R;
- mobile phase B: mix 300 mL of a 3.0 g/L solution of anhydrous sodium dihydrogen phosphate R, adjusted to pH 6.0 with 1 M sodium hydroxide, and 700 mL of acetonitrile R;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 30	100 → 50	0 → 50
30 - 31	50 → 10	50 → 90
31 - 35	10	90

**Flow rate:** 2.3 mL/min.

**Detection:** spectrophotometer at 254 nm.

**Injection:** 20  $\mu$ L.

**Identification:** use the chromatogram supplied with teicoplanin for identification CRS and the chromatogram obtained with reference solution (a) to identify the groups and impurities.

**Relative retention** of groups and impurities with reference to teicoplanin A<sub>2-2</sub>:

- teicoplanin A<sub>3</sub> group  $\leq 0.70$ ;
- teicoplanin A<sub>2</sub> group  $> 0.70$  and  $\leq 1.25$  and within this group:
  - teicoplanin A<sub>2-2</sub> = 1;
  - teicoplanin A<sub>2-1</sub> group  $< 1$ ;
  - teicoplanin A<sub>2-3</sub> group  $> 1$  and  $< 1.12$ ;
  - teicoplanin A<sub>2-4</sub> = about 1.12;
  - teicoplanin A<sub>2-5</sub> group  $> 1.12$  and  $\leq 1.25$ ;
- impurities  $> 1.25$ .

**Relative retention** of principal peaks of the groups with reference to teicoplanin A<sub>2-2</sub> (retention time = about 18 min): teicoplanin A<sub>3-1</sub> = about 0.43; teicoplanin A<sub>2-1</sub> = about 0.93; teicoplanin A<sub>2-3</sub> = about 1.04; teicoplanin A<sub>2-4</sub> = about 1.12; teicoplanin A<sub>2-5</sub> = about 1.14.

**System suitability:** reference solution (a):

- the chromatogram obtained is similar to the chromatogram supplied with teicoplanin for identification CRS;
- resolution: minimum 1.0 between the peaks due to teicoplanin A<sub>2-4</sub> and teicoplanin A<sub>2-5</sub>.

Calculate the percentage content of the different components using the following equations:

$$\text{teicoplanin A}_2 \text{ group} = \frac{S_a}{S_a + 0.83 \times S_b + S_c} \times 100$$

$$\text{teicoplanin A}_{2-2} = \frac{S_2}{S_a + 0.83 \times S_b + S_c} \times 100$$

$$\text{teicoplanin A}_{2-1} \text{ group} = \frac{S_1}{S_a + 0.83 \times S_b + S_c} \times 100$$

$$\text{teicoplanin A}_{2-3} \text{ group} = \frac{S_3}{S_a + 0.83 \times S_b + S_c} \times 100$$

$$\text{teicoplanin A}_{2-4} = \frac{S_4}{S_a + 0.83 \times S_b + S_c} \times 100$$

$$\text{teicoplanin A}_{2-5} \text{ group} = \frac{S_5}{S_a + 0.83 \times S_b + S_c} \times 100$$

$$\text{teicoplanin A}_3 \text{ group} = \frac{0.83 \times S_b}{S_a + 0.83 \times S_b + S_c} \times 100$$

$$\text{impurities} = \frac{S_c}{S_a + 0.83 \times S_b + S_c} \times 100$$

$S_a$  = sum of the areas of the peaks due to teicoplanin A<sub>2</sub> group in the chromatogram obtained with the test solution;

$S_b$  = sum of the areas of the peaks due to teicoplanin A<sub>3</sub> group in the chromatogram obtained with the test solution; disregard any peak due to mesityl oxide;

$S_c$  = sum of the areas of the peaks with a relative retention more than 1.25;

$S_1$  = sum of the areas of the peaks due to teicoplanin A<sub>2-1</sub> group in the chromatogram obtained with the test solution;

$S_2$  = area of the peak due to teicoplanin A<sub>2-2</sub> in the chromatogram obtained with the test solution;

07/2008:2154  
corrected 6.3

- $S_3$  = sum of the areas of the peaks due to telmoplanin  $A_{2,3}$  group in the chromatogram obtained with the test solution;
- $S_4$  = area of the peak due to telmoplanin  $A_{2,4}$  in the chromatogram obtained with the test solution;
- $S_5$  = sum of the areas of the peaks due to telmoplanin  $A_{2,5}$  group in the chromatogram obtained with the test solution.

**Limits:**

- *telmoplanin*  $A_2$  group: minimum 80.0 per cent;
- *telmoplanin*  $A_{2,2}$ : 35.0 per cent to 55.0 per cent;
- *telmoplanin*  $A_{2,1}$  group: maximum 20.0 per cent;
- *telmoplanin*  $A_{2,3}$  group: maximum 20.0 per cent;
- *telmoplanin*  $A_{2,4}$ : maximum 20.0 per cent;
- *telmoplanin*  $A_{2,5}$  group: maximum 20.0 per cent;
- *telmoplanin*  $A_3$  group: maximum 15.0 per cent;
- *total of impurities other than mesityl oxide with a relative retention more than 1.25*: maximum 5.0 per cent;
- *disregard limit*: the area of the peak due to telmoplanin  $A_{2,2}$  in the chromatogram obtained with reference solution (b) (0.25 per cent).

**Chlorides:** maximum 5.0 per cent, expressed as sodium chloride (anhydrous substance).

Dissolve 1.000 g in 300 mL of *water R*, stir and acidify with 2 mL of *nitric acid R*. Titrate with 0.1 M *silver nitrate*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *silver nitrate* is equivalent to 5.844 mg of NaCl.

**Heavy metals** (2.4.8): maximum 20 ppm.

0.50 g complies with test G. Prepare the reference solution using 100  $\mu$ L of *lead standard solution (100 ppm Pb) R*. Filter the solutions through a membrane filter (nominal pore size 0.45  $\mu$ m).

**Impurity A.** Liquid chromatography (2.2.29) as described in the test for composition and related substances with the following modifications.

**Injection:** 20  $\mu$ L of the test solution and reference solution (c).

**Relative retention** with reference to telmoplanin  $A_{2,2}$  (retention time = about 18 min): impurity A = about 0.6.

**Limits:**

- *impurity A*: maximum twice the area of the principal peak in the chromatogram obtained with reference solution (c) (0.2 per cent).

**Water** (2.5.12): maximum 15.0 per cent, determined on 0.300 g.

**Bacterial endotoxins** (2.6.14): less than 0.31 IU/mg.

**ASSAY**

Carry out the microbiological assay of antibiotics (2.7.2), using the diffusion method. Use *telmoplanin CRS* as the reference substance.

**STORAGE**

Protected from light, at a temperature of 2 °C to 8 °C.

**IMPURITIES**

**Specified impurities:** A.

A. 4-methylpent-3-en-2-one (mesityl oxide).

**TELMISARTAN**

## Telmisartanum

$C_{33}H_{30}N_4O_2$   
[144701-48-4]

$M_r$  514.6

**DEFINITION**

4'-[[4-Methyl-6-(1-methyl-1*H*-benzimidazol-2-yl)-2-propyl-1*H*-benzimidazol-1-yl]methyl]biphenyl-2-carboxylic acid.

**Content:** 99.0 per cent to 101.0 per cent (dried substance).

**CHARACTERS**

**Appearance:** white or slightly yellowish, crystalline powder.

**Solubility:** practically insoluble in water, slightly soluble in methanol, sparingly soluble in methylene chloride. It dissolves in 1 M sodium hydroxide.

It shows polymorphism (5.9).

**IDENTIFICATION**

Infrared absorption spectrophotometry (2.2.24).

**Comparison:** *telmisartan CRS*.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in hot *anhydrous ethanol R*, evaporate to dryness and record new spectra using the residues.

**TESTS**

**Appearance of solution.** The solution is not more intensely coloured than reference solution  $Y_4$  (2.2.2, *Method II*).

Dissolve 0.5 g in 1 M *sodium hydroxide* and dilute to 10 mL with the same solvent.

**Related substances.** Liquid chromatography (2.2.29).

**Test solution.** To 25 mg of the substance to be examined add about 5 mL of *methanol R* and 100  $\mu$ L of a 40 g/L solution of *sodium hydroxide R*. Dissolve with the aid of ultrasound and dilute to 50 mL with *methanol R*.

**Reference solution (a).** Dilute 1.0 mL of the test solution to 10.0 mL with *methanol R*. Dilute 1.0 mL of this solution to 100.0 mL with *methanol R*.

**Reference solution (b).** Dissolve the contents of a vial of *telmisartan for system suitability CRS* (containing impurities A, B, C, E and F) in 2 mL of *methanol R*.

**Reference solution (c).** To 5 mg of *telmisartan for peak identification CRS* (containing impurity D) add about 5 mL of *methanol R* and 100  $\mu$ L of a 40 g/L solution of *sodium hydroxide R*. Dissolve with the aid of ultrasound and dilute to 10 mL with *methanol R*.

**Column:**

- *size:*  $l = 0.125$  m,  $\emptyset = 4.0$  mm;
- *stationary phase:* octadecylsilyl silica gel for chromatography  $R$  (5  $\mu$ m) with a pore size of 10 nm;
- *temperature:* 40 °C.

**Mobile phase:**

- **mobile phase A:** dissolve 2.0 g of *potassium dihydrogen phosphate R* and 3.8 g of *sodium pentanesulfonate monohydrate R1* in *water R*, adjust to pH 3.0 with *dilute phosphoric acid R* and dilute to 1000 mL with *water R*;
- **mobile phase B:** *methanol R2*, *acetonitrile R1* (20:80 V/V);

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 3	70	30
3 - 28	70 → 20	30 → 80

**Flow rate:** 1 mL/min.

**Detection:** spectrophotometer at 230 nm.

**Injection:** 10 µL.

**Identification of impurities:** use the chromatogram supplied with *telmisartan for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A, B, C, E and F; use the chromatogram supplied with *telmisartan for peak identification CRS* and the chromatogram obtained with reference solution (c) to identify the peak due to impurity D.

**Relative retention** with reference to telmisartan (retention time = about 15 min): impurity A = about 0.2; impurity E = about 0.6; impurity F = about 0.7; impurity B = about 0.9; impurity C = about 1.5; impurity D = about 1.6.

**System suitability:** reference solution (b):

- the chromatogram obtained with reference solution (b) is similar to the chromatogram supplied with *telmisartan for system suitability CRS*;
- **resolution:** minimum 3.0 between the peaks due to impurity B and telmisartan.

**Limits:**

- **impurities C, D:** for each impurity, not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- **impurities A, B:** for each impurity, not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.15 per cent);
- **unspecified impurities:** for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- **total:** not more than 10 times the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent);
- **disregard limit:** 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Loss on drying** (2.2.32): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

**ASSAY**

Dissolve 0.190 g in 5 mL of *anhydrous formic acid R*. Add 75 mL of *acetic anhydride R*. Titrate with 0.1 M *perchloric acid*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *perchloric acid* is equivalent to 25.73 mg of C<sub>33</sub>H<sub>30</sub>N<sub>4</sub>O<sub>2</sub>.

**IMPURITIES**

**Specified impurities:** A, B, C, D.

**Other detectable impurities** (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general

acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use* (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): E, F, G, H.

## TEMAZEPAM

### Temazepamum

$C_{16}H_{13}ClN_2O_2$   
[846-50-4]

$M_r$  300.7

#### DEFINITION

(3*RS*)-7-Chloro-3-hydroxy-1-methyl-5-phenyl-1,3-dihydro-2*H*-1,4-benzodiazepin-2-one.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

#### CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: practically insoluble in water, freely soluble in methylene chloride, sparingly soluble in ethanol (96 per cent).

#### IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

*Comparison*: temazepam CRS.

#### TESTS

**Impurity A**: maximum 0.05 per cent.

Dissolve 0.400 g in *methylene chloride R* and dilute to 20.0 mL with the same solvent. The absorbance (2.2.25) is not greater than 0.30 at 409 nm.

**Related substances**. Liquid chromatography (2.2.29).

*Test solution*. Dissolve 10.0 mg of the substance to be examined in a mixture of 1 volume of *water R* and 9 volumes of *methanol R* and dilute to 50.0 mL with the same mixture of solvents.

*Reference solution (a)*. Dilute 1.0 mL of the test solution to 100.0 mL with a mixture of 1 volume of *water R* and 9 volumes of *methanol R*. Dilute 2.0 mL of this solution to 10.0 mL with a mixture of 1 volume of *water R* and 9 volumes of *methanol R*.

*Reference solution (b)*. Dissolve 1 mg of *oxazepam R*, 1 mg of *temazepam impurity F CRS* and 1 mg of *temazepam impurity G CRS* in a mixture of 1 volume of *water R* and 9 volumes of *methanol R* and dilute to 25 mL with the same mixture of solvents.

*Reference solution (c)*. Dissolve 1 mg of *temazepam impurity C CRS* and 1 mg of *temazepam impurity D CRS* with a mixture of 1 volume of *water R* and 9 volumes of *methanol R* and dilute to 25 mL with the same mixture of solvents.

#### Column:

– *size*:  $l = 0.15$  m,  $\varnothing = 4.6$  mm;

– *stationary phase*: end-capped octadecylsilyl silica gel for chromatography *R* (3.5  $\mu$ m).

#### Mobile phase:

– *mobile phase A*: solution containing 4.9 g/L of *sodium dihydrogen phosphate R* and 0.63 g/L of *disodium hydrogen phosphate R* (pH 5.6);

– *mobile phase B*: *methanol R*;

– *mobile phase C*: *acetonitrile R*;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)	Mobile phase C (per cent V/V)
0 - 18	54	39	7
18 - 25	54 → 22	39 → 63	7 → 15
25 - 31	22	63	15
31 - 37	22 → 54	63 → 39	15 → 7

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 230 nm.

*Injection*: 20  $\mu$ L.

*Relative retention* with reference to temazepam (retention time = about 16 min): *impurity E* = about 0.55; *impurity F* = about 0.67; *impurity G* = about 0.73; *impurity B* = about 0.8; *impurity D* = about 1.2; *impurity C* = about 1.3; *impurity A* = about 1.5.

*System suitability*: reference solution (b):

– *resolution*: minimum 1.5 between the peaks due to *impurity F* and *impurity G*;

– *peak-to-valley ratio*: minimum 1.7, where  $H_p$  = height above the baseline of the peak due to *impurity G* and  $H_v$  = height above the baseline of the lowest point of the curve separating this peak from the peak due to *impurity B*.

#### Limits:

– *correction factors*: for the calculation of contents, multiply the peak areas of the following impurities by the corresponding correction factor: *impurity F* = 3.2; *impurity G* = 3.1;

– *impurities B, C, D, E, F, G*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);

– *unspecified impurities*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);

– *total*: not more than 2.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

– *disregard limit*: 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Loss on drying** (2.2.32): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 4 h.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

#### ASSAY

Dissolve 0.250 g in 50 mL of *nitroethane R*. Titrate with 0.1 *M perchloric acid*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 *M perchloric acid* is equivalent to 30.07 mg of  $C_{16}H_{13}ClN_2O_2$ .

## STORAGE

Protected from light.

## IMPURITIES

Specified impurities: A, B, C, D, E, F, G.

A. [5-chloro-2-(methylamino)phenyl]phenylmethanone,

B. (3*RS*)-7-chloro-3-hydroxy-5-phenyl-1,3-dihydro-2*H*-1,4-benzodiazepin-2-one (oxazepam),

C. R = CO-CH<sub>3</sub>: (3*RS*)-7-chloro-1-methyl-2-oxo-5-phenyl-2,3-dihydro-1*H*-1,4-benzodiazepin-3-yl acetate,

D. R = CH<sub>3</sub>: (3*RS*)-7-chloro-3-methoxy-1-methyl-5-phenyl-1,3-dihydro-2*H*-1,4-benzodiazepin-2-one,

E. 7-chloro-1-methyl-5-phenyl-1,3-dihydro-2*H*-1,4-benzodiazepin-2-one 4-oxide,

F. R = H: (5*RS*)-7-chloro-1-methyl-5-phenyl-4,5-dihydro-1*H*-1,4-benzodiazepine-2,3-dione,

G. R = CH<sub>3</sub>: (5*RS*)-7-chloro-1,4-dimethyl-5-phenyl-4,5-dihydro-1*H*-1,4-benzodiazepine-2,3-dione.

## TENOXICAM

## Tenoxicamum

C<sub>13</sub>H<sub>11</sub>N<sub>3</sub>O<sub>4</sub>S<sub>2</sub>  
[59804-37-4]

*M*, 337.4

## DEFINITION

4-Hydroxy-2-methyl-*N*-(pyridin-2-yl)-2*H*-thieno[2,3-*e*]1,2-thiazine-3-carboxamide 1,1-dioxide.

*Content*: 99.0 per cent to 101.0 per cent (anhydrous substance).

## CHARACTERS

*Appearance*: yellow, crystalline powder.

*Solubility*: practically insoluble in water, sparingly soluble in methylene chloride, very slightly soluble in anhydrous ethanol. It dissolves in solutions of acids and alkalis.

It shows polymorphism (5.9).

## IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

*Comparison*: tenoxicam CRS.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in the minimum volume of *methylene chloride R*, evaporate to dryness and record new spectra using the residues.

## TESTS

**Appearance of solution.** The solution is clear (2.2.1).

Dissolve 0.10 g in *methylene chloride R* and dilute to 20 mL with the same solvent.

**Related substances.** Liquid chromatography (2.2.29). Carry out the test protected from light.

*Solvent mixture.* Mix equal volumes of *acetonitrile R* and *water R*. Adjust to apparent pH 3.2 with *dilute phosphoric acid R1*.

*Test solution.* Dissolve 35 mg of the substance to be examined in the solvent mixture, sonicate and dilute to 50.0 mL with the solvent mixture.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Reference solution (b).* Dissolve 7 mg of *pyridin-2-amine R* (impurity A) in the solvent mixture and dilute to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 100.0 mL with the solvent mixture.

*Reference solution (c).* Dissolve the contents of a vial of *tenoxicam impurity mixture CRS* (impurities B, G and H) in 1.0 mL of the test solution.

*Column*:

- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: cyanosilyl silica gel for chromatography *R* (3.5 µm);
- *temperature*: 35 °C.

*Mobile phase*:

- *mobile phase A*: mix 25 volumes of *methanol R2* and 75 volumes of *water R* and adjust to apparent pH 3.2 with *dilute phosphoric acid R1*;

- *mobile phase B*: mix 25 volumes of *water R* and 75 volumes of *methanol R2* and adjust to apparent pH 3.2 with *dilute phosphoric acid R1*;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 5	96	4
5 - 16	96 → 76	4 → 24
16 - 25	76	24

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 230 nm.

*Injection*: 20 µL.

*Identification of impurities*:

- use the chromatogram obtained with reference solution (b) to identify the peak due to impurity A;
- use the chromatogram supplied with *tenoxicam impurity mixture CRS* and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities B, G and H; for identification of impurities G and H, which may be inverted in the elution order, take into account the heights of the corresponding peaks in the chromatogram supplied with *tenoxicam impurity mixture CRS*.

*Relative retention* with reference to tenoxicam (retention time = about 12 min): impurity A = about 0.1; impurity G = about 0.85; impurity H = about 0.9; impurity B = about 1.3.

*System suitability*: reference solution (c):

- *resolution*: minimum 1.3 between the peaks due to impurity H (or G if peaks are inverted) and tenoxicam, and between the peaks due to impurities G and H; if necessary, optimise the apparent pH of the mobile phases within the range 3.0-3.4.

*Limits*:

- *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 0.2; impurity B = 2.0;
- *impurities A, B*: for each impurity, not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.15 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Heavy metals** (2.4.8): maximum 20 ppm.

0.5 g complies with test C. Prepare the reference solution using 5 mL of *lead standard solution (2 ppm Pb) R*.

**Water** (2.5.12): maximum 0.5 per cent, determined on 1.000 g.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in 5 mL of *anhydrous formic acid R*. Add 70 mL of *anhydrous acetic acid R*. Titrate with 0.1 M *perchloric acid*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *perchloric acid* is equivalent to 33.74 mg of C<sub>13</sub>H<sub>11</sub>N<sub>3</sub>O<sub>4</sub>S<sub>2</sub>.

STORAGE

Protected from light.

IMPURITIES

*Specified impurities: A, B.*

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): C, D, E, F, G, H.

A. pyridin-2-amine,

B. methyl 4-hydroxy-2-methyl-2H-thieno[2,3-e]1,2-thiazine-3-carboxylate 1,1-dioxide,

C. R1 = NH-CH<sub>3</sub>, R2 = H: *N*-methylthiophene-2-carboxamide,

H. R1 = OH, R2 = SO<sub>2</sub>-NH-CH<sub>3</sub>: 3-[(methylamino)sulfonyl]-thiophene-2-carboxylic acid,

D. *N*-methyl-*N'*-(pyridin-2-yl)-ethanediamide,

E. 2-methylthieno[2,3-d]isothiazol-3(2H)-one 1,1-dioxide,

F. 4-hydroxy-*N*,2-dimethyl-*N*-(pyridin-2-yl)-2H-thieno[2,3-e]1,2-thiazine-3-carboxamide 1,1-dioxide,

G. 4-hydroxy-2-methyl-2H-thieno[2,3-e]1,2-thiazine-3-carboxamide 1,1-dioxide.

01/2008:2021 *Detection*: spectrophotometer at 210 nm.**TERAZOSIN HYDROCHLORIDE  
DIHYDRATE**

Terazosini hydrochloridum dihydricum

 $C_{19}H_{26}ClN_5O_4 \cdot 2H_2O$   
 [70024-40-7]
 $M_r$  459.9**DEFINITION**

1-(4-Amino-6,7-dimethoxyquinazolin-2-yl)-4-[(2*RS*)-tetrahydrofuran-2-yl]carbonylpiperazine hydrochloride dihydrate.

*Content*: 99.0 per cent to 101.0 per cent (anhydrous substance).

**CHARACTERS**

*Appearance*: white or slightly yellow, crystalline powder.

*Solubility*: sparingly soluble in water, slightly soluble in methanol, very slightly soluble in ethanol (96 per cent), practically insoluble in acetone.

**IDENTIFICATION**

A. Infrared absorption spectrophotometry (2.2.24).

*Comparison*: terazosin hydrochloride dihydrate CRS.

B. It gives reaction (a) of chlorides (2.3.1).

**TESTS**

**Solution S.** Dissolve 1.00 g in carbon dioxide-free water *R* and dilute to 50.0 mL with the same solvent.

**Appearance of solution.** The solution is clear (2.2.1) and not more intensely coloured than reference solution  $Y_7$  (2.2.2, Method II).

Dilute 10 mL of solution S to 20 mL with water *R*.

**pH** (2.2.3): 3.0 to 5.0 for solution S.

**Impurities N and O.** Liquid chromatography (2.2.29).

*Solvent mixture*: acetonitrile *R1*, water *R* (20:80 V/V).

*Test solution.* Dissolve 50.0 mg of the substance to be examined in the solvent mixture and dilute to 50.0 mL with the solvent mixture.

*Reference solution (a).* Dissolve 5 mg of terazosin impurity A CRS and 5.0 mg of terazosin impurity N CRS in acetonitrile *R1* using sonication, add 5.0 mL of the test solution and dilute to 50.0 mL with acetonitrile *R1*. Dilute 10.0 mL of this solution to 100.0 mL with the solvent mixture.

*Reference solution (b).* Dilute 10.0 mL of reference solution (a) to 100.0 mL with the solvent mixture.

*Column*:

- size:  $l = 0.25$  m,  $\varnothing = 4.0$  mm;
- stationary phase: octadecylsilyl silica gel for chromatography *R* (5  $\mu$ m);
- temperature: 25 °C.

*Mobile phase*: dissolve 2.80 g of sodium laurilsulfate *R* in 1000.0 mL of water *R* and add 11.0 mL of a solution containing 202.4 g/L of triethylamine *R* and 230.0 g/L of phosphoric acid *R*; adjust to pH 2.5 with phosphoric acid *R*; mix 600 volumes of this solution with 400 volumes of acetonitrile *R1*.

*Flow rate*: 1.0 mL/min.

*Injection*: 20  $\mu$ L.

*Run time*: 4 times the retention time of terazosin.

*Relative retention* with reference to terazosin (retention time = about 10 min): impurity O = about 0.2; impurity N = about 0.3; impurity A = about 0.4.

*System suitability*: reference solution (a):

- resolution: minimum 1.5 between the peaks due to impurities A and N.

*Limits*:

- impurity N: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.1 per cent);
- impurity O: not more than the area of the peak due to terazosin in the chromatogram obtained with reference solution (b) (0.1 per cent).

**Related substances.** Liquid chromatography (2.2.29).

*Test solution.* Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 100.0 mL with the mobile phase.

*Reference solution (a).* Dilute 2.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 5.0 mL of this solution to 100.0 mL with the mobile phase.

*Reference solution (b).* Dissolve the contents of a vial of terazosin for system suitability CRS (containing impurities A, B, C, J, K and M) in the mobile phase and dilute to 10 mL with the mobile phase.

*Reference solution (c).* Dissolve 5.0 mg of terazosin impurity L CRS in the mobile phase and dilute to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 100.0 mL with the mobile phase.

*Reference solution (d).* To 5 mg of terazosin impurity E CRS, add 70 mL of methanol *R* and 30 mL of water *R*. Allow to stand for at least 1 h to dissolve the substance. Use sonication if necessary.

*Column*:

- size:  $l = 0.25$  m,  $\varnothing = 4.6$  mm;
- stationary phase: octylsilyl silica gel for chromatography *R* (5  $\mu$ m);
- temperature: 30 °C.

*Mobile phase*: mix 2 volumes of triethylamine *R*, 350 volumes of acetonitrile *R*, and 1650 volumes of a solution containing 6 g/L of sodium citrate *R* and 14.25 g/L of anhydrous citric acid *R*.

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 245 nm.

*Injection*: 20  $\mu$ L.

*Run time*: 4 times the retention time of terazosin.

*Identification of impurities*: use the chromatogram supplied with terazosin for system suitability CRS and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A, B, C, J, K and M; use the chromatograms obtained with reference solutions (c) and (d) to identify the peaks due to impurities L and E respectively.

*Retention time*: terazosin = about 11 min.

*System suitability*: reference solution (b):

- resolution: minimum 1.5 between the peaks due to impurities B and J; if necessary, adjust the proportion of the aqueous component in the mobile phase (an increase in the proportion of the aqueous component increases the retention times);
- the chromatogram obtained is similar to the chromatogram supplied with terazosin for system suitability CRS; in case of insufficient separation of the impurities, reduce the amount of triethylamine in the mobile phase.

**Limits:**

- *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity C = 0.7; impurity M = 1.6;
- *impurities A, C, E, K*: for each impurity, not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- *impurity L*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.1 per cent);
- *impurities B, J, M*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Heavy metals** (2.4.8): maximum 20 ppm.

1.0 g complies with test C. Prepare the reference solution using 2 mL of *lead standard solution* (10 ppm) *Pb R*.

**Water** (2.5.12): 7.0 per cent to 8.6 per cent, determined on 0.200 g.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

**ASSAY**

Dissolve 0.300 g in a mixture of 5.0 mL of 0.01 M *hydrochloric acid* and 50 mL of *methanol R*. Titrate with 0.1 M *sodium hydroxide*, determining the end-point potentiometrically (2.2.20). Read the volume added between the 2 points of inflexion.

1 mL of 0.1 M *sodium hydroxide* is equivalent to 42.39 mg of  $C_{19}H_{26}ClN_5O_4$ .

**STORAGE**

Protected from light.

**IMPURITIES**

## TERBINAFINE HYDROCHLORIDE

### Terbinafini hydrochloridum

C<sub>21</sub>H<sub>26</sub>ClN  
[78628-80-5]

M<sub>r</sub> 327.9

#### DEFINITION

(2*E*)-*N*,6,6-Trimethyl-*N*-(naphthalen-1-ylmethyl)hept-2-en-4-yn-1-amine hydrochloride.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

#### CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: very slightly or slightly soluble in water, freely soluble in anhydrous ethanol and in methanol, slightly soluble in acetone.

#### IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

*Comparison*: terbinafine hydrochloride CRS.

B. It gives reaction (a) of chlorides (2.3.1) using *anhydrous ethanol R* as solvent.

#### TESTS

**Related substances.** Liquid chromatography (2.2.29). Carry out the test protected from light.

*Solvent mixture A*: acetonitrile R, water R (50:50 V/V).

*Solvent mixture B*: acetonitrile R, methanol R (40:60 V/V).

*Buffer solution.* Dilute 2.0 mL of triethylamine R1 to 950 mL with water R. Adjust to pH 7.5 with a mixture of 5 volumes of glacial acetic acid R and 95 volumes of water R and dilute to 1000.0 mL with water R.

*Test solution.* Dissolve 25 mg of the substance to be examined in solvent mixture A and dilute to 50.0 mL with solvent mixture A.

*Reference solution (a).* Dissolve 5 mg of terbinafine for system suitability CRS (containing impurities B and E) in 10.0 mL of solvent mixture A.

*Reference solution (b).* Dilute 1.0 mL of the test solution to 100.0 mL with solvent mixture A. Dilute 1.0 mL of this solution to 10.0 mL with solvent mixture A.

*Column*:

- size:  $l = 0.15$  m,  $\varnothing = 3.0$  mm;
- stationary phase: spherical end-capped octadecylsilyl silica gel for chromatography R (5  $\mu$ m);
- temperature: 40 °C.

*Mobile phase*:

- mobile phase A: buffer solution, solvent mixture B (30:70 V/V);

- mobile phase B: buffer solution, solvent mixture B (5:95 V/V);

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 4	100	0
4 - 25	100 → 0	0 → 100
25 - 30	0	100

*Flow rate*: 0.8 mL/min.

*Detection*: spectrophotometer at 280 nm.

*Injection*: 20  $\mu$ L.

*Identification of impurities*: use the chromatogram supplied with terbinafine for system suitability CRS and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities B and E.

*Relative retention* with reference to terbinafine (retention time = about 15 min): impurity B = about 0.9; impurity E = about 1.7.

*System suitability*: reference solution (a):

- resolution: minimum 2.0 between the peaks due to impurity B and terbinafine.

*Limits*:

- correction factor: for the calculation of content, multiply the peak area of impurity E by 0.5;
- impurity B: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.15 per cent);
- impurity E: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent);
- unspecified impurities: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- total: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);
- disregard limit: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Loss on drying** (2.2.32): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

#### ASSAY

Dissolve 0.250 g in 50 mL of ethanol (96 per cent) R, add 5 mL of 0.01 M hydrochloric acid. Titrate with 0.1 M sodium hydroxide determining the end-point potentiometrically (2.2.20). Read the volume added between the 2 points of inflexion.

1 mL of 0.1 M sodium hydroxide is equivalent to 32.79 mg of C<sub>21</sub>H<sub>26</sub>ClN.

#### STORAGE

Protected from light.

#### IMPURITIES

*Specified impurities*: B, E.

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use* (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): A, C, D, F.

A. *N*-methyl-*N*-(naphthalen-1-yl)methanamine,B. (2*Z*)-*N*,6,6-trimethyl-*N*-(naphthalen-1-ylmethyl)hept-2-en-4-yn-1-amine (*cis*-terbinafine),C. **Solubility:** freely soluble in water, slightly soluble in ethanol (96 per cent).

It shows polymorphism (5.9).

## IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

**Comparison:** *terbutaline sulfate CRS*.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in *aldehyde-free methanol R*, evaporate to dryness and record new spectra using the residues.

B. 5 mL of solution S (see Tests) gives reaction (a) of sulfates (2.3.1).

## TESTS

**Solution S.** Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 50 mL with the same solvent.

**Appearance of solution.** Solution S is clear (2.2.1) and its absorbance (2.2.25) at 400 nm in a 2 cm cell is not greater than 0.11.

**Acidity.** To 10 mL of solution S add 0.05 mL of *methyl red solution R*. Not more than 1.2 mL of 0.01 M *sodium hydroxide* is required to change the colour of the indicator to yellow.

**Optical rotation** (2.2.7):  $-0.10^{\circ}$  to  $+0.10^{\circ}$ , determined on solution S.

**Related substances.** Liquid chromatography (2.2.29).

**Test solution.** Dissolve 75.0 mg of the substance to be examined in the mobile phase and dilute to 50.0 mL with the mobile phase.

**Reference solution (a).** Dissolve 7.5 mg of *terbutaline impurity C CRS* and 22.5 mg of *terbutaline sulfate CRS* in the mobile phase and dilute to 50.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 100.0 mL with the mobile phase.

**Reference solution (b).** Dilute 1.0 mL of the test solution to 50.0 mL with the mobile phase. Dilute 2.0 mL of this solution to 20.0 mL with the mobile phase.

**Column:**

- size:  $l = 0.15$  m,  $\varnothing = 4.6$  mm;
- stationary phase: *base-deactivated octadecylsilyl silica gel for chromatography R* (5  $\mu$ m).

**Mobile phase:** dissolve 4.23 g of *sodium hexanesulfonate R* in 770 mL of 0.050 M ammonium formate solution prepared as follows: dissolve 3.15 g of *ammonium formate R* in about 980 mL of *water R*; adjust to pH 3.0 by adding about 8 mL of *anhydrous formic acid R* and dilute to 1000 mL with *water R*; then add 230 mL of *methanol R*.

**Flow rate:** 1.0 mL/min.

**Detection:** spectrophotometer at 276 nm.

**Injection:** 20  $\mu$ L.

**Run time:** 6 times the retention time of terbutaline.

**Retention time:** impurity C = about 9 min; terbutaline = about 11 min.

**System suitability:** reference solution (a):

- **resolution:** minimum 2.0 between the peaks due to impurity C and terbutaline; if necessary adjust the composition of the mobile phase, decrease the content of methanol to increase the retention time.

**Limits:**

- **impurity C:** not more than twice the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- **impurities A, B, D:** for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
- **sum of impurities other than C:** not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.4 per cent);

## TERBUTALINE SULFATE

## Terbutalini sulfas

$C_{24}H_{40}N_2O_{10}S$   
[23031-32-5]

$M_r$  548.7

## DEFINITION

Bis[(1*R*S)-1-(3,5-dihydroxyphenyl)-2-[(1,1-dimethylethyl)amino]ethanol] sulfate.

**Content:** 98.0 per cent to 101.0 per cent (dried substance).

## CHARACTERS

**Appearance:** white or almost white, crystalline powder.

– *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.02 per cent).

**Loss on drying** (2.2.32): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

#### ASSAY

Dissolve 0.400 g in 70 mL of *anhydrous acetic acid R* with heating. Titrate with 0.1 M *perchloric acid*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *perchloric acid* is equivalent to 54.87 mg of  $C_{24}H_{40}N_2O_{10}S$ .

#### IMPURITIES

*Specified impurities: A, B, C, D.*

A. 3,5-dihydroxybenzoic acid ( $\alpha$ -resorcylic acid),

B. (4*RS*)-2-(1,1-dimethylethyl)-1,2,3,4-tetrahydroisoquinoline-4,6,8-triol,

C. 1-(3,5-dihydroxyphenyl)-2-[(1,1-dimethylethyl)amino]ethanone,

D. 2-[benzyl-(1,1-dimethylethyl)amino]-1-(3,5-dihydroxyphenyl)ethanone.

corrected 6.1

## TERCONAZOLE

### Terconazolium

$C_{26}H_{31}Cl_2N_5O_3$   
[67915-31-5]

$M_r$  532.5

#### DEFINITION

1-[4-[(2*RS*,4*SR*)-2-(2,4-Dichlorophenyl)-2-[(1*H*-1,2,4-triazol-1-yl)methyl]-1,3-dioxolan-4-yl]methoxy]phenyl]-4-(1-methylethyl)piperazine.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

#### CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: practically insoluble in water, freely soluble in methylene chloride, soluble in acetone, sparingly soluble in ethanol (96 per cent).

It shows polymorphism (5.9).

#### IDENTIFICATION

*First identification: A.*

*Second identification: B, C.*

A. Infrared absorption spectrophotometry (2.2.24).

*Comparison: terconazole CRS.*

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in the minimum volume of *acetone R*, evaporate to dryness in a current of air and record new spectra using the residues.

B. Thin-layer chromatography (2.2.27).

*Test solution.* Dissolve 30 mg of the substance to be examined in *methanol R* and dilute to 5 mL with the same solvent.

*Reference solution (a).* Dissolve 30 mg of *terconazole CRS* in *methanol R* and dilute to 5 mL with the same solvent.

*Reference solution (b).* Dissolve 30 mg of *terconazole CRS* and 30 mg of *ketoconazole CRS* in *methanol R* and dilute to 5 mL with the same solvent.

*Plate: TLC octadecylsilyl silica gel plate R.*

*Mobile phase: ammonium acetate solution R, dioxan R, methanol R* (20:40:40 V/V/V).

*Application: 5 µL.*

*Development: in an unsaturated tank over a path of 10 cm.*

*Drying: in a current of warm air for 15 min.*

*Detection: expose to iodine vapour until the spots appear and examine in daylight.*

*System suitability: reference solution (b):*

– the chromatogram shows 2 clearly separated spots.

*Results: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).*

C. To 30 mg in a porcelain crucible add 0.3 g of *anhydrous sodium carbonate R*. Heat over an open flame for 10 min. Allow to cool. Take up the residue with 5 mL of *dilute nitric acid R* and filter. To 1 mL of the filtrate add 1 mL of *water R*. The solution gives reaction (a) of chlorides (2.3.1).

#### TESTS

**Optical rotation** (2.2.7):  $-0.10^\circ$  to  $+0.10^\circ$ .

Dissolve 1.0 g in *methylene chloride R* and dilute to 10 mL with the same solvent.

**Related substances.** Liquid chromatography (2.2.29).

*Test solution.* Dissolve 0.100 g of the substance to be examined in *methanol R* and dilute to 10.0 mL with the same solvent.

*Reference solution (a).* Dissolve 2.5 mg of *terconazole CRS* and 2.0 mg of *ketoconazole CRS* in *methanol R* and dilute to 100.0 mL with the same solvent.

*Reference solution (b).* Dilute 1.0 mL of the test solution to 100.0 mL with *methanol R*. Dilute 5.0 mL of this solution to 20.0 mL with *methanol R*.

*Column:*

– *size: l* = 0.1 m,  $\varnothing$  = 4.6 mm;

– *stationary phase: base-deactivated octadecylsilyl silica gel for chromatography R* (3 µm).

*Mobile phase:*

– *mobile phase A: 3.4 g/L solution of tetrabutylammonium hydrogen sulfate R;*

– mobile phase B: acetonitrile R1;

01/2008:0955  
corrected 6.1

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 10	95 → 50	5 → 50
10 - 15	50	50

Flow rate: 2 mL/min.

Detection: spectrophotometer at 220 nm.

Equilibration: with acetonitrile R1 for at least 30 min and then with the mobile phase at the initial composition for at least 5 min.

Injection: 10 µL; inject methanol R as a blank.

Retention time: ketoconazole = about 6 min; terconazole = about 7.5 min.

System suitability: reference solution (a):

- resolution: minimum 13 between the peaks due to ketoconazole and terconazole; if necessary, adjust the concentration of acetonitrile in the mobile phase or adjust the time programme for the linear gradient elution.

Limits:

- impurities A, B: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.25 per cent);
- total: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- disregard limit: 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Loss on drying (2.2.32): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulfated ash (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

#### ASSAY

Dissolve 0.150 g in 70 mL of a mixture of 1 volume of anhydrous acetic acid R and 7 volumes of methyl ethyl ketone R. Titrate with 0.1 M perchloric acid, determining the end-point potentiometrically at the 2<sup>nd</sup> point of inflexion (2.2.20).

1 mL of 0.1 M perchloric acid is equivalent to 17.75 mg of C<sub>26</sub>H<sub>31</sub>Cl<sub>2</sub>N<sub>5</sub>O<sub>3</sub>.

#### STORAGE

Protected from light.

#### IMPURITIES

Specified impurities: A, B.

- A. 1-[4-[[[(2RS,4RS)-2-(2,4-dichlorophenyl)-2-[(1H-1,2,4-triazol-1-yl)methyl]-1,3-dioxolan-4-yl]methoxy]phenyl]-4-(1-methylethyl)piperazine,

- B. 1-[4-[[[(2RS,4SR)-2-(2,4-dichlorophenyl)-2-[(4H-1,2,4-triazol-4-yl)methyl]-1,3-dioxolan-4-yl]methoxy]phenyl]-4-(1-methylethyl)piperazine.

## TERFENADINE

### Terfenadinum

C<sub>32</sub>H<sub>41</sub>NO<sub>2</sub>  
[50679-08-8]

M<sub>r</sub> 471.7

#### DEFINITION

(1RS)-1-[4-(1,1-Dimethylethyl)phenyl]-4-[4-(hydroxy-diphenylmethyl)piperidin-1-yl]butan-1-ol.

Content: 98.5 per cent to 101.0 per cent (dried substance).

#### CHARACTERS

Appearance: white or almost white, crystalline powder.

Solubility: very slightly soluble in water, freely soluble in methylene chloride, soluble in methanol. It is very slightly soluble in dilute hydrochloric acid.

It shows polymorphism (5.9).

#### IDENTIFICATION

First identification: C.

Second identification: A, B, D.

A. Melting point (2.2.14): 146 °C to 152 °C.

B. Ultraviolet and visible absorption spectrophotometry (2.2.25).

Test solution. Dissolve 50.0 mg in methanol R and dilute to 100.0 mL with the same solvent.

Spectral range: 230-350 nm.

Absorption maximum: at 259 nm.

Shoulders: at 253 nm and 270 nm.

Specific absorbance at the absorption maximum: 13.5 to 14.9.

C. Infrared absorption spectrophotometry (2.2.24).

Comparison: terfenadine CRS.

D. Thin-layer chromatography (2.2.27).

Test solution. Dissolve 50 mg of the substance to be examined in methylene chloride R and dilute to 10 mL with the same solvent.

Reference solution. Dissolve 50 mg of terfenadine CRS in methylene chloride R and dilute to 10 mL with the same solvent.

Plate: TLC silica gel F<sub>254</sub> plate R.

Mobile phase: methanol R, methylene chloride R (10:90 V/V).

Application: 10 µL.

Development: over a path of 15 cm.

Drying: in air.

Detection: examine in ultraviolet light at 254 nm.

Results: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

## TESTS

**Related substances.** Liquid chromatography (2.2.29).

**Test solution.** Dissolve 15 mg of the substance to be examined in the mobile phase and dilute to 10.0 mL with the mobile phase.

**Reference solution (a).** Dilute 1.0 mL of the test solution to 10.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 20.0 mL with the mobile phase.

**Reference solution (b).** Dissolve 15 mg of *terfenadine impurity A CRS* in the mobile phase and dilute to 10.0 mL with the mobile phase. To 5.0 mL of this solution, add 5.0 mL of the test solution and dilute to 50.0 mL with the mobile phase.

**Reference solution (c).** Dilute 10.0 mL of reference solution (a) to 25.0 mL with the mobile phase.

**Reference solution (d).** Dissolve 0.1 g of *potassium iodide R* in the mobile phase and dilute to 100 mL with the mobile phase. Dilute 1 mL of this solution to 100 mL with the mobile phase.

**Column:**

- size:  $l = 0.25$  m,  $\varnothing = 4.6$  mm;
- stationary phase: octylsilyl silica gel for chromatography R (5  $\mu$ m).

**Mobile phase:** dilute 600 mL of acetonitrile R1 to 1 L with diethylammonium phosphate buffer solution pH 6.0 R.

**Flow rate:** 1 mL/min.

**Detection:** spectrophotometer at 217 nm.

**Injection:** 20  $\mu$ L.

**Run time:** 5 times the retention time of terfenadine.

**System suitability:** reference solution (b):

- resolution: minimum 5.0 between the peaks due to terfenadine and impurity A;
- mass distribution ratio: minimum 2.0 for the peak due to terfenadine; use *potassium iodide R* as the unretained compound (reference solution (d)).

**Limits:**

- impurities A, B, C, D, E, F, G, H, I, J: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.2 per cent);
- total: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- disregard limit: 0.025 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.005 per cent).

**Loss on drying (2.2.32):** maximum 0.5 per cent, determined on 1.000 g by drying at 60 °C at a pressure not exceeding 0.5 kPa.

**Sulfated ash (2.4.14):** maximum 0.1 per cent, determined on 1.0 g.

## ASSAY

Dissolve 0.400 g in 50 mL of *anhydrous acetic acid R*. Titrate with 0.1 M *perchloric acid*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *perchloric acid* is equivalent to 47.17 mg of  $C_{32}H_{41}NO_2$ .

## STORAGE

Protected from light.

## IMPURITIES

**Specified impurities:** A, B, C, D, E, F, G, H, I, J.

- A.  $R_1 + R_2 = O$ ,  $R_3 = OH$ : 1-[4-(1,1-dimethylethyl)phenyl]-4-[4-(hydroxydiphenylmethyl)piperidin-1-yl]butan-1-one,
- B.  $R_1 = OH$ ,  $R_2 = R_3 = H$ : (1*RS*)-1-[4-(1,1-dimethylethyl)phenyl]-4-[4-(diphenylmethyl)piperidin-1-yl]butan-1-ol,
- H.  $R_1 = R_2 = H$ ,  $R_3 = OH$ : [1-[4-[4-(1,1-dimethylethyl)phenyl]butyl]piperidin-4-yl]diphenylmethanol,

- C. 1-[(4*RS*)-4-[4-(1,1-dimethylethyl)phenyl]-4-hydroxybutyl]-4-(hydroxydiphenylmethyl)piperidine 1-oxide,

- D. (1*RS*)-1-[4-(1,1-dimethylethyl)phenyl]-4-[4-(diphenylmethylene)piperidin-1-yl]butan-1-ol,

- E.  $R = H$ : 1-[(4*RS*)-4-[4-(1,1-dimethylethyl)phenyl]-4-hydroxybutyl]piperidine-4-carboxylic acid,

- J.  $R = C_2H_5$ : ethyl 1-[(4*RS*)-4-[4-(1,1-dimethylethyl)phenyl]-4-hydroxybutyl]piperidine-4-carboxylate,

- F. 1-[4-[4-(1,1-dimethylethyl)phenyl]but-3-enyl]-4-(diphenylmethylene)piperidine,

G. [1-[4-[4-(1,1-dimethylethyl)phenyl]but-3-enyl]piperidin-4-yl]diphenylmethanol,

I. diphenyl(piperidin-4-yl)methanol.

01/2008:1373  
corrected 7.0

## TESTOSTERONE

### Testosteronum

C<sub>19</sub>H<sub>28</sub>O<sub>2</sub>  
[58-22-0]

M<sub>r</sub> 288.4

#### DEFINITION

17β-Hydroxyandrost-4-en-3-one.

Content: 97.0 per cent to 103.0 per cent (dried substance).

#### CHARACTERS

Appearance: white or almost white crystalline powder, or colourless or yellowish-white crystals.

Solubility: practically insoluble in water, freely soluble in alcohol and in methylene chloride, practically insoluble in fatty oils.

mp: about 155 °C.

#### IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

Comparison: testosterone CRS.

#### TESTS

Specific optical rotation (2.2.7): + 106 to + 114 (dried substance).

Dissolve 0.250 g in ethanol R and dilute to 25.0 mL with the same solvent.

Impurities D and F. Thin-layer chromatography (2.2.27).

Test solution. Dissolve 0.100 g of the substance to be examined in methanol R and dilute to 10 mL with the same solvent.

Reference solution (a). Dissolve 1 mg of stanolone R in methanol R and dilute to 10 mL with the same solvent. In 1 mL of this solution, dissolve 10 mg of testosterone for impurity D identification CRS (testosterone spiked with about 1 per cent of impurity D).

Reference solution (b). Dilute 1.0 mL of the test solution to 100.0 mL with methanol R.

Reference solution (c). Dilute 2.0 mL of reference solution (b) to 10.0 mL with methanol R.

Reference solution (d). Dilute 1.0 mL of reference solution (b) to 10.0 mL with methanol R.

Plate: TLC silica gel F<sub>254</sub> plate R (6-8 μm).

Preconditioning (in the dark): add about 5 g of powdered silver nitrate R to 100 mL of methanol R. Stir the suspension for 30 min. Filter or decant the suspension and immerse the plate in the silver nitrate solution for at least 30 min. Dry at 75 °C for 30 min.

A pre-conditioned plate can be stored in the dark for 5-7 days.

Mobile phase: acetic acid R, ethanol R, dioxan R, methylene chloride R (1:2:10:90 V/V/V/V).

Application: 2 μL.

Development: in a saturated tank over 3/4 of the plate.

Drying: allow to stand at room temperature and protected from light for 30 min.

Detection: spray with a 200 g/L solution of toluenesulfonic acid R in ethanol R and heat at 105 °C for 10 min. Examine in ultraviolet light at 365 nm.

System suitability: the chromatogram obtained with reference solution (a) shows 3 clearly separated spots; impurity D R<sub>F</sub> = about 0.5; testosterone R<sub>F</sub> = about 0.65; impurity F R<sub>F</sub> = about 0.7.

Limits:

- impurity D: any spot due to impurity D is not more intense than the spot in the chromatogram obtained with reference solution (c) (0.2 per cent),
- impurity F: any spot due to impurity F is not more intense than the spot in the chromatogram obtained with reference solution (d) (0.1 per cent).

Related substances. Liquid chromatography (2.2.29).

Test solution. Dissolve 0.100 g of the substance to be examined in methanol R and dilute to 10.0 mL with the same solvent.

Reference solution (a). Dissolve 10 mg of testosterone for system suitability CRS (containing impurities C and I) in 1 mL of methanol R.

Reference solution (b). Dilute 1.0 mL of the test solution to 20.0 mL with methanol R. Dilute 1.0 mL of this solution to 10.0 mL with methanol R.

Reference solution (c). Dilute 2.0 mL of reference solution (b) to 10.0 mL with methanol R.

Column:

- size: l = 0.25 m, Ø = 4.6 mm,
- stationary phase: spherical end-capped octadecylsilyl silica gel for chromatography R (5 μm) with a pore size of 15 nm,
- temperature: 40 °C.

Mobile phase:

- mobile phase A: water for chromatography R, methanol R (45:55 V/V),
- mobile phase B: methanol R,

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 4	100	0
4 - 24	100 → 60	0 → 40
24 - 53	60 → 0	40 → 100
53 - 55	0	100

Flow rate: 1.0 mL/min.

Detection: spectrophotometer at 254 nm.

Injection: 20 μL.

Relative retention with reference to testosterone (retention time = about 18 min): impurity G = about 0.6; impurity H = about 0.8; impurity A = about 0.9; impurity I = about 0.95; impurity C = about 1.2; impurity E = about 1.7; impurity J = about 2.1; impurity B = about 2.5.

*System suitability*: reference solution (a):

- *resolution*: minimum baseline separation between the peaks due to impurity I and testosterone.

*Limits*: use the chromatogram obtained with reference solution (a) to identify the peaks due to impurities C and I:

- *correction factor*: for the calculation of content, multiply the peak area of impurity I by 2.9,
- *impurity C*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent),
- *impurity I*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (c) (0.2 per cent),
- *impurities A, B, E, G, H, J*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.1 per cent),
- *any other impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.1 per cent),
- *total*: not more than 1.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.6 per cent),
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent).

**Loss on drying** (2.2.32): maximum 1.0 per cent, determined on 0.500 g by drying in an oven at 105 °C for 2 h.

#### ASSAY

Dissolve 50.0 mg in *alcohol R* and dilute to 100.0 mL with the same solvent. Dilute 2.0 mL to 100.0 mL with *alcohol R*. Measure the absorbance (2.2.25) at the absorption maximum at 241 nm.

Calculate the content of  $C_{19}H_{28}O_2$  taking the specific absorbance to be 569.

#### STORAGE

Protected from light.

#### IMPURITIES

*Specified impurities*: A, B, C, D, E, F, G, H, I, J.

- A.  $R_1 + R_2 = R_3 + R_4 = O$ : androst-4-ene-3,17-dione (androstenedione),
- C.  $R_1 + R_2 = O$ ,  $R_3 = H$ ,  $R_4 = OH$ :  $17\alpha$ -hydroxyandrost-4-en-3-one (epitestosterone),
- D.  $R_1 = R_3 = OH$ ,  $R_2 = R_4 = H$ : androst-4-ene- $3\beta$ , $17\beta$ -diol ( $\Delta^4$ -androstenediol),
- E.  $R_1 + R_2 = O$ ,  $R_3 = O-CO-CH_3$ ,  $R_4 = H$ : 3-oxoandrost-4-en- $17\beta$ -yl acetate (testosterone acetate),

- B.  $R = C_2H_5$ : 3-ethoxyandrost-4,5-dien-17-one (androstenedione ethyleneoether),
- J.  $R = CH_3$ : 3-methoxyandrost-4,5-dien-17-one (androstenedione methyleneoether),

- F.  $17\beta$ -hydroxy- $5\alpha$ -androstan-3-one (androstanolone, stanolone),

- G.  $R_1 + R_2 = O$ : androsta-1,4-diene-3,17-dione (androstadienedione).

- H.  $R_1 = OH$ ,  $R_2 = H$ :  $17\beta$ -hydroxyandrosta-1,4-dien-3-one (boldenone),

- I.  $17\beta$ -hydroxyandrosta-4,6-dien-3-one ( $\Delta^6$ -testosterone).

01/2008:1736

## TESTOSTERONE DECANOATE

### Testosteroni decanoas

$C_{29}H_{46}O_3$

$M_r$  442.7

#### DEFINITION

3-Oxoandrost-4-en- $17\beta$ -yl decanoate.

*Content*: 97.0 per cent to 102.0 per cent (dried substance).

#### CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: practically insoluble in water, very soluble in acetone, in methylene chloride and in anhydrous ethanol, freely soluble in fatty oils.

#### IDENTIFICATION

- A. Infrared absorption spectrophotometry (2.2.24).

*Comparison*: testosterone decanoate CRS.

- B. Examine the chromatograms obtained in the assay.

*Results*: the principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (c).

#### TESTS

**Appearance of solution.** The solution is clear (2.2.1) and not more intensely coloured than reference solution BY<sub>6</sub> (2.2.2, Method II).

Dissolve 0.20 g in 20 mL of *methanol R*.

**Specific optical rotation** (2.2.7): + 75.0 to + 80.0 (dried substance).

Dissolve 0.200 g in *anhydrous ethanol R* and dilute to 20.0 mL with the same solvent.

**Related substances.** Liquid chromatography (2.2.29).

**Test solution.** Dissolve 20.0 mg of the substance to be examined in the mobile phase and dilute to 50.0 mL with the mobile phase.

**Reference solution (a).** Dissolve the contents of a vial of *testosterone decanoate for system suitability CRS* (containing impurities A, B, C, D, E and F) in 1 mL of the mobile phase.

**Reference solution (b).** Dilute 10.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 20.0 mL with the mobile phase.

**Reference solution (c).** Dissolve 20.0 mg of *testosterone decanoate CRS* in the mobile phase and dilute to 50.0 mL with the mobile phase.

**Column:**

- size:  $l = 0.25$  m,  $\varnothing = 4.6$  mm;
- stationary phase: end-capped octadecylsilyl silica gel for chromatography R (5  $\mu$ m);
- temperature: 40 °C.

**Mobile phase:** water R, acetonitrile R (5:95 V/V).

**Flow rate:** 1.0 mL/min.

**Detection:** spectrophotometer at 240 nm.

**Injection:** 20  $\mu$ L of the test solution and reference solutions (a) and (b).

**Run time:** twice the retention time of testosterone decanoate.

**Identification of impurities:** use the chromatogram supplied with *testosterone decanoate for system suitability CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A, B, C, D, E and F.

**Relative retention** with reference to testosterone decanoate (retention time = about 20 min): impurity A = about 0.2; impurity B = about 0.6; impurities C and G = about 0.79; impurity D = about 0.83; impurity E = about 1.3; impurity F = about 1.7.

**System suitability:** reference solution (a):

- resolution: minimum 1.5 between the peaks due to impurities C and D.

**Limits:**

- correction factors: for the calculation of content, multiply the peak area of impurity A by 0.7;
- impurities A, B, D, E, F: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- sum of impurities C and G: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- unspecified impurities: for each impurity, not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- total: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);
- disregard limit: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Free acid.** Dissolve 0.65 g in 10 mL of *ethanol (96 per cent) R*, previously neutralised to *bromothymol blue solution R3*, and titrate immediately with 0.01 M sodium hydroxide, using 0.1 mL of *bromothymol blue solution R3* as indicator. Not more than 0.6 mL of 0.01 M sodium hydroxide is required to change the colour of the indicator to blue.

**Loss on drying (2.2.32):** maximum 0.5 per cent, determined on 1.000 g over *diphosphorus pentoxide R* at a pressure not exceeding 0.7 kPa.

**ASSAY**

Liquid chromatography (2.2.29) as described in the test for related substances with the following modification.

**Injection:** 20  $\mu$ L of the test solution and reference solution (c).

Calculate the percentage content of  $C_{29}H_{46}O_3$  from the declared content of *testosterone decanoate CRS*.

**STORAGE**

At a temperature of 2 °C to 8 °C.

**IMPURITIES**

**Specified impurities:** A, B, C, D, E, F, G.

- A. R = H: testosterone,  
 B. R = CO-[CH<sub>2</sub>]<sub>6</sub>-CH<sub>3</sub>: 3-oxoandrost-4-en-17 $\beta$ -yl octanoate (testosterone octanoate),  
 C. R = CO-[CH<sub>2</sub>]<sub>7</sub>-CH<sub>3</sub>: 3-oxoandrost-4-en-17 $\beta$ -yl nonanoate (testosterone nonanoate),  
 D. R = CO-[CH<sub>2</sub>]<sub>8</sub>-CH=CH<sub>2</sub>: 3-oxoandrost-4-en-17 $\beta$ -yl undec-10-enoate (testosterone undecylenate),  
 E. R = CO-[CH<sub>2</sub>]<sub>9</sub>-CH<sub>3</sub>: 3-oxoandrost-4-en-17 $\beta$ -yl undecanoate (testosterone undecanoate),  
 F. R = CO-[CH<sub>2</sub>]<sub>10</sub>-CH<sub>3</sub>: 3-oxoandrost-4-en-17 $\beta$ -yl dodecanoate (testosterone laurate),

- G. 3-oxoandrost-4-en-17 $\alpha$ -yl decanoate (epitestosterone decanoate).

01/2008:1048

## TESTOSTERONE ENANTATE

### Testosteroni enantas

$C_{26}H_{40}O_3$   
[315-37-7]

$M_r$  400.6

**DEFINITION**

3-Oxoandrost-4-en-17 $\beta$ -yl heptanoate.

**Content:** 97.0 per cent to 103.0 per cent (dried substance).

**CHARACTERS**

**Appearance:** white or yellowish-white, crystalline powder.

**Solubility:** practically insoluble in water, very soluble in anhydrous ethanol, freely soluble in fatty oils.

**IDENTIFICATION**

**First identification:** B.

**Second identification:** A, C, D.

- A. Melting point (2.2.14): 34 °C to 39 °C.  
 B. Infrared absorption spectrophotometry (2.2.24).  
*Comparison:* testosterone enantate CRS.

C. Thin-layer chromatography (2.2.27).

*Solvent mixture:* methanol R, methylene chloride R (10:90 V/V).

**Test solution.** Dissolve 5 mg of the substance to be examined in the solvent mixture and dilute to 10 mL with the solvent mixture.

**Reference solution (a).** Dissolve 5 mg of *testosterone enantate CRS* in the solvent mixture and dilute to 10 mL with the solvent mixture.

**Reference solution (b).** Dissolve 5 mg of *testosterone enantate CRS*, 5 mg of *testosterone decanoate CRS* and 5 mg of *testosterone isocaproate CRS* in the solvent mixture and dilute to 10 mL with the solvent mixture.

**Plate:** TLC octadecylsilyl silica gel  $F_{254}$  plate R.

**Mobile phase:** water R, acetonitrile R, 2-propanol R (20:40:60 V/V/V).

**Application:** 5  $\mu$ L.

**Development:** over a path of 15 cm.

**Drying:** in air, then at 100 °C for 10 min; allow to cool.

**Detection A:** examine in ultraviolet light at 254 nm.

**Results A:** the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

**Detection B:** spray with alcoholic solution of sulfuric acid R; heat at 120 °C for 10 min; allow to cool and examine in daylight.

**Results B:** the principal spot in the chromatogram obtained with the test solution is green and is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

**System suitability:** reference solution (b):

- the chromatogram shows 3 clearly separated principal spots by each method of visualisation.

- D. To about 25 mg add 2 mL of a 10 g/L solution of *potassium hydroxide R* in *methanol R* and boil under a reflux condenser for 1 h. Cool. Add 10 mL of *water R*. Acidify with dilute hydrochloric acid R until blue litmus paper R turns red. Filter and wash the precipitate with a small quantity of *water R*. The residue, after drying at 60 °C at a pressure not exceeding 0.7 kPa for 3 h, melts (2.2.14) at 150 °C to 153 °C.

## TESTS

**Specific optical rotation (2.2.7):** + 77 to + 82 (dried substance).

Dissolve 0.250 g in *dioxan R* and dilute to 25.0 mL with the same solvent.

**Impurity A:** maximum 0.16 per cent.

Dissolve 0.50 g in 10 mL of *ethanol (96 per cent) R* previously neutralised to *bromothymol blue solution R3*. Titrate immediately with 0.01 M *sodium hydroxide*. Not more than 0.6 mL of 0.01 M *sodium hydroxide* is required to change the colour of the indicator to blue.

**Impurities C and D.** Thin-layer chromatography (2.2.27).

**Solvent mixture:** *methanol R*, *methylene chloride R* (10:90 V/V).

**Test solution.** Dissolve 0.20 g of the substance to be examined in the solvent mixture and dilute to 10 mL with the solvent mixture.

**Reference solution (a).** Dilute 1 mL of the test solution to 100 mL with the solvent mixture.

**Reference solution (b).** Dissolve 20 mg of *testosterone propionate CRS* in the solvent mixture, add 1 mL of the test solution and dilute to 100 mL with the solvent mixture.

**Plate:** TLC silica gel G plate R.

**Mobile phase:** *ethyl acetate R*, *toluene R* (20:80 V/V).

**Application:** 5  $\mu$ L.

**Development:** over a path of 15 cm.

**Drying:** in air.

**Detection:** spray with alcoholic solution of sulfuric acid R and heat at 120 °C for 10 min.

**System suitability:** reference solution (b):

- the chromatogram shows 2 clearly separated principal spots.

**Limit:**

- *impurities C, D:* any spot, apart from the principal spot, is not more intense than the principal spot in the chromatogram obtained with reference solution (a) (1.0 per cent).

**Impurity B.** Liquid chromatography (2.2.29).

**Test solution.** Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 50.0 mL with the mobile phase.

**Reference solution (a).** Dissolve 10.0 mg of *testosterone caproate CRS* (impurity B) in the mobile phase and dilute to 20.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 50.0 mL with the mobile phase.

**Reference solution (b).** Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. To 1 mL of this solution add 1 mL of reference solution (a).

**Column:**

- *size:*  $l = 0.12$  m,  $\varnothing = 4$  mm;
- *stationary phase:* octadecylsilyl silica gel for chromatography R (5  $\mu$ m).

**Mobile phase:** *water R*, *acetonitrile R* (30:70 V/V).

**Flow rate:** 1.0 mL/min.

**Detection:** spectrophotometer at 240 nm.

**Injection:** 20  $\mu$ L.

**System suitability:** reference solution (b):

- *relative retention* with reference to testosterone enantate: impurity B = about 0.7.

**Limit:**

- *impurity B:* not more than the area of the corresponding peak in the chromatogram obtained with reference solution (a) (1.0 per cent).

**Loss on drying (2.2.32):** maximum 0.5 per cent, determined on 1.000 g by drying in a desiccator over *diphosphorus pentoxide R* at a pressure not exceeding 0.7 kPa.

## ASSAY

Dissolve 50.0 mg in *anhydrous ethanol R* and dilute to 100.0 mL with the same solvent. Dilute 2.0 mL of this solution to 100.0 mL with *anhydrous ethanol R*. Measure the absorbance (2.2.25) at the absorption maximum at 241 nm.

Calculate the content of  $C_{26}H_{40}O_3$  taking the specific absorbance to be 422.

## STORAGE

Protected from light, at a temperature of 2 °C to 8 °C.

## IMPURITIES

**Specified impurities:** A, B, C, D.

A. heptanoic acid,

B. 3-oxoandrost-4-en-17 $\beta$ -yl hexanoate (testosterone caproate),

C. 3-oxo-5 $\alpha$ -androstan-17 $\beta$ -yl heptanoate,

D. 17β-hydroxyandrost-4-en-3-one (testosterone).

01/2008:1737

## TESTOSTERONE ISOCAPROATE

### Testosteroni isocaproas

C<sub>25</sub>H<sub>38</sub>O<sub>3</sub>M<sub>r</sub> 386.6

#### DEFINITION

3-Oxoandrost-4-en-17β-yl 4-methylpentanoate.

Content: 97.0 per cent to 102.0 per cent (dried substance).

#### CHARACTERS

Appearance: white or almost white powder.

Solubility: practically insoluble in water, very soluble in acetone and in methylene chloride, freely soluble in fatty oils.

#### IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

Comparison: testosterone isocaproate CRS.

B. Examine the chromatograms obtained in the assay.

Results: the principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (c).

#### TESTS

Appearance of solution. The solution is clear (2.2.1) and not more intensely coloured than reference solution BY<sub>6</sub> (2.2.2, Method II).

Dissolve 0.20 g in 20 mL of methanol R.

Specific optical rotation (2.2.7): + 82.0 to + 88.0 (dried substance).

Dissolve 0.200 g in anhydrous ethanol R and dilute to 20.0 mL with the same solvent.

Related substances. Liquid chromatography (2.2.29).

Test solution. Dissolve 20.0 mg of the substance to be examined in the mobile phase and dilute to 100.0 mL with the mobile phase.

Reference solution (a). Dissolve 2 mg of testosterone isocaproate for system suitability CRS (containing impurities A, B, C, D, E, F and G) in 10 mL of the mobile phase.

Reference solution (b). Dilute 10.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 20.0 mL with the mobile phase.

Reference solution (c). Dissolve 20.0 mg of testosterone isocaproate CRS in the mobile phase and dilute to 100.0 mL with the mobile phase.

Column:

- size:  $l = 0.25$  m,  $\varnothing = 4.6$  mm;
- stationary phase: end-capped octadecylsilyl silica gel for chromatography R (5  $\mu$ m);
- temperature: 40 °C.

Mobile phase: water R, acetonitrile R (15:85 V/V).

Flow rate: 1.0 mL/min.

Detection: spectrophotometer at 240 nm.

Injection: 20  $\mu$ L of the test solution and reference solutions (a) and (b).

Run time: twice the retention time of testosterone isocaproate.

Identification of impurities: use the chromatogram supplied with testosterone isocaproate for system suitability CRS and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A, B, C, D, E, F and G.

Relative retention with reference to testosterone isocaproate (retention time = about 14 min): impurity A = about 0.2; impurity B = about 0.4; impurity C = about 0.5; impurity D = about 0.7; impurity G = about 0.8; impurity E = about 1.1; impurity F = about 1.4.

System suitability: reference solution (a):

- peak-to-valley ratio: minimum 2.5, where  $H_p$  = height above the baseline of the peak due to impurity E and  $H_v$  = height above the baseline of the lowest point of the curve separating this peak from the peak due to testosterone isocaproate.

Limits:

- impurities A, B, C, D, E, F, G: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- unspecified impurities: for each impurity, not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- total: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);
- disregard limit: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Free acid. Dissolve 0.44 g in 10 mL of ethanol (96 per cent) R, previously neutralised to bromothymol blue solution R3, and titrate immediately with 0.01 M sodium hydroxide, using 0.1 mL of bromothymol blue solution R3 as indicator. Not more than 0.6 mL of 0.01 M sodium hydroxide is required to change the colour of the indicator to blue.

Loss on drying (2.2.32): maximum 0.5 per cent, determined on 1.000 g over diphosphorus pentoxide R at a pressure not exceeding 0.7 kPa.

#### ASSAY

Liquid chromatography (2.2.29) as described in the test for related substances with the following modification.

Injection: 20  $\mu$ L of the test solution and reference solution (c). Calculate the percentage content of C<sub>25</sub>H<sub>38</sub>O<sub>3</sub> from the declared content of testosterone isocaproate CRS.

#### IMPURITIES

Specified impurities: A, B, C, D, E, F, G.

- A. R = H: testosterone,
- B. R = CO-CH<sub>3</sub>: 3-oxoandrost-4-en-17β-yl acetate (testosterone acetate),
- C. R = CO-C<sub>2</sub>H<sub>5</sub>: testosterone propionate,
- D. R = CO-CH(CH<sub>3</sub>)<sub>2</sub>: 3-oxoandrost-4-en-17β-yl 2-methylpropanoate (testosterone isobutyrate),
- E. R = CO-[CH<sub>2</sub>]<sub>4</sub>-CH<sub>3</sub>: 3-oxoandrost-4-en-17β-yl hexanoate (testosterone caproate),
- F. R = CO-[CH<sub>2</sub>]<sub>5</sub>-CH<sub>3</sub>: testosterone enantate,

G. 3-oxoandrost-4-en-17 $\alpha$ -yl 4-methylpentanoate (epitestosterone isocaproate).

01/2008:0297  
corrected 6.0

## TESTOSTERONE PROPIONATE

### Testosteroni propionas

$C_{22}H_{32}O_3$   
[57-85-2]

$M_r$  344.5

#### DEFINITION

3-Oxoandrost-4-en-17 $\beta$ -yl propanoate.

*Content*: 97.0 per cent to 103.0 per cent (dried substance).

#### CHARACTERS

*Appearance*: white or almost white powder or colourless crystals.

*Solubility*: practically insoluble in water, freely soluble in acetone and in alcohol, soluble in fatty oils.

#### IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

*Comparison*: *Ph. Eur. reference spectrum of testosterone propionate*.

#### TESTS

**Specific optical rotation** (2.2.7): + 84 to + 90 (dried substance).

Dissolve 0.250 g in *ethanol R* and dilute to 25.0 mL with the same solvent.

**Related substances**. Liquid chromatography (2.2.29).

*Test solution*. Dissolve 50.0 mg of the substance to be examined in *methanol R* and dilute to 50.0 mL with the same solvent.

*Reference solution (a)*. Dissolve 2 mg of the substance to be examined and 2 mg of *testosterone acetate CRS* in *methanol R* and dilute to 50.0 mL with the same solvent.

*Reference solution (b)*. Dilute 1.0 mL of the test solution to 100.0 mL with *methanol R*.

*Column*:

- *size*:  $l = 0.25$  m,  $\varnothing = 4.6$  mm,
- *stationary phase*: octadecylsilyl silica gel for chromatography R (5  $\mu$ m).

*Mobile phase*: *water R*, *methanol R* (20:80 V/V).

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 20  $\mu$ L.

*Run time*: twice the retention time of testosterone propionate.

*Relative retention* with reference to testosterone propionate (retention time = about 9 min): impurity C = about 0.5; impurity A = about 0.7; impurity D = about 0.8; impurity B = about 1.4.

*System suitability*: reference solution (a):

- *resolution*: minimum 4.0 between the peaks due to testosterone propionate and to impurity A.

*Limits*:

- *any impurity*: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent),
- *total*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent),
- *disregard limit*: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Loss on drying** (2.2.32): maximum 0.5 per cent, determined on 0.500 g by drying in an oven at 105 °C for 2 h.

#### ASSAY

Dissolve 25.0 mg in *ethanol R* and dilute to 250.0 mL with the same solvent. Dilute 10.0 mL of the solution to 100.0 mL with *ethanol R*. Measure the absorbance (2.2.25) at the maximum at 240 nm.

Calculate the content of  $C_{22}H_{32}O_3$  taking the specific absorbance to be 490.

#### IMPURITIES

*Specified impurities*: A, B, C, D.

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use* (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): E.

A. R = CO-CH<sub>3</sub>: 3-oxoandrost-4-en-17 $\beta$ -yl acetate (testosterone acetate),

B. R = CO-CH(CH<sub>3</sub>)<sub>2</sub>: 3-oxoandrost-4-en-17 $\beta$ -yl 2-methylpropanoate (testosterone isobutyrate),

C. R = H: testosterone,

D. 3-oxoandrost-1,4-dien-17 $\beta$ -yl propanoate,

E. 3-oxoandrost-4,6-dien-17 $\beta$ -yl propanoate.

04/2008:0057 – stationary phase: octadecylsilyl silica gel for chromatography R (5 µm);

– temperature: 30 °C.

Mobile phase:

– mobile phase A: dissolve 1.36 g of potassium dihydrogen phosphate R in water R, add 0.5 mL of phosphoric acid R and dilute to 1000 mL with water R;

– mobile phase B: acetonitrile R;

## TETRACAINE HYDROCHLORIDE

### Tetracaini hydrochloridum

C<sub>15</sub>H<sub>25</sub>ClN<sub>2</sub>O<sub>2</sub>  
[136-47-0]

M<sub>r</sub> 300.8

#### DEFINITION

2-(Dimethylamino)ethyl 4-(butylamino)benzoate hydrochloride.

Content: 99.0 per cent to 101.0 per cent (dried substance).

#### CHARACTERS

Appearance: white or almost white, slightly hygroscopic, crystalline powder.

Solubility: freely soluble in water, soluble in ethanol (96 per cent).

It melts at about 148 °C or it may occur in either of 2 other crystalline forms which melt respectively at about 134 °C and 139 °C. Mixtures of these forms melt within the range 134 °C to 147 °C.

#### IDENTIFICATION

First identification: A, B, D.

Second identification: B, C, D.

A. Infrared absorption spectrophotometry (2.2.24).

Comparison: tetracaine hydrochloride CRS.

B. To 10 mL of solution S (see Tests) add 1 mL of ammonium thiocyanate solution R. A white, crystalline precipitate is formed which, after recrystallisation from water R and drying at 80 °C for 2 h, melts (2.2.14) at about 131 °C.

C. To about 5 mg add 0.5 mL of fuming nitric acid R. Evaporate to dryness on a water-bath, allow to cool and dissolve the residue in 5 mL of acetone R. Add 1 mL of 0.1 M alcoholic potassium hydroxide. A violet colour develops.

D. Solution S gives reaction (a) of chlorides (2.3.1).

#### TESTS

**Solution S.** Dissolve 5.0 g in carbon dioxide-free water R and dilute to 50 mL with the same solvent.

**Appearance of solution.** The solution is clear (2.2.1) and colourless (2.2.2, Method II).

Dilute 2 mL of solution S to 10 mL with water R.

pH (2.2.3): 4.5 to 6.5.

Dilute 1 mL of solution S to 10 mL with carbon dioxide-free water R.

**Related substances.** Liquid chromatography (2.2.29). Prepare the solutions immediately before use or store them at a temperature of 2-8 °C.

Solvent mixture: acetonitrile R, water R (20:80 V/V).

Test solution. Dissolve 50 mg of the substance to be examined in the solvent mixture and dilute to 50 mL with the solvent mixture.

Reference solution (a). Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

Reference solution (b). Dissolve the contents of a vial of tetracaine for system suitability CRS (containing impurities A, B and C) in 2 mL of the solvent mixture.

Column:

– size: l = 0.15 m, Ø = 4.6 mm;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 3	80	20
3 - 18	80 → 40	20 → 60
18 - 23	40	60

Flow rate: 1.5 mL/min.

Detection: spectrophotometer at 300 nm.

Injection: 10 µL.

Identification of impurities: use the chromatogram supplied with tetracaine for system suitability CRS and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A, B and C.

Relative retention with reference to tetracaine (retention time = about 8 min): impurity A = about 0.3; impurity B = about 1.7; impurity C = about 2.1.

System suitability: reference solution (b):

– resolution: minimum 5.0 between the peaks due to tetracaine and impurity B.

Limits:

– correction factors: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity B = 0.6; impurity C = 0.7;

– impurity A: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent);

– impurities B, C: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);

– unspecified impurities: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);

– total: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

– disregard limit: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Heavy metals** (2.4.8): maximum 10 ppm.

12 mL of solution S complies with test A. Prepare the reference solution using lead standard solution (1 ppm Pb) R.

**Loss on drying** (2.2.32): maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

#### ASSAY

Dissolve 0.250 g in 50 mL of ethanol (96 per cent) R and add 5.0 mL of 0.01 M hydrochloric acid. Carry out a potentiometric titration (2.2.20), using 0.1 M sodium hydroxide. Read the volume added between the 2 points of inflexion.

1 mL of 0.1 M sodium hydroxide is equivalent to 30.08 mg of C<sub>15</sub>H<sub>25</sub>ClN<sub>2</sub>O<sub>2</sub>.

#### STORAGE

In an airtight container, protected from light.

## IMPURITIES

Specified impurities: A, B, C.

A. 4-aminobenzoic acid,

B. 4-(butylamino)benzoic acid,

C. methyl 4-(butylamino)benzoate.

04/2010:0644

## TETRACOSACTIDE

### Tetracosactidum

H - Ser - Tyr - Ser - Met - Glu - His - Phe - Arg - Trp - Gly -  
Lys - Pro - Val - Gly - Lys - Lys - Arg - Arg - Pro - Val -  
Lys - Val - Tyr - Pro - OH

$C_{136}H_{210}N_{40}O_{31}S$   
[16960-16-0]

$M_r$  2933

## DEFINITION

Synthetic tetracosapeptide, in which the sequence of amino acids is the same as that of the first 24 residues of human corticotropin. It increases the rate at which corticoid hormones are secreted by the adrenal glands. It is available as an acetate.

**Content:** 90 per cent to 102 per cent (anhydrous and acetic acid-free substance). By convention, 1 µg of tetracosactide is equivalent to 1 IU of tetracosactide.

## CHARACTERS

**Appearance:** white or yellow, amorphous powder.

**Solubility:** sparingly soluble in water.

## IDENTIFICATION

A. Examine the chromatograms obtained in the test for related peptides.

**Results:** the principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with the reference solution.

B. Amino acid analysis (2.2.56). For hydrolysis use Method 1 and for analysis use Method 1.

Express the content of each amino acid in moles. Calculate the relative proportions of the amino acids, taking that of valine to be equivalent to 3. The values fall within the following limits: lysine 3.5 to 4.7; histidine 0.9 to 1.1; arginine 2.7 to 3.3; serine 1.1 to 2.2; glutamic acid 0.9 to 1.1; proline 2.5 to 3.5; glycine 1.8 to 2.2; methionine 0.9 to 1.1; tyrosine 1.7 to 2.2; phenylalanine 0.9 to 1.1. Not more than traces of other amino acids are present.

## TESTS

**Specific optical rotation** (2.2.7): -99 to -109 (anhydrous and acetic acid-free substance).

Dissolve 10.0 mg in 1.0 mL of a mixture of 1 volume of *glacial acetic acid R* and 99 volumes of *water R*.

**Absorbance** (2.2.25): 0.51 to 0.61 (anhydrous and acetic acid-free substance), determined at the absorption maximum between 240 nm and 280 nm, at 276 nm. The ratio of the absorbance at the maximum at 276 nm to the absorbance at 248 nm is 2.4 to 2.9.

Dissolve 1.0 mg in 0.1 M *hydrochloric acid* and dilute to 5.0 mL with the same acid.

**Related peptides.** Liquid chromatography (2.2.29): use the normalisation procedure.

**Test solution.** Dissolve an accurately weighed quantity of the substance to be examined in *water R* to obtain the same concentration as in reference solution (a).

**Reference solution (a).** Dissolve the contents of a vial of *tetracosactide CRS* in *water R* to obtain a concentration of about 1 mg/mL, as indicated in the leaflet provided with the reference standard.

**Reference solution (b).** In order to prepare impurity A *in situ*, dissolve 1.0 mg of the substance to be examined in 1 mL of a 1 per cent V/V solution of *glacial acetic acid R*, add 50 µL of a mixture of 1 volume of *strong hydrogen peroxide solution R* and 999 volumes of *water R*, and allow to stand for 2 h.

**Column:**

- size:  $l = 0.15$  m,  $\emptyset = 4.6$  mm;
- stationary phase: octadecylsilyl silica gel for chromatography R (3 µm);
- temperature: 25 °C.

**Mobile phase:**

- mobile phase A: mix 5.0 mL of *glacial acetic acid R*, 60 mL of *acetonitrile R* and 5.0 g of *ammonium sulfate R* and dilute to 1000 mL with *water R*;
- mobile phase B: mix 5.0 mL of *glacial acetic acid R*, 310 mL of *acetonitrile R* and 5.0 g of *ammonium sulfate R* and dilute to 1000 mL with *water R*;
- mobile phase C: *acetonitrile R*.

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)	Mobile phase C (per cent V/V)
0 - 50	55 → 40	45 → 60	0
50 - 50.1	40 → 0	60 → 15	0 → 85
50.1 - 55	0	15	85
55 - 55.1	0 → 55	15 → 45	85 → 0
55.1 - 60	55	45	0

**Flow rate:** 0.8 mL/min.

**Detection:** spectrophotometer at 275 nm.

**Injection:** 20 µL.

**Identification of impurities:** use the chromatogram supplied with *tetracosactide CRS* and the chromatogram obtained with reference solution (a) to identify the peak due to impurity B; use the chromatogram obtained with reference solution (b) to identify the peak due to impurity A.

**Relative retention** with reference to tetracosactide (retention time = about 26 min): impurity A = about 0.3; impurity B = about 0.95.

**System suitability:** reference solution (a):

- peak-to-valley ratio: minimum 3, where  $H_p$  = height above the baseline of the peak due to impurity B and  $H_v$  = height above the baseline of the lowest point of the curve separating this peak from the peak due to tetracosactide.

**Limits:**

- impurity A: maximum 3 per cent;
- impurity B: maximum 4 per cent;
- unspecified impurities: for each impurity, maximum 2.5 per cent;
- sum of impurities other than A: maximum 9 per cent.

**Acetic acid** (2.5.34): 8.0 per cent to 13.0 per cent.

**Test solution.** Dissolve 10.0 mg of the substance to be examined in a mixture of 5 volumes of mobile phase B and 95 volumes of mobile phase A and dilute to 10.0 mL with the same mixture of mobile phases.

**Water** (2.5.32): maximum 14.0 per cent, determined on 20.0-50.0 mg.

**Bacterial endotoxins** (2.6.14): less than 10 IU/mg, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins.

#### ASSAY

Liquid chromatography (2.2.29) as described in the test for related peptides.

Calculate the content of  $C_{136}H_{210}N_{40}O_{31}S$  using the declared content of *tetracosactide CRS*.

#### STORAGE

Protected from light, at a temperature of 2 °C to 8 °C.

#### LABELLING

The label states:

- the mass of peptide in the container;
- where applicable, that the substance is suitable for use in the manufacture of parenteral preparations.

#### IMPURITIES

*Specified impurities: A, B.*

- A. tetracosactide sulfoxide,
- B. unidentified impurity.

**Reference solution (a).** Dissolve 5 mg of *tetracycline hydrochloride CRS* in *methanol R* and dilute to 10 mL with the same solvent.

**Reference solution (b).** Dissolve 5 mg of *tetracycline hydrochloride CRS*, 5 mg of *demeclocycline hydrochloride R* and 5 mg of *oxytetracycline hydrochloride R* in *methanol R* and dilute to 10 mL with the same solvent.

**Plate:** *TLC octadecylsilyl silica gel F<sub>254</sub> plate R.*

**Mobile phase:** mix 20 volumes of *acetonitrile R*, 20 volumes of *methanol R* and 60 volumes of a 63 g/L solution of *oxalic acid R* previously adjusted to pH 2 with *concentrated ammonia R*.

**Application:** 1 µL.

**Development:** over 3/4 of the plate.

**Drying:** in air.

**Detection:** examine in ultraviolet light at 254 nm.

**System suitability:** the chromatogram obtained with reference solution (b) shows 3 clearly separated spots.

**Results:** the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

- B. To about 2 mg add 5 mL of *sulfuric acid R*. A violet-red colour develops. Add the solution to 2.5 mL of *water R*. The colour becomes yellow.
- C. Dissolve about 10 mg in a mixture of 1 mL of *dilute nitric acid R* and 5 mL of *water R*. Shake and add 1 mL of *silver nitrate solution R2*. Any opalescence in the solution is not more intense than that in a mixture of 1 mL of *dilute nitric acid R*, 5 mL of *water R* and 1 mL of *silver nitrate solution R2*.

#### TESTS

**pH** (2.2.3): 3.5 to 6.0.

Suspend 0.1 g in 10 mL of *carbon dioxide-free water R*.

**Specific optical rotation** (2.2.7): –260 to –280 (dried substance).

Dissolve 0.250 g in 0.1 M *hydrochloric acid* and dilute to 50.0 mL with the same acid.

**Related substances.** Liquid chromatography (2.2.29). *Prepare the solutions immediately before use.*

**Test solution.** Dissolve 25.0 mg of the substance to be examined in 0.01 M *hydrochloric acid* and dilute to 25.0 mL with the same acid.

**Reference solution (a).** Dissolve 25.0 mg of *tetracycline hydrochloride CRS* in 0.01 M *hydrochloric acid* and dilute to 25.0 mL with the same acid.

**Reference solution (b).** Dissolve 12.5 mg of *4-epitetracycline hydrochloride CRS* in 0.01 M *hydrochloric acid* and dilute to 50.0 mL with the same acid.

**Reference solution (c).** Dissolve 10.0 mg of *anhydrotetracycline hydrochloride CRS* in 0.01 M *hydrochloric acid* and dilute to 100.0 mL with the same acid.

**Reference solution (d).** Dissolve 10.0 mg of *4-epianhydrotetracycline hydrochloride CRS* in 0.01 M *hydrochloric acid* and dilute to 50.0 mL with the same acid.

**Reference solution (e).** Mix 1.0 mL of reference solution (a), 2.0 mL of reference solution (b) and 5.0 mL of reference solution (d) and dilute to 25.0 mL with 0.01 M *hydrochloric acid*.

**Reference solution (f).** Mix 40.0 mL of reference solution (b), 20.0 mL of reference solution (c) and 5.0 mL of reference solution (d) and dilute to 200.0 mL with 0.01 M *hydrochloric acid*.

**Reference solution (g).** Dilute 1.0 mL of reference solution (c) to 50.0 mL with 0.01 M *hydrochloric acid*.

**Column:**

- size:  $l = 0.25$  m,  $\varnothing = 4.6$  mm;

corrected 6.0

## TETRACYCLINE

### Tetracyclinum

$C_{22}H_{24}N_2O_8$   
[60-54-8]

$M_r$  444.4

#### DEFINITION

(4S,4aS,5aS,6S,12aS)-4-(Dimethylamino)-3,6,10,12,12a-pentahydroxy-6-methyl-1,11-dioxo-1,4,4a,5,5a,6,11,12a-octahydrotetracene-2-carboxamide.

Substance produced by certain strains of *Streptomyces aerofaciens* or obtained by any other means.

**Content:** 88.0 per cent to 102.0 per cent (dried substance).

#### CHARACTERS

**Appearance:** yellow, crystalline powder.

**Solubility:** very slightly soluble in water, soluble in ethanol (96 per cent) and in methanol, sparingly soluble in acetone. It dissolves in dilute acid and alkaline solutions.

#### IDENTIFICATION

A. Thin-layer chromatography (2.2.27).

**Test solution.** Dissolve 5 mg of the substance to be examined in *methanol R* and dilute to 10 mL with the same solvent.

- *stationary phase*: styrene-divinylbenzene copolymer *R* (8 µm);
- *temperature*: 60 °C.

*Mobile phase*: weigh 80.0 g of 2-methyl-2-propanol *R* and transfer to a 1000 mL volumetric flask with the aid of 200 mL of water *R*; add 100 mL of a 35 g/L solution of dipotassium hydrogen phosphate *R* adjusted to pH 9.0 with dilute phosphoric acid *R*, 200 mL of a 10 g/L solution of tetrabutylammonium hydrogen sulfate *R* adjusted to pH 9.0 with dilute sodium hydroxide solution *R* and 10 mL of a 40 g/L solution of sodium edetate *R* adjusted to pH 9.0 with dilute sodium hydroxide solution *R*; dilute to 1000.0 mL with water *R*.

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 20 µL; inject the test solution and reference solutions (e), (f) and (g).

*System suitability*:

- *resolution*: minimum 2.5 between the peaks due to impurity A (1<sup>st</sup> peak) and tetracycline (2<sup>nd</sup> peak) and minimum 8.0 between the peaks due to tetracycline and impurity D (3<sup>rd</sup> peak) in the chromatogram obtained with reference solution (e); if necessary, adjust the concentration of 2-methyl-2-propanol in the mobile phase;
- *signal-to-noise ratio*: minimum 3 for the principal peak in the chromatogram obtained with reference solution (g);
- *symmetry factor*: maximum 1.25 for the peak due to tetracycline in the chromatogram obtained with reference solution (e).

*Limits*:

- *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (f) (5.0 per cent);
- *impurity B* (eluting on the tail of the principal peak): not more than 0.4 times the area of the peak due to impurity A in the chromatogram obtained with reference solution (f) (2.0 per cent);
- *impurity C*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (f) (1.0 per cent);
- *impurity D*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (f) (0.5 per cent).

**Heavy metals** (2.4.8): maximum 50 ppm.

0.5 g complies with test C. Prepare the reference solution using 2.5 mL of lead standard solution (10 ppm Pb) *R*.

**Loss on drying** (2.2.32): maximum 13.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (2.4.14): maximum 0.5 per cent, determined on 1.0 g.

#### ASSAY

Liquid chromatography (2.2.29) as described in the test for related substances with the following modification.

*Injection*: test solution and reference solution (a).

Calculate the percentage content of C<sub>22</sub>H<sub>24</sub>N<sub>2</sub>O<sub>8</sub>.

#### STORAGE

Protected from light.

#### IMPURITIES

- A. R<sub>1</sub> = NH<sub>2</sub>, R<sub>2</sub> = H, R<sub>3</sub> = N(CH<sub>3</sub>)<sub>2</sub>: (4*R*,4*aS*,5*aS*,6*S*,12*aS*)-4-(dimethylamino)-3,6,10,12,12*a*-pentahydroxy-6-methyl-1,11-dioxo-1,4,4*a*,5,5*a*,6,11,12*a*-octahydrotetracycane-2-carboxamide (4-epitetracycline),
- B. R<sub>1</sub> = CH<sub>3</sub>, R<sub>2</sub> = N(CH<sub>3</sub>)<sub>2</sub>, R<sub>3</sub> = H: (4*S*,4*aS*,5*aS*,6*S*,12*aS*)-2-acetyl-4-(dimethylamino)-3,6,10,12,12*a*-pentahydroxy-6-methyl-4*a*,5*a*,6,12*a*-tetrahydrotetracycane-1,11(4*H*,5*H*)-dione (2-acetyl-2-decarbamoylepitanolol tetracycline),

- C. R<sub>1</sub> = N(CH<sub>3</sub>)<sub>2</sub>, R<sub>2</sub> = H: (4*S*,4*aS*,12*aS*)-4-(dimethylamino)-3,10,11,12*a*-tetrahydroxy-6-methyl-1,12-dioxo-1,4,4*a*,5,12,12*a*-hexahydrotetracycane-2-carboxamide (anhydrotetracycline),
- D. R<sub>1</sub> = H, R<sub>2</sub> = N(CH<sub>3</sub>)<sub>2</sub>: (4*R*,4*aS*,12*aS*)-4-(dimethylamino)-3,10,11,12*a*-tetrahydroxy-6-methyl-1,12-dioxo-1,4,4*a*,5,12,12*a*-hexahydrotetracycane-2-carboxamide (4-epianhydrotetracycline).

## TETRACYCLINE HYDROCHLORIDE

### Tetracyclini hydrochloridum

C<sub>22</sub>H<sub>25</sub>ClN<sub>2</sub>O<sub>8</sub>  
[64-75-5]

*M*<sub>r</sub> 480.9

#### DEFINITION

(4*S*,4*aS*,5*aS*,6*S*,12*aS*)-4-(Dimethylamino)-3,6,10,12,12*a*-pentahydroxy-6-methyl-1,11-dioxo-1,4,4*a*,5,5*a*,6,11,12*a*-octahydrotetracycane-2-carboxamide hydrochloride.

Substance produced by certain strains of *Streptomyces aerofaciens* or obtained by any other means.

*Content*: 95.0 per cent to 102.0 per cent (dried substance).

#### CHARACTERS

*Appearance*: yellow, crystalline powder.

*Solubility*: soluble in water, slightly soluble in ethanol (96 per cent), practically insoluble in acetone. It dissolves in solutions of alkali hydroxides and carbonates. Solutions in water become turbid on standing, owing to the precipitation of tetracycline.

#### IDENTIFICATION

A. Thin-layer chromatography (2.2.27).

*Test solution*. Dissolve 5 mg of the substance to be examined in methanol *R* and dilute to 10 mL with the same solvent.

*Reference solution (a)*. Dissolve 5 mg of tetracycline hydrochloride CRS in methanol *R* and dilute to 10 mL with the same solvent.

*Reference solution (b).* Dissolve 5 mg of tetracycline hydrochloride CRS, 5 mg of demeclocycline hydrochloride R and 5 mg of oxytetracycline hydrochloride R in methanol R and dilute to 10 mL with the same solvent.

*Plate:* TLC octadecylsilyl silica gel F<sub>254</sub> plate R.

*Mobile phase:* mix 20 volumes of acetonitrile R, 20 volumes of methanol R and 60 volumes of a 63 g/L solution of oxalic acid R previously adjusted to pH 2 with concentrated ammonia R.

*Application:* 1 µL.

*Development:* over 3/4 of the plate.

*Drying:* in air.

*Detection:* examine in ultraviolet light at 254 nm.

*System suitability:* the chromatogram obtained with reference solution (b) shows 3 clearly separated spots.

*Results:* the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

B. To about 2 mg add 5 mL of sulfuric acid R. A violet-red colour develops. Add the solution to 2.5 mL of water R. The colour becomes yellow.

C. It gives reaction (a) of chlorides (2.3.1).

## TESTS

**pH** (2.2.3): 1.8 to 2.8.

Dissolve 0.1 g in 10 mL of carbon dioxide-free water R.

**Specific optical rotation** (2.2.7): –240 to –255 (dried substance).

Dissolve 0.250 g in 0.1 M hydrochloric acid and dilute to 25.0 mL with the same acid.

**Related substances.** Liquid chromatography (2.2.29). Prepare the solutions immediately before use.

*Test solution.* Dissolve 25.0 mg of the substance to be examined in 0.01 M hydrochloric acid and dilute to 25.0 mL with the same acid.

*Reference solution (a).* Dissolve 25.0 mg of tetracycline hydrochloride CRS in 0.01 M hydrochloric acid and dilute to 25.0 mL with the same acid.

*Reference solution (b).* Dissolve 15.0 mg of 4-epitetracycline hydrochloride CRS in 0.01 M hydrochloric acid and dilute to 50.0 mL with the same acid.

*Reference solution (c).* Dissolve 10.0 mg of anhydrotetracycline hydrochloride CRS in 0.01 M hydrochloric acid and dilute to 100.0 mL with the same acid.

*Reference solution (d).* Dissolve 10.0 mg of 4-epianhydrotetracycline hydrochloride CRS in 0.01 M hydrochloric acid and dilute to 50.0 mL with the same acid.

*Reference solution (e).* Mix 1.0 mL of reference solution (a), 2.0 mL of reference solution (b) and 5.0 mL of reference solution (d) and dilute to 25.0 mL with 0.01 M hydrochloric acid.

*Reference solution (f).* Mix 20.0 mL of reference solution (b), 10.0 mL of reference solution (c) and 5.0 mL of reference solution (d) and dilute to 200.0 mL using 0.01 M hydrochloric acid.

*Reference solution (g).* Dilute 1.0 mL of reference solution (c) to 50.0 mL with 0.01 M hydrochloric acid.

*Column:*

– size:  $l = 0.25$  m,  $\varnothing = 4.6$  mm;

– stationary phase: styrene-divinylbenzene copolymer R (8 µm);

– temperature: 60 °C.

*Mobile phase:* weigh 80.0 g of 2-methyl-2-propanol R and transfer to a 1000 mL volumetric flask with the aid of 200 mL of water R; add 100 mL of a 35 g/L solution of dipotassium hydrogen phosphate R adjusted to pH 9.0 with dilute phosphoric acid R, 200 mL of a 10 g/L solution of tetrabutylammonium hydrogen sulfate R adjusted to pH 9.0 with dilute sodium hydroxide solution R and 10 mL of a 40 g/L solution of sodium edetate R adjusted to pH 9.0 with dilute sodium hydroxide solution R; dilute to 1000.0 mL with water R.

*Flow rate:* 1.0 mL/min.

*Detection:* spectrophotometer at 254 nm.

*Injection:* 20 µL; inject the test solution and reference solutions (e), (f) and (g).

*System suitability:*

– resolution: minimum 2.5 between the peaks due to impurity A (1<sup>st</sup> peak) and tetracycline (2<sup>nd</sup> peak) and minimum 8.0 between the peaks due to tetracycline and impurity D (3<sup>rd</sup> peak) in the chromatogram obtained with reference solution (e); if necessary, adjust the concentration of 2-methyl-2-propanol in the mobile phase;

– signal-to-noise ratio: minimum 3 for the principal peak in the chromatogram obtained with reference solution (g);

– symmetry factor: maximum 1.25 for the peak due to tetracycline in the chromatogram obtained with reference solution (e).

*Limits:*

– impurity A: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (f) (3.0 per cent);

– impurity B (eluting on the tail of the principal peak): not more than 0.5 times the area of the peak due to impurity A in the chromatogram obtained with reference solution (f) (1.5 per cent);

– impurity C: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (f) (0.5 per cent);

– impurity D: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (f) (0.5 per cent).

**Heavy metals** (2.4.8): maximum 50 ppm.

0.5 g complies with test C. Prepare the reference solution using 2.5 mL of lead standard solution (10 ppm Pb) R.

**Loss on drying** (2.2.32): maximum 2.0 per cent, determined on 1.000 g by drying at 60 °C over diphosphorus pentoxide R at a pressure not exceeding 670 Pa for 3 h.

**Sulfated ash** (2.4.14): maximum 0.5 per cent, determined on 1.0 g.

**Bacterial endotoxins** (2.6.14): less than 0.5 IU/mg, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins.

## ASSAY

Liquid chromatography (2.2.29) as described in the test for related substances with the following modification.

*Injection:* test solution and reference solution (a).

Calculate the percentage content of C<sub>22</sub>H<sub>25</sub>ClN<sub>2</sub>O<sub>8</sub>.

## STORAGE

Protected from light. If the substance is sterile, store in a sterile, tamper-proof container.

## IMPURITIES

- A. R1 = NH<sub>2</sub>, R2 = H, R3 = N(CH<sub>3</sub>)<sub>2</sub>: (4*R*,4*aS*,5*aS*,6*S*,12*aS*)-4-(dimethylamino)-3,6,10,12,12*a*-pentahydroxy-6-methyl-1,11-dioxo-1,4,4*a*,5,5*a*,6,11,12*a*-octahydrotetracene-2-carboxamide (4-epitetrazepam),
- B. R1 = CH<sub>3</sub>, R2 = N(CH<sub>3</sub>)<sub>2</sub>, R3 = H: (4*S*,4*aS*,5*aS*,6*S*,12*aS*)-2-acetyl-4-(dimethylamino)-3,6,10,12,12*a*-pentahydroxy-6-methyl-4*a*,5*a*,6,12*a*-tetrahydrotetracene-1,11(4*H*,5*H*)-dione (2-acetyl-2-decarbamoylepitetrazepam),

- C. R1 = N(CH<sub>3</sub>)<sub>2</sub>, R2 = H: (4*S*,4*aS*,12*aS*)-4-(dimethylamino)-3,10,11,12*a*-tetrahydroxy-6-methyl-1,12-dioxo-1,4,4*a*,5,12,12*a*-hexahydrotetracene-2-carboxamide (anhydrotetrazepam),

## TETRAZEPAM

## Tetrazepamum

C<sub>16</sub>H<sub>17</sub>ClN<sub>2</sub>O  
[10379-14-3]

M<sub>r</sub> 288.8

## DEFINITION

7-Chloro-5-(cyclohex-1-enyl)-1-methyl-1,3-dihydro-2*H*-1,4-benzodiazepin-2-one.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

## CHARACTERS

*Appearance*: light yellow or yellow crystalline powder.

*Solubility*: practically insoluble in water, freely soluble in methylene chloride, soluble in acetonitrile.

## IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

*Comparison*: Ph. Eur. reference spectrum of tetrazepam.

## TESTS

**Related substances.** Liquid chromatography (2.2.29).

*Test solution.* Dissolve 25.0 mg of the substance to be examined in acetonitrile *R* and dilute to 25.0 mL with the same solvent.

*Reference solution (a).* Dissolve 5.0 mg of the substance to be examined and 5.0 mg of tetrazepam impurity C CRS in acetonitrile *R* and dilute to 10.0 mL with the same solvent. Dilute 1.0 mL of the solution to 10.0 mL with acetonitrile *R*.

*Reference solution (b).* Dilute 1.0 mL of the test solution to 50.0 mL with acetonitrile *R*. Dilute 1.0 mL of this solution to 10.0 mL with acetonitrile *R*.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: octadecylsilyl silica gel for chromatography *R* (5 µm).

*Mobile phase*:

- *mobile phase A*: mix 40 volumes of acetonitrile *R* and 60 volumes of a 3.4 g/L solution of potassium dihydrogen phosphate *R*;
- *mobile phase B*: acetonitrile *R*;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 35	100	0
35 - 40	100 → 55	0 → 45
40 - 50	55	45

*Flow rate*: 1.5 mL/min.

*Detection*: a spectrophotometer at 229 nm.

*Injection*: 20 µL.

*System suitability*: reference solution (a):

- *resolution*: minimum 2.0 between the peaks due to tetrazepam and to impurity C.

*Limits*:

- *any impurity*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
- *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);
- *disregard limit*: 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Chlorides** (2.4.4): maximum 100 ppm.

Dissolve 0.750 g in 10 mL of methylene chloride *R* and add 15 mL of water *R*. Shake and separate the 2 layers. Dilute 10 mL of the aqueous layer to 15 mL with water *R*. The solution obtained complies with the limit test for chlorides.

**Loss on drying** (2.2.32): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

## ASSAY

Dissolve 0.230 g in 50.0 mL of anhydrous acetic acid *R*. Titrate with 0.1 *M* perchloric acid, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 *M* perchloric acid is equivalent to 28.88 mg of C<sub>16</sub>H<sub>17</sub>ClN<sub>2</sub>O.

## STORAGE

Protected from light.

## IMPURITIES

- A. R = CH<sub>3</sub>, X = O: 7-chloro-1-methyl-5-(3-oxocyclohex-1-enyl)-1,3-dihydro-2H-1,4-benzodiazepin-2-one,

## TETRYZOLINE HYDROCHLORIDE

## Tetryzolini hydrochloridum

C<sub>13</sub>H<sub>17</sub>ClN<sub>2</sub>  
[522-48-5]

M<sub>r</sub> 236.7

## DEFINITION

2-[(1*R*S)-1,2,3,4-Tetrahydronaphthalen-1-yl]-4,5-dihydro-1*H*-imidazole hydrochloride.

*Content*: 98.0 per cent to 101.0 per cent (dried substance).

## CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: freely soluble in water, in anhydrous ethanol and in ethanol (96 per cent), practically insoluble in acetone.

## IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

*Comparison*: tetryzoline hydrochloride CRS.

B. Dissolve 50 mg in 10 mL of *water R*. The solution gives reaction (a) of chlorides (2.3.1).

## TESTS

**Appearance of solution.** The solution is clear (2.2.1) and colourless (2.2.2, *Method II*).

Dissolve 1.0 g in *water R* and dilute to 10 mL with the same solvent.

**Related substances.** Gas chromatography (2.2.28).

*Test solution.* Dissolve 1.0 g of the substance to be examined in a mixture of 25 volumes of 1 M sodium hydroxide and

75 volumes of *methanol R* and dilute to 10 mL with the same mixture of solvents.

*Reference solution.* Dilute 1.0 mL of the test solution to 100.0 mL with a mixture of 25 volumes of 1 M sodium hydroxide and 75 volumes of *methanol R*. Dilute 1.0 mL of this solution to 10.0 mL with a mixture of 25 volumes of 1 M sodium hydroxide and 75 volumes of *methanol R*.

*Column*:

- *material*: fused silica,
- *size*: *l* = 25 m, Ø = 0.32 mm,
- *stationary phase*: poly(dimethyl)siloxane R (1 µm).

*Carrier gas*: helium for chromatography R.

*Split ratio*: 1:40.

*Flow rate*: 2.5 mL/min.

*Temperature*:

	Time (min)	Temperature (°C)
Column	0 - 8	160
	8 - 11	160 → 220
	11 - 15	220
Injection port		220
Detector		220

*Detection*: flame ionisation.

*Injection*: 1 µL.

*Relative retention* with reference to tetryzoline (retention time = about 12 min): impurity A = about 0.5.

*System suitability*: reference solution:

- *signal-to-noise ratio*: minimum 50 for the principal peak.

*Limits*:

- *impurity A*: not more than the area of the principal peak in the chromatogram obtained with the reference solution (0.1 per cent),
- *any other impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with the reference solution (0.1 per cent),
- *total*: not more than twice the area of the principal peak in the chromatogram obtained with the reference solution (0.2 per cent),
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with the reference solution (0.05 per cent).

**Loss on drying** (2.2.32): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

## ASSAY

Dissolve 0.200 g in 100 mL of a mixture of 3 volumes of *anhydrous acetic acid R* and 7 volumes of *acetic anhydride R*. Titrate with 0.1 M perchloric acid, determining the end-point potentiometrically (2.2.20). Carry out a blank titration.

1 mL of 0.1 M perchloric acid is equivalent to 23.67 mg of C<sub>13</sub>H<sub>17</sub>ClN<sub>2</sub>.

## IMPURITIES

*Specified impurities*: A.

- A. (1*R*S)-1,2,3,4-tetrahydronaphthalene-1-carbonitrile (α-cyanotetraline).

**01/2008:0298 corrected 6.0** **Sulfated ash (2.4.14).** Not more than 0.1 per cent, determined on 1.0 g.

## THEOBROMINE

### Theobrominum

$C_7H_8N_4O_2$   
[83-67-0]

$M_r$  180.2

#### DEFINITION

Theobromine contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of 3,7-dimethyl-3,7-dihydro-1*H*-purine-2,6-dione, calculated with reference to the dried substance.

#### CHARACTERS

A white or almost white powder, very slightly soluble in water and in ethanol, slightly soluble in ammonia. It dissolves in dilute solutions of alkali hydroxides and in mineral acids.

#### IDENTIFICATION

*First identification:* A, C.

*Second identification:* B, C.

- Examine by infrared absorption spectrophotometry (2.2.24), comparing with the spectrum obtained with *theobromine CRS*.
- Dissolve about 20 mg in 2 mL of *dilute ammonia R1*, warming slightly, and cool. Add 2 mL of *silver nitrate solution R2*. The solution remains clear. Boil the solution for a few minutes. A white, crystalline precipitate is formed.
- It gives the reaction of xanthines (2.3.1).

#### TESTS

**Acidity.** To 0.4 g add 20 mL of boiling *water R* and boil for 1 min. Allow to cool and filter. Add 0.05 mL of *bromothymol blue solution R1*. The solution is yellow or yellowish-green. Not more than 0.2 mL of 0.01 *M sodium hydroxide* is required to change the colour of the indicator to blue.

**Related substances.** Examine by thin-layer chromatography (2.2.27), using *silica gel GF<sub>254</sub> R* as the coating substance.

**Test solution.** To 0.2 g of the finely powdered substance to be examined add 10 mL of a mixture of 4 volumes of *methanol R* and 6 volumes of *chloroform R*. Heat under a reflux condenser on a water-bath for 15 min, shaking occasionally. Cool and filter.

**Reference solution.** Dissolve 5 mg of *theobromine CRS* in a mixture of 4 volumes of *methanol R* and 6 volumes of *chloroform R* and dilute to 50 mL with the same mixture of solvents.

Apply separately to the plate 10 µL of each solution. Develop over a path of 15 cm using a mixture of 10 volumes of *concentrated ammonia R*, 30 volumes of *acetone R*, 30 volumes of *chloroform R* and 40 volumes of *butanol R*. Allow the plate to dry in air and examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with the test solution, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with the reference solution (0.5 per cent).

**Heavy metals (2.4.8).** 1.0 g complies with limit test C for heavy metals (20 ppm). Prepare the standard using 2 mL of *lead standard solution (10 ppm Pb) R*.

**Loss on drying (2.2.32).** Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

#### ASSAY

Dissolve 0.150 g in 125 mL of boiling *water R*, cool to 50 °C to 60 °C and add 25 mL of 0.1 *M silver nitrate*. Using 1 mL of *phenolphthalein solution R* as indicator, titrate with 0.1 *M sodium hydroxide* until a pink colour is obtained.

1 mL of 0.1 *M sodium hydroxide* is equivalent to 18.02 mg of  $C_7H_8N_4O_2$ .

**01/2008:0299 corrected 6.0**

## THEOPHYLLINE

### Theophyllinum

$C_7H_8N_4O_2$   
[58-55-9]

$M_r$  180.2

#### DEFINITION

1,3-Dimethyl-3,7-dihydro-1*H*-purine-2,6-dione.

*Content:* 99.0 per cent to 101.0 per cent (dried substance).

#### CHARACTERS

*Appearance:* white or almost white, crystalline powder.

*Solubility:* slightly soluble in water, sparingly soluble in ethanol (96 per cent). It dissolves in solutions of alkali hydroxides, in ammonia and in mineral acids.

#### IDENTIFICATION

*First identification:* B, D.

*Second identification:* A, C, D, E.

- Melting point (2.2.14): 270 °C to 274 °C, determined after drying at 100-105 °C.
- Infrared absorption spectrophotometry (2.2.24).  
*Comparison:* Ph. Eur. reference spectrum of *theophylline*.
- Heat 10 mg with 1.0 mL of a 360 g/L solution of *potassium hydroxide R* in a water-bath at 90 °C for 3 min, then add 1.0 mL of *diazotised sulfanilic acid solution R*. A red colour slowly develops. Carry out a blank test.
- Loss on drying (see Tests).
- It gives the reaction of xanthines (2.3.1).

#### TESTS

**Solution S.** Dissolve 0.5 g with heating in *carbon dioxide-free water R*, cool and dilute to 75 mL with the same solvent.

**Appearance of solution.** Solution S is clear (2.2.1) and colourless (2.2.2, *Method II*).

**Acidity.** To 50 mL of solution S add 0.1 mL of *methyl red solution R*. The solution is red. Not more than 1.0 mL of 0.01 *M sodium hydroxide* is required to change the colour of the indicator to yellow.

**Related substances.** Liquid chromatography (2.2.29).

**Test solution.** Dissolve 40.0 mg of the substance to be examined in the mobile phase and dilute to 20.0 mL with the mobile phase.

**Reference solution (a).** Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

**Reference solution (b).** Dissolve 10 mg of *theobromine R* in the mobile phase, add 5 mL of the test solution and dilute to 100 mL with the mobile phase. Dilute 5 mL of this solution to 50 mL with the mobile phase.

**Column:**

- size:  $l = 0.25$  m,  $\varnothing = 4$  mm;
- stationary phase: octadecylsilyl silica gel for chromatography R (7  $\mu$ m).

**Mobile phase:** mix 7 volumes of acetonitrile for chromatography R and 93 volumes of a 1.36 g/L solution of sodium acetate R containing 5.0 mL/L of glacial acetic acid R.

**Flow rate:** 2.0 mL/min.

**Detection:** spectrophotometer at 272 nm.

**Injection:** 20  $\mu$ L.

**Run time:** 3.5 times the retention time of theophylline.

**Relative retention** with reference to theophylline (retention time = about 6 min): impurity C = about 0.3; impurity B = about 0.4; impurity D = about 0.5; impurity A = about 2.5.

**System suitability:** reference solution (b):

- resolution: minimum 2.0 between the peaks due to theobromine and theophylline.

**Limits:**

- impurities A, B, C, D: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- any other impurity: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- total: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- disregard limit: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Heavy metals (2.4.8):** maximum 20 ppm.

1.0 g complies with test C. Prepare the reference solution using 2 mL of lead standard solution (10 ppm Pb) R.

**Loss on drying (2.2.32):** maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash (2.4.14):** maximum 0.1 per cent, determined on 1.0 g.

#### ASSAY

Dissolve 0.150 g in 100 mL of *water R*, add 20 mL of 0.1 M silver nitrate and shake. Add 1 mL of bromothymol blue solution RI. Titrate with 0.1 M sodium hydroxide.

1 mL of 0.1 M sodium hydroxide is equivalent to 18.02 mg of  $C_7H_8N_4O_2$ .

#### IMPURITIES

**Specified impurities:** A, B, C, D.

**Other detectable impurities** (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): E, F.

A. 1,3,7-trimethyl-3,7-dihydro-1H-purine-2,6-dione (caffeine),

B. 3-methyl-3,7-dihydro-1H-purine-2,6-dione,

C. *N*-(6-amino-1,3-dimethyl-2,4-dioxo-1,2,3,4-tetrahydropyrimidin-5-yl)formamide,

D. *N*-methyl-5-(methylamino)-1H-imidazole-4-carboxamide (theophyllidine),

E. 1,3-dimethyl-7,9-dihydro-1H-purine-2,6,8(3H)-trione,

F. 7-(2-hydroxyethyl)-1,3-dimethyl-3,7-dihydro-1H-purine-2,6-dione (etofylline).

corrected 6.0

## THEOPHYLLINE MONOHYDRATE

### Theophyllinum monohydricum

$C_7H_8N_4O_2 \cdot H_2O$   
[5967-84-0]

$M_r$  198.2

#### DEFINITION

1,3-Dimethyl-3,7-dihydro-1H-purine-2,6-dione monohydrate.

**Content:** 99.0 per cent to 101.0 per cent (anhydrous substance).

#### CHARACTERS

**Appearance:** white or almost white, crystalline powder.

**Solubility:** slightly soluble in water, sparingly soluble in ethanol (96 per cent). It dissolves in solutions of alkali hydroxides, in ammonia and in mineral acids.

#### IDENTIFICATION

**First identification:** B, D.

**Second identification:** A, C, D, E.

A. Melting point (2.2.14): 270 °C to 274 °C, determined after drying at 100-105 °C.

## B. Infrared absorption spectrophotometry (2.2.24).

*Preparation:* dry the substance to be examined at 100-105 °C before use.

*Comparison:* Ph. Eur. reference spectrum of theophylline.

## C. Heat 10 mg with 1.0 mL of a 360 g/L solution of potassium hydroxide R in a water-bath at 90 °C for 3 min, then add 1.0 mL of diazotised sulfanilic acid solution R. A red colour slowly develops. Carry out a blank test.

## D. Water (see Tests).

## E. It gives the reaction of xanthines (2.3.1).

## TESTS

**Solution S.** Dissolve 0.5 g with heating in carbon dioxide-free water R, cool and dilute to 75 mL with the same solvent.

**Appearance of solution.** Solution S is clear (2.2.1) and colourless (2.2.2, Method II).

**Acidity.** To 50 mL of solution S add 0.1 mL of methyl red solution R. The solution is red. Not more than 1.0 mL of 0.01 M sodium hydroxide is required to change the colour of the indicator to yellow.

**Related substances.** Liquid chromatography (2.2.29).

*Test solution.* Dissolve 40.0 mg of the substance to be examined in the mobile phase and dilute to 20.0 mL with the mobile phase.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Reference solution (b).* Dissolve 10 mg of theobromine R in the mobile phase, add 5 mL of the test solution and dilute to 100 mL with the mobile phase. Dilute 5 mL of this solution to 50 mL with the mobile phase.

*Column:*

- size:  $l = 0.25$  m,  $\varnothing = 4$  mm;
- stationary phase: octadecylsilyl silica gel for chromatography R (7  $\mu$ m).

*Mobile phase:* mix 7 volumes of acetonitrile for chromatography R and 93 volumes of a 1.36 g/L solution of sodium acetate R containing 5.0 mL/L of glacial acetic acid R.

*Flow rate:* 2.0 mL/min.

*Detection:* spectrophotometer at 272 nm.

## THEOPHYLLINE-ETHYLENEDIAMINE, ANHYDROUS

Theophyllinum et ethylenediaminum  
anhydricum

$C_{16}H_{24}N_{10}O_4$   
[317-34-0]

$M_r$  420.4

### DEFINITION

#### Content:

- *theophylline* ( $C_7H_8N_4O_2$ ;  $M_r$  180.2): 84.0 per cent to 87.4 per cent (anhydrous substance);
- *ethylenediamine* ( $C_2H_8N_2$ ;  $M_r$  60.1): 13.5 per cent to 15.0 per cent (anhydrous substance).

### CHARACTERS

**Appearance:** white or slightly yellowish powder, sometimes granular, hygroscopic.

**Solubility:** freely soluble in water (the solution becomes cloudy through absorption of carbon dioxide), practically insoluble in anhydrous ethanol.

### IDENTIFICATION

**First identification:** B, C, E.

**Second identification:** A, C, D, E, F.

Dissolve 1.0 g in 10 mL of *water R* and add 2 mL of *dilute hydrochloric acid R* dropwise with shaking. Filter. Use the precipitate for identification tests A, B, D and F and the filtrate for identification test C.

A. Melting point (2.2.14): 270 °C to 274 °C, determined after washing the precipitate with *water R* and drying at 105 °C.

B. Infrared absorption spectrophotometry (2.2.24).

**Preparation:** precipitate, washed with *water R* and dried at 105 °C.

**Comparison:** *theophylline CRS*.

C. To the filtrate add 0.2 mL of *benzoyl chloride R*, make alkaline with *dilute sodium hydroxide solution R* and shake vigorously. Filter the precipitate, wash with 10 mL of *water R*, dissolve in 5 mL of hot *ethanol (96 per cent) R* and add 5 mL of *water R*. A precipitate is formed, which, when washed and dried at 105 °C, melts (2.2.14) at 248 °C to 252 °C.

D. Heat about 10 mg of the precipitate with 1.0 mL of a 360 g/L solution of *potassium hydroxide R* in a water-bath at 90 °C for 3 min, then add 1.0 mL of *diazotised sulfanilic acid solution R*. A red colour slowly develops. Carry out a blank test.

E. Water (see Tests).

F. The precipitate gives the reaction of xanthines (2.3.1).

### TESTS

**Appearance of solution.** The solution is not more opalescent than reference suspension II (2.2.1) and not more intensely coloured than reference solution GY<sub>6</sub> (2.2.2, Method II).

Dissolve 0.5 g with gentle warming in 10 mL of *carbon dioxide-free water R*.

**Related substances.** Liquid chromatography (2.2.29).

**Test solution.** Dissolve 47 mg of the substance to be examined in the mobile phase and dilute to 20.0 mL with the mobile phase.

**Reference solution (a).** Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

**Reference solution (b).** Dissolve 10 mg of *theobromine R* (impurity G) in the mobile phase, add 5 mL of the test solution and dilute to 100 mL with the mobile phase. Dilute 5 mL of this solution to 50 mL with the mobile phase.

**Column:**

- **size:**  $l = 0.25$  m,  $\varnothing = 4$  mm;
- **stationary phase:** *octadecylsilyl silica gel for chromatography R* (7  $\mu$ m).

**Mobile phase:** mix 7 volumes of *acetonitrile for chromatography R* and 93 volumes of a 1.36 g/L solution of *sodium acetate R* containing 0.50 per cent (V/V) of *glacial acetic acid R*.

**Flow rate:** 2.0 mL/min.

**Detection:** spectrophotometer at 272 nm.

**Injection:** 20  $\mu$ L.

**Run time:** 3.5 times the retention time of theophylline.

**Relative retention** with reference to theophylline (retention time = about 6 min): impurity G = about 0.6.

**System suitability:** reference solution (b):

- **resolution:** minimum 2.0 between the peaks due to impurity G and theophylline.

**Limits:**

- **unspecified impurities:** for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- **total:** not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- **disregard limit:** 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Heavy metals** (2.4.8): maximum 20 ppm.

**Solvent:** *water R*.

0.500 g complies with test H. Prepare the reference solution using 1 mL of *lead standard solution (10 ppm Pb) R*. The substance precipitates after addition of *buffer solution pH 3.5 R*. Dilute to 100 mL with *water R*; the substance re-dissolves completely.

**Water** (2.5.12): maximum 1.5 per cent, determined on 0.50 g.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

### ASSAY

**Ethylenediamine.** Dissolve 0.250 g in 30 mL of *water R*. Add 0.1 mL of *bromocresol green solution R*. Titrate with 0.1 M *hydrochloric acid* until a green colour is obtained.

1 mL of 0.1 M *hydrochloric acid* is equivalent to 3.005 mg of  $C_2H_8N_2$ .

**Theophylline.** Heat 0.200 g to constant mass in an oven at 135 °C. Dissolve the residue with heating in 100 mL of *water R*, allow to cool, add 20 mL of 0.1 M *silver nitrate* and shake. Add 1 mL of *bromothymol blue solution R1*. Titrate with 0.1 M *sodium hydroxide*.

1 mL of 0.1 M *sodium hydroxide* is equivalent to 18.02 mg of  $C_7H_8N_4O_2$ .

### STORAGE

In an airtight container, protected from light.

### IMPURITIES

**Other detectable impurities** (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use*

07/2010:0301

(2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*: A, B, C, D, E, F, G.

A. 1,3,7-trimethyl-3,7-dihydro-1H-purine-2,6-dione (caffeine),

B. 3-methyl-3,7-dihydro-1H-purine-2,6-dione,

C. *N*-(6-amino-1,3-dimethyl-2,4-dioxo-1,2,3,4-tetrahydropyrimidin-5-yl)formamide,D. *N*-methyl-5-(methylamino)-1H-imidazole-4-carboxamide,

E. 1,3-dimethyl-7,9-dihydro-1H-purine-2,6,8(3H)-trione,

F. 7-(2-hydroxyethyl)-1,3-dimethyl-3,7-dihydro-1H-purine-2,6-dione (etofylline),

G. 3,7-dimethyl-3,7-dihydro-1H-purine-2,6-dione (theobromine).

## THEOPHYLLINE-ETHYLENEDIAMINE HYDRATE

### Theophyllum et ethylenediaminum hydricum

$C_{16}H_{24}N_{10}O_4 \cdot xH_2O$   
[72487-55-9]

$M_r$  420.4 (anhydrous substance)

#### DEFINITION

##### Content:

- *theophylline* ( $C_7H_8N_4O_2$ ;  $M_r$  180.2): 84.0 per cent to 87.4 per cent (anhydrous substance);
- *ethylenediamine* ( $C_2H_8N_2$ ;  $M_r$  60.1): 13.5 per cent to 15.0 per cent (anhydrous substance).

#### CHARACTERS

*Appearance*: white or slightly yellowish powder, sometimes granular.

*Solubility*: freely soluble in water (the solution becomes cloudy through absorption of carbon dioxide), practically insoluble in anhydrous ethanol.

#### IDENTIFICATION

*First identification*: B, C, E.

*Second identification*: A, C, D, E, F.

Dissolve 1.0 g in 10 mL of *water R* and add 2 mL of *dilute hydrochloric acid R* dropwise with shaking. Filter. Use the precipitate for identification tests A, B, D and F and the filtrate for identification test C.

- Melting point (2.2.14): 270 °C to 274 °C, determined after washing the precipitate with *water R* and drying at 105 °C.
- Infrared absorption spectrophotometry (2.2.24).

*Preparation*: precipitate, washed with *water R* and dried at 105 °C.

*Comparison*: *theophylline CRS*.

- To the filtrate add 0.2 mL of *benzoyl chloride R*, make alkaline with *dilute sodium hydroxide solution R* and shake vigorously. Filter the precipitate, wash with 10 mL of *water R*, dissolve in 5 mL of hot *ethanol (96 per cent) R* and add 5 mL of *water R*. A precipitate is formed, which, when washed and dried at 105 °C, melts (2.2.14) at 248 °C to 252 °C.
- Heat about 10 mg of the precipitate with 1.0 mL of a 360 g/L solution of *potassium hydroxide R* in a water-bath at 90 °C for 3 min, then add 1.0 mL of *diazotised sulfanilic acid solution R*. A red colour slowly develops. Carry out a blank test.

E. Water (see Tests).

F. The precipitate gives the reaction of xanthines (2.3.1).

#### TESTS

**Appearance of solution.** The solution is not more opalescent than reference suspension II (2.2.1) and not more intensely coloured than reference solution GY<sub>6</sub> (2.2.2, *Method II*).

Dissolve 0.5 g with gentle warming in 10 mL of *carbon dioxide-free water R*.

**Related substances.** Liquid chromatography (2.2.29).

*Test solution.* Dissolve 50 mg of the substance to be examined in the mobile phase and dilute to 20.0 mL with the mobile phase.

**Reference solution (a).** Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

**Reference solution (b).** Dissolve 10 mg of *theobromine R* (impurity G) in the mobile phase, add 5 mL of the test solution and dilute to 100 mL with the mobile phase. Dilute 5 mL of this solution to 50 mL with the mobile phase.

**Column:**

- size:  $l = 0.25$  m,  $\varnothing = 4$  mm;
- stationary phase: octadecylsilyl silica gel for chromatography R (7  $\mu$ m).

**Mobile phase:** mix 7 volumes of acetonitrile for chromatography R and 93 volumes of a 1.36 g/L solution of sodium acetate R containing 0.50 per cent (V/V) of glacial acetic acid R.

**Flow rate:** 2.0 mL/min.

**Detection:** spectrophotometer at 272 nm.

**Injection:** 20  $\mu$ L.

**Run time:** 3.5 times the retention time of theophylline.

**Relative retention** with reference to theophylline (retention time = about 6 min): impurity G = about 0.6.

**System suitability:** reference solution (b):

- resolution: minimum 2.0 between the peaks due to impurity G and theophylline.

**Limits:**

- *unspecified impurities:* for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *total:* not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- *disregard limit:* 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Heavy metals (2.4.8):** maximum 20 ppm.

**Solvent:** water R.

0.500 g complies with test H. Prepare the reference solution using 1 mL of *lead standard solution (10 ppm Pb) R*. The substance precipitates after addition of *buffer solution pH 3.5 R*. Dilute to 100 mL with water R; the substance re-dissolves completely.

**Water (2.5.12):** 3.0 per cent to 8.0 per cent, determined on 0.50 g.

**Sulfated ash (2.4.14):** maximum 0.1 per cent, determined on 1.0 g.

**ASSAY**

**Ethylenediamine.** Dissolve 0.250 g in 30 mL of water R. Add 0.1 mL of *bromocresol green solution R*. Titrate with 0.1 M *hydrochloric acid* until a green colour is obtained.

1 mL of 0.1 M *hydrochloric acid* is equivalent to 3.005 mg of  $C_2H_8N_2$ .

**Theophylline.** Heat 0.200 g to constant mass in an oven at 135 °C. Dissolve the residue with heating in 100 mL of water R, allow to cool, add 20 mL of 0.1 M *silver nitrate* and shake. Add 1 mL of *bromothymol blue solution R1*. Titrate with 0.1 M *sodium hydroxide*.

1 mL of 0.1 M *sodium hydroxide* is equivalent to 18.02 mg of  $C_7H_8N_4O_2$ .

**STORAGE**

In a well-filled, airtight container, protected from light.

## IMPURITIES

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): A, B, C, D, E, F, G.

A. 1,3,7-trimethyl-3,7-dihydro-1H-purine-2,6-dione (caffeine),

B. 3-methyl-3,7-dihydro-1H-purine-2,6-dione,

C. *N*-(6-amino-1,3-dimethyl-2,4-dioxo-1,2,3,4-tetrahydropyrimidin-5-yl)formamide,

D. *N*-methyl-5-(methylamino)-1H-imidazole-4-carboxamide,

E. 1,3-dimethyl-7,9-dihydro-1H-purine-2,6,8(3H)-trione,

F. 7-(2-hydroxyethyl)-1,3-dimethyl-3,7-dihydro-1H-purine-2,6-dione (etofylline),

G. 3,7-dimethyl-3,7-dihydro-1H-purine-2,6-dione (theobromine).

## THIAMAZOLE

## Thiamazolium

C<sub>4</sub>H<sub>6</sub>N<sub>2</sub>S  
[60-56-0]

M<sub>r</sub> 114.2

## DEFINITION

1-Methyl-1,3-dihydro-2H-imidazole-2-thione.

Content: 98.0 per cent to 101.0 per cent (dried substance).

## CHARACTERS

Appearance: white or pale brown, crystalline powder.

Solubility: freely soluble in water, freely soluble in methylene chloride, freely soluble or soluble in ethanol (96 per cent).

## IDENTIFICATION

First identification: A, C.

Second identification: A, B, D.

A. Melting point (2.2.14): 143 °C to 146 °C.

B. Dissolve 25 mg in 10 mL of a 0.28 per cent V/V solution of sulfuric acid R and dilute to 50.0 mL with the same solution. Dilute 1.0 mL of this solution to 100.0 mL with a 0.28 per cent V/V solution of sulfuric acid R. Examined between 200 nm and 300 nm (2.2.25), the solution shows 2 absorption maxima, at 211 nm and 251 nm. The ratio of the absorbance measured at the absorption maximum at 251 nm to that measured at the absorption maximum at 211 nm is 2.5 to 2.7.

C. Infrared absorption spectrophotometry (2.2.24).

Preparation: discs.

Comparison: thiamazole CRS.

D. Thin-layer chromatography (2.2.27).

Test solution. Dissolve 5.0 mg of the substance to be examined in methanol R and dilute to 5.0 mL with the same solvent.

Reference solution (a). Dissolve 5.0 mg of thiamazole CRS in methanol R and dilute to 5.0 mL with the same solvent.

Reference solution (b). Dissolve 5.0 mg of 2-methylimidazole R in methanol R and dilute to 5.0 mL with the same solvent. Dilute 1.0 mL of this solution to 2.0 mL with the test solution.

Plate: TLC silica gel F<sub>254</sub> plate R.

Mobile phase: concentrated ammonia R1, 2-propanol R, toluene R (1:24:75 V/V/V).

Application: 10 µL.

Development: over 2/3 of the plate.

Drying: in air.

Detection: examine in ultraviolet light at 254 nm.

System suitability: reference solution (b):

- expose the plate to iodine vapour for 30 min; the chromatogram shows 2 clearly separated spots.

Results: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

## 01/2008:1706 TESTS

corrected 6.0

**Solution S.** Dissolve 2.0 g in water R and dilute to 20.0 mL with the same solvent.

**Appearance of solution.** Solution S is clear (2.2.1) and not more intensely coloured than reference solution B<sub>6</sub> (2.2.2, Method II).

**Related substances.** Gas chromatography (2.2.28).

**Test solution.** Dissolve 0.100 g of the substance to be examined in chloroform R and dilute to 10.0 mL with the same solvent.

**Reference solution (a).** Dilute 1.0 mL of the test solution to 100.0 mL with chloroform R. Dilute 1.0 mL of this solution to 10.0 mL with chloroform R.

**Reference solution (b).** Dissolve 5.0 mg of thiamazole impurity A CRS, 5.0 mg of 1-methylimidazole R1 and 5.0 mg of thiamazole impurity C CRS in chloroform R and dilute to 50.0 mL with the same solvent. Dilute 1.0 mL of this solution to 10.0 mL with chloroform R.

Column:

- material: fused silica,
- size: *l* = 30.0 m, Ø = 0.25 mm,
- stationary phase: poly(dimethyl)(diphenyl)siloxane R with special deactivation for basic compounds (film thickness 0.5 µm).

Carrier gas: helium for chromatography R.

Flow rate: 1.5 mL/min.

Split ratio: 3:20.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 2	100
	2 - 7	100 → 250
	7 - 22	250
Injection port		150
Detector		250

Detection: flame ionisation.

Injection: 1 µL.

Relative retention with reference to thiamazole (retention time = about 6.5 min): impurity A = about 0.3; impurity B = about 0.4; impurity C = about 0.7.

System suitability: reference solution (b):

- resolution: minimum 1.5 between the peaks due to impurity A and impurity B.

Limits:

- impurities A, B, C: for each impurity, not more than the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.1 per cent),
- any other impurity: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent),
- total: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent),
- disregard limit: 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.02 per cent).

Heavy metals (2.4.8): maximum 10 ppm.

12 mL of solution S complies with limit test A. Prepare the reference solution using lead standard solution (1 ppm Pb) R.

Loss on drying (2.2.32): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 2 h.

Sulfated ash (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

## ASSAY

Dissolve 0.250 g in 75 mL of *water R*. Add 15.0 mL of 0.1 M *sodium hydroxide*, mix and add with stirring, about 30 mL of 0.1 M *silver nitrate*. Continue the titration with 0.1 M *sodium hydroxide*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *sodium hydroxide* is equivalent to 11.42 mg of  $C_4H_6N_2S$ .

## IMPURITIES

Specified impurities: A, B, C.

A. 2,2-dimethoxy-N-methylethanamine,

B. R = H: 1-methyl-1H-imidazole,

C. R = SCH<sub>3</sub>: 1-methyl-2-(methylsulfonyl)-1H-imidazole.

01/2008:0303

## THIAMINE HYDROCHLORIDE

## Thiamini hydrochloridum

$C_{12}H_{18}Cl_2N_4OS$   
[67-03-8]

$M_r$  337.3

## DEFINITION

3-[(4-Amino-2-methylpyrimidin-5-yl)methyl]-5-(2-hydroxyethyl)-4-methylthiazolium chloride hydrochloride.

Content: 98.5 per cent to 101.0 per cent (anhydrous substance).

## CHARACTERS

Appearance: white or almost white, crystalline powder or colourless crystals.

Solubility: freely soluble in water, soluble in glycerol, slightly soluble in alcohol.

## IDENTIFICATION

First identification: A, C.

Second identification: B, C.

A. Infrared absorption spectrophotometry (2.2.24).

Comparison: *thiamine hydrochloride CRS*.

B. Dissolve about 20 mg in 10 mL of *water R*, add 1 mL of *dilute acetic acid R* and 1.6 mL of 1 M *sodium hydroxide*, heat on a water-bath for 30 min and allow to cool. Add 5 mL of *dilute sodium hydroxide solution R*, 10 mL of *potassium ferricyanide solution R* and 10 mL of *butanol R* and shake vigorously for 2 min. The upper alcoholic layer shows an intense light-blue fluorescence, especially in ultraviolet light at 365 nm. Repeat the test using 0.9 mL of 1 M *sodium hydroxide* and 0.2 g of *sodium sulfite R* instead of 1.6 mL of 1 M *sodium hydroxide*. Practically no fluorescence is seen.

C. It gives reaction (a) of chlorides (2.3.1).

## TESTS

**Solution S.** Dissolve 2.5 g in *distilled water R* and dilute to 25 mL with the same solvent.

**Appearance of solution.** The solution is clear (2.2.1) and not more intensely coloured than reference solution Y<sub>7</sub> or GY<sub>7</sub> (2.2.2, Method II).

Dilute 2.5 mL of solution S to 5 mL with *water R*.

pH (2.2.3): 2.7 to 3.3.

Dilute 2.5 mL of solution S to 10 mL with *water R*.

**Related substances.** Liquid chromatography (2.2.29).

**Solution A.** Add 5 volumes of *glacial acetic acid R* to 95 volumes of *water R* and mix.

**Test solution.** Dissolve 0.35 g of the substance to be examined in 15.0 mL of solution A and dilute to 100.0 mL with *water R*.

**Reference solution (a).** Dissolve 5 mg of the substance to be examined and 5 mg of *thiamine impurity E CRS* in 4 mL of solution A and dilute to 25.0 mL with *water R*. Dilute 5.0 mL of the solution to 25.0 mL with *water R*.

**Reference solution (b).** Dilute 1.0 mL of the test solution to 50.0 mL with *water R*. Dilute 5.0 mL of this solution to 25.0 mL with *water R*.

Column:

– size:  $l = 0.25$  m,  $\varnothing = 4.0$  mm,

– stationary phase: spherical *end-capped octadecylsilyl silica gel for chromatography R* (5  $\mu$ m) with a specific surface area of 350 m<sup>2</sup>/g and a pore size of 10 nm,

– temperature: 45 °C.

Mobile phase:

– mobile phase A: 3.764 g/L solution of *sodium hexanesulfonate R* adjusted to pH 3.1 with *phosphoric acid R*,

– mobile phase B: *methanol R2*,

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 25	90 → 70	10 → 30
25 - 33	70 → 50	30 → 50
33 - 40	50	50
40 - 45	50 → 90	50 → 10

Flow rate: 1.0 mL/min.

Detection: spectrophotometer at 248 nm.

Injection: 25  $\mu$ L.

Relative retention with reference to thiamine (retention time = about 30 min): impurity A = about 0.3; impurity B = about 0.9; impurity C = about 1.2.

System suitability: reference solution (a):

– resolution: minimum 1.6 between the peaks due to impurity E and to thiamine.

Limits:

– any impurity: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.4 per cent),

– total: not more than 2.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent),

– disregard limit: 0.125 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Sulfates** (2.4.13): maximum 300 ppm.

5 mL of solution S diluted to 15 mL with *distilled water R* complies with the limit test for sulfates.

**Heavy metals** (2.4.8): maximum 20 ppm.

12 mL of solution S complies with limit test A. Prepare the standard using *lead standard solution (2 ppm Pb) R*.

**Water** (2.5.12): maximum 5.0 per cent, determined on 0.40 g.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

## ASSAY

Dissolve 0.110 g in 5 mL of *anhydrous formic acid R* and add 50 mL of *acetic anhydride R*. Titrate immediately with 0.1 M *perchloric acid*, determining the end-point potentiometrically (2.2.20) and carrying out the titration within 2 min. Carry out a blank titration.

1 mL of 0.1 M *perchloric acid* is equivalent to 16.86 mg of  $C_{12}H_{18}Cl_2N_4OS$ .

## STORAGE

In a non-metallic container, protected from light.

## IMPURITIES

*Specified impurities: A, B, C.*

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): D, E, F, G, H.

- A. R1 = CH<sub>3</sub>, R2 = O-SO<sub>3</sub><sup>-</sup>: 3-[(4-amino-2-methylpyrimidin-5-yl)methyl]-4-methyl-5-[2-(sulfonatoxy)ethyl]thiazolium (thiamine sulfate ester),

## THIAMINE NITRATE

## Thiamini nitras

$C_{12}H_{17}N_5O_4S$   
[532-43-4]

$M_r$  327.4

## DEFINITION

3-[(4-Amino-2-methylpyrimidin-5-yl)methyl]-5-(2-hydroxyethyl)-4-methylthiazolium nitrate.

*Content*: 98.0 per cent to 101.0 per cent (dried substance).

## CHARACTERS

*Appearance*: white or almost white, crystalline powder or small, colourless crystals.

*Solubility*: sparingly soluble in water, freely soluble in boiling water, slightly soluble in alcohol and in methanol.

## IDENTIFICATION

*First identification: A, C.*

*Second identification: B, C.*

A. Infrared absorption spectrophotometry (2.2.24).

*Comparison: Ph. Eur. reference spectrum of thiamine nitrate.*

B. Dissolve about 20 mg in 10 mL of *water R*, add 1 mL of *dilute acetic acid R* and 1.6 mL of 1 M *sodium hydroxide*, heat on a water-bath for 30 min and allow to cool. Add 5 mL of *dilute sodium hydroxide solution R*, 10 mL of *potassium ferricyanide solution R* and 10 mL of *butanol R* and shake vigorously for 2 min. The upper alcoholic layer shows an intense light-blue fluorescence, especially in ultraviolet light at 365 nm. Repeat the test using 0.9 mL of 1 M *sodium hydroxide* and 0.2 g of *sodium sulfite R* instead of 1.6 mL of 1 M *sodium hydroxide*. Practically no fluorescence is produced.

C. About 5 mg gives the reaction of nitrates (2.3.1).

## TESTS

**Solution S.** Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 50 mL with the same solvent.

**Appearance of solution.** Solution S is clear (2.2.1) and not more intensely coloured than reference solution Y<sub>7</sub> (2.2.2, *Method II*).

**pH** (2.2.3): 6.8 to 7.6 for solution S.

**Related substances.** Liquid chromatography (2.2.29).

**Solution A.** Add 5 volumes of *glacial acetic acid R* to 95 volumes of *water R* and mix.

**Test solution.** Dissolve 0.35 g of the substance to be examined in 15.0 mL of solution A and dilute to 100.0 mL with *water R*.

**Reference solution (a).** Dissolve 5 mg of the substance to be examined and 5 mg of *thiamine impurity E CRS* in 4 mL of solution A and dilute to 25.0 mL with *water R*. Dilute 5.0 mL of the solution to 25.0 mL with *water R*.

**Reference solution (b).** Dilute 1.0 mL of the test solution to 100.0 mL with *water R*.

**Column:**

- *size*:  $l = 0.25$  m,  $\varnothing = 4.0$  mm,
- *stationary phase*: spherical *end-capped octadecylsilyl silica gel for chromatography R* (4  $\mu$ m) with a specific surface area of 350 m<sup>2</sup>/g and a pore size of 10 nm,

corrected 6.0

## THIAMPHENICOL

## Thiamphenicolum

C<sub>12</sub>H<sub>15</sub>Cl<sub>2</sub>NO<sub>5</sub>S  
[15318-45-3]

*M*<sub>r</sub> 356.2

## DEFINITION

2,2-Dichloro-*N*-[(1*R*,2*R*)-2-hydroxy-1-(hydroxymethyl)-2-[4-(methylsulfonyl)phenyl]ethyl]acetamide.

Content: 98.0 per cent to 100.5 per cent (dried substance).

## CHARACTERS

Appearance: fine, white or yellowish-white, crystalline powder or crystals.

Solubility: slightly soluble in water, very soluble in dimethylacetamide, freely soluble in acetonitrile and in dimethylformamide, soluble in methanol, sparingly soluble in acetone and in anhydrous ethanol, slightly soluble in ethyl acetate.

A solution in anhydrous ethanol is dextrorotatory and a solution in dimethylformamide is laevorotatory.

## IDENTIFICATION

## A. Infrared absorption spectrophotometry (2.2.24).

*Preparation:* dry the substance to be examined and the reference substance at 100-105 °C for 2 h; examine as discs of *potassium bromide R*.

*Comparison:* *thiamphenicol CRS*.

## B. Thin-layer chromatography (2.2.27).

*Test solution.* Dissolve 0.1 g of the substance to be examined in *methanol R* and dilute to 10 mL with the same solvent.

*Reference solution.* Dissolve 0.1 g of *thiamphenicol CRS* in *methanol R* and dilute to 10 mL with the same solvent.

*Plate:* *silica gel GF<sub>254</sub> R* as the coating substance.

*Mobile phase:* *methanol R, ethyl acetate R* (3:97 V/V).

*Application:* 5 µL.

*Development:* over a path of 10 cm.

*Drying:* in air.

*Detection:* examine in ultraviolet light at 254 nm.

*Results:* the principal spot in the chromatogram obtained with the test solution is similar in position and size to the spot in the chromatogram obtained with the reference solution.

C. To 50 mg in a porcelain crucible add 0.5 g of *anhydrous sodium carbonate R*. Heat over an open flame for 10 min. Allow to cool. Take up the residue with 5 mL of *dilute nitric acid R* and filter. To 1 mL of the filtrate add 1 mL of *water R*. The solution gives reaction (a) of chlorides (2.3.1).

## TESTS

**Acidity or alkalinity.** Shake 0.1 g with 20 mL of *carbon dioxide-free water R* and add 0.1 mL of *bromothymol blue solution R1*. Not more than 0.1 mL of *0.02 M hydrochloric acid* or *0.02 M sodium hydroxide* is required to change the colour of the indicator.

**Specific optical rotation** (2.2.7): – 21 to – 24 (dried substance). Dissolve 1.25 g in *dimethylformamide R* and dilute to 25.0 mL with the same solvent.

**Melting point** (2.2.14): 163 °C to 167 °C.

**Absorbance** (2.2.25).

*Test solution (a).* Dissolve 20 mg in *water R*, heating to about 40 °C, and dilute to 100.0 mL with the same solvent.

*Test solution (b).* Dilute 2.5 mL of test solution (a) to 50.0 mL with *water R*.

*Spectral range:* 240-300 nm for test solution (a); 200-240 nm for test solution (b).

*Absorption maxima:* at 266 nm and 273 nm for test solution (a); at 224 nm for test solution (b).

*Specific absorbances at the absorption maxima:*

- at 266 nm: 25 to 28 for test solution (a),
- at 273 nm: 21.5 to 23.5 for test solution (a),
- at 224 nm: 370 to 400 for test solution (b).

**Chlorides** (2.4.4): maximum 200 ppm.

Shake 0.5 g with 30 mL of *water R* for 5 min and filter.

**Heavy metals** (2.4.8): maximum 10 ppm.

1.0 g complies with test C. Prepare the reference solution using 1 mL of *lead standard solution (10 ppm Pb) R*.

**Loss on drying** (2.2.32): maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 2.0 g.

## ASSAY

Dissolve 0.300 g in 30 mL of *ethanol (96 per cent) R*, add 20 mL of a 500 g/L solution of *potassium hydroxide R*, mix and heat under a reflux condenser for 4 h. Cool, add 100 mL of *water R*, neutralise with *dilute nitric acid R* and add 5 mL of the same acid in excess. Titrate with *0.1 M silver nitrate*, determining the

end-point potentiometrically (2.2.20), using a silver indicator electrode and a mercurous sulfate reference electrode or any other appropriate electrode. Carry out a blank test.

1 mL of *0.1 M silver nitrate* is equivalent to 17.81 mg of  $C_{12}H_{15}Cl_2NO_5S$ .

## STORAGE

In an airtight container, protected from light.

01/2008:1648

## THIOCTIC ACID

## Acidum thiocticum

$C_8H_{14}O_2S_2$   
[1077-28-7]

$M_r$  206.3

## DEFINITION

5-[(3*RS*)-1,2-Dithiolan-3-yl]pentanoic acid.

*Content:* 97.0 per cent to 102.0 per cent (dried substance).

## CHARACTERS

*Appearance:* yellow, crystalline powder.

*Solubility:* very slightly soluble in water, very soluble in dimethylformamide, freely soluble in methanol.

mp: about 61 °C.

## IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

*Comparison:* *thioctic acid CRS*.

## TESTS

**Appearance of solution.** The solution is clear (2.2.1).

Dissolve 0.50 g in a 20 g/L solution of *sodium hydroxide R* and dilute to 10 mL with the same solution.

**Impurity B.** Thin-layer chromatography (2.2.27).

*Test solution.* Dissolve 0.20 g of the substance to be examined in *dimethylformamide R* and dilute to 10 mL with the same solvent.

*Reference solution.* Dissolve 20 mg of *thioctic acid containing impurity B CRS* in *dimethylformamide R* and dilute to 1.0 mL with the same solvent (1.0 per cent impurity B solution).

*Plate:* *TLC silica gel plate R*.

*Mobile phase:* 25 per cent V/V solution of *ammonia R, water R, ethyl acetate R, propanol R* (5:10:40:40 V/V/V/V).

*Application:* 5 µL.

*Development:* over 2/3 of the plate.

*Drying:* at 50 °C for 20 min.

*Detection:* expose to iodine vapour for 30 min or until the spots appear.

*System suitability:* reference solution:

- the chromatogram shows 2 clearly separated principal spots due to impurity B ( $R_f = 0.0$ ) and thioctic acid ( $R_f =$  about 0.3).

*Limit:*

- *impurity B:* any spot due to impurity B is not more intense than the corresponding spot in the chromatogram obtained with the reference solution (1.0 per cent).

**Related substances.** Liquid chromatography (2.2.29). *Protect the solutions from light.*

*Solvent mixture:* a mixture of equal volumes of *acetonitrile R1* and a 0.7 g/L solution of *potassium dihydrogen phosphate R* previously adjusted to pH 3.6 with *phosphoric acid R*.

*Test solution.* Dissolve 50.0 mg of the substance to be examined in the solvent mixture and dilute to 50.0 mL with the solvent mixture.

**Reference solution (a).** Dissolve 5 mg of *thioctic acid* for system suitability CRS (containing impurity A) in the solvent mixture and dilute to 5 mL with the solvent mixture.

**Reference solution (b).** Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

**Reference solution (c).** Dissolve 50.0 mg of *thioctic acid* CRS in the solvent mixture and dilute to 50.0 mL with the solvent mixture.

**Blank solution.** Solvent mixture.

**Column:**

- size:  $l = 0.25$  m,  $\varnothing = 4.6$  mm;
- stationary phase: octadecylsilyl silica gel for chromatography R (5  $\mu$ m);
- temperature: 35 °C.

**Mobile phase:** mix 8 volumes of *acetonitrile* R1, 41 volumes of a 0.7 g/L solution of *potassium dihydrogen phosphate* R previously adjusted to pH 3.0 with *phosphoric acid* R, and 51 volumes of *methanol* R.

**Flow rate:** 1.2 mL/min.

**Detection:** spectrophotometer at 215 nm.

**Injection:** 20  $\mu$ L.

**Run time:** 2.5 times the retention time of *thioctic acid*.

**Relative retention** with reference to *thioctic acid* (retention time = about 6 min): impurity A = about 2.2.

**System suitability:**

- resolution: minimum 6.0 between the peaks due to *thioctic acid* and impurity A in the chromatogram obtained with reference solution (a);
- symmetry factor: maximum 2.0 for the peak due to *thioctic acid* in the chromatogram obtained with reference solution (c).

**Limits:**

- correction factor: for the calculation of content, multiply the peak area of impurity A by 0.6;
- impurity A: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
- unspecified impurities: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- total: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);
- disregard limit: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Loss on drying** (2.2.32): maximum 0.2 per cent, determined on 1.000 g by drying *in vacuo* at 40 °C for 3 h.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

**ASSAY**

Liquid chromatography (2.2.29) as described in the test for related substances with the following modification.

**Injection:** test solution and reference solution (c).

Calculate the percentage content of  $C_8H_{14}O_2S_2$  from the peak areas and the declared content of *thioctic acid* CRS.

**STORAGE**

Protected from light.

**IMPURITIES**

**Specified impurities:** A, B.

A. 5-[(4RS)-1,2,3-trithian-4-yl]pentanoic acid,

B.  $\alpha$ -hydro- $\omega$ -hydroxypoly[sulfanediy] (3-sulfanyl-8-oxooctane-1,8-diyl) (mixture of *thioctic acid* polymers).

01/2008:1625

## THIOMERSAL

### Thiomersalum

$C_9H_9HgNaO_2S$   
[54-64-8]

$M_r$  404.8

**DEFINITION**

Sodium ethyl[2-sulfanylbenzoato(2-)-O,S]mercurate(1-).

**Content:** 97.0 per cent to 101.0 per cent (dried substance).

**CHARACTERS**

**Appearance:** white or almost white, crystalline powder.

**Solubility:** freely soluble in water, sparingly soluble or soluble in ethanol (96 per cent), practically insoluble in methylene chloride.

**IDENTIFICATION**

**First identification:** B, D.

**Second identification:** A, C, D.

A. Melting point (2.2.14): 103 °C to 115 °C.

Dissolve 0.5 g in *water* R and dilute to 10 mL with the same solvent. Add 2 mL of *dilute hydrochloric acid* R. A white precipitate is formed. Wash the precipitate with *water* R and dry over *diphosphorus pentoxide* R at a pressure not exceeding 0.7 kPa.

B. Infrared absorption spectrophotometry (2.2.24).

**Comparison:** *thiomersal* CRS.

C. Treat 50 mg by the oxygen-flask method (2.5.10). Use a mixture of 1 mL of *strong hydrogen peroxide solution* R and 50 mL of *water* R to absorb the combustion products. To the solution add 5 mL of *dilute nitric acid* R. 0.1 mL of this solution gives reaction (a) of mercury (2.3.1). To the remaining part of the solution add 10 mL of *dilute hydrochloric acid* R and filter. 5 mL of the filtrate, without further addition of acid, gives reaction (a) of sulfates (2.3.1).

D. Solution S (see Tests) gives reaction (a) of sodium (2.3.1).

**TESTS**

**Solution S.** Dissolve 2.0 g in *carbon dioxide-free water* R and dilute to 25 mL with the same solvent.

**Appearance of solution.** Solution S is not more opalescent than reference suspension II (2.2.1) and not more intensely coloured than reference solution B<sub>6</sub> (2.2.2, Method II).

**pH** (2.2.3): 6.0 to 8.0.

Dilute 5 mL of solution S to 50 mL with *carbon dioxide-free water* R.

**Inorganic mercury compounds:** maximum 0.70 per cent.

*Protect the solutions from light throughout the procedure.*

**Test solution.** Dissolve 25 mg of the substance to be examined in *water R* and dilute to 25.0 mL with the same solvent.

**Reference solution.** Dissolve 95.0 mg of *mercuric chloride R* in *water R* and dilute to 50.0 mL with the same solvent. Dilute 1.0 mL of the solution to 20.0 mL with *water R*.

**Test, reference and blank preparations.** Label five 10 mL volumetric flasks A, B, C, D and E. Place 5 mL of the test solution in flasks A, B, C and D. To each of the flasks C and D add 0.5 mL of the reference solution. Dilute the contents of flasks A and C to 10 mL with *water R* (blank preparations A and C). Dilute the contents of flasks B and D to 10 mL with a freshly prepared 332 g/L solution of *potassium iodide R* (test preparation B and reference preparation D). Place 5 mL of a 332 g/L solution of *potassium iodide R* in flask E. Dilute to 10 mL with *water R* (blank preparation E).

Measure the absorbance (2.2.25) of each solution ( $A_a$ ,  $A_b$ ,  $A_c$ ,  $A_d$  and  $A_e$ ) at 323 nm using *water R* as the compensation liquid. Calculate the content of inorganic mercury compounds, expressed as Hg from the expression:

$$\frac{(A_b - A_a - A_e) \times m_R \times 0.1847}{(A_d - A_c - A_b + A_a) \times m_T}$$

$m_R$  = mass of mercuric chloride in the reference solution in milligrams,

$m_T$  = mass of the substance to be examined in milligrams.

**Loss on drying (2.2.32):** maximum 0.5 per cent, determined on 1.000 g by drying in a desiccator over *diphosphorus pentoxide R* at a pressure not exceeding 0.7 kPa for 24 h.

#### ASSAY

Place 0.5 g in a 100 mL long-necked combustion flask, add 5 mL of *sulfuric acid R* and heat gently until charring occurs, continue to heat and add dropwise *strong hydrogen peroxide solution R* until the mixture is colourless. Dilute with *water R*, evaporate until slight fuming occurs, dilute to 10 mL with *water R*, cool down and titrate with 0.1 M *ammonium thiocyanate* using *ferric ammonium sulfate solution R2* as indicator.

1 mL of 0.1 M *ammonium thiocyanate* is equivalent to 20.24 mg of  $C_9H_9HgNaO_2S$ .

#### STORAGE

Protected from light.

01/2008:0212

## THIOPENTAL SODIUM AND SODIUM CARBONATE

### Thiopentalum natricum et natrii carbonas

#### DEFINITION

Thiopental sodium and sodium carbonate is a mixture of the sodium derivative of 5-ethyl-5-[(1*RS*)-1-methylbutyl]-2-thioxo-2,3-dihydropyrimidine-4,6-(1*H*,5*H*)-dione ( $C_{11}H_{17}N_2NaO_2S$ ;  $M_r$  264.3) and anhydrous sodium carbonate, containing the equivalent of not less than 84.0 per cent and not more than 87.0 per cent of thiopental and not less than 10.2 per cent and not more than 11.2 per cent of Na, both calculated with reference to the dried substance.

#### CHARACTERS

A yellowish-white powder, hygroscopic, freely soluble in water, partly soluble in ethanol.

#### IDENTIFICATION

**First identification:** A, B, E.

**Second identification:** A, C, D, E.

A. Acidify 10 mL of solution S (see Tests) with *dilute hydrochloric acid R*. An effervescence is produced. Shake with 20 mL of *ether R*. Separate the ether layer, wash with 10 mL of *water R*, dry over *anhydrous sodium sulfate R* and filter. Evaporate the filtrate to dryness and dry the residue at 100 °C to 105 °C (test residue). Determine the melting point (2.2.14) of the test residue. Mix equal parts of the test residue and *thiopental CRS* and determine the melting point of the mixture. The difference between the melting points (which are about 160 °C) is not greater than 2 °C.

B. Examine by infrared absorption spectrophotometry (2.2.24), comparing the test residue (see identification test A) with the spectrum obtained with *thiopental CRS*.

C. Examine by thin-layer chromatography (2.2.27), using *silica gel GF<sub>254</sub> R* as the coating substance.

**Test solution.** Dissolve 0.1 g of the substance to be examined in *water R* and dilute to 100 mL with the same solvent.

**Reference solution.** Dissolve 85 mg of *thiopental CRS* in 10 mL of *dilute sodium hydroxide solution R* and dilute to 100 mL with *water R*.

Apply separately to the plate 10 µL of each solution. Develop over a path of 18 cm using the lower layer of a mixture of 5 volumes of *concentrated ammonia R*, 15 volumes of *alcohol R* and 80 volumes of *chloroform R*. Examine immediately in ultraviolet light at 254 nm. The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

D. It gives the reaction of non-nitrogen substituted barbiturates (2.3.1).

E. It gives reaction (a) of sodium (2.3.1).

#### TESTS

**Solution S.** Dissolve 5.0 g in *carbon dioxide-free water R* and dilute to 50 mL with the same solvent.

**Appearance of solution.** Solution S is clear (2.2.1) and not more intensely coloured than reference solution GY<sub>3</sub> (2.2.2, Method II).

**Related substances.** Examine by thin-layer chromatography (2.2.27), using *silica gel GF<sub>254</sub> R* as the coating substance.

**Test solution.** Dissolve 1.0 g of the substance to be examined in *water R* and dilute to 100 mL with the same solvent. Disregard any slight residue.

**Reference solution.** Dilute 0.5 mL of the test solution to 100 mL with *water R*.

Apply separately to the plate 20 µL of each solution. Develop over a path of 15 cm using the lower layer of a mixture of 5 volumes of *concentrated ammonia R*, 15 volumes of *alcohol R* and 80 volumes of *chloroform R*. Examine immediately in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with the test solution, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with the reference solution (0.5 per cent). Disregard any spot at the point of application.

**Chlorides (2.4.4).** To 5 mL of solution S add 35 mL of *water R* and 10 mL of *dilute nitric acid R*. Shake with three quantities, each of 25 mL, of *ether R* and discard the ether layers. Eliminate the ether from the aqueous layer by heating on a water-bath. 15 mL of the aqueous layer complies with the limit test for chlorides (330 ppm).

**Loss on drying (2.2.32).** Not more than 2.5 per cent, determined on 0.50 g by drying in vacuo at 100 °C for 4 h.

## ASSAY

**Sodium.** Dissolve 0.400 g in 30 mL of *water R*. Add 0.1 mL of *methyl red solution R* and titrate with 0.1 M hydrochloric acid until a red colour is obtained. Boil gently for 2 min. Cool and, if necessary, continue the titration with 0.1 M hydrochloric acid until the red colour is again obtained.

1 mL of 0.1 M hydrochloric acid is equivalent to 2.299 mg of Na.

**Thiopental.** Dissolve 0.150 g in 5 mL of *water R*. Add 2 mL of *dilute sulfuric acid R* and shake with four quantities, each of 10 mL, of *chloroform R*. Combine the chloroform layers, filter and evaporate the filtrate to dryness on a water-bath. Dissolve the residue in 30 mL of previously neutralised *dimethylformamide R* and add 0.1 mL of a 2 g/L solution of *thymol blue R* in *methanol R*. Titrate immediately with 0.1 M *lithium methoxide* until a blue colour is obtained. Protect the solution from atmospheric carbon dioxide during the titration. 1 mL of 0.1 M *lithium methoxide* is equivalent to 24.23 mg of C<sub>11</sub>H<sub>18</sub>N<sub>2</sub>O<sub>2</sub>S.

## STORAGE

Store in an airtight container, protected from light.

01/2008:2005  
corrected 7.0

## THIORIDAZINE

## Thioridazinum

C<sub>21</sub>H<sub>26</sub>N<sub>2</sub>S<sub>2</sub>  
[50-52-2]

*M<sub>r</sub>* 370.6

## DEFINITION

10-[2-[(2*RS*)-1-Methylpiperidin-2-yl]ethyl]-2-(methylsulfonyl)-10*H*-phenothiazine

*Content:* 99.0 per cent to 101.0 per cent (dried substance).

## CHARACTERS

*Appearance:* white or almost white powder.

*Solubility:* practically insoluble in water, very soluble in methylene chloride, freely soluble in methanol, soluble in ethanol (96 per cent).

## IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

*Comparison:* thioridazine CRS.

## TESTS

**Solution S.** Dissolve 1.25 g in *methanol R* and dilute to 25 mL with the same solvent.

**Appearance of solution.** Solution S is clear (2.2.1) and not more intensely coloured than intensity 6 of the range of reference solutions of the most appropriate colour (2.2.2, *Method II*).

**Related substances.** Liquid chromatography (2.2.29). Carry out the test as quickly as possible and protected from light.

*Test solution.* Dissolve 20 mg of the substance to be examined in *methanol R* and dilute to 100 mL with the same solvent.

*Reference solution (a).* Dilute 5.0 mL of the test solution to 100.0 mL with *methanol R*. Dilute 2.0 mL of this solution to 100.0 mL with *methanol R*.

*Reference solution (b).* Dissolve the contents of a vial of *thioridazine for system suitability CRS* (containing impurities A, B, C, D and E) in 1.0 mL of *methanol R*.

## Column:

– *size:* *l* = 0.25 m, Ø = 4.0 mm;

– *stationary phase:* end-capped octadecylsilyl silica gel for chromatography *R* resistant to bases up to pH 11.

## Mobile phase:

– *mobile phase A:* triethylamine *R1*, acetonitrile *R*, water *R* (2:400:600 V/V/V);

– *mobile phase B:* triethylamine *R1*, acetonitrile *R* (2:1000 V/V);

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 5	100	0
5 - 35	100 → 5	0 → 95
35 - 40	5	95

*Flow rate:* 1.0 mL/min.

*Detection:* spectrophotometer at 275 nm.

*Injection:* 25 µL.

*Identification of impurities:* use the chromatogram supplied with *thioridazine for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A, B, C, D and E.

*Relative retention* with reference to thioridazine (retention time = about 30 min): impurity D = about 0.1; impurity A = about 0.3; impurity C = about 0.4; impurity B = about 0.5; impurity E = about 0.6.

*System suitability:* reference solution (b):

– *resolution:* minimum 3.5 between the peaks due to impurities C and B.

## Limits:

– *correction factors:* for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 1.9; impurity B = 2.4; impurity C = 0.5; impurity D = 1.5;

– *impurities A, B, C, D, E:* for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);

– *unspecified impurities:* for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);

– *total:* not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

– *disregard limit:* 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Heavy metals** (2.4.8): maximum 20 ppm.

1.0 g complies with test C. Prepare the reference solution using 2 mL of *lead standard solution (10 ppm Pb) R*.

**Loss on drying** (2.2.32): maximum 0.5 per cent, determined on 1.000 g *in vacuo* at 50 °C for 4 h.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

## ASSAY

Dissolve 0.300 g in 60 mL of *anhydrous acetic acid R*. Titrate with 0.1 M *perchloric acid*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *perchloric acid* is equivalent to 37.06 mg of C<sub>21</sub>H<sub>26</sub>N<sub>2</sub>S<sub>2</sub>.

## STORAGE

Protected from light.

## IMPURITIES

Specified impurities: A, B, C, D, E.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): F.

## THIORIDAZINE HYDROCHLORIDE

## Thioridazini hydrochloridum

C<sub>21</sub>H<sub>27</sub>ClN<sub>2</sub>S<sub>2</sub>  
[130.61-0]

M<sub>r</sub> 407.0

## DEFINITION

10-[2-[(2RS)-1-Methylpiperidin-2-yl]ethyl]-2-(methylsulfanyl)-10H-phenothiazine hydrochloride.

Content: 99.0 per cent to 101.0 per cent (dried substance).

## CHARACTERS

Appearance: white or almost white, crystalline powder.

Solubility: freely soluble in water and in methanol, soluble in ethanol 96 per cent.

## IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

Comparison: thioridazine hydrochloride CRS.

B. 0.2 g gives reaction (b) of chlorides (2.3.1).

## TESTS

Carry out all operations protected from light.

Appearance of solution. The solution is clear (2.2.1) and not more intensely coloured than intensity 6 of the range of reference solutions of the most appropriate colour (2.2.2, Method II).

Dissolve 1.0 g in methanol R and dilute to 20 mL with the same solvent.

Optical rotation (2.2.7): -0.10° to +0.10°.

Dissolve 1.0 g in methanol R and dilute to 20.0 mL with the same solvent.

Related substances. Liquid chromatography (2.2.29). Carry out the test as quickly as possible and protected from light.

Test solution. Dissolve 20.0 mg of the substance to be examined in methanol R and dilute to 100.0 mL with the same solvent.

Reference solution (a). Dilute 5.0 mL of the test solution to 100.0 mL with methanol R. Dilute 2.0 mL of this solution to 100.0 mL with methanol R.

Reference solution (b). Dissolve the contents of a vial of thioridazine for system suitability CRS (containing impurities A, B, C, D and E) in 1.0 mL of methanol R.

Column:

– size:  $l = 0.25$  m,  $\varnothing = 4.0$  mm;

– stationary phase: end-capped octadecylsilyl silica gel for chromatography R (5  $\mu$ m) resistant to bases up to pH 11.

Mobile phase:

– mobile phase A: triethylamine R1, acetonitrile R, water R (2:400:600 V/V/V);

– mobile phase B: triethylamine R1, acetonitrile R (2:1000 V/V);

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 5	100	0
5 - 35	100 → 5	0 → 95
35 - 40	5	95

Flow rate: 1.0 mL/min.

Detection: spectrophotometer at 275 nm.

Injection: 25  $\mu$ L.

Identification of impurities: use the chromatogram supplied with thioridazine for system suitability CRS to identify the peaks due to impurities A, B, C, D and E.

Relative retention with reference to thioridazine (retention time = about 30 min): impurity D = about 0.1; impurity A = about 0.3; impurity C = about 0.4; impurity B = about 0.5; impurity E = about 0.6; impurity F = about 0.9.

System suitability: reference solution (b):

– resolution: minimum 3.5 between the peaks due to impurities C and B.

Limits:

– correction factors: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 1.9; impurity B = 2.4; impurity C = 0.5; impurity D = 1.5;

– impurities A, B, C, D, E: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);

– unspecified impurities: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);

– total: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

– disregard limit: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Heavy metals** (2.4.8): maximum 20 ppm.

Dissolve 1.0 g in 20 mL of *water R*. 12 mL of the solution complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

**Loss on drying** (2.2.32): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 4 h.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

#### ASSAY

Dissolve 0.300 g in a mixture of 10 mL of *anhydrous acetic acid R* and 60 mL of *acetic anhydride R*. Titrate with 0.1 M *perchloric acid*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *perchloric acid* is equivalent to 40.70 mg of C<sub>21</sub>H<sub>27</sub>ClN<sub>2</sub>S<sub>2</sub>.

#### STORAGE

Protected from light.

#### IMPURITIES

*Specified impurities: A, B, C, D, E.*

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): *F*.

- A. R = CH<sub>3</sub>, X = X' = SO<sub>2</sub>: 10-[2-[(2*RS*)-1-methylpiperidin-2-yl]ethyl]-2-(methylsulfonyl)-10*H*-phenothiazine 5,5-dioxide,
- B. R = CH<sub>3</sub>, X = SO, X' = S: 10-[2-[(2*RS*)-1-methylpiperidin-2-yl]ethyl]-2-(methylsulfinyl)-10*H*-phenothiazine,
- C. R = CH<sub>3</sub>, X = S, X' = SO: 10-[2-[(2*RS*)-1-methylpiperidin-2-yl]ethyl]-2-(methylsulfanyl)-10*H*-phenothiazine 5-oxide,
- D. R = CH<sub>3</sub>, X = X' = SO: 10-[2-[(2*RS*)-1-methylpiperidin-2-yl]ethyl]-2-(methylsulfinyl)-10*H*-phenothiazine 5-oxide,
- E. R = CH<sub>3</sub>, X = SO<sub>2</sub>, X' = S: 10-[2-[(2*RS*)-1-methylpiperidin-2-yl]ethyl]-2-(methylsulfonyl)-10*H*-phenothiazine,
- F. R = H, X = X' = S: 2-(methylsulfanyl)-10-[2-[(2*RS*)-piperidin-2-yl]ethyl]-10*H*-phenothiazine.

corrected 6.0

## THREONINE

### Threoninum

C<sub>4</sub>H<sub>9</sub>NO<sub>3</sub>  
[72-19-5]

M<sub>r</sub> 119.1

#### DEFINITION

Threonine contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of (2*S*,3*R*)-2-amino-3-hydroxybutanoic acid, calculated with reference to the dried substance.

#### CHARACTERS

A white or almost white, crystalline powder or colourless crystals, soluble in water, practically insoluble in alcohol.

#### IDENTIFICATION

*First identification: A, B.*

*Second identification: A, C, D.*

- A. Specific optical rotation (see Tests).
- B. Examine by infrared absorption spectrophotometry (2.2.24), comparing with the spectrum obtained with *threonine CRS*. Examine the substances prepared as discs.
- C. Examine the chromatograms obtained in the test for ninhydrin-positive substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).
- D. Mix 1 mL of a 2 g/L solution of the substance to be examined with 1 mL of a 20 g/L solution of *sodium periodate R*. Add 0.2 mL of *piperidine R* and 0.1 mL of a 25 g/L solution of *sodium nitroprusside R*. A blue colour develops that changes to yellow after a few minutes.

#### TESTS

**Solution S.** Dissolve 2.5 g in *carbon dioxide-free water R* and dilute to 100 mL with the same solvent.

**Appearance of solution.** Solution S is clear (2.2.1) and colourless (2.2.2, *Method II*).

**pH** (2.2.3). The pH of solution S is 5.0 to 6.5.

**Specific optical rotation** (2.2.7). Dissolve 1.50 g in *water R* and dilute to 25.0 mL with the same solvent. The specific optical rotation is –27.6 to –29.0, calculated with reference to the dried substance.

**Ninhydrin-positive substances.** Examine by thin-layer chromatography (2.2.27), using a *TLC silica gel plate R*.

*Test solution (a).* Dissolve 0.10 g of the substance to be examined in *dilute hydrochloric acid R* and dilute to 10 mL with the same acid.

*Test solution (b).* Dilute 1 mL of test solution (a) to 50 mL with *water R*.

*Reference solution (a).* Dissolve 10 mg of *threonine CRS* in a 1 per cent *V/V* solution of *hydrochloric acid R* and dilute to 50 mL with the same acid solution.

*Reference solution (b).* Dilute 5 mL of test solution (b) to 20 mL with *water R*.

*Reference solution (c).* Dissolve 10 mg of *threonine CRS* and 10 mg of *proline CRS* in a 1 per cent *V/V* solution of *hydrochloric acid R* and dilute to 25 mL with the same acid solution.

Apply to the plate 5 µL of each solution. Allow the plate to dry in air. Develop over a path of 15 cm using a mixture of 20 volumes of *glacial acetic acid R*, 20 volumes of *water R* and 60 volumes of *butanol R*. Allow the plate to dry in air, spray with *ninhydrin solution R* and heat at 100 °C to 105 °C for 15 min. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent). The test is not valid unless the chromatogram obtained with reference solution (c) shows two clearly separated principal spots.

**Chlorides** (2.4.4). Dilute 10 mL of solution S to 15 mL with *water R*. The solution complies with the limit test for chlorides (200 ppm).

**Sulfates** (2.4.13). Dissolve 0.5 g in *distilled water R* and dilute to 15 mL with the same solvent. The solution complies with the limit test for sulfates (300 ppm).

**Ammonium** (2.4.1). 0.10 g complies with limit test B for ammonium (200 ppm). Prepare the standard using 0.2 mL of *ammonium standard solution (100 ppm NH<sub>4</sub>) R*.

**Iron (2.4.9).** In a separating funnel, dissolve 1.0 g in 10 mL of *dilute hydrochloric acid R*. Shake with three quantities, each of 10 mL, of *methyl isobutyl ketone RI*, shaking for 3 min each time. To the combined organic layers add 10 mL of *water R* and shake for 3 min. The aqueous layer complies with the limit test for iron (10 ppm).

**Heavy metals (2.4.8).** 2.0 g complies with limit test C for heavy metals (10 ppm). Prepare the standard using 2 mL of *lead standard solution (10 ppm Pb) R*.

**Loss on drying (2.2.32).** Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash (2.4.14).** Not more than 0.1 per cent, determined on 1.0 g.

#### ASSAY

Dissolve 0.100 g in 5 mL of *anhydrous formic acid R*. Add 30 mL of *anhydrous acetic acid R*. Titrate with 0.1 M *perchloric acid*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *perchloric acid* is equivalent to 11.91 mg of  $C_4H_9NO_3$ .

#### STORAGE

Store protected from light.

## THYMOL

### Thymolum

$C_{10}H_{14}O$   
[89-83-8]

$M_r$  150.2

#### DEFINITION

5-Methyl-2-(methylethyl)phenol.

#### CHARACTERS

**Appearance:** colourless crystals.

**Solubility:** very slightly soluble in water, very soluble in ethanol (96 per cent), freely soluble in essential oils and in fatty oils, sparingly soluble in glycerol. It dissolves in dilute solutions of alkali hydroxides.

#### IDENTIFICATION

**First identification:** B.

**Second identification:** A, C, D.

A. Melting point (2.2.14): 48 °C to 52 °C.

B. Infrared absorption spectrophotometry (2.2.24).

**Comparison:** *thymol CRS*.

C. Dissolve 0.2 g with heating in 2 mL of *dilute sodium hydroxide solution R* and add 0.2 mL of *chloroform R*. Heat on a water-bath. A violet colour develops.

D. Dissolve about 2 mg in 1 mL of *anhydrous acetic acid R*. Add 0.15 mL of *sulfuric acid R* and 0.05 mL of *nitric acid R*. A bluish-green colour develops.

#### TESTS

**Appearance of solution.** The solution is not more opalescent than reference suspension IV (2.2.1) and not more intensely coloured than reference solution  $R_6$  (2.2.2, *Method II*).

Dissolve 1.0 g in 10 mL of *dilute sodium hydroxide solution R*.

**Acidity.** To 1.0 g in a 100 mL glass-stoppered conical flask add 20 mL of *water R*. Boil until dissolution is complete, cool and stopper the flask. Shake vigorously for 1 min. Add a few crystals of the substance to be examined to initiate crystallisation.

Shake vigorously for 1 min and filter. To 5 mL of the filtrate add 0.05 mL of *methyl red solution R* and 0.05 mL of 0.01 M *sodium hydroxide*. The solution is yellow.

**Related substances.** Gas chromatography (2.2.28).

**Test solution.** Dissolve 0.100 g of the substance to be examined in *ethanol (96 per cent) R* and dilute to 10.0 mL with the same solvent.

**Reference solution (a).** Dilute 1 mL of the test solution to 100 mL with *ethanol (96 per cent) R*.

**Reference solution (b).** Dilute 1 mL of reference solution (a) to 10 mL with *ethanol (96 per cent) R*.

**Reference solution (c).** Dilute 5 mL of reference solution (b) to 10 mL with *ethanol (96 per cent) R*.

#### Column:

- **material:** glass or steel;
- **size:**  $l = 4$  m,  $\varnothing = 2$  mm;
- **stationary phase:** *diatomaceous earth for gas chromatography R*, impregnated with a mixture suitable for the separation of free fatty acids.

**Carrier gas:** *nitrogen for chromatography R*.

**Flow rate:** 30 mL/min.

#### Temperature:

	Time (min)	Temperature (°C)
Column	0 - 2	80
	2 - 22	80 → 240
	22 - 37	240
Injection port		250
Detector		300

**Detection:** flame ionisation.

**Injection:** 1 µL.

**System suitability:** reference solution (b):

- **signal-to-noise ratio:** minimum 5 for the principal peak.

#### Limits:

- **total:** not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent);
- **disregard limit:** the area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent).

**Residue on evaporation:** maximum 0.05 per cent.

Evaporate 2.00 g on a water-bath and heat in an oven at 100-105 °C for 1 h. The residue weighs not more than 1.0 mg.

#### STORAGE

Protected from light.

01/2008:0866

## TIABENDAZOLE

### Tiabendazolium

$C_{10}H_7N_3S$   
[148-79-8]

$M_r$  201.2

#### DEFINITION

Tiabendazole contains not less than 98.0 per cent and not more than the equivalent of 101.0 per cent of 2-(thiazol-4-yl)-1H-benzimidazole, calculated with reference to the anhydrous substance.

## CHARACTERS

A white or almost white, crystalline powder, practically insoluble in water, slightly soluble in alcohol and in methylene chloride. It dissolves in dilute mineral acids. It melts at about 300 °C.

## IDENTIFICATION

*First identification:* B.

*Second identification:* A, C, D.

- A. Dissolve 25 mg in 0.1 M hydrochloric acid and dilute to 100.0 mL with the same acid. Dilute 2.0 mL of the solution to 100.0 mL with 0.1 M hydrochloric acid. Examined between 230 nm and 350 nm (2.2.25), the solution shows two absorption maxima, at 243 nm and 302 nm. The ratio of the absorbance measured at the maximum at 302 nm to that measured at the maximum at 243 nm is 1.8 to 2.1.
- B. Examine by infrared absorption spectrophotometry (2.2.24), comparing with the spectrum obtained with *tiabendazole CRS*. Examine the substances prepared as discs.
- C. Examine the chromatograms obtained in the test for related substances in ultraviolet light at 254 nm. The principal spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).
- D. Dissolve about 5 mg in 0.1 M hydrochloric acid and dilute to 5 mL with the same acid. Add 3 mg of *p*-phenylenediamine dihydrochloride *R* and shake until dissolved. Add 0.1 g of zinc powder *R*, mix, allow to stand for 2 min and add 5 mL of ferric ammonium sulfate solution *R2*. A bluish-violet colour develops.

## TESTS

**Related substances.** Examine by thin-layer chromatography (2.2.27), using *silica gel HF<sub>254</sub> R* as the coating substance.

*Test solution (a).* Dissolve 0.10 g of the substance to be examined in *methanol R* and dilute to 10 mL with the same solvent.

*Test solution (b).* Dilute 2 mL of test solution (a) to 20 mL with *methanol R*.

*Reference solution (a).* Dissolve 20 mg of *tiabendazole CRS* in *methanol R* and dilute to 20 mL with the same solvent.

*Reference solution (b).* Dilute 1 mL of test solution (b) to 10 mL with *methanol R*.

*Reference solution (c).* Dilute 1 mL of test solution (b) to 25 mL with *methanol R*.

Apply separately to the plate 20 µL of each solution. Develop over a path of 15 cm using a mixture of 2.5 volumes of *water R*, 10 volumes of *acetone R*, 25 volumes of *glacial acetic acid R* and 62.5 volumes of *toluene R*. Allow the plate to dry in air and examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (1.0 per cent) and at most one such spot is more intense than the spot in the chromatogram obtained with reference solution (c) (0.4 per cent).

***o*-Phenylenediamine.** To 5.0 g in a flask fitted with a ground-glass stopper, add 25 mL of a mixture of 1 volume of *methanol R* and 2 volumes of *water R*. Shake for 3 min. Filter through a sintered-glass filter (16) (2.1.2) under reduced pressure. To 10 mL of the filtrate add 0.5 mL of *hydrochloric acid R* and 0.5 mL of *acetylacetone R* and shake until the solution is clear. The solution is not more intensely coloured than reference solution *R<sub>7</sub>* (2.2.2, *Method I*) (10 ppm).

**Heavy metals** (2.4.8). 1.0 g complies with limit test D for heavy metals (20 ppm). Prepare the standard using 2 mL of *lead standard solution (10 ppm Pb) R*.

**Water** (2.5.12). Not more than 0.5 per cent, determined on 1.00 g by the semi-micro determination of water.

**Sulfated ash** (2.4.14). Not more than 0.2 per cent, determined on 1.0 g.

## ASSAY

Dissolve 0.150 g in 30 mL of *anhydrous acetic acid R*. Titrate with 0.1 M perchloric acid, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M perchloric acid is equivalent to 20.12 mg of C<sub>10</sub>H<sub>7</sub>N<sub>3</sub>S.

## STORAGE

Store protected from light.

## IMPURITIES

A. benzene-1,2-diamine.

01/2008:1660  
corrected 6.5

## TIAMULIN FOR VETERINARY USE

## Tiamulinum ad usum veterinarium

C<sub>28</sub>H<sub>47</sub>NO<sub>4</sub>S  
[55297-95-5]

*M<sub>r</sub>* 493.8

## DEFINITION

(3*a*S,4*R*,5*S*,6*S*,8*R*,9*R*,9*a**R*,10*R*)-6-Ethenyl-5-hydroxy-4,6,9,10-tetramethyl-1-oxodecahydro-3*a*,9-propano-3*aH*-cyclopentacycloocten-8-yl [[2-(diethylamino)ethyl]sulfanyl]acetate.

Semi-synthetic product derived from a fermentation product.

*Content:* 96.5 per cent to 102.0 per cent (dried substance).

## CHARACTERS

*Appearance:* sticky, translucent yellowish mass, slightly hygroscopic.

*Solubility:* practically insoluble in water, very soluble in methylene chloride, freely soluble in anhydrous ethanol.

## IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

*Comparison:* *Ph. Eur. reference spectrum of tiamulin.*

## TESTS

**Appearance of solution.** The solution is clear (2.2.1) and its absorbance (2.2.25) at 420 nm is not greater than 0.050.

Dissolve 2.5 g in 50 mL of *methanol R*.

**Related substances.** Liquid chromatography (2.2.29).

*Ammonium carbonate buffer solution pH 10.0.* Dissolve 10.0 g of *ammonium carbonate R* in *water R*, add 22 mL of *perchloric acid solution R* and dilute to 1000.0 mL with *water R*. Adjust to pH 10.0 with *concentrated ammonia R1*.

*Solvent mixture: acetonitrile R1, ammonium carbonate buffer solution pH 10.0 (50:50 V/V).*

*Test solution.* Dissolve 0.200 g of the substance to be examined in the solvent mixture and dilute to 50.0 mL with the solvent mixture.

**Reference solution (a).** Dissolve 0.250 g of *tiamulin hydrogen fumarate CRS* in the solvent mixture and dilute to 50.0 mL with the solvent mixture.

**Reference solution (b).** Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture.

**Reference solution (c).** Dilute 0.1 mL of *toluene R* to 100 mL with *acetonitrile R*. Dilute 0.1 mL of this solution to 100.0 mL with the solvent mixture.

**Column:**

- size:  $l = 0.15$  m,  $\varnothing = 4.6$  mm;
- stationary phase: *end-capped octadecylsilyl silica gel for chromatography R* ( $5 \mu\text{m}$ );
- temperature:  $30 \text{ }^\circ\text{C}$ .

**Mobile phase:** *acetonitrile R1*, ammonium carbonate buffer solution pH 10.0, *methanol R1* (21:30:49 V/V/V).

**Flow rate:** 1.0 mL/min.

**Detection:** spectrophotometer at 212 nm.

**Injection:** 20  $\mu\text{L}$ .

**Run time:** 3 times the retention time of tiamulin.

**Relative retention** with reference to tiamulin (retention time = about 18 min): impurity A = about 0.22; impurity B = about 0.5; impurity C = about 0.66; impurity D = about 1.1; impurity F = about 1.6; impurity E = about 2.4.

**System suitability:** reference solution (a):

- baseline separation between the peaks due to tiamulin and impurity D.

**Limits:**

- **impurities A, B, C, D, E, F:** for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);
- **any other impurity:** for each impurity, not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
- **total:** not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (3.0 per cent);
- **disregard limit:** 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent); disregard any peak present in the chromatogram obtained with reference solution (c).

**Loss on drying (2.2.32):** maximum 1.0 per cent, determined on 1.000 g by drying in an oven at  $80 \text{ }^\circ\text{C}$ .

**Bacterial endotoxins (2.6.14, Method D):** less than 0.4 IU/mg, determined in a 1 mg/mL solution in *anhydrous ethanol R* (endotoxin free) diluted 1:40 with water for bacterial endotoxins test.

**ASSAY**

Liquid chromatography (2.2.29) as described in the test for related substances with the following modification.

**Injection:** test solution and reference solution (a).

Calculate the percentage content of  $\text{C}_{28}\text{H}_{47}\text{NO}_4\text{S}$ , from the declared content of *tiamulin hydrogen fumarate CRS*.

**STORAGE**

Protected from light.

**IMPURITIES**

**Specified impurities:** A, B, C, D, E, F.

**Other detectable impurities** (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities

for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): G, H, I, J, K, L, M, N, O, P, Q, R.

- A.  $\text{R1} = \text{R2} = \text{H}$ : (3a*S*,4*R*,5*S*,6*S*,8*R*,9*R*,9a*R*,10*R*)-6-ethenyl-5,8-dihydroxy-4,6,9,10-tetramethyloctahydro-3a,9-propano-3a*H*-cyclopentacycloocten-1(4*H*)-one (mutilin),

## TIAMULIN HYDROGEN FUMARATE FOR VETERINARY USE

Tiamulini hydrogenofumaras ad usum  
veterinarium

$C_{32}H_{51}NO_8S$   
[55297-96-6]

$M_r$  610

### DEFINITION

(3*aS*,4*R*,5*S*,6*S*,8*R*,9*R*,9*aR*,10*R*)-6-Ethenyl-5-hydroxy-4,6,9,10-tetramethyl-1-oxodecahydro-3*a*,9-propano-3*aH*-cyclopentacycloocten-8-yl [[2-(diethylamino)ethyl]sulfanyl]acetate hydrogen (*E*)-butenedioate.

Semi-synthetic product derived from a fermentation product.

*Content*: 96.5 per cent to 102.0 per cent (dried substance).

### CHARACTERS

*Appearance*: white or light yellow, crystalline powder.

*Solubility*: soluble in water, freely soluble in anhydrous ethanol and soluble in methanol.

### IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

*Comparison*: tiamulin hydrogen fumarate CRS.

### TESTS

**pH** (2.2.3): 3.1 to 4.1.

Dissolve 0.5 g in carbon dioxide-free water *R* and dilute to 50 mL with the same solvent.

**Related substances**. Liquid chromatography (2.2.29).

*Ammonium carbonate buffer solution pH 10.0*. Dissolve 10.0 g of ammonium carbonate *R* in water *R*, add 22 mL of perchloric acid solution *R* and dilute to 1000.0 mL with water *R*. Adjust to pH 10.0 with concentrated ammonia *R1*.

*Solvent mixture*: ammonium carbonate buffer solution pH 10.0, acetonitrile *R1* (50:50 *V/V*).

*Test solution*. Dissolve 0.200 g of the substance to be examined in the solvent mixture and dilute to 50.0 mL with the solvent mixture.

*Reference solution (a)*. Dissolve 0.200 g of tiamulin hydrogen fumarate CRS in the solvent mixture and dilute to 50.0 mL with the solvent mixture.

*Reference solution (b)*. Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture.

*Reference solution (c)*. Dissolve 40.0 mg of fumaric acid *R* in the solvent mixture and dilute to 50.0 mL with the solvent mixture.

*Reference solution (d)*. Dissolve 4 mg of tiamulin for peak identification CRS (tiamulin hydrogen fumarate containing impurities B, C, D, F, H and I) in the solvent mixture and dilute to 1 mL with the solvent mixture.

*Column*:

– size:  $l = 0.15$  m,  $\varnothing = 4.6$  mm,

– stationary phase: end-capped octadecylsilyl silica gel for chromatography *R* (5  $\mu$ m),

– temperature: 30 °C.

*Mobile phase:* acetonitrile R1, ammonium carbonate buffer solution pH 10.0, *methanol R1* (21:30:49 V/V/V).

*Flow rate:* 1.0 mL/min.

*Detection:* spectrophotometer at 212 nm.

*Injection:* 20 µL.

*Run time:* 3 times the retention time of tiamulin.

*Identification of impurities:* use the chromatogram supplied with *tiamulin for peak identification CRS* and the chromatogram obtained with reference solution (d) to identify the peaks due to impurities B and H.

*Relative retention* with reference to tiamulin (retention time = about 18 min): impurity G = about 0.2; impurity A = about 0.22; impurity H = about 0.23; impurity I = about 0.3; impurity J = about 0.4; impurity K = about 0.45; impurity B = about 0.5; impurity L = about 0.65; impurity C = about 0.66; impurity F = about 0.8; impurity M = about 0.85; impurity D = about 1.1; impurity S = about 1.4; impurity T = about 1.6; impurity E = 2.4.

*System suitability:* reference solution (a):

- baseline separation between the peaks due to tiamulin and impurity D.

*Limits:*

- *impurities B, H:* for each impurity, not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.5 per cent),
- *impurities A, C, D, E, F, G, I, J, K, L, M, S, T:* for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent),
- *any other impurity:* for each impurity, not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent),
- *total:* not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (3.0 per cent),
- *disregard limit:* 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent); disregard any peak present in reference solution (c).

**Loss on drying** (2.2.32): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

## ASSAY

Liquid chromatography (2.2.29) as described in the test for related substances with the following modification.

*Injection:* test solution and reference solution (a).

Calculate the percentage content of C<sub>32</sub>H<sub>51</sub>NO<sub>8</sub>S from the declared content of *tiamulin hydrogen fumarate CRS*.

## STORAGE

Protected from light.

## IMPURITIES

*Specified impurities:* A, B, C, D, E, F, G, H, I, J, K, L, M, S, T.

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use* (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): N, O, P, Q, R.

## TIANEPTINE SODIUM

### Tianeptinum natricum

C<sub>21</sub>H<sub>24</sub>ClN<sub>2</sub>NaO<sub>4</sub>S  
[30123-17-2]

*M*<sub>r</sub> 458.9

#### DEFINITION

Sodium 7-[[1*RS*]-3-chloro-6-methyl-6,11-dihydrodibenzo[*c,f*][1,2]thiazepin-11-yl]amino]heptanoate *S,S*-dioxide.

*Content*: 99.0 per cent to 101.0 per cent (anhydrous substance).

#### CHARACTERS

*Appearance*: white or yellowish powder, very hygroscopic.

*Solubility*: freely soluble in water, in methanol and in methylene chloride.

#### IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

*Comparison*: *Ph. Eur. reference spectrum of tianeptine sodium*.

B. It gives reaction (a) of sodium (2.3.1).

#### TESTS

**Impurity A.** Gas chromatography (2.2.28).

*Internal standard solution.* Dilute 1 mL of *ethyl 5-bromovalerate R* in *ethanol R* and dilute to 100.0 mL with the same solvent. Dilute 1.0 mL of the solution to 250.0 mL with *ethanol R*.

*Test solution.* Dissolve 0.1000 g of the substance to be examined in the internal standard solution and dilute to 2.0 mL with the same solution.

*Reference solution.* Dissolve 10.0 mg of *tianeptine impurity A CRS* in the internal standard solution and dilute to 200.0 mL with the same solution.

*Column*:

- *material*: fused silica,
- *size*: *l* = 25 m, Ø = 0.25 mm,
- *stationary phase*: *poly(cyanopropyl)siloxane R* (film thickness 0.2 µm).

*Carrier gas*: *helium for chromatography R*.

*Linear velocity*: 26 cm/s.

*Split ratio*: 1:100.

*Temperature*:

- *column*: 150 °C,
- *injection port and detector*: 210 °C.

*Detection*: flame ionisation.

*Injection*: 1 µL.

**Run time:** twice the retention time of ethyl 5-bromovalerate.

**System suitability:** reference solution:

- **elution order:** ethanol, ethyl 5-bromovalerate, impurity A,
- **resolution:** minimum 10 between the peaks due to ethyl 5-bromovalerate and impurity A,
- **signal-to-noise ratio:** minimum 20 for the peak due to impurity A.

**Limit:**

- **impurity A:** not more than the area of the corresponding peak in the chromatogram obtained with the reference solution (0.1 per cent).

**Related substances.** Liquid chromatography (2.2.29).

**Solvent mixture.** Mix 50 volumes of *methanol R* and 50 volumes of *water for chromatography R*.

**Test solution.** Dissolve 50.0 mg of the substance to be examined in the solvent mixture and dilute to 50.0 mL with the solvent mixture.

**Reference solution (a).** Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 20.0 mL with the solvent mixture.

**Reference solution (b).** Dissolve 20.0 mg of *sodium tianeptine for system suitability CRS* in the solvent mixture and dilute to 200.0 mL with the solvent mixture.

**Column:**

- **size:**  $l = 0.15$  m,  $\varnothing = 4.6$  mm,
- **stationary phase:** *octadecylsilyl silica gel for chromatography R* (3  $\mu$ m) with a pore size of 0.01  $\mu$ m,
- **temperature:** 30 °C.

**Mobile phase:**

- **mobile phase A:** mix 21 volumes of *methanol R1*, 31.5 volumes of *acetonitrile R1* and 47.5 volumes of a 2 g/L solution of *sodium laurilsulfate R*, adjusted to pH 2.5 with *phosphoric acid R*,
- **mobile phase B:** mix 20 volumes of *methanol R1*, 20 volumes of a 2 g/L solution of *sodium laurilsulfate R*, adjusted to pH 2.5 with *phosphoric acid R* and 60 volumes of *acetonitrile R1*,

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 35	100	0
35 - 45	100 → 40	0 → 60
45 - 60	40	60
60 - 70	40 → 100	60 → 0

**Flow rate:** 1 mL/min.

**Detection:** spectrophotometer at 220 nm.

**Injection:** 10  $\mu$ L.

**Relative retention** with reference to tianeptine (retention time = about 30 min): impurity C = about 0.4; impurity D1 = about 0.6; impurity D2 = about 0.8; impurity E = about 1.1; impurity B = about 1.7.

**System suitability:** reference solution (b):

- **resolution:** minimum 2.5 between the peaks due to tianeptine and impurity E.

**Limits:**

- **any impurity:** not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent),
- **total:** not more than 8 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.4 per cent),
- **disregard limit:** area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Water (2.5.12):** maximum 5.0 per cent, determined on 0.100 g.

**ASSAY**

Dissolve 0.165 g in 50 mL of *anhydrous acetic acid R*. Titrate with 0.1 M *perchloric acid*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *perchloric acid* is equivalent to 22.95 mg of  $C_{21}H_{24}ClN_2NaO_4S$ .

**STORAGE**

In an airtight container.

**IMPURITIES**

A.  $Br-[CH_2]_6-CO-O-C_2H_5$ : ethyl 7-bromoheptanoate,

B.  $R = H, R' = [CH_2]_6-CO-O-C_2H_5$ : ethyl 7-[(11*RS*)-3-chloro-6-methyl-6,11-dihydrodibenzo[*c,f*][1,2]thiazepin-11-yl]amino]heptanoate *S,S*-dioxide,

E.  $R = R' = [CH_2]_6-CO_2H$ : 7,7'-[(11*RS*)-3-chloro-6-methyl-6,11-dihydrodibenzo[*c,f*][1,2]thiazepin-11-yl]imino]diheptanoic acid *S,S*-dioxide,

C.  $X = O$ : 3-chloro-6-methyl-6,11-dihydrodibenzo[*c,f*][1,2]thiazepin-11(6*H*)-one *S,S*-dioxide,

D.  $X = N-[CH_2]_6-CO_2H$ : 7-[(11*RS*)-3-chloro-6-methyl-6,11-dihydrodibenzo[*c,f*][1,2]thiazepin-11(6*H*)-ylidene]amino]heptanoic acid *S,S*-dioxide.

## TIAPRIDE HYDROCHLORIDE

### Tiapridi hydrochloridum

$C_{15}H_{25}ClN_2O_4S$   
[51012-33-0]

$M_r$  364.9

**DEFINITION**

*N*-[2-(Diethylamino)ethyl]-2-methoxy-5-(methylsulfonyl)-benzamide hydrochloride.

**Content:** 98.5 per cent to 101.0 per cent (dried substance).

**CHARACTERS**

**Appearance:** white or almost white, crystalline powder.

**Solubility:** very soluble in water, soluble in methanol, slightly soluble in anhydrous ethanol.

**IDENTIFICATION**

A. Infrared absorption spectrophotometry (2.2.24).

**Preparation:** discs.

**Comparison:** *tiapride hydrochloride CRS*.

B. Solution S (see Tests) gives reaction (a) of chlorides (2.3.1).

## TESTS

**Solution S.** Dissolve 2.5 g in *carbon dioxide-free water R* and dilute to 50.0 mL with the same solvent.

**Appearance of solution.** Solution S is clear (2.2.1) and its absorbance (2.2.25) at 450 nm is not greater than 0.030.

**pH** (2.2.3): 4.0 to 6.0 for solution S.

**Impurity C.** Thin-layer chromatography (2.2.27).

**Test solution.** Dissolve 0.400 g of the substance to be examined in *methanol R* and dilute to 10 mL with the same solvent.

**Reference solution.** Dissolve 20.0 mg of *metoclopramide impurity E CRS* (impurity C) in *methanol R* and dilute to 50 mL with the same solvent. Dilute 2.0 mL of this solution to 20 mL with *methanol R*.

**Plate:** TLC silica gel G plate R.

**Mobile phase:** concentrated ammonia R, dioxan R, methanol R, methylene chloride R (2:10:14:90 V/V/V/V).

**Application:** 10 µL.

**Development:** over a path of 12 cm.

**Drying:** in air.

**Detection:** spray with a 2 g/L solution of *ninhydrin R* in *butanol R* and heat at 100 °C for 15 min.

**Limit:**

- *impurity C*: any spot due to impurity C is not more intense than the corresponding spot in the chromatogram obtained with the reference solution (0.1 per cent).

**Related substances.** Liquid chromatography (2.2.29).

**Test solution.** Dissolve 0.100 g of the substance to be examined in the mobile phase and dilute to 100.0 mL with the mobile phase.

**Reference solution (a).** Dilute 1.0 mL of the test solution to 10.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 100.0 mL with the mobile phase.

**Reference solution (b).** Dissolve 5.0 mg of *tiapride hydrochloride CRS* and 5.0 mg of *tiapride N-oxide CRS* in the mobile phase and dilute to 100.0 mL with the mobile phase.

**Column:**

- *size*:  $l = 0.25$  m,  $\varnothing = 4.6$  mm;
- *stationary phase*: octylsilyl silica gel for chromatography R (5 µm);
- *temperature*: 40 °C.

**Mobile phase:** dissolve 5.44 g of *potassium dihydrogen phosphate R* and 0.08 g of *sodium octanesulfonate R* in 780 mL of *water R*, adjust to pH 2.7 using *phosphoric acid R* and dilute to 800 mL with *water R*; add 150 mL of *methanol R* and 50 mL of *acetonitrile R* and mix.

**Flow rate:** 1.5 mL/min.

**Detection:** spectrophotometer at 240 nm.

**Injection:** 10 µL.

**Run time:** 3 times the retention time of tiapride.

**Retention time:** tiapride = about 9 min; tiapride N-oxide = about 13 min.

**System suitability:** reference solution (b):

- *resolution*: minimum 4.0 between the peaks due to tiapride and tiapride N-oxide.

**Limits:**

- *impurities A, B*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Heavy metals** (2.4.8): maximum 20 ppm.

Dissolve 2.0 g in *water R* and dilute to 20 mL with the same solvent. 12 mL of the solution complies with test A. Prepare the reference solution using *lead standard solution (2 ppm Pb) R*.

**Loss on drying** (2.2.32): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

## ASSAY

Dissolve 0.300 g in 20 mL of *anhydrous acetic acid R*. Add 20 mL of *acetic anhydride R*. Titrate with 0.1 M *perchloric acid*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *perchloric acid* is equivalent to 36.49 mg of  $C_{15}H_{25}ClN_2O_4S$ .

## IMPURITIES

*Specified impurities: A, B, C.*

A. R = CH<sub>3</sub>: methyl 2-methoxy-5-(methylsulfonyl)benzoate,

B. R = H: 2-methoxy-5-(methylsulfonyl)benzoic acid,

C. *N,N*-diethylethane-1,2-diamine.

01/2008:1157

## TIAPROFENIC ACID

## Acidum tiaprofenicum

and enantiomer

$C_{14}H_{12}O_3S$   
[33005-95-7]

$M_r$  260.3

## DEFINITION

(2*RS*)-2-(5-Benzoylthiophen-2-yl)propanoic acid.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

## CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: practically insoluble in water, freely soluble in acetone, in ethanol (96 per cent) and in methylene chloride.

## IDENTIFICATION

*First identification: C.*

*Second identification: A, B, D.*

A. Melting point (2.2.14): 95 °C to 99 °C.

B. Ultraviolet and visible absorption spectrophotometry (2.2.25).

**Test solution.** Dissolve 25.0 mg in *ethanolic hydrochloric acid R* and dilute to 50.0 mL with the same solvent. Dilute 1.0 mL of this solution to 50.0 mL with *ethanolic hydrochloric acid R*.

**Spectral range:** 220-350 nm.

*Absorption maximum*: at 305 nm.

*Shoulder*: at 262 nm.

*Specific absorbance at the absorption maximum*: 550 to 590.

C. Infrared absorption spectrophotometry (2.2.24).

*Comparison*: tiaprofenic acid CRS.

D. Thin-layer chromatography (2.2.27).

*Test solution*. Dissolve 10 mg of the substance to be examined in *methylene chloride R* and dilute to 10 mL with the same solvent.

*Reference solution (a)*. Dissolve 10 mg of *tiaprofenic acid CRS* in *methylene chloride R* and dilute to 10 mL with the same solvent.

*Reference solution (b)*. Dissolve 10 mg of *ketoprofen CRS* in *methylene chloride R* and dilute to 10 mL with the same solvent. Dilute 1 mL of this solution to 2 mL with reference solution (a).

*Plate*: TLC silica gel  $F_{254}$  plate R.

*Mobile phase*: acetic acid R, methylene chloride R, acetone R (1:20:80 V/V/V).

*Application*: 10  $\mu$ L.

*Development*: over a path of 15 cm.

*Drying*: in air.

*Detection*: examine in ultraviolet light at 254 nm.

*System suitability*: reference solution (b):

- the chromatogram shows 2 clearly separated principal spots.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

## TESTS

**Appearance of solution.** The solution is clear (2.2.1) and not more intensely coloured than reference solution  $Y_6$  (2.2.2, Method II).

Dissolve 2.0 g in *ethanol (96 per cent) R* and dilute to 20 mL with the same solvent.

**Optical rotation** (2.2.7):  $-0.10^\circ$  to  $+0.10^\circ$ .

Dissolve 0.50 g in *ethyl acetate R* and dilute to 10.0 mL with the same solvent.

**Related substances.** Liquid chromatography (2.2.29).

*Test solution*. Dissolve 20.0 mg of the substance to be examined in the mobile phase and dilute to 20.0 mL with the mobile phase.

*Reference solution (a)*. Dilute 1.0 mL of the test solution to 50.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Reference solution (b)*. Dilute 5.0 mL of reference solution (a) to 10.0 mL with the mobile phase.

*Reference solution (c)*. Dissolve 10.0 mg of *tiaprofenic acid impurity C CRS* in the mobile phase and dilute to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 50.0 mL with the mobile phase.

*Reference solution (d)*. Dilute 1.0 mL of reference solution (a) to 2.0 mL with reference solution (c).

*Column*:

- size:  $l = 0.25$  m,  $\varnothing = 4.6$  mm;
- stationary phase: silica gel for chromatography R (5  $\mu$ m).

*Mobile phase*: water R, glacial acetic acid R, hexane R, methylene chloride R (0.25:20:500:500 V/V/V/V); add the water to the acetic acid, then hexane and methylene chloride; sonicate the mixture for 2 min. Do not degas with helium during analysis.

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 250 nm.

*Injection*: 20  $\mu$ L.

*Run time*: twice the retention time of tiaprofenic acid.

*Relative retention* with reference to tiaprofenic acid: impurity A = about 0.19; impurity B = about 0.43; impurity C = about 0.86.

*System suitability*: reference solution (d):

- resolution: minimum 3.0 between the peaks due to impurity C and tiaprofenic acid.

*Limits*:

- impurity C: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.2 per cent);
- unspecified impurities: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- sum of impurities other than C: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);
- disregard limit: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Heavy metals** (2.4.8): maximum 10 ppm.

2.0 g complies with test C. Prepare the reference solution using 2 mL of lead standard solution (10 ppm Pb) R.

**Loss on drying** (2.2.32): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 60 °C at a pressure not exceeding 0.7 kPa for 3 h.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

## ASSAY

Dissolve 0.250 g in 25 mL of *ethanol (96 per cent) R*. Add 25 mL of *water R* and 0.5 mL of *phenolphthalein solution R*. Titrate with 0.1 M sodium hydroxide.

1 mL of 0.1 M sodium hydroxide is equivalent to 26.03 mg of  $C_{14}H_{12}O_3S$ .

## STORAGE

Protected from light.

## IMPURITIES

*Specified impurities*: C.

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use* (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): A, B, D, E, F.

A. R =  $C_2H_5$ : (5-ethylthiophen-2-yl)phenylmethanone,

B. R =  $CO-CH_3$ : 1-(5-benzoylthiophen-2-yl)ethanone,

F. R = Br: (5-bromothiophen-2-yl)phenylmethanone,

C. (2RS)-2-(5-benzoylthiophen-3-yl)propanoic acid,

D. benzoic acid,

E. (2*RS*)-2-(thiophen-2-yl)propanoic acid.

corrected 6.0

## TIBOLONE

### Tibolonum

$C_{21}H_{28}O_2$

$M_r$  312.5

#### DEFINITION

17-Hydroxy-7 $\alpha$ -methyl-19-nor-17 $\alpha$ -pregn-5(10)-en-20-yn-3-one.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

#### CHARACTERS

*Appearance*: white or almost white, crystalline powder or crystals.

*Solubility*: practically insoluble in water, soluble in acetone and in methanol.

It shows polymorphism (5.9).

#### IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

*Comparison*: *Ph. Eur. reference spectrum of tibolone*.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined in the minimum volume of *anhydrous ethanol R*, evaporate to dryness on a water-bath and record a new spectrum using the residue.

#### TESTS

**Specific optical rotation** (2.2.7): + 100 to + 106 (dried substance).

Dissolve 0.250 g in *anhydrous ethanol R* and dilute to 25.0 mL with the same solvent.

**Related substances**. Liquid chromatography (2.2.29).

*Select a brand of acetonitrile such that the formation of possible artefact peaks, eluting after impurity C at relative retentions 0.6 to 0.8, is avoided.*

*Solvent mixture*: water R, acetonitrile R1 (25:75 V/V).

*Test solution*. Dissolve 40.0 mg of the substance to be examined in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

*Reference solution (a)*. Dissolve 4 mg of *tibolone for system suitability CRS* (containing impurities A, B, C, D and E) in 1 mL of the solvent mixture.

*Reference solution (b)*. Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture.

*Column*:

- *size*:  $l = 0.15$  m,  $\varnothing = 4.6$  mm;
- *stationary phase*: spherical *end-capped octylsilyl silica gel for chromatography R* (5  $\mu$ m).

*Mobile phase*: methanol R, acetonitrile R1, water R (8:40:52 V/V/V).

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 205 nm.

*Injection*: 5  $\mu$ L.

*Run time*: 3 times the retention time of tibolone.

*Identification of impurities*: use the chromatogram supplied with *tibolone for system suitability CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A, B, C, D and E.

*Relative retention* with reference to tibolone (retention time = about 14 min): impurity A = about 0.22; impurity B = about 0.24; impurity C = about 0.58; impurity D = about 1.12; impurity E = about 2.24.

*System suitability*: reference solution (a):

- *peak-to-valley ratio*: minimum 2.0, where  $H_p$  = height above the baseline of the peak due to impurity D and  $H_v$  = height above the baseline of the lowest point of the curve separating this peak from the peak due to tibolone.

*Limits*:

- *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 1.7; impurity B = 1.5; impurity C = 2.1;
- *impurities A, E*: for each impurity, not more than 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);
- *impurity B*: not more than 0.4 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.4 per cent);
- *impurity C*: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- *impurity D*: not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
- *unspecified impurities*: for each impurity, not more than 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- *total*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);
- *disregard limit*: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Loss on drying** (2.2.32): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

#### ASSAY

Dissolve 0.250 g in 60 mL of *tetrahydrofuran R*. Add 25 mL of a 100 g/L solution of *silver nitrate R*. Titrate with 0.1 M *sodium hydroxide*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *sodium hydroxide* is equivalent to 31.25 mg of  $C_{21}H_{28}O_2$ .

#### STORAGE

At a temperature of 2 °C to 8 °C.

#### IMPURITIES

*Specified impurities*: A, B, C, D, E.

- A. R = OH: 10,17-dihydroxy-7 $\alpha$ -methyl-19-nor-10 $\xi$ ,17 $\alpha$ -pregn-4-en-20-yn-3-one,  
 B. R = O-OH: 10-hydroperoxy-17-hydroxy-7 $\alpha$ -methyl-19-nor-10 $\xi$ ,17 $\alpha$ -pregn-4-en-20-yn-3-one,  
 C. R = H: 17-hydroxy-7 $\alpha$ -methyl-19-nor-10 $\xi$ ,17 $\alpha$ -pregn-4-en-20-yn-3-one,

- D. 17-hydroxy-7 $\beta$ -methyl-19-nor-17 $\alpha$ -pregn-5(10)-en-20-yn-3-one,

- E. 3,3-dimethoxy-7 $\alpha$ -methyl-19-nor-17 $\alpha$ -pregn-5(10)-en-20-yn-17-ol.

01/2008:0956  
corrected 6.0

## TICARCILLIN SODIUM

### Ticarcillinum natrium

$C_{15}H_{14}N_2Na_2O_6S_2$   
[4697-14-7]

$M_r$  428.4

#### DEFINITION

Disodium (2*S*,5*R*,6*R*)-6-[[*(2R*)-2-carboxylato-2-(thiophen-3-yl)acetyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate.

Semi-synthetic product derived from a fermentation product.

*Content*: 89.0 per cent to 102.0 per cent (anhydrous substance).

#### CHARACTERS

*Appearance*: white or slightly yellow, hygroscopic powder.

*Solubility*: freely soluble in water, soluble in methanol.

#### IDENTIFICATION

*First identification*: A, D, E.

*Second identification*: B, C, D.

A. Infrared absorption spectrophotometry (2.2.24).

*Preparation*: dissolve 50 mg of the substance to be examined in 1 mL of *water R*, add 0.1 mL of *hydrochloric acid RI*, swirl and allow to stand in iced water for 10 min. Filter the precipitate and rinse with 2 mL of *water R*. Dissolve in a mixture of 1 volume of *water R* and 9 volumes of *acetone R*. Evaporate the solvent almost to dryness, then dry in an oven at 60 °C for 30 min.

*Comparison*: repeat the operations using *ticarcillin monosodium CRS*.

B. Thin-layer chromatography (2.2.27).

*Test solution*. Dissolve 25 mg of the substance to be examined in *methanol R* and dilute to 5 mL with the same solvent.

*Reference solution (a)*. Dissolve 25 mg of *ticarcillin monosodium CRS* in *methanol R* and dilute to 5 mL with the same solvent.

*Reference solution (b)*. Dissolve 25 mg of *carbenicillin sodium CRS* and 25 mg of *ticarcillin monosodium CRS* in *methanol R* and dilute to 5 mL with the same solvent.

*Plate*: TLC silanised silica gel plate *R*.

*Mobile phase*: mix 10 volumes of *acetone R* and 90 volumes of a 154 g/L solution of *ammonium acetate R*, adjusted to pH 5.0 with *glacial acetic acid R*.

*Application*: 1  $\mu$ L.

*Development*: over a path of 12 cm.

*Drying*: in a current of hot air.

*Detection*: expose to iodine vapour.

*System suitability*: reference solution (b):

– the chromatogram shows 2 clearly separated spots.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Place about 2 mg in a test-tube about 15 cm long and 15 mm in diameter. Moisten with 0.05 mL of *water R* and add 2 mL of *sulfuric acid-formaldehyde reagent R*. Mix the contents of the tube by swirling; the solution is brown. Place the test-tube in a water-bath for 1 min; a dark reddish-brown colour develops.

D. It gives reaction (a) of sodium (2.3.1).

E. Specific optical rotation (see Tests).

#### TESTS

**Solution S**. Dissolve 2.50 g in *carbon dioxide-free water R* and dilute to 50 mL with the same solvent.

**Appearance of solution**. Solution S is clear (2.2.1) and not more intensely coloured than reference solution  $Y_5$  (2.2.2, *Method II*).

**pH** (2.2.3): 5.5 to 7.5 for solution S.

**Specific optical rotation** (2.2.7): + 172 to + 187 (anhydrous substance).

Dissolve 0.250 g in *water R* and dilute to 25.0 mL with the same solvent.

**Related substances**. Liquid chromatography (2.2.29).

*Test solution*. Dissolve 25.0 mg of the substance to be examined in mobile phase A and dilute to 25.0 mL with mobile phase A.

*Reference solution (a)*. Dissolve 20.0 mg of *ticarcillin impurity A CRS* in mobile phase A and dilute to 100.0 mL with mobile phase A. Dilute 5.0 mL of this solution to 50.0 mL with mobile phase A.

*Reference solution (b)*. Dilute 1 mL of the test solution to 50 mL with mobile phase A.

*Column*:

– *size*:  $l = 0.25$  m,  $\varnothing = 4$  mm;

– *stationary phase*: octadecylsilyl silica gel for chromatography *R* (5  $\mu$ m).

*Mobile phase*:

– *mobile phase A*: 1.3 g/L solution of *ammonium phosphate R* adjusted to pH 7.0 with *phosphoric acid R*;

– *mobile phase B*: *methanol R*, mobile phase A (50:50 V/V);

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 30	100 $\rightarrow$ 30	0 $\rightarrow$ 70
30 - 40	30	70

*Flow rate*: 1.0 mL/min.

**Detection:** spectrophotometer at 220 nm.

**Injection:** 20 µL.

**System suitability:** reference solution (b):

- **resolution:** minimum 2.0 between the 2 principal peaks (diastereoisomers).

**Limits:**

- **impurity A:** not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (4 per cent);
- **any other impurity:** for each impurity, not more than 1.25 times the area of the principal peak in the chromatogram obtained with reference solution (a) (2.5 per cent).

***N,N*-Dimethylaniline** (2.4.26, Method B): maximum 20 ppm.

**2-Ethylhexanoic acid** (2.4.28): maximum 0.5 per cent *m/m*.

**Water** (2.5.12): maximum 5.5 per cent, determined on 0.150 g.

**Bacterial endotoxins** (2.6.14): less than 0.05 IU/mg, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins.

#### ASSAY

Liquid chromatography (2.2.29).

**Test solution.** Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 100.0 mL with the mobile phase. Dilute 10.0 mL of this solution to 50.0 mL with the mobile phase.

**Reference solution.** Dissolve 50.0 mg of *ticarcillin monosodium CRS* in the mobile phase and dilute to 100.0 mL with the mobile phase. Dilute 10.0 mL of this solution to 50.0 mL with the mobile phase.

**Column:**

- **size:**  $l = 0.25$  m,  $\varnothing = 4$  mm;
- **stationary phase:** octadecylsilyl silica gel for chromatography R (5 µm).

**Mobile phase:** mix 20 volumes of *methanol R* and 80 volumes of a 1.3 g/L solution of *ammonium phosphate R* adjusted to pH 7.0 with *phosphoric acid R*.

**Flow rate:** 1 mL/min.

**Detection:** spectrophotometer at 220 nm.

**Injection:** 20 µL.

**System suitability:** reference solution:

- **resolution:** minimum 2.5 between the 2 principal peaks;
- **repeatability:** maximum relative standard deviation of 1.0 per cent for the 2 peaks due to *ticarcillin* after 6 injections.

Calculate the percentage content of *ticarcillin sodium* as the sum of the areas of the 2 peaks, multiplying the content of *ticarcillin monosodium* by 1.054.

#### STORAGE

In an airtight container, at a temperature of 2 °C to 8 °C. If the substance is sterile, store in a sterile, airtight, tamper-proof container.

#### IMPURITIES

**Specified impurities:** A.

**Other detectable impurities** (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use* (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): B, C, D, E.

- A. (2*S*,5*R*,6*R*)-3,3-dimethyl-7-oxo-6-[[2-(thiophen-3-yl)acetyl]amino]-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid (decarboxy ticarcillin),

- B. R = H: (thiophen-3-yl)acetic acid,

- C. R = CO<sub>2</sub>H: 2-(thiophen-3-yl)propanedioic acid (3-thienylmalonic acid),

- D. R = CO<sub>2</sub>H: (4*S*)-2-[carboxy[[2-carboxy-2-(thiophen-3-yl)acetyl]amino]methyl]-5,5-dimethylthiazolidine-4-carboxylic acid (penicilloic acids of ticarcillin),

- E. R = H: (4*S*)-2-[[[2-carboxy-2-(thiophen-3-yl)acetyl]amino]methyl]-5,5-dimethylthiazolidine-4-carboxylic acid (penicilloic acids of ticarcillin).

01/2008:1050

## TICLOPIDINE HYDROCHLORIDE

### Ticlopidini hydrochloridum

C<sub>14</sub>H<sub>15</sub>Cl<sub>2</sub>NS  
[53885-35-1]

*M<sub>r</sub>*, 300.2

#### DEFINITION

5-(2-Chlorobenzyl)-4,5,6,7-tetrahydrothieno[3,2-*c*]pyridine hydrochloride.

**Content:** 99.0 per cent to 101.0 per cent (anhydrous substance).

#### CHARACTERS

**Appearance:** white or almost white, crystalline powder.

**Solubility:** sparingly soluble in water and in anhydrous ethanol, very slightly soluble in ethyl acetate.

#### IDENTIFICATION

**First identification:** B, D.

**Second identification:** A, C, D.

- A. Ultraviolet and visible absorption spectrophotometry (2.2.25).

**Test solution (a).** Dissolve 40 mg in *water R* and dilute to 100.0 mL with the same solvent.

**Test solution (b).** Dilute 5.0 mL of test solution (a) to 100.0 mL with *water R*.

**Spectral range:** 250-350 nm for test solution (a); 200-350 nm for test solution (b).

**Absorption maxima:** at 268 nm and 275 nm for test solution (a); at 214 nm and 232 nm for test solution (b).

**Absorption ratio:**  $A_{268}/A_{275} = 1.1$  to 1.2.

- B. Infrared absorption spectrophotometry (2.2.24).

**Preparation:** discs.

**Comparison:** ticlopidine hydrochloride CRS.

- C. Mix about 6 mg of *citric acid R* and 0.3 mL of *acetic anhydride R*. Add about 5 mg of the substance to be examined and heat in a water-bath at 80 °C. A red colour develops.
- D. About 20 mg gives reaction (a) of chlorides (2.3.1).

## TESTS

**Appearance of solution.** The solution is clear (2.2.1) and colourless (2.2.2, Method II).

Dissolve 0.5 g in a 1 per cent V/V solution of *hydrochloric acid R* and dilute to 20 mL with the same solution.

**pH (2.2.3):** 3.5 to 4.0.

Dissolve 0.5 g in *carbon dioxide-free water R* and dilute to 20 mL with the same solvent.

**Related substances.** Liquid chromatography (2.2.29).

**Solvent mixture:** mobile phase B, mobile phase A (20:80 V/V).

**Test solution.** Dissolve 0.250 g of the substance to be examined in the solvent mixture and dilute to 50.0 mL with the solvent mixture.

**Reference solution.** Dissolve 5.0 mg of *ticlopidine impurity F CRS* in the solvent mixture. Add 1.00 mL of the test solution and dilute to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

**Column:**

- size:  $l = 0.15$  m,  $\varnothing = 4.6$  mm;
- stationary phase: *octadecylsilyl silica gel for chromatography R* (5  $\mu$ m);
- temperature: 40 °C.

**Mobile phase:**

- mobile phase A: 0.95 g/L solution of *sodium pentanesulfonate monohydrate R*, adjusted to pH 3.4 with a 50 per cent V/V solution of *phosphoric acid R*;
- mobile phase B: *methanol R*;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 45	80 → 20	20 → 80
45 - 50	20	80

**Flow rate:** 1.3 mL/min.

**Detection:** spectrophotometer at 220 nm.

**Injection:** 10  $\mu$ L; inject the solvent mixture as a blank.

**Retention time:** ticlopidine = about 15 min.

**System suitability:** reference solution:

- resolution: minimum 2.0 between the peaks due to ticlopidine and impurity F; if necessary, adjust the pH of mobile phase A;
- signal-to-noise ratio: minimum 50 for the peak due to ticlopidine.

**Limits:**

- impurity F: not more than 0.5 times the area of the corresponding peak in the chromatogram obtained with the reference solution (0.05 per cent);
- any other impurity: for each impurity, not more than 0.5 times the area of the peak due to ticlopidine in the chromatogram obtained with the reference solution (0.05 per cent);
- total: not more than the area of the peak due to ticlopidine in the chromatogram obtained with the reference solution (0.1 per cent);
- disregard limit: 0.1 times the area of the peak due to ticlopidine in the chromatogram obtained with the reference solution (0.01 per cent).

**Formaldehyde:** maximum 20 ppm.

Dissolve 0.200 g in 4.0 mL of *water R*. Add 0.4 mL of *dilute sodium hydroxide solution R*. Centrifuge, filter the supernatant

liquid through cotton previously impregnated with *water R* and dilute to 5.0 mL with *water R*. Transfer to a test-tube. Add 5.0 mL of *acetylacetone reagent R1*. Place the test-tube in a water-bath at 40 °C for 40 min. The test solution is not more intensely coloured than a standard prepared at the same time and in the same manner using 5.0 mL of a 0.8 ppm solution of formaldehyde (CH<sub>2</sub>O), obtained by dilution of *formaldehyde standard solution (5 ppm CH<sub>2</sub>O) R* with *water R*. Examine the tubes down their vertical axis.

**Heavy metals (2.4.8):** maximum 10 ppm.

Dissolve 2.0 g in a 85 per cent V/V solution of *methanol R* and dilute to 20.0 mL with the same solvent. 12 mL of the solution complies with test B. Prepare the reference solution using 10 mL of *lead standard solution (1 ppm Pb) R*.

**Water (2.5.12):** maximum 0.5 per cent, determined on 0.500 g.

**Sulfated ash (2.4.14):** maximum 0.1 per cent, determined on 1.0 g.

## ASSAY

Dissolve 0.150 g in 15 mL of *anhydrous acetic acid R*. Add 35 mL of *acetic anhydride R*. Titrate with 0.1 M *perchloric acid*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *perchloric acid* is equivalent to 30.02 mg of C<sub>14</sub>H<sub>15</sub>Cl<sub>2</sub>NS.

## IMPURITIES

**Specified impurities: F.**

**Other detectable impurities** (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): A, B, C, D, E, G, H, I, J, K, L.

A. thieno[3,2-c]pyridine,

B. 6,7-dihydrothieno[3,2-c]pyridin-4(5H)-one,

corrected 7.0

## TILIDINE HYDROCHLORIDE HEMIHYDRATE

### Tilidini hydrochloridum hemihydricum

$C_{17}H_{24}ClNO_2 \cdot \frac{1}{2}H_2O$

$M_r$  318.9

#### DEFINITION

Ethyl (1*RS*,2*SR*)-2-(dimethylamino)-1-phenylcyclohex-3-enecarboxylate hydrochloride hemihydrate.

*Content*: 99.0 per cent to 101.0 per cent (anhydrous substance).

A suitable antioxidant may be added.

#### CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: freely soluble in water, very soluble in methylene chloride, freely soluble in ethanol (96 per cent).

#### IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

*Comparison*: *Ph. Eur. reference spectrum of tilidine hydrochloride hemihydrate*.

B. It gives reaction (a) of chlorides (2.3.1).

#### TESTS

**Solution S.** Dissolve 1.0 g in carbon dioxide-free water *R* and dilute to 20 mL with the same solvent.

**Appearance of solution.** Solution S is clear (2.2.1) and not more intensely coloured than reference solution Y<sub>7</sub> (2.2.2, *Method II*).

**Acidity or alkalinity.** To 20 mL of solution S add 0.2 mL of 0.01 *M* sodium hydroxide. The pH is not less than 4.1. Add 0.4 mL of 0.01 *M* hydrochloric acid. The pH is not more than 4.3.

**Related substances.** Liquid chromatography (2.2.29).

*Test solution.* Dissolve 50.0 mg of the substance to be examined in water *R* and dilute to 50.0 mL with the same solvent.

*Reference solution (a).* Dilute 0.5 mL of the test solution to 100.0 mL with water *R*.

*Reference solution (b).* Dilute 2.0 mL of reference solution (a) to 10.0 mL with water *R*.

*Precolumn*:

– *size*:  $l = 4$  mm,  $\varnothing = 4.0$  mm;

– *stationary phase*: spherical octadecylsilyl silica gel for chromatography *R* (5  $\mu$ m).

*Column*:

– *size*:  $l = 0.125$  m,  $\varnothing = 4.0$  mm;

– *stationary phase*: spherical octadecylsilyl silica gel for chromatography *R* (5  $\mu$ m).

*Mobile phase*: mix equal volumes of acetonitrile *R* and a 0.98 g/L solution of ammonium carbonate *R*.

*Flow rate*: 0.8 mL/min.

*Detection*: spectrophotometer at 220 nm.

*Injection*: 10  $\mu$ L.

*Run time*: twice the retention time of tilidine.

*Relative retention* with reference to tilidine (retention

time = about 11 min): impurity C = about 0.5;

impurity B = about 0.7; impurity A = about 1.5.

*Limits*:

– *impurities A, B, C*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

– *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);

– *total*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Heavy metals** (2.4.8): maximum 20 ppm.

Dissolve 2.0 g in 20 mL of water *R*. 12 mL of the solution complies with test A. Prepare the reference solution using lead standard solution (2 ppm Pb) *R*.

**Water** (2.5.12): 2.5 per cent to 3.1 per cent, determined on 0.300 g.

**Bacterial endotoxins** (2.6.14): less than 0.25 IU/mg, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins.

#### ASSAY

Dissolve 0.250 g in a mixture of 10 mL of anhydrous acetic acid *R* and 50 mL of acetic anhydride *R*. Titrate with 0.1 *M* perchloric acid, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 *M* perchloric acid is equivalent to 30.99 mg of  $C_{17}H_{24}ClNO_2$ .

#### STORAGE

Protected from light.

#### IMPURITIES

*Specified impurities*: A, B, C.

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use* (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): D.

A. ethyl (1*RS*,2*RS*)-2-(dimethylamino)-1-phenylcyclohex-3-enecarboxylate,

B. R = R' = CH<sub>3</sub>: methyl (1*RS*,2*SR*)-2-(dimethylamino)-1-phenylcyclohex-3-enecarboxylate,

C. R = C<sub>2</sub>H<sub>5</sub>, R' = H: ethyl (1*RS*,2*SR*)-2-(methylamino)-1-phenylcyclohex-3-enecarboxylate,

D. ethyl (2*RS*)-3-dimethylamino-2-phenylpropanoate.

01/2011:0572

## TIMOLOL MALEATE

### Timololi maleas

C<sub>17</sub>H<sub>28</sub>N<sub>4</sub>O<sub>5</sub>S  
[26921-17-5]

M<sub>r</sub> 432.5

#### DEFINITION

(2*S*)-1-[(1,1-Dimethylethyl)amino]-3-[[4-(morpholin-4-yl)-1,2,5-thiadiazol-3-yl]oxy]propan-2-ol (*Z*)-butenedioate.

*Content*: 98.5 per cent to 101.0 per cent (dried substance).

#### CHARACTERS

*Appearance*: white or almost white, crystalline powder or colourless crystals.

*Solubility*: soluble in water and in ethanol (96 per cent).

mp: about 199 °C, with decomposition.

#### IDENTIFICATION

*First identification*: A, B.

*Second identification*: A, C, D.

A. Specific optical rotation (2.2.7): –5.7 to –6.2.

Dissolve 1.000 g in 1 M hydrochloric acid and dilute to 10.0 mL with the same acid.

B. Infrared absorption spectrophotometry (2.2.24).

*Comparison*: timolol maleate CRS.

C. Thin-layer chromatography (2.2.27).

*Test solution*. Dissolve 5 mg of the substance to be examined in methanol R and dilute to 5 mL with the same solvent.

*Reference solution*. Dissolve 5 mg of timolol maleate CRS in methanol R and dilute to 5 mL with the same solvent.

*Plate*: TLC silica gel GF<sub>254</sub> plate R.

*Mobile phase*: concentrated ammonia R, methanol R, methylene chloride R (1:20:80 V/V/V).

*Application*: 10 µL.

*Development*: over 2/3 of the plate.

*Drying*: in air.

*Detection*: expose to iodine vapour for 2 h.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

D. Triturate 0.1 g with a mixture of 1 mL of dilute sodium hydroxide solution R and 3 mL of water R. Shake with 3 quantities, each of 5 mL, of ether R. To 0.1 mL of the aqueous layer add a solution containing 10 mg of resorcinol R in 3 mL of sulfuric acid R. Heat on a water-bath for 15 min; no violet-red colour develops. Neutralise the remainder of the aqueous layer with dilute sulfuric acid R and add 1 mL of bromine water R. Heat on a water-bath for 15 min, then heat to boiling and cool. To 0.2 mL of this solution add a solution containing 10 mg of resorcinol R in 3 mL of sulfuric acid R. Heat on a water-bath for 15 min; a violet-red colour develops. Add 0.2 mL of a 100 g/L solution of potassium bromide R and heat for 5 min on a water-bath; the colour becomes violet-blue.

#### TESTS

**Solution S**. Dissolve 0.5 g in carbon dioxide-free water R and dilute to 25 mL with the same solvent.

**Appearance of solution**. Solution S is clear (2.2.1) and not more intensely coloured than reference solution B<sub>8</sub> (2.2.2, Method II).

**pH** (2.2.3): 3.8 to 4.3 for solution S.

**Enantiomeric purity**. Liquid chromatography (2.2.29). Carry out the test protected from actinic light.

*Solvent mixture*: methylene chloride R, 2-propanol R (10:30 V/V).

*Test solution*. Dissolve 30.0 mg of the substance to be examined in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

*Reference solution (a)*. Dissolve 30 mg of timolol maleate CRS in the solvent mixture and dilute to 10 mL with the solvent mixture.

*Reference solution (b)*. Dissolve 15.0 mg of (*R*)-timolol CRS (impurity A) in the solvent mixture and dilute to 10.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 50.0 mL with the solvent mixture.

*Reference solution (c)*. Dilute 1 mL of reference solution (a) to 100 mL with the solvent mixture. Mix 1 mL of this solution with 1 mL of reference solution (b).

*Reference solution (d)*. Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture.

*Column*:

– size: *l* = 0.25 m, Ø = 4.6 mm;

– stationary phase: silica gel OD for chiral separations R (5 µm).

*Mobile phase*: diethylamine R, 2-propanol R, hexane R (2:40:960 V/V/V).

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 297 nm.

*Injection*: 5 µL.

*Elution order*: impurity A is eluted first.

**System suitability:**

- **resolution:** minimum 4.0 between the peaks due to impurity A and the (S)-enantiomer in the chromatogram obtained with reference solution (c);
- the retention times of the principal peaks due to the (S)-enantiomer in the chromatograms obtained with the test solution and reference solution (a) are identical.

**Limit:**

- **impurity A:** not more than the area of the principal peak in the chromatogram obtained with reference solution (d) (1.0 per cent).

**Related substances.** Liquid chromatography (2.2.29).

**Test solution.** Dissolve 0.100 g of the substance to be examined in mobile phase A and dilute to 20 mL with mobile phase A.

**Reference solution (a).** Dilute 1.0 mL of the test solution to 100.0 mL with mobile phase A. Dilute 1.0 mL of this solution to 10.0 mL with mobile phase A.

**Reference solution (b).** Dissolve the contents of a vial of *timolol for system suitability CRS* (containing impurities B, C, D and F) in 1.0 mL of mobile phase A.

**Reference solution (c).** Dissolve 2 mg of the substance to be examined and 20 mg of *maleic acid R* in 10 mL of *acetonitrile R*. Evaporate 1 mL of the solution to dryness under a stream of *nitrogen R* in an amber glass vial. Heat the open vial at 105 °C for 1 h. Reconstitute the residue with 1.0 mL of mobile phase A.

**Column:**

- **size:**  $l = 0.125$  m,  $\varnothing = 4$  mm;
- **stationary phase:** *octadecylsilyl silica gel for chromatography R* (5  $\mu$ m).

**Mobile phase:**

- **mobile phase A:** mixture of equal volumes of *methanol R* and a 4.32 g/L solution of *sodium octanesulfonate R* previously adjusted to pH 3.0 with *glacial acetic acid R*;
- **mobile phase B:** *methanol R*;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 10	97.5	2.5
10 - 11	97.5 → 70	2.5 → 30
11 - 14.5	70	30

**Flow rate:** 2.0 mL/min.

**Detection:** spectrophotometer at 295 nm.

**Injection:** 20  $\mu$ L.

**Identification of impurities:** use the chromatogram supplied with *timolol for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities B, C, D and F. Use the chromatogram obtained with reference solution (c) to identify the peak due to impurity E.

**Relative retention** with reference to timolol (retention time = about 5 min): maleic acid = about 0.1; impurity D = about 0.3; impurity E = about 0.4; impurity F = about 0.6; impurity B = about 0.7; impurity C = about 2.8.

**System suitability:** reference solution (b):

- **resolution:** minimum 1.5 between the peaks due to impurity F and impurity B.

**Limits:**

- **correction factor:** for the calculation of content, multiply the peak area of impurity D by 0.6;
- **impurities B, C, D, E, F:** for each impurity, not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- **unspecified impurities:** for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);

- **total:** not more than 4 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.4 per cent);
- **disregard limit:** 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent); disregard any peak due to maleic acid.

**Loss on drying** (2.2.32): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

**ASSAY**

Dissolve 0.350 g in 60 mL of *anhydrous acetic acid R*. Titrate with 0.1 M *perchloric acid* determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *perchloric acid* is equivalent to 43.25 mg of  $C_{17}H_{28}N_4O_7S$ .

**STORAGE**

Protected from light.

**IMPURITIES**

**Specified impurities:** A, B, C, D, E, F.

**Other detectable impurities** (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use* (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): G, H, I, J.

A. (2R)-1-[(1,1-dimethylethyl)amino]-3-[[4-(morpholin-4-yl)-1,2,5-thiadiazol-3-yl]oxy]propan-2-ol ((R)-timolol),

- I. (2RS)-1-(ethylamino)-3-[[4-(morpholin-4-yl)-1,2,5-thiadiazol-3-yl]oxy]propan-2-ol,

- J. 1,1'-[1,2,5-thiadiazol-3,4-diylbis(oxy)]bis[3-[(1,1-dimethylethyl)amino]propan-2-ol].

## IDENTIFICATION

First identification: A, C.

Second identification: A, B, D, E.

- A. Melting point (2.2.14): 125 °C to 128 °C.  
B. Ultraviolet and visible absorption spectrophotometry (2.2.25).

*Test solution.* Dissolve 10.0 mg in *methanol R* and dilute to 100.0 mL with the same solvent. Dilute 1.0 mL of this solution to 10.0 mL with *methanol R*.

*Spectral range:* 220-350 nm.

*Absorption maximum:* at 310 nm.

*Specific absorbance at the absorption maximum:* 340 to 360.

- C. Infrared absorption spectrophotometry (2.2.24).

*Comparison:* *tinidazole CRS*.

- D. Thin-layer chromatography (2.2.27).

*Test solution.* Dissolve 20 mg of the substance to be examined in *methanol R* and dilute to 10 mL with the same solvent.

*Reference solution.* Dissolve 20 mg of *tinidazole CRS* in *methanol R* and dilute to 10 mL with the same solvent.

*Plate:* TLC silica gel GF<sub>254</sub> plate R.

*Pretreatment:* heat at 110 °C for 1 h and allow to cool.

*Mobile phase:* *butanol R*, *ethyl acetate R* (25:75 V/V).

*Application:* 10 µL.

*Development:* over 2/3 of the plate.

*Drying:* in air.

*Detection:* examine in ultraviolet light at 254 nm.

*Results:* the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

- E. To about 10 mg add about 10 mg of *zinc powder R*, 0.3 mL of *hydrochloric acid R* and 1 mL of *water R*. Heat in a water-bath for 5 min and cool. The solution gives the reaction of primary aromatic amines (2.3.1).

## TESTS

**Appearance of solution.** The solution is clear (2.2.1) and not more intensely coloured than reference solution Y<sub>5</sub> (2.2.2, Method II).

Dissolve 1.0 g in *acetone R* and dilute to 20 mL with the same solvent.

**Related substances.** Liquid chromatography (2.2.29). *Protect solutions from light.*

*Test solution.* Dissolve 10.0 mg of the substance to be examined in 10.0 mL of *methanol R* and dilute to 100.0 mL with the mobile phase.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Reference solution (b).* Dissolve 5.0 mg of *tinidazole impurity A CRS* and 5.0 mg of *tinidazole impurity B CRS* in 10.0 mL of *methanol R* and dilute to 100.0 mL with the mobile phase. Dilute 2.0 mL of this solution to 10.0 mL with the mobile phase.

*Reference solution (c).* Dilute 1.0 mL of reference solution (b) to 50.0 mL with the mobile phase.

**Column:**

- size:  $l = 0.25$  m,  $\varnothing = 3.0$  mm;
- stationary phase: *octylsilyl silica gel for chromatography R* (5 µm).

Regular column conditioning by subsequent flushing with 50 mL of *water R*, 100 mL of *methanol R*, 25 mL of *water R* and 100 mL of the mobile phase is recommended.

07/2008:1051

## TINIDAZOLE

### Tinidazolium

C<sub>8</sub>H<sub>13</sub>N<sub>3</sub>O<sub>4</sub>S  
[19387-91-8]

*M*<sub>r</sub> 247.3

## DEFINITION

1-[2-(Ethylsulfonyl)ethyl]-2-methyl-5-nitro-1*H*-imidazole.

*Content:* 98.0 per cent to 101.0 per cent (dried substance).

## CHARACTERS

*Appearance:* almost white or pale yellow, crystalline powder.

*Solubility:* practically insoluble in water, soluble in acetone and in methylene chloride, sparingly soluble in methanol.

01/2008:1271

Mobile phase: acetonitrile R, methanol R, water R (10:20:70 V/V/V).

Flow rate: 0.5 mL/min.

Detection: spectrophotometer at 320 nm.

Injection: 20 µL.

Run time: 1.5 times the retention time of tinidazole.

Relative retention with reference to tinidazole (retention time = about 6 min): impurity A = about 0.6; impurity B = about 0.7.

System suitability: reference solution (b):

- resolution: minimum 2.0 between the peaks due to impurities A and B.

Limits:

- impurities A, B: for each impurity, not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.2 per cent);
- unspecified impurities: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- total: not more than 4 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.4 per cent);
- disregard limit: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Heavy metals (2.4.8): maximum 20 ppm.

1.0 g complies with test D. Prepare the reference solution using 2 mL of lead standard solution (10 ppm Pb) R.

Loss on drying (2.2.32): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulfated ash (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

#### ASSAY

Dissolve 0.150 g in 25 mL of anhydrous acetic acid R. Titrate with 0.1 M perchloric acid, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M perchloric acid is equivalent to 24.73 mg of C<sub>8</sub>H<sub>13</sub>N<sub>3</sub>O<sub>4</sub>S.

#### STORAGE

Protected from light.

#### IMPURITIES

Specified impurities: A, B.

A. 2-methyl-5-nitro-1H-imidazole,

B. 1-[2-(ethylsulfonyl)ethyl]-2-methyl-4-nitro-1H-imidazole.

## TINZAPARIN SODIUM

### Tinzaparinum natriicum

#### DEFINITION

Tinzaparin sodium is the sodium salt of a low-molecular-mass heparin that is obtained by controlled enzymatic depolymerisation of heparin from porcine intestinal mucosa using heparinase from *Flavobacterium heparinum*. The majority of the components have a 2-O-sulfo-4-enepyranosuronic acid structure at the non-reducing end and a 2-N,6-O-disulfo-D-glucosamine structure at the reducing end of their chain.

Tinzaparin sodium complies with the monograph on Low-molecular-mass heparins (0828) with the modifications and additional requirements below.

The mass-average relative molecular mass ranges between 5500 and 7500 with a characteristic value of about 6500.

The degree of sulfatation is 1.8 to 2.5 per disaccharide unit.

The potency is not less than 70 IU and not more than 120 IU of anti-factor Xa activity per milligram calculated with reference to the dried substance. The ratio of the anti-factor Xa activity to anti-factor IIa activity is between 1.5 and 2.5.

#### IDENTIFICATION

Carry out identification test A as described in the monograph for Low-molecular-mass heparins (0828) using tinzaparin sodium CRS.

Carry out identification test C as described in the monograph for Low-molecular-mass heparins (0828). The following requirements apply.

The mass-average relative molecular mass ranges between 5500 and 7500. The mass percentage of chains lower than 2000 is not more than 10.0 per cent. The mass percentage of chains between 2000 and 8000 ranges between 60.0 and 72.0 per cent. The mass percentage of chains above 8000 ranges between 22.0 and 36.0 per cent.

#### TESTS

**Appearance of solution.** Dissolve 1.0 g in 10 mL of water R. The solution is clear (2.2.1) and not more intensely coloured than intensity 5 of the range of reference solutions of the most appropriate colour (2.2.2, Method II).

**Absorbance (2.2.25).** Dissolve 50.0 mg in 100 mL of 0.01 M hydrochloric acid. The specific absorbance, measured at 231 nm and calculated with reference to the dried substance, is 8.0 to 12.5.

## TIOCONAZOLE

## Tioconazolium

$C_{16}H_{13}Cl_3N_2OS$   
[65899-73-2]

$M_r$  387.7

## DEFINITION

1-[(2*RS*)-2-[(2-chlorothiophen-3-yl)methoxy]-2-(2,4-dichlorophenyl)ethyl]-1*H*-imidazole.

*Content*: 99.0 per cent to 101.0 per cent (anhydrous substance).

## CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: very slightly soluble in water, very soluble in methylene chloride, freely soluble in alcohol.

## IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

*Comparison*: Ph. Eur. reference spectrum of tioconazole.

## TESTS

**Related substances.** Liquid chromatography (2.2.29).

*Test solution.* Dissolve 20.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 mL with the mobile phase.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 2.0 mL of this solution to 10.0 mL with the mobile phase.

*Reference solution (b).* Dissolve 5 mg of tioconazole for system suitability CRS in the mobile phase and dilute to 2.5 mL with the mobile phase.

*Column*:

- *size*:  $l = 0.25$  m,  $\varnothing = 4.6$  mm,
- *stationary phase*: end-capped octadecylsilyl silica gel for chromatography R (5  $\mu$ m) with a specific surface area of 170 m<sup>2</sup>/g, a pore size of 12 nm and a carbon loading of 10 per cent.

*Mobile phase*: mix 1 volume of a 1.7 g/L solution of tetrabutylammonium dihydrogen phosphate R previously adjusted to pH 7.4 with dilute ammonia R2 and 3 volumes of methanol R.

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 218 nm.

*Injection*: 20  $\mu$ L.

*Run time*: 2.5 times the retention time of tioconazole.

*System suitability*: reference solution (b):

- *resolution*: minimum 1.0 between the peaks due to impurity B and impurity C (locate impurities A, B and C by comparison with the chromatogram provided with tioconazole for system suitability CRS).

## 01/2008:2074 Limits:

- *correction factors*: for the calculation of contents, multiply the peak areas of the following impurities by the corresponding correction factor: impurity B = 1.7; impurity C = 1.7.
- *impurities A, B, C*: for each impurity, not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent),
- *unspecified impurities*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent),
- *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent),
- *disregard limit*: 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Water** (2.5.12): maximum 0.5 per cent, determined on 1.00 g.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

## ASSAY

Dissolve 0.300 g in 50 mL of *anhydrous acetic acid R*. Titrate with 0.1 M perchloric acid, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M perchloric acid is equivalent to 38.77 mg of  $C_{16}H_{13}Cl_3N_2OS$ .

## STORAGE

Protected from light.

## IMPURITIES

*Specified impurities*: A, B, C.

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use* (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): D.

- A. R1 = R2 = H: 1-[(2*RS*)-2-(2,4-dichlorophenyl)-2-[(thiophen-3-yl)methoxy]ethyl]-1*H*-imidazole,
- B. R1 = R2 = Cl: 1-[(2*RS*)-2-(2,4-dichlorophenyl)-2-[(2,5-dichlorothiophen-3-yl)methoxy]ethyl]-1*H*-imidazole,
- C. R1 = Cl, R2 = Br: 1-[(2*RS*)-2-[(5-bromo-2-chlorothiophen-3-yl)methoxy]-2-(2,4-dichlorophenyl)ethyl]-1*H*-imidazole,

- D. (1*RS*)-1-(2,4-dichlorophenyl)-2-(1*H*-imidazol-1-yl)ethanol.

07/2010:2420 – *impurity H*: any spot due to impurity H is not more intense than the corresponding spot in the chromatogram obtained with reference solution (a) (0.1 per cent).

## TIOTROPIUM BROMIDE MONOHYDRATE

Tiotropii bromidum monohydricum

$C_{19}H_{22}BrNO_4S_2 \cdot H_2O$

$M_r$  490.4

### DEFINITION

(1*R*,2*R*,4*S*,5*S*,7*S*)-7-[(2-Hydroxy-2,2-dithiophen-2-ylacetyl)oxy]-9,9-dimethyl-3-oxa-9-azoniatricyclo[3.3.1.0<sup>2,4</sup>]nonane bromide monohydrate.

*Content*: 98.5 per cent to 101.5 per cent (anhydrous substance).

### CHARACTERS

*Appearance*: white or yellowish-white powder or crystals.

*Solubility*: sparingly soluble in water, soluble in methanol, practically insoluble in methylene chloride.

### IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

*Comparison*: tiotropium bromide monohydrate CRS.

B. It gives reaction (a) of bromides (2.3.1).

### TESTS

**Appearance of solution.** The solution is clear (2.2.1) and not more intensely coloured than reference solution  $Y_6$  (2.2.2, *Method II*).

Dissolve 0.2 g in *water R* and dilute to 20 mL with the same solvent.

**Impurities G and H.** Thin-layer chromatography (2.2.27). Prepare the solutions immediately before use.

*Solvent mixture.* Dilute 1 volume of 1 M hydrochloric acid to 100 volumes with *methanol R*.

*Test solution.* Dissolve 0.40 g of the substance to be examined in the solvent mixture and dilute to 10 mL with the solvent mixture.

*Reference solution (a).* Dissolve the contents of a vial of *tiotropium impurity mixture CRS* (40 µg each of impurities G and H) in 1.0 mL of the solvent mixture.

*Reference solution (b).* Mix 0.1 mL of the test solution with 0.1 mL of reference solution (a).

*Plate*: TLC silica gel  $F_{254}$  plate *R* (2-10 µm).

*Mobile phase*: *water R*, *anhydrous formic acid R*, *acetonitrile R*, *methylene chloride R* (10:15:35:50 V/V/V/V).

*Application*: 10 µL of the test solution and reference solution (a) and 20 µL of reference solution (b).

*Development*: over 2/3 of the plate.

*Drying*: in air.

*Detection*: expose to iodine vapour until the spots are clearly visible (about 15 min). Remove the plate and examine immediately.

*Retardation factors*: impurity G = about 0.33; impurity H = about 0.38; tiotropium = about 0.64.

*System suitability*: reference solution (b):

– the chromatogram shows 3 clearly separated spots.

*Limits*:

– *impurity G*: any spot due to impurity G is not more intense than the corresponding spot in the chromatogram obtained with reference solution (a) (0.1 per cent);

**Related substances.** Liquid chromatography (2.2.29). Prepare all solutions protected from light.

*Test solution.* Dissolve 50.0 mg of the substance to be examined in mobile phase B and dilute to 25.0 mL with mobile phase B.

*Reference solution (a).* Dissolve 5.0 mg of *tiotropium impurity F CRS* in mobile phase B and dilute to 100.0 mL with mobile phase B. Dilute 1.0 mL of this solution to 25.0 mL with mobile phase B.

*Reference solution (b).* Dissolve 4 mg of *tiotropium for system suitability CRS* (containing impurities A, C and E) in 2.0 mL of mobile phase B.

*Reference solution (c).* Dilute 1.0 mL of the test solution to 100.0 mL with mobile phase B. Dilute 1.0 mL of this solution to 10.0 mL with mobile phase B.

*Column*:

– *size*:  $l = 0.15$  m,  $\varnothing = 3.0$  mm;

– *stationary phase*: propylsilyl silica gel for chromatography *R* (3.5 µm);

– *temperature*: 50 °C.

*Mobile phase*:

– *mobile phase A*: dissolve 1.0 g of *sodium methanesulfonate R* and 5.0 g of *potassium dihydrogen phosphate R* in about 980 mL of *water R*, adjust to pH 3.0 with *dilute phosphoric acid R* and dilute to 1000 mL with *water R*;

– *mobile phase B*: *methanol R*, *acetonitrile R*, mobile phase A (10:40:50 V/V/V);

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 3	90	10
3 - 17	90 → 80	10 → 20
17 - 28	80 → 25	20 → 75
28 - 30	25	75

*Flow rate*: 1.2 mL/min.

*Detection*: spectrophotometer at 240 nm.

*Injection*: 5 µL.

*Identification of impurities*: use the chromatogram supplied with *tiotropium for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A, C and E.

*Relative retention* with reference to tiotropium (retention time = about 15 min): impurity A = about 0.5; impurity C = about 1.2; impurity E = about 1.7; impurity F = about 1.8.

*System suitability*: reference solution (b):

– *resolution*: minimum 2.4 between the peaks due to tiotropium and impurity C.

*Limits*:

– *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 0.5; impurity E = 0.5;

– *impurity C*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.3 per cent);

– *impurity F*: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.15 per cent);

– *impurities A, E*: for each impurity, not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.15 per cent);

– *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.10 per cent);

- *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.3 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent).

**Heavy metals** (2.4.8): maximum 10 ppm.

*Solvent mixture*: water R, methanol R (10:90 V/V).

Dissolve 0.50 g of the substance to be examined in 20 mL of the solvent mixture using sonication for about 10 min. The solution complies with test H. Prepare the reference solution using 0.5 mL of *lead standard solution (10 ppm Pb) R*.

**Water** (2.5.12): 2.5 per cent to 4.0 per cent, determined on 0.300 g.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

#### ASSAY

Dissolve 0.35 g in 100 mL of *water R*. Add 10 mL of *dilute nitric acid R2*. Titrate with 0.1 M *silver nitrate* determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *silver nitrate* is equivalent to 47.24 mg of  $C_{19}H_{22}BrNO_4S_2$ .

#### IMPURITIES

*Specified impurities*: A, C, E, F, G, H.

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): B, D, I, J, K.

A. 2-hydroxy-2,2-dithiophen-2-ylacetic acid,

B. (1R,2R,4S,5S,7s)-9-methyl-3-oxa-9-azatricyclo[3.3.1.0<sup>2,4</sup>]nonan-7-yl 2-hydroxy-2,2-dithiophen-2-ylacetate,

C. (1R,3s,5S)-3-[(2-hydroxy-2,2-dithiophen-2-ylacetyl)oxy]-8,8-dimethyl-8-azoniabicyclo[3.2.1]oct-6-ene bromide,

I. (1R,2R,4S,5S,7r)-7-[(2-hydroxy-2,2-dithiophen-2-ylacetyl)oxy]-9,9-dimethyl-3-oxa-9-azoniatricyclo[3.3.1.0<sup>2,4</sup>]nonane bromide,

J. (1R,3s,5S,8s)-8-(chloromethyl)-3-[(2-hydroxy-2,2-dithiophen-2-ylacetyl)oxy]-8-methyl-8-azoniabicyclo[3.2.1]oct-6-ene chloride,

K. (1R,2R,4S,5S,7s)-9-acetyl-3-oxa-9-azatricyclo[3.3.1.0<sup>2,4</sup>]nonan-7-yl 2-hydroxy-2,2-dithiophen-2-ylacetate.

01/2011:0150

## TITANIUM DIOXIDE

Titanii dioxidum

TiO<sub>2</sub>  
[13463-67-7]

M<sub>r</sub> 79.9

#### DEFINITION

*Content*: 98.0 per cent to 100.5 per cent.

## CHARACTERS

**Appearance:** white or almost white powder.

**Solubility:** practically insoluble in water. It does not dissolve in dilute mineral acids but dissolves slowly in hot concentrated sulfuric acid.

## IDENTIFICATION

- A. When strongly heated, it becomes pale yellow; the colour disappears on cooling.
- B. To 5 mL of solution S2 (see Tests) add 0.1 mL of *strong hydrogen peroxide solution R*. An orange-red colour appears.
- C. To 5 mL of solution S2 add 0.5 g of *zinc R* in granules. After 45 min, the mixture has a violet-blue colour.

## TESTS

**Solution S1.** Shake 20.0 g with 30 mL of *hydrochloric acid R* for 1 min. Add 100 mL of *distilled water R* and heat the mixture to boiling. Filter the hot mixture through a hardened filter paper until a clear filtrate is obtained. Wash the filter with 60 mL of *distilled water R* and dilute the combined filtrate and washings to 200 mL with *distilled water R*.

**Solution S2.** Mix 0.500 g (*m* g) with 5 g of *anhydrous sodium sulfate R* in a 300 mL long-necked combustion flask. Add 10 mL of *water R* and mix. Add 10 mL of *sulfuric acid R* and boil vigorously, with the usual precautions, until a clear solution is obtained. Cool, add slowly a cooled mixture of 30 mL of *water R* and 10 mL of *sulfuric acid R*, cool again and dilute to 100.0 mL with *water R*.

**Appearance of solution.** Solution S2 is not more opalescent than reference suspension II (2.2.1) and is colourless (2.2.2, *Method II*).

**Acidity or alkalinity.** Shake 5.0 g with 50 mL of *carbon dioxide-free water R* for 5 min. Centrifuge or filter until a clear solution is obtained. To 10 mL of the solution add 0.1 mL of *bromothymol blue solution R1*. Not more than 1.0 mL of 0.01 *M hydrochloric acid* or 0.01 *M sodium hydroxide* is required to change the colour of the indicator.

**Water-soluble substances:** maximum 0.5 per cent.

To 10.0 g add a solution of 0.5 g of *ammonium sulfate R* in 150 mL of *water R* and boil for 5 min. Cool, dilute to 200 mL with *water R* and filter until a clear solution is obtained. Evaporate 100 mL of the solution to dryness in a tared evaporating dish and ignite. The residue weighs a maximum of 25 mg.

**Antimony:** maximum 100 ppm.

To 10 mL of solution S2 add 10 mL of *hydrochloric acid R* and 10 mL of *water R*. Cool to 20 °C, if necessary, and add 0.15 mL of *sodium nitrite solution R*. After 5 min, add 5 mL of a 10 g/L solution of *hydroxylamine hydrochloride R* and 10 mL of a freshly prepared 0.1 g/L solution of *rhodamine B R*. Mix thoroughly after each addition. Shake vigorously with 10.0 mL of *toluene R* for 1 min. Allow to separate and centrifuge for 2 min if necessary. Any pink colour in the toluene phase is not more intense than that in the toluene phase of a standard prepared at the same time in the same manner using a mixture of 5.0 mL of *antimony standard solution (1 ppm Sb) R*, 10 mL of *hydrochloric acid R* and 15 mL of a solution containing 0.5 g of *anhydrous sodium sulfate R* and 2 mL of *sulfuric acid R* instead of the mixture of 10 mL of solution S2, 10 mL of *hydrochloric acid R* and 10 mL of *water R*.

**Arsenic (2.4.2, Method A):** maximum 5 ppm.

Place 0.50 g in a 250 mL round-bottomed flask, fitted with a thermometer, a funnel with stopcock and a vapour-outlet tube connected to a flask containing 30 mL of *water R*. Add 50 mL of *water R*, 0.5 g of *hydrazine sulfate R*, 0.5 g of *potassium bromide R* and 20 g of *sodium chloride R*. Through the funnel, add dropwise 25 mL of *sulfuric acid R*, heat and maintain the

temperature of the liquid at 110-115 °C for 20 min. Collect the vapour in the flask containing 30 mL of *water R*. Dilute to 50 mL with *water R*. 20 mL of the solution complies with the test.

**Barium.** To 10 mL of solution S1 add 1 mL of *dilute sulfuric acid R*. After 30 min, any opalescence in the solution is not more intense than that in a mixture of 10 mL of solution S1 and 1 mL of *distilled water R*.

**Iron:** maximum 200 ppm.

To 8 mL of solution S2 add 4 mL of *water R*. Mix and add 0.05 mL of *bromine water R*. Allow to stand for 5 min and remove the excess of bromine with a current of air. Add 3 mL of *potassium thiocyanate solution R*. Any colour in the solution is not more intense than that in a standard prepared at the same time in the same manner using a mixture of 4 mL of *iron standard solution (2 ppm Fe) R* and 8 mL of a 200 g/L solution of *sulfuric acid R*.

**Heavy metals (2.4.8):** maximum 20 ppm.

To 10 mL of solution S1, add dropwise *concentrated ammonia R* to adjust to pH 4 and dilute to 20 mL with *water R*. 12 mL of the solution complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

## ASSAY

To 300 g of *zinc R* in granules (710) add 300 mL of a 20 g/L solution of *mercuric nitrate R* and 2 mL of *nitric acid R*, shake for 10 min and wash with *water R*. Pack the amalgamated zinc into a glass tube about 400 mm long and about 20 mm in diameter fitted with a tap and a filter plate. Pass through the column 100 mL of *dilute sulfuric acid R* followed by 100 mL of *water R*, making sure that the amalgam is always covered with liquid. Pass slowly at a rate of about 3 mL/min through the column a mixture of 100 mL of *dilute sulfuric acid R* and 100 mL of *water R* followed by 100 mL of *water R*. Collect the eluate in a 500 mL conical flask containing 50.0 mL of a 150 g/L solution of *ferric ammonium sulfate R* in a mixture of 1 volume of *sulfuric acid R* and 3 volumes of *water R*. Add 0.1 mL of *ferroin R* and titrate immediately with 0.1 *M ammonium and cerium nitrate* until a greenish colour is obtained ( $n_1$  mL). Pass slowly at a rate of about 3 mL/min through the column a mixture of 50 mL of *dilute sulfuric acid R* and 50 mL of *water R*, followed by 20.0 mL of solution S2, a mixture of 50 mL of *dilute sulfuric acid R* and 50 mL of *water R* and finally 100 mL of *water R*. Collect the eluate in a 500 mL conical flask containing 50.0 mL of a 150 g/L solution of *ferric ammonium sulfate R* in a mixture of 1 volume of *sulfuric acid R* and 3 volumes of *water R*. Rinse the lower end of the column with *water R*, add 0.1 mL of *ferroin R* and titrate immediately with 0.1 *M ammonium and cerium nitrate* until a greenish colour is obtained ( $n_2$  mL).

Calculate the percentage content of TiO<sub>2</sub> using the following expression:

$$\frac{3.99 \times (n_2 - n_1)}{m}$$

$m$  = mass of the substance to be examined used for the preparation of solution S2, in grams.

## FUNCTIONALITY-RELATED CHARACTERISTICS

*This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient (see chapter 5.15). This section is a non-mandatory part of the monograph and it is not necessary to verify the characteristics to demonstrate compliance. Control of these characteristics can however contribute to the quality of a medicinal product by improving the consistency of the manufacturing process and the performance of the medicinal product during use. Where control methods are cited, they are recognised as being*

*suitable for the purpose, but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.*

*The following characteristics may be relevant for titanium dioxide used as opacifier in solid oral dosage forms and in preparations for cutaneous application.*

**Particle-size distribution** (2.9.31).

**Bulk and tapped density** (2.9.34).

01/2008:0645  
corrected 6.2

## TOBRAMYCIN

### Tobramycinum

C<sub>18</sub>H<sub>37</sub>N<sub>5</sub>O<sub>9</sub>  
[32986-56-4]

M<sub>r</sub> 467.5

#### DEFINITION

4-O-(3-Amino-3-deoxy-α-D-glucopyranosyl)-2-deoxy-6-O-(2,6-diamino-2,3,6-trideoxy-α-D-ribo-hexopyranosyl)-L-streptamine.

Substance produced by *Streptomyces tenebrarius* or obtained by any other means.

*Content*: 97.0 per cent to 102.0 per cent (anhydrous substance).

#### PRODUCTION

It is produced by methods of manufacture designed to eliminate or minimise substances lowering blood pressure.

#### CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: freely soluble in water, very slightly soluble in ethanol (96 per cent).

#### IDENTIFICATION

*First identification*: A.

*Second identification*: B, C.

A. Nuclear magnetic resonance spectrometry (2.2.33).

*Preparation*: 100 g/L solution in *deuterium oxide R*.

*Comparison*: 100 g/L solution of *tobramycin CRS* in *deuterium oxide R*.

B. Thin-layer chromatography (2.2.27).

*Test solution*. Dissolve 20 mg of the substance to be examined in *water R* and dilute to 5 mL with the same solvent.

*Reference solution (a)*. Dissolve 20 mg of *tobramycin CRS* in *water R* and dilute to 5 mL with the same solvent.

*Reference solution (b)*. Dissolve 4 mg of *neomycin sulfate CRS* and 4 mg of *kanamycin monosulfate CRS* in 1 mL of reference solution (a).

*Plate*: TLC silica gel plate R.

*Mobile phase*: *methylene chloride R*, *concentrated ammonia R*, *methanol R* (17:33:50 V/V/V).

*Application*: 5 µL.

*Development*: over 2/3 of the plate.

*Drying*: in a current of warm air.

*Detection*: spray with a mixture of equal volumes of a 2 g/L solution of *1,3-dihydroxynaphthalene R* in *ethanol (96 per cent) R* and a 460 g/L solution of *sulfuric acid R*; heat at 105 °C for 5-10 min.

*System suitability*: the chromatogram obtained with reference solution (b) shows 3 major spots which are clearly separated.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Dissolve about 5 mg in 5 mL of *water R*. Add 5 mL of a 1 g/L solution of *ninhydrin R* in *ethanol (96 per cent) R* and heat in a water-bath for 3 min. A violet-blue colour develops.

#### TESTS

**pH** (2.2.3): 9.0 to 11.0.

Dissolve 1.0 g in 10 mL of *carbon dioxide-free water R*.

**Specific optical rotation** (2.2.7): + 138 to + 148 (anhydrous substance).

Dissolve 1.00 g in *water R* and dilute to 25.0 mL with the same solvent.

**Related substances**. Liquid chromatography (2.2.29).

*Test solution (a)*. Dissolve 25.0 mg of the substance to be examined in the mobile phase and dilute to 25.0 mL with the mobile phase.

*Test solution (b)*. Dilute 10.0 mL of test solution (a) to 100.0 mL with the mobile phase.

*Reference solution (a)*. Dissolve 25.0 mg of *tobramycin CRS* in the mobile phase and dilute to 100.0 mL with the mobile phase.

*Reference solution (b)*. Dilute 1.0 mL of reference solution (a) to 100.0 mL with the mobile phase.

*Reference solution (c)*. Dilute 1.0 mL of reference solution (a) to 50.0 mL with the mobile phase.

*Reference solution (d)*. Dissolve 10.0 mg of *kanamycin B sulfate CRS* in 20.0 mL of the mobile phase. To 1.0 mL of this solution, add 2.0 mL of reference solution (a) and dilute to 10.0 mL with the mobile phase.

*Reference solution (e)*. Dilute 10.0 mL of reference solution (a) to 25.0 mL with the mobile phase.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;

– *stationary phase*: *styrene-divinylbenzene copolymer R* (8 µm) with a pore size of 100 nm;

– *temperature*: 55 °C.

*Mobile phase*: mixture prepared with *carbon dioxide-free water R* containing 52 g/L of *anhydrous sodium sulfate R*, 1.5 g/L of *sodium octanesulfonate R*, 3 mL/L of *tetrahydrofuran R* stabilised with *butylhydroxytoluene R*, and 50 mL/L of 0.2 M *potassium dihydrogen phosphate R* previously adjusted to pH 3.0 with *dilute phosphoric acid R*. Degas.

*Flow rate*: 1.0 mL/min.

*Post-column solution*: *carbonate-free sodium hydroxide solution R* diluted 25-fold with *carbon dioxide-free water R*, which is added pulselessly to the column effluent using a 375 µL polymeric mixing coil.

*Flow rate*: 0.3 mL/min.

*Detection*: pulsed amperometric detector or equivalent with a gold working electrode, a silver-silver chloride reference electrode and a stainless steel auxiliary electrode which is the cell body, held at respectively + 0.05 V detection, + 0.75 V oxidation and – 0.15 V reduction potentials, with pulse durations according to the instrument used. The temperature of the detector is set at 35 °C.

*NOTE*: to prevent problems due to salt precipitation, the electrochemical cell can be flushed with *water R* overnight.

**Injection:** 20  $\mu$ L using a refrigerated injector (4–8 °C); inject test solution (a) and reference solutions (b), (c) and (d).

**Run time:** 1.5 times the retention time of tobramycin.

**Relative retention** with reference to tobramycin (retention time = about 18 min): impurity C = about 0.35; impurity B = about 0.40, impurity A = about 0.70.

**System suitability:**

- **resolution:** minimum 3.0 between the peaks due to impurity A and to tobramycin in the chromatogram obtained with reference solution (d); if necessary, adjust the concentration of sodium octanesulfonate in the mobile phase;
- **signal-to-noise ratio:** minimum 10 for the principal peak in the chromatogram obtained with reference solution (b).

**Limits:**

- **any impurity:** not more than twice the area of the principal peak in the chromatogram obtained with reference solution (c) (1.0 per cent) and not more than 1 such peak has an area greater than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.5 per cent);
- **total:** not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (c) (1.5 per cent);
- **disregard limit:** the area of the principal peak in the chromatogram obtained with reference solution (b) (0.25 per cent).

**2-Methyl-1-propanol** (2.4.24, System B): maximum 1.0 per cent *m/m*.

**Water** (2.5.12): maximum 8.0 per cent, determined on 0.30 g.

**Sulfated ash** (2.4.14): maximum 0.3 per cent, determined on 1.0 g.

**Bacterial endotoxins** (2.6.14): less than 2.0 IU/mg, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins.

#### ASSAY

Liquid chromatography (2.2.29) as described in the test for related substances with the following modifications.

**Injection:** test solution (b) and reference solution (e).

Calculate the percentage content of tobramycin.

#### STORAGE

If the substance is sterile, store in a sterile, airtight, tamper-proof container.

#### IMPURITIES

- A. 4-*O*-(3-amino-3-deoxy- $\alpha$ -D-glucopyranosyl)-2-deoxy-6-*O*-(2,6-diamino-2,6-dideoxy- $\alpha$ -D-glucopyranosyl)-L-streptamine (kanamycin B),

- B. R = H: 2-deoxy-4-*O*-(2,6-diamino-2,3,6-trideoxy- $\alpha$ -D-ribohexopyranosyl)-D-streptamine (nebramine),  
C. R = OH: 2-deoxy-4-*O*-(2,6-diamino-2,6-dideoxy- $\alpha$ -D-glucopyranosyl)-D-streptamine (neamine).

## all-*rac*- $\alpha$ -TOCOPHEROL

### int-*rac*- $\alpha$ -Tocopherolum

C<sub>29</sub>H<sub>50</sub>O<sub>2</sub>  
[10191-41-0]

M<sub>r</sub> 430.7

#### DEFINITION

all-*rac*-2,5,7,8-Tetramethyl-2-(4,8,12-trimethyltridecyl)-3,4-dihydro-2*H*-1-benzopyran-6-ol.

**Content:** 96.0 per cent to 102.0 per cent.

#### CHARACTERS

**Appearance:** clear, colourless or yellowish-brown, viscous, oily liquid.

**Solubility:** practically insoluble in water, freely soluble in acetone, in anhydrous ethanol, in methylene chloride and in fatty oils.

#### IDENTIFICATION

**First identification:** A, B.

**Second identification:** A, C.

A. Optical rotation (2.2.7):  $-0.01^\circ$  to  $+0.01^\circ$ .

Dissolve 2.50 g in *anhydrous ethanol R* and dilute to 25.0 mL with the same solvent.

B. Infrared absorption spectrophotometry (2.2.24).

**Comparison:**  $\alpha$ -tocopherol CRS.

C. Thin-layer chromatography (2.2.27).

**Test solution.** Dissolve 10 mg of the substance to be examined in 2 mL of *cyclohexane R*.

**Reference solution.** Dissolve 10 mg of  $\alpha$ -tocopherol CRS in 2 mL of *cyclohexane R*.

**Plate:** TLC silica gel F<sub>254</sub> plate R.

**Mobile phase:** ether R, cyclohexane R (20:80 V/V).

**Application:** 10  $\mu$ L.

**Development:** over 2/3 of the plate.

**Drying:** in a current of air.

**Detection:** examine in ultraviolet light at 254 nm.

**Results:** the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

## TESTS

**Related substances.** Gas chromatography (2.2.28): use the normalisation procedure.

**Internal standard solution.** Dissolve 1.0 g of *squalane R* in *cyclohexane R* and dilute to 100.0 mL with the same solvent.

**Test solution (a).** Dissolve 0.100 g of the substance to be examined in 10.0 mL of the internal standard solution.

**Test solution (b).** Dissolve 0.100 g of the substance to be examined in 10 mL of *cyclohexane R*.

**Reference solution (a).** Dissolve 0.100 g of  $\alpha$ -tocopherol CRS in 10.0 mL of the internal standard solution.

**Reference solution (b).** Dissolve 10 mg of the substance to be examined and 10 mg of  $\alpha$ -tocopheryl acetate *R* in *cyclohexane R* and dilute to 100.0 mL with the same solvent.

**Reference solution (c).** Dissolve 10 mg of *all-rac- $\alpha$ -tocopherol for peak identification CRS* (containing impurities A and B) in *cyclohexane R* and dilute to 1 mL with the same solvent.

**Reference solution (d).** Dilute 1.0 mL of test solution (b) to 100.0 mL with *cyclohexane R*. Dilute 1.0 mL of this solution to 10.0 mL with *cyclohexane R*.

**Column:**

- **material:** fused silica;
- **size:**  $l = 30$  m,  $\varnothing = 0.25$  mm;
- **stationary phase:** *poly(dimethyl)siloxane R* (film thickness 0.25  $\mu$ m).

**Carrier gas:** helium for chromatography *R*.

**Flow rate:** 1 mL/min.

**Split ratio:** 1:100.

**Temperature:**

- **column:** 280 °C;
- **injection port and detector:** 290 °C.

**Detection:** flame ionisation.

**Injection:** 1  $\mu$ L of test solution (b) and reference solutions (b), (c) and (d).

**Run time:** twice the retention time of *all-rac- $\alpha$ -tocopherol*.

**Identification of impurities:** use the chromatogram supplied with *all-rac- $\alpha$ -tocopherol for peak identification CRS* and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities A and B.

**Relative retention** with reference to *all-rac- $\alpha$ -tocopherol* (retention time = about 13 min): *squalane* = about 0.5; impurity A = about 0.7; impurity B = about 0.8; impurities C and D = about 1.05 (eluting immediately after the *all-rac- $\alpha$ -tocopherol* peak).

**System suitability:** reference solution (b):

- **resolution:** minimum 3.5 between the peaks due to *all-rac- $\alpha$ -tocopherol* and  $\alpha$ -tocopheryl acetate.

**Limits:**

- **impurity A:** maximum 0.5 per cent;
- **impurity B:** maximum 1.5 per cent;
- **sum of impurities C and D:** maximum 1.0 per cent;
- **any other impurity:** for each impurity, maximum 0.25 per cent;
- **total:** maximum 2.5 per cent;
- **disregard limit:** the area of the principal peak in the chromatogram obtained with reference solution (d) (0.1 per cent).

The thresholds indicated under Related substances (Table 2034.-1) in the general monograph *Substances for pharmaceutical use (2034)* do not apply.

## ASSAY

Gas chromatography (2.2.28) as described in the test for related substances with the following modification.

**Injection:** test solution (a) and reference solution (a).

Calculate the percentage content of  $C_{29}H_{50}O_2$  from the declared content of  $\alpha$ -tocopherol CRS.

## STORAGE

Under an inert gas, protected from light.

## IMPURITIES

**Specified impurities:** A, B, C, D.

A. *all-rac-trans*-2,3,4,6,7-pentamethyl-2-(4,8,12-trimethyltridecyl)-2,3-dihydrobenzofuran-5-ol,

B. *all-rac-cis*-2,3,4,6,7-pentamethyl-2-(4,8,12-trimethyltridecyl)-2,3-dihydrobenzofuran-5-ol.

C. 4-methoxy-2,3,6-trimethyl-5-[(*all-RS,E*)-3,7,11,15-tetramethylhexadec-2-enyl]phenol,

D. (*all-RS,all-E*)-2,6,10,14,19,23,27,31-octamethyldotriaconta-12,14,18-triene.

## RRR- $\alpha$ -TOCOPHERYL ACETATE

### RRR- $\alpha$ -Tocopherylis acetas

$C_{31}H_{52}O_3$

$M_r$  472.7

#### DEFINITION

(2*R*)-2,5,7,8-Tetramethyl-2-[(4*R*,8*R*)-4,8,12-trimethyltridecyl]-3,4-dihydro-2*H*-1-benzopyran-6-yl acetate.

Content: 95.0 per cent to 101.0 per cent.

#### CHARACTERS

**Appearance:** clear, colourless or slightly greenish-yellow, viscous, oily liquid.

**Solubility:** practically insoluble in water, freely soluble in acetone, in anhydrous ethanol and in fatty oils, soluble in ethanol (96 per cent).

#### IDENTIFICATION

First identification: A, B.

Second identification: A, C.

A. Optical rotation (2.2.7): + 0.25° to + 0.35°.

Dissolve 2.50 g in anhydrous ethanol *R* and dilute to 25.0 mL with the same solvent.

B. Infrared absorption spectrophotometry (2.2.24).

Comparison:  $\alpha$ -tocopheryl acetate CRS.

C. Thin-layer chromatography (2.2.27).

Test solution (a). Dissolve 10 mg of the substance to be examined in 2 mL of cyclohexane *R*.

Test solution (b). In a ground-glass-stoppered tube, dissolve about 10 mg of the substance to be examined in 2 mL of 2.5 *M* alcoholic sulfuric acid *R*. Heat on a water-bath for 5 min. Cool and add 2 mL of water *R* and 2 mL of cyclohexane *R*. Shake for 1 min. Use the upper layer.

Reference solution (a). Dissolve 10 mg of  $\alpha$ -tocopheryl acetate CRS in 2 mL of cyclohexane *R*.

Reference solution (b). Prepare as described for test solution (b), using  $\alpha$ -tocopheryl acetate CRS instead of the substance to be examined.

Plate: TLC silica gel  $F_{254}$  plate *R*.

Mobile phase: ether *R*, cyclohexane *R* (20:80 V/V).

Application: 10  $\mu$ L.

Development: over 2/3 of the plate.

Drying: in a current of air.

Detection: examine in ultraviolet light at 254 nm.

Results: the principal spot in the chromatogram obtained with test solution (a) is similar in position and size to the principal spot in the chromatogram obtained with

reference solution (a). In the chromatograms obtained with test solution (b) and reference solution (b), there may be 2 spots depending on the degree of hydrolysis: the spot with the higher  $R_f$  value is due to  $\alpha$ -tocopheryl acetate and corresponds to the spot in the chromatogram obtained with reference solution (a); the spot with the lower  $R_f$  value is due to  $\alpha$ -tocopherol.

#### TESTS

**Related substances.** Gas chromatography (2.2.28): use the normalisation procedure.

**Internal standard solution.** Dissolve 1.0 g of squalane *R* in cyclohexane *R* and dilute to 100.0 mL with the same solvent.

Test solution (a). Dissolve 0.100 g of the substance to be examined in 10.0 mL of the internal standard solution.

Test solution (b). Dissolve 0.100 g of the substance to be examined in 10 mL of cyclohexane *R*.

Reference solution (a). Dissolve 0.100 g of  $\alpha$ -tocopheryl acetate CRS in 10.0 mL of the internal standard solution.

Reference solution (b). Dissolve 10 mg of  $\alpha$ -tocopherol *R* and 10 mg of  $\alpha$ -tocopheryl acetate *R* in cyclohexane *R* and dilute to 100.0 mL with the same solvent.

Column:

– material: fused silica;

– size:  $l = 30$  m,  $\varnothing = 0.25$  mm;

– stationary phase: poly(dimethyl)siloxane *R* (film thickness 0.25  $\mu$ m).

Carrier gas: helium for chromatography *R*.

Flow rate: 1 mL/min.

Split ratio: 1:100.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 15	280
Injection port		290
Detector		290

Detection: flame ionisation.

Injection: 1  $\mu$ L of test solution (b) and reference solutions (a) and (b); inject directly onto the column or via a sufficiently inert, glass-lined injection port using an automatic injection device or other reproducible injection method.

System suitability:

– resolution: minimum 3.5 between the peaks due to  $\alpha$ -tocopherol and  $\alpha$ -tocopheryl acetate in the chromatogram obtained with reference solution (b);

– in the chromatogram obtained with reference solution (a), the area of the peak due to  $\alpha$ -tocopherol is not greater than 0.2 per cent of the area of the peak due to  $\alpha$ -tocopheryl acetate.

Limits:

– total: maximum 4.0 per cent;

– disregard limit: 0.1 per cent.

The thresholds indicated under Related substances (Table 2034.1) in the general monograph Substances for pharmaceutical use (2034) do not apply.

#### ASSAY

Gas chromatography (2.2.28) as described in the test for related substances with the following modification.

Injection: test solution (a) and reference solution (a).

Calculate the percentage content of  $C_{31}H_{52}O_3$  taking into account the declared content of  $\alpha$ -tocopheryl acetate CRS.

#### STORAGE

Protected from light.

### $\alpha$ -Tocopherylis acetatis pulvis

## DEFINITION

Preparation obtained either by finely dispersing *all-rac*- $\alpha$ -Tocopheryl acetate (0439) in a suitable carrier of suitable quality (for example gelatin, acacia, carbohydrates, lactoproteins or a mixture thereof) or by adsorbing *all-rac*- $\alpha$ -Tocopheryl acetate (0439) on silicic acid of suitable quality.

**Content:** 90.0 per cent to 115.0 per cent of the  $\alpha$ -tocopheryl acetate content stated on the label, which is not less than 25 g per 100 g of concentrate.

## CHARACTERS

**Appearance:** almost white, yellowish or light brown, small particles.

**Solubility:** practically insoluble or swells or forms a dispersion in water, depending on the formulation.

## IDENTIFICATION

**First identification:** B.

**Second identification:** A.

- A. Thin-layer chromatography (2.2.27).

**Test solution.** To a quantity of the preparation to be examined corresponding to 50 mg of  $\alpha$ -tocopheryl acetate add 5 mL of 0.01 M hydrochloric acid and treat with ultrasound at 60 °C. Add 5 mL of anhydrous ethanol R and 10 mL of cyclohexane R, shake for 1 min and centrifuge for 5 min. Use the upper layer.

**Reference solution.** Dissolve 50 mg of  $\alpha$ -tocopheryl acetate CRS in cyclohexane R and dilute to 10 mL with the same solvent.

**Plate:** TLC silica gel F<sub>254</sub> plate R.

**Mobile phase:** ether R, cyclohexane R (20:80 V/V).

**Application:** 10  $\mu$ L.

**Development:** 3/4 of the plate.

**Drying:** in a current of air.

**Detection:** examine in ultraviolet light at 254 nm.

**Results:** the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

- B. Examine the chromatograms obtained in the assay.

**Results:**

- the principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (a);
- in the chromatogram obtained with reference solution (c) no additional principal peak is observed when compared with the chromatogram obtained with the test solution.

## ASSAY

Gas chromatography (2.2.28).

**Internal standard solution.** Dissolve 1.0 g of squalane R in cyclohexane R and dilute to 500.0 mL with the same solvent.

**Test solution.** Weigh accurately a quantity of the preparation to be examined corresponding to about 0.100 g of  $\alpha$ -tocopheryl acetate into a 250 mL conical flask. Add 20 mL of 1 M hydrochloric acid and sonicate at 70 °C for 20 min. Add 50 mL of anhydrous ethanol R and 50.0 mL of the internal standard solution. Mix thoroughly for 30 min using a magnetic stirrer. Allow the 2 layers to separate and use the upper layer.

**Reference solution (a).** Dissolve 0.100 g of  $\alpha$ -tocopheryl acetate CRS in 50.0 mL of the internal standard solution.

**Reference solution (b).** Dissolve 10 mg of  $\alpha$ -tocopherol R and 10 mg of  $\alpha$ -tocopheryl acetate CRS in 5.0 mL of cyclohexane R.

**Reference solution (c).** Mix 1.0 mL of the test solution and 1.0 mL of reference solution (a).

**Column:**

- **material:** fused silica;
- **size:**  $l = 30$  m,  $\varnothing = 0.25$  mm;
- **stationary phase:** poly(dimethyl)siloxane R (film thickness 0.25  $\mu$ m).

**Carrier gas:** helium for chromatography R.

**Flow rate:** 1 mL/min.

**Split ratio:** 1:100.

**Temperature:**

- **column:** 280 °C;
- **injection port and detector:** 290 °C.

**Detection:** flame ionisation.

**Injection:** 1  $\mu$ L; inject directly onto the column or via a sufficiently inert, glass-lined injection port.

**Run time:** 1.1 times the retention time of  $\alpha$ -tocopheryl acetate.

**Relative retention** with reference to  $\alpha$ -tocopheryl acetate (retention time = about 12 min): squalane = about 0.5;  $\alpha$ -tocopherol = about 0.9.

**System suitability:**

- **resolution:** minimum 3.5 between the peaks due to  $\alpha$ -tocopherol and  $\alpha$ -tocopheryl acetate in the chromatogram obtained with reference solution (b);
- in the chromatogram obtained with reference solution (a), the area of the peak due to  $\alpha$ -tocopherol is not greater than 0.002 times the area of the peak due to  $\alpha$ -tocopheryl acetate (0.2 per cent).

Calculate the percentage content of C<sub>31</sub>H<sub>52</sub>O<sub>3</sub> from the declared content of  $\alpha$ -tocopheryl acetate CRS.

## STORAGE

In an airtight, well-filled container, protected from light.

## LABELLING

The label states the content of  $\alpha$ -tocopheryl acetate, expressed in grams per 100 g of concentrate.

01/2008:1258

## DL- $\alpha$ -TOCOPHERYL HYDROGEN SUCCINATE

DL- $\alpha$ -Tocopherylis hydrogenosuccinas $C_{33}H_{54}O_5$  $M_r$  530.8

### DEFINITION

(2*RS*)-2,5,7,8-Tetramethyl-2-[(4*RS*,8*RS*)-4,8,12-trimethyltridecyl]-3,4-dihydro-2*H*-1-benzopyran-6-yl hydrogen succinate.

*Content*: 96.0 per cent to 102.0 per cent.

### CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: practically insoluble in water, very soluble in methylene chloride, soluble in acetone and in anhydrous ethanol.

### IDENTIFICATION

*First identification*: B, D.

*Second identification*: A, C, D.

A. Absorbance (see Tests).

B. Infrared absorption spectrophotometry (2.2.24).

*Comparison*: RRR- $\alpha$ -tocopheryl hydrogen succinate CRS.

C. Thin-layer chromatography (2.2.27).

*Test solution (a)*. Dissolve 10 mg of the substance to be examined in 2 mL of cyclohexane R.

*Test solution (b)*. In a ground-glass-stoppered tube, dissolve 10 mg of the substance to be examined in 2 mL of 2.5 M alcoholic sulfuric acid R. Heat on a water-bath for 5 min. Cool and add 2 mL of water R and 2 mL of cyclohexane R. Shake for 1 min. Use the upper layer.

*Reference solution (a)*. Dissolve 10 mg of RRR- $\alpha$ -tocopheryl hydrogen succinate CRS in 2 mL of cyclohexane R.

*Reference solution (b)*. Prepare as described for test solution (b), using RRR- $\alpha$ -tocopheryl hydrogen succinate CRS instead of the substance to be examined.

*Plate*: TLC silica gel  $F_{254}$  plate R.

*Mobile phase*: glacial acetic acid R, ether R, cyclohexane R (0.2:20:80 V/V/V).

*Application*: 10  $\mu$ L.

*Development*: over a path of 15 cm.

*Drying*: in a current of air.

*Detection A*: examine in ultraviolet light at 254 nm.

*Results A*: the principal spot in the chromatogram obtained with test solution (a) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a). In the chromatograms obtained with test solution (b) and reference solution (b), there are 2 spots: the spot with the higher  $R_f$  value is due to  $\alpha$ -tocopherol, the spot with the lower  $R_f$  value is due to DL- $\alpha$ -tocopheryl hydrogen succinate and corresponds to the spot obtained with reference solution (a). Depending on the degree of hydrolysis, the lower spot may be weak or even absent.

*Detection B*: spray with a mixture of 10 volumes of hydrochloric acid R, 40 volumes of a 2.5 g/L solution of ferric chloride R in ethanol (96 per cent) R and 40 volumes of a 10 g/L solution of phenanthroline hydrochloride R in ethanol (96 per cent) R.

*Results B*: in the chromatograms obtained with test solution (b) and reference solution (b), the spot due to  $\alpha$ -tocopherol is orange.

D. Optical rotation (see Tests).

### TESTS

**Optical rotation** (2.2.7):  $-0.01^\circ$  to  $+0.01^\circ$ .

Dissolve 2.50 g in anhydrous ethanol R and dilute to 25.0 mL with the same solvent.

**Absorbance** (2.2.25).

*Solution A*. Dissolve 0.150 g in anhydrous ethanol R and dilute to 100 mL with the same solvent.

*Test solution (a)*. Dilute 10.0 mL of solution A to 100.0 mL with anhydrous ethanol R.

*Test solution (b)*. Dilute 20.0 mL of solution A to 50.0 mL with anhydrous ethanol R.

*Absorption maximum*: at 284 nm for test solution (a).

*Absorption minimum*: at 254 nm for test solution (b).

*Specific absorbance at the absorption maximum*: 35 to 38 for test solution (a).

*Specific absorbance at the absorption minimum*: 6.0 to 8.0 for test solution (b).

**Acid value** (2.5.1): 101 to 108, determined on 1.00 g.

**Free tocopherol**: maximum 1.0 per cent.

Dissolve 0.500 g in 100 mL of 0.25 M alcoholic sulfuric acid R. Add 20 mL of water R and 0.1 mL of a 2.5 g/L solution of diphenylamine R in sulfuric acid R. Titrate with 0.01 M ammonium and cerium sulfate until a blue colour is obtained that persists for at least 5 s. Carry out a blank titration.

1 mL of 0.01 M ammonium and cerium sulfate is equivalent to 2.154 mg of free tocopherol.

### Related substances

The thresholds indicated under Related substances (Table 2034.1) in the general monograph *Substances for pharmaceutical use* (2034) do not apply.

**Heavy metals** (2.4.8): maximum 20 ppm.

0.50 g complies with test D. Prepare the reference solution using 1 mL of lead standard solution (10 ppm Pb) R.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

### ASSAY

Gas chromatography (2.2.28).

*Internal standard solution*. Dissolve 0.300 g of dotriacontane R in hexane R and dilute to 100.0 mL with the same solvent.

*Test solution*. Weigh 30.0 mg of the substance to be examined into a 20 mL vial. Add 2.0 mL of methanol R, 1.0 mL of dimethoxypropane R and 0.1 mL of hydrochloric acid R. Cap tightly and sonicate. Allow to stand in the dark for 1 h  $\pm$  5 min. Remove from the dark, uncap and evaporate just to dryness on a steam bath with the aid of a stream of nitrogen. Add 10.0 mL of the internal standard solution. Vortex into solution.

*Reference solution*. Weigh 30.0 mg of RRR- $\alpha$ -tocopheryl hydrogen succinate CRS into a 20 mL vial. Add 2.0 mL of methanol R, 1.0 mL of dimethoxypropane R and 0.1 mL of hydrochloric acid R. Cap tightly and sonicate. Allow to stand in the dark for 1 h  $\pm$  5 min. Remove from the dark, uncap and evaporate just to dryness on a steam bath with the aid of a stream of nitrogen. Add 10.0 mL of the internal standard solution. Vortex into solution.

**Column:**

- *material*: fused silica;
- *size*:  $l = 15$  m,  $\varnothing = 0.32$  mm;
- *stationary phase*: poly(dimethyl)siloxane R (film thickness 0.25  $\mu$ m).

*Carrier gas*: helium for chromatography R.

*Flow rate*: 3-6 mL/min.

*Split ratio*: 1:10 to 1:20.

*Temperature*:

	Time (min)	Temperature (°C)
Column	0 - 10	200 → 250
	10 - 20	250
Injection port		300
Detector		330

*Detection*: flame ionisation.

*Injection*: 1  $\mu$ L; inject directly onto the column or via a glass-lined injection port using an automatic injection device or some other reproducible injection method.

*System suitability*: reference solution:

- *resolution*: minimum 12.0 between the peaks due to dotriacontane and DL- $\alpha$ -tocopheryl hydrogen succinate.

*Interference test*. Dissolve 0.100 g of the substance to be examined in hexane R and dilute to 50.0 mL with the same solvent. Inject 1  $\mu$ L of the solution and record the chromatogram. If a peak is detected with the same retention time as that of the peak due to dotriacontane, calculate the area of this peak relative to the peak area of the substance to be examined. If the relative peak area is greater than 0.5 per cent, use the corrected peak area  $S'_{D(\text{corr})}$  for the final calculation.

$$S'_{D(\text{corr})} = S'_D - \frac{S_I \times S'_T}{S_{TI}}$$

- $S'_D$  = area of the peak due to dotriacontane in the chromatogram obtained with the test solution;
- $S_I$  = area of the peak with the same retention time as that of the peak due to dotriacontane in the chromatogram obtained in the interference test;
- $S'_T$  = area of the peak due to DL- $\alpha$ -tocopheryl hydrogen succinate in the chromatogram obtained with the test solution;
- $S_{TI}$  = area of the peak due to DL- $\alpha$ -tocopheryl hydrogen succinate in the chromatogram obtained in the interference test.

Measure the areas of the peaks due to RRR- $\alpha$ -tocopheryl hydrogen succinate CRS ( $S_T$ ) and dotriacontane ( $S_D$ ) in the chromatogram obtained with the reference solution and the areas of the peaks due to DL- $\alpha$ -tocopheryl hydrogen succinate ( $S'_T$ ) and dotriacontane ( $S'_D$ ) in the chromatogram obtained with the test solution.

Determine the response factor (RF) for DL- $\alpha$ -tocopheryl hydrogen succinate from the areas of the peaks due to RRR- $\alpha$ -tocopheryl hydrogen succinate CRS and dotriacontane in the chromatogram obtained with the reference solution, using the following expression:

$$\frac{S_D \times m_T}{S_T \times m_D}$$

Calculate the percentage content of DL- $\alpha$ -tocopheryl hydrogen succinate using the following expression:

$$\frac{100 \times S'_T \times m_D \times \text{RF}}{S'_{D(\text{corr})} \times m}$$

- $S_D$  = area of the peak due to dotriacontane in the chromatogram obtained with the reference solution;
- $S'_{D(\text{corr})}$  = corrected area of the peak due to dotriacontane in the chromatogram obtained with the test solution;
- $S_T$  = area of the peak due to RRR- $\alpha$ -tocopheryl hydrogen succinate CRS in the chromatogram obtained with the reference solution;
- $S'_T$  = area of the peak due to DL- $\alpha$ -tocopheryl hydrogen succinate in the chromatogram obtained with the test solution;
- $m_D$  = mass of dotriacontane in the test solution and in the reference solution, in milligrams;
- $m_T$  = mass of RRR- $\alpha$ -tocopheryl hydrogen succinate CRS in the reference solution, in milligrams;
- $m$  = mass of the substance to be examined in the test solution, in milligrams.

**STORAGE**

Protected from light.

01/2008:1259

## RRR- $\alpha$ -TOCOPHERYL HYDROGEN SUCCINATE

### RRR- $\alpha$ -Tocopheryl hydrogen succinate

$C_{33}H_{54}O_5$   
[4345-03-3]

$M_r$  530.8

**DEFINITION**

(2R)-2,5,7,8-Tetramethyl-2-[(4R,8R)-4,8,12-trimethyltridecyl]-3,4-dihydro-2H-1-benzopyran-6-yl hydrogen succinate.

*Content*: 96.0 per cent to 102.0 per cent.

**CHARACTERS**

*Appearance*: white or almost white, crystalline powder.

*Solubility*: practically insoluble in water, very soluble in methylene chloride, soluble in acetone and in anhydrous ethanol.

**IDENTIFICATION**

*First identification*: B, D.

*Second identification*: A, C, D.

A. Absorbance (see Tests).

B. Infrared absorption spectrophotometry (2.2.24).

*Comparison*: RRR- $\alpha$ -tocopheryl hydrogen succinate CRS.

C. Thin-layer chromatography (2.2.27).

*Test solution (a)*. Dissolve 10 mg of the substance to be examined in 2 mL of cyclohexane R.

*Test solution (b)*. In a ground-glass-stoppered tube, dissolve 10 mg of the substance to be examined in 2 mL of 2.5 M alcoholic sulfuric acid R. Heat on a water-bath for 5 min. Cool and add 2 mL of water R and 2 mL of cyclohexane R. Shake for 1 min. Use the upper layer.

*Reference solution (a)*. Dissolve 10 mg of RRR- $\alpha$ -tocopheryl hydrogen succinate CRS in 2 mL of cyclohexane R.

*Reference solution (b).* Prepare as described for test solution (b), using *RRR- $\alpha$ -tocopheryl hydrogen succinate CRS* instead of the substance to be examined.

*Plate:* TLC silica gel F<sub>254</sub> plate R.

*Mobile phase:* glacial acetic acid R, ether R, cyclohexane R (0.2:20:80 V/V/V).

*Application:* 10  $\mu$ L.

*Development:* over a path of 15 cm.

*Drying:* in a current of air.

*Detection A:* examine in ultraviolet light at 254 nm.

*Results A:* the principal spot in the chromatogram obtained with test solution (a) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a). In the chromatograms obtained with test solution (b) and reference solution (b), there are 2 spots: the spot with the higher *R<sub>F</sub>* value is due to  $\alpha$ -tocopherol, the spot with the lower *R<sub>F</sub>* value is due to *RRR- $\alpha$ -tocopheryl hydrogen succinate* and corresponds to the spot obtained with reference solution (a). Depending on the degree of hydrolysis, the lower spot may be weak or even absent.

*Detection B:* spray with a mixture of 10 volumes of *hydrochloric acid R*, 40 volumes of a 2.5 g/L solution of *ferric chloride R* in *ethanol (96 per cent) R* and 40 volumes of a 10 g/L solution of *phenanthroline hydrochloride R* in *ethanol (96 per cent) R*.

*Results B:* in the chromatograms obtained with test solution (b) and reference solution (b), the spot due to  $\alpha$ -tocopherol is orange.

- D. After saponification, the resulting *RRR- $\alpha$ -tocopherol* is dextrorotatory (2.2.7). The specific optical rotation after oxidation to the quinone form is not less than + 24.

*Carry out the test avoiding exposure to actinic light.*

Transfer 1.0 g to a round bottomed, ground-glass-stoppered, 250 mL flask, dissolve in 30 mL of *anhydrous ethanol R* and heat under reflux for 3 min. While the solution is boiling, add, through the condenser, 20 mL of 2 M *alcoholic potassium hydroxide solution R*. Continue heating under reflux for 20 min and, without cooling, add 4.0 mL of *hydrochloric acid R* dropwise through the condenser. Cool, rinse the condenser with 10 mL of *anhydrous ethanol R*, transfer the contents of the flask to a 500 mL separating funnel, and rinse the flask with 4 quantities, each of 25 mL, of *water R* and 4 quantities, each of 25 mL, of *ether R*. Add the rinsings to the separating funnel. Shake vigorously for 2 min, allow the layers to separate and collect each of the 2 layers in individual separating funnels. Shake the aqueous layer with 2 quantities, each of 50 mL, of *ether R* and add these extracts to the main ether extract. Wash the combined ether extracts with 4 quantities, each of 100 mL, of *water R* and discard the washings.

To the ether solution add 40 mL of a 100 g/L solution of *potassium ferricyanide R* in an 8 g/L solution of *sodium hydroxide R* and shake for 3 min. Wash the ether solution with 4 quantities, each of 50 mL, of *water R*, discard the washings and dry the ether layer over *anhydrous sodium sulfate R*. Evaporate the ether on a water-bath under reduced pressure or in an atmosphere of nitrogen until a few millilitres remain, then complete the evaporation removing the last traces of ether without the application of heat. Immediately dissolve the residue in 25.0 mL of *trimethylpentane R* and determine the optical rotation.

Calculate the specific optical rotation of the substance in the test solution using as *c* the number of grams equivalent to  $\alpha$ -tocopherol (factor 0.811) in 1000 mL.

TESTS

**Absorbance** (2.2.25).

*Solution A.* Dissolve 0.150 g in *anhydrous ethanol R* and dilute to 100 mL with the same solvent.

*Test solution (a).* Dilute 10.0 mL of solution A to 100.0 mL with *anhydrous ethanol R*.

*Test solution (b).* Dilute 20.0 mL of solution A to 50.0 mL with *anhydrous ethanol R*.

*Absorption maximum:* at 284 nm for test solution (a).

*Absorption minimum:* at 254 nm for test solution (b).

*Specific absorbance at the absorption maximum:* 35 to 38 for test solution (a).

*Specific absorbance at the absorption minimum:* 6.0 to 8.0 for test solution (b).

**Acid value** (2.5.1): 101 to 108, determined on 1.00 g.

**Free tocopherol:** maximum 1.0 per cent.

Dissolve 0.500 g in 100 mL of 0.25 M *alcoholic sulfuric acid R*. Add 20 mL of *water R* and 0.1 mL of a 2.5 g/L solution of *diphenylamine R* in *sulfuric acid R*. Titrate with 0.01 M *ammonium and cerium sulfate* until a blue colour is obtained that persists for at least 5 s. Carry out a blank titration.

1 mL of 0.01 M *ammonium and cerium sulfate* is equivalent to 2.154 mg of free tocopherol.

**Related substances**

The thresholds indicated under Related substances (Table 2034-1) in the general monograph *Substances for pharmaceutical use (2034)* do not apply.

**Heavy metals** (2.4.8): maximum 20 ppm.

0.50 g complies with test D. Prepare the reference solution using 1 mL of *lead standard solution (10 ppm Pb) R*.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Gas chromatography (2.2.28).

*Internal standard solution.* Dissolve 0.300 g of *dotriacontane R* in *hexane R* and dilute to 100.0 mL with the same solvent.

*Test solution.* Weigh 30.0 mg of the substance to be examined into a 20 mL vial. Add 2.0 mL of *methanol R*, 1.0 mL of *dimethoxypropane R* and 0.1 mL of *hydrochloric acid R*. Cap tightly and sonicate. Allow to stand in the dark for 1 h  $\pm$  5 min. Remove from the dark, uncap and evaporate just to dryness on a steam bath with the aid of a stream of nitrogen. Add 10.0 mL of the internal standard solution. Vortex into solution.

*Reference solution.* Weigh 30.0 mg of *RRR- $\alpha$ -tocopheryl hydrogen succinate CRS* into a 20 mL vial. Add 2.0 mL of *methanol R*, 1.0 mL of *dimethoxypropane R* and 0.1 mL of *hydrochloric acid R*. Cap tightly and sonicate. Allow to stand in the dark for 1 h  $\pm$  5 min. Remove from the dark, uncap and evaporate just to dryness on a steam bath with the aid of a stream of nitrogen. Add 10.0 mL of the internal standard solution. Vortex into solution.

*Column:*

- *material:* fused silica;
- *size:* *l* = 15 m,  $\varnothing$  = 0.32 mm;
- *stationary phase:* *poly(dimethyl)siloxane R* (film thickness 0.25  $\mu$ m).

*Carrier gas:* *helium for chromatography R*.

*Flow rate:* 3-6 mL/min.

*Split ratio:* 1:10 to 1:20.

*Temperature:*

	Time (min)	Temperature (°C)
Column	0 - 10	200 $\rightarrow$ 250
	10 - 20	250
Injection port		300
Detector		330

*Detection:* flame ionisation.

**Injection:** 1 µL; inject directly onto the column or via a glass-lined injection port using an automatic injection device or some other reproducible injection method.

**System suitability:** reference solution:

- **resolution:** minimum 12.0 between the peaks due to dotriacontane and *RRR*-α-tocopheryl hydrogen succinate.

**Interference test.** Dissolve 0.100 g of the substance to be examined in *hexane R* and dilute to 50.0 mL with the same solvent. Inject 1 µL of the solution and record the chromatogram. If a peak is detected with the same retention time as that of the peak due to dotriacontane, calculate the area of this peak relative to the peak area of the substance to be examined. If the relative peak area is greater than 0.5 per cent, use the corrected peak area  $S'_{D(\text{corr})}$  for the final calculation.

$$S'_{D(\text{corr})} = S'_D - \frac{S_I \times S'_T}{S_{T1}}$$

- $S'_D$  = area of the peak due to dotriacontane in the chromatogram obtained with the test solution;
- $S_I$  = area of the peak with the same retention time as that of the peak due to dotriacontane in the chromatogram obtained in the interference test;
- $S'_T$  = area of the peak due to *RRR*-α-tocopheryl hydrogen succinate in the chromatogram obtained with the test solution;
- $S_{T1}$  = area of the peak due to *RRR*-α-tocopheryl hydrogen succinate in the chromatogram obtained in the interference test.

Measure the areas of the peaks due to *RRR*-α-tocopheryl hydrogen succinate CRS ( $S'_T$ ) and dotriacontane ( $S_D$ ) in the chromatogram obtained with the reference solution and the areas of the peaks due to *RRR*-α-tocopheryl hydrogen succinate ( $S'_T$ ) and dotriacontane ( $S'_D$ ) in the chromatogram obtained with the test solution.

Determine the response factor (RF) for *RRR*-α-tocopheryl hydrogen succinate from the areas of the peaks due to *RRR*-α-tocopheryl hydrogen succinate CRS and dotriacontane in the chromatogram obtained with the reference solution, using the following expression:

$$\frac{S_D \times m_T}{S_T \times m_D}$$

Calculate the percentage content of *RRR*-α-tocopheryl hydrogen succinate using the following expression:

$$\frac{100 \times S'_T \times m_D \times \text{RF}}{S'_{D(\text{corr})} \times m}$$

- $S_D$  = area of the peak due to dotriacontane in the chromatogram obtained with the reference solution;
- $S'_{D(\text{corr})}$  = corrected area of the peak due to dotriacontane in the chromatogram obtained with the test solution;
- $S_T$  = area of the peak due to *RRR*-α-tocopheryl hydrogen succinate CRS in the chromatogram obtained with the reference solution;
- $S'_T$  = area of the peak due to *RRR*-α-tocopheryl hydrogen succinate in the chromatogram obtained with the test solution;
- $m_D$  = mass of dotriacontane in the test solution and in the reference solution, in milligrams;
- $m_T$  = mass of *RRR*-α-tocopheryl hydrogen succinate CRS in the reference solution, in milligrams;
- $m$  = mass of the substance to be examined in the test solution, in milligrams.

## TOLBUTAMIDE

### Tolbutamidum

$C_{12}H_{18}N_2O_3S$   
[64-77-7]

$M_r$  270.3

## DEFINITION

1-Butyl-3-[(4-methylphenyl)sulfonyl]urea.

**Content:** 99.0 per cent to 101.0 per cent (dried substance).

## CHARACTERS

**Appearance:** white or almost white, crystalline powder.

**Solubility:** practically insoluble in water, soluble in acetone and in ethanol (96 per cent). It dissolves in dilute solutions of alkali hydroxides.

## IDENTIFICATION

**First identification:** A, C.

**Second identification:** A, B, D.

A. Melting point (2.2.14): 126 °C to 130 °C.

B. Ultraviolet and visible absorption spectrophotometry (2.2.25).

**Test solution (a).** Dissolve 25.0 mg in *methanol R* and dilute to 100.0 mL with the same solvent.

**Test solution (b).** Dilute 10.0 mL of test solution (a) to 250.0 mL with *methanol R*.

**Spectral range:** 245-300 nm for test solution (a); 220-235 nm for test solution (b).

**Absorption maxima:** at 258 nm, 263 nm and 275 nm for test solution (a); at 228 nm for test solution (b).

**Shoulder:** at 268 nm for test solution (a).

**Specific absorbance at the absorption maximum:** 480 to 520 for test solution (b).

C. Infrared absorption spectrophotometry (2.2.24).

**Comparison:** *tolbutamide CRS*.

D. To 0.2 g add 8 mL of a 500 g/L solution of *sulfuric acid R* and heat under a reflux condenser for 30 min. Allow to cool. Crystals are formed which, after recrystallisation from hot *water R* and drying at 105 °C, melt (2.2.14) at 135 °C to 140 °C.

## TESTS

**Appearance of solution.** The solution is clear (2.2.1) and colourless (2.2.2, *Method II*).

Dissolve 0.2 g in 5 mL of *dilute sodium hydroxide solution R* and add 5 mL of *water R*.

**pH (2.2.3):** 4.5 to 5.5.

To 2.0 g add 50 mL of *carbon dioxide-free water R* and heat at 70 °C for 5 min. Cool rapidly and filter.

**Related substances.** Liquid chromatography (2.2.29). Prepare the solutions immediately before use.

**Test solution.** Dissolve 50 mg of the substance to be examined in the mobile phase and dilute to 50.0 mL with the mobile phase.

**Reference solution (a).** Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

**Reference solution (b).** Dissolve 10 mg of *toluenesulfonamide R* (impurity A) and 10 mg of *toluenesulfonylurea R* (impurity B) in the mobile phase and dilute to 10.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 100.0 mL with the mobile phase.

**Column:**

- size:  $l = 0.25$  m,  $\varnothing = 4.6$  mm;
- stationary phase: *end-capped octadecylsilyl silica gel for chromatography R* (5  $\mu$ m).

**Mobile phase:** mix 35 volumes of *acetonitrile R1* and 65 volumes of a 1.36 g/L solution of *potassium dihydrogen phosphate R* adjusted to pH 3.5 with *phosphoric acid R*.

**Flow rate:** 1.5 mL/min.

**Detection:** spectrophotometer at 230 nm.

**Injection:** 20  $\mu$ L.

**Run time:** 1.5 times the retention time of tolbutamide.

**Identification of impurities:** use the chromatogram obtained with reference solution (b) to identify the peak due to impurities A and B.

**Relative retention** with reference to tolbutamide (retention time = about 18 min): impurity B = about 0.2; impurity A = about 0.3.

**System suitability:** reference solution (b):

- resolution: minimum 2.0 between the peaks due to impurities A and B.

**Limits:**

- *unspecified impurities:* for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *total:* not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);
- *disregard limit:* 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Heavy metals (2.4.8):** maximum 10 ppm.

Dissolve 1.0 g in a mixture of 15 volumes of *water R* and 85 volumes of *acetone R* and dilute to 20 mL with the same mixture of solvents. 12 mL of the solution complies with test B. Prepare the reference solution using lead standard solution (0.5 ppm Pb) obtained by diluting *lead standard solution (100 ppm Pb) R* with a mixture of 15 volumes of *water R* and 85 volumes of *acetone R*.

**Loss on drying (2.2.32):** maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash (2.4.14):** maximum 0.1 per cent, determined on 1.0 g.

**ASSAY**

Dissolve 0.250 g in a mixture of 20 mL of *water R* and 40 mL of *ethanol (96 per cent) R*. Titrate with 0.1 M *sodium hydroxide*, using 1 mL of *phenolphthalein solution R* as indicator.

1 mL of 0.1 M *sodium hydroxide* is equivalent to 27.03 mg of  $C_{12}H_{18}N_2O_3S$ .

**STORAGE**

In an airtight container.

**IMPURITIES**

**Other detectable impurities** (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): A, B, C.

A. (4-methylphenyl)sulfonamide (toluenesulfonamide),

B. 1-[(4-methylphenyl)sulfonyl]urea (toluenesulfonylurea),

C. 1-azepan-1-yl-3-[(4-methylphenyl)sulfonyl]urea (tolazamide).

01/2008:2039  
corrected 7.0

## TOLFENAMIC ACID

### Acidum tolfenamicum

$C_{14}H_{12}ClNO_2$   
[13710-19-5]

$M_r$  261.7

**DEFINITION**

2-[(3-Chloro-2-methylphenyl)amino]benzoic acid.

**Content:** 99.0 per cent to 101.0 per cent (dried substance).

**CHARACTERS**

**Appearance:** white or slightly yellow, crystalline powder.

**Solubility:** practically insoluble in water, soluble in dimethylformamide, sparingly soluble in ethanol and in methylene chloride. It dissolves in dilute solutions of alkali hydroxides.

mp: about 213 °C.

**IDENTIFICATION**

**First identification:** B.

**Second identification:** A, C.

- A. Dissolve 20 mg in a mixture of 1 volume of 1 M *hydrochloric acid* and 99 volumes of *methanol R* and dilute to 100 mL with the same mixture of solvents. Dilute 5.0 mL of the solution to 50 mL with a mixture of 1 volume of 1 M *hydrochloric acid* and 99 volumes of *methanol R*. Examined between 250 nm and 380 nm (2.2.25), the solution shows 2 absorption maxima, at 286 nm and 345 nm. The ratio of the absorbance measured at the maximum at 286 nm to that measured at the maximum at 345 nm is 1.2 to 1.4.

- B. Infrared absorption spectrophotometry (2.2.24).

**Comparison:** *tolfenamic acid CRS*.

- C. Thin-layer chromatography (2.2.27).

**Test solution.** Dissolve 25 mg of the substance to be examined in a mixture of 1 volume of *methanol R* and 3 volumes of *methylene chloride R* and dilute to 10 mL with the same mixture of solvents.

**Reference solution.** Dissolve 25 mg of *tolfenamic acid CRS* in a mixture of 1 volume of *methanol R* and 3 volumes of *methylene chloride R* and dilute to 10 mL with the same mixture of solvents.

**Plate:** TLC silica gel GF<sub>254</sub> plate R.

*Mobile phase:* glacial acetic acid R, dioxan R, toluene R (1:25:90 V/V/V).

*Application:* 10 µL.

*Development:* over 2/3 of the plate.

*Drying:* in a current of warm air.

*Detection:* ultraviolet light at 254 nm.

*Results:* the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

## TESTS

**Related substances.** Liquid chromatography (2.2.29).

*Test solution.* Dissolve 50.0 mg of the substance to be examined in 5 mL of ethanol R and dilute to 50.0 mL with the mobile phase.

*Reference solution (a).* Dissolve 25 mg of 2-chlorobenzoic acid R and 25 mg of 3-chloro-2-methylaniline R in 5 mL of ethanol R and dilute to 50.0 mL with the mobile phase. Dilute 1.0 mL of the solution to 50.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Reference solution (b).* Dilute 1.0 mL of the test solution to 10.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 100.0 mL with the mobile phase.

*Column:*

- *size:*  $l = 0.25$  m,  $\varnothing = 4.6$  mm,
- *stationary phase:* spherical end-capped octadecylsilyl silica gel for chromatography R (5 µm) with a specific surface area of 450 m<sup>2</sup>/g and a pore size of 8 nm.

*Mobile phase:* glacial acetic acid R, water R, ethanol R (2:350:650 V/V/V).

*Flow rate:* 0.8 mL/min.

*Detection:* spectrophotometer at 232 nm.

*Injection:* 20 µL.

*Run time:* 3 times the retention time of tolfenamic acid.

*Relative retention* with reference to tolfenamic acid (retention time = about 15 min): impurity A = about 0.25; impurity B = about 0.34.

*System suitability:* reference solution (a):

- *resolution:* minimum 2.5 between the peaks due to impurity A and to impurity B.

*Limits:*

- *impurity A:* not more than the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.1 per cent),
- *impurity B:* not more than half the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.05 per cent),
- *any other impurity:* not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent),
- *total:* not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent),
- *disregard limit:* 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.01 per cent).

**Copper:** maximum 10 ppm.

Atomic absorption spectrometry (2.2.23, Method I).

*Test solution.* Place 1.00 g of the substance to be examined in a silica crucible, moisten with sulfuric acid R, heat cautiously on a flame for 30 min and then progressively to about 650 ± 50 °C. Continue ignition until all black particles have disappeared. Allow to cool, dissolve the residue in 0.1 M hydrochloric acid and dilute to 25.0 mL with the same acid.

*Reference solutions.* Prepare the reference solutions using copper standard solution (0.1 per cent Cu) R, diluted as necessary using 0.1 M nitric acid.

*Source:* copper hollow-cathode lamp.

*Wavelength:* 324.8 nm.

*Flame:* air-acetylene.

**Loss on drying** (2.2.32): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

## ASSAY

Dissolve 0.200 g with the aid of ultrasound in 100 mL of ethanol R. Add 0.1 mL of phenol red solution R and titrate with 0.1 M sodium hydroxide.

1 mL of 0.1 M sodium hydroxide is equivalent to 26.17 mg of C<sub>14</sub>H<sub>12</sub>ClNO<sub>2</sub>.

## STORAGE

Protected from light.

## IMPURITIES

A. 2-chlorobenzoic acid,

B. 3-chloro-2-methylaniline,

C. 3-chloro-4-methyl-9-oxo-9,10-dihydroacridine.

07/2009:1158

## TOLNAFTATE

### Tolnaftatum

C<sub>19</sub>H<sub>17</sub>NO<sub>2</sub>  
[2398-96-1]

*M*, 307.4

## DEFINITION

*O*-Naphthalen-2-yl methyl(3-methylphenyl)carbamothioate.

*Content:* 97.0 per cent to 103.0 per cent (dried substance).

## CHARACTERS

*Appearance:* white or yellowish-white powder.

*Solubility:* practically insoluble in water, freely soluble in acetone and in methylene chloride, very slightly soluble in ethanol (96 per cent).

## IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

*Comparison:* tolnaftate CRS.

## TESTS

**Impurity D.** Liquid chromatography (2.2.29).

**Test solution.** Dissolve 0.400 g of the substance to be examined in 2 mL of *methylene chloride R*. Extract with 3 quantities, each of 3 mL, of 0.01 M *hydrochloric acid*. Combine the aqueous phases and dilute to 10.0 mL with 0.01 M *hydrochloric acid*.

**Reference solution (a).** Dissolve 20.0 mg of *N-methyl-m-toluidine R* (impurity D) in 50.0 mL of *methylene chloride R*.

**Reference solution (b).** Dilute 1.0 mL of reference solution (a) to 100.0 mL with *methylene chloride R*. Take 2.0 mL of this solution and extract with 3 quantities, each of 3 mL, of 0.01 M *hydrochloric acid*. Combine the aqueous phases and dilute to 10.0 mL with 0.01 M *hydrochloric acid*.

**Reference solution (c).** Dissolve 10 mg of the substance to be examined in 25 mL of *methanol R*. Add 2 mL of this solution to 2 mL of reference solution (a) and dilute to 25 mL with *methanol R*.

**Column:**

- size:  $l = 0.15$  m,  $\varnothing = 4.6$  mm;
- stationary phase: octadecylsilyl silica gel for chromatography R (5  $\mu$ m).

**Mobile phase:**

- mobile phase A: trifluoroacetic acid R, *methanol R*, water R (0.1:10:90 V/V/V);
- mobile phase B: trifluoroacetic acid R, water R, *methanol R* (0.1:10:90 V/V/V);

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 3	70	30
3 - 8	70 → 0	30 → 100
8 - 20	0	100

**Flow rate:** 1.0 mL/min.

**Detection:** spectrophotometer at 254 nm.

**Injection:** 100  $\mu$ L of the test solution and reference solution (b); 10  $\mu$ L of reference solution (c).

**Relative retention** with reference to tolinaftate (retention time = about 15 min): impurity D = about 0.25.

**System suitability:** reference solution (c):

- resolution: minimum 5.0 between the peaks due to impurity D and tolinaftate.

**Limit:**

- impurity D: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (20 ppm).

**Related substances.** Liquid chromatography (2.2.29).

**Test solution.** Dissolve 25 mg of the substance to be examined in 5 mL of *methanol R* and dilute to 25.0 mL with the same solvent.

**Reference solution (a).** Dilute 1.0 mL of the test solution to 100.0 mL with *methanol R*. Dilute 1.0 mL of this solution to 10.0 mL with *methanol R*.

**Reference solution (b).** Dissolve 5 mg of tolinaftate for system suitability CRS (containing resolution component A) in 5.0 mL of *methanol R*.

**Column:**

- size:  $l = 0.15$  m,  $\varnothing = 4.6$  mm;
- stationary phase: octadecylsilyl silica gel for chromatography R (5  $\mu$ m).

**Mobile phase:**

- mobile phase A: trifluoroacetic acid R, water R, *methanol R* (0.1:30:70 V/V/V);
- mobile phase B: trifluoroacetic acid R, water R, *methanol R* (0.1:10:90 V/V/V);

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 12	100	0
12 - 30	100 → 0	0 → 100
30 - 33	0	100

**Flow rate:** 1.0 mL/min.

**Detection:** spectrophotometer at 254 nm.

**Injection:** 10  $\mu$ L.

**Relative retention** with reference to tolinaftate (retention time = about 18 min): resolution component A = about 0.7.

**System suitability:** reference solution (b):

- resolution: minimum 5.0 between the peaks due to resolution component A and tolinaftate.

**Limits:**

- unspecified impurities: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- total: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- disregard limit: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Loss on drying** (2.2.32): maximum 0.5 per cent, determined on 1.000 g by drying at 60 °C at a pressure not exceeding 0.7 kPa for 3 h.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

## ASSAY

Dissolve 50.0 mg in *methanol R* and dilute to 250.0 mL with the same solvent. Dilute 2.0 mL of this solution to 50.0 mL with *methanol R*. Measure the absorbance (2.2.25) at the absorption maximum at 257 nm.

Calculate the content of C<sub>19</sub>H<sub>17</sub>NOS taking the specific absorbance to be 720.

## STORAGE

Protected from light.

## IMPURITIES

**Specified impurities: D.**

**Other detectable impurities** (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use* (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): A, B.

A. naphthalen-2-ol ( $\beta$ -naphthol),

B. O,O-dinaphthalen-2-yl carbonothioate,

D. N,3-dimethylaniline (*N*-methyl-*m*-toluidine).

01/2008:2132 *System suitability*: reference solution (a):

corrected 6.0

**TORASEMIDE, ANHYDROUS**

## Torasemidum anhydricum

C<sub>16</sub>H<sub>20</sub>N<sub>4</sub>O<sub>3</sub>S  
[56211-40-6]M<sub>r</sub> 348.4

## DEFINITION

1-(1-Methylethyl)-3-[[4-[(3-methylphenyl)amino]pyridin-3-yl]sulfonyl]urea.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

## CHARACTERS

*Appearance*: white or almost white powder.*Solubility*: practically insoluble in water, slightly soluble in ethanol (96 per cent). It is sparingly soluble in dilute solutions of alkali hydroxides and slightly soluble in dilute acids.

It shows polymorphism (5.9).

## IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

*Comparison*: anhydrous torasemide CRS.If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in *methanol R*, evaporate to dryness and record new spectra using the residues.

## TESTS

**Related substances.** Liquid chromatography (2.2.29).*Solution A.* Dissolve 2.7 g of *potassium dihydrogen phosphate R* in 950 mL of *water R*, adjust to pH 3.5 with *phosphoric acid R* and dilute to 1000 mL with *water R*.*Test solution.* Dissolve 20.0 mg of the substance to be examined in 15 mL of *methanol R*, sonicate for 15 min. Add 22.5 mL of solution A, cool to room temperature and dilute to 50.0 mL with the mobile phase.*Reference solution (a).* Dissolve the contents of a vial of *torasemide for system suitability CRS* (containing impurities A, B, C and D) in 0.5 mL of *methanol R*. Add 0.5 mL of solution A.*Reference solution (b).* Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.*Column*:

- *size*:  $l = 0.125$  m,  $\varnothing = 4.0$  mm;
- *stationary phase*: octadecylsilyl silica gel for chromatography R (5  $\mu$ m);
- *temperature*: 30 °C.

*Mobile phase*: *methanol R*, solution A (40:60 V/V).*Flow rate*: 0.8 mL/min.*Detection*: spectrophotometer at 288 nm.*Injection*: 20  $\mu$ L.*Run time*: 2.5 times the retention time of torasemide.*Relative retention* with reference to torasemide (retention time = about 10 min): impurity A = about 0.3; impurity B = about 0.4; impurity C = about 0.5; impurity D = about 2.3.

- *resolution*: minimum 3.0 between the peaks due to impurity B and impurity C;
- the chromatogram obtained is similar to the chromatogram supplied with *torasemide for system suitability CRS*.

*Limits*:

- *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 5.1; impurity B = 0.76;
- *impurities A, C, D*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);
- *impurity B*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- *any other impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);

## TOSYLCHLORAMIDE SODIUM

## Tosylchloramidum natricum

 $C_7H_7ClNaO_2S \cdot 3H_2O$  $M_r$  281.7

## DEFINITION

Sodium *N*-chloro-4-methylbenzenesulfonimide trihydrate.*Content*: 98.0 per cent to 103.0 per cent of  $C_7H_7ClNaO_2S \cdot 3H_2O$ .

## CHARACTERS

*Appearance*: white or slightly yellow, crystalline powder.*Solubility*: freely soluble in water, soluble in ethanol (96 per cent).

## IDENTIFICATION

- Solution S (see Tests) turns *red litmus paper R* blue and then bleaches it.
- To 10 mL of solution S add 10 mL of *dilute hydrogen peroxide solution R*. A white precipitate is formed which dissolves on heating. Filter the hot solution and allow to cool. White crystals are formed which, when washed and dried at 100-105 °C, melt (2.2.14) at 137 °C to 140 °C.
- Ignite cautiously 1 g, because of the risk of deflagration. Dissolve the residue in 10 mL of *water R*. The solution gives reaction (a) of chlorides (2.3.1).
- The solution prepared for identification test C gives reaction (a) of sulfates (2.3.1).
- The solution prepared for identification test C gives reaction (b) of sodium (2.3.1).

## TESTS

**Solution S.** Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 20 mL with the same solvent.**Appearance of solution.** Solution S is not more opalescent than reference suspension II (2.2.1) and is colourless (2.2.2, *Method II*).**pH** (2.2.3): 8.0 to 10.0 for solution S.**Ortho compound.** To 2 g add 10 mL of *water R*, mix, add 1 g of *sodium metabisulfite R* and heat to boiling. Cool to 0 °C, filter rapidly and wash with 3 quantities, each of 5 mL, of *iced water R*. The precipitate, dried over *diphosphorus pentoxide R* at a pressure not exceeding 600 Pa, melts (2.2.14) at a minimum of 134 °C.**Residue insoluble in anhydrous ethanol:** maximum 2 per cent.Shake 1.00 g with 20 mL of *anhydrous ethanol R* for 30 min, filter on a tared filter, wash any residue with 5 mL of *anhydrous ethanol R* and dry at 100-105 °C. The residue weighs a maximum of 20 mg.

## ASSAY

Dissolve 0.125 g in 100 mL of *water R* in a ground-glass-stoppered flask. Add 1 g of *potassium iodide R* and 5 mL of *dilute sulfuric acid R*. Allow to stand for 3 min. Titrate with 0.1 M *sodium thiosulfate*, using 1 mL of *starch solution R* as indicator.1 mL of 0.1 M *sodium thiosulfate* is equivalent to 14.08 mg of  $C_7H_7ClNaO_2S \cdot 3H_2O$ .

## STORAGE

In an airtight container, protected from light.

## TRAMADOL HYDROCHLORIDE

## Tramadoli hydrochloridum

 $C_{16}H_{26}ClNO_2$   
[36282-47-0] $M_r$  299.8

## DEFINITION

(1*S*,2*RS*)-2-[(Dimethylamino)methyl]-1-(3-methoxyphenyl)cyclohexanol hydrochloride.*Content*: 99.0 per cent to 101.0 per cent (anhydrous substance).

## CHARACTERS

*Appearance*: white or almost white, crystalline powder.*Solubility*: freely soluble in water and in methanol, very slightly soluble in acetone.

## IDENTIFICATION

*First identification*: B, D.*Second identification*: A, C, D.

- Melting point (2.2.14): 180 °C to 184 °C.
- Infrared absorption spectrophotometry (2.2.24).  
*Comparison*: tramadol hydrochloride CRS.

C. Chromatograms obtained in the test for impurity E.

*Results*: the principal spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

D. It gives reaction (a) of chlorides (2.3.1).

## TESTS

**Solution S.** Dissolve 1.0 g in *water R* and dilute to 20 mL with the same solvent.**Appearance of solution.** Solution S is clear (2.2.1) and colourless (2.2.2, *Method II*).**Acidity.** To 10 mL of solution S, add 0.2 mL of *methyl red solution R* and 0.2 mL of 0.01 M *hydrochloric acid*. The solution is red. Not more than 0.4 mL of 0.01 M *sodium hydroxide* is required to change the colour of the indicator to yellow.**Optical rotation** (2.2.7):  $-0.10^\circ$  to  $+0.10^\circ$ , determined on solution S.**Impurity E.** Thin-layer chromatography (2.2.27).*Test solution (a).* Dissolve 0.10 g in *methanol R* and dilute to 2 mL with the same solvent.*Test solution (b).* Dilute 1 mL of test solution (a) to 10 mL with *methanol R*.*Reference solution (a).* Dissolve 25 mg of *tramadol hydrochloride CRS* in *methanol R* and dilute to 5 mL with the same solvent.*Reference solution (b).* Dissolve 5 mg of *tramadol impurity E CRS* in 5 mL of *methanol R*. Dilute 1 mL of the solution to 10 mL with *methanol R*.*Reference solution (c).* Dissolve 5 mg of *tramadol impurity A CRS* in 1 mL of reference solution (a).*Plate*: TLC silica gel  $F_{254}$  plate R, prewashed with *methanol R*.

**Mobile phase:** concentrated ammonia R, 2-propanol R, toluene R (1:19:80 V/V/V).

**Application:** 10 µL.

**Development:** over 2/3 of the plate. Saturate the plate for 20 min with concentrated ammonia R. For this, add concentrated ammonia R to one trough of a twin trough tank. Just before developing, add the mobile phase to the other trough. Place the plate in the chromatographic tank, ensuring that the layer of silica gel is orientated towards the middle of the tank.

**Drying:** in air.

**Detection:** expose the plate to iodine vapour for 1 h, examine in ultraviolet light at 254 nm.

**System suitability:** the chromatogram obtained with reference solution (c) shows 2 clearly separated spots.

**Limit:** test solution (a):

- **impurity E:** any spot corresponding to impurity E is not more intense and not greater than the spot in the chromatogram obtained with reference solution (b) (0.2 per cent).

**Related substances.** Liquid chromatography (2.2.29).

**Test solution.** Dissolve 0.15 g of the substance to be examined in the mobile phase and dilute to 100 mL with the mobile phase.

**Reference solution (a).** Dilute 2.0 mL of the test solution to 10.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 100 mL with the mobile phase.

**Reference solution (b).** Dissolve 5 mg of tramadol impurity A CRS in 4.0 mL of the test solution and dilute to 100 mL with the mobile phase.

**Column:**

- **size:**  $l = 0.25$  m,  $\varnothing = 4.0$  mm;
- **stationary phase:** base-deactivated end-capped octylsilyl silica gel for chromatography R (5 µm).

**Mobile phase:** 295 volumes of acetonitrile R and 705 volumes of a mixture of 0.2 mL of trifluoroacetic acid R and 100 mL of water R.

**Flow rate:** 1.0 mL/min.

**Detection:** spectrophotometer at 270 nm.

**Injection:** 20 µL.

**Run time:** 4 times the retention time of tramadol.

**Relative retention** with reference to tramadol (retention time = about 5 min): impurity A = about 0.85.

**System suitability:** reference solution (b):

- **resolution:** minimum 2.0 between the peaks due to impurity A and tramadol.

**Limits:**

- **impurity A:** not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- **unspecified impurities:** for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- **total:** not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.4 per cent);
- **disregard limit:** 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.02 per cent).

**Heavy metals** (2.4.8): maximum 20 ppm.

Dissolve 2.0 g in water R and dilute to 20 mL with the same solvent. 12 mL of this solution complies with test A. Prepare the reference solution using lead standard solution (2 ppm Pb) R.

**Water** (2.5.12): maximum 0.5 per cent, determined on 1.000 g.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

#### ASSAY

Dissolve 0.180 g in 25 mL of anhydrous acetic acid R and add 10 mL of acetic anhydride R. Titrate with 0.1 M perchloric acid, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M perchloric acid is equivalent to 29.98 mg of  $C_{16}H_{26}ClNO_2$ .

#### STORAGE

Protected from light.

#### IMPURITIES

**Specified impurities:** A, E.

**Other detectable impurities** (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use* (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): B, C, D.

A. (1RS,2SR)-2-[(dimethylamino)methyl]-1-(3-methoxyphenyl)cyclohexanol,

B. [2-(3-methoxyphenyl)cyclohex-1-enyl]-N,N-dimethylmethanamine,

*Content:* 99.0 per cent to 101.0 per cent (anhydrous substance).

## CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: practically insoluble in water, freely soluble in methylene chloride, sparingly soluble in anhydrous ethanol.

## IDENTIFICATION

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry (2.2.24).

*Comparison*: trandolapril CRS.

## TESTS

**Appearance of solution.** The solution is not more intensely coloured than reference solution Y<sub>7</sub> (2.2.2, Method II).

Dissolve 1.0 g in *methanol R* and dilute to 10 mL with the same solvent.

**Specific optical rotation** (2.2.7): – 16.5 to – 18.5 (anhydrous substance).

Dissolve 1.0 g in *anhydrous ethanol R* and dilute to 50.0 mL with the same solvent.

**Related substances.** Liquid chromatography (2.2.29).

*Test solution.* Dissolve 25.0 mg of the substance to be examined in mobile phase A and dilute to 10.0 mL with mobile phase A.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 10.0 mL with mobile phase A. Dilute 1.0 mL of this solution to 100.0 mL with mobile phase A.

*Reference solution (b).* Dissolve 5 mg of *trandolapril impurity C CRS* and 5 mg of *trandolapril impurity D CRS* in mobile phase A and dilute to 5 mL with mobile phase A. Dilute 1 mL of this solution to 20 mL with mobile phase A.

*Column*:

- *size*:  $l = 0.15$  m,  $\varnothing = 4.6$  mm,
- *stationary phase*: end-capped polar-embedded octadecylsilyl amorphous organosilica polymer R (3.5  $\mu$ m),
- *temperature*: 40 °C.

*Mobile phase*:

- *mobile phase A*: mix 25 volumes of *acetonitrile R*, and 75 volumes of a 6.8 g/L solution of *potassium dihydrogen phosphate R* previously adjusted to pH 2.5  $\pm$  0.1 with *phosphoric acid R*;
- *mobile phase B*: mix equal volumes of *acetonitrile R*, and a 6.8 g/L solution of *potassium dihydrogen phosphate R* previously adjusted to pH 2.2  $\pm$  0.1 with *phosphoric acid R*;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 20	95	5
20 - 35	95 $\rightarrow$ 5	5 $\rightarrow$ 95
35 - 45	5	95

*Flow rate*: 1.3 mL/min.

*Detection*: spectrophotometer at 210 nm.

*Injection*: 20  $\mu$ L.

*Relative retention* with reference to trandolapril (retention time = about 14.5 min): impurity C = about 2.1; impurity D = about 2.5.

*System suitability*: reference solution (b):

- *resolution*: minimum 4 between the peaks due to impurity C and impurity D.

*Limits*:

- *correction factor*: for the calculation of content, multiply the peak area of impurity C by 2.2,
- *impurity C*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent),
- *impurity D*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent),
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent),
- *sum of impurities other than D*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent),
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Palladium**: maximum 5 ppm.

Atomic absorption spectrometry (2.2.23, Method I).

*Solvent mixture*: *nitric acid R*, *water R* (1:99 V/V).

*Test solution.* To the residue of the test for sulfated ash add 3 mL of *hydrochloric acid R* and 1 mL of *fuming nitric acid R*. Cover the crucible with a watch glass and heat at 160-170 °C for 1 h to dissolve the residue. Afterwards continue heating in the open crucible and evaporate the solution. Stop heating before the residue is completely dried, add 1 mL of *nitric acid R*, heat at 160-170 °C for further 10 min, and after cooling dilute to 10.0 mL with *water R*.

*Reference solutions.* Prepare reference solutions containing 0.5  $\mu$ g, 1.0  $\mu$ g and 1.5  $\mu$ g of Pd per millilitre by diluting *palladium standard solution (500 ppm Pd) R* with the solvent mixture.

*Source*: palladium hollow-cathode lamp.

*Wavelength*: 244.8 nm.

*Atomisation device*: air-acetylene flame.

**Water** (2.5.32): maximum 0.2 per cent, determined on 1.000 g.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 2.0 g in a porcelain or quartz crucible.

## ASSAY

Dissolve 0.300 g in 50 mL of *anhydrous acetic acid R*. Titrate with 0.1 M *perchloric acid*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *perchloric acid* is equivalent to 43.05 mg of C<sub>24</sub>H<sub>34</sub>N<sub>2</sub>O<sub>5</sub>.

## STORAGE

Protected from light.

## IMPURITIES

*Specified impurities*: C, D.

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. - F. (2*R*,3*aR*,7*aS*)-1-[(2*S*)-2-[[1*S*]-1-(ethoxycarbonyl)-3-phenylpropyl]amino]propanoyl]octahydro-1*H*-indole-2-carboxylic acid.

## IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

Preparation: discs.

Comparison: tranexamic acid CRS.

## TESTS

pH (2.2.3): 7.0 to 8.0.

Dissolve 2.5 g in carbon dioxide-free water *R* and dilute to 50 mL with the same solvent.

Related substances. Liquid chromatography (2.2.29).

Test solution. Dissolve 0.20 g of the substance to be examined in water *R* and dilute to 20.0 mL with the same solvent.

Reference solution (a). Dilute 5.0 mL of the test solution to 100.0 mL with water *R*. Dilute 1.0 mL of this solution to 10.0 mL with water *R*.

Reference solution (b). Dissolve 20 mg of tranexamic acid CRS (containing impurity C) in water *R* and dilute to 2 mL with the same solvent.

Reference solution (c). Dissolve 12 mg of 4-aminomethylbenzoic acid *R* (impurity D) in water *R* and dilute to 100 mL with the same solvent. Dilute 1 mL of the solution to 50 mL with water *R*. Dilute 5 mL of this solution to 200 mL with water *R*.

Column:

- size:  $l = 0.25$  m,  $\varnothing = 4.6$  mm or  $l = 0.25$  m,  $\varnothing = 6.0$  mm;
- stationary phase: octadecylsilyl silica gel for chromatography *R* (5  $\mu$ m).

Mobile phase: dissolve 11.0 g of anhydrous sodium dihydrogen phosphate *R* in 500 mL of water *R* and add 5 mL of triethylamine *R* and 1.4 g of sodium laurilsulfate *R*. Adjust to pH 2.5 with dilute phosphoric acid *R* and dilute to 600 mL with water *R*. Add 400 mL of methanol *R* and mix.

Flow rate: 0.9 mL/min.

Detection: spectrophotometer at 220 nm.

Injection: 20  $\mu$ L.

Run time: 3 times the retention time of tranexamic acid.

Identification of impurities: use the chromatogram supplied with tranexamic acid CRS and the chromatogram obtained with reference solution (b) to identify the peak due to impurity C; use the chromatogram obtained with reference solution (c) to identify the peak due to impurity D.

Relative retention with reference to tranexamic acid (retention time = about 13 min): impurity C = about 1.1; impurity D = about 1.3; impurity B = about 1.5; impurity A = about 2.1.

System suitability: reference solution (b):

- resolution: minimum 1.5 between the peaks due to tranexamic acid and impurity C.

Limits:

- correction factors: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity B = 1.2; impurity C = 0.005; impurity D = 0.006;
- impurity A: not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- impurity B: not more than 0.4 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- unspecified impurities: for each impurity, not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- sum of unspecified impurities: not more than 0.4 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- disregard limit: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.025 per cent).

## Trehalosum dihydricum

C<sub>12</sub>H<sub>22</sub>O<sub>11</sub>·2H<sub>2</sub>O  
[6138-23-4]

M<sub>r</sub> 378.3

## DEFINITION

α-D-Glucopyranosyl α-D-glucopyranoside dihydrate (α,α-trehalose dihydrate). It is obtained by enzymatic modification of starch.

*Content*: 97.0 per cent to 102.0 per cent (anhydrous substance).

## CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: freely soluble in water, slightly soluble in methanol, practically insoluble in ethanol (96 per cent).

## IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

*Comparison*: *trehalose dihydrate CRS*.

B. Dissolve 2 g in 5 mL of *water R*. To 1 mL of this solution add 0.4 mL of a 50 g/L solution of α-naphthol *R* in *ethanol (96 per cent) R* and mix thoroughly. Carefully add 2 mL of *sulfuric acid R*. A violet colour develops at the interface.

C. Dissolve 1 g in 25 mL of *water R*. To 2 mL of this solution add 1 mL of *dilute hydrochloric acid R* and mix. Keep the solution for 20 min at room temperature. Add 4 mL of a 40 g/L solution of *sodium hydroxide R* and 2 mL of a 40 g/L solution of *glycine R* and mix. Heat the solution in a water-bath for 10 min. No brown colour develops.

## TESTS

**Solution S**. Dissolve 10.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100.0 mL with the same solvent.

**Appearance of solution**. Solution S is clear (2.2.1) and colourless (2.2.2, *Method II*).

**pH** (2.2.3): 4.5 to 6.5 for solution S.

**Specific optical rotation** (2.2.7): + 197 to + 201 (anhydrous substance), determined on solution S.

**Related substances**. Liquid chromatography (2.2.29).

*Test solution*. Dissolve 0.100 g of the substance to be examined in *water R* and dilute to 10.0 mL with the same solvent.

*Reference solution (a)*. Dissolve 0.100 g of *trehalose dihydrate CRS* in *water R* and dilute to 10.0 mL with the same solvent.

*Reference solution (b)*. Dilute 1.0 mL of the test solution to 100.0 mL with *water R*.

*Reference solution (c)*. Dilute 5.0 mL of reference solution (b) to 25.0 mL with *water R*.

*Reference solution (d)*. Dissolve 25 mg of *glucose R* (impurity A) and 25 mg of *maltotriose R* in *water R*, add 2.5 mL of reference solution (a) and dilute to 10.0 mL with *water R*.

*Column*:

– *size*: *l* = 0.3 m, Ø = 8 mm;

- *stationary phase*: strong cation-exchange resin (sodium form) *R* (6 µm);
  - *temperature*: 80 °C.
- Mobile phase*: water *R*.
- Flow rate*: 0.4 mL/min.
- Detection*: refractometer maintained at 40 °C.
- Injection*: 20 µL of the test solution and reference solutions (b), (c) and (d).
- Run time*: twice the retention time of trehalose.
- Identification of impurities*: use the chromatogram obtained with reference solution (d) to identify the peaks due to impurities A and B; impurity B has the same retention time as maltotriose.
- Relative retention* with reference to trehalose (retention time = about 15 min): impurity B = about 0.9; impurity A = about 1.2.

*System suitability*: reference solution (d):

- *resolution*: minimum 1.5 between the peaks due to maltotriose and trehalose.

*Limits*:

- *impurities A, B*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.2 per cent);
- *total*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.1 per cent).

**Chlorides** (2.4.4): maximum 125 ppm.

Dilute 4 mL of solution S to 15 mL with water *R*.

**Sulfates** (2.4.13): maximum 200 ppm.

Dilute 7.5 mL of solution S to 15 mL with distilled water *R*.

**Heavy metals** (2.4.8): maximum 5 ppm.

Dissolve 4.0 g in water *R* and dilute to 20 mL with the same solvent. 12 mL of the solution complies with test A. Prepare the reference solution using lead standard solution (1 ppm Pb) *R*.

**Soluble starch**. Dissolve 1 g in 10 mL of water *R*. Add 0.1 mL of iodine solution *R1*. No blue colour develops.

**Water** (2.5.12): 9.0 per cent to 11.0 per cent, determined on 0.10 g.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

#### Microbial contamination

If intended for use in the manufacture of parenteral preparations:

- TAMC: acceptance criterion 10<sup>2</sup> CFU/g (2.6.12).

If not intended for use in the manufacture of parenteral preparations:

- TAMC: acceptance criterion 10<sup>3</sup> CFU/g (2.6.12);
- TYMC: acceptance criterion 10<sup>2</sup> CFU/g (2.6.12);
- absence of *Escherichia coli* (2.6.13);
- absence of *Salmonella* (2.6.13).

**Bacterial endotoxins** (2.6.14). If intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins:

- less than 4 IU/g for parenteral preparations having a concentration of 100 g/L or less of trehalose dihydrate;
- less than 2.5 IU/g for parenteral preparations having a concentration of more than 100 g/L of trehalose dihydrate.

#### ASSAY

Liquid chromatography (2.2.29) as described in the test for related substances with the following modification.

*Injection*: test solution and reference solution (a).

Calculate the percentage content of trehalose from the declared content of trehalose dihydrate *CRS*.

#### LABELLING

The label states:

- where applicable, the maximum concentration of bacterial endotoxins;
- where applicable, that the substance is suitable for use in the manufacture of parenteral preparations.

#### IMPURITIES

*Specified impurities*: A, B.

A. (+)-D-glucopyranose (glucose),

B. oligosaccharides, mainly glucosyltrehalose: mixture of α-D-glucopyranosyl α-D-glucopyranosyl-(1→4)-α-D-glucopyranoside (4-O-glucosyltrehalose or α-D-maltosyl α-D-glucoside) and α-D-glucopyranosyl-(1→6)-α-D-glucopyranosyl α-D-glucopyranoside (6-O-glucosyltrehalose or α-D-isomaltosyl α-D-glucoside).

01/2011:0693

## TRETINOIN

### Tretinoinum

C<sub>20</sub>H<sub>28</sub>O<sub>2</sub>  
[302-79-4]

M<sub>r</sub> 300.4

#### DEFINITION

(2*E*,4*E*,6*E*,8*E*)-3,7-Dimethyl-9-(2,6,6-trimethylcyclohex-1-enyl)nona-2,4,6,8-tetraenoic acid.

*Content*: 98.0 per cent to 102.0 per cent (dried substance).

## CHARACTERS

*Appearance*: yellow or light orange, crystalline powder.

*Solubility*: practically insoluble in water, soluble in methylene chloride, slightly soluble in ethanol (96 per cent).

mp: about 182 °C, with decomposition.

It is sensitive to air, heat and light, especially in solution.

*Carry out all operations as rapidly as possible and avoid exposure to actinic light; use freshly prepared solutions.*

## IDENTIFICATION

*First identification*: A.

*Second identification*: B, C.

A. Infrared absorption spectrophotometry (2.2.24).

*Comparison*: tretinoin CRS.

B. Thin-layer chromatography (2.2.27).

*Test solution*. Dissolve 10 mg of the substance to be examined in *methylene chloride R* and dilute to 10 mL with the same solvent.

*Reference solution*. Dissolve 10 mg of *tretinoin CRS* in *methylene chloride R* and dilute to 10 mL with the same solvent.

*Plate*: TLC silica gel GF<sub>254</sub> plate R.

*Mobile phase*: glacial acetic acid R, acetone R, peroxide-free ether R, cyclohexane R (2:4:40:54 V/V/V/V).

*Application*: 5 µL.

*Development*: over 3/4 of the plate.

*Drying*: in air.

*Detection*: examine in ultraviolet light at 254 nm.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

C. Dissolve about 5 mg in 2 mL of *antimony trichloride solution R*. An intense red colour develops and later becomes violet.

## TESTS

**Related substances.** Liquid chromatography (2.2.29).

*Test solution*. Dissolve 0.100 g of the substance to be examined in *methanol R* and dilute to 50.0 mL with the same solvent.

*Reference solution (a)*. Dissolve 10.0 mg of *isotretinoin CRS* (impurity A) in *methanol R* and dilute to 10.0 mL with the same solvent.

*Reference solution (b)*. Mix 1.0 mL of reference solution (a) with 0.5 mL of the test solution and dilute to 25.0 mL with *methanol R*.

*Reference solution (c)*. Dilute 0.5 mL of the test solution to 100.0 mL with *methanol R*.

*Column*:

– *size*:  $l = 0.15$  m,  $\varnothing = 4.6$  mm;

– *stationary phase*: octadecylsilyl silica gel for chromatography R (3 µm).

*Mobile phase*: glacial acetic acid R, water R, *methanol R* (5:225:770 V/V/V).

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 355 nm.

*Injection*: 10 µL.

*Run time*: 1.2 times the retention time of tretinoin.

*Identification of impurities*: use the chromatogram obtained with reference solution (a) to identify the peak due to impurity A.

*Relative retention* with reference to tretinoin (retention time = about 29 min): impurity A = about 0.75.

*System suitability*: reference solution (b):

– *resolution*: minimum 5.0 between the peaks due to impurity A and tretinoin.

## Limits:

- *impurity A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.5 per cent);
- *unspecified impurities*: for each impurity, not more than 0.4 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.2 per cent);
- *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (c) (1.0 per cent);
- *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent).

The thresholds indicated under Related substances (Table 2034-1) in the general monograph *Substances for Pharmaceutical use (2034)* do not apply.

**Heavy metals (2.4.8)**: maximum 20 ppm.

0.5 g complies with test D. Prepare the reference solution using 1 mL of *lead standard solution (10 ppm Pb) R*.

**Loss on drying (2.2.32)**: maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* for 16 h.

**Sulfated ash (2.4.14)**: maximum 0.1 per cent, determined on 1.0 g.

## ASSAY

Dissolve 0.200 g in 70 mL of *acetone R*. Titrate with 0.1 M *tetrabutylammonium hydroxide in 2-propanol*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *tetrabutylammonium hydroxide in 2-propanol* is equivalent to 30.04 mg of C<sub>20</sub>H<sub>28</sub>O<sub>2</sub>.

## STORAGE

Under an inert gas, in an airtight container, protected from light.

It is recommended that the contents of an opened container be used as soon as possible and any unused part be protected by an atmosphere of inert gas.

## IMPURITIES

*Specified impurities*: A.

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities. It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): B, C, D.

A. (2Z,4E,6E,8E)-3,7-dimethyl-9-(2,6,6-trimethylcyclohex-1-enyl)nona-2,4,6,8-tetraenoic acid (isotretinoin),

B. (2Z,4E,6Z,8E)-3,7-dimethyl-9-(2,6,6-trimethylcyclohex-1-enyl)nona-2,4,6,8-tetraenoic acid (9,13-dicis-retinoic acid),

C. (2Z,4Z,6E,8E)-3,7-dimethyl-9-(2,6,6-trimethylcyclohex-1-enyl)nona-2,4,6,8-tetraenoic acid (11,13-dicis-retinoic acid),

01/2008:1376

D. (2*E*,4*E*,6*Z*,8*E*)-3,7-dimethyl-9-(2,6,6-trimethylcyclohex-1-enyl)nona-2,4,6,8-tetraenoic acid (9-*cis*-retinoic acid).

01/2008:1106  
corrected 6.0

## TRIACETIN

### Triacetinum

C<sub>9</sub>H<sub>14</sub>O<sub>6</sub>  
[102-76-1]

M<sub>r</sub> 218.2

#### DEFINITION

Propane-1,2,3-triyl triacetate.

*Content*: 97.0 per cent to 100.5 per cent (anhydrous substance).

#### CHARACTERS

*Appearance*: clear, colourless, slightly viscous oily liquid.

*Solubility*: soluble in water, miscible with ethanol (96 per cent) and toluene.

bp: about 260 °C.

#### IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

*Comparison*: Ph. Eur. reference spectrum of triacetin.

#### TESTS

**Appearance.** It is clear (2.2.1) and not more intensely coloured than reference solution Y<sub>6</sub> (2.2.2, Method II).

**Acidity.** Dissolve 5.00 g in 25 mL of *anhydrous ethanol R*, previously neutralised to 0.2 mL of *phenolphthalein solution R* and add 0.20 mL of 0.1 M *sodium hydroxide*. The pink colour of the mixture persists for 15 s.

**Relative density** (2.2.5): 1.159 to 1.164.

**Refractive index** (2.2.6): 1.429 to 1.432.

**Water** (2.5.12): maximum 0.2 per cent, determined on 5.00 g.

#### ASSAY

Introduce 0.300 g into a 250 mL borosilicate glass flask fitted with a reflux condenser. Add 25.0 mL of 0.5 M *alcoholic potassium hydroxide* and a few glass beads. Attach the condenser and heat under reflux for 30 min. Add 1 mL of *phenolphthalein solution R1* and titrate immediately with 0.5 M *hydrochloric acid*. Carry out a blank test under the same conditions. Calculate the content from the difference in consumption of alkali in the main and the blank procedure.

1 mL of 0.5 M *alcoholic potassium hydroxide* is equivalent to 36.37 mg of C<sub>9</sub>H<sub>14</sub>O<sub>6</sub>.

#### STORAGE

In a well-filled container.

## TRIAMCINOLONE

### Triamcinolonum

C<sub>21</sub>H<sub>27</sub>FO<sub>6</sub>  
[124-94-7]

M<sub>r</sub> 394.4

#### DEFINITION

9-Fluoro-11β,16α,17,21-tetrahydroxypregna-1,4-diene-3,20-dione.

*Content*: 97.0 per cent to 103.0 per cent (anhydrous substance).

#### CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: practically insoluble in water, slightly soluble in methanol, practically insoluble in methylene chloride.

It shows polymorphism (5.9).

#### IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

*Comparison*: triamcinolone CRS.

If the spectra obtained show differences, dissolve the substance to be examined and the reference substance separately in *methanol R*, evaporate to dryness, dry the residues at 60 °C at a pressure not exceeding 0.7 kPa and record new spectra using the residues.

B. Thin-layer chromatography (2.2.27). Prepare the solutions immediately before use and protect from light. Examine the plate under ultraviolet light immediately after development.

*Test solution.* Dissolve 10 mg of the substance to be examined in *methanol R* and dilute to 10 mL with the same solvent.

*Reference solution (a).* Dissolve 20 mg of triamcinolone CRS in *methanol R* and dilute to 20 mL with the same solvent.

*Reference solution (b).* Dissolve 10 mg of dexamethasone CRS in reference solution (a) and dilute to 10 mL with the same solution.

*Plate*: TLC silica gel F<sub>254</sub> plate R.

*Mobile phase*: add a mixture of 1.2 volumes of *water R* and 8 volumes of *methanol R* to a mixture of 15 volumes of *ether R* and 77 volumes of *methylene chloride R*.

*Application*: 5 µL.

*Development*: over a path of 15 cm.

*Drying*: in air.

*Detection*: examine in ultraviolet light at 254 nm.

*System suitability*: the chromatogram obtained with reference solution (b) shows 2 clearly separated spots.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

#### TESTS

**Specific optical rotation** (2.2.7): + 65 to + 72 (anhydrous substance).

Dissolve 0.100 g in *dimethylformamide R* and dilute to 10.0 mL with the same solvent.

**Related substances.** Liquid chromatography (2.2.29). Prepare the solutions immediately before use and protect from light.

**Test solution.** Dissolve 25.0 mg of the substance to be examined in a mixture of equal volumes of *methanol R* and *water R* and dilute to 10.0 mL with the same mixture of solvents.

**Reference solution (a).** Dissolve 2 mg of *triamcinolone CRS* and 2 mg of *triamcinolone impurity C CRS* in a mixture of equal volumes of *methanol R* and *water R* and dilute to 100.0 mL with the same mixture of solvents.

**Reference solution (b).** Dilute 1.0 mL of the test solution to 100.0 mL with a mixture of equal volumes of *methanol R* and *water R*.

**Blank:** *methanol R*.

**Column:**

- size:  $l = 0.25$  m,  $\varnothing = 4.6$  mm,
- stationary phase: base-deactivated end-capped octadecylsilyl silica gel for chromatography *R* (5  $\mu$ m).

**Mobile phase:** a mixture prepared as follows: in a 1000 mL volumetric flask mix 525 mL of *methanol R* with 400 mL of *water R* and allow to equilibrate; adjust the volume to 1000 mL with *water R* and mix again.

**Flow rate:** 1 mL/min.

**Detection:** spectrophotometer set at 238 nm.

**Injection:** 20  $\mu$ L.

**Run time:** 4.5 times the retention time of triamcinolone.

**Retention time:** triamcinolone = about 11 min.

**System suitability:** reference solution (a):

- resolution: minimum of 1.8 between the peaks due to triamcinolone and to impurity C.

**Limits:**

- any impurity: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1 per cent) and not more than 2 such peaks have an area greater than half the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent),
- total: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (2 per cent),
- disregard limit: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Water (2.5.12):** maximum 1.0 per cent, determined on 0.500 g.

## ASSAY

Prepare the solutions immediately before use and protect from light.

Dissolve 50.0 mg in *alcohol R* and dilute to 50.0 mL with the same solvent. Dilute 2.0 mL of the solution to 100.0 mL with *alcohol R*. Measure the absorbance (2.2.25) at the maximum at 238 nm.

Calculate the content of  $C_{21}H_{27}FO_6$  taking the specific absorbance to be 389.

## STORAGE

Protected from light.

## IMPURITIES

A.  $R_1 = R_2 = CO-CH_3$ : 9-fluoro-11 $\beta$ ,17-dihydroxy-3,20-dioxopregna-1,4-diene-16 $\alpha$ ,21-diyl diacetate (triamcinolone 16,21-diacetate),

B.  $R_1 = H, R_2 = CO-CH_3$ : 9-fluoro-11 $\beta$ ,16 $\alpha$ ,17-trihydroxy-3,20-dioxopregna-1,4-dien-21-yl acetate (triamcinolone 21-acetate),

C. 9-fluoro-11 $\beta$ ,16 $\alpha$ ,17,21-tetrahydroxypregn-4-ene-3,20-dione (pretriamcinolone).

01/2008:0533

## TRIAMCINOLONE ACETONIDE

### Triamcinoloni acetonidum

$C_{24}H_{31}FO_6$   
[76-25-5]

$M_r$  434.5

## DEFINITION

9-Fluoro-11 $\beta$ ,21-dihydroxy-16 $\alpha$ ,17-(1-methylethylidenedioxy)pregna-1,4-diene-3,20-dione.

**Content:** 97.0 per cent to 103.0 per cent (anhydrous substance).

## CHARACTERS

**Appearance:** white or almost white, crystalline powder.

**Solubility:** practically insoluble in water, sparingly soluble in ethanol (96 per cent).

It shows polymorphism (5.9).

## IDENTIFICATION

**First identification:** A, B.

**Second identification:** C, D.

A. Infrared absorption spectrophotometry (2.2.24).

**Comparison:** *triamcinolone acetonide CRS*.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in the minimum volume of *methanol R* and evaporate to dryness. Using the residues, prepare halogen salt discs or mulls in *liquid paraffin R* and record new spectra.

B. Thin-layer chromatography (2.2.27). Prepare the solutions immediately before use and protect from light.

**Test solution.** Dissolve 10 mg of the substance to be examined in *methanol R* and dilute to 10 mL with the same solvent.

**Reference solution (a).** Dissolve 20 mg of *triamcinolone acetonide CRS* in *methanol R* and dilute to 20 mL with the same solvent.

**Reference solution (b).** Dissolve 10 mg of *triamcinolone hexacetonide CRS* in reference solution (a) and dilute to 10 mL with reference solution (a).

**Plate:** TLC silica gel  $F_{254}$  plate *R*.

**Mobile phase:** add a mixture of 1.2 volumes of *water R* and 8 volumes of *methanol R* to a mixture of 15 volumes of *ether R* and 77 volumes of *methylene chloride R*.

**Application:** 5  $\mu$ L.

**Development:** over a path of 15 cm.

**Drying:** in air.

**Detection:** examine in ultraviolet light at 254 nm, immediately after development.

**System suitability:** reference solution (b):

- the chromatogram shows 2 clearly separated spots.

**Results:** the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Thin-layer chromatography (2.2.27). Prepare the solutions immediately before use and protect from light.

**Test solution (a).** Dissolve 10 mg of the substance to be examined in *methanol R* and dilute to 10 mL with the same solvent.

**Test solution (b).** In a separating funnel, dissolve 10 mg of the substance to be examined in 1.5 mL of *glacial acetic acid R*, add 0.5 mL of a 20 g/L solution of *chromium trioxide R* and allow to stand for 60 min. Add 5 mL of *water R*, 2 mL of *methylene chloride R* and shake vigorously for 2 min. Allow to separate and use the lower layer.

**Reference solution (a).** Dissolve 10 mg of *triamcinolone acetonide CRS* in *methanol R* and dilute to 10 mL with the same solvent.

**Reference solution (b).** In a separating funnel, dissolve 10 mg of *triamcinolone acetonide CRS* in 1.5 mL of *glacial acetic acid R*, add 0.5 mL of a 20 g/L solution of *chromium trioxide R* and allow to stand for 60 min. Add 5 mL of *water R*, 2 mL of *methylene chloride R* and shake vigorously for 2 min. Allow to separate and use the lower layer.

**Plate:** TLC silica gel  $F_{254}$  plate *R*.

**Mobile phase:** add a mixture of 1.2 volumes of *water R* and 8 volumes of *methanol R* to a mixture of 15 volumes of *ether R* and 77 volumes of *methylene chloride R*.

**Application:** 5  $\mu$ L.

**Development:** over a path of 15 cm.

**Drying:** in air.

**Detection:** examine in ultraviolet light at 254 nm, immediately after development.

**Results:** the principal spot in each of the chromatograms obtained with the test solutions is similar in position and size to the principal spot in the chromatogram obtained with the corresponding reference solution. The principal spot in the chromatograms obtained with test solution (b) and reference solution (b) has an  $R_f$  value distinctly higher than that of the principal spot in the chromatograms obtained with test solution (a) and reference solution (a).

D. Mix about 5 mg with 45 mg of *heavy magnesium oxide R* and ignite in a crucible until an almost white residue is obtained (usually less than 5 min). Allow to cool, add 1 mL of *water R*, 0.05 mL of *phenolphthalein solution R1* and about 1 mL of *dilute hydrochloric acid R* to render the solution colourless. Filter. To a freshly prepared mixture of 0.1 mL of *alizarin S solution R* and 0.1 mL of *zirconyl nitrate solution R*, add 1.0 mL of the filtrate. Mix, allow to stand for 5 min and compare the colour of the solution to that of a blank prepared in the same manner. The test solution is yellow and the blank is red.

## TESTS

**Specific optical rotation (2.2.7):** + 100 to + 107 (anhydrous substance).

Dissolve 0.100 g in *dioxan R* and dilute to 10.0 mL with the same solvent.

**Related substances.** Liquid chromatography (2.2.29). Carry out the test protected from light.

**Test solution.** Dissolve 25.0 mg of the substance to be examined in 7 mL of *methanol R* and dilute to 10.0 mL with *water R*.

**Reference solution (a).** Dissolve 2 mg of *triamcinolone acetonide CRS* and 2 mg of *triamcinolone R* (impurity A) in the mobile phase and dilute to 100.0 mL with the mobile phase.

**Reference solution (b).** Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase.

**Column:**

- size:  $l = 0.25$  m,  $\varnothing = 4.6$  mm;
- stationary phase: *octadecylsilyl silica gel for chromatography R* (5  $\mu$ m).

**Mobile phase:** in a 1000 mL volumetric flask mix 525 mL of *methanol R* with 400 mL of *water R* and allow to equilibrate; dilute to 1000 mL with *water R* and mix again.

**Flow rate:** 1.5 mL/min.

**Detection:** spectrophotometer at 254 nm.

**Equilibration:** with the mobile phase for about 10 min.

**Injection:** 20  $\mu$ L.

**Run time:** 3.5 times the retention time of triamcinolone acetonide.

**Retention time:** impurity A = about 5 min; triamcinolone acetonide = about 17 min.

**System suitability:** reference solution (a):

- resolution: minimum 15 between the peaks due to impurity A and triamcinolone acetonide; if necessary, adjust the concentration of methanol in the mobile phase.

**Limits:**

- impurity A: not more than 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.25 per cent);
- total: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- disregard limit: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Water (2.5.12):** maximum 2.0 per cent, determined on 0.500 g.

## ASSAY

Protect the solutions from light throughout the assay.

Dissolve 50.0 mg in *ethanol (96 per cent) R* and dilute to 50.0 mL with the same solvent. Dilute 2.0 mL of this solution to 100.0 mL with *ethanol (96 per cent) R*. Measure the absorbance (2.2.25) at the absorption maximum at 238.5 nm.

Calculate the content of  $C_{24}H_{31}FO_6$  taking the specific absorbance to be 355.

## STORAGE

Protected from light.

## IMPURITIES

**Specified impurities:** A.

A. 9-fluoro-11 $\beta$ ,16 $\alpha$ ,17,21-tetrahydroxypregna-1,4-diene-3,20-dione (triamcinolone),

01/2008:0867 **Related substances.** Liquid chromatography (2.2.29). Carry out the test protected from light.

## TRIAMCINOLONE HEXACETONIDE

### Triamcinoloni hexacetonidum

$C_{30}H_{41}FO_7$   
[5611-51-8]

$M_r$  532.6

#### DEFINITION

9-Fluoro-11 $\beta$ -hydroxy-16 $\alpha$ ,17-(1-methylethylidenedioxy)-3,20-dioxopregna-1,4-diene-21-yl 3,3-dimethylbutanoate.

*Content:* 97.0 per cent to 103.0 per cent (anhydrous substance).

#### CHARACTERS

*Appearance:* white or almost white, crystalline powder.

*Solubility:* practically insoluble in water, sparingly soluble in anhydrous ethanol and in methanol.

#### IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

*Comparison:* triamcinolone hexacetonide CRS.

B. Thin-layer chromatography (2.2.27). Prepare the solutions immediately before use and protect from light.

*Test solution.* Dissolve 10 mg of the substance to be examined in methanol R and dilute to 10 mL with the same solvent.

*Reference solution (a).* Dissolve 20 mg of triamcinolone hexacetonide CRS in methanol R and dilute to 20 mL with the same solvent.

*Reference solution (b).* Dissolve 10 mg of triamcinolone acetonide CRS in reference solution (a) and dilute to 10 mL with reference solution (a).

*Plate:* TLC silica gel  $F_{254}$  plate R.

*Mobile phase:* add a mixture of 1.2 volumes of water R and 8 volumes of methanol R to a mixture of 15 volumes of ether R and 77 volumes of methylene chloride R.

*Application:* 5  $\mu$ L.

*Development:* over a path of 15 cm.

*Drying:* in air.

*Detection:* examine in ultraviolet light at 254 nm, immediately after development.

*System suitability:* reference solution (b):

– the chromatogram shows 2 clearly separated spots.

*Results:* the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

#### TESTS

**Specific optical rotation** (2.2.7): + 92 to + 98 (anhydrous substance).

Dissolve 0.100 g in methylene chloride R and dilute to 10.0 mL with the same solvent.

*Test solution.* Dissolve 25.0 mg of the substance to be examined in methanol R and dilute to 10.0 mL with the same solvent.

*Reference solution (a).* Dissolve 2 mg of triamcinolone hexacetonide CRS and 2 mg of triamcinolone acetonide CRS (impurity A) in the mobile phase and dilute to 100.0 mL with the mobile phase.

*Reference solution (b).* Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase.

*Column:*

– size:  $l = 0.25$  m,  $\varnothing = 4.6$  mm;

– stationary phase: octadecylsilyl silica gel for chromatography R (5  $\mu$ m).

*Mobile phase:* in a 1000 mL volumetric flask mix 750 mL of methanol R with 200 mL of water R and allow to equilibrate; dilute to 1000 mL with water R and mix again.

*Flow rate:* 2 mL/min.

*Detection:* spectrophotometer at 254 nm.

*Equilibration:* with the mobile phase for about 10 min.

*Injection:* 20  $\mu$ L.

*Run time:* 3 times the retention time of triamcinolone hexacetonide.

*Retention time:* impurity A = about 3 min; triamcinolone hexacetonide = about 12 min.

*System suitability:* reference solution (a):

– resolution: minimum 20.0 between the peaks due to impurity A and triamcinolone hexacetonide; if necessary, adjust the concentration of methanol in the mobile phase.

*Limits:*

– impurity A: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

– total: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1 per cent);

– disregard limit: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Water** (2.5.12): maximum 2.0 per cent, determined on 0.50 g.

#### ASSAY

Dissolve 50.0 mg in ethanol (96 per cent) R and dilute to 50.0 mL with the same solvent. Dilute 2.0 mL of this solution to 100.0 mL with ethanol (96 per cent) R. Measure the absorbance (2.2.25) at the absorption maximum at 238 nm.

Calculate the content of  $C_{30}H_{41}FO_7$  taking the specific absorbance to be 291.

#### STORAGE

Protected from light.

#### IMPURITIES

*Specified impurities:* A.

A. 9-fluoro-11 $\beta$ ,21-dihydroxy-16 $\alpha$ ,17-(1-methylethylidenedioxy)pregna-1,4-diene-3,20-dione (triamcinolone acetonide).

corrected 6.3

## TRIAMTERENE

### Triamterenum

C<sub>12</sub>H<sub>11</sub>N<sub>7</sub>  
[396-01-0]

M<sub>r</sub> 253.3

#### DEFINITION

6-Phenylpteridine-2,4,7-triamine.

Content: 99.0 per cent to 101.0 per cent (dried substance).

#### CHARACTERS

Appearance: yellow, crystalline powder.

Solubility: very slightly soluble in water and in ethanol (96 per cent).

#### IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

Comparison: triamterene CRS.

#### TESTS

**Acidity.** Boil 1.0 g with 20 mL of water R for 5 min, cool, filter and wash the filter with 3 quantities, each of 10 mL, of water R. Combine the filtrate and washings and add 0.3 mL of phenolphthalein solution R. Not more than 1.5 mL of 0.01 M sodium hydroxide is required to change the colour of the indicator.

**Impurity D.** Gas chromatography (2.2.28).

**Internal standard solution.** Dilute 0.1 mL of nitrobenzene R to 100 mL with methanol R. Dilute 1 mL of this solution to 50 mL with methanol R.

**Test solution.** Introduce 0.800 g of the substance to be examined into a suitable vial, add 5 mL of dimethyl sulfoxide R and heat until the sample is dissolved (do not heat to boiling). Allow to cool. Add 5 mL of cold methanol R to enhance the precipitation of triamterene. Filter and wash the filter with 5 mL of methanol R. Combine the filtrate and washing, add 2.0 mL of the internal standard solution and dilute to 20.0 mL with methanol R.

**Reference solution.** Dissolve 20.0 mg of benzyl cyanide R (impurity D) in methanol R and dilute to 100.0 mL with the same solvent. Dilute 5.0 mL of the solution to 50.0 mL with methanol R. To 2.0 mL of this solution add 2.0 mL of the internal standard solution and 5 mL of dimethyl sulfoxide R and dilute to 20.0 mL with methanol R.

**Blank solution.** Dilute 5 mL of dimethyl sulfoxide R to 20 mL with methanol R.

Column:

- material: fused silica;
- size:  $l = 30$  m,  $\varnothing = 0.25$  mm;
- stationary phase: macrogol 20 000 R (0.5  $\mu$ m).

Carrier gas: helium for chromatography R.

Flow rate: 1.5 mL/min.

Split ratio: 1:15.

Temperature:

- column: 170 °C;
- injection port: 210 °C;
- detector: 230 °C.

Detection: flame ionisation.

Injection: 1  $\mu$ L.

Run time: twice the retention time of the internal standard.

Relative retention with reference to the internal standard (retention time = about 6 min): impurity D = about 1.6.

System suitability: reference solution:

- resolution: minimum 2.0 between the peak due to impurity D and the nearest peak due to the solvent (blank solution);
- signal-to-noise ratio: minimum 10 for the peak due to impurity D.

Limit:

- impurity D: calculate the ratio ( $R$ ) of the area of the peak due to impurity D to the area of the peak due to the internal standard from the chromatogram obtained with the reference solution; from the chromatogram obtained with the test solution, calculate the ratio of the area of the peak due to impurity D to the area of the peak due to the internal standard: this ratio is not greater than  $R$  (50 ppm).

**Related substances.** Liquid chromatography (2.2.29).

**Test solution.** Dissolve 10.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 mL with the mobile phase.

**Reference solution (a).** Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

**Reference solution (b).** Dissolve 5.0 mg of nitrosotriaminopyrimidine CRS (impurity A) in the mobile phase and dilute to 100.0 mL with the mobile phase. Dilute 1.0 mL of the solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

**Reference solution (c).** Dissolve the contents of a vial of triamterene impurity B CRS in 200  $\mu$ L of dimethyl sulfoxide R. Add 5.0 mL of the test solution and dilute to 50.0 mL with the mobile phase. Filter the solution through a membrane filter (nominal pore size 0.45  $\mu$ m) before injection.

Column:

- size:  $l = 0.25$  m,  $\varnothing = 4.0$  mm;
- stationary phase: spherical end-capped octylsilyl silica gel for chromatography R (5  $\mu$ m).

Mobile phase: butylamine R, acetonitrile R, methanol R, water R (2:200:200:600 V/V/V/V), adjusted to pH 5.3 with acetic acid R.

Flow rate: 1 mL/min.

Detection: spectrophotometer at 320 nm and at 355 nm.

Injection: 50  $\mu$ L.

Relative retention with reference to triamterene (retention time = about 5 min): impurity A = about 0.6; impurity B = about 0.8; impurity C = about 1.7.

System suitability:

- resolution: minimum 1.5 between the peaks due to impurity B and triamterene in the chromatogram obtained with reference solution (c) at 355 nm; if necessary, increase the quantity of water R in the mobile phase;
- signal-to-noise ratio: minimum 10 for the principal peak in the chromatogram obtained with reference solution (b) at 320 nm.

Limits:

- correction factors: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity B = 1.8; impurity C = 1.5;
- impurity A at 320 nm: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (b) (50 ppm);
- impurities B, C at 355 nm: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- unspecified impurities at 355 nm: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);

- *total at 355 nm*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- *disregard limit at 355 nm*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Loss on drying** (2.2.32): maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

#### ASSAY

Dissolve 0.150 g in 5 mL of *anhydrous formic acid R* and add 100 mL of *anhydrous acetic acid R*. Titrate with 0.1 M *perchloric acid*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *perchloric acid* is equivalent to 25.33 mg of  $C_{12}H_{11}N_7$ .

#### STORAGE

Protected from light.

#### IMPURITIES

*Specified impurities: A, B, C, D.*

A. 5-nitrosopyrimidine-2,4,6-triamine (nitrosotriaminopyrimidine),

B. R = OH, R' = NH<sub>2</sub>; 2,7-diamino-6-phenylpteridin-4-ol,

C. R = NH<sub>2</sub>, R' = OH; 2,4-diamino-6-phenylpteridin-7-ol,

D. phenylacetonitrile (benzyl cyanide).

**Solubility**: practically insoluble in water, very soluble in acetone, in methanol and in methylene chloride.

#### IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

*Preparation*: discs.

*Comparison*: *tribenoside CRS*.

#### TESTS

**Solution S**. Dissolve 4.00 g in *methanol R* and dilute to 20 mL with the same solvent.

**Appearance of solution**. Solution S is clear (2.2.1) and its absorbance (2.2.25) at 420 nm has a maximum of 0.10.

**Specific optical rotation** (2.2.7): –31.0 to –40.0.

Dilute 2.0 mL of solution S to 20.0 mL with *methanol R*.

**Related substances**. Liquid chromatography (2.2.29).

*Test solution (a)*. Dissolve 1.000 g of the substance to be examined in a mixture of 5 volumes of *water R* and 95 volumes of *acetonitrile R* and dilute to 25.0 mL with the same mixture of solvents.

*Test solution (b)*. Dissolve 50.0 mg of the substance to be examined in a mixture of 5 volumes of *water R* and 95 volumes of *acetonitrile R* and dilute to 50.0 mL with the same mixture of solvents.

*Reference solution (a)*. Dilute 25.0 mg of *benzaldehyde R* and 30.0 mg of *tribenoside impurity A CRS* to 100.0 mL with *acetonitrile R*. Introduce 20.0 mL of this solution into a 50 mL volumetric flask, add 2.5 mL of *water R* and dilute to 50.0 mL with *acetonitrile R*.

*Reference solution (b)*. Dissolve 50.0 mg of *tribenoside CRS* in a mixture of 5 volumes of *water R* and 95 volumes of *acetonitrile R* and dilute to 50.0 mL with the same mixture of solvents.

*Reference solution (c)*. Dissolve 12.0 mg of *benzyl ether R* in a mixture of 5 volumes of *water R* and 95 volumes of *acetonitrile R* and dilute to 100.0 mL with the same mixture of solvents.

#### Column:

- *size*:  $l = 0.15$  m,  $\varnothing = 4.6$  mm,
- *stationary phase*: octadecylsilyl silica gel for chromatography R (3  $\mu$ m).

#### Mobile phase:

- *mobile phase A*: 0.1 per cent V/V solution of *phosphoric acid R*,
- *mobile phase B*: *acetonitrile R*,

01/2008:1740  
corrected 7.0

## TRIBENOSIDE

### Tribenosidum

$C_{29}H_{34}O_6$   
[10310-32-4]

$M_r$  478.6

#### DEFINITION

Mixture of  $\alpha$ - and  $\beta$ -anomers of ethyl 3,5,6-tri-*O*-benzyl-D-glucofuranoside.

*Content*: 96.0 per cent to 102.0 per cent.

#### CHARACTERS

*Appearance*: yellowish to pale yellow, clear, viscous liquid.

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 40	55 → 10	45 → 90
40 - 55	10	90

*Flow rate*: 1.3 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 20  $\mu$ L; inject test solution (a) and reference solutions (a), (b) and (c).

*Relative retentions* with reference to the  $\beta$ -anomer of tribenoside (retention time = about 18 min):  $\alpha$ -anomer = about 1.1; impurity C = about 0.2; impurity B = about 0.6; impurity D = about 0.8; impurity A = about 1.4.

*System suitability*: reference solution (b):

- *resolution*: minimum 3.0 between the peaks due to the  $\alpha$ -anomer and to the  $\beta$ -anomer of tribenoside.

#### Limits:

- *impurity A*: not more than 1.7 times the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.5 per cent),

- *impurity C*: not more than twice the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.5 per cent); if the area of the peak due to impurity C in the chromatogram obtained with the test solution is greater than the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.25 per cent), dilute the test solution to obtain an area equal to or smaller than the area of the peak in the chromatogram obtained with reference solution (a); calculate the content of impurity C taking into account the dilution factor;
- *impurity D*: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.3 per cent),
- *any other impurity*: not more than the area of the peak due to impurity A in the chromatogram obtained with reference solution (a) (0.3 per cent),
- *total*: not more than 6.7 times the area of the peak due to impurity A in the chromatogram obtained with reference solution (a) (2.0 per cent),
- *disregard limit*: 0.17 times the area of the peak due to impurity A in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Heavy metals (2.4.8)**: maximum 20 ppm.

Dilute 5.0 mL of solution S to 20.0 mL with *methanol R*. 12 mL of the solution complies with limit test B. Prepare the standard using lead standard solution (1 ppm Pb) obtained by diluting *lead standard solution (100 ppm Pb) R* with *methanol R*.

#### ASSAY

Liquid chromatography (2.2.29) as described in the test for related substances with the following modification.

*Injection*: test solution (b) and reference solution (b).

Calculate the sum of the percentage contents of the  $\alpha$ -anomer and the  $\beta$ -anomer of tribenoside.

#### STORAGE

Under nitrogen, in an airtight container.

#### IMPURITIES

- A. R = CH<sub>2</sub>-C<sub>6</sub>H<sub>5</sub>: 3,5,6-tri-*O*-benzyl-1,2-*O*-(1-methylethylidene)- $\alpha$ -D-glucopyranose,
- B. R = H: 3,5-di-*O*-benzyl-1,2-*O*-(1-methylethylidene)- $\alpha$ -D-glucopyranose,
- C. C<sub>6</sub>H<sub>5</sub>-CHO: benzaldehyde,
- D. C<sub>6</sub>H<sub>5</sub>-CH<sub>2</sub>-O-CH<sub>2</sub>-C<sub>6</sub>H<sub>5</sub>: dibenzyl ether.

01/2009:1770  
corrected 6.6

## TRIBUTYL ACETYLACRYLATE

### Tributylis acetylacrylas

C<sub>20</sub>H<sub>34</sub>O<sub>8</sub>  
[77-90-7]

*M<sub>r</sub>* 402.5

#### DEFINITION

Tributyl 2-(acetyloxy)propane-1,2,3-tricarboxylate.

*Content*: 99.0 per cent to 101.0 per cent (anhydrous substance).

#### CHARACTERS

*Appearance*: clear, oily liquid.

*Solubility*: not miscible with water, miscible with ethanol (96 per cent) and with methylene chloride.

#### IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

*Preparation*: thin films between 2 sodium chloride plates.

*Comparison*: *tributyl acetylacrylate CRS*.

#### TESTS

**Appearance.** The substance to be examined is clear (2.2.1) and not more intensely coloured than reference solution BY<sub>6</sub> (2.2.2, *Method II*).

**Acidity.** Dilute 10 g with 10 mL of previously neutralised *ethanol (96 per cent) R* and add 0.5 mL of *bromothymol blue solution R2*. Not more than 0.3 mL of 0.1 M *sodium hydroxide* is required to change the colour of the indicator to blue.

**Refractive index (2.2.6)**: 1.442 to 1.445.

**Related substances.** Gas chromatography (2.2.28).

*Test solution.* Dissolve 0.5 g of the substance to be examined in *methylene chloride R* and dilute to 20 mL with the same solvent.

*Reference solution (a).* Dissolve 50 mg of the substance to be examined and 50 mg of *tributyl citrate R* (impurity A) in *methylene chloride R* and dilute to 20 mL with the same solvent.

*Reference solution (b).* Dilute 1.0 mL of the test solution to 20.0 mL with *methylene chloride R*. Dilute 1.0 mL of this solution to 25.0 mL with *methylene chloride R*.

*Reference solution (c).* Dissolve the contents of a vial of *tributyl acetylacrylate for peak identification CRS* (containing impurities B and C) in 1 mL of *methylene chloride R*.

*Column*:

- *material*: fused silica;
- *size*: *l* = 30 m,  $\varnothing$  = 0.25 mm;
- *stationary phase*: poly[(cyanopropyl)(methyl)-[(phenyl)(methyl)siloxane R (film thickness 0.25  $\mu$ m)].

*Carrier gas*: helium for chromatography R.

*Linear velocity*: 36 cm/s.

*Split ratio*: 1:20.

*Temperature*:

	Time (min)	Temperature (°C)
Column	0 - 7	70 → 210
	7 - 50	210
Injection port		250
Detector		250

*Detection*: flame ionisation.

*Injection*: 1  $\mu$ L; inject via an inert, glass-lined injection port using an automatic injection device.

*Identification of impurities*: use the chromatogram supplied with *tributyl acetylacrylate for peak identification CRS* and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities B and C; use the chromatogram obtained with reference solution (a) to identify the peak due to impurity A.

*Relative retention* with reference to tributyl acetylacrylate (retention time = about 24 min): impurity B = about 0.70; impurity C = about 0.83; impurity A = about 0.87.

*System suitability:*

- *resolution*: minimum 2.0 between the peaks due to impurity A and tributyl acetylacrylate in the chromatogram obtained with reference solution (a);
- *repeatability*: maximum relative standard deviation of 5.0 per cent after 6 injections of reference solution (b).

*Limits:*

- *impurity A*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.6 per cent);
- *impurity C*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.4 per cent);
- *impurity B*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
- *unspecified impurities*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);
- *disregard limit*: 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Heavy metals** (2.4.8): maximum 10 ppm.

2.0 g complies with test F. Prepare the reference solution using 2 mL of *lead standard solution* (10 ppm Pb) R.

**Water** (2.5.12): maximum 0.25 per cent, determined on 2.00 g.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

## ASSAY

Introduce 1.500 g into a 250 mL borosilicate glass flask. Add 25 mL of *2-propanol* R, 50 mL of *water* R, 25.0 mL of *1 M sodium hydroxide* and a few glass beads. Heat under a reflux condenser for 3 h. Allow to cool. Add 1 mL of *phenolphthalein solution* R1 and titrate with *1 M hydrochloric acid*. Carry out a blank titration.

1 mL of *1 M sodium hydroxide* is equivalent to 100.6 mg of C<sub>20</sub>H<sub>34</sub>O<sub>8</sub>.

## IMPURITIES

*Specified impurities: A, B, C.*

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use* (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): D, E.

A. tributyl 2-hydroxypropane-1,2,3-tricarboxylate (tributyl citrate),

B. tributyl propene-1,2,3-tricarboxylate (tributyl aconitate),

C. 1,2-dibutyl 3-(2-methylpropyl) 2-(acetyloxy)propane-1,2,3-tricarboxylate,

D. R = H: butan-1-ol,

E. R = CO-CH<sub>3</sub>: butyl acetate.

07/2010:1682

TRI-*n*-BUTYL PHOSPHATETri-*n*-butylis phosphas

C<sub>12</sub>H<sub>27</sub>O<sub>4</sub>P  
[126-73-8]

*M*<sub>r</sub> 266.3

## CHARACTERS

*Appearance*: clear, colourless or pale yellow liquid.

*Solubility*: slightly soluble in water, miscible with ethanol (96 per cent V/V).

bp: about 289 °C, with decomposition.

## IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

*Comparison*: tri-*n*-butyl phosphate CRS.

## TESTS

**Appearance.** The substance to be examined is clear (2.2.1) and not more intensely coloured than reference solution Y<sub>6</sub> (2.2.2, Method II).

**Acidity.** Dissolve 50 mL in 50 mL of *ethanol* (96 per cent V/V) R previously adjusted with 0.02 M *potassium hydroxide* or 0.02 M *hydrochloric acid* to a bluish-green colour, using 0.5 mL of *bromothymol blue solution* R1 as indicator. Titrate with 0.02 M *potassium hydroxide* to the initial bluish-green coloration. Not more than 0.8 mL of 0.02 M *potassium hydroxide* is required.

**Related substances.** Gas chromatography (2.2.28): use the normalisation procedure.

*Test solution.* The substance to be examined.

*Reference solution.* Dissolve 10 mg of the substance to be examined and 10 mg of *methyl myristate* R in *methylene chloride* R and dilute to 10 mL with the same solvent.

*Column*:

- *material*: fused silica;
  - *size*: *l* = 30 m, Ø = 0.32 mm;
  - *stationary phase*: poly(dimethyl)siloxane R (5 µm).
- Carrier gas*: helium for chromatography R.

*Linear velocity*: 32 cm/s.

*Split ratio*: 65:1.

*Temperature*:

- *column*: 250 °C;
- *injection port and detector*: 250 °C.

*Detection*: flame ionisation.

*Injection*: 1 µL.

*Run time*: twice the retention time of tri-*n*-butyl phosphate.

*System suitability*: reference solution:

- *resolution*: minimum 10 between the peaks due to tri-*n*-butyl phosphate and methyl myristate.

**Limits:**

- *any impurity*: for each impurity, maximum 0.3 per cent;
- *total*: maximum 0.5 per cent;
- *disregard limit*: 0.01 per cent.

**Chlorides** (2.4.4): maximum 200 ppm.

Dissolve 0.25 g in 15 mL of *ethanol* (70 per cent V/V) R. The solution complies with the test. Prepare the reference solution using 10 mL of *chloride standard solution* (5 ppm Cl) R and 5 mL of *anhydrous ethanol* R.

**Heavy metals** (2.4.8): maximum 20 ppm.

Dissolve 2.0 g in 13 mL of *ethanol* (96 per cent V/V) R and dilute to 20.0 mL with *water* R. 12 mL of the solution complies with test B. Prepare the reference solution using lead standard solution (2 ppm Pb) obtained by diluting *lead standard solution* (100 ppm Pb) R with a mixture of 5 volumes of *water* R and 13 volumes of *ethanol* (96 per cent V/V) R.

**Water** (2.5.32): maximum 0.1 per cent, determined on 1.0 g.

**STORAGE**

Protected from light.

**IMPURITIES**

A. dibutyl hydrogen phosphate,

B. butyl dihydrogen phosphate,

C. H<sub>3</sub>C-[CH<sub>2</sub>]<sub>3</sub>-OH: butan-1-ol,

**TRICHLOROACETIC ACID**

## Acidum trichloroaceticum

C<sub>2</sub>HCl<sub>3</sub>O<sub>2</sub>  
[76-03-9]

M<sub>r</sub> 163.4

**DEFINITION**

2,2,2-Trichloroacetic acid.

*Content*: 98.0 per cent to 100.5 per cent.

**CHARACTERS**

*Appearance*: white or almost white, crystalline mass or colourless crystals, very deliquescent.

*Solubility*: very soluble in water, in alcohol and in methylene chloride.

**IDENTIFICATION**

*First identification*: A.

*Second identification*: B, C.

A. Infrared absorption spectrophotometry (2.2.24).

*Comparison*: Ph. Eur. reference spectrum of trichloroacetic acid.

B. To 0.5 mL of solution S (see Tests) add 2 mL of *pyridine* R and 5 mL of *strong sodium hydroxide solution* R. Shake vigorously and heat in a water-bath at 60-70 °C for 5 min. The upper layer shows an intense red colour.

C. Solution S is strongly acidic (2.2.4).

**TESTS**

**Solution S**. Dissolve 2.5 g in *water* R and dilute to 25 mL with the same solvent.

**Appearance of solution**. Solution S is clear (2.2.1) and not more intensely coloured than reference solution BY<sub>7</sub> (2.2.2, *Method II*).

**Chlorides** (2.4.4): maximum 100 ppm.

Dilute 5 mL of solution S to 15 mL with *water* R. The solution complies with the limit test for chlorides.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

**ASSAY**

Dissolve 0.150 g in 20 mL of *water* R. Titrate with 0.1 M *sodium hydroxide*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *sodium hydroxide* is equivalent to 16.34 mg of C<sub>2</sub>HCl<sub>3</sub>O<sub>2</sub>.

**STORAGE**

In an airtight container.

01/2008:1479 Retention time: triethyl citrate = about 13.6 min.

System suitability: reference solution:

- resolution: minimum 1.5 between the peaks due to triethyl citrate and methyl tridecanoate.

Limits:

- any impurity: for each impurity, maximum 0.2 per cent;
- total: maximum 0.5 per cent;
- disregard limit: 0.04 per cent.

Heavy metals (2.4.8): maximum 5 ppm.

Dissolve 4.0 g in 8 mL of ethanol (96 per cent) R and dilute to 20 mL with water R. 12 mL of the solution complies with test B. Prepare the reference solution using lead standard solution (1 ppm) obtained by diluting lead standard solution (100 ppm Pb) R with a mixture of equal volumes of ethanol (96 per cent) R and water R.

Water (2.5.12): maximum 0.25 per cent, determined on 1.000 g.

Sulfated ash (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Introduce 1.500 g into a 250 mL borosilicate-glass flask fitted with a reflux condenser. Add 25 mL of 2-propanol R, 50 mL of water R, 25.0 mL of 1 M sodium hydroxide and a few glass beads. Heat under a reflux condenser for 1 h. Allow to cool. Add 1 mL of phenolphthalein solution R1 and titrate with 1 M hydrochloric acid. Carry out a blank titration.

1 mL of 1 M sodium hydroxide is equivalent to 92.1 mg of C<sub>12</sub>H<sub>20</sub>O<sub>7</sub>.

STORAGE

In an airtight container.

IMPURITIES

A. triethyl propene-1,2,3-tricarboxylate (triethyl aconitate).

## TRIETHYL CITRATE

### Triethylis citras

C<sub>12</sub>H<sub>20</sub>O<sub>7</sub>  
[77-93-0]M<sub>r</sub> 276.3

## DEFINITION

Triethyl 2-hydroxypropane-1,2,3-tricarboxylate.

Content: 98.5 per cent to 101.0 per cent (anhydrous substance).

## CHARACTERS

Appearance: clear, viscous, colourless or almost colourless, hygroscopic liquid.

Solubility: soluble in water, miscible with ethanol (96 per cent), slightly soluble in fatty oils.

## IDENTIFICATION

First identification: A, B.

Second identification: A, C, D.

A. Refractive index (see Tests).

B. Infrared absorption spectrophotometry (2.2.24).

Comparison: Ph. Eur. reference spectrum of triethyl citrate.

C. It gives the reaction of esters (2.3.1).

D. To 0.5 mL add 5 mL of ethanol (96 per cent) R and 4 mL of dilute sodium hydroxide solution R. Boil under reflux for about 10 min. 2 mL of the solution gives the reaction of citrates (2.3.1).

## TESTS

Appearance. The substance to be examined is clear (2.2.1) and not more intensely coloured than reference solution BY<sub>6</sub> (2.2.2, Method II).

Acidity. Dilute 10 g with 10 mL of previously neutralised ethanol (96 per cent) R, add 0.5 mL of bromothymol blue solution R2. Not more than 0.3 mL of 0.1 M sodium hydroxide is required to change the colour of the indicator to blue.

Refractive index (2.2.6): 1.440 to 1.446.

Related substances. Gas chromatography (2.2.28): use the normalisation procedure.

Test solution. Dissolve 1.0 mL of the substance to be examined in methylene chloride R and dilute to 50.0 mL with the same solvent.

Reference solution. Dissolve 1.0 mL of the substance to be examined and 0.5 mL of methyl tridecanoate R in methylene chloride R, then dilute to 50.0 mL with the same solvent.

Column:

- material: fused silica;
- size: l = 30 m, Ø = 0.32 mm;
- stationary phase: poly(dimethyl)siloxane R (5 µm).

Carrier gas: helium for chromatography R.

Linear velocity: about 26 cm/s.

Split ratio: about 1:50.

Temperature:

- column: 200 °C;
- injection port and detector: 220 °C.

Detection: flame ionisation.

Injection: 1.0 µL.

Run time: twice the retention time of triethyl citrate.

01/2008:0059  
corrected 6.0

## TRIFLUOPERAZINE HYDROCHLORIDE

### Trifluoperazini hydrochloridum

C<sub>21</sub>H<sub>26</sub>Cl<sub>2</sub>F<sub>3</sub>N<sub>3</sub>S  
[440-17-5]M<sub>r</sub> 480.4

## DEFINITION

Trifluoperazine hydrochloride contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of 10-[3-(4-methylpiperazin-1-yl)propyl]-2-(trifluoromethyl)-10H-phenothiazine dihydrochloride, calculated with reference to the dried substance.

## CHARACTERS

A white to pale yellow, crystalline powder, hygroscopic, freely soluble in water, soluble in alcohol.

It melts at about 242 °C, with decomposition.

01/2011:1377

## IDENTIFICATION

- A. *Protect the solutions from bright light and measure the absorbances immediately.* Dissolve 50 mg in 0.1 M hydrochloric acid and dilute to 500 mL with the same acid. Examined between 280 nm and 350 nm, the solution shows an absorption maximum (2.2.25) at 305 nm. Dilute 5 mL of the solution to 100 mL with 0.1 M hydrochloric acid. Examined between 230 nm and 280 nm, this solution shows an absorption maximum at 255 nm. The specific absorbance at this maximum is about 650.
- B. It complies with the identification test for phenothiazines by thin-layer chromatography (2.3.3): use trifluoperazine hydrochloride CRS to prepare the reference solution.
- C. Place 0.25 g in a 100 mL separating funnel, add 5 mL of water R and 2 mL of dilute sodium hydroxide solution R. Shake vigorously with 20 mL of ether R. Wash the ether layer with 5 mL of water R, add 0.15 g of maleic acid R and evaporate the ether. The residue, recrystallised from 30 mL of alcohol R and dried, melts (2.2.14) at about 192 °C.
- D. Dissolve about 0.5 mg in 1 mL of water R, add 0.1 mL of bromine water R and shake for about 1 min. Add dropwise 1 mL of sulfuric acid R with constant, vigorous agitation. A red colour develops.
- E. Dissolve about 50 mg in 5 mL of water R and add 2 mL of nitric acid R. A dark-red colour develops which turns to pale yellow. The solution gives reaction (a) of chlorides (2.3.1).

## TESTS

**pH** (2.2.3). Dissolve 2.0 g in carbon dioxide-free water R and dilute to 20 mL with the same solvent. The pH of the solution is 1.6 to 2.5.

**Related substances.** Carry out the test protected from bright light.

Examine by thin-layer chromatography (2.2.27), using a TLC silica gel GF<sub>254</sub> plate R.

**Test solution.** Dissolve 0.2 g of the substance to be examined in a mixture of 5 volumes of diethylamine R and 95 volumes of methanol R and dilute to 10 mL with the same mixture of solvents. Prepare immediately before use.

**Reference solution.** Dilute 1 mL of the test solution to 200 mL with a mixture of 5 volumes of diethylamine R and 95 volumes of methanol R.

Apply to the plate 10 µL of each solution. Develop over a path of 12 cm using a mixture of 10 volumes of acetone R, 10 volumes of diethylamine R and 80 volumes of cyclohexane R. Allow the plate to dry in air and examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with the test solution, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with the reference solution (0.5 per cent).

**Loss on drying** (2.2.32). Not more than 1.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (2.4.14). Not more than 0.1 per cent, determined on 1.0 g.

## ASSAY

Dissolve 0.200 g in 50 mL of alcohol R and add 5.0 mL of 0.01 M hydrochloric acid. Carry out a potentiometric titration (2.2.20), using 0.1 M sodium hydroxide. Read the volume added between the 2 points of inflexion.

1 mL of 0.1 M sodium hydroxide is equivalent to 48.04 mg of C<sub>10</sub>H<sub>7</sub>F<sub>3</sub>O<sub>4</sub>.

## STORAGE

Store in an airtight container, protected from light.

## TRIFLUSAL

## Triflusalum

C<sub>10</sub>H<sub>7</sub>F<sub>3</sub>O<sub>4</sub>  
[322-79-2]

M<sub>r</sub> 248.2

## DEFINITION

2-(Acetyloxy)-4-(trifluoromethyl)benzoic acid.

**Content:** 98.5 per cent to 101.5 per cent (dried substance).

## CHARACTERS

**Appearance:** white or almost white, crystalline powder.

**Solubility:** practically insoluble in water, very soluble in anhydrous ethanol, freely soluble in methylene chloride.

mp: about 118 °C, with decomposition.

## IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

**Comparison:** triflusal CRS.

## TESTS

**Related substances.** Liquid chromatography (2.2.29).

**Test solution.** Dissolve 0.200 g of the substance to be examined in acetonitrile R and dilute to 20.0 mL with the same solvent. Prepare the solution immediately before use.

**Reference solution (a).** Dissolve 5.0 mg of triflusal impurity B CRS in acetonitrile R and dilute to 10.0 mL with the same solvent.

**Reference solution (b).** Dilute 1.0 mL of reference solution (a) to 25.0 mL with acetonitrile R.

**Reference solution (c).** Dissolve 2.5 mg of the substance to be examined in acetonitrile R, add 5 mL of reference solution (a) and dilute to 10.0 mL with acetonitrile R. Prepare the solution immediately before use.

## Column:

- size:  $l = 0.15$  m,  $\varnothing = 4.0$  mm;
- stationary phase: end-capped octadecylsilyl silica gel for chromatography R (4-5 µm).

## Mobile phase:

- mobile phase A: 0.5 per cent V/V solution of phosphoric acid R;
- mobile phase B: acetonitrile R;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 20	80 → 30	20 → 70
20 - 25	30	70

**Flow rate:** 1.2 mL/min.

**Detection:** spectrophotometer at 237 nm.

**Injection:** 10 µL of the test solution and reference solutions (b) and (c).

**Identification of impurities:** use the chromatogram obtained with reference solution (b) to identify the peak due to impurity B.

**Relative retention** with reference to triflusal (retention time = about 11 min): impurity B = about 1.2.

**System suitability:** reference solution (c):

- resolution: minimum 3.0 between the peaks due to triflusal and impurity B.

01/2010:0868

## Limits:

- *impurity B*: not more than 1.5 times the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.3 per cent);
- *unspecified impurities*: for each impurity, not more than 0.5 times the area of the peak due to impurity B in the chromatogram obtained with reference solution (b) (0.10 per cent);
- *sum of impurities other than B*: not more than 0.5 times the area of the peak due to impurity B in the chromatogram obtained with reference solution (b) (0.1 per cent);
- *disregard limit*: 0.25 times the area of the peak due to impurity B in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Heavy metals** (2.4.8): maximum 10 ppm.

Dissolve 2.0 g in 12 mL of *ethanol* (96 per cent) R and dilute to 20 mL with *water* R. 12 mL of the solution complies with test B. Prepare the reference solution using lead standard solution (1 ppm Pb) obtained by diluting *lead standard solution* (100 ppm Pb) R with a mixture of 2 volumes of *water* R and 3 volumes of *ethanol* (96 per cent) R.

**Loss on drying** (2.2.32): maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo*.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g in a platinum crucible.

## ASSAY

Dissolve 0.200 g in 50 mL of *anhydrous ethanol* R. Titrate with 0.1 M *sodium hydroxide*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *sodium hydroxide* is equivalent to 24.82 mg of  $C_{10}H_7F_3O_4$ .

## STORAGE

In an airtight container, at a temperature not exceeding 25 °C.

## IMPURITIES

*Specified impurities*: B.

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use* (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): A, C, D.

- A. R1 = H, R2 = CO-CH<sub>3</sub>, R4 = CO<sub>2</sub>H: 2-(acetyloxy)benzene-1,4-dicarboxylic acid (2-acetoxyterephthalic acid),
- B. R1 = R2 = H, R4 = CF<sub>3</sub>: 2-hydroxy-4-(trifluoromethyl)benzoic acid (4-(trifluoromethyl)salicylic acid),
- C. R1 = R2 = CO-CH<sub>3</sub>, R4 = CF<sub>3</sub>: acetic 2-(acetyloxy)-4-(trifluoromethyl)benzoic anhydride,

- D. 2-[[2-(acetyloxy)-4-(trifluoromethyl)benzoyl]oxy]-4-(trifluoromethyl)benzoic acid.

## TRIGLYCERIDES, MEDIUM-CHAIN

## Triglycerida saturata media

## DEFINITION

Mixture of triglycerides of saturated fatty acids, mainly of caprylic (octanoic) acid and of capric (decanoic) acid. The fatty acids are obtained from the oil extracted from the hard, dried fraction of the endosperm of *Cocos nucifera* L. or from the dried endosperm of *Elaeis guineensis* Jacq.

*Content*: minimum 95.0 per cent of saturated fatty acids with 8 and 10 carbon atoms.

## CHARACTERS

*Appearance*: colourless or slightly yellowish, oily liquid.

*Solubility*: practically insoluble in water, miscible with ethanol (96 per cent), with methylene chloride, with light petroleum and with fatty oils.

## IDENTIFICATION

*First identification*: B, C.

*Second identification*: A, D.

- A. Heat 3.0 g under a reflux condenser for 30 min with 50 mL of a mixture of equal volumes of *ethanol* (96 per cent) R and 2 M *alcoholic potassium hydroxide* R. Reserve 10 mL of the mixture for identification test D. To 40 mL of the mixture add 30 mL of *water* R, evaporate the ethanol and acidify the hot solution with 25 mL of *dilute hydrochloric acid* R. After cooling, shake with 50 mL of *peroxide-free ether* R. Wash the ether layer with 3 quantities, each of 10 mL, of *sodium chloride solution* R, dry over *anhydrous sodium sulfate* R and filter. Evaporate the ether and determine the acid value (2.5.1) of the residue, using 0.300 g. The acid value is 350 to 390.
- B. Saponification value (see Tests).
- C. Composition of fatty acids (see Tests).
- D. Evaporate 10 mL of the alcoholic mixture obtained in identification test A to dryness on a water-bath. Transfer the residue into a test-tube, add 0.3 mL of *sulfuric acid* R and close the test-tube with a stopper through which a U-shaped glass tube is inserted. One end of the U-tube is dipped into 3 mL of a 10 g/L solution of *tryptophan* R in a mixture of equal volumes of *sulfuric acid* R and *water* R. Heat the test-tube in a silicone-oil bath at 180 °C for 10 min and collect the liberated fumes in the tryptophan reagent. Heat the tryptophan reagent on a water-bath for 1 min. A violet colour develops.

## TESTS

**Appearance**. The substance to be examined is clear (2.2.1) and not more intensely coloured than reference solution Y<sub>3</sub> (2.2.2, *Method I*).

**Alkaline impurities**. Dissolve 2.00 g in a mixture of 1.5 mL of *ethanol* (96 per cent) R and 3.0 mL of *ether* R. Add 0.05 mL of *bromophenol blue solution* R. Not more than 0.15 mL of 0.01 M *hydrochloric acid* is required to change the colour of the indicator to yellow.

**Relative density** (2.2.5): 0.93 to 0.96.

**Refractive index** (2.2.6): 1.440 to 1.452.

**Viscosity** (2.2.9): 25 mPas to 33 mPas.

**Acid value** (2.5.1): maximum 0.2.

**Hydroxyl value** (2.5.3, *Method A*): maximum 10.

**Iodine value** (2.5.4): maximum 1.0.

**Peroxide value** (2.5.5, *Method A*): maximum 1.0.

**Saponification value** (2.5.6): 310 to 360.

**Unsaponifiable matter** (2.5.7): maximum 0.5 per cent, determined on 5.0 g.

**Composition of fatty acids.** Gas chromatography (2.4.22, Method C).

**Column:**

- *material*: fused silica;
- *size*:  $l = 30$  m,  $\varnothing = 0.32$  mm;
- *stationary phase*: macrogol 20 000 R (film thickness 0.5  $\mu$ m).

*Carrier gas*: helium for chromatography R.

*Flow rate*: 1.3 mL/min.

*Temperature:*

	Time (min)	Temperature (°C)
Column	0 - 1	70
	1 - 35	70 → 240
	35 - 50	240
Injection port		250
Detector		250

*Detection*: flame ionisation.

*Split ratio*: 1:100.

*Composition of the fatty-acid fraction of the substance:*

- *caproic acid*: maximum 2.0 per cent;
- *caprylic acid*: 50.0 per cent to 80.0 per cent;
- *capric acid*: 20.0 per cent to 50.0 per cent;
- *lauric acid*: maximum 3.0 per cent;
- *myristic acid*: maximum 1.0 per cent.

**Chromium:** maximum 0.05 ppm, if intended for use in parenteral nutrition.

Atomic absorption spectrometry (2.2.23, Method II).

*Test solution.* Dissolve 2.0 g of the substance to be examined in methyl isobutyl ketone R3 and dilute to 10.0 mL with the same solvent.

*Solution A.* Dilute 0.100 mL of chromium liposoluble standard solution (1000 ppm Cr) R to 10.0 mL with methyl isobutyl ketone R3.

*Stock solution.* Dilute 0.100 mL of solution A to 10.0 mL with methyl isobutyl ketone R3.

*Reference solutions.* Prepare 3 reference solutions by dissolving for each 2.0 g of the substance to be examined in the minimum volume of methyl isobutyl ketone R3, adding 0.5 mL, 1.0 mL and 2.0 mL, respectively, of stock solution and diluting to 10.0 mL with methyl isobutyl ketone R3.

*Source:* chromium hollow-cathode lamp.

*Wavelength:* 357.8 nm.

*Atomic generator:* graphite furnace.

*Carrier gas:* argon R.

**Copper:** maximum 0.1 ppm, if intended for use in parenteral nutrition.

Atomic absorption spectrometry (2.2.23, Method II).

*Test solution.* Dissolve 2.0 g of the substance to be examined in methyl isobutyl ketone R3 and dilute to 10.0 mL with the same solvent.

*Solution A.* Dilute 0.100 mL of copper liposoluble standard solution (1000 ppm Cu) R to 10.0 mL with methyl isobutyl ketone R3.

*Stock solution.* Dilute 0.100 mL of solution A to 10.0 mL with methyl isobutyl ketone R3.

*Reference solutions.* Prepare 3 reference solutions by dissolving for each 2.0 g of the substance to be examined in the minimum volume of methyl isobutyl ketone R3, adding 1.0 mL, 2.0 mL and 4.0 mL, respectively, of stock solution and diluting to 10.0 mL with methyl isobutyl ketone R3.

*Source:* copper hollow-cathode lamp.

*Wavelength:* 324.7 nm.

*Atomic generator:* graphite furnace.

*Carrier gas:* argon R.

**Lead:** maximum 0.1 ppm, if intended for use in parenteral nutrition.

Atomic absorption spectrometry (2.2.23, Method II).

*Test solution.* Dissolve 2.0 g of the substance to be examined in methyl isobutyl ketone R3 and dilute to 10.0 mL with the same solvent.

*Solution A.* Dilute 0.100 mL of lead liposoluble standard solution (1000 ppm Pb) R to 10.0 mL with methyl isobutyl ketone R3.

*Stock solution.* Dilute 0.100 mL of solution A to 10.0 mL with methyl isobutyl ketone R3.

*Reference solutions.* Prepare 3 reference solutions by dissolving for each 2.0 g of the substance to be examined in the minimum volume of methyl isobutyl ketone R3, adding 1.0 mL, 2.0 mL and 4.0 mL, respectively, of stock solution and diluting to 10.0 mL with methyl isobutyl ketone R3.

*Source:* lead hollow-cathode lamp.

*Wavelength:* 283.3 nm.

*Atomic generator:* graphite furnace coated inside with palladium carbide; calcination is carried out in the presence of oxygen at a temperature below 800 °C.

*Carrier gas:* argon R.

**Nickel:** maximum 0.2 ppm, if intended for use in parenteral nutrition.

Atomic absorption spectrometry (2.2.23, Method II).

*Test solution.* Dissolve 2.0 g of the substance to be examined in methyl isobutyl ketone R3 and dilute to 10.0 mL with the same solvent.

*Solution A.* Dilute 0.100 mL of nickel liposoluble standard solution (1000 ppm Ni) R to 10.0 mL with methyl isobutyl ketone R3.

*Stock solution.* Dilute 0.100 mL of solution A to 10.0 mL with methyl isobutyl ketone R3.

*Reference solutions.* Prepare 3 reference solutions by dissolving for each 2.0 g of the substance to be examined in the minimum volume of methyl isobutyl ketone R3, adding 1.0 mL, 2.0 mL and 4.0 mL, respectively, of stock solution and diluting to 10.0 mL with methyl isobutyl ketone R3.

*Source:* nickel hollow-cathode lamp.

*Wavelength:* 232 nm.

*Atomic generator:* graphite furnace.

*Carrier gas:* argon R.

**Tin:** maximum 0.1 ppm, if intended for use in parenteral nutrition.

Atomic absorption spectrometry (2.2.23, Method II).

*Test solution.* Dissolve 2.0 g of the substance to be examined in methyl isobutyl ketone R3 and dilute to 10.0 mL with the same solvent.

*Solution A.* Dilute 0.100 mL of tin liposoluble standard solution (1000 ppm Sn) R to 10.0 mL with methyl isobutyl ketone R3.

*Stock solution.* Dilute 0.100 mL of solution A to 10.0 mL with methyl isobutyl ketone R3.

*Reference solutions.* Prepare 3 reference solutions by dissolving for each 2.0 g of the substance to be examined in the minimum volume of methyl isobutyl ketone R3, adding 1.0 mL, 2.0 mL and 4.0 mL, respectively, of stock solution and diluting to 10.0 mL with methyl isobutyl ketone R3.

*Source:* tin hollow-cathode lamp.

*Wavelength:* 286.3 nm.

*Atomic generator:* graphite furnace coated inside with palladium carbide.

*Carrier gas:* argon R.

**Heavy metals** (2.4.8): maximum 10 ppm, if intended for use other than parenteral nutrition.

2.0 g complies with test D. Prepare the reference solution using 2 mL of *lead standard solution* (10 ppm Pb) R.

**Water** (2.5.12): maximum 0.2 per cent, determined on 10.00 g.

**Total ash** (2.4.16): maximum 0.1 per cent, determined on 2.0 g.

#### STORAGE

In a well-filled container, protected from light.

#### LABELLING

The label states, where applicable, that the substance is intended for use in parenteral nutrition.

01/2008:1626  
corrected 6.0

## TRIHXYPHENIDYL HYDROCHLORIDE

### Trihexyphenidyli hydrochloridum

C<sub>20</sub>H<sub>32</sub>ClNO  
[52-49-3]

M<sub>r</sub> 337.9

04/2008:2032

## TRIGLYCEROL DIISOSTEARATE

### Triglyceroli diisostearas

#### DEFINITION

Mixture of polyglycerol diesters of mainly isostearic acid, obtained by esterification of polyglycerol and isostearic acid. The polyglycerol consists mainly of triglycerol.

#### CHARACTERS

*Appearance*: clear, yellowish, viscous liquid.

*Solubility*: practically insoluble in water, miscible with ethanol (96 per cent) and with fatty oils.

#### IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

*Preparation*: film between 2 plates of *sodium chloride* R.

*Comparison*: *triglycerol diisostearate* CRS.

B. Composition of fatty acids (see Tests).

#### TESTS

**Appearance of solution.** The solution is not more intensely coloured than reference solution BY<sub>3</sub> (2.2.2, *Method* I).

Mix 10 mL with 10 mL of *ethanol* (96 per cent) R.

**Acid value** (2.5.1): maximum 3.0, determined on 1.0 g.

**Hydroxyl value** (2.5.3, *Method* A): 180 to 230, determined on 0.25 g.

**Iodine value** (2.5.4, *Method* B): maximum 3.0.

**Peroxide value** (2.5.5, *Method* B): maximum 6.0.

**Saponification value** (2.5.6): 128 to 160.

**Composition of fatty acids** (2.4.22, *Method* B). Use the mixture of calibrating substances in Table 2.4.22.-1.

*Composition of the fatty-acid fraction of the substance*:

- *sum of the contents of the fatty acids eluting between palmitic acid and stearic acid*: minimum 60.0 per cent;
- *sum of the contents of myristic acid, palmitic acid and stearic acid*: maximum 11.0 per cent.

**Water** (2.5.12): maximum 0.5 per cent, determined on 2.00 g.

**Sulfated ash**: maximum 0.5 per cent, determined on 1.0 g.

Heat a silica crucible to redness for 30 min, allow to cool in a desiccator and weigh. Evenly distribute 1.00 g of the substance to be examined in the crucible and weigh. Dry at 100-105 °C for 1 h and ignite in a muffle furnace at 600 °C ± 25 °C, until the substance is thoroughly charred. Carry out the test for sulfated ash (2.4.14) on the residue obtained, starting with "Moisten the substance to be examined...".

#### STORAGE

In an airtight container, protected from light.

#### DEFINITION

(1*R*)-1-Cyclohexyl-1-phenyl-3-(piperidin-1-yl)propan-1-ol hydrochloride.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

#### CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: slightly soluble in water, sparingly soluble in ethanol (96 per cent) and in methylene chloride.

mp: about 250 °C, with decomposition.

#### IDENTIFICATION

*First identification*: A, D.

*Second identification*: B, C, D.

A. Infrared absorption spectrophotometry (2.2.24).

*Comparison*: *trihexyphenidyl hydrochloride* CRS.

B. Thin-layer chromatography (2.2.27).

*Test solution.* Dissolve 25 mg of the substance to be examined in a mixture of 20 volumes of *methanol* R and 80 volumes of *methylene chloride* R and dilute to 10 mL with the same mixture of solvents.

*Reference solution.* Dissolve 25 mg of *trihexyphenidyl hydrochloride* CRS in a mixture of 20 volumes of *methanol* R and 80 volumes of *methylene chloride* R and dilute to 10 mL with the same mixture of solvents.

*Plate*: TLC silica gel G plate R.

*Mobile phase*: *diethylamine* R, *hexane* R (5:95 V/V).

*Application*: 5 µL.

*Development*: over 2/3 of the plate.

*Drying*: in air.

*Detection*: spray with a 0.1 g/L solution of *chloroplatinic acid* R in *hydrochloric acid* R containing 0.4 per cent V/V of *hydriodic acid* R.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

C. Dissolve 0.5 g in 5 mL of warm *methanol* R and make just alkaline to *red litmus paper* R with *sodium hydroxide solution* R. A precipitate is formed which, after recrystallisation from *methanol* R, melts (2.2.14) at about 113 °C to 115 °C.

D. It gives reaction (a) of chlorides (2.3.1).

#### TESTS

**pH** (2.2.3): 5.2 to 6.2.

Dissolve 0.5 g with heating in 25 mL of *carbon dioxide-free water* R. Cool to room temperature and dilute to 50 mL with *carbon dioxide-free water* R.

**Optical rotation** (2.2.7): –0.10° to +0.10°.

Dissolve 1.25 g in a mixture of 20 volumes of *methanol* R and 80 volumes of *methylene chloride* R and dilute to 25.0 mL with the same mixture of solvents.

01/2011:2182

**Related substances.** Liquid chromatography (2.2.29).

**Test solution.** Dissolve 20.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 mL with the mobile phase.

**Reference solution (a).** Dilute 1.0 mL of the test solution to 200.0 mL with the mobile phase. Dilute 10.0 mL to 50.0 mL with the mobile phase.

**Reference solution (b).** Dissolve 10.0 mg of *trihexyphenidyl impurity A CRS* in the mobile phase and dilute to 10.0 mL with the mobile phase.

**Reference solution (c).** Dilute 1.0 mL of reference solution (b) to 100.0 mL with the mobile phase.

**Reference solution (d).** To 1 mL of reference solution (b), add 1 mL of the test solution and dilute to 100 mL with the mobile phase.

**Column:**

- size:  $l = 0.15$  m,  $\emptyset = 4.6$  mm;
- stationary phase: octadecylsilyl silica gel for chromatography R (5  $\mu$ m).

**Mobile phase:** mix 200 mL of water R with 0.2 mL of triethylamine R. Adjust to pH 4.0 with phosphoric acid R and add 800 mL of acetonitrile R.

**Flow rate:** 1.0 mL/min.

**Detection:** spectrophotometer at 210 nm.

**Injection:** 20  $\mu$ L.

**Run time:** 3 times the retention time of trihexyphenidyl.

**System suitability:** reference solution (d):

- resolution: minimum 4.0 between the peaks corresponding to trihexyphenidyl and to impurity A.

**Limits:**

- impurity A: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.5 per cent);
- unspecified impurities: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- total: not more than 0.5 per cent;
- disregard limit: 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.02 per cent).

**Loss on drying (2.2.32):** maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash (2.4.14):** maximum 0.1 per cent, determined on 1.0 g.

**ASSAY**

Dissolve 0.250 g in 50 mL of ethanol (96 per cent) R and add 5.0 mL of 0.01 M hydrochloric acid. Carry out a potentiometric titration (2.2.20), using 0.1 M sodium hydroxide. Read the volume added between the 2 points of inflexion.

1 mL of 0.1 M sodium hydroxide is equivalent to 33.79 mg of  $C_{26}H_{33}NO_9$ .

**IMPURITIES**

A. 1-phenyl-3-(piperidin-1-yl)propan-1-one.

## TRIMEBUTINE MALEATE

### Trimebutini maleas

$C_{26}H_{33}NO_9$   
[34140-59-5]

$M_r$  503.5

**DEFINITION**

(2*RS*)-2-(Dimethylamino)-2-phenylbutyl 3,4,5-trimethoxybenzoate (*Z*)-butenedioate.

**Content:** 99.0 per cent to 101.5 per cent (dried substance).

**CHARACTERS**

**Appearance:** white or almost white, crystalline powder.

**Solubility:** slightly soluble in water, soluble in acetonitrile, sparingly soluble in acetone, slightly soluble in ethanol (96 per cent).

mp: about 133 °C.

**IDENTIFICATION**

Infrared absorption spectrophotometry (2.2.24).

**Comparison:** trimebutine maleate CRS.

**TESTS**

**Appearance of solution.** The solution is clear (2.2.1) and colourless (2.2.2, Method II).

Dissolve 0.5 g in acetone R, sonicate and dilute to 100 mL with the same solvent.

**Related substances.** Liquid chromatography (2.2.29).

**Solvent mixture.** Dissolve 0.24 g of anhydrous sodium dihydrogen phosphate R in 180 mL of water R and adjust to pH 2.5 with dilute phosphoric acid R; dilute to 200 mL with water R. Add 50 mL of acetonitrile R and mix.

**Test solution.** Dissolve 10 mg of the substance to be examined in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

**Reference solution (a).** Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

**Reference solution (b).** Dissolve 5 mg of methyl 3,4,5-trimethoxybenzoate R (impurity C) in 10.0 mL of the solvent mixture. Dilute 1.0 mL of this solution to 20.0 mL with the solvent mixture.

**Reference solution (c).** Dissolve the contents of a vial of trimebutine for system suitability CRS (containing impurities D and E) in 1.0 mL of reference solution (b).

**Column:**

- size:  $l = 0.25$  m,  $\emptyset = 4.6$  mm;
- stationary phase: end-capped octadecylsilyl silica gel for chromatography R (5  $\mu$ m);
- temperature: 25 °C.

**Mobile phase:**

- mobile phase A: dissolve 3.6 g of anhydrous sodium dihydrogen phosphate R in 990 mL of water R and adjust to pH 3.0 with phosphoric acid R; dilute to 1000 mL with water R;

– mobile phase B: acetonitrile R1;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 3	78	22
3 - 6.5	78 → 65	22 → 35
6.5 - 15	65 → 60	35 → 40
15 - 35	60	40

Flow rate: 1.5 mL/min.

Detection: spectrophotometer at 215 nm.

Injection: 20 µL of the test solution and reference solutions (a) and (c).

Identification of impurities: use the chromatogram supplied with *trimebutine for system suitability CRS* and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities C, D and E.

Relative retention with reference to trimebutine (retention time = about 12 min): maleic acid = about 0.17; impurity E = about 0.9; impurity D = about 1.3; impurity C = about 1.4.

System suitability: reference solution (c):

- resolution: minimum 1.5 between the peaks due to impurities D and C;
- peak-to-valley ratio: minimum 10, where  $H_p$  = height above the baseline of the peak due to impurity E and  $H_v$  = height above the baseline of the lowest point of the curve separating this peak from the peak due to trimebutine.

Limits:

- impurity E: not more than 6 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.6 per cent);
- unspecified impurities: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- total: not more than 10 times the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent);
- disregard limit: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent); disregard any peak due to maleic acid.

Heavy metals (2.4.8): maximum 10 ppm.

Dissolve 2.0 g in 20 mL of a mixture of 15 volumes of *water R* and 85 volumes of *dioxan R*. 12 mL of the solution complies with test B. Prepare the reference solution using lead standard solution (1 ppm Pb) obtained by diluting *lead standard solution (100 ppm Pb) R* with a mixture of 15 volumes of *water R* and 85 volumes of *dioxan R*.

Loss on drying (2.2.32): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulfated ash (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

#### ASSAY

Dissolve 0.300 g in 50 mL of *anhydrous acetic acid R*. Titrate with 0.1 M *perchloric acid*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *perchloric acid* is equivalent to 50.35 mg of  $C_{26}H_{33}NO_9$ .

#### IMPURITIES

Specified impurities: E.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use*

(2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): A, B, C, D.

A. (2RS)-2-(dimethylamino)-2-phenylbutanol,

B. 3,4,5-trimethoxybenzoic acid,

C. methyl 3,4,5-trimethoxybenzoate,

D. (1RS)-1-[(dimethylamino)methyl]-1-phenylpropyl 3,4,5-trimethoxybenzoate,

E. (2RS)-2-(methylamino)-2-phenylbutyl 3,4,5-trimethoxybenzoate.

01/2008:1741  
corrected 6.0

## TRIMETAZIDINE DIHYDROCHLORIDE

### Trimetazidini dihydrochloridum

$C_{14}H_{24}Cl_2N_2O_3$   
[13171-25-0]

$M_r$  339.3

#### DEFINITION

1-(2,3,4-Trimethoxybenzyl)piperazine dihydrochloride.

Content: 98.5 per cent to 101.5 per cent (dried substance).

#### CHARACTERS

Appearance: white or almost white, crystalline powder, slightly hygroscopic.

Solubility: freely soluble in water, sparingly soluble in alcohol.

#### IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

Comparison: Ph. Eur. reference spectrum of trimetazidine dihydrochloride.

B. Dissolve 25 mg in 5 mL of *water R*. 2 mL of the solution gives reaction (a) of chlorides (2.3.1).

#### TESTS

**Appearance of solution.** The solution is clear (2.2.1) and not more intensely coloured than reference solution BY<sub>6</sub> (2.2.2, Method II).

Dissolve 1.0 g in *water R* and dilute to 10 mL with the same solvent.

**Related substances.** Liquid chromatography (2.2.29).

**Test solution.** Dissolve 0.200 g of the substance to be examined in *water R* and dilute to 50.0 mL with the same solvent.

**Reference solution (a).** Dissolve 20.0 mg of *trimetazidine for system suitability CRS* in *water R* and dilute to 5.0 mL with the same solvent.

**Reference solution (b).** Dilute 2.0 mL of the test solution to 100.0 mL with *water R*. Dilute 5.0 mL of this solution to 100.0 mL with *water R*.

**Reference solution (c).** Dilute 25.0 mL of reference solution (b) to 50.0 mL with *water R*.

**Column:**

- size:  $l = 0.15$  m,  $\varnothing = 4.6$  mm,
- stationary phase: spherical octadecylsilyl silica gel for chromatography R (5  $\mu$ m) with a pore size of 10 nm,
- temperature: 30 °C.

**Mobile phase:**

- mobile phase A: mix 357 volumes of *methanol R* and 643 volumes of a 2.87 g/L solution of *sodium heptanesulfonate R* adjusted to pH 3.0 with *dilute phosphoric acid R*,
- mobile phase B: *methanol R*,

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 50	95 → 75	5 → 25
50 - 52	75 → 95	25 → 5

**Flow rate:** 1.2 mL/min.

**Detection:** spectrophotometer at 240 nm.

**Equilibration:** for at least 1 h with the mobile phase at the initial composition.

**Injection:** 10  $\mu$ L.

**Relative retention** with reference to trimetazidine (retention time = about 25 min): impurity D = about 0.2; impurity C = about 0.4; impurity H = about 0.6; impurities A and I = about 0.9; impurity E = about 0.95; impurity F = about 1.4; impurity B = about 1.8.

**System suitability:**

- **peak-to-valley ratio:** minimum 3, where  $H_p$  = height above the baseline of the peak due to impurity E and  $H_v$  = height above the baseline of the lowest point of the curve separating this peak from the principal peak in the chromatogram obtained with reference solution (a);

- **signal-to-noise ratio:** minimum 10 for the principal peak in the chromatogram obtained with reference solution (c).

**Limits:**

- **correction factors:** for the calculation of contents, multiply the peak areas of the following impurities by the corresponding correction factor: impurity B = 0.55; impurity C = 0.37; impurity F = 0.71;
- **impurities A, B, C, D, E, F, H, I:** for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);
- **any other impurity:** for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);

- **total:** not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
- **disregard limit:** area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent).

**Impurity G.** Thin-layer chromatography (2.2.27).

**Test solution.** Dissolve 0.10 g of the substance to be examined in *methanol R* and dilute to 10 mL with the same solvent.

**Reference solution.** Dissolve 22.6 mg of *piperazine hydrate R* in *methanol R* and dilute to 100 mL with the same solvent. Dilute 10 mL of the solution to 100 mL with *methanol R*.

**Plate:** TLC silica gel plate R.

**Mobile phase:** concentrated ammonia R, alcohol R (20:80 V/V).

**Application:** 10  $\mu$ L.

**Development:** over 2/3 of the plate.

**Drying:** at 100-105 °C for 30 min.

**Detection:** spray with *iodoplatinate reagent R*.

**Limit:**

- **impurity G:** any spot due to impurity G is not more intense than the spot in the chromatogram obtained with the reference solution (0.1 per cent, expressed as anhydrous piperazine).

**Loss on drying** (2.2.32): maximum 2.5 per cent, determined on 1.000 g by drying in an oven at 105 °C over *diphosphorus pentoxide R* at a pressure not exceeding 15 kPa.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

#### ASSAY

Dissolve 0.120 g in 50.0 mL of *water R*. Add 1 mL of *nitric acid R* and titrate with 0.1 M *silver nitrate*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *silver nitrate* is equivalent to 16.96 mg of C<sub>14</sub>H<sub>24</sub>Cl<sub>2</sub>N<sub>2</sub>O<sub>3</sub>.

#### STORAGE

In an airtight container.

#### IMPURITIES

**Specified impurities:** A, B, C, D, E, F, G, H, I.

- A. R1 = R4 = H, R2 = R3 = OCH<sub>3</sub>: 1-(3,4,5-trimethoxybenzyl)piperazine,  
 E. R1 = R3 = OCH<sub>3</sub>, R2 = R4 = H: 1-(2,4,5-trimethoxybenzyl)piperazine,  
 F. R1 = R4 = OCH<sub>3</sub>, R2 = R3 = H: 1-(2,4,6-trimethoxybenzyl)piperazine,

- B. 1,4-bis(2,3,4-trimethoxybenzyl)piperazine,

- C. R = CHO: 2,3,4-trimethoxybenzaldehyde,  
 D. R = CH<sub>2</sub>OH: (2,3,4-trimethoxyphenyl)methanol,

G. piperazine,

H. R = COOC<sub>2</sub>H<sub>5</sub>: ethyl 4-(2,3,4-trimethoxybenzyl)piperazine-1-carboxylate,

I. R = CH<sub>3</sub>: 1-methyl-4-(2,3,4-trimethoxybenzyl)piperazine (*N*-methyltrimetazidine).

01/2008:0440

## TRIMETHADIONE

### Trimethadionum

C<sub>6</sub>H<sub>9</sub>NO<sub>3</sub>  
[127-48-0]

*M*<sub>r</sub> 143.1

#### DEFINITION

3,5,5-Trimethyloxazolidine-2,4-dione.

*Content*: 98.0 per cent to 102.0 per cent (dried substance).

#### CHARACTERS

*Appearance*: colourless or almost colourless crystals.

*Solubility*: soluble in water, very soluble in ethanol (96 per cent).

#### IDENTIFICATION

*First identification*: B.

*Second identification*: A, C, D.

A. Melting point (2.2.14): 45 °C to 47 °C, determined without previous drying.

B. Infrared absorption spectrophotometry (2.2.24).

*Preparation*: discs prepared using 3 mg of substance per 0.4 g of potassium bromide R.

*Comparison*: trimethadione CRS.

C. To 2 mL of solution S (see Tests) add 1 mL of barium hydroxide solution R. A white precipitate is formed, which dissolves on addition of 1 mL of dilute hydrochloric acid R.

D. Dissolve 0.3 g in a mixture of 5 mL of alcoholic potassium hydroxide solution R and 5 mL of ethanol (96 per cent) R. Allow to stand for 10 min. Add 0.05 mL of phenolphthalein solution R1 and neutralise exactly with hydrochloric acid R. Evaporate to dryness on a water-bath and take up the residue with 4 quantities, each of 5 mL, of ether R. Filter the combined ether layers and evaporate to dryness. The residue, recrystallised from 5 mL of toluene R and dried, melts (2.2.14) at about 80 °C.

#### TESTS

**Solution S.** Dissolve 2.0 g in carbon dioxide-free water R and dilute to 40 mL with the same solvent.

**Appearance of solution.** Solution S is clear (2.2.1) and colourless (2.2.2, Method II).

**Acidity or alkalinity.** To 10 mL of solution S add 0.1 mL of methyl red solution R. Not more than 0.1 mL of 0.01 M hydrochloric acid or 0.01 M sodium hydroxide is required to change the colour of the indicator.

**Heavy metals** (2.4.8): maximum 20 ppm.

12 mL of solution S complies with test A. Prepare the reference solution using lead standard solution (1 ppm Pb) R.

**Loss on drying** (2.2.32): maximum 0.5 per cent, determined on 1.00 g by drying in a desiccator over anhydrous silica gel R for 6 h.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

#### ASSAY

Gas chromatography (2.2.28).

*Internal standard solution.* Dissolve 0.125 g of decanol R in anhydrous ethanol R and dilute to 25 mL with the same solvent.

*Test solution.* Dissolve 0.100 g of the substance to be examined in the internal standard solution and dilute to 10.0 mL with the same solution.

*Reference solution.* Dissolve 0.100 g of trimethadione CRS in the internal standard solution and dilute to 10.0 mL with the same solution.

*Column*:

- *material*: stainless steel,
- *size*: *l* = 0.75 m,  $\varnothing$  = 3 mm,
- *stationary phase*: styrene-divinylbenzene copolymer R (125-150  $\mu$ m).

*Carrier gas*: nitrogen for chromatography R.

*Flow rate*: 20 mL/min.

*Temperature*:

- *column*: 210 °C,
- *injection port*: 240 °C,
- *detector*: 270 °C.

*Detection*: flame ionisation.

*Injection*: 1  $\mu$ L.

Calculate the content of C<sub>6</sub>H<sub>9</sub>NO<sub>3</sub> from the declared content of trimethadione CRS.

#### STORAGE

Protected from light.

01/2008:0060  
corrected 6.0

## TRIMETHOPRIM

### Trimethoprimum

C<sub>14</sub>H<sub>18</sub>N<sub>4</sub>O<sub>3</sub>  
[738-70-5]

*M*<sub>r</sub> 290.3

#### DEFINITION

5-(3,4,5-Trimethoxybenzyl)pyrimidine-2,4-diamine.

*Content*: 98.5 per cent to 101.0 per cent (dried substance).

#### CHARACTERS

*Appearance*: white or yellowish-white powder.

*Solubility*: very slightly soluble in water, slightly soluble in ethanol (96 per cent).

#### IDENTIFICATION

*First identification*: C.

*Second identification*: A, B, D.

A. Melting point (2.2.14): 199 °C to 203 °C.

B. Dissolve about 20 mg in 0.1 M sodium hydroxide and dilute to 100.0 mL with the same solvent. Dilute 1.0 mL of this solution to 10.0 mL with 0.1 M sodium hydroxide. Examined between 230 nm and 350 nm (2.2.25), the solution shows an absorption maximum at 287 nm. The specific absorbance at the absorption maximum is 240 to 250.

C. Infrared absorption spectrophotometry (2.2.24).

*Preparation:* discs.

*Comparison:* trimethoprim CRS.

D. Dissolve about 25 mg, heating if necessary, in 5 mL of 0.005 M sulfuric acid and add 2 mL of a 16 g/L solution of potassium permanganate R in 0.1 M sodium hydroxide. Heat to boiling and add to the hot solution 0.4 mL of formaldehyde R. Mix, add 1 mL of 0.5 M sulfuric acid, mix and heat again to boiling. Cool and filter. To the filtrate, add 2 mL of methylene chloride R and shake vigorously. The organic layer, examined in ultraviolet light at 365 nm, shows green fluorescence.

## TESTS

**Appearance of solution.** The solution is not more intensely coloured than reference solution BY<sub>7</sub> (2.2.2, Method II).

Dissolve 0.5 g in 10 mL of a mixture of 1 volume of water R, 4.5 volumes of methanol R and 5 volumes of methylene chloride R.

## Related substances

A. Liquid chromatography (2.2.29).

*Test solution.* Dissolve 25.0 mg of the substance to be examined in the mobile phase and dilute to 25.0 mL with the mobile phase.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 200.0 mL with the mobile phase.

*Reference solution (b).* Dissolve the contents of a vial of trimethoprim for system suitability CRS (containing impurity E) in 1 mL of the mobile phase.

*Column:*

- *size:*  $l = 0.250$  m,  $\varnothing = 4.0$  mm;
- *stationary phase:* base-deactivated octadecylsilyl silica gel for chromatography R (5  $\mu\text{m}$ ).

*Mobile phase:* mix 30 volumes of methanol R and 70 volumes of a 1.4 g/L solution of sodium perchlorate R adjusted to pH 3.6 with phosphoric acid R.

*Flow rate:* 1.3 mL/min.

*Detection:* spectrophotometer at 280 nm.

*Injection:* 20  $\mu\text{L}$  loop injector.

*Run time:* 11 times the retention time of trimethoprim.

*Relative retention* with reference to trimethoprim (retention time = about 5 min): impurity C = about 0.8; impurity E = about 0.9; impurity A = about 1.5; impurity D = about 2.0; impurity G = about 2.1; impurity B = about 2.3; impurity J = about 2.7; impurity F = about 4.0.

*System suitability:* reference solution (b):

- *resolution:* minimum 2.5 between the peaks due to impurity E and trimethoprim.

*Limits:*

- *correction factors:* for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity B = 0.43; impurity E = 0.53; impurity J = 0.66;
- *any impurity:* not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- *total:* not more than 0.4 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);

- *disregard limit:* 0.04 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.02 per cent); disregard any peak corresponding to impurity H (relative retention = about 10.3).

B. Liquid chromatography (2.2.29).

*Test solution.* Dissolve 25.0 mg of the substance to be examined in the mobile phase and dilute to 25.0 mL with the mobile phase.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 200.0 mL with the mobile phase.

*Reference solution (b).* Dissolve 5.0 mg of trimethoprim CRS and 5.0 mg of trimethoprim impurity B CRS in the mobile phase and dilute to 100.0 mL with the mobile phase.

*Column:*

- *size:*  $l = 0.25$  m,  $\varnothing = 4.6$  mm;
- *stationary phase:* nitrile silica gel for chromatography R (5  $\mu\text{m}$ ) with a specific surface area of 350  $\text{m}^2/\text{g}$  and a pore diameter of 10 nm.

*Mobile phase:* dissolve 1.14 g of sodium hexane sulfonate R in 600 mL of a 13.6 g/L solution of potassium dihydrogen phosphate R; adjust to pH 3.1 with phosphoric acid R and mix with 400 mL of methanol R.

*Flow rate:* 0.8 mL/min.

*Detection:* spectrophotometer at 280 nm.

*Injection:* 20  $\mu\text{L}$  loop injector.

*Run time:* 6 times the retention time of trimethoprim.

*Relative retention* with reference to trimethoprim (retention time = about 4 min): impurity H = about 1.8; impurity I = about 4.9.

*System suitability:* reference solution (b):

- *resolution:* minimum 2.0 between the peaks due to trimethoprim and impurity B.

*Limits:*

- *correction factors:* for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity H = 0.50; impurity I = 0.28;
- *any impurity:* not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- *total:* not more than 0.4 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- *disregard limit:* 0.04 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.02 per cent); disregard any peak due to impurity B (relative retention = about 1.3).

**Impurity K.** Gas chromatography (2.2.28).

*Test solution.* Dissolve 0.500 g of the substance to be examined in 35.0 mL of citrate buffer solution pH 5.0 R, add 10.0 mL of 1,1-dimethylethyl methyl ether R, shake thoroughly and centrifuge for 10 min. Use the upper layer.

*Reference solution.* Dilute 5.0 mL of hydrochloric acid R to 50.0 mL with water R, add 12.5 mg of aniline R and shake thoroughly. Add 10.0  $\mu\text{L}$  of this solution and 10.0 mL of 1,1-dimethylethyl methyl ether R to 35.0 mL of citrate buffer solution pH 5.0 R, shake thoroughly and centrifuge for 10 min. Use the upper layer.

*Column:*

- *material:* fused silica;
- *size:*  $l = 30$  m,  $\varnothing = 0.53$  mm;
- *stationary phase:* poly(dimethyl)siloxane R (film thickness 3  $\mu\text{m}$ ).

*Carrier gas:* helium for chromatography R.

*Flow rate:* 12 mL/min.

*Temperature:*

- *column:* 80 °C;

– injection port: 230 °C;

– detector: 270 °C.

Detection: nitrogen-phosphorus detector.

Injection: 3 µL.

Run time: 15 min.

System suitability: reference solution:

– repeatability: maximum relative standard deviation of 5.0 per cent after 6 injections.

Limit:

– impurity K: not more than the area of the corresponding peak in the chromatogram obtained with the reference solution (5 ppm).

**Heavy metals** (2.4.8): maximum 20 ppm.

1.0 g complies with test C. Prepare the reference solution using 2 mL of lead standard solution (10 ppm Pb) R

**Loss on drying** (2.2.32): maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

#### ASSAY

Dissolve 0.250 g in 50 mL of anhydrous acetic acid R. Titrate with 0.1 M perchloric acid, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M perchloric acid is equivalent to 29.03 mg of C<sub>14</sub>H<sub>18</sub>N<sub>4</sub>O<sub>3</sub>.

#### IMPURITIES

By liquid chromatography A: A, B, C, D, E, F, G, H, J.

By liquid chromatography B: B, H, I.

By gas chromatography: K.

A. N<sup>2</sup>-methyl-5-(3,4,5-trimethoxybenzyl)pyrimidine-2,4-diamine,

B. R + R' = O: (2,4-diaminopyrimidin-5-yl)(3,4,5-trimethoxyphenyl)methanone,

C. R = OH, R' = H: (RS)-(2,4-diaminopyrimidin-5-yl)(3,4,5-trimethoxyphenyl)methanol,

D. R<sub>2</sub> = NH<sub>2</sub>, R<sub>4</sub> = OH: 2-amino-5-(3,4,5-trimethoxybenzyl)pyrimidin-4-ol,

E. R<sub>2</sub> = OH, R<sub>4</sub> = NH<sub>2</sub>: 4-amino-5-(3,4,5-trimethoxybenzyl)pyrimidin-2-ol,

F. R<sub>3</sub> = Br, R<sub>4</sub> = OCH<sub>3</sub>: 5-(3-bromo-4,5-dimethoxybenzyl)pyrimidine-2,4-diamine,

G. R<sub>3</sub> = OCH<sub>3</sub>, R<sub>4</sub> = OC<sub>2</sub>H<sub>5</sub>: 5-(4-ethoxy-3,5-dimethoxybenzyl)pyrimidine-2,4-diamine,

H. R = CH<sub>3</sub>: methyl 3,4,5-trimethoxybenzoate,

J. R = H: 3,4,5-trimethoxybenzoic acid,

I. 3-(phenylamino)-2-(3,4,5-trimethoxybenzyl)prop-2-enenitrile,

K. aniline.

01/2008:0534

## TRIMIPRAMINE MALEATE

### Trimipramini maleas

C<sub>24</sub>H<sub>30</sub>N<sub>2</sub>O<sub>4</sub>  
[521-78-8]

M<sub>r</sub> 410.5

#### DEFINITION

(2*RS*)-3-(10,11-Dihydro-5*H*-dibenzo[*b,f*]azepin-5-yl)-*N,N*,2-trimethylpropan-1-amine (*Z*)-butenedioate.

Content: 98.0 per cent to 101.0 per cent (dried substance).

#### CHARACTERS

Appearance: white or almost white, crystalline powder.

Solubility: slightly soluble in water and in ethanol (96 per cent).

#### IDENTIFICATION

First identification: A, C.

Second identification: A, B, D, E.

A. Melting point (2.2.14): 140 °C to 144 °C.

B. Ultraviolet and visible absorption spectrophotometry (2.2.25).

Test solution. Dissolve 40.0 mg in 0.01 M hydrochloric acid and dilute to 100.0 mL with the same acid. Dilute 5.0 mL of this solution to 100.0 mL with 0.01 M hydrochloric acid.

Spectral range: 230-350 nm.

Absorption maximum: at 250 nm.

Shoulder: at 270 nm.

Specific absorbance at the absorption maximum: 205 to 235.

C. Infrared absorption spectrophotometry (2.2.24).

Comparison: trimipramine maleate CRS.

D. Thin-layer chromatography (2.2.27). Prepare the solutions immediately before use.

Test solution. Dissolve 0.50 g of the substance to be examined in methanol R and dilute to 10 mL with the same solvent. Dilute 1 mL of this solution to 20 mL with methanol R.

**Reference solution.** Dissolve 25 mg of *trimipramine maleate CRS* in *methanol R* and dilute to 10 mL with the same solvent.

**Plate:** TLC silica gel G plate R.

**Mobile phase:** concentrated ammonia R, anhydrous ethanol R, toluene R (0.7:10:90 V/V/V).

**Application:** 5 µL.

**Development:** over 2/3 of the plate.

**Drying:** in air for 15 min.

**Detection:** spray with a 5 g/L solution of *potassium dichromate R* in a mixture of 1 volume of *sulfuric acid R* and 4 volumes of *water R* and examine immediately.

**Results:** the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

#### E. Thin-layer chromatography (2.2.27).

**Test solution.** Dissolve 0.20 g of the substance to be examined in *methanol R* and dilute to 10 mL with the same solvent.

**Reference solution.** Dissolve 56 mg of *maleic acid R* in *methanol R* and dilute to 10 mL with the same solvent.

**Plate:** TLC silica gel GF<sub>254</sub> R.

**Mobile phase:** *water R*, *anhydrous formic acid R*, *di-isopropyl ether R* (3:7:90 V/V/V).

**Application:** 5 µL as bands of 10 mm.

**Development:** over 2/3 of the plate.

**Drying:** in a current of air for a few minutes and then at 120 °C for 10 min.

**Detection:** examine in ultraviolet light at 254 nm.

**Results:** the chromatogram obtained with the test solution shows 2 zones: one is on the line of application and the other is similar in position and size to the principal zone in the chromatogram obtained with the reference solution.

#### TESTS

**Related substances.** Liquid chromatography (2.2.29). Carry out the test protected from light.

**Buffer solution pH 7.7:** 2.64 g/L solution of *ammonium phosphate R* in *water for chromatography R*; adjust to pH 7.7 with *phosphoric acid R*.

**Test solution.** Dissolve 50 mg of the substance to be examined in the mobile phase and dilute to 100 mL with the mobile phase.

**Reference solution (a).** Dissolve 5 mg of the substance to be examined and 5 mg of *iminodibenzyl R* (impurity F) in the mobile phase and dilute to 10 mL with the mobile phase.

**Reference solution (b).** Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

**Reference solution (c).** Dissolve the contents of a vial of *trimipramine for peak identification CRS* (containing impurities A, B, C, D and E) in 1 mL of *acetonitrile R1*.

**Column:**

- size:  $l = 0.125$  m,  $\varnothing = 4.0$  mm;
- stationary phase: end-capped octadecylsilyl silica gel for chromatography R (5 µm).

**Mobile phase:** *acetonitrile R1*, buffer solution pH 7.7 (38:62 V/V).

**Flow rate:** 1.5 mL/min.

**Detection:** spectrophotometer at 210 nm.

**Injection:** 20 µL.

**Run time:** 3 times the retention time of trimipramine.

**Identification of impurities:** use the chromatogram supplied with *trimipramine for peak identification CRS* and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities A, B, C, D and E; doubling of the peak due to impurity E may be observed.

**Relative retention** with reference to trimipramine (retention time = about 27 min): impurity A = about 0.1; impurity B = about 0.3; impurity C = about 0.4; impurity D = about 0.5; impurity F = about 1.4; impurity E = about 1.5.

**System suitability:**

- **resolution:** minimum 3.5 between the peaks due to trimipramine and impurity F in the chromatogram obtained with reference solution (a);
- the chromatogram obtained with reference solution (c) is similar to the chromatogram supplied with *trimipramine for peak identification CRS*.

**Limits:**

- **correction factor:** for the calculation of content, multiply the peak area of impurity F by 0.5;
- **impurity E:** not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);
- **impurity F:** not more than 2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
- **impurities A, B, C, D:** for each impurity, not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.15 per cent);
- **unspecified impurities:** for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- **total:** not more than 10 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);
- **disregard limit:** 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Heavy metals (2.4.8):** maximum 20 ppm.

2.0 g complies with test C. Prepare the reference solution using 4 mL of *lead standard solution (10 ppm Pb) R*.

**Loss on drying (2.2.32):** maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash (2.4.14):** maximum 0.1 per cent, determined on 1.0 g.

#### ASSAY

Dissolve 0.350 g in 50 mL of *anhydrous acetic acid R*. Titrate with 0.1 M *perchloric acid* determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *perchloric acid* is equivalent to 41.05 mg of C<sub>24</sub>H<sub>30</sub>N<sub>2</sub>O<sub>4</sub>.

#### STORAGE

Protected from light.

#### IMPURITIES

**Specified impurities:** A, B, C, D, E, F.

**Other detectable impurities** (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): G.

- A. (2*RS*)-3-(10,11-dihydro-5*H*-dibenzo[*b,f*]azepin-5-yl)-*N,N*,2-trimethylpropan-1-amine *N*-oxide,

- B. R = CH<sub>3</sub>, R' = H: (2*RS*)-3-(10,11-dihydro-5*H*-dibenzo[*b,f*]azepin-5-yl)-*N,N*,2-dimethylpropan-1-amine,

- D. R = H, R' = CH<sub>3</sub>: imipramine,

- C. (2*RS*)-3-(5*H*-dibenzo[*b,f*]azepin-5-yl)-*N,N*,2-trimethylpropan-1-amine,

- E. mixture of the stereoisomers of *N*-[3-(10,11-dihydro-5*H*-dibenzo[*b,f*]azepin-5-yl)-2-methylpropyl]-*N,N',N'*,2-tetramethylpropane-1,3-diamine,

- F. R = H: 10,11-dihydro-5*H*-dibenzo[*b,f*]azepine,

- G. R = CH<sub>3</sub>: 2-methyl-10,11-dihydro-5*H*-dibenzo[*b,f*]azepine.

## CHARACTERS

**Appearance:** clear, viscous, colourless or slightly yellow liquid, very hygroscopic.

**Solubility:** miscible with water and with ethanol (96 per cent), soluble in methylene chloride.

## IDENTIFICATION

**First identification:** B, C.

**Second identification:** A, B, D.

A. Relative density (2.2.5): 1.120 to 1.130.

B. Refractive index (2.2.6): 1.482 to 1.485.

C. Examine the chromatograms obtained in the test for related substances.

**Results:** the principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (a).

D. To 1 mL add 0.3 mL of *copper sulfate solution R*. A blue colour develops. Add 2.5 mL of *dilute sodium hydroxide solution R* and heat to boiling. The blue colour remains unchanged.

## TESTS

**Solution S.** Dissolve 12 g in *water R* and dilute to 20 mL with the same solvent.

**Appearance of solution.** Solution S is clear (2.2.1) and not more intensely coloured than reference solution B<sub>6</sub> (2.2.2, *Method II*).

**Related substances.** Gas chromatography (2.2.28).

**Internal standard solution.** Dissolve 5.0 g of 3-aminopropanol *R* in *water R* and dilute to 100.0 mL with the same solvent.

**Test solution.** Dissolve 10.0 g of the substance to be examined in *water R*. Add 1.0 mL of the internal standard solution and dilute to 100.0 mL with *water R*.

**Reference solution (a).** Dissolve 1.0 g of *trolamine CRS* in *water R* and dilute to 10.0 mL with the same solvent.

**Reference solution (b).** Dissolve 0.1 g of *trolamine impurity A CRS*, 0.5 g of *trolamine impurity B CRS* and 0.1 g of *trolamine CRS* in *water R* and dilute to 10.0 mL with the same solvent. To 1.0 mL of this solution add 1.0 mL of the internal standard solution and dilute to 100.0 mL with *water R*.

**Column:**

- **material:** fused silica;
- **size:** *l* = 25 m, Ø = 0.25 mm;
- **stationary phase:** poly(dimethyl)(diphenyl)siloxane *R* (film thickness 0.50 µm).

**Carrier gas:** helium for chromatography *R*.

**Flow rate:** 1 mL/min.

**Split ratio:** 1:35.

**Temperature:**

	Time (min)	Temperature (°C)
Column	0	60
	0 - 8.5	60 → 230
	8.5 - 14	230
Injection port		260
Detector		280

**Detection:** flame ionisation.

**Injection:** 2 µL; if necessary inject a blank solution.

**Elution order:** impurity A, 3-aminopropanol, impurity B, trolamine.

**System suitability:** reference solution (b):

- **resolution:** minimum 2.0 between the peaks due to 3-aminopropanol and impurity A.

07/2010:1577

## TROLAMINE

### Trolaminum

C<sub>6</sub>H<sub>15</sub>NO<sub>3</sub>  
[102-71-6]

*M*<sub>r</sub> 149.2

## DEFINITION

2,2',2''-Nitrilotriethanol.

**Content:** 99.0 per cent *m/m* to 103.0 per cent *m/m* of total bases (anhydrous substance).

**Limits:**

- **impurity A:** calculate the ratio (*R1*) of the area of the peak due to impurity A to the area of the peak due to the internal standard from the chromatogram obtained with reference solution (b); from the chromatogram obtained with the test solution, calculate the ratio of the area of any peak due to impurity A to the area of the peak due to the internal standard: this ratio is not greater than *R1* (0.1 per cent);
- **impurity B:** calculate the ratio (*R2*) of the area of the peak due to impurity B to the area of the peak due to the internal standard from the chromatogram obtained with reference solution (b); from the chromatogram obtained with the test solution, calculate the ratio of the area of any peak due to impurity B to the area of the peak due to the internal standard: this ratio is not greater than *R2* (0.5 per cent);
- **total:** calculate the ratio (*R4*) of the area of the peak due to trolamine to the area of the peak due to the internal standard from the chromatogram obtained with reference solution (b); from the chromatogram obtained with the test solution, calculate the ratio of the sum of the areas of any peaks, apart from the principal peak and the peak due to the internal standard, to the area of the peak due to the internal standard: this ratio is not greater than 10 times *R4* (1.0 per cent);
- **disregard limit:** 0.5 times the ratio of the area of the peak due to trolamine to the area of the peak due to the internal standard from the chromatogram obtained with reference solution (b) (0.05 per cent).

**Impurity C.** Gas chromatography (2.2.28).

**Solvent mixture:** acetone R, chloroform R (10:50 V/V).

**Preparation of solid phase extraction columns**

**Column A.** Fill a glass chromatography column (*l* = 400 mm;  $\emptyset$  = 20 mm) fitted with a teflon stopcock and a sintered-glass filter (160) (2.1.2) with 3 g of anhydrous sodium sulfate R and cover with a mixture of 17 g of kieselguhr for chromatography R and 3 g of potassium carbonate R. Settle the column bed by gently tapping the column.

**Column B.** Fill a glass chromatography column (*l* = 400 mm;  $\emptyset$  = 20 mm) fitted with a teflon stopcock and a sintered-glass filter (160) (2.1.2) with a slurry of 25 g of silica gel for chromatography R (0.063 to 0.200 mm) in the solvent mixture. Apply slight pressure to settle the column and cover the column bed with 5 g of anhydrous sodium sulfate R.

**Standard solution (a).** Dissolve 50  $\mu$ L of *N*-nitrosodiethanolamine R (impurity C) in methanol R and dilute to 50.0 mL with the same solvent. Dilute 100  $\mu$ L of this solution to 100.0 mL with methanol R.

**Standard solution (b).** Dilute 10.0 mL of standard solution (a) to 50.0 mL with methanol R.

**Standard solution (c).** Dissolve 50 mg of *N*-nitrosodiisopropanolamine R in methanol R and dilute to 50.0 mL with the same solvent. Dilute 100  $\mu$ L of this solution to 100.0 mL with methanol R.

**Test solution.** To 2.000 g of the substance to be examined add 200  $\mu$ L of methanol R and 0.5 g of sulfamic acid R. Dissolve in 8 mL of water for chromatography R and apply the solution to column A. Rinse the vessel twice with 1.5 mL of water for chromatography R, applying the rinsings to the column as well. After 15 min of equilibration time elute the column with 100 mL of ethyl acetate R, collecting the eluate in a 250 mL distillation flask. Evaporate the eluate to dryness. Take up the residue in 1 mL of the solvent mixture, apply to column B and let it settle. Rinse the flask twice with 2 mL of the solvent mixture, apply the rinsings to the column and let it settle. Wash the column with 100 mL of the solvent mixture and discard. Elute the column with 120 mL of acetone R, collecting the eluate in a 250 mL distillation flask. Evaporate the eluate to dryness. Transfer the residue with the aid of a small volume of acetone R into a vial and evaporate again to dryness under a stream of nitrogen R. Dissolve the residue in

100  $\mu$ L of trimethylpentane for chromatography R, add 100  $\mu$ L of *N*-methyltrimethylsilyl-trifluoroacetamide R and heat at 70 °C for 1 h.

**Reference solution (a).** To 2.000 g of the substance to be examined add 200  $\mu$ L of standard solution (b) and 0.5 g of sulfamic acid R. Dissolve in 8 mL of water for chromatography R, then proceed exactly as described for the test solution.

**Reference solution (b).** To 1.0 mL of standard solution (a) add 4.0 mL of standard solution (c) and mix. Transfer 500  $\mu$ L of the solution to a vial and evaporate to dryness under a stream of nitrogen R. Dissolve the residue in 200  $\mu$ L of trimethylpentane for chromatography R, add 200  $\mu$ L of *N*-methyltrimethylsilyl-trifluoroacetamide R and heat at 70 °C for 1 h.

**Reference solution (c).** In a vial, evaporate 200  $\mu$ L of standard solution (b) to dryness under a stream of nitrogen R. Dissolve the residue in 100  $\mu$ L of trimethylpentane for chromatography R, add 100  $\mu$ L of *N*-methyltrimethylsilyl-trifluoroacetamide R and heat at 70 °C for 1 h.

**Blank solution.** In a gas chromatography vial, evaporate 200  $\mu$ L of methanol R to dryness under a stream of nitrogen R. Dissolve the residue in 100  $\mu$ L of trimethylpentane for chromatography R add 100  $\mu$ L of *N*-methyltrimethylsilyl-trifluoroacetamide R and heat at 70 °C for 1 h.

**Column:**

- **material:** fused silica;
- **size:** *l* = 30 m;  $\emptyset$  = 0.25 mm;
- **stationary phase:** base-deactivated poly(dimethyl)-(diphenyl)siloxane R (film thickness 1  $\mu$ m).

**Carrier gas:** helium for chromatography R.

**Flow rate:** 2 mL/min.

**Split ratio:** 1:10.

**Temperature:**

	Time (min)	Temperature (°C)
Column	0 - 5	180 → 280
	5 - 10	280
Injection port		220

**Detection:** chemoluminescence:

- dual plasma burner in nitrosamine mode;
- burner temperature: 450 °C;
- oxygen flow rate: 4.4-5.0 mL/min.

**Injection:** 4  $\mu$ L.

**System suitability:**

- **resolution:** minimum 1.3 between the peaks due to impurity C and *N*-nitrosodiisopropanolamine in the chromatogram obtained with reference solution (b);
- **recovery:** minimum 50 per cent. The difference between the area of the peak due to impurity C in the chromatogram obtained with reference solution (a) and the area of the corresponding peak in the chromatogram obtained with the test solution is not less than 0.5 times the area of the corresponding peak in the chromatogram obtained with reference solution (c).

**Limits:**

- **impurity C:** not more than the difference between the area of the peak due to impurity C in the chromatogram obtained with reference solution (a) and the area of the corresponding peak in the chromatogram obtained with the test solution (24 ppb).

**Heavy metals (2.4.8):** maximum 10 ppm.

Dilute 5 mL of solution S to 30 mL with water R. The solution complies with test A. Prepare the reference solution using lead standard solution (1 ppm Pb) R.

**Water** (2.5.12): maximum 1.0 per cent, determined on 1.000 g. Open the titration vessel, introduce the substance to be examined directly into the previously titrated solvent. Stopper the flask immediately.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g. Do not carry out the initial heating on a water-bath.

#### ASSAY

Dissolve 1.200 g in 75 mL of *carbon dioxide-free water R*. Add 0.3 mL of *methyl red solution R*. Titrate with 1 M *hydrochloric acid*.

1 mL of 1 M *hydrochloric acid* is equivalent to 0.149 g of  $C_4H_{11}NO_3$ .

#### STORAGE

In an airtight container, protected from light.

#### IMPURITIES

*Specified impurities: A, B, C.*

A. 2-aminoethanol (ethanolamine),

B. 2,2'-iminodiethanol (diethanolamine),

C. 2,2'-(nitrosoimino)diethanol (*N*-nitrosodiethanolamine).

01/2008:1053  
corrected 6.0

## TROMETAMOL

### Trometamolum

$C_4H_{11}NO_3$   
[77-86-1]

$M_r$  121.1

#### DEFINITION

Trometamol contains not less than 99.0 per cent and not more than the equivalent of 100.5 per cent of aminomethylidynetri(methanol), calculated with reference to the dried substance.

#### CHARACTERS

A white or almost white, crystalline powder, or colourless crystals, freely soluble in water, sparingly soluble in alcohol, very slightly soluble in ethyl acetate.

#### IDENTIFICATION

*First identification: B, C.*

*Second identification: A, B, D.*

A. Solution S (see Tests) is strongly alkaline (2.2.4).

B. Melting point (2.2.14): 168 °C to 174 °C.

C. Examine by infrared absorption spectrophotometry (2.2.24), comparing with the spectrum obtained with *trometamol CRS*.

D. Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

#### TESTS

**Solution S.** Dissolve 2.5 g in *carbon dioxide-free water R* and dilute to 50 mL with the same solvent.

**Appearance of solution.** Solution S is clear (2.2.1) and colourless (2.2.2, *Method II*).

**pH** (2.2.3). The pH of freshly prepared solution S is 10.0 to 11.5.

**Related substances.** Examine by thin-layer chromatography (2.2.27), using *silica gel G R* as the coating substance. Wash the plate with *methanol R* before applying the solutions.

*Test solution (a).* Dissolve 0.20 g in 1 mL of *water R*, with heating, and dilute to 10 mL with *methanol R*.

*Test solution (b).* Dilute 1 mL of test solution (a) to 10 mL with *methanol R*.

*Reference solution (a).* Dissolve 20 mg of *trometamol CRS* in *methanol R* and dilute to 10 mL with the same solvent.

*Reference solution (b).* Dilute 1 mL of test solution (a) to 100 mL with *methanol R*.

Apply to the plate 10 µL of each solution. Develop over a path of 10 cm using a mixture of 10 volumes of *dilute ammonia RI* and 90 volumes of *2-propanol R*. Dry the plate at 100 °C to 105 °C. Spray with a 5 g/L solution of *potassium permanganate R* in a 10 g/L solution of *sodium carbonate R*. After about 10 min examine in daylight. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (1.0 per cent).

**Chlorides** (2.4.4). To 10 mL of solution S add 2.5 mL of *dilute nitric acid R* and dilute to 15 mL with *water R*. The solution complies with the limit test for chlorides (100 ppm).

**Heavy metals** (2.4.8). Dissolve 2.0 g in 10 mL of *water R*. Neutralise the solution with *hydrochloric acid RI* and dilute to 20 mL with *water R*. 12 mL of the solution complies with limit test A for heavy metals (10 ppm). Prepare the standard using *lead standard solution (1 ppm Pb) R*.

**Iron** (2.4.9). Dissolve 1.0 g in *water R* and dilute to 10 mL with the same solvent. The solution complies with the limit test for iron (10 ppm).

**Loss on drying** (2.2.32). Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (2.4.14). Not more than 0.1 per cent, determined on 1.0 g.

**Bacterial endotoxins** (2.6.14): less than 0.03 IU/mg, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins.

#### ASSAY

Dissolve 0.100 g in 20 mL of *water R*. Add 0.2 mL of *methyl red solution R*. Titrate with 0.1 M *hydrochloric acid* until the colour changes from yellow to red.

1 mL of 0.1 M *hydrochloric acid* is equivalent to 12.11 mg of  $C_4H_{11}NO_3$ .

#### IMPURITIES

A. nitromethylidynetri(methanol).

01/2011:1159 **Optical rotation** (2.2.7):  $-0.1^{\circ}$  to  $+0.1^{\circ}$ .**TROPICAMIDE**

## Tropicamidum

$C_{17}H_{20}N_2O_2$   
[1508-75-4]

 $M_r$  284.4**DEFINITION**

(2*RS*)-*N*-Ethyl-3-hydroxy-2-phenyl-*N*-(pyridin-4-ylmethyl)propanamide.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

**CHARACTERS**

*Appearance*: white or almost white, crystalline powder.

*Solubility*: slightly soluble in water, freely soluble in ethanol (96 per cent) and in methylene chloride.

**IDENTIFICATION**

*First identification*: C.

*Second identification*: A, B, D, E.

A. Melting point (2.2.14):  $95^{\circ}\text{C}$  to  $98^{\circ}\text{C}$ .

B. Ultraviolet and visible absorption spectrophotometry (2.2.25).

*Test solution*. Dissolve 20.0 mg in 0.1 *M* hydrochloric acid and dilute to 50.0 mL with the same acid. Dilute 2.0 mL of this solution to 20.0 mL with 0.1 *M* hydrochloric acid.

*Spectral range*: 230-350 nm.

*Absorption maximum*: at 254 nm.

*Specific absorbance at the absorption maximum*: 170 to 190.

C. Infrared absorption spectrophotometry (2.2.24).

*Comparison*: tropicamide CRS.

D. Thin-layer chromatography (2.2.27).

*Test solution*. Dissolve 10 mg of the substance to be examined in methylene chloride *R* and dilute to 10 mL with the same solvent.

*Reference solution*. Dissolve 10 mg of tropicamide CRS in methylene chloride *R* and dilute to 10 mL with the same solvent.

*Plate*: TLC silica gel  $F_{254}$  plate *R*.

*Mobile phase*: concentrated ammonia *R*, methanol *R*, methylene chloride *R* (0.5:5:95 V/V/V).

*Application*: 10  $\mu\text{L}$ .

*Development*: over 2/3 of the plate.

*Drying*: in air.

*Detection*: examine in ultraviolet light at 254 nm.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the spot in the chromatogram obtained with the reference solution.

E. Dissolve about 5 mg in 3 mL of a mixture of 9 mL of acetic anhydride *R*, 1 mL of acetic acid *R* and 0.1 g of citric acid *R*. Heat on a water-bath for 5-10 min. A reddish-yellow colour is produced.

**TESTS**

**Appearance of solution**. The solution is clear (2.2.1) and colourless (2.2.2, Method II).

Dissolve 0.1 g in ethanol (96 per cent) *R* and dilute to 10 mL with the same solvent.

Dissolve 2.5 g in anhydrous ethanol *R* and dilute to 25.0 mL with the same solvent.

**Related substances**. Liquid chromatography (2.2.29).

*Test solution*. Dissolve 50.0 mg of the substance to be examined in 3 mL of acetonitrile *R1* and dilute to 50.0 mL with water for chromatography *R*.

*Reference solution (a)*. Dilute 1.0 mL of the test solution to 100.0 mL with water for chromatography *R*. Dilute 1.0 mL of this solution to 10.0 mL with water for chromatography *R*.

*Reference solution (b)*. Dissolve 5 mg of 4-[(ethylamino)methyl]pyridine *R* (impurity A), 5.0 mg of tropicamide impurity C CRS and 5.0 mg of tropicamide impurity D CRS in 2 mL of acetonitrile *R1* and dilute to 50.0 mL with water for chromatography *R*. Dilute 1.0 mL of this solution to 10.0 mL with water for chromatography *R*.

*Reference solution (c)*. Dissolve 5 mg of tropicamide for peak identification CRS (containing impurity B) in 1.0 mL of acetonitrile *R1* and dilute to 10.0 mL with water for chromatography *R*.

*Reference solution (d)*. To 1 mL of reference solution (b) add 1 mL of reference solution (c).

*Reference solution (e)*. Dilute 1.5 mL of reference solution (b) to 10.0 mL with water for chromatography *R*.

*Column*:

– *size*:  $l = 0.15\text{ m}$ ,  $\varnothing = 4.6\text{ mm}$ ;

– *stationary phase*: end-capped octadecylsilyl silica gel for chromatography *R* (3  $\mu\text{m}$ );

– *temperature*:  $40^{\circ}\text{C}$ .

*Mobile phase*. Dissolve 0.135 g of sodium dodecyl sulfate *R* and 3.4 mL of phosphoric acid *R* in 950 mL of water for chromatography *R*. Adjust to pH 3.0 with strong sodium hydroxide solution *R* and dilute to 1000 mL with water for chromatography *R*. Mix 73 volumes of this solution with 27 volumes of acetonitrile *R1*.

*Flow rate*: 0.8 mL/min.

*Detection*: spectrophotometer at 210 nm and at 254 nm.

*Injection*: 15  $\mu\text{L}$ .

*Run time*: 3 times the retention time of tropicamide.

*Identification of impurities*: use the chromatogram obtained with reference solution (c) to identify the peak due to impurity B; use the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A, C and D.

*Relative retention* with reference to tropicamide (retention time = about 11 min): impurity C = about 0.4; impurity A = about 0.5; impurity D = about 0.8; impurity B = about 2.3.

*System suitability*: reference solution (d):

– *resolution at 210 nm*: minimum 2.0 between the peaks due to impurities C and A;

– *resolution at 254 nm*: minimum 2.0 between the peaks due to impurities A and D.

*Limits*:

– *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 0.8; impurity B = 0.6;

– *impurity B at 254 nm*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);

– *impurity A at 254 nm*: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.15 per cent);

– *impurity C at 210 nm*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (e) (0.15 per cent);

– *impurity D at 210 nm*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (e) (0.15 per cent);

01/2008:2102  
corrected 6.0

- *unspecified impurities at 254 nm*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *sum of impurities other than C and D at 254 nm*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- *disregard limit at 254 nm*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Chlorides (2.4.4)**: maximum 100 ppm.

Dissolve 1.0 g with heating in 8 mL of *acetic acid R*, cool and dilute to 10 mL with the same acid. Dilute 5 mL of this solution to 15 mL with *water R*.

**Loss on drying (2.2.32)**: maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 80 °C at a pressure not exceeding 0.7 kPa for 4 h.

**Sulfated ash (2.4.14)**: maximum 0.1 per cent, determined on 1.0 g.

#### ASSAY

Dissolve 0.200 g in 50 mL of *anhydrous acetic acid R*. Add 0.2 mL of *naphtholbenzein solution R* and titrate with 0.1 M *perchloric acid* until the colour changes from orange to green.

1 mL of 0.1 M *perchloric acid* is equivalent to 28.44 mg of  $C_{17}H_{21}N_2O_2$ .

#### STORAGE

Protected from light.

#### IMPURITIES

*Specified impurities: A, B, C, D.*

A. *N*-(pyridin-4-ylmethyl)ethanamine,

B. *N*-ethyl-2-phenyl-*N*-(pyridin-4-ylmethyl)propanamide,

C. (2*RS*)-3-hydroxy-2-phenylpropanoic acid (tropic acid),

D. phenylacetic acid.

## TROPISETRON HYDROCHLORIDE

### Tropisetroni hydrochloridum

$C_{17}H_{21}ClN_2O_2$   
[105826-92-4]

$M_r$  320.8

#### DEFINITION

Hydrochloride of (1*R*,3*r*,5*S*)-8-methyl-8-azabicyclo[3.2.1]oct-3-yl 1*H*-indole-3-carboxylate.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

#### CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: freely soluble or soluble in water, sparingly soluble in ethanol (96 per cent), very slightly soluble in methylene chloride.

#### IDENTIFICATION

*First identification: B, D.*

*Second identification: A, C, D.*

A. Ultraviolet and visible absorption spectrophotometry (2.2.25).

*Test solution*. Dissolve 50 mg in *methanol R* and dilute to 25.0 mL with the same solvent. Dilute 1.0 mL of this solution to 100.0 mL with *methanol R*.

*Spectral range*: 220-360 nm.

*Absorption maxima*: at 228 nm and 282 nm.

*Absorbance ratio*:  $A_{228}/A_{282} = 1.3$  to 1.4.

B. Infrared absorption spectrophotometry (2.2.24).

*Comparison: tropisetron hydrochloride CRS.*

C. Thin-layer chromatography (2.2.27).

*Test solution*. Dissolve 5 mg of the substance to be examined in a mixture of equal volumes of *methanol R* and *methylene chloride R* and dilute to 5 mL with the same mixture of solvents.

*Reference solution*. Dissolve 5 mg of *tropisetron hydrochloride CRS* in a mixture of equal volumes of *methanol R* and *methylene chloride R* and dilute to 5 mL with the same mixture of solvents.

*Plate: TLC silica gel F<sub>254</sub> plate R.*

*Mobile phase: anhydrous formic acid R, water R, methanol R, methylene chloride R (2:2:30:70 V/V/V/V).*

*Application*: 5 µL.

*Development*: over 2/3 of the plate.

*Drying*: in cold air.

*Detection A*: examine in ultraviolet light at 254 nm.

*Detection B*: spray first with a solution prepared as follows: dissolve 0.85 g of *bismuth subnitrate R* in a mixture of 10 mL of *acetic acid R* and 40 mL of *water R*; to 5 mL of this solution add 5 mL of a 400 g/L solution of *potassium iodide R* and dilute to 100 mL with *water R*. Then spray with *strong hydrogen peroxide solution R*.

*Results*: for both detection methods, the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

D. It gives reaction (a) of chlorides (2.3.1).

## TESTS

**Appearance of solution.** The solution is clear (2.2.1) and not more intensely coloured than reference solution B<sub>7</sub> (2.2.2, Method II).

Dissolve 1.00 g in *water R* and dilute to 20 mL with the same solvent.

**Impurity A.** Thin-layer chromatography (2.2.27).

**Test solution.** Dissolve 0.200 g of the substance to be examined in a mixture of equal volumes of *methanol R* and *methylene chloride R* and dilute to 5.0 mL with the same mixture of solvents.

**Reference solution (a).** Dissolve 5.0 mg of *tropine CRS* (impurity A) in a mixture of equal volumes of *methanol R* and *methylene chloride R* and dilute to 25.0 mL with the same mixture of solvents.

**Reference solution (b).** Dilute 1.0 mL of the test solution to 20.0 mL with a mixture of equal volumes of *methanol R* and *methylene chloride R*. To 0.1 mL of this solution add 1.0 mL of reference solution (a).

**Plate:** TLC silica gel F<sub>254</sub> plate R.

**Mobile phase:** ammonia R, *methanol R*, *methylene chloride R* (5:40:60 V/V/V).

**Application:** 10 µL.

**Development:** over 2/3 of the plate.

**Drying:** in a current of cold air.

**Detection:** dip the plate in *potassium iodobismuthate solution RI*.

**System suitability:** reference solution (b):

- the chromatogram shows 2 clearly separated spots.

**Limit:**

- **impurity A:** any spot due to impurity A is not more intense than the spot in the chromatogram obtained with reference solution (a) (0.5 per cent).

**Related substances.** Liquid chromatography (2.2.29).

**Test solution.** Dissolve 0.100 g of the substance to be examined in mobile phase A and dilute to 20.0 mL with mobile phase A.

**Reference solution (a).** Dilute 1.0 mL of the test solution to 100.0 mL with mobile phase A. Dilute 1.0 mL of this solution to 10.0 mL with mobile phase A.

**Reference solution (b).** Dissolve 5.0 mg of *tropisetron impurity B CRS* and 5 mg of *ethyl indole-3-carboxylate CRS* in mobile phase A and dilute to 20.0 mL with mobile phase A. Dilute 1.0 mL of this solution to 50.0 mL with mobile phase A.

**Column:**

- **size:**  $l = 0.25$  m,  $\emptyset = 4.6$  mm;
- **stationary phase:** *octylsilyl silica gel for chromatography R* (5 µm).

**Mobile phase:**

- **mobile phase A:** *triethylamine R*, *acetonitrile R*, *water R*, *methanol R* (0.3:35:400:565 V/V/V/V);
- **mobile phase B:** *triethylamine R*, *acetonitrile R*, *water R*, *methanol R* (0.3:100:100:800 V/V/V/V);

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 14	100	0
14 - 32	100 → 0	0 → 100
32 - 36	0	100
36 - 37	0 → 100	100 → 0
37 - 52	100	0

**Flow rate:** 2 mL/min.

**Detection:** spectrophotometer at 280 nm.

**Injection:** 20 µL.

**Relative retention** with reference to tropisetron (retention time = about 22 min): impurity B = about 0.05; ethyl indole-3-carboxylate = about 0.2.

**System suitability:** reference solution (b):

- **resolution:** minimum 4 between the peaks due to impurity B and ethyl indole-3-carboxylate.

**Limits:**

- **impurity B:** not more than the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.1 per cent);
- **unspecified impurities:** for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- **total:** not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);
- **disregard limit:** 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**N,N-Dimethylaniline.** Liquid chromatography (2.2.29).

**Prepare the solutions immediately before use.**

**Test solution.** Dissolve 250 mg of the substance to be examined in mobile phase A and dilute to 5.0 mL with mobile phase A.

**Reference solution.** Dissolve 10.0 mg of *N,N-dimethylaniline R* in mobile phase A and dilute to 100.0 mL with mobile phase A. Dilute 1.0 mL of this solution to 100.0 mL with mobile phase A.

**Column:**

- **size:**  $l = 0.25$  m,  $\emptyset = 4.6$  mm;
- **stationary phase:** *octylsilyl silica gel for chromatography R* (5 µm).

**Mobile phase:**

- **mobile phase A:** *triethylamine R*, *acetonitrile R*, *water R*, *methanol R* (0.3:35:400:565 V/V/V/V);
- **mobile phase B:** *triethylamine R*, *acetonitrile R*, *water R*, *methanol R* (0.3:100:100:800 V/V/V/V);

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 10	100	0
10 - 11	100 → 0	0 → 100
11 - 30	0	100
30 - 31	0 → 100	100 → 0
31 - 50	100	0

**Flow rate:** 1 mL/min.

**Detection:** spectrophotometer at 248 nm.

**Injection:** 20 µL.

**Limit:**

- **N,N-dimethylaniline:** not more than the area of the principal peak in the chromatogram obtained with the reference solution (20 ppm).

**Loss on drying** (2.2.32): maximum 0.3 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

## ASSAY

Dissolve 0.250 g in 10 mL of *anhydrous acetic acid R* and add 70 mL of *acetic anhydride R*. Titrate with 0.1 M *perchloric acid*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *perchloric acid* is equivalent to 32.08 mg of C<sub>17</sub>H<sub>21</sub>ClN<sub>2</sub>O<sub>2</sub>.

## IMPURITIES

Specified impurities: A, B.

A. (1*R*,3*r*,5*S*)-8-methyl-8-azabicyclo[3.2.1]octan-3-ol (tropine),B. 1*H*-indole-3-carboxylic acid.01/2008:1798  
corrected 6.0

## TROSPIUM CHLORIDE

## Tropii chloridum

C<sub>25</sub>H<sub>30</sub>ClNO<sub>3</sub>  
[10405-02-4]M<sub>r</sub> 428.0

## DEFINITION

(1*R*,3*r*,5*S*)-3-[(Hydroxydiphenylacetyl)oxy]spiro[8-azoniabicyclo[3.2.1]octane-8,1'-pyrrolidinium] chloride.

Content: 99.0 per cent to 101.0 per cent (dried substance).

## CHARACTERS

*Appearance*: white or almost white, crystalline powder.*Solubility*: very soluble in water, freely soluble in methanol, practically insoluble in methylene chloride.

## IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

*Comparison*: tropium chloride CRS.

B. It gives reaction (a) of chlorides (2.3.1).

## TESTS

**Solution S.** Dissolve 3.0 g in carbon dioxide-free water R and dilute to 30 mL with the same solvent.**Appearance of solution.** Solution S is clear (2.2.1) and not more intensely coloured than reference solution B<sub>7</sub> (2.2.2, Method II).**pH** (2.2.3): 5.0 to 7.0.

Dilute 5 mL of solution S to 50 mL with carbon dioxide-free water R.

**Impurity C.** Thin-layer chromatography (2.2.27).*Test solution.* Dissolve 0.20 g of the substance to be examined in 2.0 mL of methanol R.*Reference solution (a).* Dissolve 1.0 mg of tropium impurity C CRS in 2.0 mL of methanol R.*Reference solution (b).* Dilute 1.0 mL of test solution to 10.0 mL with methanol R. To 50 µL of this solution add 1 mL of reference solution (a).*Plate*: TLC silica gel plate R.*Mobile phase*: glacial acetic acid R, hydrochloric acid R, acetonitrile R (1:3.5:45 V/V/V).*Application*: 10 µL as bands.*Development*: over 2/3 of the plate.*Drying*: in a current of warm air until the odour of acetic acid is no longer perceptible.*Detection*: spray with potassium iodobismuthate solution R and subsequently with a 5 g/L solution of sodium nitrite R.*System suitability*: reference solution (b):

– the chromatogram shows 2 clearly visible and separated zones.

*Limit*:– *impurity C*: any zone due to impurity C is not more intense than the zone in the chromatogram obtained with reference solution (a) (0.5 per cent).**Related substances.** Liquid chromatography (2.2.29).*Test solution.* Dissolve 30.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 mL with the mobile phase.*Reference solution (a).* Dissolve 6.0 mg of tropium impurity A CRS in the mobile phase and dilute to 20.0 mL with the mobile phase.*Reference solution (b).* Dissolve 7.5 mg of tropium impurity B CRS in the mobile phase and dilute to 5.0 mL with the mobile phase.*Reference solution (c).* Dilute a mixture of 0.3 mL of the test solution, 1.0 mL of reference solution (a) and 1.0 mL of reference solution (b) to 100.0 mL with the mobile phase.*Column*:– *size*: *l* = 0.25 m, Ø = 4.6 mm;– *stationary phase*: end-capped octylsilyl silica gel for chromatography R (5 µm);– *temperature*: 40 °C.*Mobile phase*: mix 1 volume of triethylamine R and 3 volumes of phosphoric acid R with 700 volumes of water R and add 300 volumes of acetonitrile R.*Flow rate*: 1 mL/min.*Detection*: spectrophotometer at 215 nm.*Injection*: 20 µL.*Run time*: 3 times the retention time of tropium.*Relative retention* with reference to tropium (retention time = about 10 min): impurity B = about 0.7; impurity A = about 1.9.*System suitability*: reference solution (c):– *resolution*: minimum 3 between the peaks due to impurity B and tropium.*Limits*:– *impurity B*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.5 per cent);– *impurity A*: not more than 3 times the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.3 per cent);– *unspecified impurities*: for each impurity, not more than 0.2 times the area of the peak due to impurity B in the chromatogram obtained with reference solution (c) (0.10 per cent);– *total*: not more than twice the area of the peak due to impurity B in the chromatogram obtained with reference solution (c) (1.0 per cent);– *disregard limit*: 0.1 times the area of the peak due to impurity B in the chromatogram obtained with reference solution (c) (0.05 per cent).**Loss on drying** (2.2.32): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

## ASSAY

Dissolve 0.300 g in 50 mL of *water R*. Titrate with 0.1 M silver nitrate, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M silver nitrate is equivalent to 42.80 mg of  $C_{25}H_{30}ClNO_3$ .

## STORAGE

Protected from light.

## IMPURITIES

Specified impurities: A, B, C.

A. hydroxydiphenylacetic acid (benzilic acid),

B. (1*R*,3*r*,5*S*)-8-azabicyclo[3.2.1]oct-3-yl hydroxydiphenylacetate,

C. (1*R*,3*r*,5*S*)-3-hydroxyspiro[8-azoniabicyclo[3.2.1]octane-8,1'-pyrrolidinium].

01/2008:2133  
corrected 6.0

## TROXERUTIN

## Troxerutinum

$C_{33}H_{42}O_{19}$

$M_r$  743

## DEFINITION

Mixture of *O*-hydroxyethylated derivatives of rutin containing minimum 80 per cent of 2-[3,4-bis(2-hydroxyethoxy)phenyl]-3-[[6-*O*-(6-deoxy- $\alpha$ -L-mannopyranosyl)- $\beta$ -D-glucopyranosyl]oxy]-5-hydroxy-7-(2-hydroxyethoxy)-4*H*-1-benzopyran-4-one (tris(hydroxyethyl)rutin).

*Content*: 95.0 per cent to 105.0 per cent (dried substance).

## CHARACTERS

*Appearance*: yellowish-green, crystalline powder, hygroscopic.

*Solubility*: freely soluble in water, slightly soluble in ethanol (96 per cent) and practically insoluble in methylene chloride.

## IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

*Comparison*: troxerutin CRS.

B. Examine the chromatograms obtained in the test for composition.

*Results*: the principal peak in the chromatogram obtained with the test solution is similar in position and size to the principal peak in the chromatogram obtained with the reference solution (a).

## TESTS

**Composition.** Liquid chromatography (2.2.29): use the normalisation procedure.

*Test solution.* Dissolve 10.0 mg of the substance to be examined in the mobile phase, if necessary using an ultrasonic bath and dilute to 10.0 mL with the mobile phase.

*Reference solution (a).* Dissolve 10.0 mg of troxerutin CRS in the mobile phase, if necessary using an ultrasonic bath and dilute to 10.0 mL with the mobile phase.

*Reference solution (b).* Dilute 1 mL of reference solution (a) to 10 mL with the mobile phase. Dilute 1 mL of this solution to 100 mL with the mobile phase.

*Column*:

– *size*:  $l = 0.25$  m,  $\varnothing = 4.6$  mm,

– *stationary phase*: end-capped octadecylsilyl silica gel for chromatography R (5  $\mu$ m).

*Mobile phase*: mix 20 volumes of acetonitrile R and 80 volumes of a 15.6 g/L solution of sodium dihydrogen phosphate R adjusted to pH 4.4 with dilute phosphoric acid R or dilute sodium hydroxide solution R.

*Flow rate*: 0.5 mL/min.

*Detection*: spectrophotometer at 350 nm.

*Injection*: 10  $\mu$ L.

*Run time*: twice the retention time of the main compound of troxerutin (tris(hydroxyethyl)rutin).

*Relative retention* with reference to tris(hydroxyethyl)rutin (retention time = about 25 min): tetrakis(hydroxyethyl)rutin = about 0.5; mono(hydroxyethyl)rutin = about 0.8; bis(hydroxyethyl)rutin = about 1.1.

*System suitability*: reference solution (a):

– *peak-to-valley ratio*: minimum 2.0, where  $H_p$  = height above the baseline of the peak due to bis(hydroxyethyl)rutin and  $H_v$  = height above the baseline of the lowest point of the curve separating this peak from the peak due to tris(hydroxyethyl)rutin;

– *signal-to-noise ratio*: minimum 10 for the principal peak in the chromatogram obtained with reference solution (b).

*Limits*:

– *principal peak*: minimum 80 per cent,

– *any other peak*: for each peak, maximum 5 per cent, except for 1 peak which can be maximum 10 per cent.

– *disregard limit*: area of the principal peak in the chromatogram obtained with reference solution (b).

**Ethylene oxide.** Head-space gas chromatography (2.2.28).

*Test solution.* To 1.00 g of the substance to be examined in a vial, add 1.0 mL of *water R*. Mix to obtain a homogeneous solution. Heat at 70 °C for 45 min.

*Reference solution.* To 1.00 g of the substance to be examined in a vial, add 50  $\mu$ L of ethylene oxide solution R4 and 950  $\mu$ L of *water R* and close tightly. Mix to obtain a homogeneous solution. Heat at 70 °C for 45 min.

*Column*:

– *material*: fused silica,

– *size*:  $l = 30$  m,  $\varnothing = 0.32$  mm,

– *stationary phase*: poly(cyanopropyl)(7)(phenyl)(7)methyl(86)siloxane R (film thickness 1  $\mu$ m).

*Carrier gas*: helium for chromatography R.

*Flow rate*: 1.1 mL/min.

Static head-space conditions which may be used:

- equilibration temperature: 80 °C,
- equilibration time: 45 min,
- transfer line temperature: 110 °C,
- pressurisation time: 2 min,
- injection time: 12 s.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 5	40
	5 - 18	40 → 200
Injection port		150
Detector		250

Detection: flame ionisation.

Injection: 1.0 mL.

The peak due to ethylene oxide is identified by injecting solutions of ethylene oxide of increasing concentration.

Determine the content of ethylene oxide (ppm) in the substance to be examined using the following expression:

$$\frac{A_1 \times m_1}{(A_2 \times m_2) - (A_1 \times m_3)}$$

- $A_1$  = area of the peak due to ethylene oxide in the chromatogram obtained with the test solution,
- $A_2$  = area of the peak due to ethylene oxide in the chromatogram obtained with the reference solution,
- $m_1$  = mass of ethylene oxide in the reference solution, in micrograms,
- $m_2$  = mass of the substance to be examined in the test solution, in grams,
- $m_3$  = mass of the substance to be examined in the reference solution, in grams.

Limit:

- ethylene oxide: maximum 1 ppm.

**Heavy metals** (2.4.8): maximum 20 ppm.

1.0 g complies with test F. Prepare the reference solution using 2 mL of lead standard solution (10 ppm Pb) R.

**Loss on drying** (2.2.32): maximum 5.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 4 h.

**Sulfated ash** (2.4.14): maximum 0.4 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.200 g in 100.0 mL of water R. Dilute 10.0 mL of this solution to 100.0 mL with water R. Dilute 10.0 mL to 100.0 mL with water R. Measure the absorbance (2.2.25) at the absorption maximum at 350 nm.

Calculate the percentage content of C<sub>33</sub>H<sub>42</sub>O<sub>19</sub> taking the specific absorbance to be 250.

STORAGE

In an airtight container, protected from light.

DEFINITION

Trypsin is a proteolytic enzyme obtained by the activation of trypsinogen extracted from the pancreas of mammals. It has an activity of not less than 0.5 microkatal per milligram, calculated with reference to the dried substance. In solution, it has maximum enzymic activity at pH 8; the activity is reversibly inhibited at pH 3, the pH at which it is most stable.

PRODUCTION

The animals from which trypsin is derived must fulfil the requirements for the health of animals suitable for human consumption.

The method of manufacture is validated to demonstrate that the product, if tested, would comply with the following test.

**Histamine** (2.6.10): not more than 1 µg of histamine base per 0.2 microkatal of trypsin activity. Use a 10 g/L solution of the substance to be examined in 0.0015 M borate buffer solution pH 8.0 R inactivated by heating on a water-bath for 30 min. Carry out dilutions with a 9 g/L solution of sodium chloride R.

CHARACTERS

**Appearance:** white or almost white, crystalline or amorphous powder, hygroscopic if amorphous.

**Solubility:** sparingly soluble in water.

IDENTIFICATION

- A. Dilute 1 mL of solution S (see Tests) to 100 mL with water R. In a depression in a white spot-plate, mix 0.1 mL of this solution with 0.2 mL of tosylarginine methyl ester hydrochloride solution R. A reddish-violet colour develops within 3 min.
- B. Dilute 0.5 mL of solution S to 5 mL with water R. Add 0.1 mL of a 20 g/L solution of tosyl-lysyl-chloromethane hydrochloride R. Adjust to pH 7.0, shake for 2 h and dilute to 50 mL with water R. In one of the depressions of a white spot-plate, mix 0.1 mL of this solution with 0.2 mL of tosylarginine methyl ester hydrochloride solution R. No reddish-violet colour develops within 3 min.

TESTS

**Solution S.** Dissolve 0.10 g in carbon dioxide-free water R and dilute to 10.0 mL with the same solvent.

**Appearance of solution.** Solution S is not more opalescent than reference suspension III (2.2.1).

**pH** (2.2.3): 3.0 to 6.0 for solution S.

**Specific absorbance** (2.2.25): 13.5 to 16.5, determined at the absorption maximum at 280 nm; maximum 7.0, determined at the absorption minimum at 250 nm.

Dissolve 30.0 mg in 0.001 M hydrochloric acid and dilute to 100.0 mL with the same acid.

**Chymotrypsin.**

**Test solution.** To 1.8 mL of buffer solution pH 8.0 R add 7.4 mL of water R and 0.5 mL of 0.2 M acetyltyrosine ethyl ester R. While shaking the solution, add 0.3 mL of solution S and start a timer. After exactly 5 min, measure the pH (2.2.3).

**Reference solution.** Prepare in the same manner as the test solution, replacing solution S by 0.3 mL of a 0.5 g/L solution of chymotrypsin BRP, and measure the pH (2.2.3) exactly 5 min after adding the chymotrypsin.

The pH of the test solution is higher than that of the reference solution.

**Loss on drying** (2.2.32): not more than 5.0 per cent, determined on 0.500 g by drying at 60 °C at a pressure not exceeding 0.67 kPa for 2 h.

**Microbial contamination**

TAMC: acceptance criterion 10<sup>4</sup> CFU/g (2.6.12).

TYMC: acceptance criterion 10<sup>2</sup> CFU/g (2.6.12).

01/2011:0694

## TRYPSIN

Trypsinum

[9002-07-7]

Absence of *Escherichia coli* (2.6.13).

Absence of *Salmonella* (2.6.13).

01/2009:1272  
corrected 7.0

## ASSAY

The activity of trypsin is determined by comparing the rate at which it hydrolyses *benzoylarginine ethyl ester hydrochloride R* with the rate at which *trypsin BRP* hydrolyses the same substrate in the same conditions.

**Apparatus.** Use a reaction vessel of about 30 mL capacity provided with:

- a device that will maintain a temperature of  $25.0 \pm 0.1$  °C;
- a stirring device (for example, a magnetic stirrer);
- a lid with holes for the insertion of electrodes, the tip of a burette, a tube for the admission of nitrogen and the introduction of reagents.

An automatic or manual titration device may be used. For the latter, the burette is graduated in 0.005 mL and the pH meter is provided with a wide-range scale and glass-calomel or glass-silver-silver chloride electrodes.

**Test solution.** Dissolve sufficient of the substance to be examined in 0.001 M hydrochloric acid and dilute to 25.0 mL with the same acid in order to obtain a solution containing approximately 700 nanokatals per millilitre.

**Reference solution.** Dissolve 25.0 mg of *trypsin BRP* in 0.001 M hydrochloric acid and dilute to 25.0 mL with the same acid.

Store the solutions at 0-5 °C. Warm 1 mL of each solution to about 25 °C over 15 min and use 50 µL of each solution for each titration. Carry out the titration in an atmosphere of nitrogen. Transfer 10.0 mL of 0.0015 M borate buffer solution pH 8.0 R to the reaction vessel and, while stirring, add 1.0 mL of a freshly prepared 6.86 g/L solution of *benzoylarginine ethyl ester hydrochloride R*. When the temperature is steady at  $25.0 \pm 0.1$  °C (after about 5 min) adjust to pH 8.0 exactly with 0.1 M sodium hydroxide. Add 50 µL of the test solution and start a timer. Maintain at pH 8.0 by the addition of 0.1 M sodium hydroxide, the tip of the microburette being immersed in the solution; note the volume added every 30 s. Follow the reaction for 8 min. Calculate the volume of 0.1 M sodium hydroxide used per second. Carry out a titration in the same manner using the reference solution and calculate the volume of 0.1 M sodium hydroxide used per second.

Calculate the activity in microkatals per milligram using the following expression:

$$\frac{m' \times V}{m \times V'} \times A$$

- m* = mass of the substance to be examined, in milligrams;  
*m'* = mass of *trypsin BRP*, in milligrams;  
*V* = volume of 0.1 M sodium hydroxide used per second by the test solution;  
*V'* = volume of 0.1 M sodium hydroxide used per second by the reference solution;  
*A* = activity of *trypsin BRP*, in microkatals per milligram.

## STORAGE

In an airtight container, protected from light, at a temperature of 2 °C to 8 °C.

## LABELLING

The label states:

- the activity in microkatals per milligram;
- for the amorphous substance, that it is hygroscopic.

## TRYPTOPHAN

### Tryptophanum

$C_{11}H_{12}N_2O_2$   
[73-22-3]

$M_r$  204.2

## DEFINITION

(S)-2-Amino-3-(1*H*-indol-3-yl)propanoic acid.

**Content:** 98.5 per cent to 101.0 per cent (dried substance).

## CHARACTERS

**Appearance:** white or almost white, crystalline or amorphous powder.

**Solubility:** sparingly soluble in water, slightly soluble in ethanol (96 per cent). It dissolves in dilute solutions of mineral acids and alkali hydroxides.

## IDENTIFICATION

**First identification:** A, B.

**Second identification:** A, C, D.

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry (2.2.24).

**Preparation:** discs.

**Comparison:** *tryptophan CRS*.

C. Examine the chromatograms obtained in the test for ninhydrin-positive substances.

**Results:** the principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

D. Dissolve about 20 mg in 10 mL of *water R*. Add 5 mL of *dimethylaminobenzaldehyde solution R6* and 2 mL of *hydrochloric acid R1*. Heat on a water-bath. A purple-blue colour develops.

## TESTS

**Appearance of solution.** The solution is clear (2.2.1) and not more intensely coloured than reference solution BY<sub>6</sub> (2.2.2, *Method II*).

Dissolve 0.1 g in 1 M hydrochloric acid and dilute to 10 mL with the same acid.

**Specific optical rotation** (2.2.7):  $-30.0$  to  $-33.0$  (dried substance).

Dissolve 0.25 g in *water R*, heating on a water-bath if necessary, and dilute to 25.0 mL with the same solvent.

**Ninhydrin-positive substances.** Thin-layer chromatography (2.2.27).

**Solvent mixture:** *glacial acetic acid R*, *water R* (50:50 V/V).

**Test solution (a).** Dissolve 0.10 g of the substance to be examined in the solvent mixture and dilute to 10 mL with the solvent mixture.

**Test solution (b).** Dilute 1 mL of test solution (a) to 50 mL with the solvent mixture.

**Reference solution (a).** Dissolve 10 mg of *tryptophan CRS* in the solvent mixture and dilute to 50 mL with the solvent mixture.

**Reference solution (b).** Dilute 5 mL of test solution (b) to 20 mL with the solvent mixture.

**Reference solution (c).** Dissolve 10 mg of *tryptophan CRS* and 10 mg of *tyrosine CRS* in the solvent mixture and dilute to 25 mL with the solvent mixture.

**Plate:** *TLC silica gel plate R*.

**Mobile phase:** *glacial acetic acid R, water R, butanol R* (20:20:60 V/V/V).

**Application:** 5 µL.

**Development:** over a path of 15 cm.

**Drying:** in air.

**Detection:** spray with *ninhydrin solution R* and heat at 100-105 °C for 15 min.

**System suitability:** reference solution (c):

- the chromatogram shows 2 clearly separated spots.

**Limit:** test solution (a):

- **any impurity:** any spot, apart from the principal spot, is not more intense than the principal spot in the chromatogram obtained with reference solution (b) (0.5 per cent).

**Impurity A and other related substances.** Liquid chromatography (2.2.29). Prepare the standard, test and reference solutions immediately before use.

**Buffer solution pH 2.3.** Dissolve 3.90 g of *sodium dihydrogen phosphate R* in 1000 mL of *water R*. Add about 700 mL of a 2.9 g/L solution of *phosphoric acid R* and adjust to pH 2.3 with the same acid solution.

**Solvent mixture:** *acetonitrile R, water R* (10:90 V/V).

**Standard solution.** Dissolve 10.0 mg of *N-acetyltryptophan R* in the solvent mixture and dilute to 100.0 mL with the solvent mixture. Dilute 2.0 mL of this solution to 100.0 mL with the solvent mixture.

**Test solution (a).** Dissolve 0.10 g of the substance to be examined in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

**Test solution (b).** Dissolve 0.10 g of the substance to be examined in the standard solution and dilute to 10.0 mL with the standard solution.

**Reference solution (a).** Dissolve the contents of a vial of *1,1'-ethylidenebistryptophan CRS* (impurity A) in 1.0 mL of the solvent mixture.

**Reference solution (b).** Dissolve the contents of a vial of *1,1'-ethylidenebistryptophan CRS* (impurity A) in 1.0 mL of the standard solution.

**Reference solution (c).** Dilute 0.5 mL of reference solution (a) to 5.0 mL with the solvent mixture.

**Column:**

- **size:**  $l = 0.25$  m,  $\varnothing = 4.6$  mm;
- **stationary phase:** *octadecylsilyl silica gel for chromatography R* (5 µm);
- **temperature:** 40 °C.

**Mobile phase:**

- **mobile phase A:** *acetonitrile R*, buffer solution pH 2.3 (115:885 V/V);
- **mobile phase B:** *acetonitrile R*, buffer solution pH 2.3 (350:650 V/V);

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 10	100	0
10 - 45	100 → 0	0 → 100
45 - 65	0	100

**Flow rate:** 0.7 mL/min.

**Detection:** spectrophotometer at 220 nm.

**Injection:** 20 µL of test solutions (a) and (b) and reference solutions (b) and (c).

**Retention time:** tryptophan = about 8 min; *N-acetyltryptophan* = about 29 min; impurity A = about 34 min.

**System suitability:**

- **resolution:** minimum 8.0 between the peaks due to *N-acetyltryptophan* and impurity A in the chromatogram obtained with reference solution (b); if necessary, adjust the time programme for the elution gradient (an increase in the duration of elution with mobile phase A produces longer retention times and a better resolution);
- **signal-to-noise ratio:** minimum 15 for the principal peak in the chromatogram obtained with reference solution (c);
- **symmetry factor:** maximum 3.5 for the peak due to impurity A in the chromatogram obtained with reference solution (b).
- in the chromatogram obtained with test solution (a) there is no peak with the same retention time as *N-acetyltryptophan* (in such case correct the area of the *N-acetyltryptophan* peak).

**Limits:** test solution (b):

- **impurity A:** not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (c) (10 ppm);
- **sum of impurities with a retention time less than that of tryptophan:** not more than 0.6 times the area of the peak due to *N-acetyltryptophan* in the chromatogram obtained with reference solution (b) (100 ppm);
- **sum of impurities with a retention time greater than that of tryptophan and up to 1.8 times the retention time of N-acetyltryptophan:** not more than 1.9 times the area of the peak due to *N-acetyltryptophan* in the chromatogram obtained with reference solution (b) (300 ppm);
- **disregard limit:** 0.02 times the area of the peak due to *N-acetyltryptophan* in the chromatogram obtained with reference solution (b); disregard the peak due to *N-acetyltryptophan*.

**Chlorides (2.4.4):** maximum 200 ppm.

Dissolve 0.25 g in 3 mL of *dilute nitric acid R* and dilute to 15 mL with *water R*. The solution, without any further addition of nitric acid, complies with the test.

**Sulfates (2.4.13):** maximum 300 ppm.

Dissolve 0.5 g in a mixture of 5 volumes of *dilute hydrochloric acid R* and 25 volumes of *distilled water R*, and dilute to 15 mL with the same mixture of solvents.

**Ammonium (2.4.1, Method B):** maximum 200 ppm, determined on 0.10 g.

Prepare the standard using 0.2 mL of *ammonium standard solution (100 ppm NH<sub>4</sub>) R*.

**Iron (2.4.9):** maximum 20 ppm.

In a separating funnel, dissolve 0.50 g in 10 mL of *dilute hydrochloric acid R*. Shake with 3 quantities, each of 10 mL, of *methyl isobutyl ketone RI*, shaking for 3 min each time. To the combined organic layers add 10 mL of *water R* and shake for 3 min. Examine the aqueous layer.

**Heavy metals (2.4.8):** maximum 10 ppm.

2.0 g complies with test D. Prepare the reference solution using 2 mL of *lead standard solution (10 ppm Pb) R*.

**Loss on drying (2.2.32):** maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash (2.4.14):** maximum 0.1 per cent, determined on 1.0 g.

**ASSAY**

Dissolve 0.150 g in 3 mL of *anhydrous formic acid R*. Add 30 mL of *anhydrous acetic acid R*. Titrate with 0.1 M *perchloric acid*, using 0.1 mL of *naphtholbenzein solution R* as indicator.

1 mL of 0.1 M *perchloric acid* is equivalent to 20.42 mg of C<sub>11</sub>H<sub>12</sub>N<sub>2</sub>O<sub>2</sub>.

## STORAGE

Protected from light.

## TUBERCULIN FOR HUMAN USE, OLD

## Tuberculinum pristinum ad usum humanum

## DEFINITION

Old tuberculin for human use consists of a filtrate, concentrated by heating, containing the soluble products of the culture and lysis of one or more strains of *Mycobacterium bovis* and/or *Mycobacterium tuberculosis* that is capable of demonstrating a delayed hypersensitivity in an animal sensitised to micro-organisms of the same species.

Old tuberculin for human use in concentrated form is a transparent, viscous, yellow or brown liquid.

## PRODUCTION

## GENERAL PROVISIONS

The production of old tuberculin is based on a seed-lot system. The production method shall have been shown to yield consistently old tuberculin of adequate potency and safety in man. A batch of old tuberculin, calibrated in International Units by the method described under Assay and for which adequate clinical information is available as to its activity in man, is set aside to serve as a reference preparation.

The International Unit is the activity of a stated quantity of the International Standard. The equivalence in International Units of the International Standard is stated by the World Health Organisation.

## SEED LOTS

The strains of mycobacteria used shall be identified by historical records that include information on their origin and subsequent manipulation.

The working seed lots used to inoculate the media for the production of a concentrated harvest shall not have undergone more than 4 subcultures from the master seed lot.

Only seed lots that comply with the following requirements may be used for propagation.

**Identification.** The species of mycobacterium of the master and working seed lots is identified.

**Bacterial and fungal contamination.** Carry out the test for sterility (2.6.1), using 10 mL for each medium. The working seed lot complies with the test for sterility except for the presence of mycobacteria.

## PROPAGATION AND HARVEST

The bacteria are grown in a liquid medium which may be a glycerolated broth or a synthetic medium. Growth must be typical for the strain. The culture is inactivated by a suitable method, such as treatment in an autoclave (121 °C for not less than 30 min) or in flowing steam at a temperature not less than 100 °C for at least 1 h. The culture liquid, from which the micro-organisms may or may not have been separated by filtration, is concentrated by evaporation, usually to one-tenth of its initial volume. The preparation is free from live mycobacteria. The concentrated harvest is shown to comply with the test

for mycobacteria (2.6.2) before addition of any antimicrobial preservative or other substance that might interfere with the test. Phenol (5 g/L) or another suitable antimicrobial preservative that does not give rise to false positive reactions may be added.

Only a concentrated harvest that complies with the following requirements may be used in the preparation of the final bulk tuberculin.

**pH (2.2.3).** The pH of the concentrated harvest is 6.5 to 8.

**Glycerol.** Where applicable, determine the glycerol content of the concentrated harvest. The amount is within the limits approved for the particular product.

**Antimicrobial preservative.** Where applicable, determine the amount of antimicrobial preservative by a suitable chemical or physico-chemical method. The content is not less than 85 per cent and not more than 115 per cent of the intended amount. If phenol has been used in the preparation, the concentration is not more than 5 g/L (2.5.15).

**Sensitisation.** Carry out the test described under Tests.

**Sterility (2.6.1).** The concentrated harvest complies with the test for sterility, carried out using 10 mL for each medium.

**Potency.** Determine the potency as described under Assay.

#### FINAL BULK TUBERCULIN

The concentrated harvest is diluted aseptically.

Only a final bulk tuberculin that complies with the following requirement may be used in the preparation of the final lot.

**Sterility (2.6.1).** The final bulk tuberculin complies with the test for sterility, carried out using 10 mL for each medium.

#### FINAL LOT

The final bulk tuberculin is distributed aseptically into sterile containers which are then closed so as to prevent contamination.

Only a final lot that is satisfactory with respect to each of the requirements given below under Identification, Tests and Assay may be released for use.

The following tests may be omitted on the final lot if they have been carried out at the stages indicated:

- live mycobacteria: concentrated harvest,
- sensitisation: concentrated harvest,
- toxicity: concentrated harvest or final bulk tuberculin,
- antimicrobial preservative: final bulk tuberculin.

#### IDENTIFICATION

Inject increasing doses of the preparation to be examined intradermally into healthy, white or pale-coloured guinea-pigs, specifically sensitised (for example, as described under Assay). A reaction varying from erythema to necrosis is produced at the site of the injection. Similar injections administered to non-sensitised guinea-pigs do not stimulate a reaction. The assay may also serve as identification.

#### TESTS

*Old tuberculin for human use in concentrated form ( $\geq 100\,000$  IU/mL) complies with each of the tests prescribed below; the diluted product complies with the tests for antimicrobial preservative and sterility.*

**Toxicity.** Inject a quantity equivalent to 50 000 IU subcutaneously into each of two healthy guinea-pigs weighing 250 g to 350 g and which have not been subjected to any treatment likely to interfere with the test. Observe the animals for 7 days. No adverse effect is produced.

**Sensitisation.** Use 3 guinea-pigs that have not been subjected to any treatment likely to interfere with the test. On 3 occasions at intervals of 5 days, inject intradermally into each guinea-pig

about 500 IU of the preparation to be examined in a volume of 0.1 mL. 2 to 3 weeks after the third injection, administer the same dose intradermally to the same animals and to a control group of 3 guinea-pigs of the same mass that have not previously received injections of tuberculin. After 24 h to 72 h, the reactions in the 2 groups of animals are not substantially different.

**Antimicrobial preservative.** Where applicable, determine the amount of antimicrobial preservative by a suitable chemical or physico-chemical method. The content is not less than the minimum amount shown to be effective and not more than 115 per cent of the amount stated on the label. If phenol has been used in the preparation, the concentration is not more than 5 g/L (2.5.15).

**Live mycobacteria (2.6.2).** It complies with the test for mycobacteria.

**Sterility (2.6.1).** It complies with the test for sterility.

#### ASSAY

The potency of old tuberculin is determined by comparing the reactions produced by the intradermal injection of increasing doses of the preparation to be examined into sensitised guinea-pigs with the reactions produced by known concentrations of the reference preparation.

Prepare a suspension containing a suitable amount (0.1 mg to 0.4 mg/mL) of heat-inactivated, dried mycobacteria in mineral oil with or without emulsifier; use mycobacteria of a strain of the same species as that used in the preparation to be examined. Sensitise not fewer than 6 pale-coloured guinea-pigs weighing not less than 300 g by injecting intramuscularly or intradermally a total of about 0.5 mL of the suspension, divided between several sites if necessary. Carry out the test after the period of time required for optimal sensitisation which is usually 4 to 8 weeks after sensitisation. Depilate the flanks of the animals so that it is possible to make at least three injections on each side and not more than a total of 12 injection points per animal. Use at least three different doses of the reference preparation and at least 3 different doses of the preparation to be examined. For both preparations, use doses such that the highest dose is about 10 times the lowest dose. Choose the doses such that when they are injected the lesions produced have a diameter of not less than 8 mm and not more than 25 mm. In any given test, the order of the dilutions injected at each point is chosen at random in a Latin square design. Inject each dose intradermally in a constant volume of 0.1 mL or 0.2 mL. Measure the diameters of the lesions 24 h to 48 h later and calculate the results of the test by the usual statistical methods, assuming that the diameters of the lesions are directly proportional to the logarithm of the concentration of the preparation.

The estimated potency is not less than 80 per cent and not more than 125 per cent of the stated potency. The confidence limits ( $P = 0.95$ ) are not less than 64 per cent and not more than 156 per cent of the stated potency.

#### STORAGE

Store protected from light.

#### LABELLING

The label states:

- the number of International Units per millilitre,
- the species of mycobacterium used to prepare the product,
- the name and quantity of any antimicrobial preservative or any other excipient,
- the expiry date,
- where applicable, that old tuberculin is not to be injected in its concentrated form but diluted so as to administer not more than 100 IU per dose.

01/2008:0535

## TUBERCULIN PURIFIED PROTEIN DERIVATIVE, AVIAN

### Tuberculini aviarii derivatum proteinosum purificatum

#### DEFINITION

Avian tuberculin purified protein derivative (avian tuberculin PPD) is a preparation obtained from the heat-treated products of growth and lysis of *Mycobacterium avium* capable of revealing a delayed hypersensitivity in an animal sensitised to micro-organisms of the same species.

#### PRODUCTION

It is obtained from the water-soluble fractions prepared by heating in free-flowing steam and subsequently filtering cultures of *M. avium* grown in a liquid synthetic medium. The active fraction of the filtrate, consisting mainly of protein, is isolated by precipitation, washed and re-dissolved. An antimicrobial preservative that does not give rise to false positive reactions, such as phenol, may be added. The final sterile preparation, free from mycobacteria, is distributed aseptically into sterile tamper-proof glass containers, which are then closed so as to prevent contamination. The preparation may be freeze-dried.

*The identification, the tests and the determination of potency apply to the liquid form and to the freeze-dried form after reconstitution as stated on the label.*

#### IDENTIFICATION

Inject a range of graded doses intradermally at different sites into suitably sensitised albino guinea-pigs, each weighing not less than 250 g. After 24-28 h, reactions appear in the form of oedematous swellings with erythema, with or without necrosis, at the points of injection. The size and severity of the reactions vary according to the dose. Unsensitised guinea-pigs show no reactions to similar injections.

#### TESTS

**pH** (2.2.3): 6.5 to 7.5.

**Phenol** (2.5.15): maximum 5 g/L, if the preparation to be examined contains phenol.

**Sensitising effect.** Use a group of 3 guinea-pigs that have not been treated with any material that will interfere with the test. On 3 occasions at intervals of 5 days, inject intradermally into each guinea-pig a dose of the preparation to be examined equivalent to 500 IU in 0.1 mL. 15-21 days after the 3<sup>rd</sup> injection, inject the same dose (500 IU) intradermally into these animals and into a control group of 3 guinea-pigs of the same mass, which have not previously received injections of tuberculin. 24-28 h after the last injections, the reactions of the 2 groups are not significantly different.

**Toxicity.** Use 2 guinea-pigs, each weighing not less than 250 g, that have not previously been treated with any material that will interfere with the test. Inject subcutaneously into each guinea-pig 0.5 mL of the preparation to be examined. Observe the animals for 7 days. No abnormal effects occur during the observation period.

**Sterility.** It complies with the test for sterility prescribed in the monograph *Vaccines for veterinary use* (0062).

#### POTENCY

The potency of avian tuberculin purified protein derivative is determined by comparing the reactions produced in sensitised guinea-pigs by the intradermal injection of a series of dilutions of the preparation to be examined with those produced by known concentrations of a reference preparation calibrated in International Units.

The International Unit is the activity contained in a stated amount of the International Standard. The equivalence in International Units of the International Standard is stated by the World Health Organisation.

Sensitise not fewer than 8 albino guinea-pigs, each weighing 400-600 g, by the deep intramuscular injection of a suitable dose of inactivated or live *M. avium*. Not less than 4 weeks after the sensitisation of the guinea-pigs, shave their flanks to provide space for not more than 4 injection sites on each side. Prepare dilutions of the preparation to be examined and of the reference preparation using isotonic phosphate-buffered saline (pH 6.5-7.5) containing 0.005 g/L of *polysorbate 80 R*. Use not fewer than 3 doses of the reference preparation and not fewer than 3 doses of the preparation to be examined. Choose the doses such that the lesions produced have a diameter of not less than 8 mm and not more than 25 mm. Allocate the dilutions randomly to the sites, for example using a Latin square design. Inject each dose intradermally in a constant volume of 0.1 mL or 0.2 mL. Measure the diameters of the lesions after 24-28 h and calculate the results of the test using the usual statistical methods (for example, 5.3) and assuming that the diameters of the lesions are directly proportional to the logarithm of the concentration of the tuberculins.

The test is not valid unless the confidence limits ( $P = 0.95$ ) are not less than 50 per cent and not more than 200 per cent of the estimated potency. The estimated potency is not less than 75 per cent and not more than 133 per cent of the stated potency. The stated potency is not less than 20 000 IU/mL.

#### STORAGE

Protected from light, at a temperature of  $5 \pm 3$  °C.

#### LABELLING

The label states:

- the potency in International Units per millilitre;
- the name and quantity of any excipient;
- for freeze-dried preparations:
  - the name and volume of the reconstituting liquid to be added;
  - that the product is to be used immediately after reconstitution.

01/2008:0536

## TUBERCULIN PURIFIED PROTEIN DERIVATIVE, BOVINE

### Tuberculini bovini derivatum proteinosum purificatum

#### DEFINITION

Bovine tuberculin purified protein derivative (bovine tuberculin PPD) is a preparation obtained from the heat-treated products of growth and lysis of *Mycobacterium bovis* capable of revealing a delayed hypersensitivity in an animal sensitised to micro-organisms of the same species.

#### PRODUCTION

It is obtained from the water-soluble fractions prepared by heating in free-flowing steam and subsequently filtering cultures of *M. bovis* grown in a liquid synthetic medium. The active fraction of the filtrate, consisting mainly of protein, is isolated by precipitation, washed and re-dissolved. An antimicrobial preservative that does not give rise to false positive reactions, such as phenol, may be added. The final sterile preparation, free from mycobacteria, is distributed aseptically into sterile, tamper-proof glass containers, which are then closed so as to prevent contamination. The preparation may be freeze-dried.

The identification, the tests and the determination of potency apply to the liquid form and to the freeze-dried form after reconstitution as stated on the label.

#### IDENTIFICATION

Inject a range of graded doses intradermally at different sites into suitably sensitised albino guinea-pigs, each weighing not less than 250 g. After 24-28 h, reactions appear in the form of oedematous swellings with erythema, with or without necrosis, at the points of injection. The size and severity of the reactions vary according to the dose. Unsensitised guinea-pigs show no reactions to similar injections.

#### TESTS

**pH (2.2.3):** 6.5 to 7.5.

**Phenol (2.5.15):** maximum 5 g/L, if the preparation to be examined contains phenol.

**Sensitising effect.** Use a group of 3 guinea-pigs that have not been treated with any material that will interfere with the test. On 3 occasions at intervals of 5 days, inject intradermally into each guinea-pig a dose of the preparation to be examined equivalent to 500 IU in 0.1 mL. 15-21 days after the 3<sup>rd</sup> injection, inject the same dose (500 IU) intradermally into these animals and into a control group of 3 guinea-pigs of the same mass, which have not previously received injections of tuberculin. 24-28 h after the last injections, the reactions of the 2 groups are not significantly different.

**Toxicity.** Use 2 guinea-pigs, each weighing not less than 250 g, that have not previously been treated with any material that will interfere with the test. Inject subcutaneously into each guinea-pig 0.5 mL of the preparation to be examined. Observe the animals for 7 days. No abnormal effects occur during the observation period.

**Sterility.** It complies with the test for sterility prescribed in the monograph *Vaccines for veterinary use (0062)*.

#### POTENCY

The potency of bovine tuberculin purified protein derivative is determined by comparing the reactions produced in sensitised guinea-pigs by the intradermal injection of a series of dilutions of the preparation to be examined with those produced by known concentrations of a reference preparation calibrated in International Units.

The International Unit is the activity contained in a stated amount of the International Standard. The equivalence in International Units of the International Standard is stated by the World Health Organisation.

Sensitise not fewer than 8 albino guinea-pigs, each weighing 400-600 g, by the deep intramuscular injection of 0.0001 mg of wet mass of living *M. bovis* of strain AN5 suspended in 0.5 mL of a 9 g/L solution of *sodium chloride R*. Not less than 4 weeks after the sensitisation of the guinea-pigs, shave their flanks to provide space for not more than 4 injection sites on each side. Prepare dilutions of the preparation to be examined and of the reference preparation using isotonic phosphate-buffered saline (pH 6.5-7.5) containing 0.005 g/L of *polysorbate 80 R*. Use not fewer than 3 doses of the reference preparation and not fewer than 3 doses of the preparation to be examined. Choose the doses such that the lesions produced have a diameter of not less than 8 mm and not more than 25 mm. Allocate the dilutions randomly to the sites, for example using a Latin square design. Inject each dose intradermally in a constant volume of 0.1 mL or 0.2 mL. Measure the diameters of the lesions after 24-28 h and calculate the results of the test using the usual statistical methods (for example, 5.3) and assuming that the diameters of the lesions are directly proportional to the logarithm of the concentration of the tuberculins.

The test is not valid unless the confidence limits ( $P = 0.95$ ) are not less than 50 per cent and not more than 200 per cent of the estimated potency. The estimated potency is not less than 66 per cent and not more than 150 per cent of the stated potency. The stated potency is not less than 20 000 IU/mL.

#### STORAGE

Protected from light, at a temperature of  $5 \pm 3$  °C.

#### LABELLING

The label states:

- the potency in International Units per millilitre;
- the name and quantity of any excipient;
- for freeze-dried preparations:
  - the name and volume of the reconstituting liquid to be added;
  - that the product is to be used immediately after reconstitution.

01/2008:0151

## TUBERCULIN PURIFIED PROTEIN DERIVATIVE FOR HUMAN USE

### Tuberculini derivatum proteinosum purificatum ad usum humanum

#### DEFINITION

Tuberculin purified protein derivative (tuberculin PPD) for human use is a preparation obtained by precipitation from the heated products of the culture and lysis of *Mycobacterium bovis* and/or *Mycobacterium tuberculosis* and capable of demonstrating a delayed hypersensitivity in an animal sensitised to micro-organisms of the same species.

Tuberculin PPD is a colourless or pale-yellow liquid; the diluted preparation may be a freeze-dried powder which upon dissolution gives a colourless or pale-yellow liquid.

#### PRODUCTION

##### GENERAL PROVISIONS

The production of tuberculin PPD is based on a seed-lot system. The production method shall have been shown to yield consistently tuberculin PPD of adequate potency and safety in man. A batch of tuberculin PPD, calibrated in International Units by method A described under Assay and for which adequate clinical information is available as to its activity in man, is set aside to serve as a reference preparation.

The International Unit is the activity of a stated quantity of the International Standard. The equivalence in International Units of the International Standard is stated by the World Health Organisation.

##### SEED LOTS

The strains of mycobacteria used shall be identified by historical records that include information on their origin and subsequent manipulation.

The working seed lots used to inoculate the media for production of a concentrated harvest shall not have undergone more than 4 subcultures from the master seed lot.

Only seed lots that comply with the following requirements may be used for propagation.

**Identification.** The species of mycobacterium of the master and working seed lots is identified.

**Bacterial and fungal contamination.** Carry out the test for sterility (2.6.1), using 10 mL for each medium. The working seed lot complies with the test for sterility except for the presence of mycobacteria.

**PROPAGATION AND HARVEST**

The bacteria are grown in a liquid synthetic medium. Growth must be typical for the strain. The culture is inactivated by a suitable method such as treatment in an autoclave (121 °C for not less than 30 min) or in flowing steam at a temperature not less than 100 °C for at least 1 h and filtered. The active fraction of the filtrate, consisting mainly of protein, is isolated by precipitation, washed and re-dissolved. The preparation is free from mycobacteria. The concentrated harvest is shown to comply with the test for mycobacteria (2.6.2) before addition of any antimicrobial preservative or other substance that might interfere with the test. Phenol (5 g/L) or another suitable antimicrobial preservative that does not give rise to false positive reactions may be added; a suitable stabiliser intended to prevent adsorption on glass or plastic surfaces may be added. The concentrated harvest may be freeze-dried. Phenol is not added to preparations that are to be freeze-dried.

Only a concentrated harvest that complies with the following requirements may be used in the preparation of the final bulk tuberculin PPD.

**Antimicrobial preservative.** Where applicable, determine the amount of antimicrobial preservative by a suitable chemical or physico-chemical method. The content is not less than 85 per cent and not more than 115 per cent of the intended amount. If phenol has been used in the preparation, the concentration is not more than 5 g/L (2.5.15).

**Sensitisation.** Carry out the test described under Tests.

**Sterility (2.6.1).** The concentrated harvest, reconstituted if necessary, complies with the test for sterility, carried out using 10 mL for each medium.

**Potency.** Determine the potency as described under Assay.

**FINAL BULK TUBERCULIN PPD**

The concentrated harvest is diluted aseptically, after reconstitution if necessary.

Only a final bulk tuberculin PPD that complies with the following requirement may be used in the preparation of the final lot.

**Sterility (2.6.1).** The final bulk tuberculin PPD complies with the test for sterility, carried out using 10 mL for each medium.

**FINAL LOT**

The final bulk tuberculin PPD is distributed aseptically into sterile containers which are then closed so as to prevent contamination. It may be freeze-dried.

Only a final lot that is satisfactory with respect to each of the requirements given below under Identification, Tests and Assay may be released for use.

The following tests may be omitted on the final lot if they have been carried out at the stages indicated:

- live mycobacteria: concentrated harvest
- sensitisation: concentrated harvest
- toxicity: concentrated harvest or final bulk tuberculin PPD
- antimicrobial preservative: final bulk tuberculin PPD.

**IDENTIFICATION**

Inject increasing doses of the preparation to be examined intradermally into healthy, white or pale-coloured guinea-pigs, specifically sensitised (for example as described under Assay). A reaction varying from erythema to necrosis is produced at the site of the injection. Similar injections administered to non-sensitised guinea-pigs do not stimulate a reaction. The assay may also serve as identification.

**TESTS**

*Tuberculin purified protein derivative for human use in concentrated form ( $\geq 100\,000$  IU/mL) complies with each of the tests prescribed below; the diluted product complies with the tests for pH, antimicrobial preservative and sterility.*

**pH (2.2.3).** The pH of the preparation, reconstituted if necessary as stated on the label, is 6.5 to 7.5.

**Toxicity.** Inject subcutaneously 50 000 IU of the preparation to be examined into each of two healthy guinea-pigs weighing 250 g to 350 g and which have not been subjected to any treatment likely to interfere with the test. Observe the animals for 7 days. No adverse effect is produced.

**Sensitisation.** Use 3 guinea-pigs that have not been subjected to any treatment likely to interfere with the test. On 3 occasions at intervals of 5 days, inject intradermally into each guinea-pig about 500 IU of the preparation to be examined in a volume of 0.1 mL. 2 to 3 weeks after the third injection, administer the same dose intradermally to the same animals and to a control group of three guinea-pigs of the same mass that have not previously received injections of tuberculin. After 24 h to 72 h, the reactions in the 2 groups of animals are not substantially different.

**Antimicrobial preservative.** Where applicable, determine the amount of antimicrobial preservative by a suitable chemical or physico-chemical method. The content is not less than the minimum amount shown to be effective and not more than 115 per cent of the amount stated on the label. If phenol has been used in the preparation, the concentration is not more than 5 g/L (2.5.15).

**Live mycobacteria (2.6.2).** It complies with the test for mycobacteria.

**Sterility (2.6.1).** It complies with the test for sterility.

**ASSAY**

Use method A or, where the preparation contains 1 IU to 2 IU, use method B.

**METHOD A**

The potency of tuberculin PPD is determined by comparing the reactions produced by the intradermal injection of increasing doses of the preparation to be examined into sensitised guinea-pigs with the reactions produced by known concentrations of the reference preparation.

Prepare a suspension containing a suitable amount (0.1 mg/mL to 0.4 mg/mL) of heat-inactivated, dried mycobacteria in mineral oil with or without emulsifier; use mycobacteria of a strain of the same species as that used in the preparation to be examined. Sensitise not fewer than six pale-coloured guinea-pigs weighing not less than 300 g by injecting intramuscularly or intradermally a total of about 0.5 mL of the suspension, divided between several sites if necessary. Carry out the test after the period of time required for optimal sensitisation which is usually 4 to 8 weeks after sensitisation. Depilate the flanks of the animals so that it is possible to make at least 3 injections on each side but not more than a total of 12 injection points per animal. Prepare dilutions of the preparation to be examined and of the reference preparation using isotonic phosphate-buffered saline (pH 6.5 to 7.5) containing 50 mg/L of *polysorbate 80 R*. If the preparation to be examined is freeze-dried and does not contain a stabiliser, reconstitute it using the liquid described above. Use at least 3 different doses of the reference preparation and at least 3 different doses of the preparation to be examined. For both preparations, use doses such that the highest dose is about 10 times the lowest dose. Choose the doses such that when they are injected the lesions produced have a diameter of not less than 8 mm and not more than 25 mm. In any given test, the order of the dilutions injected at each point is chosen at random in a Latin square design. Inject each dose intradermally in a constant volume of 0.1 mL or 0.2 mL. Measure the diameters of the lesions 24 h to 48 h later and calculate the results of the test by the usual statistical methods, assuming that the diameters of the lesions are directly proportional to the logarithm of the concentration of the preparation.

01/2008:0305

The estimated potency is not less than 80 per cent and not more than 125 per cent of the stated potency. The confidence limits ( $P = 0.95$ ) are not less than 64 per cent and not more than 156 per cent of the stated potency.

**METHOD B**

The potency of tuberculin PPD is determined by comparing the reactions produced by the intradermal injection of the preparation to be examined into sensitised guinea-pigs with the reactions produced by known concentrations of the reference preparation.

Prepare a suspension in mineral oil with or without emulsifier and containing a suitable amount (0.1 mg/mL to 0.4 mg/mL) of heat-inactivated, dried mycobacteria; use mycobacteria of a strain of the same species as that used in the preparation to be examined. Sensitise not fewer than 6 pale-coloured guinea-pigs weighing not less than 300 g by injecting intramuscularly or intradermally a total of about 0.5 mL of the suspension, divided between several sites if necessary. Carry out the test after the period of time required for optimal sensitisation which is usually 4 to 8 weeks after sensitisation. Depilate the flanks of the animals so that it is possible to make at least 3 injections on each side but not more than a total of 12 injection points per animal. Prepare dilutions of the reference preparation using isotonic phosphate-buffered saline (pH 6.5 to 7.5) containing 50 mg/L of *polysorbate 80 R*. Use at least 3 different doses of the reference preparation such that the highest dose is about 10 times the lowest dose and the median dose is the same as that of the preparation to be examined. In any given test, the order of the dilutions injected at each point is chosen at random in a Latin square design. Inject the preparation to be examined and each dilution of the reference preparation intradermally in a constant volume of 0.1 mL or 0.2 mL. Measure the diameters of the lesions 24 h to 48 h later and calculate the results of the test by the usual statistical methods, assuming that the areas of the lesions are directly proportional to the logarithm of the concentration of the preparation to be examined. (This dose relationship applies to this assay and not necessarily to other test systems.)

The estimated potency is not less than 80 per cent and not more than 125 per cent of the stated potency. The confidence limits ( $P = 0.95$ ) are not less than 64 per cent and not more than 156 per cent of the stated potency.

**STORAGE**

Store protected from light.

**LABELLING**

The label states:

- the number of International Units per container,
- the species of mycobacteria used to prepare the product,
- the name and quantity of any antimicrobial preservative or any other excipient,
- the expiry date,
- for freeze-dried products, a statement that the product is to be reconstituted using the liquid provided by the manufacturer,
- where applicable, that tuberculin PPD is not to be injected in its concentrated form but diluted so as to administer not more than 100 IU per dose.

If the package does not contain a leaflet warning that the inhalation of concentrated tuberculin PPD may produce toxic effects, this warning must be shown on the label on the container together with a statement that the powder must be handled with care.

**TUBOCURARINE CHLORIDE****Tubocurarini chloridum**

$\text{C}_{37}\text{H}_{42}\text{Cl}_2\text{N}_2\text{O}_6 \cdot 5\text{H}_2\text{O}$   
[6989-98-6]

$M_r$  772

**DEFINITION**

Tubocurarine chloride contains not less than 98.0 per cent and not more than the equivalent of 102.0 per cent of (3a*R*,16a*S*)-8,23-dihydroxy-24,29-dimethoxy-3,3,16-trimethyl-2,3,3a,4,15,16,16a,17-octahydro-1*H*-11,13:18,21-dietheno-5,9-metheno-14*H*-pyrido[3',2':14,15][1,11]dioxacycloicosino[2,3,4-*ij*]isoquinolinium chloride hydrochloride, calculated with reference to the anhydrous substance.

**CHARACTERS**

A white or slightly yellowish, crystalline powder, soluble in water and in alcohol, practically insoluble in acetone. It dissolves in solutions of alkali hydroxides.

It melts at about 270 °C, with decomposition.

**IDENTIFICATION**

*First identification:* B, E.

*Second identification:* A, C, D, E, F.

- A. Dissolve 50.0 mg in *water R* and dilute to 1000.0 mL with the same solvent. Examined between 230 nm and 350 nm (2.2.25), the solution shows an absorption maximum at 280 nm and a minimum at 255 nm. The specific absorbance at the maximum is 113 to 123, calculated with reference to the anhydrous substance.
- B. Examine by infrared absorption spectrophotometry (2.2.24), comparing with the spectrum obtained with *tubocurarine chloride CRS*.
- C. Dissolve about 25 mg in 1 mL of *water R*. Add 0.2 mL of *ferric chloride solution R2* and heat in a water-bath for 1 min. The solution is green. Carry out a blank test; after heating in a water-bath, the colour is brown.
- D. To 1 mL of solution S (see Tests) add 1 mL of *nitric acid solution of mercury R*. A red colour develops slowly.
- E. It gives reaction (a) of chlorides (2.3.1).
- F. It gives the reaction of alkaloids (2.3.1).

**TESTS**

**Solution S.** Dissolve 0.25 g in *carbon dioxide-free water R* and dilute to 25.0 mL with the same solvent.

**Appearance of solution.** Solution S is clear (2.2.1) and not more intensely coloured than reference solution  $Y_6$  (2.2.2, *Method II*).  
**pH** (2.2.3). The pH of solution S is 4.0 to 6.0.

**Specific optical rotation** (2.2.7): + 210 to + 222, determined on solution S 3 h after preparation and calculated with reference to the anhydrous substance.

**Chloroform-soluble substances.** Dissolve 0.25 g in 150 mL of *water R*. Add 5 mL of a saturated solution of *sodium bicarbonate R* and shake with three quantities, each of 20 mL, of *chloroform R*. Wash the combined chloroform layers with

10 mL of *water R*, filter the chloroform solution into a tared beaker and wash the filter with two quantities, each of 5 mL, of *chloroform R*. Add the washings to the filtrate. Evaporate to dryness on a water-bath and dry at 100-105 °C for 1 h. The residue weighs not more than 5 mg. The residue does not dissolve in 10 mL of *water R*, but dissolves on the addition of 1 mL of *dilute hydrochloric acid R*.

**Related substances.** Examine by thin-layer chromatography (2.2.27), using *silica gel G R* as the coating substance.

**Test solution.** Dissolve 0.25 g of the substance to be examined in *water R* and dilute to 10 mL with the same solvent.

**Reference solution (a).** Dilute 1.5 mL of the test solution to 100 mL with *water R*.

**Reference solution (b).** Dilute 5 mL of reference solution (a) to 10 mL with *water R*.

Apply to the plate 5 µL of each solution. Develop in an unsaturated tank over a path of 15 cm using the lower layer of a mixture of equal volumes of *chloroform R*, *methanol R* and a 125 g/L solution of *trichloroacetic acid R*. Dry the plate in a current of cold air. Spray with a mixture of 1 volume of *potassium ferricyanide solution R*, 1 volume of *water R* and 2 volumes of *ferric chloride solution R1*, prepared immediately before use. Any spot in the chromatogram obtained with the test solution, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (a) (1.5 per cent) and at most one such spot is more intense than the spot in the chromatogram obtained with reference solution (b) (0.75 per cent).

**Water (2.5.12):** 9.0 per cent to 12.0 per cent, determined on 0.30 g by the semi-micro determination of water.

**Sulfated ash (2.4.14).** Not more than 0.25 per cent, determined on 0.2 g.

#### ASSAY

Dissolve 25.0 mg in *water R* and dilute to 500.0 mL with the same solvent. In the same manner, prepare a reference solution using 25.0 mg of *tubocurarine chloride CRS*. Measure the absorbance (2.2.25) at the maximum at 280 nm.

Calculate the content of  $C_{37}H_{42}Cl_2N_2O_6$  from the absorbances measured, the concentrations of the solutions and the declared content of anhydrous tubocurarine chloride in *tubocurarine chloride CRS*.

#### STORAGE

Store in an airtight container.

01/2008:1273

## TYLOSIN FOR VETERINARY USE

### Tylosinum ad usum veterinarium

Name	Mol. Formula	R1	R2	R3
tylosin A	$C_{46}H_{77}NO_{17}$	osyl	OCH <sub>3</sub>	CHO
tylosin B	$C_{39}H_{65}NO_{14}$	H	OCH <sub>3</sub>	CHO
tylosin C	$C_{45}H_{75}NO_{17}$	osyl	OH	CHO
tylosin D	$C_{46}H_{79}NO_{17}$	osyl	OCH <sub>3</sub>	CH <sub>2</sub> OH

#### DEFINITION

Mixture of macrolide antibiotics produced by a strain of *Streptomyces fradiae* or by any other means. The main component of the mixture is (4*R*,5*S*,6*S*,7*R*,9*R*,11*E*,13*E*,15*R*,16*R*)-15-[[[(6-deoxy-2,3-di-*O*-methyl-β-D-allopyranosyl)oxy]methyl]-6-[[[3,6-dideoxy-4-*O*-(2,6-dideoxy-3-*C*-methyl-α-*L*-ribo-hexopyranosyl)-3-(dimethylamino)-β-D-glucopyranosyl]oxy]-16-ethyl-4-hydroxy-5,9,13-trimethyl-7-(2-oxoethyl)oxacyclohexadeca-11,13-diene-2,10-dione (tylosin A,  $M_r$  916). Tylosin B (desmycosin,  $M_r$  772), tylosin C (macrocin,  $M_r$  902) and tylosin D (relomycin,  $M_r$  918) may also be present. They contribute to the potency of the substance to be examined. **Potency:** minimum 900 IU/mg (dried substance).

#### CHARACTERS

**Appearance:** almost white or slightly yellow powder.

**Solubility:** slightly soluble in water, freely soluble in anhydrous ethanol and in methylene chloride. It dissolves in dilute solutions of mineral acids.

#### IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

**Comparison:** *tylosin CRS*.

B. Examine the chromatograms obtained in the test for composition.

**Results:** the principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (a).

C. Dissolve about 30 mg in a mixture of 0.15 mL of *water R*, 2.5 mL of *acetic anhydride R* and 7.5 mL of *pyridine R*. Allow to stand for about 10 min. No green colour develops.

#### TESTS

**pH (2.2.3):** 8.5 to 10.5.

Suspend 0.25 g in 10 mL of *carbon dioxide-free water R*.

**Composition.** Liquid chromatography (2.2.29): use the normalisation procedure. *Prepare the solutions immediately before use.*

**Solvent mixture:** *acetonitrile R*, *water R* (50:50 V/V).

**Test solution.** Dissolve 20.0 mg of the substance to be examined in the solvent mixture and dilute to 100.0 mL with the solvent mixture.

**Reference solution (a).** Dissolve 2 mg of *tylosin phosphate for peak identification CRS* (containing tylosins A, B, C and D) in the solvent mixture and dilute to 10 mL with the solvent mixture.

**Reference solution (b).** Dissolve 2 mg of *tylosin CRS* and 2 mg of *tylosin D CRS* in the solvent mixture and dilute to 10 mL with the solvent mixture.

**Column:**

- size:  $l = 0.20$  m,  $\varnothing = 4.6$  mm;
- stationary phase: *octadecylsilyl silica gel for chromatography R* (5 µm);
- temperature: 35 °C.

**Mobile phase:** mix 40 volumes of *acetonitrile R* and 60 volumes of a 200 g/L solution of *sodium perchlorate R* previously adjusted to pH 2.5 using 1 M *hydrochloric acid*.

**Flow rate:** 1.0 mL/min.

**Detection:** spectrophotometer at 290 nm.

**Injection:** 20 µL.

**Retention time:** tylosin A = about 12 min.

**Identification of peaks:** use the chromatogram supplied with *tylosin phosphate for peak identification CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to tylosins A, B, C and D.

*System suitability*: reference solution (b):

01/2008:1661

- *resolution*: minimum 2.0 between the peaks due to tylosins A and D.

*Limits*:

- *tylosin A*: minimum 80.0 per cent;
- *sum of tylosins A, B, C and D*: minimum 95.0 per cent.

**Tyramine**: maximum 0.35 per cent and maximum 0.15 per cent, if intended for use in the manufacture of parenteral preparations.

In a 25.0 mL volumetric flask, dissolve 50.0 mg in 5.0 mL of a 3.4 g/L solution of *phosphoric acid R*. Add 1.0 mL of *pyridine R* and 2.0 mL of a saturated solution of *ninhydrin R* (about 40 g/L). Close the flask with a piece of aluminium foil and heat in a water-bath at 85 °C for 30 min. Cool the solution rapidly and dilute to 25.0 mL with *water R*. Mix and measure immediately the absorbance (2.2.25) of the solution at 570 nm using a blank solution as the compensation liquid. The absorbance is not greater than that of a standard prepared at the same time and in the same manner using 5.0 mL of a 35 mg/L solution of *tyramine R* in a 3.4 g/L solution of *phosphoric acid R*. If intended for use in the manufacture of parenteral preparations, the absorbance is not greater than that of a standard prepared at the same time and in the same manner using 5.0 mL of a 15 mg/L solution of *tyramine R* in a 3.4 g/L solution of *phosphoric acid R*.

**Loss on drying** (2.2.32): maximum 5.0 per cent, determined on 1.000 g by drying in an oven at 60 °C at a pressure not exceeding 0.7 kPa for 3 h.

**Sulfated ash** (2.4.14): maximum 3.0 per cent, determined on 1.0 g.

#### ASSAY

Carry out the microbiological assay of antibiotics (2.7.2). Use *tylosin CRS* as the chemical reference substance.

#### STORAGE

Protected from light.

#### IMPURITIES

A. desmynosyltylosin,

B. tylosin A aldol.

## TYLOSIN PHOSPHATE BULK SOLUTION FOR VETERINARY USE

### Tylosini phosphatis solutio ad usum veterinarium

Tylosin	R1	R2	R3	Mol. Formula	$M_r$
A	osyl	OCH <sub>3</sub>	CHO	C <sub>46</sub> H <sub>77</sub> NO <sub>17</sub>	916
B	H	OCH <sub>3</sub>	CHO	C <sub>39</sub> H <sub>65</sub> NO <sub>14</sub>	772
C	osyl	OH	CHO	C <sub>45</sub> H <sub>75</sub> NO <sub>17</sub>	902
D	osyl	OCH <sub>3</sub>	CH <sub>2</sub> OH	C <sub>46</sub> H <sub>79</sub> NO <sub>17</sub>	918

#### DEFINITION

Solution of the dihydrogen phosphate of a mixture of macrolide antibiotics produced by a strain of *Streptomyces fradiae* or by any other means.

The main component is the phosphate of (4*R*,5*S*,6*S*,7*R*,9*R*,11*E*,13*E*,15*R*,16*R*)-15-[[[(6-deoxy-2,3-di-*O*-methyl-β-*D*-allopyranosyl)oxy]methyl]-6-[[[3,6-dideoxy-4-*O*-(2,6-dideoxy-3-*C*-methyl-α-*L*-ribo-hexopyranosyl)-3-(dimethylamino)-β-*D*-glucopyranosyl]oxy]-16-ethyl-4-hydroxy-5,9,13-trimethyl-7-(2-oxoethyl)oxacyclohexadeca-11,13-diene-2,10-dione (tylosin A phosphate). The phosphates of tylosin B (desmocosin phosphate), tylosin C (macrocin phosphate) and tylosin D (relomycin phosphate) may also be present. The solution also contains sodium dihydrogen phosphate.

**Potency**: minimum 800 IU per milligram of dry residue. Tylosins A, B, C and D contribute to the potency.

#### CHARACTERS

**Appearance**: yellow or brownish-yellow, viscous liquid.

**Solubility**: miscible with water.

#### IDENTIFICATION

A. Ultraviolet and visible absorption spectrophotometry (2.2.25).

**Test solution**. Dilute an amount of the preparation to be examined equivalent to 400 000 IU of tylosin phosphate to 100.0 mL with *water R*. Dilute 1.0 mL of this solution to 100.0 mL with *water R*.

**Spectral range**: 230-350 nm.

**Absorption maximum**: at 290 nm.

**Absorbance at the absorption maximum**: minimum 0.70.

B. Examine the chromatograms obtained in the test for composition.

**Results**: the principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (a).

C. Dilute an amount of the preparation to be examined equivalent to 400 000 IU of tylosin phosphate in 10 mL of *water R*. The solution gives reaction (a) of phosphates (2.3.1).

## TESTS

**pH** (2.2.3): 5.5 to 6.5.

Dilute 1.0 g in 10 mL of *carbon dioxide-free water R*.

**Composition.** Liquid chromatography (2.2.29): use the normalisation procedure. *Prepare the solutions immediately before use.*

**Test solution.** Dilute an amount of the preparation to be examined equivalent to 50 000 IU of tylosin phosphate to 200 mL with a mixture of equal volumes of *acetonitrile R* and *water R*.

**Reference solution (a).** Dissolve 2 mg of *tylosin phosphate for peak identification CRS* (containing tylosins A, B, C and D) in a mixture of equal volumes of *acetonitrile R* and *water R* and dilute to 10 mL with the same mixture of solvents.

**Reference solution (b).** Dissolve 2 mg of *tylosin CRS* and 2 mg of *tylosin D CRS* in a mixture of equal volumes of *acetonitrile R* and *water R* and dilute to 10 mL with the same mixture of solvents.

**Reference solution (c).** Dilute 1.0 mL of reference solution (a) to 100.0 mL with a mixture of equal volumes of *acetonitrile R* and *water R*. Dilute 1.0 mL of this solution to 10.0 mL with a mixture of equal volumes of *acetonitrile R* and *water R*.

**Column:**

- size:  $l = 0.20$  m,  $\varnothing = 4.6$  mm;
- stationary phase: *octadecylsilyl silica gel for chromatography R* (5  $\mu$ m);
- temperature: 35 °C.

**Mobile phase:** mix 40 volumes of *acetonitrile R* and 60 volumes of a 200 g/L solution of *sodium perchlorate R* previously adjusted to pH 2.5 using a 36.5 g/L solution of *hydrochloric acid R*.

**Flow rate:** 1.0 mL/min.

**Detection:** spectrophotometer at 290 nm.

**Injection:** 20  $\mu$ L.

**Run time:** 1.8 times the retention time of tylosin A.

**Identification of tylosins:** use the chromatogram supplied with *tylosin phosphate for peak identification CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to tylosins A, B, C and D.

**Relative retention** with reference to tylosin A (retention time = about 12 min): impurity A = about 0.35; tylosin C = about 0.5; tylosin B = about 0.6; tylosin D = about 0.85; impurity B = about 0.9.

**System suitability:** reference solution (b):

- resolution: minimum 2.0 between the peaks due to tylosin D and tylosin A.

**Limits:**

- *tylosin A*: minimum 80.0 per cent;
- *sum of the contents of tylosin A, tylosin B, tylosin C and tylosin D*: minimum 95.0 per cent;
- *disregard limit*: area of the principal peak in the chromatogram obtained with reference solution (c).

**Tyramine.** In a 25.0 mL volumetric flask, dissolve an amount of the preparation to be examined equivalent to 50 000 IU of tylosin phosphate in 5.0 mL of a 3.4 g/L solution of *phosphoric acid R*. Add 1.0 mL of *pyridine R* and 2.0 mL of a saturated solution of *ninhydrin R* (about 40 g/L). Close the flask with aluminium foil and heat in a water-bath at 85 °C for 20-30 min. Cool the solution rapidly and dilute to 25.0 mL with *water R*. Mix and measure immediately the absorbance (2.2.25) of the solution at 570 nm using a blank solution as the compensation liquid.

The absorbance is not greater than that of a standard prepared at the same time and in the same manner using 5.0 mL of

a 35 mg/L solution of *tyramine R* in a 3.4 g/L solution of *phosphoric acid R*.

**Phosphate:** 8.5 per cent to 10.0 per cent of  $\text{PO}_4$ , calculated with reference to the dry residue (see Assay).

**Test solution.** Dissolve an amount of the preparation to be examined equivalent to 200 000 IU of tylosin phosphate in 50 mL of *water R*. Add 5.0 mL of *dilute sulfuric acid R* and dilute to 100.0 mL with *water R*. To 2.0 mL of this solution add successively, mixing after each addition, 10.0 mL of *water R*, 5.0 mL of *ammonium molybdate reagent R2*, 1.0 mL of *hydroquinone solution R* and 1.0 mL of a 200 g/L solution of *sodium metabisulfite R*. Allow to stand for at least 20 min and dilute to 50.0 mL with *water R*. Mix thoroughly.

**Reference solution (a).** To 1.0 mL of a standard solution containing 0.430 g/L of *potassium dihydrogen phosphate R* (corresponds to 300 ppm of  $\text{PO}_4$ ) add successively, mixing after each addition, 10.0 mL of *water R*, 5.0 mL of *ammonium molybdate reagent R2*, 1.0 mL of *hydroquinone solution R* and 1.0 mL of a 200 g/L solution of *sodium metabisulfite R*. Allow to stand for at least 20 min and dilute to 50.0 mL with *water R*. Mix thoroughly.

**Reference solution (b).** Prepare as reference solution (a) but using 2.0 mL of the standard solution.

**Reference solution (c).** Prepare as reference solution (a) but using 5.0 mL of the standard solution.

**Compensation liquid.** Prepare as reference solution (a) but omitting the standard solution.

Measure the absorbance (2.2.25) of the test solution and of the reference solutions at 650 nm. Draw a calibration curve with the absorbances of the 3 reference solutions as a function of the quantity of phosphate in the solutions and read from the curve the quantity of phosphate in the test solution. Determine the percentage content of  $\text{PO}_4$ , calculated with reference to the dry residue (see Assay).

## ASSAY

Carry out the microbiological assay of antibiotics (2.7.2).

Use *tylosin CRS* as the reference substance. Calculate the potency from the mass of the dry residue and the activity of the solution.

**Dry residue.** Dry 3.0 g of the preparation to be examined *in vacuo* at 60 °C for 3 h and weigh.

## STORAGE

Protected from light, at a temperature of 2 °C to 8 °C.

## LABELLING

The label states the concentration of the solution in International Units per milligram of preparation.

## IMPURITIES

A. desmicynosyltylosin A,

- B. (1*R*,2*S*,3*S*,4*R*,8*R*,9*R*,10*E*,12*E*,15*R*,16*RS*)-9-[[[(6-deoxy-2,3-di-*O*-methyl-β-*D*-allopyranosyl)oxy]methyl]-2-[[[3,6-dideoxy-4-*O*-(2,6-dideoxy-3-*C*-methyl-α-*L*-ribo-hexopyranosyl)-3-(dimethylamino)-β-*D*-glucopyranosyl]oxy]-8-ethyl-4,16-dihydroxy-3,11,15-trimethyl-7-oxabicyclo[13.2.1]octadeca-10,12-diene-6,14-dione (tylosin A aldol).

01/2008:1274

## TYLOSIN TARTRATE FOR VETERINARY USE

Tylosini tartras ad usum veterinarium

### DEFINITION

Tartrate of a mixture of macrolide antibiotics produced by a strain of *Streptomyces fradiae* or by any other means. The main component of the mixture is (4*R*,5*S*,6*S*,7*R*,9*R*,11*E*,13*E*,15*R*,16*R*)-15-[[[(6-deoxy-2,3-di-*O*-methyl-β-*D*-allopyranosyl)oxy]methyl]-6-[[[3,6-dideoxy-4-*O*-(2,6-dideoxy-3-*C*-methyl-α-*L*-ribo-hexopyranosyl)-3-(dimethylamino)-β-*D*-glucopyranosyl]oxy]-16-ethyl-4-hydroxy-5,9,13-trimethyl-7-(2-oxoethyl)oxacyclohexadeca-11,13-diene-2,10-dione (tylosin A, tartrate *M<sub>r</sub>* 1982). Tylosin B (desmycosin, tartrate *M<sub>r</sub>* 1694), tylosin C (macrocin, tartrate *M<sub>r</sub>* 1954) and tylosin D (relomycin, tartrate *M<sub>r</sub>* 1986) may also be present. They contribute to the potency of the substance to be examined.

**Potency:** minimum 800 IU/mg (dried substance).

### CHARACTERS

**Appearance:** almost white or slightly yellow, hygroscopic powder.

**Solubility:** freely soluble in water and in methylene chloride, slightly soluble in anhydrous ethanol. It dissolves in dilute solutions of mineral acids.

### IDENTIFICATION

- A. Infrared absorption spectrophotometry (2.2.24).

**Comparison:** Ph. Eur. reference spectrum of tylosin tartrate.

- B. Examine the chromatograms obtained in the test for composition.

**Results:** the principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (a).

- C. Dissolve about 30 mg in a mixture of 0.15 mL of *water R*, 2.5 mL of *acetic anhydride R* and 7.5 mL of *pyridine R*. Allow to stand for about 10 min. A green colour is produced.

### TESTS

**pH (2.2.3):** 5.0 to 7.2.

Dissolve 0.25 g in 10 mL of *carbon dioxide-free water R*.

**Composition.** Liquid chromatography (2.2.29): use the normalisation procedure. Prepare the solutions immediately before use.

**Solvent mixture:** acetonitrile *R*, *water R* (50:50 V/V).

**Test solution.** Dissolve 20.0 mg of the substance to be examined in the solvent mixture and dilute to 100.0 mL with the solvent mixture.

**Reference solution (a).** Dissolve 2 mg of *tylosin phosphate for peak identification CRS* (containing tylosins A, B, C and D) in the solvent mixture and dilute to 10 mL with the solvent mixture.

**Reference solution (b).** Dissolve 2 mg of *tylosin CRS* and 2 mg of *tylosin D CRS* in the solvent mixture and dilute to 10 mL with the solvent mixture.

**Column:**

- **size:** *l* = 0.20 m, Ø = 4.6 mm;
- **stationary phase:** octadecylsilyl silica gel for chromatography *R* (5 µm);
- **temperature:** 35 °C.

**Mobile phase:** mix 40 volumes of *acetonitrile R* and 60 volumes of a 200 g/L solution of *sodium perchlorate R* previously adjusted to pH 2.5 using 1 *M hydrochloric acid*.

**Flow rate:** 1.0 mL/min.

**Detection:** spectrophotometer at 290 nm.

**Injection:** 20 µL.

**Retention time:** tylosin A = about 12 min.

**Identification of peaks:** use the chromatogram supplied with *tylosin phosphate for peak identification CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to tylosins A, B, C and D.

**System suitability:** reference solution (b):

- **resolution:** minimum 2.0 between the peaks due to tylosins A and D.

**Limits:**

- **tylosin A:** minimum 80.0 per cent;
- **sum of tylosins A, B, C and D:** minimum 95.0 per cent.

**Tyramine:** maximum 0.35 per cent and maximum 0.15 per cent, if it is intended for use in the manufacture of parenteral preparations.

In a 25.0 mL volumetric flask, dissolve 50.0 mg in 5.0 mL of a 3.4 g/L solution of *phosphoric acid R*. Add 1.0 mL of *pyridine R* and 2.0 mL of a saturated solution of *ninhydrin R* (about 40 g/L). Close the flask with a piece of aluminium foil and heat in a water-bath at 85 °C for 30 min. Cool the solution rapidly and dilute to 25.0 mL with *water R*. Mix and measure immediately the absorbance (2.2.25) of the solution at 570 nm using a blank solution as the compensation liquid. The absorbance is not greater than that of a standard prepared at the same time and in the same manner using 5.0 mL of a 35 g/L solution of *tyramine R* in a 3.4 g/L solution of

*phosphoric acid R*. If intended for use in the manufacture of parenteral preparations, the absorbance is not greater than that of a standard prepared at the same time and in the same manner using 5.0 mL of a 15 mg/L solution of *tyramine R* in a 3.4 g/L solution of *phosphoric acid R*.

**Loss on drying** (2.2.32): maximum 4.5 per cent, determined on 1.000 g by drying at 60 °C at a pressure not exceeding 0.7 kPa for 3 h.

**Sulfated ash** (2.4.14): maximum 2.5 per cent, determined on 1.0 g.

#### ASSAY

Carry out the microbiological assay of antibiotics (2.7.2). Use *tylosin CRS* as the chemical reference substance.

#### STORAGE

In an airtight container, protected from light.

#### IMPURITIES

A. desmycinosyltylosin,

B. tylosin A aldol.

01/2008:1161  
corrected 6.0

## TYROSINE

### Tyrosinum

$C_9H_{11}NO_3$   
[60-18-4]

$M_r$  181.2

#### DEFINITION

Tyrosine contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of (S)-2-amino-3-(4-hydroxyphenyl)propanoic acid, calculated with reference to the dried substance.

#### CHARACTERS

A white or almost white crystalline powder or colourless crystals, very slightly soluble in water, practically insoluble in alcohol. It dissolves in dilute mineral acids and in dilute solutions of alkali hydroxides.

#### IDENTIFICATION

*First identification*: A, B.

*Second identification*: A, C, D, E.

- Specific optical rotation (see Tests).
- Examine by infrared absorption spectrophotometry (2.2.24), comparing with the spectrum obtained with *tyrosine CRS*. Examine the substances prepared as discs.
- Examine the chromatograms obtained in the test for ninhydrin-positive substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).
- To about 50 mg add 1 mL of *dilute nitric acid R*. A dark red colour is produced within 15 min.
- Dissolve about 30 mg in 2 mL of *dilute sodium hydroxide solution R*. Add 3 mL of a freshly prepared mixture of equal volumes of a 100 g/L solution of *sodium nitrite R* and a solution of 0.5 g of *sulfanilic acid R* in a mixture of 6 mL of *hydrochloric acid R1* and 94 mL of *water R*. An orange-red colour is produced.

#### TESTS

**Appearance of solution.** Dissolve 0.5 g in *dilute hydrochloric acid R* and dilute to 20 mL with the same acid. The solution is clear (2.2.1) and not more intensely coloured than reference solution  $Y_7$  (2.2.2, Method II).

**Specific optical rotation** (2.2.7). Dissolve 1.25 g in a mixture of equal volumes of *dilute hydrochloric acid R* and *water R* and dilute to 25.0 mL with the same mixture of solvents. The specific optical rotation is  $-11.0$  to  $-12.3$ , calculated with reference to the dried substance.

**Ninhydrin-positive substances.** Examine by thin-layer chromatography (2.2.27), using a *TLC silica gel plate R*.

*Test solution (a).* Dissolve 0.10 g of the substance to be examined in *dilute ammonia R2* and dilute to 10 mL with the same solvent.

*Test solution (b).* Dilute 1 mL of test solution (a) to 50 mL with *water R*.

*Reference solution (a).* Dissolve 10 mg of *tyrosine CRS* in 1 mL of *dilute ammonia R2* and dilute to 50 mL with *water R*.

*Reference solution (b).* Dilute 5 mL of test solution (b) to 20 mL with *water R*.

*Reference solution (c).* Dissolve 10 mg of *tyrosine CRS* and 10 mg of *phenylalanine CRS* in 1 mL of *dilute ammonia R2* and dilute to 25 mL with *water R*.

Apply to the plate 5  $\mu$ L of each solution. Develop over a path of 15 cm using a mixture of 30 volumes of *concentrated ammonia R1* and 70 volumes of *propanol R*. Allow the plate to dry in air, spray with *ninhydrin solution R* and heat at 100 °C to 105 °C for 15 min. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent). The test is not valid unless the chromatogram obtained with reference solution (c) shows two clearly separated spots.

**Chlorides** (2.4.4). Dissolve 0.25 g in 3 mL of *dilute nitric acid R* and dilute to 15 mL with *water R*. The solution complies with the limit test for chlorides, without any further addition of nitric acid (200 ppm).

**Sulfates** (2.4.13). Dissolve with gentle heating, 0.5 g in 5 mL of *dilute hydrochloric acid R* and dilute to 15 mL with *distilled water R*. The solution complies with the limit test for sulfates (300 ppm).

**Ammonium** (2.4.1). 0.10 g complies with limit test B for ammonium (200 ppm). Prepare the standard using 0.2 mL of *ammonium standard solution (100 ppm  $NH_4$ ) R*. Replace the *heavy magnesium oxide R* by 2.0 mL of *strong sodium hydroxide solution R*.

**Iron (2.4.9).** In a separating funnel, dissolve 1.0 g in 10 mL of *dilute hydrochloric acid R*. Shake with three quantities, each of 10 mL, of *methyl isobutyl ketone RI*, shaking for 3 min each time. To the combined organic layers add 10 mL of *water R* and shake for 3 min. The aqueous layer complies with the limit test for iron (10 ppm).

**Heavy metals (2.4.8).** 2.0 g complies with limit test C for heavy metals (10 ppm). Prepare the standard using 2 mL of *lead standard solution (10 ppm Pb) R*.

**Loss on drying (2.2.32).** Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash (2.4.14).** Not more than 0.1 per cent, determined on 1.0 g.

#### ASSAY

Dissolve 0.150 g in 5 mL of *anhydrous formic acid R*. Add 30 mL of *anhydrous acetic acid R*. Titrate with 0.1 M *perchloric acid*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *perchloric acid* is equivalent to 18.12 mg of  $C_9H_{11}NO_3$ .

#### STORAGE

Store protected from light.

01/2008:1662

## TYROTHRINICIN

### Tyrothricinum

Gramicidin	Mol. formula	$M_r$	X	Y
A1	$C_{99}H_{140}N_{20}O_{17}$	1882	L-Val	L-Trp
A2	$C_{100}H_{142}N_{20}O_{17}$	1896	L-Ile	L-Trp
C1	$C_{97}H_{139}N_{19}O_{18}$	1859	L-Val	L-Tyr
C2	$C_{98}H_{141}N_{19}O_{18}$	1873	L-Ile	L-Tyr

Tyrocidin	Mol. formula	$M_r$	X	Y	Z
A	$C_{66}H_{88}N_{13}O_{13}$	1271	L-Phe	D-Phe	L-Tyr
B	$C_{68}H_{89}N_{14}O_{13}$	1311	L-Trp	D-Phe	L-Tyr
C	$C_{70}H_{90}N_{15}O_{13}$	1350	L-Trp	D-Trp	L-Tyr
D	$C_{72}H_{91}N_{16}O_{12}$	1373	L-Trp	D-Trp	L-Trp
E	$C_{66}H_{88}N_{13}O_{12}$	1255	L-Phe	D-Phe	L-Phe

#### DEFINITION

Mixture of antimicrobial linear and cyclic polypeptides, isolated from the fermentation broth of *Brevibacillus brevis* Dubos. It consists mainly of gramicidins and tyrocidins as described above; other related compounds may be present in smaller amounts.

**Potency:** 180 IU/mg to 280 IU/mg (dried substance).

#### CHARACTERS

**Appearance:** white or almost white powder.

**Solubility:** practically insoluble in water, soluble in ethanol (96 per cent) and in methanol.

#### IDENTIFICATION

**First identification:** B.

**Second identification:** A.

A. Thin-layer chromatography (2.2.27).

**Test solution.** Dissolve 5 mg of the substance to be examined in 4.0 mL of *ethanol (96 per cent) R*.

**Reference solution.** Dissolve 5 mg of *tyrothricin CRS* in 4.0 mL of *ethanol (96 per cent) R*.

**Plate:** *TLC silica gel F<sub>254</sub> plate R*.

**Mobile phase:** *methanol R, butanol R, water R, acetic acid R, butyl acetate R* (2.5:7.5:12:20:40 V/V/V/V).

**Application:** 1 µL.

**Development:** over 2/3 of the plate.

**Drying:** in a current of warm air.

**Detection A:** examine in ultraviolet light at 254 nm.

**Results A:** the principal spots or groups of principal spots in the chromatogram obtained with the test solution are similar in position and size to the principal spots or groups of principal spots in the chromatogram obtained with the reference solution. The upper group corresponds to gramicidins, the lower group to tyrocidins.

**Detection B:** spray with *dimethylaminobenzaldehyde solution R2*. Heat the plate in a current of warm air until the spots appear.

**System suitability:** reference solution:

– the chromatogram shows 2 clearly separated spots or groups of spots.

**Results B:** the principal spots or groups of principal spots in the chromatogram obtained with the test solution are similar in position, colour and size to the principal spots or groups of principal spots in the chromatogram obtained with the reference solution. The upper group corresponds to gramicidins, the lower group to tyrocidins.

B. Composition (see Tests).

#### TESTS

**Composition.** Liquid chromatography (2.2.29): use the normalisation procedure. *Prepare the solutions immediately before use.*

**Test solution.** Dissolve 5 mg of the substance to be examined in 2 mL of *methanol R* and dilute to 5.0 mL with the mobile phase.

**Reference solution (a).** Dissolve 5 mg of *tyrothricin CRS* in 2 mL of *methanol R* and dilute to 5.0 mL with the mobile phase.

**Reference solution (b).** Dilute 1.0 mL of reference solution (a) to 50.0 mL with the mobile phase.

**Column:**

– **size:**  $l = 0.25$  m,  $\varnothing = 4.6$  mm,

– **stationary phase:** *octadecylsilyl silica gel for chromatography R* (5 µm),

– **temperature:** 60 °C.

**Mobile phase:** 0.79 g/L solution of *ammonium sulfate R*, *methanol R* (25:75 V/V).

**Flow rate:** 1.2 mL/min.

**Detection:** spectrophotometer at 280 nm.

**Injection:** 25 µL.

**Run time:** 6 times the retention time of gramicidin A1. Use the chromatogram obtained with reference solution (a) and the chromatogram supplied with *tyrothricin CRS* to identify the peaks due to gramicidin A1, gramicidin A2 and the tyrocidins.

**Relative retention** with reference to gramicidin A1 (retention time = about 10 min): gramicidin C1 = about 0.8; gramicidin C2 = about 0.9; gramicidin A2 = about 1.1; tyrocidins = about 1.5 to 6.

*System suitability*: reference solution (a):

- *peak-to-valley ratio*: minimum 3.0, where  $H_p$  = height above the baseline of the peak due to gramicidin A2 and  $H_v$  = height above the baseline of the lowest point of the curve separating this peak from the peak due to gramicidin A1.

*Composition*:

- *sum of gramicidins*: 25 per cent to 50 per cent,
- *sum of tyrocidins*: 50 per cent to 70 per cent,
- *total*: minimum 85 per cent,
- *disregard limit*: the sum of the areas of the peaks due to gramicidins in the chromatogram obtained with reference solution (b).

**Loss on drying** (2.2.32): maximum 4.0 per cent, determined on 1.000 g by drying under high vacuum at 60 °C for 3 h.

**Sulfated ash** (2.4.14): maximum 1.5 per cent, determined on 1.0 g.

#### ASSAY

Carry out the microbiological assay of antibiotics (2.7.2) using the turbidimetric method. Use *gramicidin CRS* as the reference substance.

*Test solution*. Prepare a solution of tyrothricin containing about the same amount of gramicidin as the corresponding solution of *gramicidin CRS* i.e. 5 times more concentrated.

#### STORAGE

In an airtight container, protected from light.

**01/2008:1578** *Mobile phase: ethanol R, methanol R2 (20:80 V/V).*  
**corrected 6.0** *Flow rate: 2 mL/min.*

## UBIDECARENONE

### Ubidecarenonum

$C_{59}H_{90}O_4$   
 [303-98-0]

$M_r$  863

#### DEFINITION

2-[(all-*E*)-3,7,11,15,19,23,27,31,35,39-Decamethyltetracontane-2,6,10,14,18,22,26,30,34,38-decaenyl]-5,6-dimethoxy-3-methylbenzene-1,4-dione.

*Content:* 97.0 per cent to 103.0 per cent.

#### CHARACTERS

*Appearance:* yellow or orange, crystalline powder.

*Solubility:* practically insoluble in water, soluble in acetone, very slightly soluble in ethanol.

It gradually decomposes and darkens on exposure to light.

mp: about 48 °C.

*Carry out all operations avoiding exposure to light.*

#### IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

*Preparation:* discs.

*Comparison:* ubidecarenone CRS.

B. Examine the chromatograms obtained in the test for related substances.

*Results:* the retention time of the principal peak in the chromatogram obtained with the test solution is similar to that of the principal peak in the chromatogram obtained with reference solution (a).

#### TESTS

**Related substances.** Liquid chromatography (2.2.29).

*Test solution.* Dissolve 25.0 mg of the substance to be examined in 25.0 mL of *ethanol R* by heating at about 50 °C for 2 min. Allow to cool.

*Reference solution (a).* Dissolve 5 mg of *ubidecarenone CRS* in 5 mL of *ethanol R* by heating at about 50 °C for 2 min. Allow to cool.

*Reference solution (b).* Dissolve 2 mg of *ubidecarenone impurity D CRS* in 2 mL of the test solution by heating at about 50 °C for 2 min. Allow to cool. Dilute 1 mL to 50 mL with *ethanol R*.

*Reference solution (c).* Dilute 1.0 mL of the test solution to 100.0 mL with *ethanol R*.

*Column:*

- *size:*  $l = 0.15$  m,  $\emptyset = 4.6$  mm,
- *stationary phase:* octadecylsilyl silica gel for chromatography R (5 µm).

*Detection:* spectrophotometer at 275 nm.

*Injection:* 10 µL.

*Run time:* 2 times the retention time of ubidecarenone.

*Relative retention* with reference to ubidecarenone (retention time = about 12 min): impurity D = about 0.67.

*System suitability:* reference solution (b):

- *resolution:* minimum 6.5 between the peaks due to impurity D and to ubidecarenone.

*Limits:*

- *any impurity:* not more than half the area of the principal peak in the chromatogram obtained with reference solution (c) (0.5 per cent),
- *total:* not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (1.0 per cent),
- *disregard limit:* 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent).

**Impurity F.** Liquid chromatography (2.2.29).

*Test solution.* Dissolve 25.0 mg of the substance to be examined in 25.0 mL of *hexane R*.

*Reference solution (a).* Dissolve the contents of a vial of *ubidecarenone for system suitability CRS* in 1 mL of *hexane R*.

*Reference solution (b).* Dilute 1.0 mL of the test solution to 100.0 mL with *hexane R*.

*Column:*

- *size:*  $l = 0.25$  m,  $\emptyset = 4.0$  mm,
- *stationary phase:* silica gel for chromatography R (7 µm).

*Mobile phase:* ethyl acetate R, hexane R (3:97 V/V).

*Flow rate:* 2 mL/min.

*Detection:* spectrophotometer at 275 nm.

*Injection:* 20 µL.

*Run time:* 1.2 times the retention time of ubidecarenone.

*Relative retention* with reference to ubidecarenone (retention time = about 10 min): impurity F = about 0.85.

*System suitability:* reference solution (a):

- *resolution:* minimum 1.5 between the peaks due to impurity F and to ubidecarenone.

*Limit:*

- *impurity F:* not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent).

**Sulfated ash (2.4.14):** maximum 0.1 per cent, determined on 1.0 g.

#### ASSAY

Dissolve 50.0 mg in 1.0 mL of *hexane R* and dilute to 50.0 mL with *ethanol R*. Dilute 2.0 mL of the solution to 50.0 mL with *ethanol R*. Measure the absorbance (2.2.25) at the maximum at 275 nm. Calculate the content of  $C_{59}H_{90}O_4$  taking the specific absorbance to be 169.

#### STORAGE

Store in an airtight container, protected from light.

## IMPURITIES

Specified impurities: A, B, C, D, E, F.

A. 2,3-dimethoxy-5-methylbenzene-1,4-diol,

B.  $n = 5$ : 2-[(all-*E*)-3,7,11,15,19,23,27-heptamethyloctadocosa-2,6,10,14,18,22,26-heptaenyl]-5,6-dimethoxy-3-methylbenzene-1,4-dione (ubiquinone-7),

C.  $n = 6$ : 5,6-dimethoxy-3-methyl-2-[(all-*E*)-3,7,11,15,19,23,27,31-octamethyldotriaconta-2,6,10,14,18,22,26,30-octaenyl]benzene-1,4-dione (ubiquinone-8),

D.  $n = 7$ : 5,6-dimethoxy-3-methyl-2-[(all-*E*)-3,7,11,15,19,23,27,31,35-nonamethylhexatriaconta-2,6,10,14,18,22,26,30,34-nonaenyl]benzene-1,4-dione (ubiquinone-9),

E. (2*RS*)-7,8-dimethoxy-2,5-dimethyl-2-[(all-*E*)-4,8,12,16,20,24,28,32,36-nonamethylheptatriaconta-3,7,11,15,19,23,27,31,35-nonaenyl]-2*H*-1-benzopyran-6-ol (ubiquinol),

F. 2-[(2*Z*,6*E*,10*E*,14*E*,18*E*,22*E*,26*E*,30*E*,34*E*,38*E*)-3,7,11,15,19,23,27,31,35,39-decamethyl-2,6,10,14,18,22,26,30,34,38-tetracontadecaenyl]-5,6-dimethoxy-3-methylbenzene-1,4-dione (ubidecarenone (*Z*)-isomer).

B. Freezing point (2.2.18): 21 °C to 24 °C.

C. To 2.0 g add 2 mL of freshly distilled *aniline R* and boil under a reflux condenser for 10 min. Allow to cool and add 30 mL of *ether R*. Shake with 3 quantities, each of 20 mL, of *dilute hydrochloric acid R* and then with 20 mL of *water R*. Evaporate the organic layer to dryness on a water-bath. After recrystallising twice from *ethanol (70 per cent V/V) R* and drying *in vacuo* for 3 h, the residue melts (2.2.14) at 66 °C to 68 °C.

D. Dissolve 0.1 g in a mixture of 2 mL of *dilute sulfuric acid R* and 5 mL of *glacial acetic acid R*. Add dropwise 0.25 mL of *potassium permanganate solution R*. The colour of the potassium permanganate is discharged.

## TESTS

**Peroxide value** (2.5.5, *Method A*): maximum 10.

**Fixed and mineral oils.** To 1.0 g add 5 mL of *sodium carbonate solution R* and 25 mL of *water R* and boil for 3 min. The hot solution is not more opalescent than reference suspension II (2.2.1).

**Water-soluble acids.** To 1.0 g add 20 mL of *water R* heated to 35-45 °C and shake for 2 min. Cool and filter the aqueous layer through a moistened filter. To 10 mL of the filtrate add 0.1 mL of *phenolphthalein solution R*. Not more than 0.1 mL of 0.1 *M sodium hydroxide* is required to change the colour of the indicator.

**Degree of unsaturation.** Dissolve 85.0 mg in a mixture of 5 mL of *dilute hydrochloric acid R* and 30 mL of *glacial acetic acid R*. Using 0.05 mL of *indigo carmine solution R1* as indicator, added towards the end of the titration, titrate with 0.0167 *M bromide-bromate* until the colour changes from blue to yellow. 8.9 mL to 9.4 mL of 0.0167 *M bromide-bromate* is required. Carry out a blank titration.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 0.50 g.

## ASSAY

Dissolve 0.750 g in 10 mL of *ethanol (96 per cent) R*. Titrate with 0.5 *M sodium hydroxide* using 0.1 mL of *phenolphthalein solution R* as indicator, until a pink colour is obtained.

1 mL of 0.5 *M sodium hydroxide* is equivalent to 92.14 mg of C<sub>11</sub>H<sub>20</sub>O<sub>2</sub>.

## STORAGE

In a non-metallic container, protected from light.

01/2008:0461

01/2008:0743  
corrected 6.0

## UNDECYLENIC ACID

Acidum undecylenicum

C<sub>11</sub>H<sub>20</sub>O<sub>2</sub>  
[112-38-9]

*M<sub>r</sub>* 184.3

## DEFINITION

Undec-10-enoic acid.

*Content*: 97.0 per cent to 102.0 per cent.

## CHARACTERS

*Appearance*: white or very pale yellow, crystalline mass or colourless or pale yellow liquid.

*Solubility*: practically insoluble in water, freely soluble in ethanol (96 per cent) and in fatty and essential oils.

## IDENTIFICATION

A. Refractive index (2.2.6): 1.447 to 1.450, determined at 25 ± 0.5 °C.

## UREA

Ureum

CH<sub>4</sub>N<sub>2</sub>O  
[57-13-6]

*M<sub>r</sub>* 60.1

## DEFINITION

Carbamide.

*Content*: 98.5 per cent to 101.5 per cent (dried substance).

## CHARACTERS

*Appearance*: white or almost white, crystalline powder or transparent crystals, slightly hygroscopic.

*Solubility*: very soluble in water, soluble in alcohol, practically insoluble in methylene chloride.

## IDENTIFICATION

*First identification*: A, B.

*Second identification: A, C, D.*

- A. Melting point (2.2.14): 132 °C to 135 °C.  
 B. Infrared absorption spectrophotometry (2.2.24).

*Preparation: discs.*

*Comparison: urea CRS.*

- C. Dissolve 0.1 g in 1 mL of *water R*. Add 1 mL of *nitric acid R*. A white, crystalline precipitate is formed.  
 D. Heat 0.5 g in a test tube until it liquefies and the liquid becomes turbid. Cool, dissolve in a mixture of 1 mL of *dilute sodium hydroxide solution R* and 10 mL of *water R* and add 0.05 mL of *copper sulfate solution R*. A reddish-violet colour is produced.

#### TESTS

**Solution S.** Dissolve 10.0 g in *water R* and dilute to 50 mL with the same solvent.

**Appearance of solution.** The solution is clear (2.2.1) and colourless (2.2.2, *Method II*).

To 2.5 mL of solution S add 7.5 mL of *water R*.

**Alkalinity.** To 2.5 mL of solution S add 7.5 mL of *water R*, 0.1 mL of *methyl red solution R* and 0.4 mL of 0.01 M *hydrochloric acid*. The solution is red to orange.

**Biuret:** maximum 0.1 per cent.

To 10 mL of solution S add 5 mL of *water R*, 0.5 mL of a 5 g/L solution of *copper sulfate R* and 0.5 mL of *strong sodium hydroxide solution R*. Allow to stand for 5 min. Any reddish-violet colour in the solution is not more intense than that in a standard prepared at the same time in the same manner using 10 mL of a 0.2 g/L solution of *biuret R*.

**Ammonium** (2.4.1): maximum 500 ppm, determined on 0.1 mL of solution S.

**Heavy metals** (2.4.8): maximum 10 ppm.

Dilute 10 mL of solution S to 20 mL with *water R*. 12 mL of the solution complies with limit test A. Prepare the standard using *lead standard solution (1 ppm Pb) R*.

**Loss on drying** (2.2.32): maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 1 h.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

#### ASSAY

Dissolve 0.2000 g in *water R* and dilute to 50.0 mL with the same solvent. Introduce 1.0 mL of this solution into a combustion flask. Add 4 g of a powdered mixture of 100 g of *dipotassium sulfate R*, 5 g of *copper sulfate R* and 2.5 g of *selenium R*, and 3 glass beads. Wash any adhering particles from the neck into the flask with 5 mL of *sulfuric acid R*, allowing it to run down the sides of the flask, and mix the contents by rotation. Close the mouth of the flask loosely, for example by means of a glass bulb with a short stem, to avoid excessive loss of sulfuric acid. Heat gradually at first, then increase the temperature until there is vigorous boiling with condensation of sulfuric acid in the neck of the flask; take precautions to prevent the upper part of the flask from becoming overheated. Continue the heating for 30 min. Cool, dissolve the solid material by cautiously adding to the mixture 25 mL of *water R*, cool again and place in a steam-distillation apparatus. Add 30 mL of *strong sodium hydroxide solution R* and distil immediately by passing steam through the mixture. Collect the distillate in 15 mL of a 40 g/L solution of *boric acid R* to which has been added 0.2 mL of *methyl red mixed solution R* and enough *water R* to cover the tip of the condenser. Towards the end of the distillation, lower the receiver so that the tip of the condenser is above the surface of the acid. Take precautions to prevent any water on the outer surface of the condenser from reaching the contents of the receiver. Titrate the distillate with 0.01 M *sulfuric acid*. 1 mL of 0.01 M *sulfuric acid* is equivalent to 0.6006 mg of  $\text{CH}_4\text{N}_2\text{O}$ .

#### STORAGE

In an airtight container.

01/2008:0958

## UROFOLLITROPIN

### Urofollitropinum

[97048-13-0]

#### DEFINITION

Urofollitropin is a dry preparation containing menopausal gonadotrophin obtained from the urine of post-menopausal women. It has follicle-stimulating activity and no or virtually no luteinising activity. The potency is not less than 90 International Units of follicle-stimulating hormone (hFSH) per milligram. The ratio of units of luteinising hormone (interstitial-cell-stimulating hormone) [hLH(ICSH)] to units of follicle-stimulating hormone is not more than 1/60.

#### PRODUCTION

It may be prepared by a suitable fractionation procedure followed by immunoaffinity chromatography.

#### CHARACTERS

*Appearance:* almost white or slightly yellowish powder.

*Solubility:* soluble in water.

#### IDENTIFICATION

When administered as prescribed in the assay it causes enlargement of the ovaries of immature female rats.

#### TESTS

**Hepatitis virus antigens.** Examined by a suitably sensitive immunochemical method (2.7.1), hepatitis virus antigens are not detected.

**HIV antigen.** Examined by a suitably sensitive immunochemical method (2.7.1), HIV antigen is not detected.

**Residual luteinising activity.** The International Units of FSH and LH are the activities contained in stated amounts of the International Standard of human urinary follicle-stimulating hormone and luteinising hormone (interstitial-cell-stimulating hormone) which consists of a mixture of a freeze-dried extract of urine of post-menopausal women with lactose. The equivalence in International Units of the International Standard is stated by the World Health Organisation. Use immature female rats approximately 21 days old and having masses such that the difference between the heaviest and the lightest rat is not more than 10 g. Assign the rats at random to 4 equal groups of at least 6 animals. If sets of 4 litter mates are available, assign one litter mate at random from each set to each group and mark according to litter.

Inject subcutaneously into each rat 50 IU of *serum gonadotrophin R* on the first day and 25 IU of *chorionic gonadotrophin R* on the fourth day, each in 0.5 mL of *phosphate-albumin buffered saline pH 7.2 R*.

Choose 3 doses of the reference preparation such that the smallest dose produces a depletion of the ovarian ascorbic acid content in all the rats and the largest dose does not produce a maximal depletion in all the rats. Use doses in geometric progression; as an initial approximation, total doses of 0.5 IU, 1.0 IU and 2.0 IU may be tried although the dose to be used will depend on the sensitivity of the animals.

Choose a dose of the preparation to be examined expected to contain 60X IU of follicle-stimulating hormone (hFSH), in which X = the number of IU of hLH in the middle dose of the reference preparation.

Dissolve separately the total quantities of the preparation to be examined and of the reference preparation in 1.0 mL of *phosphate-albumin buffered saline pH 7.2 R*. Inject into a tail

vein to each separate group of rats 6 days after the injection of chorionic gonadotrophin. Exactly 4 h after the injection, euthanise the rats and remove the ovaries from each animal. Remove any extraneous fluid and tissue from the ovaries and weigh the ovaries immediately.

Treat the combined ovaries from each rat separately, as follows. Crush and homogenise within 2 min in a freshly prepared 25 g/L solution of *metaphosphoric acid R* at a temperature of 4 °C and dilute to 7 mL with the same solution. Allow the homogenate to stand for 30 min at 4 °C and centrifuge at 4 °C at approximately 2500 g. Filter the supernatant liquid, if necessary, through a 0.22 µm filter.

Prepare a fresh solution consisting of a mixture of 2 mL of a 45.3 g/L solution of *sodium acetate R* adjusted to pH 7 with *acetic acid R*, 3 mL of *water R* and 2 mL of *dichlorophenolindophenol standard solution R*. Mix 2 mL of this solution with 2 mL of the clear supernatant liquid. 30 s after mixing, measure the absorbance (2.2.25) of the solution at the maximum at about 520 nm. Use as reference a solution with a known content of *ascorbic acid CRS* in a 25 g/L solution of *metaphosphoric acid R*, treated by the same process.

Calculate the amount of ascorbic acid from the ascorbic acid standard curve obtained and express in milligrams per 0.1 g of ovary to obtain the ascorbic acid content of the ovaries. Calculate the mean and its variance of the ascorbic acid content of the ovaries of the rats treated with the preparation to be examined.

For each dose-group of the reference preparation, plot the mean ascorbic acid content of the ovaries as a function of the logarithm of the dose and analyse the regression of the ascorbic acid content on the logarithm of the dose injected, using standard methods of analysis (the method of least squares).

The test is not valid unless:

- the slope constant *b* is significant at the 5 per cent level of significance,
- for the groups treated with the reference preparation, the sum of squares due to linear regression is equal to at least 95 per cent of the total sum of squares of the ascorbic acid content,
- the within-group variance of the ascorbic acid content of the group receiving the preparation to be examined is not significantly different at the 5 per cent level of significance from the within-group variance of the ascorbic acid content of the groups receiving the reference preparation.

The mean ascorbic acid content of the ovaries of the rats treated with the preparation to be examined is not significantly lower than that of the rats treated with the middle dose of the reference preparation (calculated from the regression equation) at the 5 per cent level of significance.

**Water** (2.5.32): maximum 5.0 per cent.

**Bacterial endotoxins** (2.6.14, *Method C*): less than 0.40 IU per IU of urofollitropin, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins.

#### ASSAY

The follicle-stimulating activity of urofollitropin is estimated by comparing under given conditions its effect in enlarging the ovaries of immature rats treated with chorionic gonadotrophin with the same effect of the International Standard preparation of human urinary follicle-stimulating hormone and luteinising hormone or of a reference preparation calibrated in International Units. The International Units of FSH and LH are the activities contained in stated amounts of the International Standard of human urinary follicle-stimulating hormone and luteinising hormone (interstitial-cell-stimulating hormone) which consists of a mixture of a freeze-dried extract of urine of post-menopausal women with lactose. The equivalence in International Units of the International Standard is stated by the World Health Organisation.

Use immature female rats of the same strain, 19 to 28 days old, differing in age by not more than 3 days and having masses such that the difference between the heaviest and the lightest rat is not more than 10 g. Assign the rats at random to 6 equal groups of at least 5 animals. If sets of 6 litter mates are available, assign one litter mate from each set to each group and mark according to litter.

Choose 3 doses of the reference preparation and 3 doses of the preparation to be examined such that the smallest dose produces a positive response in some of the rats and the largest dose does not produce a maximal response in all the rats. Use doses in geometric progression and as an initial approximation total doses of 1.5 IU, 3.0 IU and 6.0 IU may be tried although the dose will depend on the sensitivity of the animals used, which may vary widely.

Dissolve separately the total quantities of the preparation to be examined and of the reference preparation corresponding to the daily doses to be used in sufficient *phosphate-albumin buffered saline pH 7.2 R* such that the daily dose is administered in a volume of about 0.5 mL. The buffer solution shall contain in the daily dose not less than 14 IU of chorionic gonadotrophin to ensure complete luteinisation. Add a suitable antimicrobial preservative such as 4 g/L of phenol or 0.02 g/L of thiomersal. Store the solutions at 5 ± 3 °C.

Inject subcutaneously into each rat the daily dose allocated to its group. Repeat the injection of each dose 24 h and 48 h after the first injection. About 24 h after the last injection, euthanise the rats and remove the ovaries from each animal. Remove any extraneous fluid and tissue from the ovaries and weigh the 2 combined ovaries of each animal immediately. Calculate the results by the usual statistical methods, using the mass of the 2 combined ovaries as the response. (The precision of the assay may be improved by a suitable correction of the organ mass with reference to the mass of the animal from which it was taken; an analysis of covariance may be used).

The estimated potency is not less than 80 per cent and not more than 125 per cent of the stated potency. The confidence limits (*P* = 0.95) of the estimated potency are not less than 64 per cent and not more than 156 per cent of the stated potency.

#### STORAGE

In an airtight, tamper-proof container, protected from light, at a temperature of 2 °C to 8 °C. If the substance is sterile, store in a sterile, airtight, tamper-proof container.

#### LABELLING

The label states:

- the activity expressed in International Units of follicle-stimulating hormone per container,
- the potency expressed in International Units of follicle-stimulating hormone per milligram.

01/2008:0695

## UROKINASE

### Urokinasum

[9039-53-6]

#### DEFINITION

Enzyme, obtained from human urine, that activates plasminogen. It consists of a mixture of low-molecular-mass (LMM) (*M<sub>r</sub>* 33 000) and high-molecular-mass (HMM) (*M<sub>r</sub>* 54 000) forms, the high-molecular-mass form being predominant.

*Potency*: not less than 70 000 IU per milligram of protein.

#### PRODUCTION

It is produced by validated methods of manufacturing designed to minimise or eliminate vasoactive substances.

## CHARACTERS

**Appearance:** white or almost white, amorphous powder.

**Solubility:** soluble in water.

## IDENTIFICATION

- A. Place separately in two haemolysis tubes 0.5 mL of citrated human plasma and 0.5 mL of citrated bovine plasma and maintain in a water-bath at 37 °C. To each tube add 0.1 mL of a solution containing a quantity of the substance to be examined equivalent to 1000 IU/mL in *phosphate buffer solution pH 7.4 R* and 0.1 mL of a solution containing a quantity of *humanthrombin R* equivalent to 20 IU/mL in *phosphate buffer solution pH 7.4 R*. Shake immediately. In both tubes, a clot forms and lyses within 30 min.
- B. Carry out identification by a suitable immunodiffusion test.

## TESTS

**Appearance of solution.** The solution is clear (2.2.1) and colourless (2.2.2, *Method II*).

Dissolve 10 mg in 10 mL of *water R*.

**Hepatitis B surface antigen.** Examine by a suitably sensitive method such as radio-immunoassay. Hepatitis B surface antigen is not detected.

**Thromboplastic contaminants**

**Test solutions.** Dissolve suitable quantities of the substance to be examined in *barbital buffer solution pH 7.4 R* to obtain solutions with activities of 5000 IU/mL, 2500 IU/mL, 1250 IU/mL, 625 IU/mL and 312 IU/mL.

To each of six haemolysis tubes 1 cm in internal diameter add 0.1 mL of *citrated rabbit plasma R*. Allocate the test solutions one to each of five of the tubes; add to each tube 0.1 mL of the solution allocated to it and to the sixth tube add 0.1 mL of *barbital buffer solution pH 7.4 R* (blank). Incubate the tubes at  $25 \pm 0.5$  °C for 5 min and add 0.1 mL of a 3.675 g/L solution of *calcium chloride R*. Measure with a stop-watch the coagulation time for each tube. Plot the shortening of the recalcification time (clotting time of the blank minus clotting time measured) against log concentration in International Units. Extrapolate the best-fitting straight line through the five points until it reaches the log-concentration axis. The urokinase activity at the intersection point, which represents the limit concentration for coagulant activity (zero coagulant activity), is not less than 150 IU/mL.

**Molecular fractions.** Size-exclusion chromatography (2.2.30).

**Test solution.** Dissolve about 1 mg in 1.0 mL of 0.02 M *phosphate buffer pH 8.0 R*. Prepare immediately before use.

**Column:**

- size:  $l = 0.9$  m,  $\emptyset = 16$  mm;
- stationary phase: cross-linked dextran for chromatography R3;
- temperature: 5 °C.

**Mobile phase:** 17.5 g/L solution of *sodium chloride R* in 0.02 M *phosphate buffer solution pH 8.0 R*.

**Flow rate:** 0.1 mL/min.

Apply the test solution to the head of the column rinsing twice with 0.5 mL portions of the buffer and carry out the elution. The eluate may be collected in fractions of 1 mL. Measure the absorbance (2.2.25) of the eluate at the maximum at 280 nm and plot the individual values on a graph. Draw perpendicular lines towards the axis of the abscissae from the minima before the HMM peak, between the HMM and the LMM peaks, and after the LMM peak, thus identifying the fractions to be considered in calculating the HMM/LMM activity ratio. Pool the HMM fractions and, separately, the LMM fractions. Determine separately the urokinase activity in International Units of each of the fraction pools by the method prescribed under Assay. The ratio of the urokinase activity in the HMM fraction pool to that in the LMM fraction pool is not less than 2.0.

**Total protein.** Determine the nitrogen content, using 10 mg, by the method of sulfuric acid digestion (2.5.9) and calculate the quantity of protein by multiplying by 6.25.

**Pyrogens (2.6.8).** If intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of pyrogen, it complies with the test for pyrogens. Inject per kilogram of the rabbit's mass 1.0 mL of a sterile 9 g/L solution of *sodium chloride R* containing a quantity of the substance to be examined equivalent to 20 000 IU/mL.

## ASSAY

The potency of urokinase is determined by comparing its capacity to activate plasminogen to form plasmin with the same capacity of a reference preparation of urokinase calibrated in International Units; the formation of plasmin is measured by the determination of the lysis time of a fibrin clot in given conditions.

The International Unit is the activity contained in a stated amount of the International Reference Preparation, which consists of freeze-dried urokinase with lactose. The equivalence in International Units of the International Reference Preparation is stated by the World Health Organisation.

Unless otherwise prescribed, use *phosphate buffer solution pH 7.4 R* containing 30 g/L of *bovine albumin R* for the preparation of the solutions and dilutions used in the assay.

**Test solution.** Prepare a solution of the substance to be examined expected to have an activity of 1000 IU/mL.

**Reference solution.** Prepare a solution of a reference preparation having an activity of 1000 IU/mL.

Keep the test solution and the reference solution in iced water and use within 6 h. Prepare three serial 1.5-fold dilutions of the reference preparation such that the longest clot-lysis time is less than 20 min and the shortest clot-lysis time is greater than 3 min. Prepare three similar dilutions of the test solution. Keep the solutions in iced water and use within 1 h. Use twenty-four tubes 8 mm in diameter. Label the tubes  $T_1$ ,  $T_2$  and  $T_3$  for the dilutions of the test solution and  $S_1$ ,  $S_2$  and  $S_3$  for the dilutions of the reference solution, allocating four tubes to each dilution. Place the tubes in iced water. Into each tube, introduce 0.2 mL of the appropriate dilution, 0.2 mL of *phosphate buffer solution pH 7.4 R* containing 30 g/L of *bovine albumin R* and 0.1 mL of a solution of *humanthrombin R* having an activity of not less than 20 IU/mL. Place the tubes in a water-bath at 37 °C and allow to stand for 2 min to attain temperature equilibrium. Using an automatic pipette, introduce into the bottom of the first tube 0.5 mL of a 10 g/L solution of *bovine eglobulins R*, ensuring mixing. At intervals of 5 s, introduce successively into the remaining tubes 0.5 mL of a 10 g/L solution of *bovine eglobulins R*. Using a stop-watch, measure for each tube the time in seconds that elapses between the addition of the eglobulins solution and the lysis of the clot. Plot the logarithms of the lysis times for the substance to be examined and for the reference preparation against the logarithms of the concentration and calculate the activity of the substance to be examined using the usual statistical methods.

The estimated potency is not less than 90 per cent and not more than 111 per cent of the stated potency. The confidence limits ( $P = 0.95$ ) of the estimated potency are not less than 80 per cent and not more than 125 per cent of the stated potency.

## STORAGE

Store in an airtight container, protected from light, at a temperature not exceeding 8 °C. If the substance is sterile, store in a sterile, airtight, tamper-proof container.

## LABELLING

The label states the potency in International Units per milligram of protein.

04/2010:1275 *Development*: over 2/3 of the plate.**URSODEOXYCHOLIC ACID****Acidum ursodeoxycholicum**C<sub>24</sub>H<sub>40</sub>O<sub>4</sub>  
[128-13-2]M<sub>r</sub> 392.6**DEFINITION**3 $\alpha$ ,7 $\beta$ -Dihydroxy-5 $\beta$ -cholan-24-oic acid.*Content*: 99.0 per cent to 101.0 per cent (dried substance).**CHARACTERS***Appearance*: white or almost white powder.*Solubility*: practically insoluble in water, freely soluble in ethanol (96 per cent), slightly soluble in acetone, practically insoluble in methylene chloride.

mp: about 202 °C.

**IDENTIFICATION***First identification*: A.*Second identification*: B, C.

A. Infrared absorption spectrophotometry (2.2.24).

*Comparison*: ursodeoxycholic acid CRS.

B. Examine the chromatograms obtained in the test for impurity C.

*Results*: the principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Dissolve about 10 mg in 1 mL of sulfuric acid R. Add 0.1 mL of formaldehyde solution R and allow to stand for 5 min. Add 5 mL of water R. The suspension obtained is greenish-blue.

**TESTS****Specific optical rotation** (2.2.7): + 58.0 to + 62.0 (dried substance).

Dissolve 0.500 g in anhydrous ethanol R and dilute to 25.0 mL with the same solvent.

**Impurity C**. Thin-layer chromatography (2.2.27).*Solvent mixture*: water R, acetone R (10:90 V/V).*Test solution (a)*. Dissolve 0.40 g of the substance to be examined in the solvent mixture and dilute to 10 mL with the solvent mixture.*Test solution (b)*. Dilute 1 mL of test solution (a) to 10 mL with the solvent mixture.*Reference solution (a)*. Dissolve 40 mg of ursodeoxycholic acid CRS in the solvent mixture and dilute to 10 mL with the solvent mixture.*Reference solution (b)*. Dissolve 20 mg of lithocholic acid CRS (impurity C) in the solvent mixture and dilute to 10.0 mL with the solvent mixture (solution A). Dilute 2.0 mL of this solution to 100.0 mL with the solvent mixture.*Reference solution (c)*. To 5 mL of solution A add 10 mg of chenodeoxycholic acid CRS (impurity A) and dilute to 50 mL with the solvent mixture.*Plate*: TLC silica gel plate R.*Mobile phase*: glacial acetic acid R, acetone R, methylene chloride R (1:30:60 V/V/V).*Application*: 5  $\mu$ L.*Drying*: at 120 °C for 10 min.*Detection*: spray immediately with a 47.6 g/L solution of phosphomolybdic acid R in a mixture of 1 volume of sulfuric acid R and 20 volumes of glacial acetic acid R and heat at 120 °C until blue spots appear on a lighter background.*System suitability*: reference solution (c):

– the chromatogram shows 2 clearly separated principal spots.

*Limit*: test solution (a):– *impurity C*: any spot due to impurity C is not more intense than the principal spot in the chromatogram obtained with reference solution (b) (0.1 per cent).**Related substances**. ## VALACICLOVIR HYDROCHLORIDE, ANHYDROUS

Valacicloviri hydrochloridum anhydricum

$C_{13}H_{21}ClN_6O_4$   
[124832-27-5]

$M_r$  360.8

### DEFINITION

2-[(2-Amino-6-oxo-1,6-dihydro-9H-purin-9-yl)methoxy]ethyl L-valinate hydrochloride.

*Content:* 95.0 per cent to 102.0 per cent (anhydrous substance).

### CHARACTERS

*Appearance:* white or almost white powder.

*Solubility:* freely soluble in water, slightly soluble in anhydrous ethanol.

It shows polymorphism (5.9).

### IDENTIFICATION

Carry out either tests A, B, C or tests A, B, D.

A. Infrared absorption spectrophotometry (2.2.24).

*Comparison:* anhydrous valaciclovir hydrochloride CRS.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in the minimum volume of *anhydrous ethanol R* and evaporate to dryness in a desiccator, under high vacuum, over *diphosphorus pentoxide R*. Record new spectra using the residues.

B. It gives reaction (a) of chlorides (2.3.1).

C. It complies with the limit for impurity R given in related substances test A.

D. Optical rotation (2.2.7): laevorotatory.

Dissolve 2.50 g in *water R* and dilute to 50.0 mL with the same solvent.

### TESTS

**Impurities E, F and G.** Thin-layer chromatography (2.2.27).

*Test solution.* Dissolve 0.250 g of the substance to be examined in 2 mL of *water R* and dilute to 5.0 mL with *ethanol (96 per cent) R*.

*Reference solution (a).* Dissolve 5 mg of *valaciclovir impurity D CRS*, 5.0 mg of *valaciclovir impurity E CRS*, 5.0 mg of *valaciclovir impurity G CRS* and 8.4 mg of *valaciclovir impurity F para-toluenesulfonate CRS* in a mixture of 2 mL of *water R* and 6 mL of *ethanol (96 per cent) R*, and dilute to 10.0 mL with *ethanol (96 per cent) R*.

*Reference solution (b).* Dilute 3.0 mL of reference solution (a) to 10.0 mL with *ethanol (96 per cent) R*.

*Reference solution (c).* Dilute 2.0 mL of reference solution (a) to 10.0 mL with *ethanol (96 per cent) R*.

*Reference solution (d).* Dilute 0.5 mL of reference solution (a) to 10.0 mL with *ethanol (96 per cent) R*.

*Plate:* TLC silica gel  $F_{254}$  plate *R* (2-10  $\mu\text{m}$ ).

*Pretreatment:* wash the plate with *methanol R* until the solvent front has migrated over at least 4/5 of the plate; allow the plate to dry.

*Mobile phase:* concentrated ammonia *R*, tetrahydrofuran *R*, methanol *R*, methylene chloride *R* (3:12:34:54 V/V/V/V); use freshly prepared mobile phase.

*Application:* 4  $\mu\text{L}$  of the test solution and reference solutions (b), (c) and (d).

*Development:* over 4/5 of the plate.

*Drying:* in a current of air.

*Detection:* examine in ultraviolet light at 254 nm for impurities E and G; spray with a 0.1 g/L solution of *fluorescamine R* in *ethylene chloride R* and examine in ultraviolet light at 365 nm for impurity F.

*Retardation factors:* impurity A = about 0; impurity B = about 0.2; valaciclovir = about 0.3; impurity C = about 0.5; impurity D = about 0.6; impurity E = about 0.7; impurity F = about 0.75; impurity G = about 0.79; impurity C is masked by the leading edge of the spot due to valaciclovir; impurities F and G may co-elute, but this does not adversely affect their quantification because they are visualised differently.

*System suitability:* the chromatograms obtained with reference solutions (b), (c) and (d) each show 3 clearly separated spots when examined under ultraviolet light at 254 nm, due to impurities D, E and G.

### Limits:

- *impurity E:* any spot due to impurity E is not more intense than the corresponding spot in the chromatogram obtained with reference solution (c) (0.2 per cent);
- *impurity F:* any spot due to impurity F is not more intense than the corresponding spot in the chromatogram obtained with reference solution (b) (0.3 per cent calculated as hydrochloride salt);
- *impurity G:* any spot due to impurity G is not more intense than the corresponding spot in the chromatogram obtained with reference solution (d) (0.05 per cent).

### Related substances.

A. Impurities A, B, I and R. Liquid chromatography (2.2.29): use the normalisation procedure.

*Test solution.* Dissolve 50.0 mg of the substance to be examined in a 0.5 per cent V/V solution of *hydrochloric acid R* and dilute to 100.0 mL with the same solution.

*Reference solution (a).* Dissolve 2.5 mg of *valaciclovir for system suitability CRS* (containing impurities A, B, C, D, H, I, J, M and R) in a 0.5 per cent V/V solution of *hydrochloric acid R* and dilute to 5.0 mL with the same solution.

*Reference solution (b).* Dissolve 50.0 mg of *anhydrous valaciclovir hydrochloride CRS* in a 0.5 per cent V/V solution of *hydrochloric acid R* and dilute to 100.0 mL with the same solution.

*Reference solution (c).* Dilute 3.0 mL of the test solution to 100.0 mL with a 0.5 per cent V/V solution of *hydrochloric acid R*. Dilute 1.0 mL of this solution to 100.0 mL with a 0.5 per cent V/V solution of *hydrochloric acid R*.

### Column:

- *size:*  $l = 0.15$  m,  $\varnothing = 4.0$  mm;
- *stationary phase:* crown-ether silica gel for chromatography *R* (5  $\mu\text{m}$ );
- *temperature:* 10 °C.

*Mobile phase:* perchloric acid *R*, methanol *R*, water *R* (0.5:5:95 V/V/V).

*Flow rate:* 0.75 mL/min.

*Detection:* spectrophotometer at 254 nm.

*Injection:* 10  $\mu\text{L}$  of the test solution and reference solution (a).

*Run time:* 1.5 times the retention time of valaciclovir.

*Identification of impurities:* use the chromatogram supplied with *valaciclovir for system suitability CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A + B, C + R, D, I and M.

*Relative retention* with reference to valaciclovir (retention time = about 21 min): impurities A and B = about 0.2; impurity I = about 0.4; impurities C and R = about 0.6; impurity D = about 0.7; impurity M = about 1.3.

*System suitability*: reference solution (a):

- *peak-to-valley ratio*: minimum 1.5, where  $H_p$  = height above the baseline of the peak due to impurity D and  $H_v$  = height above the baseline of the lowest point of the curve separating this peak from the peak due to impurities C and R.

*Limits*:

- *correction factor*: for the calculation of content, multiply the peak area of impurities A and B by 0.7;
- *impurity R*: maximum 3.0 per cent; for the calculation, subtract the content of impurity C as determined in related substances test B from the content of the coeluting impurities C and R as determined in this test;
- *sum of impurities A and B*: maximum 2.0 per cent;
- *impurity I*: maximum 0.2 per cent;
- *disregard limit*: the area of the principal peak in the chromatogram obtained with reference solution (c) (0.03 per cent); disregard any peaks due to impurities other than A + B, C + R or I.

B. Liquid chromatography (2.2.29): use the normalisation procedure. Use the solutions within 24 h of preparation.

*Solvent mixture*: ethanol (96 per cent) R, water R (20:80 V/V).

*Test solution*. Dissolve 40 mg of the substance to be examined in the solvent mixture and dilute to 100 mL with the solvent mixture.

*Reference solution (a)*. Dissolve 2.5 mg of valaciclovir for system suitability CRS (containing impurities A, B, C, D, H, I, J, M and R) in the solvent mixture and dilute to 5.0 mL with the solvent mixture.

*Reference solution (b)*. Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 20.0 mL with the solvent mixture.

*Column*:

- *size*:  $l = 0.25$  m,  $\varnothing = 4.6$  mm;
- *stationary phase*: phenylhexylsilyl silica gel for chromatography R (5  $\mu$ m);
- *temperature*: 15 °C.

*Mobile phase*:

- *mobile phase A*: trifluoroacetic acid R, water R (2:1000 V/V);
- *mobile phase B*: trifluoroacetic acid R, methanol R2 (2:1000 V/V);

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 5	90	10
5 - 35	90 → 60	10 → 40

*Flow rate*: 0.8 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 10  $\mu$ L.

*Identification of impurities*: use the chromatogram supplied with valaciclovir for system suitability CRS and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A, B, C, D, H, I, J and M.

*Relative retention* with reference to valaciclovir (retention time = about 19 min): impurity A = about 0.3; impurity B = about 0.4; impurity H = about 0.5; impurity C = about 1.06; impurity I = about 1.09; impurity D = about 1.2; impurity J = about 1.3; impurity M = about 1.6.

*System suitability*: reference solution (a):

- *peak-to-valley ratio*: minimum 2.5, where  $H_p$  = height above the baseline of the peak due to impurity C and  $H_v$  = height above the baseline of the lowest point of the curve separating this peak from the peak due to valaciclovir;
- the chromatogram obtained is similar to the chromatogram supplied with valaciclovir for system suitability CRS.

*Limits*:

- *impurity M*: maximum 1.5 per cent;
- *impurity D*: maximum 0.5 per cent;
- *impurity C*: maximum 0.3 per cent;
- *impurity H*: maximum 0.1 per cent;
- *impurity J*: maximum 0.1 per cent;
- *unspecified impurities*: for each impurity, maximum 0.05 per cent;
- *disregard limit*: 0.6 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.03 per cent); disregard the peaks due to impurities A, B and I.

*Limit*:

- *total for tests A and B*: maximum 5.0 per cent.

**Chloride**: 9.4 to 9.9 per cent (anhydrous and solvent-free substance).

Dissolve 0.350 g in 100 mL of water R and add 0.2 mL of nitric acid R. Carry out a potentiometric titration (2.2.20), using 0.1 M silver nitrate. Use a silver indicator electrode and a silver-silver chloride reference electrode or a combined silver electrode. Discard the result from the first titration, which is used to condition the electrodes. Carry out a blank titration. 1 mL of 0.1 M silver nitrate is equivalent to 3.543 mg of Cl.

**Palladium**: maximum 10 ppm.

Atomic emission spectrometry (2.2.22, Method I).

*Test solution*. Dissolve 0.1 g in a 2 per cent V/V solution of hydrochloric acid R in dimethyl sulfoxide R and dilute to 10.0 mL with the same solution.

*Reference solutions*. Prepare the reference solutions using a solution containing 1000  $\mu$ g of Pd per millilitre, diluted as necessary with a 2 per cent V/V solution of hydrochloric acid R in dimethyl sulfoxide R.

*Wavelength*: 340.5 nm.

**Heavy metals** (2.4.8): maximum 20 ppm.

Dissolve 2.0 g in water R and dilute to 20 mL with the same solvent. 12 mL of the solution complies with test A. Prepare the reference solution using 10 mL of lead standard solution (2 ppm) Pb R.

**Water** (2.5.12): maximum 2.0 per cent, determined on 0.250 g.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (2.2.29) as described in related substances test A with the following modification.

*Injection*: test solution and reference solution (b).

Calculate the percentage content of  $C_{13}H_{21}ClN_6O_4$  from the declared content of anhydrous valaciclovir hydrochloride CRS.

IMPURITIES

*Specified impurities*: A, B, C, D, E, F, G, H, I, J, M, R.

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph Substances for pharmaceutical use (2034). It is therefore not necessary to identify these impurities

for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): K, L, N, O, P, Q.

## VALINE

### Valinum

$C_5H_{11}NO_2$   
[72-18-4]

$M_r$  117.1

#### DEFINITION

Valine contains not less than 98.5 per cent and not more than the equivalent of 101.0 per cent of (S)-2-amino-3-methylbutanoic acid, calculated with reference to the dried substance.

#### CHARACTERS

White or almost white, crystalline powder or colourless crystals, soluble in water, very slightly soluble in alcohol.

#### IDENTIFICATION

First identification: A, B.

Second identification: A, C.

- Specific optical rotation (see Tests).
- Examine by infrared absorption spectrophotometry (2.2.24), comparing with the spectrum obtained with *valine CRS*. Examine the substances prepared as discs.
- Examine the chromatograms obtained in the test for ninhydrin-positive substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

#### TESTS

**Solution S.** Dissolve 2.5 g in *water R* and dilute to 100 mL with the same solvent.

**Appearance of solution.** Solution S is clear (2.2.1) and not more intensely coloured than reference solution BY<sub>6</sub> (2.2.2, Method II).

**Specific optical rotation (2.2.7).** Dissolve 2.00 g in *hydrochloric acid R1* and dilute to 25.0 mL with the same acid. The specific optical rotation is + 26.5 to + 29.0, calculated with reference to the dried substance.

**Ninhydrin-positive substances.** Examine by thin-layer chromatography (2.2.27), using a *TLC silica gel plate R*.

**Test solution (a).** Dissolve 0.10 g of the substance to be examined in *dilute hydrochloric acid R* and dilute to 10 mL with the same acid.

**Test solution (b).** Dilute 1 mL of test solution (a) to 50 mL with *water R*.

**Reference solution (a).** Dissolve 10 mg of *valine CRS* in 0.1 M *hydrochloric acid* and dilute to 50 mL with the same acid.

**Reference solution (b).** Dilute 5 mL of test solution (b) to 20 mL with *water R*.

**Reference solution (c).** Dissolve 10 mg of *phenylalanine CRS* and 10 mg of *valine CRS* in 0.1 M *hydrochloric acid* and dilute to 25 mL with the same acid.

Apply to the plate 5 µL of each solution. Develop over a path of 15 cm using a mixture of 20 volumes of *glacial acetic acid R*, 20 volumes of *water R* and 60 volumes of *butanol R*. Allow the plate to dry in air, spray with *ninhydrin solution R* and heat at 100 °C to 105 °C for 15 min. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent). The test is not valid unless the chromatogram obtained with reference solution (c) shows two clearly separated spots.

**Chlorides (2.4.4).** Dilute 10 mL of solution S to 15 mL with *water R*. The solution complies with the limit test for chlorides (200 ppm).

**Sulfates (2.4.13).** Dissolve 0.5 g in *distilled water R* and dilute to 15 mL with the same solvent. The solution complies with the limit test for sulfates (300 ppm).

**Ammonium (2.4.1).** 50 mg complies with limit test B for ammonium (200 ppm). Prepare the standard using 0.1 mL of *ammonium standard solution (100 ppm NH<sub>4</sub>) R*.

**Iron (2.4.9).** In a separating funnel, dissolve 1.0 g in 10 mL of *dilute hydrochloric acid R*. Shake with three quantities, each of 10 mL, of *methyl isobutyl ketone R1*, shaking for 3 min each time. To the combined organic layers add 10 mL of *water R* and shake for 3 min. The aqueous layer complies with the limit test for iron (10 ppm).

**Heavy metals (2.4.8).** 2.0 g complies with limit test D for heavy metals (10 ppm). Prepare the standard using 2 mL of *lead standard solution (10 ppm Pb) R*.

**Loss on drying (2.2.32).** Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash (2.4.14).** Not more than 0.1 per cent, determined on 1.0 g.

#### ASSAY

Dissolve 0.100 g in 3 mL of *anhydrous formic acid R*. Add 30 mL of *anhydrous acetic acid R*. Using 0.1 mL of *naphtholbenzein solution R* as indicator, titrate with 0.1 M *perchloric acid* until the colour changes from brownish-yellow to green.

1 mL of 0.1 M *perchloric acid* is equivalent to 11.71 mg of  $C_5H_{11}NO_2$ .

#### STORAGE

Store protected from light.

## VALNEMULIN HYDROCHLORIDE FOR VETERINARY USE

### Valnemulini hydrochloridum ad usum veterinarium

$C_{31}H_{53}ClN_2O_5S$   
[133868-46-9]

$M_r$  601

#### DEFINITION

(3a*S*,4*R*,5*S*,6*S*,8*R*,9*R*,9a*R*,10*R*)-6-Ethenyl-5-hydroxy-4,6,9,10-tetramethyl-1-oxodecahydro-3a,9-propano-3a*H*-cyclopenta[8]annulen-8-yl [[2-[(2*R*)-2-amino-3-methylbutanoyl]amino]-1,1-dimethylethyl]sulfanyl]acetate hydrochloride.

Semi-synthetic product derived from a fermentation product.

**Content:** 96.0 per cent to 102.0 per cent (anhydrous substance).

#### CHARACTERS

**Appearance:** white or yellowish, amorphous powder, hygroscopic.

**Solubility:** freely soluble in water and in anhydrous ethanol, practically insoluble in *tert*-butyl methyl ether.

#### IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

*Comparison:* valnemulin hydrochloride CRS.

B. It gives reaction (a) of chlorides (2.3.1).

#### TESTS

**pH** (2.2.3): 3.0 to 6.0.

Dissolve 2.0 g in carbon dioxide-free water R and dilute to 20 mL with the same solvent.

**Specific optical rotation** (2.2.7): + 15.5 to + 18.0 (anhydrous substance).

Dissolve 0.250 g in water R and dilute to 25.0 mL with the same solvent.

**Related substances.** Liquid chromatography (2.2.29).

**Phosphate buffer solution pH 2.5.** Dissolve 8.0 g of disodium hydrogen phosphate R and 3.0 g of potassium dihydrogen phosphate R in water for chromatography R and dilute to 1000.0 mL with the same solvent. Adjust to pH 2.5 with phosphoric acid R.

**Solvent mixture.** Mix equal volumes of acetonitrile R1 and water for chromatography R.

**Test solution.** Dissolve 0.100 g of the substance to be examined in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

**Reference solution (a).** Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture.

**Reference solution (b).** Dissolve 5 mg of valnemulin impurity E CRS and 5 mg of the substance to be examined in the solvent mixture and dilute to 25 mL with the solvent mixture.

**Reference solution (c).** Dissolve the contents of a vial of valnemulin for peak identification CRS (containing impurities A, B and C) in 1 mL of the solvent mixture.

**Column:**

- size:  $l = 0.15$  m,  $\emptyset = 4.6$  mm;
- stationary phase: octadecylsilyl silica gel for chromatography R (3  $\mu$ m);
- temperature: 50 °C.

**Mobile phase:**

- mobile phase A: phosphate buffer solution pH 2.5, water R (25:75 V/V);
- mobile phase B: phosphate buffer solution pH 2.5, acetonitrile R1 (25:75 V/V);

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 2	95 → 55	5 → 45
2 - 4.5	55 → 50	45 → 50
4.5 - 5.5	50 → 35	50 → 65
5.5 - 6.85	35	65
6.85 - 10	35 → 0	65 → 100
10 - 13	0	100
13 - 14	0 → 95	100 → 5
14 - 20	95	5

**Flow rate:** 1.5 mL/min.

**Detection:** spectrophotometer at 200 nm.

**Injection:** 5  $\mu$ L.

**Identification of impurities:** use the chromatogram supplied with valnemulin for peak identification CRS and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities A, B and C.

**Relative retention** with reference to valnemulin (retention time = about 7 min): impurity D = about 0.2; impurity A = about 0.7; impurity B = about 0.85; impurity E = about 0.9; impurity C = about 1.1.

**System suitability:** reference solution (b):

- resolution: minimum 1.5 between the peaks due to impurity E and valnemulin.

**Limits:**

- correction factors: for the calculation of content multiply the peak areas of the following impurities by the corresponding correction factor: impurity B = 3.2; impurity E = 4.2;
- impurity A: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- impurity B: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (2.0 per cent);
- impurity C: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent);
- any other impurity: for each impurity, not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- total: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (3.0 per cent);
- disregard limit: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent); disregard the peak due to the chloride ion.

**Water** (2.5.12): maximum 4.0 per cent, determined on 0.500 g.

#### ASSAY

Liquid chromatography (2.2.29).

**Test solution.** Dissolve 40.0 mg of the substance to be examined in a mixture of equal volumes of acetonitrile R1 and water R and dilute to 50.0 mL with the same mixture of solvents.

**Reference solution.** Dissolve 50.0 mg of valnemulin hydrogen tartrate CRS in a mixture of equal volumes of acetonitrile R1 and water R and dilute to 50.0 mL with the same mixture of solvents.

**Column:**

- size:  $l = 0.125$  m,  $\emptyset = 4.6$  mm;
- stationary phase: octadecylsilyl silica gel for chromatography R (3  $\mu$ m);
- temperature: 45 °C.

**Mobile phase:** mix 43 volumes of acetonitrile R1 and 57 volumes of a solution containing 0.94 g/L of disodium hydrogen phosphate R and 8.7 g/L of potassium dihydrogen phosphate R previously adjusted to pH 2.5 with phosphoric acid R.

**Flow rate:** 1.2 mL/min.

**Detection:** spectrophotometer at 210 nm.

**Injection:** 5  $\mu$ L.

**Run time:** 3 times the retention time of valnemulin (retention time = about 2.4 min).

Calculate the percentage content of  $C_{31}H_{53}ClN_2O_5S$ , using the declared content of valnemulin hydrogen tartrate CRS and by multiplying by 0.841.

#### STORAGE

In an airtight container, protected from light.

#### IMPURITIES

**Specified impurities:** A, B, C.

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use* (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): D, E.

- A. R = D-Val, X = SO: (3a*S*,4*R*,5*S*,6*S*,8*R*,9*R*,9a*R*,10*R*)-6-ethenyl-5-hydroxy-4,6,9,10-tetramethyl-1-oxodecahydro-3a,9-propano-3a*H*-cyclopenta[8]annulen-8-yl [[2-[(2*R*)-2-amino-3-methylbutanoyl]amino]-1,1-dimethylethyl]sulfanyl]acetate (valnemulin sulfoxide),
- B. R = H, X = S: (3a*S*,4*R*,5*S*,6*S*,8*R*,9*R*,9a*R*,10*R*)-6-ethenyl-5-hydroxy-4,6,9,10-tetramethyl-1-oxodecahydro-3a,9-propano-3a*H*-cyclopenta[8]annulen-8-yl [(2-amino-1,1-dimethylethyl)sulfanyl]acetate (dimethyl cysteaminy pleuromulin),
- C. R = D-Val-D-Val, X = S: (3a*S*,4*R*,5*S*,6*S*,8*R*,9*R*,9a*R*,10*R*)-6-ethenyl-5-hydroxy-4,6,9,10-tetramethyl-1-oxodecahydro-3a,9-propano-3a*H*-cyclopenta[8]annulen-8-yl [[2-[(2*R*)-2-[(2*R*)-2-amino-3-methylbutanoyl]amino]-3-methylbutanoyl]amino]-1,1-dimethylethyl]sulfanyl]acetate (valyl-valneumulin),

- D. (2*R*)-2-amino-3-methylbutanoic acid (D-valine),

- E. (3a*S*,4*R*,5*S*,6*S*,8*R*,9*R*,9a*R*,10*R*)-6-ethenyl-5-hydroxy-4,6,9,10-tetramethyl-1-oxodecahydro-3a,9-propano-3a*H*-cyclopenta[8]annulen-8-yl 2-hydroxyacetate (pleuromulin).

01/2008:1378

## VALPROIC ACID

### Acidum valproicum

C<sub>8</sub>H<sub>16</sub>O<sub>2</sub>  
[99-66-1]

M<sub>r</sub> 144.2

#### DEFINITION

2-Propylpentanoic acid.

*Content*: 99.0 per cent to 101.0 per cent.

#### CHARACTERS

*Appearance*: colourless or very slightly yellow, clear liquid, slightly viscous.

*Solubility*: very slightly soluble in water, miscible with ethanol (96 per cent) and with methylene chloride. It dissolves in dilute solutions of alkali hydroxides.

#### IDENTIFICATION

*First identification*: B.

*Second identification*: A, C, D.

A. Refractive index (2.2.5): 1.422 to 1.425.

B. Infrared absorption spectrophotometry (2.2.24).

*Comparison*: valproic acid CRS.

C. Thin-layer chromatography (2.2.27).

*Test solution*. Dissolve 50 mg of the substance to be examined in *methanol R* and dilute to 5 mL with the same solvent.

*Reference solution*. Dissolve 50 mg of *valproic acid CRS* in *methanol R* and dilute to 5 mL with the same solvent.

*Plate*: TLC silica gel plate *R*.

*Mobile phase*: ether *R*, methylene chloride *R* (50:50 V/V).

*Application*: 2 µL.

*Development*: over a path of 15 cm.

*Drying*: in air.

*Detection*: spray with *bromocresol green solution R*.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

D. To 1 mL add 3 mL of *dilute sodium hydroxide solution R*. Add 3 mL of *water R* and 1 mL of a 100 g/L solution of *cobalt nitrate R*. A violet precipitate is formed. Filter. The precipitate dissolves in *methylene chloride R*.

#### TESTS

**Appearance of solution.** The solution is clear (2.2.1) and not more intensely coloured than reference solution Y<sub>5</sub> (2.2.2, *Method II*).

Dissolve 2.0 g in *dilute sodium hydroxide solution R* and dilute to 10 mL with the same alkaline solution.

**Related substances.** Gas chromatography (2.2.28).

*Internal standard solution*. Dissolve 10 mg of *butyric acid R* in *heptane R* and dilute to 200 mL with the same solvent.

*Test solution*. Dissolve 0.250 g of the substance to be examined in the internal standard solution and dilute to 5.0 mL with the internal standard solution. Dilute 1.0 mL of this solution to 10.0 mL with *heptane R*.

*Reference solution*. Dissolve 20 mg of the substance to be examined and 20 mg of *2-(1-methylethyl)pentanoic acid CRS* (impurity C) in *heptane R* and dilute to 10 mL with the same solvent. Dilute 1 mL of this solution to 10 mL with *heptane R*.

*Column*:

– *material*: wide-bore fused silica;

– *size*: *l* = 30 m, Ø = 0.53 mm;

– *stationary phase*: *macrogol 20 000 2-nitroterephthalate R* (film thickness 0.5 µm).

*Carrier gas*: helium for chromatography *R*.

*Flow rate*: 8 mL/min.

*Temperature*:

	Time (min)	Temperature (°C)
Column	0 - 10	130
	10 - 30	130 → 190
Injection port		220
Detector		220

*Detection*: flame ionisation.

*Injection*: 1 µL.

*System suitability*: reference solution:

– *resolution*: minimum 3.0 between the peaks due to impurity C and valproic acid.

**Limits:**

- *any impurity*: for each impurity, not more than the area of the peak due to the internal standard (0.1 per cent);
- *total*: not more than 3 times the area of the peak due to the internal standard (0.3 per cent);
- *disregard limit*: 0.1 times the area of the peak due to the internal standard (0.01 per cent).

**Heavy metals (2.4.8):** maximum 20 ppm.

Dissolve 2.0 g in *ethanol (80 per cent V/V) R* and dilute to 20 mL with the same solvent. 12 mL of the solution complies with test B. Prepare the reference solution using lead standard solution (2 ppm Pb) obtained by diluting *lead standard solution (100 ppm Pb) R* with *ethanol (80 per cent V/V) R*.

**Sulfated ash (2.4.14):** maximum 0.1 per cent, determined on 1.0 g.**ASSAY**

Dissolve 0.100 g in 25 mL of *ethanol (96 per cent) R*. Add 2 mL of *water R*. Titrate with 0.1 M *sodium hydroxide*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *sodium hydroxide* is equivalent to 14.42 mg of C<sub>8</sub>H<sub>16</sub>O<sub>2</sub>.

**STORAGE**

In an airtight container.

**IMPURITIES**

- R = R' = H: pentanoic acid (valeric acid),
- R = H, R' = CH<sub>2</sub>-CH<sub>3</sub>: (2*RS*)-2-ethylpentanoic acid,
- R = H, R' = CH(CH<sub>3</sub>)<sub>2</sub>: (2*RS*)-2-(1-methylethyl)pentanoic acid,
- R = R' = CH<sub>2</sub>-CH<sub>2</sub>-CH<sub>3</sub>: 2,2-dipropylpentanoic acid,

- R = R' = H: pentanamide (valeramide),
- R = H, R' = CH<sub>2</sub>-CH<sub>2</sub>-CH<sub>3</sub>: 2-propylpentanamide,
- R = R' = CH<sub>2</sub>-CH<sub>2</sub>-CH<sub>3</sub>: 2,2-dipropylpentanamide,

- R = R' = H: pentanenitrile (valeronitrile),
- R = H, R' = CH<sub>2</sub>-CH<sub>2</sub>-CH<sub>3</sub>: 2-propylpentanenitrile,
- R = R' = CH<sub>2</sub>-CH<sub>2</sub>-CH<sub>3</sub>: 2,2-dipropylpentanenitrile.

01/2010:2423

**VALSARTAN**

## Valsartanum

C<sub>24</sub>H<sub>29</sub>N<sub>5</sub>O<sub>3</sub>  
[137862-53-4]

M<sub>r</sub> 435.5**DEFINITION**

(2*S*)-3-Methyl-2-[pentanoyl[[2'-(1*H*-tetrazol-5-yl)biphenyl-4-yl]methyl]amino]butanoic acid.

*Content*: 99.0 per cent to 101.0 per cent (anhydrous substance).

**CHARACTERS**

*Appearance*: white or almost white, hygroscopic powder.

*Solubility*: practically insoluble in water, freely soluble in anhydrous ethanol, sparingly soluble in methylene chloride.

**IDENTIFICATION**

Carry out either tests A, B or tests A, C.

A. Infrared absorption spectrophotometry (2.2.24).

*Comparison*: valsartan CRS.

B. Enantiomeric purity (see Tests).

C. Specific optical rotation (2.2.7): –64.0 to –69.0 (anhydrous substance).

Dissolve 0.200 g in *methanol R* and dilute to 20.0 mL with the same solvent.

**TESTS**

**Enantiomeric purity.** Liquid chromatography (2.2.29).

*Test solution.* Dissolve 50 mg of the substance to be examined in the mobile phase and dilute to 50.0 mL with the mobile phase.

*Reference solution (a).* Dissolve 5 mg of *valsartan for peak identification CRS* (containing impurity A) in the mobile phase and dilute to 5.0 mL with the mobile phase.

*Reference solution (b).* Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;

– *stationary phase*: silica gel OD for chiral separations R.

*Mobile phase*: trifluoroacetic acid R, 2-propanol R, hexane R (0.1:15:85 V/V/V).

*Flow rate*: 0.8 mL/min.

*Detection*: spectrophotometer at 230 nm.

*Injection*: 10 µL.

*Run time*: 1.5 times the retention time of valsartan.

*Identification of impurities*: use the chromatogram supplied with *valsartan for peak identification CRS* and the chromatogram obtained with reference solution (a) to identify the peak due to impurity A.

*Relative retention* with reference to valsartan (retention time = about 13 min): impurity A = about 0.6.

*System suitability*: reference solution (a):

– *resolution*: minimum 2.0 between the peaks due to impurity A and valsartan.

*Limit*:

– *impurity A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent).

**Related substances.** Liquid chromatography (2.2.29).

*Test solution.* Dissolve 50 mg of the substance to be examined in the mobile phase and dilute to 100.0 mL with the mobile phase.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Reference solution (b).* Dissolve the contents of a vial of *valsartan for system suitability CRS* (containing impurity C) in 1.0 mL of the mobile phase.

*Column*:

– *size*: *l* = 0.125 m, Ø = 3.0 mm;

– *stationary phase*: end-capped octadecylsilyl silica gel for chromatography R (5 µm).

*Mobile phase*: glacial acetic acid R, acetonitrile R1, water R (1:500:500 V/V/V).

*Flow rate*: 0.4 mL/min.

*Detection*: spectrophotometer at 225 nm.

*Injection*: 10 µL.

*Run time*: 6 times the retention time of valsartan.

**Identification of impurities:** use the chromatogram supplied with *valsartan for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peak due to impurity C.

**Relative retention** with reference to valsartan (retention time = about 5 min): impurity C = about 0.8.

**System suitability:** reference solution (b):

– **resolution:** minimum 3.0 between the peaks due to impurity C and valsartan.

**Limits:**

- **impurity C:** not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- **unspecified impurities:** for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- **total:** not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);
- **disregard limit:** 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Heavy metals (2.4.8):** maximum 20 ppm.

Dissolve 1.0 g in a mixture of 15 volumes of *water R* and 85 volumes of *acetone R* and dilute to 20 mL with the same mixture of solvents. 12 mL of the solution complies with test B. Prepare the reference solution using 10 mL of *lead standard solution (1 ppm Pb) R*.

**Water (2.5.12):** maximum 2.0 per cent, determined on 0.500 g.

**Sulfated ash (2.4.14):** maximum 0.1 per cent, determined on 1.0 g.

#### ASSAY

Dissolve 0.170 g in 70 mL of *2-propanol R*. Titrate with 0.1 M *tetrabutylammonium hydroxide in 2-propanol*, determining the endpoint potentiometrically (2.2.20). Perform all operations under nitrogen.

1 mL of 0.1 M *tetrabutylammonium hydroxide in 2-propanol* is equivalent to 21.78 mg of  $C_{24}H_{29}N_5O_3$ .

#### STORAGE

In an airtight container.

#### IMPURITIES

**Specified impurities:** A, C.

**Other detectable impurities** (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): B.

## VANCOMYCIN HYDROCHLORIDE

### Vancomycini hydrochloridum

$C_{66}H_{76}Cl_3N_9O_{24}$

$M_r$  1486

#### DEFINITION

Hydrochloride of a mixture of related glycopeptides, consisting principally of the monohydrochloride of (3*S*,6*R*,7*R*,22*R*,23*S*,26*S*,30*aS*,36*R*,38*aR*)-3-(2-amino-2-oxoethyl)-44-[[2-*O*-(3-amino-2,3,6-trideoxy-3-*C*-methyl- $\alpha$ -*L*-lyxo-hexopyranosyl)- $\beta$ -*D*-glucopyranosyl]oxy]-10,19-dichloro-7,22,28,30,32-pentahydroxy-6-[[*(2R)*-4-methyl-2-(methylamino)pentanoyl]amino]-2,5,24,38,39-pentaoxo-2,3,4,5,6,7,23,24,25,26,36,37,38,38*a*-tetradecahydro-22*H*-8,11:18,21-dietheno-23,36-(iminomethano)-13,16:31,35-dimetheno-1*H*,13*H*-[1,6,9]oxadiazacyclohexadecino[4,5-*m*][10,2,16]benzoxadiazacyclotetracosine-26-carboxylic acid (vancomycin B).

Substance produced by certain strains of *Amycolatopsis orientalis* or obtained by any other means.

**Potency:** minimum 1050 IU/mg (anhydrous substance).

#### CHARACTERS

**Appearance:** white or almost white, hygroscopic powder.

**Solubility:** freely soluble in water, slightly soluble in ethanol (96 per cent).

#### IDENTIFICATION

A. Examine the chromatograms obtained in the test for vancomycin B.

**Results:** the principal peak in the chromatogram obtained with test solution (a) is similar in retention time to the principal peak in the chromatogram obtained with the reference solution.

B. It gives reaction (a) of chlorides (2.3.1).

## TESTS

**Appearance of solution.** The solution is clear (2.2.1) and its absorbance (2.2.25) at 450 nm is not greater than 0.10.

Dissolve 2.50 g in *water R* and dilute to 25.0 mL with the same solvent.

**pH (2.2.3):** 2.5 to 4.5.

Dissolve 0.50 g in *carbon dioxide-free water R* and dilute to 10 mL with the same solvent.

**Vancomycin B.** Liquid chromatography (2.2.29). Use the solutions within 4 h of preparation.

**Test solution (a).** Dissolve 10.0 mg of the substance to be examined in mobile phase A and dilute to 5.0 mL with mobile phase A.

**Test solution (b).** Dilute 2.0 mL of test solution (a) to 50.0 mL with mobile phase A.

**Test solution (c).** Dilute 0.5 mL of test solution (b) to 20.0 mL with mobile phase A.

**Reference solution.** Dissolve the contents of a vial of *vancomycin hydrochloride CRS* in *water R* and dilute with the same solvent to obtain a solution containing 0.5 mg/mL. Heat at 65 °C for 24 h. Allow to cool.

**Column:**

- size:  $l = 0.25$  m,  $\varnothing = 4.6$  mm;
- stationary phase: octadecylsilyl silica gel for chromatography R (5  $\mu$ m).

**Mobile phase:**

- mobile phase A: to 4 mL of *triethylamine R* add 1996 mL of *water R* and adjust to pH 3.2 with *phosphoric acid R*; to 920 mL of this solution add 10 mL of *tetrahydrofuran R* and 70 mL of *acetonitrile R*;
- mobile phase B: to 4 mL of *triethylamine R* add 1996 mL of *water R* and adjust to pH 3.2 with *phosphoric acid R*; to 700 mL of this solution add 10 mL of *tetrahydrofuran R* and 290 mL of *acetonitrile R*;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 13	100	0
13 - 22	100 $\rightarrow$ 0	0 $\rightarrow$ 100

**Flow rate:** 1.0 mL/min.

**Detection:** spectrophotometer at 280 nm.

**Injection:** 20  $\mu$ L.

**System suitability:**

- resolution: minimum 5.0 between the 2 principal peaks in the chromatogram obtained with the reference solution;
- signal-to-noise ratio: minimum 5 for the principal peak in the chromatogram obtained with test solution (c);
- symmetry factor: maximum 1.6 for the peak due to vancomycin in the chromatogram obtained with test solution (b).

Calculate the percentage content of vancomycin B hydrochloride using the following expression:

$$\frac{A_b \times 100}{A_b + \left(\frac{A_t}{25}\right)}$$

$A_b$  = area of the peak due to vancomycin B in the chromatogram obtained with test solution (b);

$A_t$  = sum of the areas of the peaks due to impurities in the chromatogram obtained with test solution (a).

**Limit:**

- *vancomycin B*: minimum 93.0 per cent.

**Related substances.** Liquid chromatography (2.2.29) as described in the test for vancomycin B with the following modifications.

**Injection:** test solution (a), (b) and (c).

Calculate the percentage content of each impurity using the following expression:

$$\frac{\left(\frac{A_i}{25}\right) \times 100}{A_b + \left(\frac{A_t}{25}\right)}$$

$A_i$  = area of the peak due to an impurity in the chromatogram obtained with test solution (a);

$A_b$  = area of the peak due to vancomycin B in the chromatogram obtained with test solution (b);

$A_t$  = sum of the areas of the peaks due to impurities in the chromatogram obtained with test solution (a).

**Limits:**

- any impurity: for each impurity, maximum 4.0 per cent;
- total: maximum 7.0 per cent;
- disregard limit: the area of the principal peak in the chromatogram obtained with test solution (c) (0.1 per cent).

**Heavy metals (2.4.8):** maximum 30 ppm.

1.0 g complies with test C. Prepare the reference solution using 3.0 mL of *lead standard solution (10 ppm Pb) R*.

**Water (2.5.12):** maximum 5.0 per cent, determined on 0.500 g.

**Sulfated ash (2.4.14):** maximum 1.0 per cent, determined on 1.00 g.

**Bacterial endotoxins (2.6.14):** less than 0.25 IU/mg, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins.

## ASSAY

Carry out the microbiological assay of antibiotics (2.7.2). Use *vancomycin hydrochloride CRS* as the chemical reference substance.

## STORAGE

In an airtight container, protected from light. If the substance is sterile, store in a sterile, airtight, tamper-proof container.

## IMPURITIES

- A. R2 = NH<sub>2</sub>, R3 = H: *N*-demethylvancomycin B,  
 C. R1 = H, R2 = NH<sub>2</sub>, R3 = CH<sub>3</sub>: aglucovancomycin B,

- D. R2 = NH<sub>2</sub>, R3 = CH<sub>3</sub>: desvancosaminylvancomycin B,

- B. (4*S*,7*R*,8*R*,23*R*,24*S*,27*S*,31*aS*,37*R*,39*aR*)-45-[[2-*O*-(3-amino-2,3,6-trideoxy-3-*C*-methyl- $\alpha$ -*L*-lyxohexopyranosyl)- $\beta$ -*D*-glucopyranosyl]oxy]-11,20-dichloro-8,23,29,31,33-pentahydroxy-7-[[2*R*]-4-methyl-2-(methylamino)pentanoyl]amino]-2,6,25,39,40-penta-oxo-1,2,3,4,5,6,7,8,24,25,26,27,37,38,39,39a-hexadecahydro-23*H*-9,12:19,22-dietheno-24,37-(iminomethano)-14,17:32,36-dimetheno-14*H*][1,6,10]oxadiazacycloheptadecino[4,5-*m*][10,2,16]benzoxadiazacyclotetracosine-4,27-dicarboxylic acid ([ $\beta$  Asp<sup>3</sup>]vancomycin B).

01/2008:0747

## VANILLIN

### Vanillinum

C<sub>8</sub>H<sub>8</sub>O<sub>3</sub>  
 [121-33-5]

M<sub>r</sub> 152.1

#### DEFINITION

Vanillin contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of 4-hydroxy-3-methoxybenzaldehyde, calculated with reference to the dried substance.

#### CHARACTERS

White or slightly yellowish, crystalline powder or needles, slightly soluble in water, freely soluble in alcohol and in methanol. It dissolves in dilute solutions of alkali hydroxides.

#### IDENTIFICATION

*First identification: B.*

*Second identification: A, C, D.*

- A. Melting point (2.2.14): 81 °C to 84 °C.  
 B. Examine by infrared absorption spectrophotometry (2.2.24), comparing with the spectrum obtained with *vanillin CRS*. Examine the substances prepared as discs.  
 C. Examine the chromatograms obtained in the test for related substances in daylight after spraying. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).  
 D. To 5 mL of a saturated solution of the substance to be examined add 0.2 mL of *ferric chloride solution R1*. A blue colour is produced. Heat to 80 °C. The solution becomes brown. On cooling, a white precipitate is formed.

#### TESTS

**Appearance of solution.** Dissolve 1.0 g in *alcohol R* and dilute to 20 mL with the same solvent. The solution is clear (2.2.1) and not more intensely coloured than reference solution B<sub>6</sub> (2.2.2, *Method II*).

**Related substances.** Examine by thin-layer chromatography (2.2.27), using *silica gel GF<sub>254</sub> R* as the coating substance.

*Test solution (a).* Dissolve 0.1 g of the substance to be examined in *methanol R* and dilute to 5 mL with the same solvent.

*Test solution (b).* Dilute 1 mL of test solution (a) to 10 mL with *methanol R*.

*Reference solution (a).* Dissolve 10 mg of *vanillin CRS* in *methanol R* and dilute to 5 mL with the same solvent.

*Reference solution (b).* Dilute 0.5 mL of test solution (a) to 100 mL with *methanol R*.

Apply to the plate 5  $\mu$ L of each solution. Develop in an unsaturated tank over a path of 10 cm using a mixture of 0.5 volumes of *anhydrous acetic acid R*, 1 volume of *methanol R* and 98.5 volumes of *methylene chloride R*. Dry the plate in a current of cold air. Examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent). Spray with *dinitrophenylhydrazine-aceto-hydrochloric solution R* and examine in daylight. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent).

**Reaction with sulfuric acid.** Dissolve 50 mg in 5 mL of *sulfuric acid R*. After 5 min, the solution is not more intensely coloured than a mixture of 4.9 mL of yellow primary solution and 0.1 mL of red primary solution or a mixture of 4.9 mL of yellow primary solution and 0.1 mL of blue primary solution (2.2.2, *Method I*).

**Loss on drying** (2.2.32). Not more than 1.0 per cent, determined on 1.000 g by drying in a desiccator for 4 h.

**Sulfated ash** (2.4.14). Not more than 0.05 per cent, determined on 2.0 g.

#### ASSAY

Dissolve 0.120 g in 20 mL of *alcohol R* and add 60 mL of *carbon dioxide-free water R*. Titrate with 0.1 M *sodium hydroxide*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *sodium hydroxide* is equivalent to 15.21 mg of C<sub>8</sub>H<sub>8</sub>O<sub>3</sub>.

## STORAGE

Store protected from light.

01/2008:1769

## VECURONIUM BROMIDE

## Vecuronii bromidum

$C_{34}H_{57}BrN_2O_4$   
[50700-72-6]

$M_r$  638

## DEFINITION

1-[3 $\alpha$ ,17 $\beta$ -Bis(acetyloxy)-2 $\beta$ -(piperidin-1-yl)-5 $\alpha$ -androstan-16 $\beta$ -yl]-1-methylpiperidinium bromide.

Content: 99.0 per cent to 101.0 per cent (anhydrous substance).

## CHARACTERS

**Appearance:** white or almost white crystals or crystalline powder.

**Solubility:** slightly soluble in water, freely soluble in methylene chloride, sparingly soluble in acetonitrile and in anhydrous ethanol.

## IDENTIFICATION

- A. Specific optical rotation (see Tests).  
 B. Infrared absorption spectrophotometry (2.2.24).  
*Comparison: vecuronium bromide CRS.*  
 C. It gives reaction (a) of bromides (2.3.1).

## TESTS

**Appearance of solution.** The solution is clear (2.2.1) and not more intensely coloured than reference solution BY<sub>7</sub> (2.2.2, Method II).

Dissolve 0.1 g in *water R* and dilute to 10 mL with the same solvent.

**Specific optical rotation** (2.2.7): + 30.5 to + 35.0 (anhydrous substance).

Dissolve 0.250 g in 0.05 M *hydrochloric acid* and dilute to 25.0 mL with the same solvent.

**Impurity B.** Thin-layer chromatography (2.2.27).

**Test solution.** Dissolve 0.10 g of the substance to be examined in *methylene chloride R* and dilute to 5.0 mL with the same solvent.

**Reference solution (a).** Dissolve 5 mg of the substance to be examined and 5 mg of *pancuronium bromide CRS* (impurity B) in *methylene chloride R* and dilute to 5 mL with the same solvent.

**Reference solution (b).** Dissolve 5.0 mg of *pancuronium bromide CRS* (impurity B) in *methylene chloride R* and dilute to 100.0 mL with the same solvent.

**Stationary phase:** TLC silica gel plate R (2-10  $\mu$ m).

**Mobile phase:** dissolve 1 g of *sodium bromide R* in 5 mL of *water R*. Add 85 mL of *2-propanol R*, then 10 mL of *acetonitrile R*.

**Application:** 1  $\mu$ L.

**Development:** in an unsaturated tank, over 2/3 of the plate.

**Drying:** in air for 30 min.

**Detection:** spray with a 2.5 g/L solution of *iodine R* in a mixture of equal volumes of *methanol R* and *methylene chloride R*.

**System suitability:** reference solution (a):

- the chromatogram obtained shows 2 clearly separated spots.

**Limit:**

- **impurity B:** any spot due to impurity B is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.25 per cent).

**Related substances.** Liquid chromatography (2.2.29). Use freshly prepared solutions.

**Test solution.** Dissolve 40.0 mg of the substance to be examined in a 0.2 g/L solution of *hydrochloric acid R* in *methanol R* and dilute to 20.0 mL with the same solution.

**Reference solution (a).** Dissolve 4 mg of *vecuronium for peak identification CRS* (containing impurities A, C, D and E) in a 0.2 g/L solution of *hydrochloric acid R* in *methanol R* and dilute to 2 mL with the same solution.

**Reference solution (b).** Dilute 5.0 mL of the test solution to 100.0 mL with a 0.2 g/L solution of *hydrochloric acid R* in *methanol R*. Dilute 5.0 mL of this solution to 100.0 mL with a 0.2 g/L solution of *hydrochloric acid R* in *methanol R*.

**Reference solution (c).** Dilute 10.0 mL of reference solution (b) to 50.0 mL with a 0.2 g/L solution of *hydrochloric acid R* in *methanol R*.

**Column:**

- **size:**  $l = 0.25$  m,  $\varnothing = 4.6$  mm;
- **stationary phase:** spherical octadecylsilyl silica gel for chromatography R (5  $\mu$ m);
- **temperature:** 40 °C.

**Mobile phase:** mix 50 volumes of a 18.0 g/L solution of *tetramethylammonium hydroxide R* adjusted to pH 6.5 with *phosphoric acid R*, 250 volumes of *methanol R* and 700 volumes of *acetonitrile R*.

**Flow rate:** 2.0 mL/min.

**Detection:** spectrophotometer at 210 nm.

**Injection:** 20  $\mu$ L.

**Run time:** 2.5 times the retention time of vecuronium.

**Identification of impurities:** use the chromatogram supplied with *vecuronium for peak identification CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A, C, D and E. The elution order may vary, but the quantity of each impurity in the CRS is different so that a clear identification of the impurities is possible.

**Relative retention** with reference to vecuronium (retention time = about 5 min): impurity C = about 0.8; impurity D = about 0.9; impurity E = about 1.2; impurity A = about 1.3.

**System suitability:** reference solution (a):

- **peak-to-valley ratio:** minimum 2.0, where  $H_p$  = height above the baseline of the peak due to impurity D and  $H_v$  = height above the baseline of the lowest point of the curve separating this peak from the principal peak; if necessary, increase the volume of the buffer solution while simultaneously decreasing the volume of acetonitrile in the mobile phase; do not change the volume of methanol;
- **symmetry factor:** maximum 3.5 for the principal peak.

**Limits:**

- **correction factors:** for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 0.6; impurity C = 1.4;
- **impurities A, C, D, E:** for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.25 per cent);
- **unspecified impurities:** for each impurity, not more than twice the area of the principal peak in the chromatogram obtained with reference solution (c) (0.10 per cent);

- *total*: not more than 2.8 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.7 per cent);
- *disregard limit*: the area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent).

**Water** (2.5.12): maximum 4.0 per cent, determined on 0.300 g.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

#### ASSAY

Dissolve 0.450 g in 50 mL of *glacial acetic acid R*. Titrate with 0.1 M *perchloric acid*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *perchloric acid* is equivalent to 63.8 mg of  $C_{34}H_{57}BrN_2O_4$ .

#### STORAGE

In an airtight container, protected from light and moisture.

#### IMPURITIES

*Specified impurities: A, B, C, D, E.*

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use* (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): *F*.

- A. 2β,16β-bis(piperidin-1-yl)-5α-androstane-3α,17β-diyl diacetate,

- B. 1,1'-[3α,17β-bis(acetyloxy)-5α-androstane-2β,16β-diyl]bis(1-methylpiperidinium) (pancuronium),

- C. R = H, R' = CO-CH<sub>3</sub>: 1-[17β-(acetyloxy)-3α-hydroxy-2β-(piperidin-1-yl)-5α-androstan-16β-yl]-1-methylpiperidinium,
- D. R = R' = H: 1-[3α,17β-dihydroxy-2β-(piperidin-1-yl)-5α-androstan-16β-yl]-1-methylpiperidinium,
- E. R = CO-CH<sub>3</sub>, R' = H: 1-[3α-(acetyloxy)-17β-hydroxy-2β-(piperidin-1-yl)-5α-androstan-16β-yl]-1-methylpiperidinium,

- F. 2β-(piperidin-1-yl)-17-oxo-5α-androstan-3α-yl acetate.

07/2009:2248

## VEDAPROFEN FOR VETERINARY USE

### Vedaprofenum ad usum veterinarium

$C_{19}H_{22}O_2$   
[71109-09-6]

$M_r$  282.4

#### DEFINITION

(2*RS*)-2-(4-Cyclohexyl-1-naphthyl)propanoic acid.

*Content*: 98.5 per cent to 101.0 per cent (dried substance).

#### CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: practically insoluble in water, freely soluble in acetone, soluble in methanol. It dissolves in dilute solutions of alkali hydroxides.

#### IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

*Comparison*: *vedaprofen CRS*.

#### TESTS

**Appearance of solution.** The solution is clear (2.2.1) and not more intensely coloured than reference solution Y<sub>5</sub> (2.2.2, *Method II*).

Dissolve 2.0 g in *acetone R* and dilute to 20.0 mL with the same solvent.

**Related substances.** Liquid chromatography (2.2.29).

*Test solution.* Dissolve 25 mg of the substance to be examined in *methanol R* and dilute to 50.0 mL with the same solvent.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 50.0 mL with *methanol R*. Dilute 1.0 mL of this solution to 10.0 mL with *methanol R*.

*Reference solution (b).* Dissolve the contents of a vial of *vedaprofen impurity mixture CRS* (impurities A, B and C) in 1.0 mL of reference solution (a).

*Column*:

- *size*:  $l = 0.10$  m,  $\varnothing = 3.0$  mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5  $\mu$ m);
- *temperature*: 35 °C.

*Mobile phase*: dissolve 1.70 g of *tetrabutylammonium hydrogen sulfate R* in 1000 mL of a mixture of 20 volumes of *water R* and 80 volumes of *methanol R*.

*Flow rate*: 0.4 mL/min.

*Detection*: spectrophotometer at 288 nm.

*Injection*: 10  $\mu$ L.

*Run time*: 5 times the retention time of vedaprofen.

**Identification of impurities:** use the chromatogram supplied with *vedaprofen impurity mixture CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A, B and C.

**Relative retention** with reference to vedaprofen (retention time = about 6 min): impurity C = about 0.8; impurity A = about 1.8; impurity B = about 3.7.

**System suitability:** reference solution (b):

- **resolution:** minimum 2.0 between the peaks due to impurity C and vedaprofen.

**Limits:**

- **correction factor:** for the calculation of content, multiply the peak area of impurity B by 0.7;
- **impurities A, B:** for each impurity, not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.4 per cent);
- **unspecified impurities:** for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.20 per cent);
- **total:** not more than 2.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- **disregard limit:** 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent).

**Heavy metals (2.4.8):** maximum 10 ppm.

Dissolve 1.0 g in a mixture of 15 volumes of *water R* and 85 volumes of *acetone R* and dilute to 20 mL with the same mixture of solvents. 12 mL of the solution complies with test B. Prepare the reference solution using lead standard solution (0.5 ppm Pb) obtained by diluting *lead standard solution (100 ppm Pb) R* with a mixture of 15 volumes of *water R* and 85 volumes of *acetone R*.

**Loss on drying (2.2.32):** maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash (2.4.14):** maximum 0.3 per cent, determined on 0.500 g.

**ASSAY**

Dissolve 0.200 g in 50 mL of *ethanol (96 per cent) R* and add 1.0 mL of 0.1 M *hydrochloric acid*. Carry out a potentiometric titration (2.2.20), using 0.1 M *sodium hydroxide*. Read the volume added between the 2 points of inflexion.

1 mL of 0.1 M *sodium hydroxide* is equivalent to 28.24 mg of  $C_{19}H_{22}O_2$ .

**IMPURITIES**

**Specified impurities:** A, B.

**Other detectable impurities** (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): C, D.

- A. R = CH<sub>3</sub>: methyl (2RS)-2-(4-cyclohexyl-1-naphthyl)propanoate,  
 B. R = C(CH<sub>3</sub>)<sub>3</sub>: 1,1-dimethylethyl (2RS)-2-(4-cyclohexyl-1-naphthyl)propanoate,

- C. R = H: (4-cyclohexyl-1-naphthyl)acetic acid,  
 D. R = CH<sub>3</sub>: methyl (2RS)-2-(4-cyclohexyl-1-naphthyl)acetate.

01/2008:2119

## VENLAFAXINE HYDROCHLORIDE

### Venlafaxini hydrochloridum

$C_{17}H_{28}ClNO_2$   
 [99300-78-4]

$M_r$  313.9

**DEFINITION**

1-[(1RS)-2-(Dimethylamino)-1-(4-methoxyphenyl)ethyl]-cyclohexanol hydrochloride.

**Content:** 99.0 per cent to 101.0 per cent (dried substance).

**CHARACTERS**

**Appearance:** white or almost white powder.

**Solubility:** freely soluble in water and in methanol, soluble in anhydrous ethanol, slightly soluble or practically insoluble in acetone.

It shows polymorphism (5.9).

**IDENTIFICATION**

A. Infrared absorption spectrophotometry (2.2.24).

**Comparison:** *venlafaxine hydrochloride CRS*.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in 2-propanol *R*, evaporate to dryness and record new spectra using the residues.

B. It gives reaction (a) of chlorides (2.3.1).

**TESTS**

**Acidity or alkalinity.** Dissolve 0.20 g in *carbon dioxide-free water R* and dilute to 10 mL with the same solvent. Add 0.05 mL of *methyl red solution R* and 0.1 mL of 0.01 M *hydrochloric acid*. The solution is pink. Not more than 0.2 mL of 0.01 M *sodium hydroxide* is required to change the colour of the indicator to yellow.

**Related substances.** Liquid chromatography (2.2.29).

**Test solution.** Dissolve 25.0 mg of the substance to be examined in the mobile phase and dilute to 25.0 mL with the mobile phase.

**Reference solution (a).** Dilute 1.0 mL of the test solution to 10.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 100.0 mL with the mobile phase.

**Reference solution (b).** Dissolve the contents of a vial of *venlafaxine for system suitability CRS* (containing impurities D and F) in 1.0 mL of the mobile phase.

**Column:**

- **size:**  $l = 0.25$  m,  $\varnothing = 4.6$  mm;
- **stationary phase:** end-capped octylsilyl silica gel for chromatography *R* (5  $\mu$ m) with a pore size of 10 nm.

**Mobile phase:** mix 510 volumes of *acetonitrile R* and 1490 volumes of a solution prepared as follows: dissolve 17 g of *ammonium dihydrogen phosphate R* in 1490 mL of *water R* and adjust to pH 4.4 using *phosphoric acid R*.

Flow rate: 1.2 mL/min.

Detection: spectrophotometer at 225 nm.

Injection: 20 µL.

Run time: 10 times the retention time of venlafaxine.

Relative retention with reference to venlafaxine (retention time = about 9 min): impurity D = about 0.9; impurity F = about 3.4.

System suitability: reference solution (b):

– resolution: minimum 1.5 between the peaks due to impurity D and venlafaxine.

Limits:

- impurity F: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- unspecified impurities: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- total: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- disregard limit: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Heavy metals (2.4.8): maximum 20 ppm.

Dissolve 1.0 g in 20 mL of water R. 12 mL of the solution complies with test A. Prepare the reference solution using lead standard solution (1 ppm Pb) R.

Loss on drying (2.2.32): maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* at 80 °C for 3 h.

Sulfated ash (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in a mixture of 5.0 mL of 0.01 M hydrochloric acid and 50 mL of ethanol (96 per cent) R. Carry out a potentiometric titration (2.2.20), using 0.1 M sodium hydroxide. Read the volume added between the 2 points of inflexion. Carry out a blank titration.

1 mL of 0.1 M sodium hydroxide is equivalent to 31.39 mg of C<sub>17</sub>H<sub>28</sub>ClNO<sub>2</sub>.

IMPURITIES

Specified impurities: F.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use* (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): A, B, C, D, E, G, H.

- A. R = H: 2-(4-methoxyphenyl)-N,N-dimethylethanamine,  
 B. R = CO-O-C<sub>2</sub>H<sub>5</sub>: ethyl (2*RS*)-3-(dimethylamino)-2-(4-methoxyphenyl)propanoate,

## VERAPAMIL HYDROCHLORIDE

### Verapamili hydrochloridum

C<sub>27</sub>H<sub>39</sub>ClN<sub>2</sub>O<sub>4</sub>  
[152-11-4]

M<sub>r</sub> 491.1

DEFINITION

(2*RS*)-2-(3,4-Dimethoxyphenyl)-5-[[2-(3,4-dimethoxyphenyl)ethyl](methyl)amino]-2-(1-methylethyl)pentanenitrile hydrochloride.

Content: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance: white or almost white, crystalline powder.

Solubility: soluble in water, freely soluble in methanol, sparingly soluble in ethanol (96 per cent).

mp: about 144 °C.

IDENTIFICATION

First identification: B, D.

Second identification: A, C, D.

A. Ultraviolet and visible absorption spectrophotometry (2.2.25).

Test solution. Dissolve 20.0 mg in 0.01 M hydrochloric acid and dilute to 100.0 mL with the same acid. Dilute 5.0 mL of this solution to 50.0 mL with 0.01 M hydrochloric acid.

Spectral range: 210-340 nm.

Absorption maxima: at 229 nm and 278 nm.

*Shoulder*: at 282 nm.

*Absorbance ratio*:  $A_{278}/A_{229} = 0.35$  to 0.39.

**B. Infrared absorption spectrophotometry (2.2.24).**

*Preparation*: discs.

*Comparison*: verapamil hydrochloride CRS.

**C. Thin-layer chromatography (2.2.27).**

*Test solution*. Dissolve 10 mg of the substance to be examined in *methylene chloride R* and dilute to 5 mL with the same solvent.

*Reference solution (a)*. Dissolve 20 mg of *verapamil hydrochloride CRS* in *methylene chloride R* and dilute to 10 mL with the same solvent.

*Reference solution (b)*. Dissolve 5 mg of *papaverine hydrochloride CRS* in reference solution (a) and dilute to 5 mL with reference solution (a).

*Plate*: TLC silica gel  $F_{254}$  plate R.

*Mobile phase*: diethylamine R, cyclohexane R (15:85 V/V).

*Application*: 5 µL.

*Development*: over a path of 15 cm.

*Drying*: in air.

*Detection*: examine in ultraviolet light at 254 nm.

*System suitability*: reference solution (b):

- the chromatogram shows 2 clearly separated principal spots.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

**D. It gives reaction (b) of chlorides (2.3.1).**

**TESTS**

**Solution S**. Dissolve 1.0 g in *carbon dioxide-free water R* while gently heating and dilute to 20.0 mL with the same solvent.

**Appearance of solution**. Solution S is clear (2.2.1) and colourless (2.2.2, Method II).

**pH (2.2.3)**: 4.5 to 6.0 for solution S.

**Optical rotation (2.2.7)**:  $-0.10^\circ$  to  $+0.10^\circ$ , determined on solution S.

**Related substances**. Liquid chromatography (2.2.29).

*Test solution*. Dissolve 25.0 mg of the substance to be examined in the initial mobile phase composition and dilute to 10.0 mL with the initial mobile phase composition.

*Reference solution (a)*. Dissolve 5 mg of *verapamil hydrochloride CRS*, 5 mg of *verapamil impurity I CRS* and 5 mg of *verapamil impurity M CRS* in the initial mobile phase composition and dilute to 20 mL with the initial mobile phase composition. Dilute 1 mL of this solution to 10 mL with the initial mobile phase composition.

*Reference solution (b)*. Dilute 1.0 mL of the test solution to 100.0 mL with the initial mobile phase composition. Dilute 1.0 mL of this solution to 10.0 mL with the initial mobile phase composition.

*Column*:

- *size*:  $l = 0.25$  m,  $\varnothing = 4.6$  mm;
- *stationary phase*: end-capped palmitamidopropylsilyl silica gel for chromatography R (5 µm).

*Mobile phase*:

- *mobile phase A*: 6.97 g/L solution of dipotassium hydrogen phosphate R adjusted to pH 7.20 with phosphoric acid R;
- *mobile phase B*: acetonitrile R;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 22	63	37
22 - 27	63 → 35	37 → 65
27 - 35	35	65

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 278 nm.

*Injection*: 10 µL.

*Retention time*: verapamil = about 16 min; impurity I = about 21 min; impurity M eluting as a doublet = about 32 min.

*System suitability*: reference solution (a):

- *resolution*: minimum 5.0 between the peaks due to verapamil and impurity I;
- impurity M elutes from the column.

*Limits*:

- *any impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);
- *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);
- *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.01 per cent).

**Heavy metals (2.4.8)**: maximum 10 ppm.

1.0 g complies with test C. Prepare the reference solution using 1 mL of *lead standard solution (10 ppm Pb) R*.

**Loss on drying (2.2.32)**: maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash (2.4.14)**: maximum 0.1 per cent, determined on 1.0 g.

**ASSAY**

Dissolve 0.400 g in 50 mL of *anhydrous ethanol R* and add 5.0 mL of 0.01 M hydrochloric acid. Titrate with 0.1 M sodium hydroxide, determining the end-point potentiometrically (2.2.20). Measure the volume added between the 2 points of inflexion.

1 mL of 0.1 M sodium hydroxide is equivalent to 49.11 mg of  $C_{27}H_{39}ClN_2O_4$ .

**STORAGE**

Protected from light.

**IMPURITIES**

A. *N,N'*-bis[2-(3,4-dimethoxyphenyl)ethyl]-*N,N'*-dimethylpropane-1,3-diamine,

B. R = H: 2-(3,4-dimethoxyphenyl)-*N*-methylethanamine,

C. R = CH<sub>3</sub>: 2-(3,4-dimethoxyphenyl)-*N,N*-dimethylethanamine,

D. R = CH<sub>2</sub>-CH<sub>2</sub>-CH<sub>2</sub>-Cl: 3-chloro-*N*-[2-(3,4-dimethoxyphenyl)ethyl]-*N*-methylpropan-1-amine,

E. Ar-CH<sub>2</sub>OH: (3,4-dimethoxyphenyl)methanol,

O. (2*RS*)-2-(3,4-dimethoxyphenyl)-5-[[2-[[2-(3,4-dimethoxyphenyl)ethyl](methylamino)-2-propyl]pentanenitrile,

P. 2,6-bis(3,4-dimethoxyphenyl)-2,6-bis(1-methylethyl)-heptane-1,7-dinitrile.

## VINBLASTINE SULFATE

### Vinblastini sulfas

C<sub>46</sub>H<sub>60</sub>N<sub>4</sub>O<sub>13</sub>S  
[143-67-9]

M<sub>r</sub> 909

#### DEFINITION

Vinblastine sulfate contains not less than 95.0 per cent and not more than the equivalent of 104.0 per cent of methyl (3*aR*,4*R*,5*S*,5*aR*,10*bR*,13*aR*)-4-(acetyloxy)-3*a*-ethyl-9-[(5*S*,7*R*,9*S*)-5-ethyl-5-hydroxy-9-(methoxycarbonyl)-1,4,5,6,7,8,9,10-octahydro-2*H*-3,7-methanoazacycloundecino[5,4-*b*]indol-9-yl]-5-hydroxy-8-methoxy-6-methyl-3*a*,4,5,5*a*,6,11,12,13*a*-octahydro-1*H*-indolizino[8,1-*cd*]carbazole-5-carboxylate sulfate, calculated with reference to the dried substance.

#### CHARACTERS

A white or slightly yellowish, crystalline powder, very hygroscopic, freely soluble in water, practically insoluble in alcohol.

#### IDENTIFICATION

- Examine by infrared absorption spectrophotometry (2.2.24), comparing with the *Ph. Eur. reference spectrum of vinblastine sulfate*.
- Examine the chromatograms obtained in the assay. The principal peak in the chromatogram obtained with the test solution is similar in position and approximate size to the principal peak in the chromatogram obtained with reference solution (a).

#### TESTS

**Solution S.** Dissolve 50.0 mg in *carbon dioxide-free water R* and dilute to 10.0 mL with the same solvent.

**Appearance of solution.** Solution S is clear (2.2.1) and not more intensely coloured than reference solution Y<sub>7</sub> (2.2.2, *Method I*).

**pH (2.2.3).** Dilute 3 mL of solution S to 10 mL with *carbon dioxide-free water R*. The pH of this solution is 3.5 to 5.0.

**Related substances.** Examine the chromatograms obtained in the assay. In the chromatogram obtained with the test solution, the area of any peak apart from the principal peak is not greater than the area of the principal peak in the chromatogram obtained with reference solution (c) (2.0 per cent) and the sum of the areas of any such peaks is not greater than 2.5 times the area of the principal peak in the chromatogram obtained with reference solution (c) (5.0 per cent). Disregard any peak with an area less than that of the peak in the chromatogram obtained with reference solution (d).

**Loss on drying.** Not more than 15.0 per cent, determined on 3 mg by thermogravimetry (2.2.34). Heat to 200 °C at a rate of 5 °C/min, under a stream of *nitrogen for chromatography R*, at a flow rate of 40 mL/min.

#### ASSAY

Examine by liquid chromatography (2.2.29).

*Keep the solutions in iced water before use.*

**Test solution.** Dilute 1.0 mL of solution S (see Tests) to 5.0 mL with *water R*.

**Reference solution (a).** Dissolve the contents of a vial of *vinblastine sulfate CRS* in 5.0 mL of *water R* to obtain a concentration of 1.0 mg/mL.

**Reference solution (b).** Dissolve 1.0 mg of *vincristine sulfate CRS* in 1.0 mL of reference solution (a).

**Reference solution (c).** Dilute 1.0 mL of reference solution (a) to 50.0 mL with *water R*.

**Reference solution (d).** Dilute 1.0 mL of reference solution (c) to 20.0 mL with *water R*.

The chromatographic procedure may be carried out using:

- a stainless steel column 0.25 m long and 4.6 mm in internal diameter packed with *octylsilyl silica gel for chromatography R* (5 µm). Place between the injector and the column a precolumn packed with suitable silica gel,
- as mobile phase at a flow rate of 1.0 mL/min a mixture of 38 volumes of a 1.5 per cent V/V solution of *diethylamine R* adjusted to pH 7.5 with *phosphoric acid R*, 12 volumes of *acetonitrile R* and 50 volumes of *methanol R*,
- as detector a spectrophotometer set at 262 nm,
- a loop injector.

Inject 10 µL of each solution and record the chromatograms for three times the retention time of the peak corresponding to *vinblastine*. The assay is not valid unless: in the chromatogram obtained with reference solution (b) the resolution between the peaks corresponding to *vincristine* and *vinblastine* is not less than four; the peak in the chromatogram obtained with reference solution (d) has a signal-to-noise ratio not less than five. Calculate the percentage content of  $C_{46}H_{60}N_4O_{13}S$  from the area of the principal peak in each of the chromatograms obtained with the test solution and reference solution (a) and from the declared content of *vinblastine sulfate CRS*.

#### STORAGE

Store in an airtight, glass container, protected from light, at a temperature not exceeding –20 °C. If the substance is sterile, store in an sterile, airtight, tamper-proof glass container.

01/2008:0749  
corrected 7.0

## VINCRIStINE SULFATE

### Vincristini sulfas

$C_{46}H_{58}N_4O_{14}S$   
[2068-78-2]

$M_r$  923

#### DEFINITION

Methyl (3*aR*,4*R*,5*S*,5*aR*,10*bR*,13*aR*)-4-(acetyloxy)-3*a*-ethyl-9-[(5*S*,7*R*,9*S*)-5-ethyl-5-hydroxy-9-(methoxycarbonyl)-1,4,5,6,7,8,9,10-octahydro-2*H*-3,7-methanoazacycloundecino[5,4-*b*]indol-9-yl]-6-formyl-5-hydroxy-8-methoxy-3*a*,4,5,5*a*,6,11,12,13*a*-octahydro-1*H*-indolizino[8,1-*cd*]carbazole-5-carboxylate sulfate.

**Content:** 95.0 per cent to 104.0 per cent (dried substance).

#### CHARACTERS

**Appearance:** white or slightly yellowish, crystalline powder, very hygroscopic.

**Solubility:** freely soluble in water, slightly soluble in alcohol.

#### IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

**Comparison:** *Ph. Eur. reference spectrum of vincristine sulfate*.

#### TESTS

**Solution S.** Dissolve 50.0 mg in *carbon dioxide-free water R* and dilute to 10.0 mL with the same solvent. *Keep the solution in iced water to carry out the test for related substances.*

**Appearance of solution.** Solution S is clear (2.2.1) and not more intensely coloured than reference solution  $Y_7$  (2.2.2, *Method I*).

**pH** (2.2.3): 3.5 to 4.5.

Dilute 2 mL of solution S to 10 mL with *carbon dioxide-free water R*.

**Related substances.** Liquid chromatography (2.2.29). *Keep the solutions in iced water before use.*

**Test solution.** Dilute 1.0 mL of solution S to 5.0 mL with *water R*.

**Reference solution (a).** Dissolve the contents of a vial of *vincristine sulfate CRS* in 5.0 mL of *water R* to obtain a concentration of 1.0 mg/mL.

**Reference solution (b).** Dissolve 1.0 mg of *vinblastine sulfate CRS* in 1.0 mL of reference solution (a).

**Reference solution (c).** Dilute 1.0 mL of the test solution to 50.0 mL with *water R*.

**Reference solution (d).** Dilute 1.0 mL of reference solution (c) to 20.0 mL with *water R*.

**Precolumn:**

- **stationary phase:** *octylsilyl silica gel for chromatography R*.

**Column:**

- **size:**  $l = 0.25$  m,  $\varnothing = 4.6$  mm,
- **stationary phase:** *octylsilyl silica gel for chromatography R* (5 µm).

**Mobile phase:**

- **mobile phase A:** 1.5 per cent V/V solution of *diethylamine R* adjusted to pH 7.5 with *phosphoric acid R*,
- **mobile phase B:** *methanol R*,

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 12	38	62
12 - 27	38 → 8	62 → 92

**Flow rate:** 2 mL/min.

**Detection:** spectrophotometer at 297 nm.

**Injection:** 20 µL.

**System suitability:** reference solution (b):

- **resolution:** minimum 4 between the peaks due to *vincristine* and *vinblastine*.

**Limits:**

- **any impurity:** not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (2.0 per cent),
- **total:** not more than 2.5 times the area of the principal peak in the chromatogram obtained with reference solution (c) (5.0 per cent),
- **disregard limit:** area of the peak in the chromatogram obtained with reference solution (d) (0.1 per cent).

**Loss on drying:** maximum 12.0 per cent, determined on 3 mg by thermogravimetry (2.2.34). Heat the substance to be examined to 200 °C increasing the temperature by 5 °C/min, under a current of *nitrogen for chromatography R*, at a flow rate of 40 mL/min.

#### ASSAY

Liquid chromatography (2.2.29) as described in the test for related substances, with the following modifications.

**Mobile phase:** mix 30 volumes of a 1.5 per cent *V/V* solution of *diethylamine R* adjusted to pH 7.5 with *phosphoric acid R* and 70 volumes of *methanol R*.

**Flow rate:** 1.0 mL/min.

Calculate the percentage content of  $C_{46}H_{58}N_4O_{14}S$  using the chromatogram obtained with reference solution (a) and the declared content of *vincristine sulfate CRS*.

#### STORAGE

In an airtight, glass container, protected from light, at a temperature not exceeding  $-20\text{ }^{\circ}\text{C}$ . If the substance is sterile, store in a sterile, airtight, tamper-proof glass container.

#### IMPURITIES

**Specified impurities:** A, B, C, D, H.

**Other detectable impurities** (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): E, F, G.

A. methyl (3*aR*,4*R*,5*S*,5*aR*,10*bR*,13*aR*)-4-(acetyloxy)-3*a*-ethyl-9-[(5*R*,7*S*,9*S*)-5-ethyl-5,6-dihydroxy-9-(methoxycarbonyl)-1,4,5,6,7,8,9,10-octahydro-2*H*-3,7-methanoazacycloundecino[5,4-*b*]indol-9-yl]-6-formyl-5-hydroxy-8-methoxy-3*a*,4,5,5*a*,6,11,12,13*a*-octahydro-1*H*-indolizino[8,1-*cd*]carbazole-5-carboxylate (3'-hydroxy-VCR),

## VINDESINE SULFATE

### Vindesini sulfas

$C_{43}H_{57}N_5O_{11}S$   
[59917-39-4]

$M_r$  852

#### DEFINITION

Methyl (5*S*,7*R*,9*S*)-9-[(3*aR*,4*R*,5*S*,5*aR*,10*bR*,13*aR*)-5-carbamoyl-3*a*-ethyl-4,5-dihydroxy-8-methoxy-6-methyl-3*a*,4,5,5*a*,6,11,12,13*a*-octahydro-1*H*-indolizino[8,1-*cd*]carbazol-9-yl]-5-ethyl-5-hydroxy-1,4,5,6,7,8,9,10-octahydro-2*H*-3,7-methanoazacycloundecino[4,5-*b*]indole-9-carboxylate sulfate.

**Content:** 96.0 per cent to 103.0 per cent (dried substance).

#### CHARACTERS

**Appearance:** white or almost white, amorphous, hygroscopic substance.

**Solubility:** freely soluble in water and in methanol, practically insoluble in cyclohexane.

#### IDENTIFICATION

Infrared absorption spectrophotometry (2.2.24).

**Comparison:** *Ph. Eur. reference spectrum of vindesine sulfate.*

#### TESTS

**Solution S.** Dissolve 50 mg in *carbon dioxide-free water R* and dilute to 10 mL with the same solvent.

**Appearance of solution.** Solution S is clear (2.2.1) and not more intensely coloured than reference solution Y<sub>7</sub> (2.2.2, Method D).

**pH** (2.2.3): 3.5 to 5.5 for solution S.

**Related substances.** Liquid chromatography (2.2.29). *Keep the solutions in iced water before use.*

**Test solution.** Dissolve 10.0 mg of the substance to be examined in water R and dilute to 10.0 mL with the same solvent.

**Reference solution (a).** Dilute 1.0 mL of the test solution to 50.0 mL with water R.

**Reference solution (b).** Dissolve 1.0 mg of *desacetylvinblastine CRS* in water R, add 1.0 mL of the test solution and dilute to 50.0 mL with water R.

**Reference solution (c).** Dilute 1.0 mL of reference solution (a) to 200.0 mL with water R.

**Column:**

- size:  $l = 0.15$  m,  $\varnothing = 4.6$  mm;
- stationary phase: octadecylsilyl silica gel for chromatography R (5  $\mu$ m).

**Mobile phase:**

- mobile phase A: 1.5 per cent V/V solution of diethylamine R adjusted to pH 7.4 with phosphoric acid R;
- mobile phase B: methanol R;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 40	49	51
40 - 49	49 → 30	51 → 70
49 - end	30	70

**Flow rate:** 2 mL/min.

**Detection:** spectrophotometer at 270 nm.

**Injection:** 200  $\mu$ L.

**Run time:** twice the retention time of vindesine.

**System suitability:** reference solution (b):

- the retention time of vindesine is less than 40 min;
- resolution: minimum 2.0 between the peaks due to vindesine and desacetylvinblastine;
- symmetry factor: maximum 2.0 for the peak due to vindesine.

**Limits:**

- impurities A, B, C: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (1 per cent);
- total: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (2 per cent);
- disregard limit: the area of the principal peak in the chromatogram obtained with reference solution (c) (0.01 per cent).

**Acetonitrile.** Gas chromatography (2.2.28).

**Internal standard solution (a).** Dilute 0.500 g of propanol R to 100 mL with water R.

**Internal standard solution (b).** Dilute 10.0 mL of internal standard solution (a) to 50.0 mL with water R.

**Reference solution.** Dilute 10.0 g of acetonitrile R to 1000 mL with water R. To 3.0 mL of this solution add 10.0 mL of internal standard solution (a) and dilute to 50.0 mL with water R.

**Test solution.** Dissolve 40 mg of the substance to be examined in 1.0 mL of internal standard solution (b).

**Column:**

- material: glass;
- size:  $l = 1.25$  m,  $\varnothing = 3$  mm;
- stationary phase: ethylvinylbenzene-divinylbenzene copolymer R.

**Carrier gas:** helium for chromatography R.

**Flow rate:** 60 mL/min.

**Temperature:**

- column: 170 °C;
- injection port and detector: 250 °C.

**Detection:** flame ionisation.

**Injection:** 3  $\mu$ L.

**System suitability:** reference solution:

- resolution: minimum 1.5 between the peaks due to acetonitrile and propanol;
- symmetry factor: maximum 1.6 for the peak due to acetonitrile.

**Limit:**

- acetonitrile: maximum 1.5 per cent m/m.

**Loss on drying:** maximum 10.0 per cent, determined on 9.00 mg by thermogravimetry (2.2.34). Heat to 200 °C at a rate of 5 °C/min, under a stream of nitrogen for chromatography R at a flow rate of 40 mL/min.

**ASSAY**

Liquid chromatography (2.2.29). *Keep the solutions in iced water before use.*

**Test solution.** Dissolve 5.0 mg of the substance to be examined in water R and dilute to 10.0 mL with the same solvent.

**Reference solution (a).** Dissolve and dilute the entire contents of a vial of vindesine sulfate CRS with water R to yield a concentration of approximately 0.50 mg/mL.

**Reference solution (b).** Add 1.0 mg of desacetylvinblastine CRS to 2.0 mL of reference solution (a).

**Column:**

- size:  $l = 0.15$  m, 4.6 mm;
- stationary phase: octadecylsilyl silica gel for chromatography R (5  $\mu$ m).

**Mobile phase:** mix 38 volumes of a 1.5 per cent V/V solution of diethylamine R, previously adjusted to pH 7.4 with phosphoric acid R, and 62 volumes of methanol R.

**Flow rate:** 1 mL/min.

**Detection:** spectrophotometer at 270 nm.

**Injection:** 20  $\mu$ L.

**System suitability:** reference solution (b):

- resolution: minimum 1.5 between the peaks due to vindesine and desacetylvinblastine;
- symmetry factor: maximum 2.0 for the peak due to vindesine;
- repeatability: maximum relative standard deviation of 1.5 per cent for the peak due to vindesine after 5 injections.

Calculate the percentage content of C<sub>43</sub>H<sub>57</sub>N<sub>5</sub>O<sub>11</sub>S from the declared content of vindesine sulfate CRS.

**STORAGE**

In an airtight polypropylene container with a polypropylene cap, at a temperature of –50 °C or below. If the substance is sterile, store in a sterile, airtight, tamper-proof container.

**IMPURITIES**

**Specified impurities:** A, B, C.

A. vindesine 3'-N-oxide,

- B. methyl (3a*R*,4*R*,5*S*,5a*R*,10b*R*,13a*R*)-4-(acetyloxy)-3a-ethyl-9-[(5*S*,7*R*,9*S*)-5-ethyl-5-hydroxy-9-(methoxycarbonyl)-1,4,5,6,7,8,9,10-octahydro-2*H*-3,7-methanoazacycloundecino[5,4-*b*]indol-9-yl]-5-hydroxy-8-methoxy-6-methyl-3a,4,5,5a,6,11,12,13a-octahydro-1*H*-indolizino[8,1-*cd*]carbazole-5-carboxylate (vinblastine),

- C. desacetylvinblastine hydrazide.

## VINORELBINE TARTRATE

### Vinorelbini tartras

C<sub>53</sub>H<sub>66</sub>N<sub>4</sub>O<sub>20</sub>  
[125317-39-7]

M<sub>r</sub> 1079

#### DEFINITION

Methyl (3a*R*,4*R*,5*S*,5a*R*,10b*R*,13a*R*)-4-(acetyloxy)-3a-ethyl-9-[(6*R*,8*S*)-4-ethyl-8-(methoxycarbonyl)-1,3,6,7,8,9-hexahydro-2,6-methano-2*H*-azacyclodecino[4,3-*b*]indol-8-yl]-5-hydroxy-8-methoxy-6-methyl-3a,4,5,5a,6,11,12,13a-octahydro-1*H*-indolizino[8,1-*cd*]carbazole-5-carboxylate dihydrogen bis[(2*R*,3*R*)-2,3-dihydroxybutanedioate].

*Content*: 98.0 per cent to 102.0 per cent (anhydrous substance).

#### CHARACTERS

*Appearance*: white or almost white powder, hygroscopic.

*Solubility*: freely soluble in water and in methanol, practically insoluble in hexane.

#### IDENTIFICATION

- A. Infrared absorption spectrophotometry (2.2.24).

*Preparation*: dissolve 10 mg in 5 mL of *water R*. Add 0.5 mL of *sodium hydroxide solution R*. Extract with 5 mL of *methylene chloride R*. Dry the organic layer over *anhydrous sodium sulfate R*, filter and reduce its volume to about 0.5 mL by evaporation and apply to a disc of *potassium bromide R*. Evaporate and record the spectrum.

*Comparison*: *vinorelbine tartrate CRS*, treated as described above.

- B. It gives reaction (b) of tartrates (2.3.1).

#### TESTS

**Solution S.** Dissolve a quantity equivalent to 0.140 g of the anhydrous substance in *water R* and dilute to 10.0 mL with the same solvent.

**Appearance of solution.** Solution S is clear (2.2.1) and its absorbance (2.2.25) at 420 nm is not greater than 0.030.

**pH** (2.2.3): 3.3 to 3.8 for solution S.

**Related substances.** Liquid chromatography (2.2.29): use the normalisation procedure.

*Test solution.* Dissolve 35.0 mg of the substance to be examined in the mobile phase and dilute to 25 mL with the mobile phase.

*Reference solution (a).* Dissolve 7 mg of *vinorelbine impurity B CRS* in *water R* and dilute to 50 mL with the same solvent. To 1 mL of this solution add 14 mg of *vinorelbine tartrate CRS*, dissolve in *water R* and dilute to 10 mL with the same solvent. Expose this solution for 1 h to a xenon lamp apparatus at a wavelength of 310-880 nm, supplying a dose of 1600 kJ/m<sup>2</sup> at a fluence rate of 500 W/m<sup>2</sup> in order to generate impurity A.

*Reference solution (b).* Dilute 1.0 mL of the test solution to 20.0 mL with *water R*. Dilute 1.0 mL of this solution to 100.0 mL with the mobile phase.

*Column*:

- *size*:  $l = 0.15$  m,  $\varnothing = 3.9$  mm,
- *stationary phase*: spherical *end-capped octadecylsilyl silica gel for chromatography R* (5  $\mu$ m) with a specific surface area of 125 m<sup>2</sup>/g, a pore size of 30 nm and a carbon loading of 7 per cent,
- *temperature*: 35  $\pm$  5 °C.

*Mobile phase*: dissolve 1.22 g of *sodium decanesulfonate R* in 620 mL of *methanol R* and add 380 mL of a 7.80 g/L solution of *sodium dihydrogen phosphate R* previously adjusted to pH 4.2 with *dilute phosphoric acid R*.

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 267 nm.

*Injection*: 20  $\mu$ L.

*Run time*: twice the retention time of vinorelbine.

*Relative retention* with reference to vinorelbine (retention time = about 14 min): impurity A = about 0.8; impurity B = about 1.2.

*System suitability*:

- *peak-to-valley ratio*: minimum 4, where  $H_p$  = height above the baseline of the peak due to impurity B and  $H_v$  = height above the baseline of the lowest point of the curve separating this peak from the peak due to vinorelbine in the chromatogram obtained with reference solution (a),
- *signal-to-noise ratio*: minimum 10 for the principal peak in the chromatogram obtained with reference solution (b).

*Limits*:

- *impurity A*: maximum 0.3 per cent,
- *any other impurity*: for each impurity, maximum 0.2 per cent,
- *sum of impurities other than A*: maximum 0.7 per cent,
- *disregard limit*: the area of the principal peak in the chromatogram obtained with reference solution (b).

**Boron**: maximum 50 ppm.

*Test solution.* Dissolve 0.10 g of the substance to be examined in 2 mL of *water R*. Slowly add 10.0 mL of *sulfuric acid R* while cooling in iced water. Stir and allow to warm to room temperature. Add 10.0 mL of a 0.5 g/L solution of *carminic acid R* in *sulfuric acid R*.

*Reference solution.* Dilute 2.5 mL of a 0.572 g/L solution of *boric acid R* to 100.0 mL with *water R*. To 2.0 mL of this solution slowly add 10.0 mL of *sulfuric acid R* while cooling in iced water. Stir and allow to warm to room temperature. Add 10.0 mL of a 0.5 g/L solution of *carminic acid R* in *sulfuric acid R*.

**Blank solution.** To 2.0 mL of *water R* slowly add 10.0 mL of *sulfuric acid R* while cooling in iced water. Stir and allow to warm to room temperature. Add 10.0 mL of a 0.5 g/L solution of *carminic acid R* in *sulfuric acid R*.

After 45 min, measure the absorbance (2.2.25) of the test solution and the reference solution, between 560 nm and 650 nm, using the blank solution as compensation liquid. The maximum absorbance value of the test solution is not greater than that of the reference solution.

**Fluorides:** maximum 50 ppm.

Potentiometry (2.2.36, *Method I*) using a fluoride-selective indicator electrode and a silver-silver chloride reference electrode.

**Test solution.** Dissolve 0.19 g of the substance to be examined in 20 mL of *water R*. Add 5.0 mL of *total-ionic-strength-adjustment buffer R* and dilute to 50 mL with *water R*.

**Reference solutions.** To 0.6 mL, 0.8 mL, 1.0 mL, 1.2 mL and 1.4 mL of *fluoride standard solution (10 ppm F) R*, add 5.0 mL of *total-ionic-strength-adjustment buffer R* and dilute to 50 mL with *water R*.

Introduce the electrodes into the reference solutions and allow to stand for 5 min. Determine the potential difference between the electrodes after 1 min of stabilisation. Using semi-logarithmic paper plot the potential difference obtained for each reference solution as a function of concentration of fluoride. Using exactly the same conditions, determine the potential difference obtained with the test solution and calculate the content of fluoride.

**Silver:** maximum 5 ppm.

Atomic absorption spectrometry (2.2.23, *Method I*).

**Test solution.** Dissolve 0.500 g of the substance to be examined in 10.0 mL of *water R*.

**Reference solutions.** Prepare the reference solutions using *silver standard solution (5 ppm Ag) R* and diluting with a 6.5 per cent *V/V* solution of *lead-free nitric acid R*.

**Source:** silver hollow-cathode lamp.

**Wavelength:** 328.1 nm.

**Atomisation device:** air-acetylene flame.

**Water (2.5.12):** maximum 4.0 per cent, determined on 0.250 g.

**Bacterial endotoxins (2.6.14):** less than 2 IU/mg (expressed as vinorelbine base), if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins.

#### ASSAY

Dissolve 0.350 g in 40 mL of *glacial acetic acid R*. Titrate with 0.1 *M perchloric acid*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 *M perchloric acid* is equivalent to 53.96 mg of  $C_{53}H_{66}N_4O_{20}$ .

#### STORAGE

Under an inert gas, protected from light, at a temperature not exceeding  $-15\text{ }^{\circ}\text{C}$ .

#### IMPURITIES

**Specified impurities:** A.

**Other detectable impurities** (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): B, C, D, E, F, G, H, I, J.

A. methyl (3a*S*,4*R*,5a*R*,10b*R*,13a*R*)-4-(acetyloxy)-3,5-epoxy-3a-ethyl-9-[(6*R*,8*S*)-4-ethyl-8-(methoxycarbonyl)-1,3,6,7,8,9-hexahydro-2,6-methano-2*H*-azacyclodecino[4,3-*b*]indol-8-yl]-8-methoxy-6-methyl-3a,4,5,5a,6,11,12,13a-octahydro-3*H*-indolizino[8,1-*cd*]carbazole-5-carboxylate,

## VINPOCETINE

### Vinpocetinum

C<sub>22</sub>H<sub>26</sub>N<sub>2</sub>O<sub>5</sub>  
[42971-09-5]

*M*<sub>r</sub> 350.5

#### DEFINITION

Ethyl (13a*S*,13b*S*)-13a-ethyl-2,3,5,6,13a,13b-hexahydro-1*H*-indolo[3,2,1-*de*]pyrido[3,2,1-*ij*][1,5]naphthyridine-12-carboxylate.

*Content*: 98.5 per cent to 101.5 per cent (dried substance).

#### CHARACTERS

*Appearance*: white or slightly yellow, crystalline powder.

*Solubility*: practically insoluble in water, soluble in methylene chloride, slightly soluble in anhydrous ethanol.

#### IDENTIFICATION

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry (2.2.24).

*Comparison*: vinpocetine CRS.

#### TESTS

**Specific optical rotation** (2.2.7): + 127 to + 134 (dried substance).

Dissolve 0.25 g in *dimethylformamide R* and dilute to 25.0 mL with the same solvent.

**Related substances**. Liquid chromatography (2.2.29).

*Test solution*. Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 50.0 mL with the mobile phase.

*Reference solution (a)*. Dilute 1.0 mL of the test solution to 50.0 mL with the mobile phase.

*Reference solution (b)*. Dissolve 5.0 mg of *vinpocetine impurity B CRS*, 6.0 mg of *vinpocetine impurity A CRS*, 5.0 mg of *vinpocetine impurity C CRS* and 5.0 mg of *vinpocetine impurity D CRS* in the mobile phase and dilute to 50.0 mL with the mobile phase.

*Reference solution (c)*. Dilute 1.0 mL of reference solution (a) and 1.0 mL of reference solution (b) to 20.0 mL with the mobile phase.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;

– *stationary phase*: octadecylsilyl end-capped silica gel for chromatography R (5 µm).

*Mobile phase*: 15.4 g/L solution of ammonium acetate R, acetonitrile R (45:55 V/V).

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 280 nm.

*Injection*: 15 µL.

*Run time*: 3 times the retention time of vinpocetine.

*Relative retention* with reference to vinpocetine (retention time = about 16 min): impurity A = about 0.4; impurity D = about 0.68; impurity B = about 0.75; impurity C = about 0.83.

*System suitability*: reference solution (c):

– *resolution*: minimum 2.0 between the peaks due to impurities D and B.

*Limits*:

– *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.6 per cent);

– *impurities B, D*: for each impurity, not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.5 per cent);

– *impurity C*: not more than 0.6 times the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.3 per cent);

– *unspecified impurities*: for each impurity, not more than the area of the peak due to vinpocetine in the chromatogram obtained with reference solution (c) (0.10 per cent);

– *total*: not more than 10 times the area of the peak due to vinpocetine in the chromatogram obtained with reference solution (c) (1.0 per cent);

– *disregard limit*: 0.5 times the area of the peak due to vinpocetine in the chromatogram obtained with reference solution (c) (0.05 per cent).

**Loss on drying** (2.2.32): maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* in an oven at 100 °C for 3 h.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

## ASSAY

Dissolve 0.300 g in 50 mL of a mixture of equal volumes of *acetic anhydride R* and *anhydrous acetic acid R*. Titrate with 0.1 M *perchloric acid*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *perchloric acid* is equivalent to 35.05 mg of  $C_{22}H_{26}N_2O_2$ .

## IMPURITIES

Specified impurities: A, B, C, D.

- A. ethyl (12*RS*,13a*SR*,13b*SR*)-13a-ethyl-12-hydroxy-2,3,5,6,12,13,13a,13b-octahydro-1*H*-indolo[3,2,1-*de*]pyrido[3,2,1-*ij*][1,5]naphthyridine-12-carboxylate (ethyl vincamine),

- B. methyl (13a*S*,13b*S*)-13a-ethyl-2,3,5,6,13a,13b-hexahydro-1*H*-indolo[3,2,1-*de*]pyrido[3,2,1-*ij*][1,5]naphthyridine-12-carboxylate (apovincamine),

- C. ethyl (13a*S*,13b*S*)-13a-ethyl-10-methoxy-2,3,5,6,13a,13b-hexahydro-1*H*-indolo[3,2,1-*de*]pyrido[3,2,1-*ij*][1,5]naphthyridine-12-carboxylate (methoxyvinpocetine),

- D. ethyl (12*RS*,13a*RS*,13b*RS*)-13a-ethyl-2,3,5,6,12,13,13a,13b-octahydro-1*H*-indolo[3,2,1-*de*]pyrido[3,2,1-*ij*][1,5]naphthyridine-12-carboxylate (dihydrovinpocetine).

corrected 6.0

## VISCOSE WADDING, ABSORBENT

### Lanugo cellulosi absorbens

## DEFINITION

Absorbent viscose wadding consists of bleached, carefully carded, new fibres of regenerated cellulose obtained by the viscose process, with or without the addition of titanium dioxide, of linear density 1.0 dtex to 8.9 dtex (dtex = mass of 10 000 m of fibre, expressed in grams) and cut to a suitable staple length. It does not contain any compensatory colouring matter.

## CHARACTERS

It is white or very slightly yellow, has a lustrous or matt appearance, and is soft to the touch.

## IDENTIFICATION

- A. Viscose rayon fibres may be solid or hollow; hollow fibres may have a continuous lumen or be compartmented. The fibres have an average length of 25 mm to 80 mm and when examined under a microscope in the dry state, or when mounted in *alcohol R* and *water R*, the following characters are observed. They are usually of a more or less uniform width, with many longitudinal parallel lines distributed unequally over the width. The ends are cut more or less straight. Matt fibres contain numerous granular particles of approximately 1 µm average diameter.

**Solid fibres.** In longitudinal view, the surface of the fibres may be uneven or crenate. Fibres having an approximately circular or elliptical cross section have a diameter of about 10 µm to 20 µm and those that are flattened and twisted ribbons vary in width from 15 µm to 20 µm as the twisting of the filament reveals first the major axis and then the minor axis. They are about 4 µm in thickness. Other solid cross sections are Y-shaped and have protruding limbs with the major axis 5 µm to 25 µm in length and the minor axis 2 µm to 8 µm wide.

**Hollow fibres.** Fibres with a continuous, hollow lumen have a diameter of up to about 30 µm; they are thin-walled, with a wall thickness of about 5 µm. When mounted in *alcohol R* and *water R*, the lumen is clearly indicated in many fibres by the presence of many entrapped air bubbles.

**Compartmented fibres.** These fibres may have a diameter of up to 80 µm; they are hollow, having a central lumen which is divided up into several compartments. Individual compartments vary in size but typically may be up to about 60 µm in length and there may be more than one compartment across the width of each fibre. Some compartments show entrapped air bubbles when the fibres are mounted in *alcohol R* and *water R*.

- B. When treated with *iodinated zinc chloride solution R*, the fibres become violet.
- C. To 0.1 g add 10 mL of *zinc chloride-formic acid solution R*. Heat to 40 °C and allow to stand for 2 h 30 min, shaking occasionally. It dissolves completely except for the matt variety where titanium dioxide particles remain.
- D. Dissolve the residue obtained in the test for sulfated ash by warming gently with 5 mL of *sulfuric acid R*. Allow to cool and add 0.2 mL of *dilute hydrogen peroxide solution R*. The solution obtained from the lustrous variety undergoes no change in colour; that from the matt variety shows an orange-yellow colour, the intensity of which depends on the quantity of titanium dioxide present.

## TESTS

**Solution S.** Place 15.0 g in a suitable vessel, add 150 mL of *water R*, close the vessel and allow to macerate for 2 h. Decant the solution, squeeze the residual liquid carefully from the sample with a glass rod and mix. Reserve 10 mL of the solution for the test for surface-active substances and filter the remainder.

**Acidity or alkalinity.** To 25 mL of solution S add 0.1 mL of *phenolphthalein solution R* and to another 25 mL add 0.05 mL of *methyl orange solution R*. Neither solution is pink.

**Foreign fibres.** Examined under a microscope, it is seen to consist exclusively of viscose fibres, except that occasionally a few isolated foreign fibres may be present.

**Fluorescence.** Examine a layer about 5 mm in thickness under ultraviolet light at 365 nm. It displays only a slight brownish-violet fluorescence. It shows no intense blue fluorescence, apart from that which may be shown by a few isolated fibres.

**Absorbency**

**Apparatus.** A dry cylindrical copper-wire basket 8.0 cm high and 5.0 cm in diameter. The wire of which the basket is constructed is about 0.4 mm in diameter, the mesh is 1.5 cm to 2.0 cm wide and the mass of the basket is  $2.7 \pm 0.3$  g.

**Sinking time.** Not more than 10 s. Weigh the basket to the nearest centigram ( $m_1$ ). Take a total of 5.00 g in approximately equal quantities from 5 different places in the product to be examined, place loosely in the basket and weigh the filled basket to the nearest centigram ( $m_2$ ). Fill a beaker 11 cm to 12 cm in diameter to a depth of 10 cm with water at about 20 °C. Hold the basket horizontally and drop it from a height of about 10 mm into the water. Measure with a stopwatch the time taken for the basket to sink below the surface of the water. Calculate the result as the average of 3 tests.

**Water-holding capacity.** Not less than 18.0 g of water per gram. After the sinking time has been measured, remove the basket from the water, allow it to drain for exactly 30 s suspended in a horizontal position over the beaker, transfer it to a tared beaker ( $m_3$ ) and weigh to the nearest centigram ( $m_4$ ). Calculate the water-holding capacity per gram of absorbent viscose wadding using the following expression:

$$\frac{m_4 - (m_2 + m_3)}{m_2 - m_1}$$

Calculate the result as the average of 3 tests.

**Ether-soluble substances.** Not more than 0.30 per cent. In an extraction apparatus, extract 5.00 g with *ether R* for 4 h at a rate of at least 4 extractions per hour. Evaporate the ether extract and dry the residue to constant mass at 100 °C to 105 °C.

**Extractable colouring matter.** In a narrow percolator, slowly extract 10.0 g with *alcohol R* until 50 mL of extract is obtained. The liquid obtained is not more intensely coloured (2.2.2, *Method II*) than reference solution  $Y_5$ ,  $GY_6$  or a reference solution prepared as follows: to 3.0 mL of blue primary solution add 7.0 mL of hydrochloric acid (10 g/L HCl) and dilute 0.5 mL of this solution to 10.0 mL with hydrochloric acid (10 g/L HCl).

**Surface-active substances.** Introduce the 10 mL portion of solution S reserved before filtration into a 25 mL graduated ground-glass-stoppered cylinder with an external diameter of 20 mm and a wall thickness of not greater than 1.5 mm, previously rinsed 3 times with *sulfuric acid R* and then with *water R*. Shake vigorously 30 times in 10 s, allow to stand for 1 min and repeat the shaking. After 5 min, any foam present does not cover the entire surface of the liquid.

**Water-soluble substances.** Not more than 0.70 per cent. Boil 5.00 g in 500 mL of *water R* for 30 min, stirring frequently. Replace the water lost by evaporation. Decant the liquid, squeeze the residual liquid carefully from the sample with a glass rod and mix. Filter the liquid whilst hot. Evaporate 400 mL of the filtrate (corresponding to 4/5 of the mass of the sample taken) and dry the residue to constant mass at 100 °C to 105 °C.

**Hydrogen sulfide.** To 10 mL of solution S add 1.9 mL of *water R*, 0.15 mL of *dilute acetic acid R* and 1 mL of *lead acetate solution R*. After 2 min, the solution is not more intensely coloured than a reference solution prepared at the same time using 0.15 mL of *dilute acetic acid R*, 1.2 mL of *thioacetamide reagent R*, 1.7 mL of *lead standard solution (10 ppm Pb) R* and 10 mL of solution S.

**Loss on drying (2.2.32).** Not more than 13.0 per cent, determined on 5.000 g by drying in an oven at 105 °C.

**Sulfated ash (2.4.14).** Not more than 0.45 per cent for the lustrous variety and not more than 1.7 per cent for the matt variety. Introduce 5.00 g into a previously heated and cooled, tared crucible. Heat cautiously over a naked flame and then carefully to dull redness at 600 °C. Allow to cool, add a few drops of *dilute sulfuric acid R*, then heat and incinerate until all the black particles have disappeared. Allow to cool. Add a

few drops of *ammonium carbonate solution R*. Evaporate and incinerate carefully, allow to cool and weigh again. Repeat the incineration for periods of 5 min to constant mass.

**STORAGE**

Store in a dust-proof package in a dry place.

01/2008:0217

**VITAMIN A****Vitaminum A**

Substance	R	Molecular formula	$M_r$
all-( <i>E</i> )-retinol	H	$C_{20}H_{30}O$	286.5
all-( <i>E</i> )-retinol acetate	CO-CH <sub>3</sub>	$C_{22}H_{32}O_2$	328.5
all-( <i>E</i> )-retinol propionate	CO-C <sub>2</sub> H <sub>5</sub>	$C_{23}H_{34}O_2$	342.5
all-( <i>E</i> )-retinol palmitate	CO-C <sub>15</sub> H <sub>31</sub>	$C_{36}H_{60}O_2$	524.9

**DEFINITION**

*Vitamin A* refers to a number of substances of very similar structure (including (*Z*)-isomers) found in animal tissues and possessing similar activity. The principal and biologically most active substance is all-(*E*)-retinol (all-(*E*)-3,7-dimethyl-9-(2,6,6-trimethylcyclohex-1-enyl)nona-2,4,6,8-tetraen-1-ol;  $C_{20}H_{30}O$ ). Vitamin A is generally used in the form of esters such as the acetate, propionate and palmitate.

*Synthetic retinol ester* refers to an ester (acetate, propionate or palmitate) or a mixture of synthetic retinol esters.

The activity of vitamin A is expressed in retinol equivalents (R.E.). 1 mg R.E. corresponds to the activity of 1 mg of all-(*E*)-retinol. The activity of the other retinol esters is calculated stoichiometrically, so that 1 mg R.E. of vitamin A corresponds to the activity of:

- 1.147 mg of all-(*E*)-retinol acetate,
- 1.195 mg of all-(*E*)-retinol propionate,
- 1.832 mg of all-(*E*)-retinol palmitate.

International Units (IU) are also used to express the activity of vitamin A. 1 IU of vitamin A is equivalent to the activity of 0.300 µg of all-(*E*)-retinol. The activity of the other retinol esters is calculated stoichiometrically, so that 1 IU of vitamin A is equivalent to the activity of:

- 0.344 µg of all-(*E*)-retinol acetate,
- 0.359 µg of all-(*E*)-retinol propionate,
- 0.550 µg of all-(*E*)-retinol palmitate,

1 mg of retinol equivalent is equivalent to 3333 IU.

**CHARACTERS****Appearance:**

Retinol acetate: pale-yellow crystals (mp: about 60 °C). Once melted retinol acetate tends to yield a supercooled melt.

Retinol propionate: reddish-brown oily liquid.

Retinol palmitate: a fat-like, light yellow solid or a yellow oily liquid, if melted (mp: about 26 °C).

**Solubility:** all retinol esters are practically insoluble in water, soluble or partly soluble in anhydrous ethanol and miscible with organic solvents.

Vitamin A and its esters are very sensitive to the action of air, oxidising agents, acids, light and heat.

Carry out the assay and all tests as rapidly as possible, avoiding exposure to actinic light and air, oxidising agents, oxidation catalysts (e.g. copper, iron), acids and heat; use freshly prepared solutions.

## IDENTIFICATION

## A. Thin-layer chromatography (2.2.27).

**Test solution.** Prepare a solution containing about 3.3 IU of vitamin A per microlitre in *cyclohexane R* containing 1 g/L of *butylhydroxytoluene R*.

**Reference solution.** Prepare a 10 mg/mL solution of *retinol esters CRS* (i.e. 3.3 IU of each ester per microlitre) in *cyclohexane R* containing 1 g/L of *butylhydroxytoluene R*.

**Plate:** TLC silica gel  $F_{254}$  plate *R*.

**Mobile phase:** ether *R*, *cyclohexane R* (20:80 V/V).

**Application:** 3  $\mu$ L.

**Development:** over 2/3 of the plate.

**Drying:** in air.

**Detection:** examine in ultraviolet light at 254 nm.

**System suitability:** reference solution:

- the chromatogram shows the individual spots of the corresponding esters. The elution order from bottom to top is: retinol acetate, retinol propionate and retinol palmitate.

**Results:** the composition of esters is confirmed by the correspondence of the principal spot or spots of the test solution with those obtained with the reference solution.

## B. Related substances (see Tests).

## TESTS

**Retinol.** Thin-layer chromatography (2.2.27).

**Test solution.** Prepare a solution in *cyclohexane R*, stabilised with a solution containing 1 g/L of *butylhydroxytoluene R*, containing about 330 IU of vitamin A per microlitre.

**Reference solution.** Shake 1 mL of the test solution with 20 mL of 0.1 M *tetrabutylammonium hydroxide* in 2-propanol for 2 min and dilute to 100 mL with *cyclohexane R*, stabilised with a solution containing 1 g/L of *butylhydroxytoluene R*.

**Plate:** TLC silica gel  $F_{254}$  plate *R*.

**Mobile phase:** ether *R*, *cyclohexane R* (20:80 V/V).

**Application:** 3  $\mu$ L.

**Development:** over a path of 15 cm.

**Drying:** in air.

**Detection:** examine in ultraviolet light at 254 nm.

**System suitability:** reference solution:

- in the chromatogram obtained no or only traces of the retinol esters are seen.

**Limit:** any spot corresponding to retinol in the chromatogram obtained with the test solution is not more intense than the spot in the chromatogram obtained with the reference solution (1.0 per cent).

**Related substances.** Ultraviolet and visible absorption spectrophotometry (2.2.25).

**Test solution.** The solution described under Activity.

**Absorption maximum:** at 325 nm to 327 nm.

**Absorbance ratios:**

- $A_{300}/A_{326}$  = maximum 0.60;
- $A_{350}/A_{326}$  = maximum 0.54;
- $A_{370}/A_{326}$  = maximum 0.14.

The thresholds indicated under Related substances (Table 2034.-1) in the general monograph *Substances for pharmaceutical use (2034)* do not apply.

## ACTIVITY

The activity of the substance is determined in order to be taken into account for the production of concentrates.

Dissolve 25-100 mg, weighed with an accuracy of 0.1 per cent, in 5 mL of *pentane R* and dilute with 2-propanol *RI* to a presumed concentration of 10 IU/mL to 15 IU/mL. Measure the absorbance (2.2.25) at the absorption maximum at 326 nm. Calculate the activity of vitamin A in International Units per gram from the expression:

$$\frac{A_{326} \times V \times 1900}{100 \times m}$$

$A_{326}$  = absorbance at 326 nm,

$m$  = mass of the substance to be examined, in grams,

$V$  = total volume to which the substance to be examined is diluted to give 10 IU/mL to 15 IU/mL,

1900 = factor to convert the specific absorbance of esters of retinol into International Units per gram.

## STORAGE

In an airtight container, protected from light.

Once the container has been opened, its contents are to be used as soon as possible; any part of the contents not used at once should be protected by an atmosphere of inert gas.

## LABELLING

The label states:

- the number of International Units per gram,
- the name of the ester or esters.

## IMPURITIES

A. R = H, CO-CH<sub>3</sub>: kitols (Diels-Alder dimers of vitamin A),

B. (3*E*,5*E*,7*E*)-3,7-dimethyl-9-[(1*Z*)-2,6,6-trimethylcyclohex-2-enylidene]nona-1,3,5,7-tetraene (anhydro-vitamin A),

C. (3*E*,5*E*,7*E*)-3,7-dimethyl-9-[(1*Z*)-2,6,6-trimethylcyclohex-2-enylidene]nona-3,5,7-trien-1-ol (*retro*-vitamin A),

D. oxidation products of vitamin A.

01/2008:0219

**VITAMIN A CONCENTRATE (OILY FORM),  
SYNTHETIC**

Vitaminum A syntheticum densatum oleosum

## DEFINITION

Oily concentrate prepared from synthetic retinol ester (0217) as is or by dilution with a suitable vegetable fatty oil.

**Content:** 95.0 per cent to 110.0 per cent of the vitamin A content stated on the label, which is not less than 500 000 IU/g.

It may contain suitable stabilisers such as antioxidants.

## CHARACTERS

**Appearance:** yellow or brownish-yellow, oily liquid.

**Solubility:** practically insoluble in water, soluble or partly soluble in anhydrous ethanol, miscible with organic solvents.

Partial crystallisation may occur in highly concentrated solutions.

## IDENTIFICATION

Thin-layer chromatography (2.2.27).

**Test solution.** Prepare a solution containing about 3.3 IU of vitamin A per microlitre in *cyclohexane R* containing 1 g/L of *butylhydroxytoluene R*.

**Reference solution.** Prepare a 10 mg/mL solution of *retinol esters CRS* (i.e. 3.3 IU of each ester per microlitre) in *cyclohexane R* containing 1 g/L of *butylhydroxytoluene R*.

**Plate:** TLC silica gel  $F_{254}$  plate *R*.

**Mobile phase:** ether *R*, *cyclohexane R* (20:80 V/V).

**Application:** 3 µL.

**Development:** immediately, over a path of 15 cm.

**Drying:** in air.

**Detection:** examine in ultraviolet light at 254 nm.

**System suitability:** reference solution:

- the chromatogram shows the individual spots of the corresponding esters. The elution order from bottom to top is: retinol acetate, retinol propionate and retinol palmitate.

**Results:** the composition of the test solution is confirmed by the correspondence of the principal spot or spots with those obtained with the reference solution.

## TESTS

**Acid value (2.5.1):** maximum 2.0, determined on 2.0 g.

**Peroxide value (2.5.5, Method A):** maximum 10.0.

**Related substances.** The thresholds indicated under Related substances (Table 2034-1) in the general monograph *Substances for pharmaceutical use (2034)* do not apply.

## ASSAY

Carry out the assay as rapidly as possible, avoiding exposure to actinic light, air, oxidising agents, oxidation catalysts (e.g. copper, iron), acids and prolonged heat; use freshly prepared solutions. If partial crystallisation has occurred, homogenise the material at a temperature of about 65 °C, but avoid prolonged heating.

Carry out the assay according to Method A. If the assay is not shown to be valid, use Method B.

**Method A.** Ultraviolet absorption spectrophotometry (2.2.25).

Dissolve 25-100 mg, weighed with an accuracy of 0.1 per cent, in 5 mL of *pentane R* and dilute with *2-propanol RI* to a presumed concentration of 10-15 IU/mL.

Verify that the absorption maximum of the solution lies between 325 nm and 327 nm and measure the absorbances at 300 nm, 326 nm, 350 nm and 370 nm. Repeat the readings at each wavelength and take the mean values. Calculate the ratio  $A_{\lambda}/A_{326}$  for each wavelength.

If the ratios do not exceed: 0.60 at 300 nm, 0.54 at 350 nm, 0.14 at 370 nm, calculate the content of vitamin A in International Units per gram using the following expression:

$$\frac{A_{326} \times V \times 1900}{100 \times m}$$

$A_{326}$  = absorbance at 326 nm,

$m$  = mass of the preparation to be examined, in grams,

$V$  = total volume to which the preparation to be examined is diluted to give 10-15 IU/mL,

1900 = factor to convert the specific absorbance of esters of retinol into International Units per gram.

If one or more of the ratios  $A_{\lambda}/A_{326}$  exceeds the values given, or if the wavelength of the absorption maximum does not lie between 325 nm and 327 nm, use Method B.

**Method B.** Liquid chromatography (2.2.29).

**Test solution (a).** Introduce 0.100 g of the preparation to be examined into a 100 mL volumetric flask and dissolve immediately in 5 mL of *pentane R*. Add 40 mL of 0.1 M *tetrabutylammonium hydroxide in 2-propanol*. Swirl gently and let the mixture react for 10 minutes at 60-65 °C for hydrolysis, swirling occasionally. Allow to cool to room temperature, dilute to 100.0 mL with *2-propanol R* containing 1 g/L *butylhydroxytoluene R*, and homogenise carefully to avoid air-bubbles.

**Test solution (b).** Dilute test solution (a) with *2-propanol R* to a final concentration of 100 IU/mL.

**Reference solution (a).** Introduce about 0.100 g of *retinol acetate CRS* into a 100 mL volumetric flask and proceed as described for test solution (a).

**Reference solution (b).** Introduce into a 50 mL volumetric flask 5.0 mL of reference solution (a) and dilute to 50.0 mL with *2-propanol R*. Homogenise carefully to avoid air-bubbles.

**Column:**

– size:  $l = 0.125$  m,  $\varnothing = 4$  mm,

– stationary phase: octadecylsilyl silica gel for chromatography *R* (5 µm).

**Mobile phase:** water *R*, methanol *R* (5:95 V/V).

**Flow rate:** 1 mL/min.

**Detection:** spectrophotometer at 325 nm.

**Injection:** 10 µL of test solution (b) and reference solution (b).

**Run time:** 1.5 times the retention time of retinol.

**Retention time:** retinol = about 3 min.

Calculate the content of vitamin A in International Units per gram using the following expression:

$$\frac{A_1 \times C \times m_2}{A_2 \times m_1}$$

$A_1$  = area of the peak due to retinol in the chromatogram obtained with test solution (b),

$A_2$  = area of the peak due to retinol in the chromatogram obtained with reference solution (b),

$C$  = concentration of *retinol acetate CRS* in International Units per gram, determined by method A; the absorption ratios  $A_{\lambda}/A_{326}$  must conform,

$m_1$  = mass of the substance to be examined in test solution (a), in milligrams,

$m_2$  = mass of *retinol acetate CRS* in reference solution (a), in milligrams.

## STORAGE

In an airtight container, protected from light.

Once the container has been opened, its contents are to be used as soon as possible; any part of the contents not used at once should be protected by an atmosphere of inert gas.

## LABELLING

The label states:

- the number of International Units per gram,
- the name of the ester or esters,
- the name of any added stabilisers,
- the method of restoring the solution if partial crystallisation has occurred.

01/2008:0218

## VITAMIN A CONCENTRATE (POWDER FORM), SYNTHETIC

### Vitamiini sintetici densati A pulvis

## DEFINITION

Powder concentrate obtained by dispersing a synthetic retinol ester (0217) in a matrix of *Gelatin* (0330) or *Acacia* (0307) or other suitable material.

*Content*: 95.0 per cent to 115.0 per cent of the vitamin A content stated on the label, which is not less than 250 000 IU/g.

It may contain suitable stabilisers such as antioxidants.

## CHARACTERS

*Appearance*: yellowish powder usually in the form of particles of almost uniform size.

*Solubility*: practically insoluble in water, swells or forms an emulsion, depending on the formulation.

## IDENTIFICATION

Thin-layer chromatography (2.2.27).

*Test solution*. Introduce a quantity of the preparation to be examined containing about the equivalent of 17 000 IU of vitamin A into a 20 mL glass-stoppered test tube. Add about 20 mg of *bromelains R*, 2 mL of *water R* and about 150 µL of *2-propanol R*, swirling gently for 2-5 min in a water-bath at 60-65 °C. Cool to below 30 °C and add 5 mL of *2-propanol R* containing 1 g/L of *butylhydroxytoluene R*. Shake vigorously for 1 min, allow to stand for a few minutes and use the supernatant solution.

*Reference solution*. Prepare a 10 mg/mL solution of *retinol esters CRS* (i.e. 3.3 IU of each ester per microlitre) in *2-propanol R* containing 1 g/L of *butylhydroxytoluene R*.

*Plate*: TLC silica gel *F<sub>254</sub>* plate *R*.

*Mobile phase*: *ether R*, *cyclohexane R* (20:80 V/V).

*Application*: 3 µL.

*Development*: over a path of 15 cm.

*Drying*: in air.

*Detection*: examine in ultraviolet light at 254 nm.

*System suitability*: reference solution:

- the chromatogram shows the individual spots of the corresponding esters. The elution order from bottom to top is: retinol acetate, retinol propionate and retinol palmitate.

*Results*: the composition of the test solution is confirmed by the correspondence of the principal spot or spots with those obtained with the reference solution.

## TESTS

**Related substances.** The thresholds indicated under Related substances (Table 2034.-1) in the general monograph *Substances for pharmaceutical use (2034)* do not apply.

## ASSAY

Carry out the assay as rapidly as possible, avoiding exposure to actinic light, air, oxidising agents, oxidation catalysts (e.g. copper, iron), acids and prolonged heat.

Liquid chromatography (2.2.29).

*Test solution (a)*. Introduce 0.200 g of the preparation to be examined into a 100 mL volumetric flask. Add 20-30 mg of *bromelains R*, 5.0 mL of *water R* and 0.15 mL of *2-propanol R*. Heat gently in a water-bath at 60 °C for about 5 min, swirling occasionally. Add 40 mL of 0.1 M *tetrabutylammonium hydroxide in 2-propanol*. Swirl gently and let the mixture react for 10 min at 60-65 °C for hydrolysis, swirling occasionally. Ensure that all sample material is wetted. Allow to cool to room temperature, dilute to 100.0 mL with *2-propanol R* containing 1 g/L *butylhydroxytoluene R*, and homogenise carefully to avoid air-bubbles. The solution may be turbid.

*Test solution (b)*. Dilute test solution (a) with *2-propanol R* to a final concentration of 100 IU/mL. Filter before injection.

*Reference solution (a)*. Introduce about 0.100 g of *retinol acetate CRS* into a 100 mL volumetric flask and dissolve immediately in 5 mL of *pentane R*. Add 40 mL of 0.1 M *tetrabutylammonium hydroxide in 2-propanol*. Swirl gently and let the mixture react for 10 min at 60-65 °C for hydrolysis, swirling occasionally. Allow to cool to room temperature, dilute to 100.0 mL with *2-propanol R* containing 1 g/L *butylhydroxytoluene R*, and homogenise carefully to avoid air-bubbles.

*Reference solution (b)*. Introduce into a 50 mL volumetric flask 5.0 mL of reference solution (a) and dilute to 50.0 mL with *2-propanol R*. Homogenise carefully to avoid air-bubbles.

*Column*:

- *size*:  $l = 0.125$  m,  $\varnothing = 4$  mm,
- *stationary phase*: octadecylsilyl silica gel for chromatography *R* (5 µm).

*Mobile phase*: *water R*, *methanol R* (5:95 V/V).

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 325 nm.

*Injection*: 10 µL of test solution (b) and reference solution (b).

*Run time*: 1.5 times the retention time of retinol.

*Retention time*: retinol = about 3 min.

Calculate the content of vitamin A using the following expression:

$$\frac{A_1 \times C \times m_2}{A_2 \times m_1}$$

- $A_1$  = area of the peak due to retinol in the chromatogram obtained with test solution (b),
- $A_2$  = area of the peak due to retinol in the chromatogram obtained with reference solution (b),
- $C$  = concentration of *retinol acetate CRS* in International Units per gram, determined by the method below,
- $m_1$  = mass of the substance to be examined in test solution (a), in milligrams,
- $m_2$  = mass of *retinol acetate CRS* in reference solution (a), in milligrams.

The exact concentration of *retinol acetate CRS* is assessed by ultraviolet absorption spectrophotometry (2.2.25). Dissolve 25-100 mg of *retinol acetate CRS*, weighed with an accuracy of 0.1 per cent, in 5 mL of *pentane R* and dilute with *2-propanol R1* to a presumed concentration of 10-15 IU/mL.

Verify that the absorption maximum of the solution lies between 325 nm and 327 nm and measure the absorbances at 300 nm, 326 nm, 350 nm and 370 nm. Repeat the readings at each wavelength and take the mean values. Calculate the ratio  $A_\lambda/A_{326}$  for each wavelength.

If the ratios do not exceed: 0.60 at 300 nm, 0.54 at 350 nm, 0.14 at 370 nm, calculate the content of vitamin A in International Units per gram using the following expression:

$$\frac{A_{326} \times V \times 1900}{100 \times m}$$

- $A_{326}$  = absorbance at 326 nm,  
 $m$  = mass of *retinol acetate CRS*, in grams,  
 $V$  = total volume to which the *retinol acetate CRS* is diluted to give 10-15 IU/mL,  
 1900 = factor to convert the specific absorbance of esters of retinol into International Units per gram.

The absorbance ratios  $A_{\lambda}/A_{326}$  must conform.

#### STORAGE

In an airtight container, protected from light. Once the container has been opened, its contents are to be used as soon as possible; any part of the contents not used at once should be protected by an atmosphere of inert gas.

#### LABELLING

- The label states:
- the number of International Units per gram,
  - the name of the ester or esters,
  - the name of the principal excipient or excipients used and the name of any added stabilisers.

01/2008:0220

## VITAMIN A CONCENTRATE (SOLUBILISATE/EMULSION), SYNTHETIC

### Vitaminum A syntheticum, solubilisatum densatum in aqua dispergibile

#### DEFINITION

Liquid concentrate (water is generally used as solvent) of a synthetic retinol ester (0217) and a suitable solubiliser.

*Content*: 95.0 per cent to 115.0 per cent of the vitamin A content stated on the label, which is not less than 100 000 IU/g. It may contain suitable stabilisers such as antimicrobial preservatives and antioxidants.

#### CHARACTERS

*Appearance*: yellow or yellowish liquid of variable opalescence and viscosity. Highly concentrated solutions may become cloudy at low temperature or take the form of a gel.

A mixture of 1 g with 10 mL of *water R* previously warmed to 50 °C gives, after cooling to 20 °C, a uniform, slightly opalescent and slightly yellow dispersion.

#### IDENTIFICATION

Thin-layer chromatography (2.2.27).

*Test solution*. Introduce a quantity of the preparation to be examined containing about the equivalent of 17 000 IU of vitamin A into a 20 mL glass-stoppered test-tube. Add 5 mL of *2-propanol R* containing 1 g/L of *butylhydroxytoluene R* and mix thoroughly.

*Reference solution*. Prepare a 10 mg/mL solution of *retinol esters CRS* (i.e. 3.3 IU of each ester per microlitre) in *2-propanol R* containing 1 g/L of *butylhydroxytoluene R*.

*Plate*: TLC silica gel  $F_{254}$  plate *R*.

*Mobile phase*: ether *R*, cyclohexane *R* (20:80 V/V).

*Application*: 3 µL.

*Development*: over a path of 15 cm.

*Drying*: in air.

*Detection*: examine in ultraviolet light at 254 nm.

*System suitability*: reference solution:

- the chromatogram shows the individual spots of the corresponding esters. The elution order from bottom to top is: retinol acetate, retinol propionate and retinol palmitate.

*Results*: the composition of the test solution is confirmed by the correspondence of the principal spot or spots with those obtained with the reference solution.

#### TESTS

**Related substances.** The thresholds indicated under Related substances (Table 2034.-1) in the general monograph *Substances for pharmaceutical use (2034)* do not apply.

#### ASSAY

Carry out the assay as rapidly as possible, avoiding exposure to actinic light, air, oxidising agents, oxidation catalysts (e.g. copper, iron), acids and prolonged heat.

Liquid chromatography (2.2.29).

*Test solution (a)*. Introduce 0.200 g of the preparation to be examined into a 100 mL volumetric flask. Add 40 mL of 0.1 M tetrabutylammonium hydroxide in *2-propanol*. Swirl into dispersion and let the mixture react for 10 min at 60-65 °C for hydrolysis, swirling occasionally. Ensure that all sample material is wetted. Allow to cool to room temperature, dilute to 100.0 mL with *2-propanol R* containing 1 g/L *butylhydroxytoluene R* and homogenise carefully to avoid air-bubbles. Residue of the matrix may make the solution more or less cloudy.

*Test solution (b)*. Dilute test solution (a) with *2-propanol R* to a final concentration of 100 IU/mL. Filter before injection.

*Reference solution (a)*. Introduce about 0.100 g of *retinol acetate CRS* into a 100 mL volumetric flask and dissolve immediately in 5 mL of *pentane R*. Add 40 mL of 0.1 M tetrabutylammonium hydroxide in *2-propanol*. Swirl gently and let the mixture react for 10 min at 60-65 °C for hydrolysis, swirling occasionally. Allow to cool to room temperature, dilute to 100.0 mL with *2-propanol R* containing 1 g/L *butylhydroxytoluene R*, and homogenise carefully to avoid air-bubbles.

*Reference solution (b)*. Introduce into a 50 mL volumetric flask 5.0 mL of reference solution (a) and dilute to 50.0 mL with *2-propanol R*. Homogenise carefully to avoid air-bubbles.

*Column*:

- *size*:  $l = 0.125$  m,  $\varnothing = 4$  mm,
- *stationary phase*: octadecylsilyl silica gel for chromatography *R* (5 µm).

*Mobile phase*: water *R*, methanol *R* (5:95 V/V).

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 325 nm.

*Injection*: 10 µL of test solution (b) and reference solution (b).

*Run time*: 1.5 times the retention time of retinol.

*Retention time*: retinol = about 3 min.

Calculate the content of vitamin A using the following expression:

$$\frac{A_1 \times C \times m_2}{A_2 \times m_1}$$

- $A_1$  = area of the peak due to retinol in the chromatogram obtained with test solution (b),  
 $A_2$  = area of the peak due to retinol in the chromatogram obtained with reference solution (b),  
 $C$  = concentration of *retinol acetate CRS* in International Units per gram, determined by the method below,  
 $m_1$  = mass of the substance to be examined in test solution (a), in milligrams,  
 $m_2$  = mass of *retinol acetate CRS* in reference solution (a), in milligrams.

The exact concentration of *retinol acetate CRS* is assessed by ultraviolet absorption spectrophotometry (2.2.25). Dissolve 25-100 mg of *retinol acetate CRS*, weighed with an accuracy of 0.1 per cent, in 5 mL of *pentane R* and dilute with *2-propanol RI* to a presumed concentration of 10-15 IU/mL.

Verify that the absorption maximum of the solution lies between 325 nm and 327 nm and measure the absorbances at 300 nm, 326 nm, 350 nm and 370 nm. Repeat the readings at each wavelength and take the mean values. Calculate the ratio  $A_{\lambda}/A_{326}$  for each wavelength.

If the ratios do not exceed: 0.60 at 300 nm, 0.54 at 350 nm, 0.14 at 370 nm, calculate the content of vitamin A in International

Units per gram using the following expression:

$$\frac{A_{326} \times V \times 1900}{100 \times m}$$

$A_{326}$  = absorbance at 326 nm,

$m$  = mass of *retinol acetate CRS*, in grams,

$V$  = total volume to which the *retinol acetate CRS* is diluted to give 10-15 IU/mL,

1900 = factor to convert the specific absorbance of esters of retinol into International Units per gram.

The absorbance ratios  $A_{\lambda}/A_{326}$  must conform.

#### STORAGE

In an airtight container, protected from light, at the temperature stated on the label.

Once the container has been opened, its contents are to be used as soon as possible; any part of the contents not used at once should be protected by an atmosphere of inert gas.

#### LABELLING

The label states:

- the number of International Units per gram,
- the name of the ester or esters,
- the name of the principal solubiliser or solubilisers used and the name of any added stabilisers,
- the storage temperature.

01/2008:0698 Flow rate: 1.5 mL/min.

Detection: spectrophotometer at 260 nm.

Injection: 20 µL.

Run time: twice the retention time of warfarin.

Relative retention with reference to warfarin (retention time = about 9 min): impurity B = about 0.4; impurity C = about 0.6.

System suitability: reference solution (a):

– resolution: minimum 2.0 between the peaks due to impurities B and C.

Limits:

– correction factors: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity B = 0.5; impurity C = 0.4;

– impurities B, C: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);

– unspecified impurities: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);

– total: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);

– disregard limit: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Phenolic ketones.** Dissolve 1.25 g in a 20 g/L solution of sodium hydroxide R and dilute to 10.0 mL with the same solvent. The absorbance (2.2.25) is maximum 0.20 measured at 385 nm within 15 min of preparing the solution.**Water (2.5.12):** maximum 4.0 per cent, determined on 0.750 g.

## ASSAY

Dissolve 0.100 g in 0.01 M sodium hydroxide and dilute to 100.0 mL with the same solvent. Dilute 10.0 mL of the solution to 100.0 mL with 0.01 M sodium hydroxide. Dilute 10.0 mL of this solution to 100.0 mL with 0.01 M sodium hydroxide. Measure the absorbance (2.2.25) at the absorption maximum at 308 nm.

Calculate the percentage content of C<sub>19</sub>H<sub>15</sub>NaO<sub>4</sub> taking the specific absorbance to be 431.

## STORAGE

In an airtight container, protected from light.

## IMPURITIES

Specified impurities: B, C.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): A.

A. (5RS)-3-(2-hydroxyphenyl)-5-phenylcyclohex-2-enone,

## WARFARIN SODIUM

## Warfarinum natricum

C<sub>19</sub>H<sub>15</sub>NaO<sub>4</sub>  
[129-06-6]M<sub>r</sub> 330.3

## DEFINITION

Sodium 2-oxo-3-[(1RS)-3-oxo-1-phenylbutyl]-2H-1-benzopyran-4-olate.

Content: 98.0 per cent to 102.0 per cent (anhydrous substance).

## CHARACTERS

Appearance: white or almost white, hygroscopic, amorphous powder.

Solubility: very soluble in water and in ethanol (96 per cent), soluble in acetone, very slightly soluble in methylene chloride.

## IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

Comparison: warfarin sodium CRS.

B. Dissolve 1 g in 10 mL of water R, add 5 mL of nitric acid R and filter. To the filtrate add 2 mL of potassium dichromate solution R1 and shake for 5 min. Allow to stand for 20 min. The solution is not greenish-blue when compared with a blank.

C. It gives reaction (b) of sodium (2.3.1).

## TESTS

**Appearance of solution.** The solution is clear (2.2.1) and colourless (2.2.2, Method II).

Dissolve 1.0 g in water R and dilute to 20 mL with the same solvent.

pH (2.2.3): 7.6 to 8.6.

Dissolve 1.0 g in carbon dioxide-free water R and dilute to 100 mL with the same solvent.

**Related substances.** Liquid chromatography (2.2.29).

Solvent mixture: methanol R, water R (25:75 V/V).

Test solution. Dissolve 40.0 mg of the substance to be examined in the solvent mixture and dilute to 50.0 mL with the solvent mixture.

Reference solution (a). Dissolve 2 mg of 4-hydroxycoumarin R (impurity B) and 2 mg of benzalacetone R (impurity C) in 25 mL of methanol R and dilute to 100 mL with water R.

Reference solution (b). Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

Column:

- size:  $l = 0.25$  m,  $\varnothing = 4.0$  mm;
- stationary phase: spherical nitrile silica gel for chromatography R (5 µm);
- temperature: 30 °C.

Mobile phase: glacial acetic acid R, acetonitrile R, water R (1:25:75 V/V/V).

B. 4-hydroxy-2H-1-benzopyran-2-one (4-hydroxycoumarin),

C. (3E)-4-phenylbut-3-en-2-one (benzalacetone).

*Reference solution (a).* Dissolve 2 mg of 4-hydroxycoumarin R (warfarin impurity B) and 2 mg of benzalacetone R (warfarin impurity C) in 25 mL of methanol R and dilute to 100 mL with water R.

*Reference solution (b).* Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Column:*

- size:  $l = 0.25$  m,  $\varnothing = 4.0$  mm;
- stationary phase: spherical nitrile silica gel for chromatography R (5  $\mu$ m);
- temperature: 30 °C.

*Mobile phase:* glacial acetic acid R, acetonitrile R, water R (1:25:75 V/V/V).

*Flow rate:* 1.5 mL/min.

*Detection:* spectrophotometer at 260 nm.

*Injection:* 20  $\mu$ L.

*Run time:* twice the retention time of warfarin.

*Relative retention* with reference to warfarin (retention time = about 9 min): impurity B = about 0.4; impurity C = about 0.6.

*System suitability:* reference solution (a):

- resolution: minimum 2.0 between the peaks due to impurities B and C.

*Limits:*

- correction factors: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity B = 0.5; impurity C = 0.4;
- impurities B, C: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);
- unspecified impurities: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- total: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);
- disregard limit: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Phenolic ketones:** the absorbance (2.2.25) is maximum 0.20 measured at 385 nm within 15 min of preparing the solution.

Dissolve 1.25 g in a 20 g/L solution of sodium hydroxide R and dilute to 10.0 mL with the same solvent.

**Propan-2-ol.** Gas chromatography (2.2.28).

*Internal standard solution.* Dilute 1.0 mL of propanol R to 200.0 mL with water R.

*Test solution (a).* Dissolve 0.250 g of the substance to be examined in water R and dilute to 5.0 mL with the same solvent.

*Test solution (b).* Dissolve 0.50 g of the substance to be examined in the internal standard solution and dilute to 10.0 mL with the internal standard solution.

*Reference solution.* Dilute 0.50 mL of 2-propanol R to 100.0 mL with the internal standard solution.

*Column:*

- size:  $l = 1.5$  m,  $\varnothing = 4$  mm;
- stationary phase: ethylvinylbenzene-divinylbenzene copolymer R (125-150  $\mu$ m).

*Carrier gas:* nitrogen for chromatography R.

*Flow rate:* 40 mL/min.

*Temperature:*

- column: 150 °C;
- injection port: 180 °C;
- detector: 200 °C.

*Detection:* flame ionisation.

01/2008:0699

## WARFARIN SODIUM CLATHRATE

### Warfarinum natricum clathratum

#### DEFINITION

Mixture, in the form of a clathrate, of warfarin sodium (sodium 2-oxo-3-[(1R,S)-3-oxo-1-phenylbutyl]-2H-1-benzopyran-4-olate) and propan-2-ol in molecular proportions 2:1 (equivalent to about 92 per cent of warfarin sodium).

*Content:*

- warfarin sodium: 98.0 per cent to 102.0 per cent (anhydrous and propan-2-ol-free substance);
- propan-2-ol: 8.0 per cent to 8.5 per cent.

#### CHARACTERS

*Appearance:* white or almost white, crystalline powder.

*Solubility:* very soluble in water, freely soluble in ethanol (96 per cent), soluble in acetone, very slightly soluble in methylene chloride.

#### IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

*Comparison:* warfarin sodium clathrate CRS.

B. Dissolve 1 g in 10 mL of water R, add 5 mL of nitric acid R and filter. To the filtrate add 2 mL of potassium dichromate solution R1 and shake for 5 min. Allow to stand for 20 min. The solution is greenish-blue when compared with a blank.

C. It gives reaction (b) of sodium (2.3.1).

#### TESTS

**Appearance of solution.** The solution is clear (2.2.1) and colourless (2.2.2, Method II).

Dissolve 1.0 g in water R and dilute to 20 mL with the same solvent.

**pH** (2.2.3): 7.6 to 8.6.

Dissolve 1.0 g in carbon dioxide-free water R and dilute to 100 mL with the same solvent.

**Related substances.** Liquid chromatography (2.2.29).

*Solvent mixture:* methanol R, water R (25:75 V/V).

*Test solution.* Dissolve 40.0 mg of the substance to be examined in the solvent mixture and dilute to 50.0 mL with the solvent mixture.

**Injection:** the chosen volume of the test solutions and the reference solution.

01/2009:0169

Calculate the content of propan-2-ol taking its density at 20 °C to be 0.785 g/mL.

**Limit:**

– *propan-2-ol*: 8.0 per cent to 8.5 per cent.

**Water (2.5.12):** maximum 0.3 per cent, determined on 2.500 g.

#### ASSAY

Dissolve 0.100 g in 0.01 M sodium hydroxide and dilute to 100.0 mL with the same solvent. Dilute 10.0 mL of the solution to 100.0 mL with 0.01 M sodium hydroxide. Dilute 10.0 mL of this solution to 100.0 mL with 0.01 M sodium hydroxide. Measure the absorbance (2.2.25) at the absorption maximum at 308 nm.

Calculate the percentage content of warfarin sodium (C<sub>19</sub>H<sub>15</sub>NaO<sub>4</sub>) taking the specific absorbance to be 431.

#### STORAGE

In an airtight container, protected from light.

#### IMPURITIES

*Specified impurities:* B, C.

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): A.

A. (5*RS*)-3-(2-hydroxyphenyl)-5-phenylcyclohex-2-enone,

B. 4-hydroxy-2*H*-1-benzopyran-2-one (4-hydroxycoumarin),

C. (3*E*)-4-phenylbut-3-en-2-one (benzalacetone).

## WATER FOR INJECTIONS

### Aqua ad iniectionabile

H<sub>2</sub>OM<sub>r</sub> 18.02

#### DEFINITION

Water for the preparation of medicines for parenteral administration when water is used as vehicle (water for injections in bulk) and for dissolving or diluting substances or preparations for parenteral administration (sterilised water for injections).

### Water for injections in bulk

#### PRODUCTION

Water for injections in bulk is obtained from water that complies with the regulations on water intended for human consumption laid down by the competent authority or from purified water by distillation in an apparatus of which the parts in contact with the water are of neutral glass, quartz or a suitable metal and which is fitted with an effective device to prevent the entrainment of droplets. The correct maintenance of the apparatus is essential. The first portion of the distillate obtained when the apparatus begins to function is discarded and the distillate is collected.

In order to ensure the appropriate quality of the water, validated procedures and in-process-monitoring of the electrical conductivity and regular microbial monitoring are applied.

Water for injections in bulk is stored and distributed in conditions designed to prevent growth of micro-organisms and to avoid any other contamination.

**Microbiological monitoring.** During production and subsequent storage, appropriate measures are taken to ensure that the microbial count is adequately controlled and monitored. Appropriate alert and action levels are set so as to detect adverse trends. Under normal conditions, an appropriate action level is a microbial count of 10 CFU per 100 mL when determined by filtration through a membrane with a nominal pore size not greater than 0.45 µm, using R2A agar, using at least 200 mL of water for injections in bulk and incubating at 30-35 °C for not less than 5 days. For aseptic processing, stricter alert levels may need to be applied.

#### R2A agar

Yeast extract	0.5 g
Proteose peptone	0.5 g
Casein hydrolysate	0.5 g
Glucose	0.5 g
Starch	0.5 g
Dipotassium hydrogen phosphate	0.3 g
Magnesium sulfate, anhydrous	0.024 g
Sodium pyruvate	0.3 g
Agar	15.0 g
Purified water	to 1000 mL

Adjust the pH so that after sterilisation it is 7.2 ± 0.2. Sterilise by heating in an autoclave at 121 °C for 15 min.

*Growth promotion of R2A agar*

- **Preparation of test strains.** Use standardised stable suspensions of test strains or prepare them as stated in Table 0169.-1. Seed lot culture maintenance techniques (seed-lot systems) are used so that the viable micro-organisms used for inoculation are not more than 5 passages removed from the original master seed-lot. Grow each of the bacterial strains separately as described in Table 0169.-1. Use buffered sodium chloride-peptone solution pH 7.0 or phosphate buffer solution pH 7.2 to make test suspensions. Use the suspensions within 2 h, or within 24 h if stored at 2-8 °C. As an alternative to preparing and then diluting a fresh suspension of vegetative cells of *Bacillus subtilis*, a stable spore suspension is prepared and then an appropriate volume of the spore suspension is used for test inoculation. The stable spore suspension may be maintained at 2-8 °C for a validated period of time.
- **Growth promotion.** Test each batch of ready-prepared medium and each batch of medium, prepared either from dehydrated medium or from the ingredients described. Inoculate plates of R2A agar separately with a small number (not more than 100 CFU) of the micro-organisms indicated in Table 0169.-1. Incubate under the conditions described in the table. Growth obtained must not differ by a factor greater than 2 from the calculated value for a standardised inoculum. For a freshly prepared inoculum, growth of the micro-organisms must be comparable to that obtained with a previously tested and approved batch of medium.

Table 0169.-1. – *Growth promotion of R2A agar*

Micro-organism	Preparation of the test strain	Growth promotion
<i>Pseudomonas aeruginosa</i> such as: ATCC 9027 NCIMB 8626 CIP 82.118 NBRC 13275	Casein soyabean digest agar or casein soyabean digest broth 30-35 °C 18-24 h	R2A agar ≤ 100 CFU 30-35 °C ≤ 3 days
<i>Bacillus subtilis</i> such as: ATCC 6633 NCIMB 8054 CIP 52.62 NBRC 3134	Casein soyabean digest agar or casein soyabean digest broth 30-35 °C 18-24 h	R2A agar ≤ 100 CFU 30-35 °C ≤ 3 days

**Total organic carbon (2.2.44):** maximum 0.5 mg/L.

**Conductivity.** Determine the conductivity off-line or in-line under the following conditions.

**EQUIPMENT***Conductivity cell:*

- electrodes of a suitable material such as stainless steel;
- cell constant: the cell constant is generally certified by the supplier and is subsequently verified at suitable intervals using a certified reference solution with a conductivity less than 1500 µS·cm<sup>-1</sup> or by comparison with a cell having a certified cell constant. The cell constant is confirmed if the value found is within 2 per cent of the certified value, otherwise re-calibration must be performed.

*Conductometer:* accuracy of 0.1 µS·cm<sup>-1</sup> or better at the lowest range.

*System calibration (conductivity cell and conductometer):*

- against one or more suitable certified reference solutions;
- accuracy: within 3 per cent of the measured conductivity plus 0.1 µS·cm<sup>-1</sup>.

*Conductometer calibration:* calibration is carried out for each range of measurement to be used, after disconnection of the conductivity cell, using certified precision resistors or equivalent devices with an uncertainty not greater than 0.1 per cent of the certified value.

If in-line conductivity cells cannot be dismantled, system calibration may be performed against a calibrated conductivity-measuring instrument with a conductivity cell placed close to the cell to be calibrated in the water flow.

*Temperature measurement:* tolerance ± 2 °C.

**PROCEDURE***Stage 1*

1. Measure the conductivity without temperature compensation, recording simultaneously the temperature. Temperature-compensated measurement may be performed after suitable validation.
2. Using Table 0169.-2, find the closest temperature value that is not greater than the measured temperature. The corresponding conductivity value is the limit at that temperature.
3. If the measured conductivity is not greater than the value in Table 0169.-2, the water to be examined meets the requirements of the test for conductivity. If the conductivity is higher than the value in Table 0169.-2, proceed with stage 2.

Table 0169.-2. – *Stage 1*  
*Temperature and conductivity requirements (for non-temperature-compensated conductivity measurements)*

Temperature (°C)	Conductivity (µS·cm <sup>-1</sup> )
0	0.6
5	0.8
10	0.9
15	1.0
20	1.1
25	1.3
30	1.4
35	1.5
40	1.7
45	1.8
50	1.9
55	2.1
60	2.2
65	2.4
70	2.5
75	2.7
80	2.7
85	2.7
90	2.7
95	2.9
100	3.1

*Stage 2*

4. Transfer a sufficient amount of the water to be examined (100 mL or more) to a suitable container, and stir the test sample. Adjust the temperature, if necessary, and while maintaining it at 25 ± 1 °C, begin vigorously agitating the test sample while periodically observing the conductivity. When the change in conductivity (due to uptake of atmospheric carbon dioxide) is less than 0.1 µS·cm<sup>-1</sup> per 5 min, note the conductivity.
5. If the conductivity is not greater than 2.1 µS·cm<sup>-1</sup>, the water to be examined meets the requirements of the test for conductivity. If the conductivity is greater than 2.1 µS·cm<sup>-1</sup>, proceed with stage 3.

## Stage 3

6. Perform this test within approximately 5 min of the conductivity determination in step 5 under stage 2, while maintaining the sample temperature at  $25 \pm 1$  °C. Add a recently prepared saturated solution of *potassium chloride R* to the test sample (0.3 mL per 100 mL of the test sample), and determine the pH (2.2.3) to the nearest 0.1 pH unit.
7. Using Table 0169.-3, determine the conductivity limit at the measured pH value in step 6. If the measured conductivity in step 4 under stage 2 is not greater than the conductivity requirements for the pH determined, the water to be examined meets the requirements of the test for conductivity. If either the measured conductivity is greater than this value or the pH is outside the range of 5.0-7.0, the water to be examined does not meet the requirements of the test for conductivity.

Table 0169.-3. – Stage 3  
pH and conductivity requirements (for atmosphere- and temperature-equilibrated samples)

pH	Conductivity ( $\mu\text{S}\cdot\text{cm}^{-1}$ )
5.0	4.7
5.1	4.1
5.2	3.6
5.3	3.3
5.4	3.0
5.5	2.8
5.6	2.6

6.5	2.2
6.6	2.1
6.7	2.6
6.8	3.1
6.9	3.8
7.0	4.6

## CHARACTERS

*Appearance*: clear and colourless liquid.

## TESTS

**Nitrates**: maximum 0.2 ppm.

Place 5 mL in a test-tube immersed in iced water, add 0.4 mL of a 100 g/L solution of *potassium chloride R*, 0.1 mL of *diphenylamine solution R* and, dropwise with shaking, 5 mL of *nitrogen-free sulfuric acid R*. Transfer the tube to a water-bath at 50 °C. After 15 min, any blue colour in the solution is not more intense than that in a reference solution prepared at the same time in the same manner using a mixture of 4.5 mL of *nitrate-free water R* and 0.5 mL of *nitrate standard solution (2 ppm NO<sub>3</sub>) R*.

**Aluminium (2.4.17)**: maximum 10 ppb, if intended for use in the manufacture of dialysis solutions.

*Prescribed solution*. To 400 mL of the water to be examined add 10 mL of *acetate buffer solution pH 6.0 R* and 100 mL of *distilled water R*.

*Reference solution*. Mix 2 mL of *aluminium standard solution (2 ppm Al) R*, 10 mL of *acetate buffer solution pH 6.0 R* and 98 mL of *distilled water R*.

*Blank solution*. Mix 10 mL of *acetate buffer solution pH 6.0 R* and 100 mL of *distilled water R*.

**Bacterial endotoxins (2.6.14)**: less than 0.25 IU/mL.

## Sterilised water for injections

## DEFINITION

Water for injections in bulk that has been distributed into suitable containers, closed and sterilised by heat in conditions which ensure that the product still complies with the test for bacterial endotoxins. Sterilised water for injections is free from any added substances.

Examined in suitable conditions of visibility, it is clear and colourless.

Each container contains a sufficient quantity of water for injections to permit the nominal volume to be withdrawn.

## TESTS

**Acidity or alkalinity**. To 20 mL add 0.05 mL of *phenol red solution R*. If the solution is yellow, it becomes red on the addition of 0.1 mL of 0.01 M *sodium hydroxide*; if red, it becomes yellow on the addition of 0.15 mL of 0.01 M *hydrochloric acid*.

**Conductivity**: maximum 25  $\mu\text{S}\cdot\text{cm}^{-1}$  for containers with a nominal volume of 10 mL or less; maximum 5  $\mu\text{S}\cdot\text{cm}^{-1}$  for containers with a nominal volume greater than 10 mL.

Use equipment and the calibration procedure as defined under Water for injections in bulk, maintaining the sample temperature at  $25 \pm 1$  °C.

**Oxidisable substances**. For containers with a nominal volume less than 50 mL: heat 100 mL to boiling with 10 mL of *dilute sulfuric acid R*, add 0.4 mL of 0.02 M *potassium permanganate* and boil for 5 min; the solution remains faintly pink.

For containers with a nominal volume equal to or greater than 50 mL: heat 100 mL to boiling with 10 mL of *dilute sulfuric acid R*, add 0.2 mL of 0.02 M *potassium permanganate* and boil for 5 min; the solution remains faintly pink.

**Chlorides (2.4.4)**: maximum 0.5 ppm for containers with a nominal volume of 100 mL or less.

15 mL complies with the limit test for chlorides. Prepare the standard using a mixture of 1.5 mL of *chloride standard solution (5 ppm Cl) R* and 13.5 mL of *water R*. Examine the solutions down the vertical axes of the tubes.

For containers with a nominal volume greater than 100 mL, use the following test: to 10 mL add 1 mL of *dilute nitric acid R* and 0.2 mL of *silver nitrate solution R2*. The solution shows no change in appearance for at least 15 min.

**Nitrates**: maximum 0.2 ppm.

Place 5 mL in a test-tube immersed in iced water, add 0.4 mL of a 100 g/L solution of *potassium chloride R*, 0.1 mL of *diphenylamine solution R* and, dropwise with shaking, 5 mL of *nitrogen-free sulfuric acid R*. Transfer the tube to a water-bath at 50 °C. After 15 min, any blue colour in the solution is not more intense than that in a reference solution prepared at the same time in the same manner using a mixture of 4.5 mL of *nitrate-free water R* and 0.5 mL of *nitrate standard solution (2 ppm NO<sub>3</sub>) R*.

**Sulfates**. To 10 mL add 0.1 mL of *dilute hydrochloric acid R* and 0.1 mL of *barium chloride solution R1*. The solution shows no change in appearance for at least 1 h.

**Aluminium (2.4.17):** maximum 10 ppb, if intended for use in the manufacture of dialysis solutions.

**Prescribed solution.** To 400 mL of the water to be examined add 10 mL of acetate buffer solution pH 6.0 R and 100 mL of distilled water R.

**Reference solution.** Mix 2 mL of aluminium standard solution (2 ppm Al) R, 10 mL of acetate buffer solution pH 6.0 R and 98 mL of distilled water R.

**Blank solution.** Mix 10 mL of acetate buffer solution pH 6.0 R and 100 mL of distilled water R.

**Ammonium:** for containers with a nominal volume less than 50 mL: maximum 0.6 ppm; for containers with a nominal volume equal to or greater than 50 mL: maximum 0.2 ppm.

Containers with a nominal volume less than 50 mL: to 20 mL add 1 mL of alkaline potassium tetraiodomercurate solution R; after 5 min, examine the solution down the vertical axis of the tube; the solution is not more intensely coloured than a standard prepared at the same time by adding 1 mL of alkaline potassium tetraiodomercurate solution R to a mixture of 4 mL of ammonium standard solution (3 ppm NH<sub>4</sub>) R and 16 mL of ammonium-free water R.

Containers with a nominal volume equal to or greater than 50 mL: to 20 mL add 1 mL of alkaline potassium tetraiodomercurate solution R; after 5 min, examine the solution down the vertical axis of the tube; the solution is not more intensely coloured than a standard prepared at the same time by adding 1 mL of alkaline potassium tetraiodomercurate solution R to a mixture of 4 mL of ammonium standard solution (1 ppm NH<sub>4</sub>) R and 16 mL of ammonium-free water R.

**Calcium and magnesium.** To 100 mL add 2 mL of ammonium chloride buffer solution pH 10.0 R, 50 mg of mordant black 11 triturate R and 0.5 mL of 0.01 M sodium edetate. A pure blue colour is produced.

**Residue on evaporation:** maximum 4 mg (0.004 per cent) for containers with a nominal volume of 10 mL or less; maximum 3 mg (0.003 per cent) for containers with a nominal volume greater than 10 mL.

Evaporate 100 mL to dryness on a water-bath and dry in an oven at 100-105 °C.

**Particulate contamination: sub-visible particles (2.9.19).** It complies with test A or test B, as appropriate.

**Sterility (2.6.1).** It complies with the test for sterility.

**Bacterial endotoxins (2.6.14):** less than 0.25 IU/mL.

In order to ensure the appropriate quality of the water, validated procedures and in-process monitoring of the electrical conductivity and regular microbial monitoring are applied.

Highly purified water is stored in bulk and distributed in conditions designed to prevent growth of micro-organisms and to avoid any other contamination.

**Microbiological monitoring.** During production and subsequent storage, appropriate measures are taken to ensure that the microbial count is adequately controlled and monitored. Appropriate alert and action levels are set so as to detect adverse trends. Under normal conditions, an appropriate action level is a microbial count of 10 CFU per 100 mL when determined by filtration through a membrane with a nominal pore size not greater than 0.45 µm, using R2A agar, at least 200 mL of highly purified water and incubating at 30-35 °C for not less than 5 days.

#### R2A agar

Yeast extract	0.5 g
Proteose peptone	0.5 g
Casein hydrolysate	0.5 g
Glucose	0.5 g
Starch	0.5 g
Dipotassium hydrogen phosphate	0.3 g
Magnesium sulfate, anhydrous	0.024 g
Sodium pyruvate	0.3 g
Agar	15.0 g
Purified water	to 1000 mL

Adjust the pH so that after sterilisation it is 7.2 ± 0.2. Sterilise by heating in an autoclave at 121 °C for 15 min.

#### Growth promotion of R2A agar

- **Preparation of test strains.** Use standardised stable suspensions of test strains or prepare them as stated in Table 1927.-1. Seed lot culture maintenance techniques (seed-lot systems) are used so that the viable micro-organisms used for inoculation are not more than 5 passages removed from the original master seed-lot. Grow each of the bacterial strains separately as described in Table 1927.-1. Use buffered sodium chloride-peptone solution pH 7.0 or phosphate buffer solution pH 7.2 to make test suspensions. Use the suspensions within 2 h, or within 24 h if stored at 2-8 °C. As an alternative to preparing and then diluting a fresh suspension of vegetative cells of *Bacillus subtilis*, a stable spore suspension is prepared and then an appropriate volume of the spore suspension is used for test inoculation. The stable spore suspension may be maintained at 2-8 °C for a validated period of time.

01/2009:1927

## WATER, HIGHLY PURIFIED

### Aqua valde purificata

H<sub>2</sub>O

M<sub>r</sub> 18.02

#### DEFINITION

Water intended for use in the preparation of medicinal products where water of high biological quality is needed, except where *Water for injections (0169)* is required.

#### PRODUCTION

Highly purified water is obtained from water that complies with the regulations on water intended for human consumption laid down by the competent authority.

Current production methods include, for example, double-pass reverse osmosis coupled with other suitable techniques such as ultrafiltration and deionisation. Correct operation and maintenance of the system is essential.

Table 1927.-1. – Growth promotion of R2A agar

Micro-organism	Preparation of the test strain	Growth promotion
<i>Pseudomonas aeruginosa</i> such as: ATCC 9027 NCIMB 8626 CIP 82.118 NBRC 13275	Casein soyabean digest agar or casein soyabean digest broth 30-35 °C 18-24 h	R2A agar ≤ 100 CFU 30-35 °C ≤ 3 days
<i>Bacillus subtilis</i> such as: ATCC 6633 NCIMB 8054 CIP 52.62 NBRC 3134	Casein soyabean digest agar or casein soyabean digest broth 30-35 °C 18-24 h	R2A agar ≤ 100 CFU 30-35 °C ≤ 3 days

- *Growth promotion.* Test each batch of ready-prepared medium and each batch of medium, prepared either from dehydrated medium or from the ingredients described. Inoculate plates of R2A agar separately with a small number (not more than 100 CFU) of the micro-organisms indicated in Table 1927.-1. Incubate under the conditions described in the table. Growth obtained must not differ by a factor greater than 2 from the calculated value for a standardised inoculum. For a freshly prepared inoculum, growth of the micro-organisms must be comparable to that obtained with a previously tested and approved batch of medium.

**Total organic carbon (2.2.44):** maximum 0.5 mg/L.

**Conductivity.** Determine the conductivity off-line or in-line under the following conditions.

#### EQUIPMENT

*Conductivity cell:*

- electrodes of a suitable material such as stainless steel;
- cell constant: the cell constant is generally certified by the supplier and is subsequently verified at suitable intervals using a certified reference solution with a conductivity less than  $1500 \mu\text{S}\cdot\text{cm}^{-1}$  or by comparison with a cell having a certified cell constant; the cell constant is confirmed if the value found is within 2 per cent of the certified value, otherwise re-calibration must be performed.

*Conductometer:* accuracy of  $0.1 \mu\text{S}\cdot\text{cm}^{-1}$  or better at the lowest range.

*System calibration (conductivity cell and conductometer):*

- against one or more suitable certified reference solutions;
- accuracy: within 3 per cent of the measured conductivity plus  $0.1 \mu\text{S}\cdot\text{cm}^{-1}$ .

*Conductometer calibration:* calibration is carried out for each range of measurement to be used, after disconnection of the conductivity cell, using certified precision resistors or equivalent devices with an uncertainty not greater than 0.1 per cent of the certified value.

If in-line conductivity cells cannot be dismantled, system calibration may be performed against a calibrated conductivity-measuring instrument with a conductivity cell placed close to the cell to be calibrated in the water flow.

*Temperature measurement:* tolerance  $\pm 2 \text{ }^\circ\text{C}$ .

#### PROCEDURE

##### Stage 1

1. Measure the conductivity without temperature compensation, recording simultaneously the temperature. Temperature-compensated measurement may be performed after suitable validation.
2. Using Table 1927.-2, find the closest temperature value that is not greater than the measured temperature. The corresponding conductivity value is the limit at that temperature.
3. If the measured conductivity is not greater than the value in Table 1927.-2, the water to be examined meets the requirements of the test for conductivity. If the conductivity is higher than the value in Table 1927.-2, proceed with stage 2.

##### Stage 2

4. Transfer a sufficient amount of the water to be examined (100 mL or more) to a suitable container, and stir the test sample. Adjust the temperature, if necessary, and while

maintaining it at  $25 \pm 1 \text{ }^\circ\text{C}$ , begin vigorously agitating the test sample while periodically observing the conductivity. When the change in conductivity (due to uptake of atmospheric carbon dioxide) is less than  $0.1 \mu\text{S}\cdot\text{cm}^{-1}$  per 5 min, note the conductivity.

5. If the conductivity is not greater than  $2.1 \mu\text{S}\cdot\text{cm}^{-1}$ , the water to be examined meets the requirements of the test for conductivity. If the conductivity is greater than  $2.1 \mu\text{S}\cdot\text{cm}^{-1}$ , proceed with stage 3.

##### Stage 3

6. Perform this test within approximately 5 min of the conductivity determination in step 5 under stage 2, while maintaining the sample temperature at  $25 \pm 1 \text{ }^\circ\text{C}$ . Add a recently prepared saturated solution of *potassium chloride R* to the test sample (0.3 mL per 100 mL of the test sample), and determine the pH (2.2.3) to the nearest 0.1 pH unit.
7. Using Table 1927.-3, determine the conductivity limit at the measured pH value in step 6. If the measured conductivity in step 4 under stage 2 is not greater than the conductivity requirements for the pH determined, the water to be examined meets the requirements of the test for conductivity. If either the measured conductivity is greater than this value or the pH is outside the range of 5.0-7.0, the water to be examined does not meet the requirements of the test for conductivity.

Table 1927.-2. – Stage 1  
Temperature and conductivity requirements (for non-temperature-compensated conductivity measurements)

## CHARACTERS

*Appearance*: clear and colourless liquid.

## TESTS

**Nitrates**: maximum 0.2 ppm.

Place 5 mL in a test-tube immersed in iced water, add 0.4 mL of a 100 g/L solution of *potassium chloride R*, 0.1 mL of *diphenylamine solution R* and, dropwise with shaking, 5 mL of *nitrogen-free sulfuric acid R*. Transfer the tube to a water-bath at 50 °C. After 15 min, any blue colour in the solution is not more intense than that in a reference solution prepared at the same time in the same manner using a mixture of 4.5 mL of *nitrate-free water R* and 0.5 mL of *nitrate standard solution (2 ppm NO<sub>3</sub>) R*.

**Aluminium (2.4.17)**: maximum 10 ppb, if intended for use in the manufacture of dialysis solutions.

*Prescribed solution*. To 400 mL of the water to be examined add 10 mL of *acetate buffer solution pH 6.0 R* and 100 mL of *distilled water R*.

*Reference solution*. Mix 2 mL of *aluminium standard solution (2 ppm Al) R*, 10 mL of *acetate buffer solution pH 6.0 R* and 98 mL of *distilled water R*.

*Blank solution*. Mix 10 mL of *acetate buffer solution pH 6.0 R* and 100 mL of *distilled water R*.

**Bacterial endotoxins (2.6.14)**: less than 0.25 IU/mL.

## LABELLING

The label states, where applicable, that the substance is suitable for use in the manufacture of dialysis solutions.

## WATER, PURIFIED

## Aqua purificata

H<sub>2</sub>OM<sub>r</sub> 18.02

## DEFINITION

Water for the preparation of medicines other than those that are required to be both sterile and apyrogenic, unless otherwise justified and authorised.

## Purified water in bulk

## PRODUCTION

Purified water in bulk is prepared by distillation, by ion exchange, by reverse osmosis or by any other suitable method from water that complies with the regulations on water intended for human consumption laid down by the competent authority.

Purified water in bulk is stored and distributed in conditions designed to prevent growth of micro-organisms and to avoid any other contamination.

**Microbiological monitoring**. During production and subsequent storage, appropriate measures are taken to ensure that the microbial count is adequately controlled and monitored. Appropriate alert and action levels are set so as to detect adverse trends. Under normal conditions, an appropriate action level is a microbial count of 100 CFU/mL, determined by filtration through a membrane with a nominal pore size not greater than 0.45  $\mu\text{m}$ , using R2A agar and incubating at 30-35 °C for not less than 5 days. The size of the sample is to be chosen in relation to the expected result.

*R2A agar*

Yeast extract	0.5 g
Proteose peptone	0.5 g
Casein hydrolysate	0.5 g
Glucose	0.5 g
Starch	0.5 g
Dipotassium hydrogen phosphate	0.3 g
Magnesium sulfate, anhydrous	0.024 g
Sodium pyruvate	0.3 g
Agar	15.0 g
Purified water	to 1000 mL

Adjust the pH so that after sterilisation it is  $7.2 \pm 0.2$ . Sterilise by heating in an autoclave at 121 °C for 15 min.

*Growth promotion of R2A agar*

– *Preparation of test strains*. Use standardised stable suspensions of test strains or prepare them as stated in Table 0008.-1. Seed lot culture maintenance techniques (seed-lot systems) are used so that the viable micro-organisms used for inoculation are not more than 5 passages removed from the original master seed-lot. Grow each of the bacterial strains separately as described in Table 0008.-1. Use buffered sodium chloride-peptone solution pH 7.0 or phosphate buffer solution pH 7.2 to make test suspensions. Use the suspensions within 2 h, or within 24 h if stored at 2-8 °C. As an alternative to preparing and then diluting a fresh suspension of vegetative cells of *Bacillus subtilis*, a stable spore suspension is prepared and then an appropriate volume of the spore suspension is used for test inoculation. The stable spore suspension may be maintained at 2-8 °C for a validated period of time.

– *Growth promotion*. Test each batch of ready-prepared medium and each batch of medium, prepared either from dehydrated medium or from the ingredients described.

Inoculate plates of R2A agar separately with a small number (not more than 100 CFU) of the micro-organisms indicated in Table 0008.-1. Incubate under the conditions described in the table. Growth obtained must not differ by a factor greater than 2 from the calculated value for a standardised inoculum. For a freshly prepared inoculum, growth of the micro-organisms must be comparable to that obtained with a previously tested and approved batch of medium.

Table 0008.-1. – Growth promotion of R2A agar

Micro-organism	Preparation of the test strain	Growth promotion
<i>Pseudomonas aeruginosa</i> such as: ATCC 9027 NCIMB 8626 CIP 82.118 NBRC 13275	Casein soyabean digest agar or casein soyabean digest broth 30-35 °C 18-24 h	R2A agar ≤ 100 CFU 30-35 °C ≤ 3 days
<i>Bacillus subtilis</i> such as: ATCC 6633 NCIMB 8054 CIP 52.62 NBRC 3134	Casein soyabean digest agar or casein soyabean digest broth 30-35 °C 18-24 h	R2A agar ≤ 100 CFU 30-35 °C ≤ 3 days

**Total organic carbon or oxidisable substances.** Carry out the test for total organic carbon (2.2.44) with a limit of 0.5 mg/L or alternatively the following test for oxidisable substances: to 100 mL add 10 mL of dilute sulfuric acid R and 0.1 mL of 0.02 M potassium permanganate and boil for 5 min; the solution remains faintly pink.

**Conductivity.** Determine the conductivity off-line or in-line under the following conditions.

#### EQUIPMENT

##### Conductivity cell:

- electrodes of a suitable material such as stainless steel;
- cell constant: the cell constant is generally certified by the supplier and is subsequently verified at suitable intervals using a certified reference solution with a conductivity less than 1500  $\mu\text{S}\cdot\text{cm}^{-1}$  or by comparison with a cell having a certified cell constant; the cell constant is confirmed if the value found is within 2 per cent of the certified value, otherwise re-calibration must be performed.

**Conductometer:** accuracy of 0.1  $\mu\text{S}\cdot\text{cm}^{-1}$  or better at the lowest range.

##### System calibration (conductivity cell and conductometer):

- against one or more suitable certified reference solutions;
- accuracy: within 3 per cent of the measured conductivity plus 0.1  $\mu\text{S}\cdot\text{cm}^{-1}$ .

**Conductometer calibration:** calibration is carried out for each range of measurement to be used, after disconnection of the conductivity cell, using certified precision resistors or equivalent devices with an uncertainty not greater than 0.1 per cent of the certified value.

If in-line conductivity cells cannot be dismantled, system calibration may be performed against a calibrated conductivity-measuring instrument with a conductivity cell placed close to the cell to be calibrated in the water flow.

**Temperature measurement:** tolerance  $\pm 2$  °C.

#### PROCEDURE

Measure the conductivity without temperature compensation, recording simultaneously the temperature. Temperature-compensated measurement may be performed after suitable validation.

The water to be examined meets the requirements if the measured conductivity at the recorded temperature is not greater than the value in Table 0008.-2.

Table 0008.-2. – Temperature and conductivity requirements

Temperature (°C)	Conductivity ( $\mu\text{S}\cdot\text{cm}^{-1}$ )
0	2.4
10	3.6
20	4.3
25	5.1
30	5.4
40	6.5
50	7.1
60	8.1
70	9.1
75	9.7
80	9.7
90	9.7
100	10.2

For temperatures not listed in Table 0008.-2, calculate the maximal permitted conductivity by interpolation between the next lower and next higher data points in the table.

**Heavy metals.** If purified water in bulk complies with the requirement for conductivity prescribed for *Water for injections (0169)* in bulk, it is not necessary to carry out the test for heavy metals prescribed below.

#### CHARACTERS

**Appearance:** clear and colourless liquid.

#### TESTS

**Nitrates:** maximum 0.2 ppm.

Place 5 mL in a test-tube immersed in iced water, add 0.4 mL of a 100 g/L solution of potassium chloride R, 0.1 mL of diphenylamine solution R and, dropwise with shaking, 5 mL of nitrogen-free sulfuric acid R. Transfer the tube to a water-bath at 50 °C. After 15 min, any blue colour in the solution is not more intense than that in a reference solution prepared at the same time in the same manner using a mixture of 4.5 mL of nitrate-free water R and 0.5 mL of nitrate standard solution (2 ppm  $\text{NO}_3^-$ ) R.

**Aluminium (2.4.17):** maximum 10 ppb, if intended for use in the manufacture of dialysis solutions.

**Prescribed solution.** To 400 mL of the water to be examined add 10 mL of acetate buffer solution pH 6.0 R and 100 mL of distilled water R.

**Reference solution.** Mix 2 mL of aluminium standard solution (2 ppm Al) R, 10 mL of acetate buffer solution pH 6.0 R and 98 mL of distilled water R.

**Blank solution.** Mix 10 mL of acetate buffer solution pH 6.0 R and 100 mL of distilled water R.

**Heavy metals (2.4.8):** maximum 0.1 ppm.

To 200 mL add 0.15 mL of 0.1 M nitric acid and heat in a glass evaporating dish on a water-bath until the volume is reduced to 20 mL. 12 mL of the concentrated solution complies with test A. Prepare the reference solution using 10 mL of lead standard solution (1 ppm Pb) R and adding 0.075 mL of 0.1 M nitric acid. Prepare the blank solution adding 0.075 mL of 0.1 M nitric acid.

**Bacterial endotoxins (2.6.14):** less than 0.25 IU/mL, if intended for use in the manufacture of dialysis solutions without a further appropriate procedure for removal of bacterial endotoxins.

#### LABELLING

The label states, where applicable, that the substance is suitable for use in the manufacture of dialysis solutions.

## Purified water in containers

### DEFINITION

Purified water in bulk that has been filled and stored in conditions designed to assure the required microbiological quality. It is free from any added substances.

### CHARACTERS

*Appearance*: clear and colourless liquid.

### TESTS

It complies with the tests prescribed in the section on Purified water in bulk and with the following additional tests.

**Acidity or alkalinity.** To 10 mL, freshly boiled and cooled in a borosilicate glass flask, add 0.05 mL of *methyl red solution R*. The solution is not coloured red.

To 10 mL add 0.1 mL of *bromothymol blue solution R1*. The solution is not coloured blue.

**Oxidisable substances.** To 100 mL add 10 mL of *dilute sulfuric acid R* and 0.1 mL of *0.02 M potassium permanganate* and boil for 5 min. The solution remains faintly pink.

**Chlorides.** To 10 mL add 1 mL of *dilute nitric acid R* and 0.2 mL of *silver nitrate solution R2*. The solution shows no change in appearance for at least 15 min.

**Sulfates.** To 10 mL add 0.1 mL of *dilute hydrochloric acid R* and 0.1 mL of *barium chloride solution R1*. The solution shows no change in appearance for at least 1 h.

**Ammonium:** maximum 0.2 ppm.

To 20 mL add 1 mL of *alkaline potassium tetraiodomercurate solution R*. After 5 min, examine the solution down the vertical axis of the tube. The solution is not more intensely coloured than a standard prepared at the same time by adding 1 mL of *alkaline potassium tetraiodomercurate solution R* to a mixture of 4 mL of *ammonium standard solution (1 ppm NH<sub>4</sub>) R* and 16 mL of *ammonium-free water R*.

**Calcium and magnesium.** To 100 mL add 2 mL of *ammonium chloride buffer solution pH 10.0 R*, 50 mg of *mordant black 11 tritrate R* and 0.5 mL of *0.01 M sodium edetate*. A pure blue colour is produced.

**Residue on evaporation:** maximum 0.001 per cent.

Evaporate 100 mL to dryness on a water-bath and dry in an oven at 100-105 °C. The residue weighs a maximum of 1 mg.

### Microbial contamination

TAMC: acceptance criterion 10<sup>2</sup> CFU/mL (2.6.12). Use casein soya bean digest agar.

### LABELLING

The label states, where applicable, that the substance is suitable for use in the manufacture of dialysis solutions.

### IDENTIFICATION

A. Examined under a microscope using equal volumes of *glycerol R* and *water R*, it presents large and small granules, and, very rarely, intermediate sizes. The large granules, 10-60 µm in diameter, are discoid or, more rarely, reniform when seen face-on. The central hilum and striations are invisible or barely visible and the granules sometimes show cracks on the edges. Seen in profile, the granules are elliptical and fusiform and the hilum appears as a slit along the main axis. The small granules, rounded or polyhedral, are 2-10 µm in diameter. Between orthogonally orientated polarising plates or prisms, the granules show a distinct black cross intersecting at the hilum.

B. Suspend 1 g in 50 mL of *water R*, boil for 1 min and cool. A thin, cloudy mucilage is formed.

C. To 1 mL of the mucilage obtained in identification test B add 0.05 mL of *iodine solution R1*. A dark blue colour is produced, which disappears on heating.

### TESTS

**pH (2.2.3):** 4.5 to 7.0.

Shake 5.0 g with 25.0 mL of *carbon dioxide-free water R* for 60 s. Allow to stand for 15 min.

**Foreign matter.** Examined under a microscope using a mixture of equal volumes of *glycerol R* and *water R*, not more than traces of matter other than starch granules are present. No starch grains of any other origin are present.

**Total protein:** maximum 0.3 per cent of total protein (corresponding to 0.048 per cent N<sub>2</sub>, conversion factor: 6.25), determined on 6.0 g by sulfuric acid digestion (2.5.9) modified as follows: wash any adhering particles from the neck into the flask with 25 mL of *sulfuric acid R*; continue the heating until a clear solution is obtained; add 45 mL of *strong sodium hydroxide solution R*.

**Oxidising substances (2.5.30):** maximum 20 ppm, calculated as H<sub>2</sub>O<sub>2</sub>.

**Sulfur dioxide (2.5.29):** maximum 50 ppm.

**Iron (2.4.9):** maximum 10 ppm.

Shake 1.5 g with 15 mL of *dilute hydrochloric acid R*. Filter. The filtrate complies with the test.

**Loss on drying (2.2.32):** maximum 15.0 per cent, determined on 1.000 g by drying in an oven at 130 °C for 90 min.

**Sulfated ash (2.4.14):** maximum 0.6 per cent, determined on 1.0 g.

### Microbial contamination

TAMC: acceptance criterion 10<sup>3</sup> CFU/g (2.6.12).

TYMC: acceptance criterion 10<sup>2</sup> CFU/g (2.6.12).

Absence of *Escherichia coli* (2.6.13).

Absence of *Salmonella* (2.6.13).

01/2009:0359

01/2010:1379

## WHEAT STARCH

### Tritici amylum

### DEFINITION

Wheat starch is obtained from the caryopsis of *Triticum aestivum* L. (*T. vulgare* Vill.).

### CHARACTERS

*Appearance*: very fine, white or almost white powder that creaks when pressed between the fingers.

*Solubility*: practically insoluble in cold water and in ethanol (96 per cent).

Wheat starch does not contain starch grains of any other origin. It may contain a minute quantity, if any, of tissue fragments of the original plant.

## WHEAT-GERM OIL, REFINED

### Tritici aestivi oleum raffinatum

### DEFINITION

Fatty oil obtained from the germ of the grain of *Triticum aestivum* L. by cold expression or by other suitable mechanical means and/or by extraction. It is then refined. A suitable antioxidant may be added.

### CHARACTERS

*Appearance*: clear, light yellow liquid.

*Solubility*: practically insoluble in water and in ethanol (96 per cent), miscible with light petroleum (bp: 40-60 °C).

*Relative density*: about 0.925.

*Refractive index*: about 1.475.

## IDENTIFICATION

A. Identification of fatty oils by thin-layer chromatography (2.3.2).

*Results:* the chromatogram obtained is similar to the corresponding chromatogram shown in Figure 2.3.2-1.

B. Composition of fatty acids (see Tests).

## TESTS

**Acid value** (2.5.1): maximum 0.9, or maximum 0.3 if intended for use in the manufacture of parenteral preparations.

**Peroxide value** (2.5.5, Method A): maximum 10.0, or maximum 5.0 if intended for use in the manufacture of parenteral preparations.

**Unsaponifiable matter** (2.5.7): maximum 5.0 per cent, determined on 5.0 g.

**Alkaline impurities** (2.4.19). It complies with the test.

**Composition of fatty acids** (2.4.22, Method C). Use the mixture of calibrating substances in Table 2.4.22-3.

*Composition of the fatty-acid fraction of the oil:*

- *palmitic acid*: 14.0 per cent to 19.0 per cent;
- *stearic acid*: maximum 2.0 per cent;
- *oleic acid*: 12.0 per cent to 23.0 per cent;
- *linoleic acid*: 52.0 per cent to 59.0 per cent;
- *linolenic acid*: 3.0 per cent to 10.0 per cent;
- *eicosenoic acid*: maximum 2.0 per cent.

**Brassicasterol** (2.4.23): maximum 0.3 per cent in the sterol fraction of the oil.

**Water** (2.5.32): maximum 0.1 per cent, determined on 1.00 g.

## STORAGE

In an airtight, well-filled container, protected from light.

## LABELLING

The label states:

- where applicable, that the substance is suitable for use in the manufacture of parenteral preparations;
- whether the oil is obtained by mechanical means, by extraction or by a combination of the 2.

01/2010:1480

## WHEAT-GERM OIL, VIRGIN

## Tritici aestivi oleum virginale

## DEFINITION

Fatty oil obtained from the germ of the grain of *Triticum aestivum* L. by cold expression or other suitable mechanical means.

## CHARACTERS

*Appearance:* clear, light yellow or golden-yellow liquid.

*Solubility:* practically insoluble in water and in ethanol (96 per cent), miscible with light petroleum (bp: 40-60 °C).

*Relative density:* about 0.925.

*Refractive index:* about 1.475.

## IDENTIFICATION

A. Identification of fatty oils by thin-layer chromatography (2.3.2).

*Results:* the chromatogram obtained is similar to the corresponding chromatogram shown in Figure 2.3.2-1.

B. Composition of fatty acids (see Tests).

## TESTS

**Acid value** (2.5.1): maximum 20.0.

**Peroxide value** (2.5.5, Method A): maximum 15.0.

**Unsaponifiable matter** (2.5.7): maximum 5.0 per cent, determined on 5.0 g.

**Composition of fatty acids** (2.4.22, Method C).

*Composition of the fatty-acid fraction of the oil:*

- *palmitic acid*: 14.0 per cent to 19.0 per cent,
- *stearic acid*: maximum 2.0 per cent,
- *oleic acid*: 12.0 per cent to 23.0 per cent,
- *linoleic acid*: 52.0 per cent to 59.0 per cent,
- *linolenic acid*: 3.0 per cent to 10.0 per cent,
- *eicosenoic acid*: maximum 2.0 per cent.

**Brassicasterol** (2.4.23): maximum 0.3 per cent in the sterol fraction of the oil.

**Water** (2.5.32): maximum 0.1 per cent, determined on 1.00 g.

## STORAGE

In an airtight, well-filled container, protected from light.

01/2008:0593  
corrected 6.0

## WOOL ALCOHOLS

## Alcoholes adipis lanæ

## DEFINITION

Mixture of sterols and higher aliphatic alcohols from wool fat. It may contain not more than 200 ppm of butylhydroxytoluene.

*Content:* minimum 30.0 per cent of cholesterol.

## CHARACTERS

*Appearance:* pale-yellow or brownish-yellow, brittle mass becoming plastic on heating.

*Solubility:* practically insoluble in water, soluble in methylene chloride and in boiling ethanol, slightly soluble in alcohol (90 per cent V/V).

## IDENTIFICATION

Dissolve 50 mg in 5 mL of *methylene chloride R* and add 1 mL of *acetic anhydride R* and 0.1 mL of *sulfuric acid R*. Within a few seconds, a green colour develops.

## TESTS

**Appearance of solution.** To 1.0 g add 10 mL of *light petroleum R1* and shake while warming in a water-bath. The substance dissolves completely. After cooling, the solution is clear (2.2.1).

**Alkalinity.** Dissolve 2.0 g in 25 mL of hot *alcohol (90 per cent V/V) R* and add 0.5 mL of *phenolphthalein solution R1*. No red colour develops.

**Melting point** (2.2.15): minimum 58 °C.

Melt the substance to be examined by heating in a water-bath at a temperature which exceeds the expected melting point by not more than 10 °C; introduce the substance to be examined into the capillary tubes and allow to stand at 15-17 °C for not less than 16 h.

**Acid value** (2.5.1): maximum 2.0.

If necessary, heat in a water-bath under a reflux condenser to dissolve the substance to be examined.

**Hydroxyl value** (2.5.3, Method A): 120 to 180.

**Peroxide value** (2.5.5, Method A): maximum 15.

Take from the substance to be examined wedge-shaped pieces whose base consists of part of the surface. Melt the pieces before carrying out the determination. Before adding 0.5 mL of *saturated potassium iodide solution R*, cool the solution obtained to room temperature.

**Saponification value** (2.5.6): maximum 12.0, determined on 2.00 g. Heat under reflux for 4 h.

**Butylhydroxytoluene.** Gas chromatography (2.2.28).

01/2008:0134  
corrected 6.0

**Internal standard solution.** Dissolve 0.20 g of *methyl decanoate R* in *carbon disulfide R* and dilute to 100.0 mL with the same solvent. Dilute 1.0 mL of the solution to 10.0 mL with *carbon disulfide R*.

**Test solution (a).** Dissolve 1.0 g of the substance to be examined in *carbon disulfide R* and dilute to 10.0 mL with the same solvent.

**Test solution (b).** Dissolve 1.0 g of the substance to be examined in *carbon disulfide R*, add 1.0 mL of the internal standard solution and dilute to 10.0 mL with *carbon disulfide R*.

**Reference solution.** Dissolve 0.20 g of *butylhydroxytoluene R* in *carbon disulfide R* and dilute to 100.0 mL with the same solvent. Dilute 1.0 mL of the solution to 10.0 mL with *carbon disulfide R*. To 1.0 mL of this solution add 1.0 mL of the internal standard solution and dilute to 10.0 mL with *carbon disulfide R*.

**Precolumn:** column filled with silanised glass wool.

**Column:**

- size:  $l = 1.5$  m,  $\emptyset = 4$  mm,
- stationary phase: silanised diatomaceous earth for gas chromatography *R* impregnated with 10 per cent *m/m* of poly(dimethyl)siloxane *R*.

**Carrier gas:** nitrogen for chromatography *R*.

**Flow rate:** 40 mL/min.

**Temperature:**

- column: 150 °C,
- injection port: 180 °C,
- detector: 300 °C.

**Detection:** flame ionisation.

**Limit:**

- *butylhydroxytoluene*: maximum 200 ppm.

**Loss on drying (2.2.32):** maximum 0.5 per cent, determined on 2.000 g by drying in an oven at 105 °C.

**Total ash (2.4.16):** maximum 0.1 per cent.

**Water-absorption capacity.** Place 0.6 g of the substance to be examined and 9.4 g of *white soft paraffin R* in a mortar and melt on a water-bath. Allow to cool and incorporate 20 mL of *water R*, added in portions. Within 24 h no water is released from the almost white, ointment-like emulsion.

#### ASSAY

Dissolve 0.1000 g in 12 mL of hot *alcohol (90 per cent V/V) R*. Allow to stand for 18 h, filter through a sintered-glass filter (16) (2.1.2) and wash the filter with 2 quantities, each of 15 mL, of *alcohol (90 per cent V/V) R*. Combine the filtrate and washings, add 20 mL of a freshly prepared 10 g/L solution of *digitonin R* in *alcohol (90 per cent V/V) R* and heat to about 60 °C. Allow to cool, filter through a sintered-glass filter (16) (2.1.2), wash the residue with 10 mL of *alcohol (90 per cent V/V) R* and dry to constant mass at 100-105 °C.

1 g of residue is equivalent to 0.239 g of cholesterol.

#### STORAGE

In a well-filled container, protected from light.

#### LABELLING

The label states, where applicable, the concentration of any added butylhydroxytoluene.

## WOOL FAT

### Adeps lanae

#### DEFINITION

Purified, anhydrous, waxy substance obtained from the wool of sheep (*Ovis aries*). It may contain not more than 200 ppm of butylhydroxytoluene.

#### CHARACTERS

**Appearance:** yellow, unctuous substance. When melted, it is a clear or almost clear, yellow liquid. A solution in light petroleum is opalescent.

**Solubility:** practically insoluble in water, slightly soluble in boiling anhydrous ethanol.

It has a characteristic odour.

#### IDENTIFICATION

- A. In a test-tube, dissolve 0.5 g in 5 mL of *methylene chloride R* and add 1 mL of *acetic anhydride R* and 0.1 mL of *sulfuric acid R*. A green colour develops.
- B. Dissolve 50 mg in 5 mL of *methylene chloride R*, add 5 mL of *sulfuric acid R* and shake. A red colour develops and an intense green fluorescence appears in the lower layer when examined in daylight, with illumination from the rear of the observer.

#### TESTS

**Water-soluble acid or alkaline substances.** Melt 5.0 g on a water-bath and shake vigorously for 2 min with 75 mL of *water R* previously heated to 90-95 °C. Allow to cool and filter through filter paper previously rinsed with *water R*. To 60 mL of the filtrate (which may not be clear) add 0.25 mL of *bromothymol blue solution R1*. Not more than 0.2 mL of 0.02 M *hydrochloric acid* or 0.15 mL of 0.02 M *sodium hydroxide* is required to change the colour of the indicator.

**Drop point (2.2.17):** 38 °C to 44 °C.

To fill the metal cup, melt the wool fat on a water-bath, cool to about 50 °C, pour into the cup and allow to stand at 15-20 °C for 24 h.

**Water-absorption capacity.** Place 10 g of molten wool fat in a mortar and allow to cool to room temperature. Weigh the mortar. Add *water R* in portions of 0.2-0.5 mL from a burette, stirring vigorously after each addition to incorporate the *water R*. Instead of a pestle, use a high-density polypropylene cylindrical rod (120 mm long and 10 mm in diameter, for example). The end-point is reached when visible droplets remain which cannot be incorporated. Weigh the mortar again and determine the amount of water absorbed by weight difference. Not less than 20 g of *water R* is absorbed.

**Acid value (2.5.1):** maximum 1.0, determined on 5.0 g dissolved in 25 mL of the prescribed mixture of solvents.

**Peroxide value (2.5.5, Method A):** maximum 20.

Before adding 0.5 mL of *saturated potassium iodide solution R*, cool the solution obtained to room temperature.

**Saponification value (2.5.6):** 90 to 105, determined on 2.00 g while heating under reflux for 4 h.

**Water-soluble oxidisable substances.** To 10 mL of the filtrate obtained in the test for water-soluble acid or alkaline substances add 1 mL of *dilute sulfuric acid R* and 0.1 mL of 0.02 M *potassium permanganate*. After 10 min, the solution is not completely decolourised.

**Butylhydroxytoluene.** Gas chromatography (2.2.28).

**Internal standard solution.** Dissolve 0.2 g of *methyl decanoate R* in *carbon disulfide R* and dilute to 100.0 mL with

the same solvent. Dilute 1.0 mL of the solution to 10.0 mL with carbon disulfide R.

**Test solution (a).** Dissolve 1.0 g of the substance to be examined in carbon disulfide R and dilute to 10.0 mL with the same solvent.

**Test solution (b).** Dissolve 1.0 g of the substance to be examined in carbon disulfide R, add 1.0 mL of the internal standard solution and dilute to 10.0 mL with carbon disulfide R.

**Reference solution.** Dissolve 0.2 g of butylhydroxytoluene R in carbon disulfide R and dilute to 100.0 mL with the same solvent. Dilute 1.0 mL of the solution to 10.0 mL with carbon disulfide R. To 1.0 mL of this solution add 1.0 mL of the internal standard solution and dilute to 10.0 mL with carbon disulfide R.

**Column:**

- size:  $l = 1.5$  m,  $\emptyset = 4$  mm;
- stationary phase: silanised diatomaceous earth for gas chromatography R impregnated with 10 per cent *m/m* of poly(dimethyl)siloxane R.

The column is preceded by a column containing silanised glass wool.

**Carrier gas:** nitrogen for chromatography R.

**Flow rate:** 40 mL/min.

**Temperature:**

- column: 150 °C;
- injection port: 180 °C;
- detector: 300 °C.

**Detection:** flame ionisation.

**Limit:**

- butylhydroxytoluene: maximum 200 ppm.

**Paraffins:** maximum 1.0 per cent.

*The tap and cotton plugs used must be free from grease.* Prepare a column of anhydrous aluminium oxide 0.23 m long and 20 mm in diameter by adding a slurry of anhydrous aluminium oxide R and light petroleum R1 to a glass tube fitted with a tap and containing light petroleum R1 (before use, dehydrate the anhydrous aluminium oxide by heating it in an oven at 600 °C for 3 h). Allow to settle and reduce the depth of the layer of solvent above the column to about 40 mm. Dissolve 3.0 g of the substance to be examined in 50 mL of warm light petroleum R1, cool, pass the solution through the column at a flow rate of 3 mL/min and wash with 250 mL of light petroleum R1. Concentrate the combined eluate and washings to low bulk by distillation, evaporate to dryness on a water-bath and heat the residue at 105 °C for periods of 10 min until 2 successive weighings do not differ by more than 1 mg. The residue weighs a maximum of 30 mg.

**Pesticide residues:** maximum 0.05 ppm for each organochlorine pesticide, 0.5 ppm for each other pesticide and 1 ppm for the sum of all the pesticides.

*All glassware used is thoroughly washed using phosphate-free detergent as follows. The glassware is immersed in a bath of detergent solution (5 per cent in deionised water) and allowed to soak for 24 h. The detergent is washed off with copious amounts of acetone and hexane for pesticide analysis. It is important to keep glassware specifically for pesticide analyses, it must not be mixed up with glassware used for other applications. The glassware used must be free of chlorinated solvents, plastics and rubber materials, in particular phthalate plasticisers, oxygenated compounds and nitrogenated solvents such as acetonitrile. Use hexane, toluene and acetone for pesticide analysis. Use HPLC grade reagents for ethyl acetate, cyclohexane and water.*

The test consists of the isolation of pesticide residues by size-exclusion chromatography (2.2.30) followed by solid phase extraction and identification by gas chromatography coupled with an electron capture detector or a thermionic detector.

**ISOLATION OF THE PESTICIDE RESIDUES.** As detector, use a UV-visible spectrophotometer set at a wavelength of 254 nm to calibrate the chromatographic column for gel permeation.

Calibration is extremely important in gel permeation chromatography to check that the pressure, solvent flow rate, solvent ratio, temperature and column conditions remain constant. The gel permeation column is to be calibrated at regular intervals using a standard mixture prepared as follows: into a 1000 mL volumetric flask, introduce 50.00 g of maize oil R, 2.00 g of di(2-ethylhexyl) phthalate R, 0.20 g of methoxychlor R, 50.0 mg of perylene R, 50.0 mg of naphthalene R, and 80.0 mg of sulfur R. Dilute to 1000.0 mL with a mixture of equal volumes of cyclohexane R and ethyl acetate R.

To calibrate the column, set the mobile phase at a flow rate of 5 mL/min with a mixture of equal volumes of cyclohexane R and ethyl acetate R. Inject 5 mL of the standard mixture and record the resulting chromatogram. The retention times for the analytes must not vary by more than  $\pm 5$  per cent between calibrations. If the retention time shift is greater than  $\pm 5$  per cent, take corrective action. Excessive retention time shifts may be caused by:

- poor laboratory temperature control;
- the pump containing air; this can be verified by measuring the flow rate: collect 25 mL of column eluate in a volumetric flask and record the time ( $300 \pm 5$  s);
- a leak in the system.

Changes in pressure, in mobile phase flow rate or in column temperature conditions, as well as column contamination, can affect pesticide retention times and are to be monitored. If the flow rate or column pressure are outside desired bands the precolumn or column is to be replaced.

**Test solution.** In a volumetric flask, dissolve 1 g of wool fat, accurately weighed, in a mixture of 1 volume of ethyl acetate R and 7 volumes of cyclohexane R. Add 1 mL of an internal standard (2 ppm) either isodrin R or ditalimphos R and dilute to 20 mL. *The internal standard solutions are used to establish that recoveries of the pesticides from the GPC purification stage, evaporation and solid phase extraction stage are at acceptable levels. Recovery levels of the internal standard solutions from the wool fat are determined by comparing the peak areas of the wool fat extracts with peak areas of solutions of the internal standards.*

**Precolumn:**

- size:  $l = 0.075$  m,  $\emptyset = 21.2$  mm;
- stationary phase: styrene-divinylbenzene copolymer R (5  $\mu$ m).

**Gel permeation column:**

- size:  $l = 0.3$  m,  $\emptyset = 21.2$  mm;
- stationary phase: styrene-divinylbenzene copolymer R (5  $\mu$ m).

**Mobile phase:** ethyl acetate R, cyclohexane R (1:7 V/V).

**Flow rate:** 5 mL/min.

**Detection:** spectrophotometer at 254 nm.

Inject 5 mL of the test solution. Discard the first 95 mL (19 min) of eluate containing the substance to be examined. Collect the next 155 mL of eluate (31 min) containing any pesticide residues in an evaporating vessel.

Place the 155 mL of the eluate collected from the gel permeation chromatography column into an evaporating vessel. Place this vessel in an autoevaporator setting the water-bath temperature at 45 °C and the nitrogen pressure at 55 kPa. Evaporate the eluate down to 0.5 mL.

To prepare the solid phase extraction cartridges take some magnesium silicate for pesticide residue analysis R and heat it in a muffle furnace at 700 °C for 4 h to remove moisture and polychlorinated biphenyls. Subsequently allow the magnesium silicate to cool for 2 h and transfer it directly to an oven at 100-105 °C, and allow to stand for 30 min. Transfer

the magnesium silicate to a stoppered glass jar and allow to equilibrate for 48 h. This material may be used for up to 2 weeks. After that period the magnesium silicate is to be reactivated, by heating at 600 °C for 2 h in a muffle furnace. Remove the magnesium silicate from the furnace, cool and store in a stoppered glass jar. The magnesium silicate is deactivated by adding 1 per cent of *water R*. After the water has been added, shake the magnesium silicate intermittently over 15 min just prior to use. The deactivated magnesium silicate is suitable for use for up to 1 week. It is essential that only deactivated magnesium silicate is used.

Take a 6 mL empty solid phase extraction cartridge and weigh into the cartridge 1 g of the deactivated magnesium silicate.

At this stage the GPC fraction still contains about 10 per cent of the substance to be examined, so further clean-up is necessary. A separate isolation procedure is carried out a) for organochlorine and synthetic pyrethroid pesticides and b) for organophosphorus pesticides. Place a preconditioned solid phase extraction cartridge containing 1 g of deactivated *magnesium silicate for pesticide residue analysis R* onto a vacuum manifold.

Condition the cartridge by adding 10 mL of *toluene R* and allowing the solvent to elute through the cartridge. Place the 0.5 mL of the solvent fraction from the evaporating vessel on the preconditioned cartridge. Elute the pesticide fractions from the cartridges using 20 mL of either of the 2 different solvent systems shown below:

- for determination of the organochlorine and synthetic pyrethroid pesticides: *toluene R*; a very small amount of the substance to be examined is co-eluted;
- for determination of the organophosphorus pesticides: a mixture of 2 volumes of *acetone R* and 98 volumes of *toluene R*; this solvent system is used to elute all the pesticides including the more polar organophosphorus pesticides; unfortunately, some of the substance to be examined is co-eluted with this solvent system, which can interfere with the electron capture detector.

Collect the eluate from the extraction cartridges in 25 mL glass vials. Quantitatively transfer the eluate to an evaporating vessel, washing the vial with 3 quantities, each of 10 mL, of *hexane R*.

Place the evaporating vessel on the autoevaporator and evaporate the solid phase extraction fractions down to 0.5 mL. The water-bath temperature is set at 45 °C and the nitrogen pressure is 55 kPa.

Examine the residues by gas chromatography (2.2.28) using electron capture and thermionic detectors as described below.

**Recovery.** Calculate the recovery correction factor ( $R_{cf}$ ) of the internal standards (*ditalimphos R* or *isodrin R*) added to the test solution using the following expression:

$$\frac{A_2}{A_1} \times 100$$

- $A_1$  = peak area of an internal standard 1 ppm in solution;  
 $A_2$  = peak area of internal standard extracted from the test solution.

5 mL of the 20 mL test solution containing 1 mL of 2 ppm internal standard concentrated to 0.5 mL is equivalent to 1 ppm of the internal standard in the solution.

If the recovery of the internal standards falls outside the range of 70 per cent to 110 per cent the test is not valid.

**Reference solutions.** Prepare reference solutions of pesticides using the pesticides standards at a concentration of 0.5 ppm (see composition of reference solutions A to D in Table 0134.-1). Commercially available pesticides may be purchased. The individual standards have a concentration of 10 ppm.

At the same time prepare solutions of pesticides equivalent to the limit of detection of the method (see recommended compositions in Table 0134.-1). These reference solutions are

used to optimise the electron capture detector and thermionic detector to achieve the detection limits of the method (reference solutions E and F).

To prepare the reference solutions at the different concentrations use a calibrated pipette and volumetric flasks. To prepare the internal standard solutions G and H use a four-place analytical balance, pipette and volumetric flasks.

Table 0134.-1. – *Composition of the reference solutions*

<b>Reference solution A (0.5 ppm or 0.5 mg/L) (organochlorine and synthetic pyrethroid pesticides)</b>	<b>Reference solution B (0.5 ppm or 0.5 mg/L) (organochlorine and synthetic pyrethroid pesticides)</b>

<i>Ditalimphos R</i> (1 ppm or 1.0 mg/L)	<i>Isodrin R</i> (1 ppm or 1.0 mg/L)

**IDENTIFICATION AND QUANTIFICATION OF THE PESTICIDE RESIDUES.** To identify any pesticide residues compare the chromatograms obtained with chromatograms obtained with reference solutions A to D.

The identity of the pesticides can be confirmed by spiking samples or overlaying chromatograms using an integration package on a computer. The interpretation of pesticides in trace residue analyses is extremely complex. The detectors, particularly the electron capture detector, are prone to interference, both from the substance to be examined itself, and from solvents, reagents and apparatus used in the extraction. These peaks can easily be misinterpreted or quoted as a false

positive. Confirmation of pesticides can be achieved by running samples and standards on different capillary columns (see chromatographic systems A or B described below). The peaks can be identified by using the information in Table 0134.-2.

Table 0134.-2. – *Elution order of the pesticides on chromatographic systems A and B*

Chromatographic system A	Chromatographic system B
Tecnazene	Tecnazene
α-Hexachlorocyclohexane	Hexachlorobenzene
Hexachlorobenzene	α-Hexachlorocyclohexane
β-Hexachlorocyclohexane	Diazinon
Lindane	Lindane
Propetamphos	Propetamphos
δ-Hexachlorocyclohexane	Heptachlor
Diazinon	Dichlofenthion
Dichlofenthion	Aldrin
Chlorpyrifos-methyl	Chlorpyrifos-methyl
Heptachlor	Fenclorphos
Fenclorphos	β-Hexachlorocyclohexane
Aldrin	δ-Hexachlorocyclohexane
Malathion	Pirimiphos-ethyl
Chlorpyrifos	Chlorpyrifos
Bromophos	Bromophos
Pirimiphos-ethyl	Malathion
Heptachlor epoxide	Heptachlor epoxide
Chlorfenvinphos (E)	o,p'-DDE
Chlorfenvinphos (Z)	Chlorfenvinphos (E)
Bromophos-ethyl	α-Endosulfan
o,p'-DDE	Chlorfenvinphos (Z)
α-Endosulfan	Bromophos-ethyl
Tetrachlorvinphos	p,p'-DDE
Dieldrin	Dieldrin
p,p'-DDE	Tetrachlorvinphos
o,p'-DDT	o,p'-DDT
Endrin	Endrin
β-Endosulfan	o,p'-DDD
o,p'-DDD	p,p'-DDD
p,p'-DDD	β-Endosulfan
Ethion	Ethion
Carbophenothion	p,p'-DDT
p,p'-DDT	Carbophenothion
Methoxychlor	Methoxychlor
Phosalone	Cyhalothrin
Cyhalothrin (2 isomers)	cis-Permethrin
cis-Permethrin	Phosalone
trans-Permethrin	trans-Permethrin
Coumaphos	Cypermethrin (4 isomers)
Cypermethrin (4 isomers)	Coumaphos
Fenvalerate (2 isomers)	Fenvalerate (2 isomers)
Deltamethrin	Deltamethrin

A knowledge of the different responses the pesticides have with the 2 detectors is useful in identification of unknown peaks.

Once the pesticides have been identified, calculate the content of each pesticide using the following expression:

$$C_P = \frac{P_P \times D \times C_e}{P_e} \times \frac{100}{R_{cf}}$$

- $C_p$  = concentration of identified pesticide (ppm);  
 $P_p$  = peak area of the individual pesticide in the test sample obtained;  
 $C_e$  = concentration of the individual pesticide in the external standard (ppm);  
 $P_e$  = peak area of the individual pesticide in the external standard;  
 $D$  = dilution factor;  
 $R_{cf}$  = recovery correction factor.

The dilution factor ( $D$ ) can be defined as follows:

$$\frac{V_1}{m \times \frac{V_2}{V_3}}$$

- $V_1$  = volume of sample obtained after the 2<sup>nd</sup> evaporation stage;  
 $m$  = sample weight;  
 $V_2$  = GPC injection volume;  
 $V_3$  = sample volumetric flask volume.

*Chromatographic system A:*

*Precolumn:*

- *material:* deactivated silica;
- *size:*  $l = 4.5$  m,  $\emptyset = 0.53$  mm.

*Column:*

- *material:* fused silica;
- *size:*  $l = 60$  m,  $\emptyset = 0.25$  mm;
- *stationary phase:* poly(dimethyl)(diphenyl)siloxane R (film thickness 0.25 µm).

*Carrier gas:* helium for chromatography R.

*Linear velocity:* 25 cm/s.

*Pressure:* 180 kPa.

*Temperature:*

	Time (min)	Temperature (°C)
Column	0 - 1	75
	1 - 5	75 → 175
	5 - 30	175 → 275
	30 - 40	275 → 285
	40 - 55	285

## Temperature:

	Time (min)	Temperature (°C)
Column	0 - 1	75
	1 - 5	75 → 175
	5 - 30	175 → 275
	30 - 40	275 → 285
	40 - 55	285
Injection port		300
Detector		350

**Detection:** electron capture or thermionic specific detector.

**Injection:** 2 µL.

**Chlorides:** maximum 150 ppm.

Boil 1.0 g with 20 mL of *ethanol (90 per cent V/V) R* in a round-bottomed flask fitted with a reflux condenser for 5 min. Cool, add 40 mL of *water R* and 0.5 mL of *nitric acid R* and filter. To the filtrate add 0.15 mL of a 10 g/L solution of *silver nitrate R* in *ethanol (90 per cent V/V) R*. Allow to stand for 5 min protected from light. Any opalescence in the solution is not more intense than that in a standard prepared at the same time by adding 0.15 mL of a 10 g/L solution of *silver nitrate R* in *ethanol (90 per cent V/V) R* to a mixture of 0.2 mL of 0.02 M *hydrochloric acid*, 20 mL of *ethanol (90 per cent V/V) R*, 40 mL of *water R* and 0.5 mL of *nitric acid R*.

**Loss on drying (2.2.32):** maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 1 h.

**Sulfated ash (2.4.14):** maximum 0.15 per cent.

Ignite 5.0 g and use the residue to determine the sulfated ash.

## STORAGE

At a temperature not exceeding 25 °C.

## LABELLING

The label states, where applicable, the concentration of added butylhydroxytoluene.

01/2008:0969  
corrected 6.0

## WOOL FAT, HYDROGENATED

## Adeps lanae hydrogenatus

## DEFINITION

Mixture of higher aliphatic alcohols and sterols obtained from the direct, high-pressure, high-temperature hydrogenation of *wool fat (0134)* during which the esters and acids present are reduced to the corresponding alcohols. It may contain butylhydroxytoluene.

## CHARACTERS

**Appearance:** white or pale yellow, unctuous substance.

**Solubility:** practically insoluble in water, soluble in boiling alcohol and in light petroleum.

## IDENTIFICATION

**First identification:** B.

**Second identification:** A, C.

A. Melting point (see Tests).

B. Examine the chromatograms obtained in the test for fatty alcohols and sterols.

**Results:** the principal peaks in the chromatogram obtained with the test solution are similar in retention time and size to the principal peaks in the chromatogram obtained with reference solution (a).

C. Dissolve 50 mg in 5 mL of *methylene chloride R* and add 1 mL of *acetic anhydride R* and 0.1 mL of *sulfuric acid R*. A green colour is produced.

## TESTS

**Melting point (2.2.15):** 45 °C to 55 °C. Allow to stand at 20 °C for 16 h.

**Acid value (2.5.1):** maximum 1.0, determined on 5.0 g.

**Hydroxyl value (2.5.3, Method A):** 140 to 180.

**Saponification value (2.5.6):** maximum 8.0. Heat under reflux for 4 h.

**Fatty alcohols and sterols.** Gas chromatography (2.2.28).

**Test solution.** Dissolve 0.25 g of the substance to be examined in 60 mL of *ethanol R* and dilute to 100.0 mL with the same solvent.

**Reference solution (a).** Dissolve 0.25 g of *hydrogenated wool fat CRS* in 60 mL of *ethanol R* and dilute to 100.0 mL with the same solvent.

**Reference solution (b).** Dissolve 50 mg of *cetyl alcohol CRS* and 50 mg of *stearyl alcohol CRS* in 60 mL of *ethanol R* and dilute to 100.0 mL with the same solvent.

**Column:**

- **material:** fused silica,
- **size:**  $l = 30$  m,  $\varnothing = 0.25$  mm,
- **stationary phase:** *poly(dimethyl)siloxane R* or another non-polar phase (film thickness: 0.25 µm).

**Carrier gas:** *helium for chromatography R* at a pressure of 100 kPa

**Temperature:**

	Time (min)	Temperature (°C)
Column	0 - 5	100
	5 - 45	100 → 300
	45 - 60	300
Injection port		325
Detector		350

**Detection:** flame ionisation.

**Injection:** 1 µL.

The chromatogram obtained with the test solution does not differ significantly from the chromatogram obtained with reference solution (a) (Figure 0969-1) and it does not show enhanced peaks with retention times corresponding to cetyl alcohol and stearyl alcohol present in the chromatogram obtained with reference solution (b).

**Heavy metals (2.4.8):** maximum 10 ppm.

2.0 g complies with test C. Prepare the reference solution using 2 mL of *lead standard solution (10 ppm Pb) R*.

**Loss on drying (2.2.32):** maximum 3.0 per cent, determined on 2.000 g by drying in an oven at 105 °C for 1 h.

**Total ash (2.4.16):** maximum 0.1 per cent, determined on 5.0 g.

## STORAGE

In a well-filled container, protected from light.

Figure 0969.-1. – Chromatogram for the test for fatty alcohols and sterols (reference solution (a)) in hydrogenated wool fat

## WOOL FAT, HYDROUS

### Adeps lanae cum aqua

#### DEFINITION

Mixture of 75 per cent *m/m* of wool fat and 25 per cent *m/m* of water. It is obtained by the gradual addition of water to melted wool fat with continuous stirring. It may contain not more than 150 ppm of butylhydroxytoluene.

#### CHARACTERS

*Appearance*: pale yellow, unctuous substance.

#### IDENTIFICATION

- In a test-tube, dissolve 0.5 g in 5 mL of *chloroform R* and add 1 mL of *acetic anhydride R* and 0.1 mL of *sulfuric acid R*. A green colour develops.
- Dissolve 50 mg in 5 mL of *chloroform R*, add 5 mL of *sulfuric acid R* and shake. A red colour develops and an intense green fluorescence appears in the lower layer.

#### TESTS

**Water-soluble acid or alkaline substances.** Melt 6.7 g on a water-bath and shake vigorously for 2 min with 75 mL of *water R* previously heated to 90-95 °C. Allow to cool and filter through filter paper previously rinsed with *water R*. To 60 mL of the filtrate (which may not be clear) add 0.25 mL of *bromothymol blue solution RI*. Not more than 0.2 mL of 0.02 M *hydrochloric acid* or 0.15 mL of 0.02 M *sodium hydroxide* is required to change the colour of the indicator.

**Drop point (2.2.17):** 38 °C to 44 °C.

To fill the metal cup, melt the residue obtained in the test for wool-fat content on a water-bath, cool to about 50 °C, pour into the cup and allow to stand at 15-20 °C for 24 h.

**01/2008:0135 Water-absorption capacity.** Place 10 g of the residue obtained in the test for wool-fat content in a mortar. Add *water R* in portions of 0.2-0.5 mL from a burette, stirring vigorously after each addition to incorporate the *water R*. The end-point is reached when visible droplets remain which cannot be incorporated. Not less than 20 mL of *water R* is absorbed.

**Acid value (2.5.1):** maximum 0.8, determined on 5.0 g dissolved in 25 mL of the prescribed mixture of solvents.

**Peroxide value (2.5.5, Method A):** maximum 15.

**Saponification value (2.5.6):** 67 to 79, determined on 2.00 g while heating under reflux for 4 h.

**Water-soluble oxidisable substances.** To 10 mL of the filtrate obtained in the test for water-soluble acid or alkaline substances add 1 mL of *dilute sulfuric acid R* and 0.1 mL of 0.02 M *potassium permanganate*. After 10 min, the solution is not completely decolourised.

**Butylhydroxytoluene.** Gas chromatography (2.2.28).

**Internal standard solution.** Dissolve 0.2 g of *methyl decanoate R* in *carbon disulfide R* and dilute to 100.0 mL with the same solvent. Dilute 1.0 mL of this solution to 10.0 mL with *carbon disulfide R*.

**Test solution (a).** Dissolve 1.0 g of the residue obtained in the test for wool-fat content in *carbon disulfide R* and dilute to 10.0 mL with the same solvent.

**Test solution (b).** Dissolve 1.0 g of the residue obtained in the test for wool-fat content in *carbon disulfide R*, add 1.0 mL of the internal standard solution and dilute to 10.0 mL with *carbon disulfide R*.

**Reference solution.** Dissolve 0.2 g of *butylhydroxytoluene R* in *carbon disulfide R* and dilute to 100.0 mL with the same solvent. Dilute 1.0 mL of the solution to 10.0 mL with *carbon disulfide R*. To 1.0 mL of this solution add 1.0 mL of the internal standard solution and dilute to 10.0 mL with *carbon disulfide R*.

**Column:**

- size:  $l = 1.5$  m,  $\varnothing = 4$  mm;
- stationary phase: silanised diatomaceous earth for gas chromatography R impregnated with 10 per cent *m/m* of poly(dimethyl)siloxane R.

The column is preceded by a column containing silanised glass wool.

Carrier gas: nitrogen for chromatography R.

Flow rate: 40 mL/min.

**Temperature:**

- column: 150 °C;
- injection port: 180 °C;
- detector: 300 °C.

Detection: flame ionisation.

**Limit:**

- butylhydroxytoluene: maximum 150 ppm.

**Paraffins:** maximum 1.0 per cent.

*The tap and cotton plugs used must be free from grease.*

Prepare a column of anhydrous aluminium oxide 230 mm long and 20 mm in diameter by adding a slurry of anhydrous aluminium oxide R and light petroleum R1 to a glass tube fitted with a tap and containing light petroleum R1. Allow to settle and reduce the depth of the layer of solvent above the column to about 40 mm. Dissolve 3.0 g of the residue obtained in the test for wool-fat content in 50 mL of warm light petroleum R1, cool, pass the solution through the column at a rate of 3 mL/min and wash with 250 mL of light petroleum R1.

Concentrate the combined eluate and washings to low bulk by distillation, evaporate to dryness on a water-bath and heat the residue at 105 °C for periods of 10 min until 2 successive weighings do not differ by more than 1 mg. The residue weighs a maximum of 30 mg.

**Chlorides:** maximum 115 ppm.

Boil 1.3 g with 20 mL of ethanol (90 per cent V/V) R under a reflux condenser for 5 min. Cool, add 40 mL of water R and 0.5 mL of nitric acid R and filter. To the filtrate add 0.15 mL of a 10 g/L solution of silver nitrate R in ethanol (90 per cent V/V) R. Allow to stand for 5 min, protected from light. Any opalescence in the solution is not more intense than that in a standard prepared at the same time by adding 0.15 mL of a 10 g/L solution of silver nitrate R in ethanol (90 per cent V/V) R to a mixture of 0.2 mL of 0.02 M hydrochloric acid, 20 mL of ethanol (90 per cent V/V) R, 40 mL of water R and 0.5 mL of nitric acid R.

**Sulfated ash (2.4.14):** maximum 0.1 per cent.

Ignite 5.0 g and use the residue.

**Wool-fat content:** 72.5 per cent to 77.5 per cent.

In a suitable tared dish containing a glass rod, heat 30.0 g to constant mass on a water-bath, stirring continuously. Weigh the residue.

**STORAGE**

At a temperature not exceeding 25 °C.

**LABELLING**

The label states, where applicable, the concentration of added butylhydroxytoluene.

**XANTHAN GUM****Xanthani gummi**

[11138-66-2]

**DEFINITION**

High-molecular-mass anionic polysaccharide produced by fermentation of carbohydrates with *Xanthomonas campestris*. It consists of a principal chain of  $\beta(1\rightarrow4)$ -linked D-glucose units with trisaccharide side chains, on alternating anhydroglucose units, consisting of 1 glucuronic acid unit included between 2 mannose units. Most of the terminal units contain a pyruvate moiety and the mannose unit adjacent to the principal chain may be acetylated at C-6.

Xanthan gum has a relative molecular mass of approximately  $1 \times 10^6$ . It exists as the sodium, potassium or calcium salt.

*Content*: minimum 1.5 per cent of pyruvoyl groups ( $C_3H_3O_2$ ;  $M_r$  71.1) (dried substance).

**CHARACTERS**

*Appearance*: white or yellowish-white, free-flowing powder.

*Solubility*: soluble in water giving a highly viscous solution, practically insoluble in organic solvents.

**IDENTIFICATION**

A. In a flask, suspend 1 g in 15 mL of 0.1 M hydrochloric acid. Close the flask with a fermentation bulb containing barium hydroxide solution R and heat carefully for 5 min. The barium hydroxide solution shows a white turbidity.

B. To 300 mL of water R, previously heated to 80 °C and stirred rapidly with a mechanical stirrer in a 400 mL beaker, add, at the point of maximum agitation, a dry blend of 1.5 g of carob bean gum R and 1.5 g of the substance to be examined. Stir until the mixture forms a solution, and then continue stirring for 30 min or longer. Do not allow the water temperature to drop below 60 °C during stirring. Discontinue stirring and allow the mixture to stand for at least 2 h. A firm rubbery gel forms after the temperature drops below 40 °C but no such gel forms in a 1 per cent control solution of the sample prepared in the same manner but omitting the carob bean gum.

**TESTS**

**pH (2.2.3)**: 6.0 to 8.0 for a 10.0 g/L solution.

**2-Propanol**. Gas chromatography (2.2.28).

*Internal standard solution*. Dilute 0.50 g of 2-methyl-2-propanol R to 500 mL with water R.

*Test solution*. To 200 mL of water R in a 1000 mL round-bottomed flask, add 5.0 g of the substance to be examined and 1 mL of a 10 g/L emulsion of dimeticone R in liquid paraffin R, stopper the flask and shake for 1 h. Distil about 90.0 mL, mix the distillate with 4.0 mL of the internal standard solution and dilute to 100.0 mL with water R.

*Reference solution*. Dilute a suitable quantity of 2-propanol R, accurately weighed, with water R to obtain a solution having a known concentration of 2-propanol of about 1 mg/mL. To 4.0 mL of this solution add 4.0 mL of the internal standard solution and dilute to 100.0 mL with water R.

*Column*:

- size:  $l = 1.8$  m,  $\varnothing = 4.0$  mm;
- stationary phase: styrene-divinylbenzene copolymer R (149-177  $\mu$ m).

*Carrier gas*: helium for chromatography R.

*Flow rate*: 30 mL/min.

**04/2009:1277** *Temperature*:

- column: 165 °C;
- injection port and detector: 200 °C.

*Detection*: flame ionisation.

*Injection*: 5  $\mu$ L.

*Relative retention* with reference to 2-propanol: 2-methyl-2-propanol = about 1.5.

*Limit*:

- 2-propanol: maximum 750 ppm.

**Other polysaccharides**. Thin-layer chromatography (2.2.27).

*Test solution*. To 10 mg of the substance to be examined in a thick-walled centrifuge test tube add 2 mL of a 230 g/L solution of trifluoroacetic acid R, shake vigorously to dissolve the forming gel, stopper the test tube, and heat the mixture at 120 °C for 1 h. Centrifuge the hydrolysate, transfer the clear supernatant liquid carefully into a 50 mL flask, add 10 mL of water R and evaporate the solution to dryness under reduced pressure. Take up the residue thus obtained in 10 mL of water R and evaporate to dryness under reduced pressure. Wash 3 times with 20 mL of methanol R and evaporate under reduced pressure. To the resulting clear film which has no odour of acetic acid, add 0.1 mL of water R and 1 mL of methanol R. Centrifuge to separate the amorphous precipitate. Dilute the supernatant liquid, if necessary, to 1 mL with methanol R.

*Reference solution*. Dissolve 10 mg of glucose R and 10 mg of mannose R in 2 mL of water R and dilute to 10 mL with methanol R.

*Plate*: TLC silica gel plate R.

*Mobile phase*: 16 g/L solution of sodium dihydrogen phosphate R, butanol R, acetone R (10:40:50 V/V/V).

*Application*: 5  $\mu$ L as bands.

*Development*: over a path of 15 cm.

*Detection*: spray with a solution of 0.5 g of diphenylamine R in 25 mL of methanol R to which 0.5 mL of aniline R and 2.5 mL of phosphoric acid R have been added. Heat for 5 min at 120 °C and examine in daylight.

*System suitability*: reference solution:

- the chromatogram shows 2 clearly separated greyish-brown zones due to glucose and mannose in the middle third.

*Results*: the chromatogram obtained with the test solution shows 2 zones corresponding to the zones due to glucose and mannose in the chromatogram obtained with the reference solution. In addition, 1 weak reddish and 2 faint bluish-grey bands may be visible just above the line of application. 1 or 2 bluish-grey bands may also be seen in the upper quarter of the chromatogram. No other bands are visible.

**Loss on drying (2.2.32)**: maximum 15.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 2.5 h.

**Total ash (2.4.16)**: 6.5 per cent to 16.0 per cent.

**Microbial contamination**

TAMC: acceptance criterion  $10^3$  CFU/g (2.6.12).

TYMC: acceptance criterion  $10^2$  CFU/g (2.6.12).

**ASSAY**

*Test solution*. Dissolve a quantity of the substance to be examined corresponding to 120.0 mg of the dried substance in water R and dilute to 20.0 mL with the same solvent.

*Reference solution*. Dissolve 45.0 mg of pyruvic acid R in water R and dilute to 500.0 mL with the same solvent.

Place 10.0 mL of the test solution in a 50 mL round-bottomed flask, add 20.0 mL of 0.1 M hydrochloric acid and weigh. Boil on a water-bath under a reflux condenser for 3 h.

Weigh and adjust to the initial mass with water R. In a separating funnel mix 2.0 mL of the solution with 1.0 mL of dinitrophenylhydrazine-hydrochloric solution R. Allow to stand for 5 min and add 5.0 mL of ethyl acetate R. Shake and allow the solids to settle. Collect the upper layer and shake with

3 quantities, each of 5.0 mL, of *sodium carbonate solution R*. Combine the aqueous layers and dilute to 50.0 mL with *sodium carbonate solution R*. Mix. Treat 10.0 mL of the reference solution at the same time and in the same manner as for the test solution.

Immediately measure the absorbance (2.2.25) of the 2 solutions at 375 nm, using *sodium carbonate solution R* as the compensation liquid.

The absorbance of the test solution is not less than that of the reference solution, which corresponds to a content of pyruvoyl groups of not less than 1.5 per cent.

#### FUNCTIONALITY-RELATED CHARACTERISTICS

*This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient (see chapter 5.15). This section is a non-mandatory part of the monograph and it is not necessary to verify the characteristics to demonstrate compliance. Control of these characteristics can however contribute to the quality of a medicinal product by improving the consistency of the manufacturing process and the performance of the medicinal product during use. Where control methods are cited, they are recognised as being suitable for the purpose, but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.*

*The following characteristics may be relevant for xanthan gum used as viscosity-increasing agent.*

**Apparent viscosity** (2.2.10): typically minimum 600 mPa·s.

Add 3.0 g within 45-90 s into 250 mL of a 12 g/L solution of *potassium chloride R* in a 500 mL beaker stirring with a low-pitch propeller-type stirrer rotating at 800 r/min. When adding the substance take care that agglomerates are destroyed. Add an additional quantity of 44 mL of *water R*, to rinse any adhering residue from the walls of the beaker. Stir the preparation at 800 r/min for 2 h whilst maintaining the temperature at  $24 \pm 1$  °C. Determine the viscosity within 15 min at  $24 \pm 1$  °C using a rotating viscosimeter set at 60 r/min and equipped with a rotating spindle 1.6 mm high and 12.7 mm in diameter which is attached to a shaft 3.2 mm in diameter. The distance from the top of the cylinder to the lower tip of the shaft should be 25.4 mm and the immersion depth 50.0 mm.

*The following characteristics may be relevant for xanthan gum used as matrix former in prolonged-release tablets.*

**Apparent viscosity**: see test above.

**Particle-size distribution** (2.9.31 or 2.9.38).

**Powder flow** (2.9.36).

#### CHARACTERS

**Appearance**: white or almost white, crystalline powder, hygroscopic.

**Solubility**: freely soluble in water, very soluble in methanol, freely soluble in methylene chloride.

#### IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

*Comparison: xylazine hydrochloride CRS.*

B. It gives reaction (b) of chlorides (2.3.1).

#### TESTS

**Solution S**. Dissolve 5.0 g in *carbon dioxide-free water R* prepared from *distilled water R*, heating at 60 °C if necessary; allow to cool and dilute to 50.0 mL with the same solvent.

**Appearance of solution**. Solution S is not more opalescent than reference suspension II (2.2.1) and is colourless (2.2.2, Method II).

**pH** (2.2.3): 4.0 to 5.5 for solution S.

**Impurity A**: maximum 100 ppm.

**Solution A**. Dissolve 0.25 g of the substance to be examined in *methanol R* and dilute to 10 mL with the same solvent. This solution is used to prepare the test solution.

**Solution B**. Dissolve 50 mg of *2,6-dimethylaniline R* in *methanol R* and dilute to 100 mL with the same solvent. Dilute 1 mL of the solution to 100 mL with *methanol R*. This solution is used to prepare the reference solution.

Using 2 flat-bottomed tubes with an inner diameter of about 10 mm, place in the first tube 2 mL of solution A, and in the second tube 1 mL of solution B and 1 mL of *methanol R*. To each tube add 1 mL of a freshly prepared 10 g/L solution of *dimethylaminobenzaldehyde R* in *methanol R* and 2 mL of *glacial acetic acid R* and allow to stand at room temperature for 10 min. Compare the colours in diffused daylight, viewing vertically against a white background. Any yellow colour in the test solution is not more intense than that in the reference solution.

**Related substances**. Liquid chromatography (2.2.29). Prepare the solutions immediately before use.

**Solvent mixture**. Mix 8 volumes of *acetonitrile R*, 30 volumes of *methanol R* and 62 volumes of a 2.72 g/L solution of *potassium dihydrogen phosphate R* adjusted to pH 7.2 with *dilute sodium hydroxide solution R*.

**Test solution**. Dissolve 0.100 g of the substance to be examined in the solvent mixture and dilute to 20.0 mL with the solvent mixture.

**Reference solution (a)**. Dissolve 5.0 mg of the substance to be examined, 5.0 mg of *2,6-dimethylaniline R* (impurity A), 5.0 mg of *xylazine impurity C CRS* and 5.0 mg of *xylazine impurity E CRS* in *acetonitrile R* and dilute to 100.0 mL with the same solvent. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

**Reference solution (b)**. With the aid of ultrasound, dissolve the contents of a vial of *xylazine impurity mixture CRS* (impurities B and D) in 1.0 mL of the solvent mixture.

**Column**:

- size:  $l = 0.15$  m,  $\varnothing = 3.9$  mm;
- stationary phase: end-capped octylsilyl silica gel for chromatography with polar incorporated groups R (5 µm);
- temperature: 40 °C.

**Mobile phase**:

- mobile phase A: mix 30 volumes of *methanol R* and 70 volumes of a 2.72 g/L solution of *potassium dihydrogen phosphate R* adjusted to pH 7.2 with *dilute sodium hydroxide solution R*;

07/2010:1481

## XYLAZINE HYDROCHLORIDE FOR VETERINARY USE

Xylazini hydrochloridum ad usum  
veterinarium

$C_{12}H_{17}ClN_2S$   
[23076-35-9]

$M_r$  256.8

#### DEFINITION

*N*-(2,6-Dimethylphenyl)-5,6-dihydro-4*H*-1,3-thiazin-2-amine hydrochloride.

**Content**: 98.0 per cent to 102.0 per cent (dried substance).

– mobile phase B: methanol R, acetonitrile R (30:70 V/V);

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 15	89 → 28	11 → 72
15 - 21	28	72

Flow rate: 1.0 mL/min.

Detection: spectrophotometer at 230 nm.

Equilibration: with a mixture of 28 volumes of mobile phase A and 72 volumes of mobile phase B for at least 30 min.

Injection: 20 µL.

Identification of impurities: use the chromatogram supplied with xylazine impurity mixture CRS and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities B and D; use the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A, C and E.

Relative retention with reference to xylazine (retention time = about 7.5 min): impurity D = about 0.5; impurity A = about 0.8; impurity B = about 1.3; impurity E = about 1.6; impurity C = about 2.2.

System suitability: reference solution (a):

– resolution: minimum 4.0 between the peaks due to impurity A and xylazine.

Limits:

- impurities B, D: for each impurity, not more than twice the area of the peak due to xylazine in the chromatogram obtained with reference solution (a) (0.2 per cent);
- impurities C, E: for each impurity, not more than twice the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- unspecified impurities: for each impurity, not more than twice the area of the peak due to xylazine in the chromatogram obtained with reference solution (a) (0.2 per cent);
- total of impurities other than B, C, D and E: not more than twice the area of the peak due to xylazine in the chromatogram obtained with reference solution (a) (0.2 per cent);
- disregard limit: 0.5 times the area of the peak due to xylazine in the chromatogram obtained with reference solution (a) (0.05 per cent); disregard any peak due to the blank.

Heavy metals (2.4.8): maximum 10 ppm.

12 mL of solution S complies with test A. Prepare the reference solution using 10 mL of lead standard solution (1 ppm Pb) R.

Loss on drying (2.2.32): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 2 h.

Sulfated ash (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

#### ASSAY

Dissolve 0.200 g in 25 mL of ethanol (96 per cent) R. Add 25 mL of water R. Titrate with 0.1 M sodium hydroxide, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M sodium hydroxide is equivalent to 25.68 mg of C<sub>12</sub>H<sub>17</sub>ClN<sub>2</sub>S.

#### STORAGE

In an airtight container, protected from light.

#### IMPURITIES

Specified impurities: A, B, C, D, E.

A. 2,6-dimethylaniline (2,6-xylidine),

B. N,N'-bis(2,6-dimethylphenyl)thiourea,

C. 2,6-dimethylphenyl isothiocyanate,

D. N-(2,6-dimethylphenyl)-N'-(3-hydroxypropyl)thiourea,

E. methyl (2,6-dimethylphenyl)carbamodithioate.

01/2009:1381

## XYLITOL

### Xylitolum

C<sub>5</sub>H<sub>12</sub>O<sub>5</sub>  
[87-99-0]

M<sub>r</sub> 152.1

#### DEFINITION

Meso-xylitol.

Content: 98.0 per cent to 102.0 per cent (anhydrous substance).

#### CHARACTERS

Appearance: white or almost white, crystalline powder or crystals.

Solubility: very soluble in water, sparingly soluble in ethanol (96 per cent).

#### IDENTIFICATION

First identification: B.

Second identification: A, C.

A. Melting point (2.2.14): 92 °C to 96 °C.

B. Infrared absorption spectrophotometry (2.2.24).

Preparation: mulls in liquid paraffin R.

Comparison: xylitol CRS.

C. Thin-layer chromatography (2.2.27).

Test solution. Dissolve 25 mg of the substance to be examined in water R and dilute to 5 mL with the same solvent.

Reference solution (a). Dissolve 25 mg of xylitol CRS in water R and dilute to 5 mL with the same solvent.

**Reference solution (b).** Dissolve 25 mg of *mannitol CRS* and 25 mg of *xylitol CRS* in *water R* and dilute to 5 mL with the same solvent.

**Plate:** *TLC silica gel G plate R*.

**Mobile phase:** *water R*, *ethyl acetate R*, *propanol R* (10:20:70 *V/V/V*).

**Application:** 2  $\mu$ L.

**Development:** over 3/4 of the plate.

**Drying:** in air.

**Detection:** spray with *4-aminobenzoic acid solution R*, dry in a current of cold air until the acetone is removed, then heat at 100 °C for 15 min; allow to cool, spray with a 2 g/L solution of *sodium periodate R*, dry in a current of cold air, then heat at 100 °C for 15 min.

**System suitability:** reference solution (b):

– the chromatogram shows 2 clearly separated spots.

**Results:** the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

## TESTS

**Appearance of solution.** The solution is not more opalescent than reference suspension IV (2.2.1) and not more intensely coloured than reference solution BY<sub>7</sub> (2.2.2, Method II).

Dissolve 2.5 g in *water R* and dilute to 50.0 mL with the same solvent.

**Conductivity (2.2.38):** maximum 20  $\mu$ S $\cdot$ cm<sup>-1</sup>.

Dissolve 20.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100.0 mL with the same solvent. Measure the conductivity of the solution while gently stirring with a magnetic stirrer.

**Reducing sugars:** maximum 0.2 per cent, calculated as glucose equivalent.

Dissolve 5.0 g in 6 mL of *water R* with the aid of gentle heat. Cool and add 20 mL of *cupri-citric solution R* and a few glass beads. Heat so that boiling begins after 4 min and maintain boiling for 3 min. Cool rapidly and add 100 mL of a 2.4 per cent *V/V* solution of *glacial acetic acid R* and 20.0 mL of 0.025 *M* iodine. With continuous shaking, add 25 mL of a mixture of 6 volumes of *hydrochloric acid R* and 94 volumes of *water R* and, when the precipitate has dissolved, titrate the excess of iodine with 0.05 *M* sodium thiosulfate using 1 mL of *starch solution R*, added towards the end of the titration, as indicator. Not less than 12.8 mL of 0.05 *M* sodium thiosulfate is required.

**Related substances.** Gas chromatography (2.2.28).

**Internal standard solution.** Dissolve 5 mg of *erythritol R* in *water R* and dilute to 25.0 mL with the same solvent.

**Test solution (a).** Dissolve 5.000 g of the substance to be examined in *water R* and dilute to 100.0 mL with the same solvent.

**Test solution (b).** Dilute 1.0 mL of test solution (a) to 10.0 mL with *water R*.

**Reference solution (a).** Dissolve 5.0 mg each of *L-arabinitol CRS* (impurity A), *galactitol CRS* (impurity B), *mannitol CRS* (impurity C) and *sorbitol CRS* (impurity D) in *water R* and dilute to 20.0 mL with the same solvent.

**Reference solution (b).** Dissolve 50.0 mg of *xylitol CRS* in *water R* and dilute to 10.0 mL with the same solvent.

Pipette 1.0 mL of test solutions (a) and (b) and reference solutions (a) and (b) into 4 separate 100 mL round-bottomed flasks. Add 1.0 mL of the internal standard solution to each of the flasks containing test solution (a) or reference solution (a), and 5.0 mL of the internal standard solution to each of the flasks containing test solution (b) or reference solution (b). Evaporate each mixture to dryness in a water-bath at 60 °C

with the aid of a rotary evaporator. Dissolve each dry residue in 1 mL of *anhydrous pyridine R*, add 1 mL of *acetic anhydride R* to each flask and boil each solution under reflux for 1 h to complete acetylation.

**Column:**

– *size:* *l* = 30 m,  $\varnothing$  = 0.25 mm;

– *stationary phase:* poly(cyanopropylphenyl)(14)(methyl)-(86)siloxane *R* (0.25  $\mu$ m).

**Carrier gas:** *nitrogen R*.

**Flow rate:** 1 mL/min.

**Split ratio:** 1:50 to 1:100.

**Temperature:**

	Time (min)	Temperature (°C)
Column	0 - 1	170
	1 - 6	170 → 230
	6 - 30	230
Injection port		250
Detector		250

**Detection:** flame-ionisation.

**Injection:** 1  $\mu$ L of test solution (a) and reference solution (a) (solutions obtained after derivatisation).

**Relative retention** with reference to xylitol (retention time = about 15 min): internal standard = about 0.6; impurity A = about 0.9; impurity C = about 1.4; impurity B = about 1.45; impurity D = about 1.5.

**System suitability:** reference solution (a):

– *resolution:* minimum 2.0 between the peaks due to impurities B and D.

Calculate the percentage content of each related substance in the substance to be examined using the following expression:

$$100 \times \frac{m_s}{m_u} \times \frac{R_u}{R_s}$$

$m_s$  = mass of the particular component in 1 mL of reference solution (a), in milligrams;

$m_u$  = mass of the substance to be examined in 1 mL of test solution (a), in milligrams;

$R_s$  = ratio of the area of the peak due to the particular derivatised component to the area of the peak due to the derivatised internal standard in the chromatogram obtained with reference solution (a);

$R_u$  = ratio of the area of the peak due to the particular derivatised component to the area of the peak due to the derivatised internal standard in the chromatogram obtained with test solution (a).

The sum of the percentage contents of the related substances in the chromatogram obtained with test solution (a) is not greater than 2.0 per cent. Disregard any peak with an area corresponding to a percentage content of 0.05 per cent or less.

**Lead (2.4.10):** maximum 0.5 ppm.

Dissolve the substance to be examined in 150.0 mL of the prescribed mixture of solvents.

**Nickel (2.4.15):** maximum 1 ppm.

Dissolve the substance to be examined in 150.0 mL of the prescribed mixture of solvents.

**Water (2.5.12):** maximum 1.0 per cent, determined on 1.00 g.

**Bacterial endotoxins (2.6.14):** less than 4 IU/g if the concentration is less than 100 g/L of xylitol and less than 2.5 IU/g if the concentration is 100 g/L or more of xylitol, when intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins.

## ASSAY

01/2008:1162  
corrected 7.0

Gas chromatography (2.2.28) as described in the test for related substances with the following modifications.

*Injection*: 1 µL of test solution (b) and reference solution (b) (solutions obtained after derivatisation).

Calculate the percentage content of C<sub>5</sub>H<sub>12</sub>O<sub>5</sub> using the following expression:

$$T \times \frac{m_t}{m_v} \times \frac{R_v}{R_t}$$

- T = declared percentage content of *xylitol CRS*;
- $m_t$  = mass of *xylitol CRS* in 1 mL of reference solution (b), in milligrams;
- $m_v$  = mass of the substance to be examined in 1 mL of test solution (b), in milligrams;
- $R_t$  = ratio of the area of the peak due to derivatised xylitol to the area of the peak due to the derivatised internal standard in the chromatogram obtained with reference solution (b);
- $R_v$  = ratio of the area of the peak due to derivatised xylitol to the area of the peak due to the derivatised internal standard in the chromatogram obtained with test solution (b).

## LABELLING

The label states:

- where applicable, the maximum concentration of bacterial endotoxins;
- where applicable, that the substance is suitable for use in the manufacture of parenteral preparations.

## IMPURITIES

A. L-arabinitol,

B. *meso*-galactitol,

C. D-mannitol,

D. D-glucitol (D-sorbitol).

## XYLOMETAZOLINE HYDROCHLORIDE

## Xylometazolini hydrochloridum

C<sub>16</sub>H<sub>25</sub>ClN<sub>2</sub>  
[1218-35-5]

$M_r$  280.8

## DEFINITION

2-[4-(1,1-Dimethylethyl)-2,6-dimethylbenzyl]-4,5-dihydro-1*H*-imidazole hydrochloride.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

## CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: freely soluble in water, in ethanol (96 per cent) and in methanol.

## IDENTIFICATION

*First identification*: A, E.

*Second identification*: B, C, D, E.

A. Infrared absorption spectrophotometry (2.2.24).

*Comparison*: *xylometazoline hydrochloride CRS*.

B. Thin-layer chromatography (2.2.27).

*Test solution*. Dissolve 20 mg of the substance to be examined in *methanol R* and dilute to 5 mL with the same solvent.

*Reference solution*. Dissolve 20 mg of *xylometazoline hydrochloride CRS* in *methanol R* and dilute to 5 mL with the same solvent.

*Plate*: TLC silica gel G plate R.

*Mobile phase*: concentrated ammonia R, *methanol R* (5:100 V/V).

*Application*: 5 µL.

*Development*: over 2/3 of the plate.

*Drying*: in air.

*Chlorine treatment*: at the bottom of a chromatographic tank place a beaker containing a mixture of 1 volume of *hydrochloric acid R1*, 1 volume of *water R* and 2 volumes of a 15 g/L solution of *potassium permanganate R*. Close the tank and allow to stand for 15 min. Place the dried plate in the tank and reclose the tank. Leave the plate in contact with the chlorine vapour for 5 min. Withdraw the plate and place it in a current of cold air until the excess of chlorine is removed and an area of the coating below the points of application does not give a blue colour with a drop of *potassium iodide and starch solution R*.

*Detection*: spray with *potassium iodide and starch solution R*.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

C. Dissolve about 0.5 mg in 1 mL of *methanol R*. Add 0.5 mL of a freshly prepared 50 g/L solution of *sodium nitroprusside R* and 0.5 mL of a 20 g/L solution of *sodium hydroxide R*.

Allow to stand for 10 min and add 1 mL of an 80 g/L solution of *sodium bicarbonate R*. A violet colour develops.

D. Dissolve 0.2 g in 1 mL of *water R*, add 2.5 mL of *ethanol (96 per cent) R* and 2 mL of 1 M *sodium hydroxide*. Mix thoroughly and examine in ultraviolet light at 365 nm.

The solution shows no fluorescence or at most the same fluorescence as a blank solution prepared in the same manner. The identification is not valid unless a solution prepared in the same manner using *naphazoline hydrochloride CRS* instead of the substance to be examined shows a distinct bluish fluorescence.

E. It gives reaction (a) of chlorides (2.3.1).

#### TESTS

**Appearance of solution.** The solution is clear (2.2.1) and not more intensely coloured than reference solution Y<sub>6</sub> (2.2.2, Method II).

Dissolve 2.5 g in *water R* and dilute to 50.0 mL with the same solvent.

**Acidity or alkalinity.** Dissolve 0.25 g in *carbon dioxide-free water R* and dilute to 25 mL with the same solvent. Add 0.1 mL of *methyl red solution R* and 0.1 mL of 0.01 M *hydrochloric acid*. The solution is red. Not more than 0.2 mL of 0.01 M *sodium hydroxide* is required to change the colour of the indicator to yellow.

**Related substances.** Liquid chromatography (2.2.29).

**Test solution.** Dissolve 50.0 mg of the substance to be examined in *water R* and dilute to 50.0 mL with the same solvent. Allow to stand for 1 h before injection.

**Reference solution (a).** Dilute 5.0 mL of the test solution to 100.0 mL with *water R*. Dilute 2.0 mL of this solution to 100.0 mL with *water R*.

**Reference solution (b).** Dissolve 5.0 mg of *xylometazoline impurity A CRS* and 5 mg of the substance to be examined in *water R* and dilute to 50.0 mL with the same solvent. Dilute 10.0 mL of this solution to 50.0 mL with *water R*.

**Reference solution (c).** Dilute 5.0 mL of reference solution (b) to 50.0 mL with *water R*.

**Column:**

- size:  $l = 0.25$  m,  $\varnothing = 4.6$  mm;
- stationary phase: end-capped octadecylsilyl silica gel for chromatography with polar incorporated groups R (5  $\mu$ m).

**Mobile phase:**

- mobile phase A: 1.36 g/L solution of *potassium dihydrogen phosphate R* adjusted to pH 3.0 with *phosphoric acid R*;
- mobile phase B: *acetonitrile R1*;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 5	70	30
5 - 20	70 → 15	30 → 85
20 - 35	15	85

**Flow rate:** 1.0 mL/min.

**Detection:** spectrophotometer at 220 nm.

**Injection:** 10  $\mu$ L.

**Relative retention** with reference to *xylometazoline* (retention time = about 7.2 min): impurity A = about 0.79.

**System suitability:** reference solution (b):

- resolution: minimum 2.5 between the peaks due to impurity A and *xylometazoline*.

**Limits:**

- impurity A: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.2 per cent);
- unspecified impurities: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- total: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

- disregard limit: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Loss on drying** (2.2.32): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

#### ASSAY

Dissolve 0.200 g in 25 mL of *anhydrous acetic acid R* and add 10 mL of *acetic anhydride R*. Titrate with 0.1 M *perchloric acid*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *perchloric acid* is equivalent to 28.08 mg of C<sub>16</sub>H<sub>25</sub>ClN<sub>2</sub>.

#### STORAGE

Protected from light.

#### IMPURITIES

**Specified impurities:** A.

**Other detectable impurities** (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use* (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): B, C, D, E, F.

A. R = CH<sub>2</sub>-CO-NH-CH<sub>2</sub>-CH<sub>2</sub>-NH<sub>2</sub>: *N*-(2-aminoethyl)-2-[4-(1,1-dimethylethyl)-2,6-dimethylphenyl]acetamide,

B. R = CH<sub>2</sub>-Cl: 2-(chloromethyl)-5-(1,1-dimethylethyl)-1,3-dimethylbenzene,

C. R = CH<sub>2</sub>-CN: [4-(1,1-dimethylethyl)-2,6-dimethylphenyl]acetonitrile,

D. R = H: 1-(1,1-dimethylethyl)-3,5-dimethylbenzene,

F. CH<sub>2</sub>-CO<sub>2</sub>H: [4-(1,1-dimethylethyl)-2,6-dimethylphenyl]acetic acid,

E. ethane-1,2-diamine mono(4-methylbenzenesulfonate).

corrected 6.0

## XYLOSE

### Xylosum

C<sub>5</sub>H<sub>10</sub>O<sub>5</sub>  
[58-86-6]

M<sub>r</sub> 150.1

#### DEFINITION

(+)-D-Xylopyranose.

## CHARACTERS

*Appearance*: white or almost white, crystalline powder or colourless needles.

*Solubility*: freely soluble in water, soluble in hot ethanol (96 per cent).

## IDENTIFICATION

*First identification*: A.

*Second identification*: B, C.

A. Infrared absorption spectrophotometry (2.2.24).

*Preparation*: discs.

*Comparison*: xylose CRS.

B. Thin-layer chromatography (2.2.27).

*Solvent mixture*: water R, methanol R (2:3 V/V).

*Test solution*. Dissolve 10 mg of the substance to be examined in the solvent mixture and dilute to 20 mL with the solvent mixture.

*Reference solution (a)*. Dissolve 10 mg of xylose CRS in the solvent mixture and dilute to 20 mL with the solvent mixture.

*Reference solution (b)*. Dissolve 10 mg of fructose R, 10 mg of glucose R and 10 mg of xylose R in the solvent mixture and dilute to 20 mL with the solvent mixture.

*Plate*: TLC silica gel plate R.

*Mobile phase*: water R, methanol R, anhydrous acetic acid R, ethylene chloride R (10:15:25:50 V/V/V/V); measure the volumes accurately since a slight excess of water produces cloudiness.

*Application*: 2 µL; thoroughly dry the points of application.

*Development*: over a path of 15 cm.

*Drying*: in a current of warm air.

*Detection*: spray with a 5 g/L solution of thymol R in a mixture of 5 volumes of sulfuric acid R and 95 volumes of ethanol (96 per cent) R. Heat in an oven at 130 °C for 10 min.

*System suitability*: reference solution (b):

– the chromatogram shows 3 clearly separated spots.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Dissolve 0.1 g in 10 mL of water R. Add 3 mL of cupri-tartaric solution R and heat. An orange or red precipitate is formed.

## TESTS

**Solution S**. Dissolve 10.0 g in carbon dioxide-free water R and dilute to 100 mL with the same solvent.

**Appearance of solution**. Solution S is clear (2.2.1) and colourless (2.2.2, Method II).

**Acidity or alkalinity**. To 50 mL of solution S add 0.3 mL of phenolphthalein solution RI. The solution is colourless. Not more than 0.2 mL of 0.1 M sodium hydroxide is required to change the colour of the indicator to pink.

**Specific optical rotation** (2.2.7): + 18.5 to + 19.5 (dried substance).

Dissolve 10.0 g in 80 mL of water R, add 1 mL of dilute ammonia R2 and dilute to 100.0 mL with water R. Allow to stand for 30 min.

**Chlorides** (2.4.4): maximum 330 ppm.

Dilute 1.5 mL of solution S to 15 mL with water R.

**Heavy metals** (2.4.8): maximum 20 ppm.

12 mL of solution S complies with test A. Prepare the reference solution using lead standard solution (2 ppm Pb) R.

**Loss on drying** (2.2.32): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C at a pressure not exceeding 0.7 kPa.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

01/2008:2172 *Relative retention* with reference to yohimbine (retention time = about 7 min): impurity F = about 0.65; impurity G = about 0.70; impurity A = about 0.75.

## YOHIMBINE HYDROCHLORIDE

### Yohimbini hydrochloridum

$C_{21}H_{27}ClN_2O_3$   
[65-19-0]

$M_r$  390.9

#### DEFINITION

Methyl 17 $\alpha$ -hydroxyyohimban-16 $\alpha$ -carboxylate hydrochloride.

*Content*: 97.0 per cent to 102.0 per cent (dried substance).

#### CHARACTERS

*Appearance*: white or slightly yellowish, crystalline powder.

*Solubility*: sparingly soluble in water, practically insoluble in ethanol (96 per cent) and in methylene chloride.

#### IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

*Comparison*: yohimbine hydrochloride CRS.

B. It gives reaction (a) of chlorides (2.3.1).

#### TESTS

**Solution S.** Dissolve 0.500 g in carbon dioxide-free water R with heating, allow to cool to room temperature and dilute to 50.0 mL with the same solvent.

**pH** (2.2.3): 3.5 to 5.5 for solution S.

**Specific optical rotation** (2.2.7): + 101.0 to + 105.0 (dried substance), determined on solution S.

**Related substances.** Liquid chromatography (2.2.29). Prepare the solutions protected from light.

*Test solution.* Dissolve 10.0 mg of the substance to be examined in methanol R and dilute to 50.0 mL with the same solvent.

*Reference solution (a).* Dissolve 5.0 mg of yohimbine hydrochloride CRS (containing impurities A, F and G) in methanol R and dilute to 25.0 mL with the same solvent.

*Reference solution (b).* Dilute 1.0 mL of reference solution (a) to 100.0 mL with methanol R.

*Reference solution (c).* Dilute 1.0 mL of reference solution (b) to 10.0 mL with methanol R.

*Column*:

- size:  $l = 0.125$  m,  $\varnothing = 4.0$  mm;
- stationary phase: octylsilyl silica gel for chromatography R (4  $\mu$ m);
- temperature: 40 °C.

*Mobile phase*: mix 50 mL of a 9.08 g/L solution of potassium dihydrogen phosphate R, 100 mL of an 11.88 g/L solution of disodium hydrogen phosphate dihydrate R, 285 mL of acetonitrile R, 4.0 g of sodium laurylsulfate R and 355 mL of water R.

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 229 nm.

*Injection*: 10  $\mu$ L.

*Run time*: 3 times the retention time of yohimbine.

*System suitability*: reference solution (a):

- *peak-to-valley ratio*: minimum 1.3, where  $H_p$  = height above the baseline of the peak due to impurity G and  $H_v$  = height above the baseline of the lowest point of the curve separating this peak from the peak due to impurity A; and minimum 1.3, where  $H_p$  = height above the baseline of the peak due to impurity G and  $H_v$  = height above the baseline of the lowest point of the curve separating this peak from the peak due to impurity F.

*Limits*:

- *sum of impurities A and G*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);
- *impurity F*: not more than 4 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.4 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.10 per cent);
- *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (2.0 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent).

**Loss on drying** (2.2.32): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

#### ASSAY

Liquid chromatography (2.2.29) as described in the test for related substances with the following modification.

*Injection*: test solution and reference solution (a).

Calculate the percentage content of  $C_{21}H_{27}ClN_2O_3$  from the declared content of yohimbine hydrochloride CRS.

#### STORAGE

In an airtight container, protected from light.

#### IMPURITIES

*Specified impurities*: A, F, G.

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use* (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): B, C, D, E.

- A. R1 = CO-OCH<sub>3</sub>, R2 = R3 = H, R4 = OH: methyl 17 $\beta$ -hydroxyyohimban-16 $\alpha$ -carboxylate ( $\beta$ -yohimbine),
- C. R1 = R4 = H, R2 = CO-OCH<sub>3</sub>, R3 = OH: methyl 17 $\alpha$ -hydroxyyohimban-16 $\beta$ -carboxylate (corynantheine),

B. methyl 17 $\alpha$ -hydroxy-20 $\alpha$ -yohimban-16 $\beta$ -carboxylate ( $\alpha$ -yohimbine),

D. methyl 17 $\alpha$ -hydroxy-3 $\beta$ -yohimban-16 $\alpha$ -carboxylate (pseudo-yohimbine),

E. methyl (2*Z*)-2-[(2*S*,3*R*,12*bS*)-3-ethyl-1,2,3,4,6,7,12,12*b*-octahydroindolo[2,3-*a*]quinolizin-2-yl]-3-methoxyprop-2-enoate,

**ZIDOVUDINE**

## Zidovudinum

$C_{10}H_{13}N_5O_4$   
[30516-87-1]

 $M_r$  267.2**DEFINITION**

1-(3-Azido-2,3-dideoxy-β-D-erythro-pentofuranosyl)-5-methylpyrimidine-2,4(1*H*,3*H*)-dione.

*Content*: 97.0 per cent to 102.0 per cent (dried substance).

**CHARACTERS**

*Appearance*: white or brownish powder.

*Solubility*: sparingly soluble in water, soluble in anhydrous ethanol.

mp: about 124 °C.

It shows polymorphism (5.9).

**IDENTIFICATION**

Infrared absorption spectrophotometry (2.2.24).

*Comparison*: zidovudine CRS.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in the minimum volume of *water R*, evaporate to dryness in a desiccator, under high vacuum over *diphosphorus pentoxide R* and record new spectra using the residues.

**TESTS**

**Appearance of solution.** The solution is not more intensely coloured than reference solution BY<sub>5</sub> (2.2.2, *Method II*).

Dissolve 0.5 g in 50 mL of *water R*, heating if necessary.

**Specific optical rotation** (2.2.7): + 60.5 to + 63.0 (dried substance).

Dissolve 0.50 g in *anhydrous ethanol R* and dilute to 50.0 mL with the same solvent. Carry out the determination at 25 °C.

**Related substances**

A. Thin-layer chromatography (2.2.27).

*Test solution.* Dissolve 0.20 g of the substance to be examined in *methanol R* and dilute to 10 mL with the same solvent.

*Reference solution (a).* Dissolve 5 mg of *thymine R* (impurity C), 5 mg of *zidovudine impurity A CRS* and 5 mg of *triphenylmethanol R* (impurity D) in *methanol R*, add 0.25 mL of the test solution and dilute to 25 mL with *methanol R*.

*Reference solution (b).* Dilute 5.0 mL of reference solution (a) to 10 mL with *methanol R*.

*Plate*: TLC silica gel  $F_{254}$  plate *R*.

*Mobile phase*: *methanol R*, *methylene chloride R* (10:90 V/V).

*Application*: 10 µL.

*Development*: over a path of 12 cm.

*Drying*: in air.

*Detection A*: examine in ultraviolet light at 254 nm.

*Limits*:

- *impurity A*: any spot due to impurity A is not more intense than the corresponding spot in the chromatogram obtained with reference solution (b) (0.5 per cent);
- *any other impurity*: any other spot apart from the principal spot and any spot due to impurity C (which is limited by liquid chromatography) is not more intense than the spot due to zidovudine in the chromatogram obtained with reference solution (b) (0.5 per cent).

*Detection B*: spray with a 10 g/L solution of *vanillin R* in *sulfuric acid R*.

*Limit*:

- *impurity D*: any spot due to impurity D is not more intense than the corresponding spot in the chromatogram obtained with reference solution (b) (0.5 per cent).

*System suitability*: reference solution (a):

- the chromatogram shows 4 clearly separated spots, due to impurity C, impurity A, zidovudine and impurity D, in order of increasing  $R_F$  value.

B. Liquid chromatography (2.2.29).

*Test solution (a).* Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 50.0 mL with the mobile phase.

*Test solution (b).* Dilute 10.0 mL of test solution (a) to 50.0 mL with the mobile phase.

*Reference solution (a).* Dissolve 10.0 mg of *zidovudine CRS* in the mobile phase and dilute to 50.0 mL with the mobile phase.

*Reference solution (b).* Dissolve 10.0 mg of *thymine R* (impurity C) in *methanol R* and dilute to 50.0 mL with the same solvent. Dilute 5.0 mL of this solution to 50.0 mL with the mobile phase.

*Reference solution (c).* Dissolve 5 mg of *zidovudine impurity B CRS* in 25.0 mL of reference solution (a) and dilute to 50.0 mL with the mobile phase.

*Reference solution (d).* Dilute 5.0 mL of reference solution (c) to 50.0 mL with the mobile phase.

*Reference solution (e).* Dilute 0.25 mL of test solution (a) to 50.0 mL with the mobile phase.

*Column*:

- *size*:  $l = 0.25$  m,  $\varnothing = 4.6$  mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: *methanol R*, *water R* (20:80 V/V).

*Flow rate*: 1.2 mL/min.

*Detection*: spectrophotometer at 265 nm.

*Equilibration*: with the mobile phase for about 45 min.

*Injection*: 10 µL of test solution (a) and reference solutions (b), (c), (d) and (e).

*Run time*: 1.5 times the retention time of zidovudine.

*Elution order*: impurity C, zidovudine, impurity B.

*System suitability*: reference solution (c):

- *resolution*: minimum 1.5 between the peaks due to zidovudine and impurity B.

**Limits:**

- *impurity C*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (b) (2 per cent);
- *impurity B*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (d) (1 per cent);
- *any other impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (e) (0.5 per cent);
- *total*: not more than 6 times the area of the principal peak in the chromatogram obtained with reference solution (e) (3.0 per cent);
- *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (e) (0.05 per cent).

**Heavy metals** (2.4.8): maximum 20 ppm.

1.00 g complies with test D. Prepare the reference solution using 2 mL of *lead standard solution (10 ppm Pb) R*.

**Loss on drying** (2.2.32): maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (2.4.14): maximum 0.25 per cent, determined on 1.00 g.

**ASSAY**

Liquid chromatography (2.2.29) as described in the test for related substances with the following modification.

**Injection**: test solution (b) and reference solution (a).

Calculate the content of  $C_{10}H_{13}N_5O_4$  from the declared content of *zidovudine CRS*.

**STORAGE**

Protected from light.

**IMPURITIES**

*Specified impurities: A, B, C, D.*

- A. 1-[(2*R*,5*S*)-5-(hydroxymethyl)-2,5-dihydrofuran-2-yl]-5-methylpyrimidine-2,4(1*H*,3*H*)-dione,

- B. 1-(3-chloro-2,3-dideoxy-β-*D*-*erythro*-pentofuranosyl)-5-methylpyrimidine-2,4(1*H*,3*H*)-dione,

- C. 5-methylpyrimidine-2,4(1*H*,3*H*)-dione (thymine),

- D. triphenylmethanol.

corrected 7.0

**ZINC ACETATE DIHYDRATE****Zinci acetas dihydricus**

$C_4H_6O_4Zn \cdot 2H_2O$   
[5970-45-6]

*M*, 219.5

**DEFINITION**

**Content**: 99.0 per cent to 101.0 per cent of  $C_4H_6O_4Zn \cdot 2H_2O$ .

**CHARACTERS**

**Appearance**: white or almost white crystalline powder or flakes.

**Solubility**: freely soluble in water, soluble in ethanol (96 per cent).

**IDENTIFICATION**

A. It gives reaction (a) of acetates (2.3.1).

B. It gives the reaction of zinc (2.3.1).

**TESTS**

**Solution S**. Dissolve 10.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100 mL with the same solvent.

**Appearance of solution**. Solution S is clear (2.2.1) and colourless (2.2.2, *Method II*).

**pH** (2.2.3): 5.8 to 7.0.

Dilute 10 mL of solution S to 20 mL with *carbon dioxide-free water R*.

**Reducing substances**. Boil for 5 min a mixture of 10 mL of solution S, 90 mL of *water R*, 5 mL of *dilute sulfuric acid R* and 1.5 mL of a 0.3 g/L solution of *potassium permanganate R*. The pink colour of the solution remains.

**Chlorides** (2.4.4): maximum 50 ppm.

Dilute 10 mL of solution S with 15 mL of *water R*.

**Sulfates** (2.4.13): maximum 100 ppm, determined on solution S.

**Aluminium**: maximum 5 ppm.

Atomic absorption spectrometry (2.2.23, *Method I*).

**Test solution**. Dissolve 2.50 g in 20 mL of a 200 g/L solution of *cadmium- and lead-free nitric acid R* and dilute to 25.0 mL with the same acid solution.

**Reference solutions**. Prepare the reference solutions using *aluminium standard solution (200 ppm Al) R*, diluted with a 200 g/L solution of *cadmium- and lead-free nitric acid R*.

**Source**: aluminium hollow-cathode lamp.

**Wavelength**: 309.3 nm.

**Atomisation device**: air-acetylene or acetylene-nitrous oxide flame.

**Arsenic** (2.4.2, *Method A*): maximum 2 ppm, determined on 0.5 g.

**Cadmium**: maximum 2 ppm.

Atomic absorption spectrometry (2.2.23, *Method I*).

**Test solution**. Use the solution described in the test for aluminium.

**Reference solutions**. Prepare the reference solutions using *cadmium standard solution (0.1 per cent Cd) R*, diluted with a 200 g/L solution of *cadmium- and lead-free nitric acid R*.

**Source**: cadmium hollow-cathode lamp.

**Wavelength**: 228.8 nm.

**Atomisation device**: air-acetylene flame.

**Copper**: maximum 50 ppm.

Atomic absorption spectrometry (2.2.23, *Method I*).

**Test solution**. Use the solution described in the test for iron.

**Reference solutions.** Prepare the reference solutions using *copper standard solution (10 ppm Cu) R*, diluted with a 200 g/L solution of *cadmium- and lead-free nitric acid R*.

**Source:** copper hollow-cathode lamp.

**Wavelength:** 324.8 nm.

**Atomisation device:** air-acetylene flame.

**Iron:** maximum 50 ppm.

Atomic absorption spectrometry (2.2.23, Method I).

**Test solution.** Dissolve 1.25 g in 20 mL of a 200 g/L solution of *cadmium- and lead-free nitric acid R* and dilute to 25.0 mL with the same acid solution.

**Reference solutions.** Prepare the reference solutions using *iron standard solution (20 ppm Fe) R*, diluted with a 200 g/L solution of *cadmium- and lead-free nitric acid R*.

**Source:** iron hollow-cathode lamp.

**Wavelength:** 248.3 nm.

**Atomisation device:** air-acetylene flame.

**Lead:** maximum 10 ppm.

Atomic absorption spectrometry (2.2.23, Method I).

**Test solution.** Dissolve 5.00 g in 20 mL of a 200 g/L solution of *cadmium- and lead-free nitric acid R* and dilute to 25.0 mL with the same acid solution.

**Reference solutions.** Prepare the reference solutions using *lead standard solution (0.1 per cent of Pb) R*, diluting with a 200 g/L solution of *cadmium- and lead-free nitric acid R*.

**Source:** lead hollow-cathode lamp.

**Wavelength:** 283.3 nm.

**Atomisation device:** air-acetylene flame.

#### ASSAY

Dissolve 0.200 g in 5 mL of *dilute acetic acid R*. Carry out the complexometric titration of zinc (2.5.11).

1 mL of 0.1 M *sodium edetate* is equivalent to 21.95 mg of  $C_{16}H_{28}N_2O_6Zn$ .

#### STORAGE

In a non-metallic container.

07/2010:1279  
corrected 7.0

## ZINC ACEXAMATE

### Zinci acexamas

$C_{16}H_{28}N_2O_6Zn$   
[70020-71-2]

$M_r$  409.8

#### DEFINITION

Zinc 6-(acetylamino)hexanoate.

**Content:** 97.5 per cent to 101.0 per cent (dried substance).

#### CHARACTERS

**Appearance:** white or almost white, crystalline powder.

**Solubility:** soluble in water, practically insoluble in acetone and in ethanol (96 per cent). It dissolves in dilute nitric acid.

mp: about 198 °C.

#### IDENTIFICATION

A. Infrared absorption spectrophotometry (2.2.24).

**Comparison:** *zinc acexamate CRS*.

B. 5 mL of solution S (see Tests) gives the reaction of zinc (2.3.1).

#### TESTS

**Solution S.** Dissolve 0.5 g in *carbon dioxide-free water R* and dilute to 20 mL with the same solvent.

**Appearance of solution.** Solution S is not more opalescent than reference suspension IV (2.2.1) and is colourless (2.2.2, Method II).

**pH (2.2.3):** 5.0 to 7.0 for solution S.

**Impurity B.** Thin-layer chromatography (2.2.27).

**Test solution.** Dissolve 0.30 g of the substance to be examined in *water R* and dilute to 10 mL with the same solvent.

**Reference solution.** Dissolve 15 mg of *6-aminohexanoic acid R* (impurity B) in *water R* and dilute to 10 mL with the same solvent. Dilute 1 mL of this solution to 10 mL with *water R*.

**Plate:** *TLC silica gel plate R*.

**Mobile phase:** *ammonia R, water R, ethanol (96 per cent) R* (2:30:68 V/V/V).

**Application:** 5 µL; allow to dry in air.

**Development:** over a path of 15 cm.

**Drying:** in a current of warm air.

**Detection:** spray with *ninhydrin solution R* and heat at 100-105 °C for 15 min.

**Limit:**

- **impurity B:** any spot due to impurity B is not more intense than the corresponding spot in the chromatogram obtained with the reference solution (0.5 per cent).

**Related substances.** Liquid chromatography (2.2.29).

**Test solution (a).** Dissolve 0.50 g of the substance to be examined in *water R* and dilute to 100.0 mL with the same solvent.

**Test solution (b).** To 20.0 mL of test solution (a), add 20 mL of the mobile phase and 0.4 mL of a 100 g/L solution of *phosphoric acid R*, then dilute to 50.0 mL with the mobile phase.

**Reference solution (a).** Dissolve 40 mg of *N-acetyl-ε-caprolactam R* (impurity C) in *water R* and dilute to 100.0 mL with the same solvent.

**Reference solution (b).** Dilute 5.0 mL of reference solution (a) to 100.0 mL with *water R*.

**Reference solution (c).** Dissolve 20 mg of *zinc acexamate impurity A CRS* in *water R* and dilute to 50.0 mL with the same solvent.

**Reference solution (d).** Dissolve 40 mg of *ε-caprolactam R* (impurity D) in *water R* and dilute to 100.0 mL with the same solvent. Dilute 5.0 mL of this solution to 100.0 mL with *water R*.

**Reference solution (e).** To 20.0 mL of test solution (a), add 5.0 mL of reference solution (b), 5.0 mL of reference solution (c), 5.0 mL of reference solution (d) and 0.4 mL of a 100 g/L solution of *phosphoric acid R*, then dilute to 50.0 mL with the mobile phase.

**Reference solution (f).** To 5.0 mL of reference solution (c), add 5.0 mL of reference solution (b), 5.0 mL of reference solution (d) and 0.4 mL of a 100 g/L solution of *phosphoric acid R*, then dilute to 50.0 mL with the mobile phase.

**Column:**

- **size:**  $l = 0.25$  m,  $\phi = 4.0$  mm;
- **stationary phase:** *octadecylsilyl silica gel for chromatography R* (5 µm).

**Mobile phase:** mix 0.2 volumes of *phosphoric acid R*, 8 volumes of *acetonitrile R* and 92 volumes of *water R*, then adjust to pH 4.5 with *dilute ammonia RI*.

**Flow rate:** 1.2 mL/min.

**Detection:** spectrophotometer at 210 nm.

**Injection:** 20 µL of test solution (b) and reference solutions (b), (e) and (f).

**Run time:** 8 times the retention time of zinc acexamate.

*Elution order:* zinc acexamate, impurity D, impurity A, impurity C.

*System suitability:* reference solution (e):

- *resolution:* minimum 3.0 between the peaks due to zinc acexamate and impurity D; if necessary, adjust the mobile phase to pH 4.7 with *dilute ammonia RI*.

*Limits:*

- *impurity A:* not more than the area of the corresponding peak in the chromatogram obtained with reference solution (f) (2 per cent);
- *impurities C, D:* for each impurity, not more than 1.5 times the area of the corresponding peak in the chromatogram obtained with reference solution (f) (0.15 per cent);
- *unspecified impurities:* for each impurity, not more than 0.5 times the area of the peak due to impurity C in the chromatogram obtained with reference solution (f) (0.05 per cent);
- *sum of impurities other than A:* not more than 5 times the area of the peak due to impurity C in the chromatogram obtained with reference solution (f) (0.5 per cent);
- *disregard limit:* 0.5 times the area of the peak due to impurity C in the chromatogram obtained with reference solution (f) (0.05 per cent).

**Arsenic** (2.4.2, *Method A*): maximum 2 ppm, determined on 0.5 g.

**Cadmium:** maximum 2 ppm.

Atomic absorption spectrometry (2.2.23, *Method I*).

*Test solution.* Dissolve 2.50 g in 20 mL of a 200 g/L solution of *cadmium- and lead-free nitric acid R* and dilute to 25.0 mL with the same acid solution.

*Reference solutions.* Prepare the reference solutions using *cadmium standard solution (0.1 per cent Cd) R*, diluting with a 200 g/L solution of *cadmium- and lead-free nitric acid R*.

*Source:* cadmium hollow-cathode lamp.

*Wavelength:* 228.8 nm.

*Atomisation device:* air-acetylene flame.

**Iron:** maximum 50 ppm.

Atomic absorption spectrometry (2.2.23, *Method I*).

*Test solution.* Dissolve 1.25 g in 20 mL of a 200 g/L solution of *cadmium- and lead-free nitric acid R* and dilute to 25.0 mL with the same acid solution.

*Reference solutions.* Prepare the reference solutions using *iron standard solution (20 ppm Fe) R*, diluting with a 200 g/L solution of *cadmium- and lead-free nitric acid R*.

*Source:* iron hollow-cathode lamp.

*Wavelength:* 248.3 nm.

*Atomisation device:* air-acetylene flame.

**Lead:** maximum 10 ppm.

Atomic absorption spectrometry (2.2.23, *Method I*).

*Test solution.* Dissolve 5.00 g in 20 mL of a 200 g/L solution of *cadmium- and lead-free nitric acid R* and dilute to 25.0 mL with the same acid solution.

*Reference solutions.* Prepare the reference solutions using *lead standard solution (0.1 per cent Pb) R*, diluting with a 200 g/L solution of *cadmium- and lead-free nitric acid R*.

*Source:* lead hollow-cathode lamp.

*Wavelength:* 283.3 nm.

*Atomisation device:* air-acetylene flame.

**Loss on drying** (2.2.32): maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

#### ASSAY

Dissolve 0.400 g in 10 mL of *dilute acetic acid R*. Carry out the complexometric titration of zinc (2.5.11).

1 mL of 0.1 M *sodium edetate* is equivalent to 40.98 mg of  $C_{16}H_{28}N_2O_6Zn$ .

#### STORAGE

In a non-metallic container.

#### IMPURITIES

*Specified impurities:* A, B, C, D.

A. 6-[[6-(acetylamino)hexanoyl]amino]hexanoic acid,

B. 6-aminohexanoic acid (6-aminocaproic acid),

C. 1-acetylhexahydro-2H-azepin-2-one (*N*-acetyl- $\epsilon$ -caprolactam),

D. hexahydro-2H-azepin-2-one ( $\epsilon$ -caprolactam).

01/2008:0110  
corrected 6.6

## ZINC CHLORIDE

### Zinci chloridum

$ZnCl_2$   
[7646-85-7]

$M_r$  136.3

#### DEFINITION

*Content:* 95.0 per cent to 100.5 per cent.

#### CHARACTERS

*Appearance:* white or almost white, crystalline powder or cast in white or almost white sticks, deliquescent.

*Solubility:* very soluble in water, freely soluble in ethanol (96 per cent) and in glycerol.

#### IDENTIFICATION

- Dissolve 0.5 g in *dilute nitric acid R* and dilute to 10 mL with the same acid. The solution gives reaction (a) of chlorides (2.3.1).
- 5 mL of solution S (see Tests) gives the reaction of zinc (2.3.1).

#### TESTS

**Solution S.** To 2.0 g add 38 mL of *carbon dioxide-free water R* prepared from *distilled water R* and add *dilute hydrochloric acid R* dropwise until dissolution is complete. Dilute to 40 mL with *carbon dioxide-free water R* prepared from *distilled water R*.

**pH** (2.2.3): 4.6 to 5.5.

Dissolve 1.0 g in 9 mL of *carbon dioxide-free water R*, ignoring any slight turbidity.

**Oxychlorides.** Dissolve 10.0 g in 10 mL of *carbon dioxide-free water R*. The solution is not more opalescent than reference suspension II (2.2.1). To 1.5 mL of the solution add 7.5 mL of *ethanol (96 per cent) R*. The solution may become cloudy within 10 min. Any cloudiness disappears on the addition of 0.2 mL of *dilute hydrochloric acid R*.

**Sulfates** (2.4.13): maximum 200 ppm.

Dilute 5 mL of solution S to 15 mL with *distilled water R*. Prepare the standard using a mixture of 5 mL of *sulfate standard solution* (10 ppm  $\text{SO}_4$ ) *R* and 10 mL of *distilled water R*.

**Aluminium, calcium, heavy metals, iron, magnesium.** To 8 mL of solution S add 2 mL of *concentrated ammonia R* and shake. The solution is clear (2.2.1) and colourless (2.2.2, *Method II*). Add 1 mL of *disodium hydrogen phosphate solution R*. The solution remains clear for at least 5 min. Add 0.2 mL of *sodium sulfide solution R*. A white precipitate is formed and the supernatant liquid remains colourless.

**Ammonium** (2.4.1): maximum 400 ppm.

Dilute 0.5 mL of solution S to 15 mL with *water R*.

#### ASSAY

Dissolve 0.250 g in 5 mL of *dilute acetic acid R*. Carry out the complexometric titration of zinc (2.5.11).

1 mL of 0.1 M *sodium edetate* is equivalent to 13.63 mg of  $\text{ZnCl}_2$ .

#### STORAGE

In a non-metallic container.

07/2009:2164  
corrected 7.0

## ZINC GLUCONATE

### Zinci gluconas

$\text{C}_{12}\text{H}_{22}\text{ZnO}_{14}\cdot x\text{H}_2\text{O}$

$M_r$  455.7 (anhydrous substance)

#### DEFINITION

Anhydrous or hydrated zinc D-gluconate.

*Content*: 98.0 per cent to 102.0 per cent (anhydrous substance).

#### CHARACTERS

*Appearance*: white or almost white, hygroscopic, crystalline powder.

*Solubility*: soluble in water, practically insoluble in anhydrous ethanol and in methylene chloride.

#### IDENTIFICATION

A. Thin-layer chromatography (2.2.27).

*Test solution.* Dissolve 20 mg of the substance to be examined in 1 mL of *water R*.

*Reference solution.* Dissolve 20 mg of *calcium gluconate CRS* in 1 mL of *water R*, heating if necessary in a water-bath at 60 °C.

*Plate*: TLC silica gel plate *R* (5-40  $\mu\text{m}$ ) [or TLC silica gel plate *R* (2-10  $\mu\text{m}$ )].

*Mobile phase*: concentrated ammonia *R*, ethyl acetate *R*, water *R*, ethanol (96 per cent) *R* (10:10:30:50 V/V/V/V).

*Application*: 1  $\mu\text{L}$ .

*Development*: over 3/4 of the plate.

*Drying*: at 100-105 °C for 20 min, then allow to cool to room temperature.

*Detection*: spray with a solution containing 25 g/L of *ammonium molybdate R* and 10 g/L of *cerium sulfate R* in *dilute sulfuric acid R*, and heat at 100-105 °C for about 10 min.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

B. Dissolve 0.1 g in 5 mL of *water R*. Add 0.5 mL of *potassium ferrocyanide solution R*. A white precipitate is formed that does not dissolve upon the addition of 5 mL of *hydrochloric acid R*.

#### TESTS

**Solution S.** Dissolve 1.0 g in *water R* and dilute to 50 mL with the same solvent.

**Appearance of solution.** Solution S is not more opalescent than reference suspension II (2.2.1) and not more intensely coloured than reference solution  $Y_6$  (2.2.2, *Method II*).

**Sucrose and reducing sugars.** Dissolve 0.5 g in a mixture of 2 mL of *hydrochloric acid R1* and 10 mL of *water R*. Boil for 5 min, allow to cool, add 10 mL of *sodium carbonate solution R* and allow to stand for 10 min. Dilute to 25 mL with *water R* and filter. To 5 mL of the filtrate add 2 mL of *cupri-tartaric solution R* and boil for 1 min. Allow to stand for 2 min. No red precipitate is formed.

**Chlorides** (2.4.4): maximum 500 ppm.

Dilute 5 mL of solution S to 15 mL with *water R*.

**Sulfates** (2.4.13): maximum 500 ppm.

Dissolve 2.0 g in a mixture of 10 mL of *acetic acid R* and 90 mL of *distilled water R*.

**Cadmium**: maximum 2 ppm.

Atomic absorption spectrometry (2.2.23, *Method II*).

*Test solution.* Dissolve 5.00 g in 20 mL of *deionised distilled water R* with the aid of ultrasound and dilute to 25.0 mL with the same solvent.

*Reference solutions.* Prepare the reference solutions using *cadmium standard solution* (0.1 per cent Cd) *R*, diluting with *deionised distilled water R*.

*Source*: cadmium hollow-cathode lamp.

*Wavelength*: 228.8 nm.

*Atomisation device*: air-acetylene flame.

**Heavy metals** (2.4.8): maximum 10 ppm.

Dissolve 2.0 g in 20 mL of *water R*, heating in a water-bath at 60 °C. 12 mL of the solution complies with test A. Prepare the reference solution using *lead standard solution* (1 ppm Pb) *R*.

**Water** (2.5.32): maximum 12.0 per cent, determined on 80.0 mg.

#### Microbial contamination

TAMC: acceptance criterion  $10^3$  CFU/g (2.6.12).

TYMC: acceptance criterion  $10^2$  CFU/g (2.6.12).

#### ASSAY

Dissolve 0.400 g in 5 mL of *dilute acetic acid R*. Carry out the complexometric titration of zinc (2.5.11).

1 mL of 0.1 M *sodium edetate* is equivalent to 45.57 mg of  $\text{C}_{12}\text{H}_{22}\text{ZnO}_{14}$ .

#### STORAGE

In a non-metallic, airtight container.

01/2008:0252  
corrected 7.0

## ZINC OXIDE

### Zinci oxidum

$\text{ZnO}$   
[1314-13-2]

$M_r$  81.4

#### DEFINITION

*Content*: 99.0 per cent to 100.5 per cent (ignited substance).

## CHARACTERS

01/2008:0306  
corrected 7.0

**Appearance:** soft, white or faintly yellowish-white, amorphous powder, free from gritty particles.

**Solubility:** practically insoluble in water and in ethanol (96 per cent). It dissolves in dilute mineral acids.

## IDENTIFICATION

- A. It becomes yellow when strongly heated; the yellow colour disappears on cooling.
- B. Dissolve 0.1 g in 1.5 mL of *dilute hydrochloric acid R* and dilute to 5 mL with *water R*. The solution gives the reaction of zinc (2.3.I).

## TESTS

**Alkalinity.** Shake 1.0 g with 10 mL of boiling *water R*. Add 0.1 mL of *phenolphthalein solution R* and filter. If the filtrate is red, not more than 0.3 mL of 0.1 M *hydrochloric acid* is required to change the colour of the indicator.

**Carbonates and substances insoluble in acids.** Dissolve 1.0 g in 15 mL of *dilute hydrochloric acid R*. It dissolves without effervescence and the solution is not more opalescent than reference suspension II (2.2.1) and is colourless (2.2.2, *Method II*).

**Arsenic** (2.4.2, *Method A*): maximum 5 ppm, determined on 0.2 g.

**Cadmium:** maximum 10 ppm.

Atomic absorption spectrometry (2.2.23, *Method II*).

**Test solution.** Dissolve 2.0 g in 14 mL of a mixture of equal volumes of *water R* and *cadmium- and lead-free nitric acid R*, boil for 1 min, cool and dilute to 100.0 mL with *water R*.

**Reference solutions.** Prepare the reference solutions using *cadmium standard solution (0.1 per cent Cd) R* and diluting with a 3.5 per cent V/V solution of *cadmium- and lead-free nitric acid R*.

**Source:** cadmium hollow-cathode lamp.

**Wavelength:** 228.8 nm.

**Atomisation device:** air-acetylene or air-propane flame.

**Iron** (2.4.9): maximum 200 ppm.

Dissolve 50 mg in 1 mL of *dilute hydrochloric acid R* and dilute to 10 mL with *water R*. Use in this test 0.5 mL of *thioglycollic acid R*.

**Lead:** maximum 50 ppm.

Atomic absorption spectrometry (2.2.23, *Method II*).

**Test solution.** Dissolve 5.0 g in 24 mL of a mixture of equal volumes of *water R* and *cadmium- and lead-free nitric acid R*, boil for 1 min, cool and dilute to 100.0 mL with *water R*.

**Reference solutions.** Prepare the reference solutions using *lead standard solution (0.1 per cent Pb) R* and diluting with a 3.5 per cent V/V solution of *cadmium- and lead-free nitric acid R*.

**Source:** lead hollow-cathode lamp.

**Wavelength:** 283.3 nm; 217.0 nm may be used depending on the apparatus.

**Atomisation device:** air-acetylene flame.

**Loss on ignition:** maximum 1.0 per cent, determined on 1.00 g by ignition to constant mass at  $500 \pm 50$  °C.

## ASSAY

Dissolve 0.150 g in 10 mL of *dilute acetic acid R*. Carry out the complexometric titration of zinc (2.5.11).

1 mL of 0.1 M *sodium edetate* is equivalent to 8.14 mg of ZnO.

## ZINC STEARATE

## Zinci stearas

[557-05-1]

## DEFINITION

Zinc stearate [(C<sub>17</sub>H<sub>35</sub>COO)<sub>2</sub>Zn; M<sub>r</sub> 632] may contain varying proportions of zinc palmitate [(C<sub>15</sub>H<sub>31</sub>COO)<sub>2</sub>Zn; M<sub>r</sub> 576.2] and zinc oleate [(C<sub>17</sub>H<sub>33</sub>COO)<sub>2</sub>Zn; M<sub>r</sub> 628].

**Content:** 10.0 per cent to 12.0 per cent of Zn.

## CHARACTERS

**Appearance:** light, white or almost white, amorphous powder, free from gritty particles.

**Solubility:** practically insoluble in water and in anhydrous ethanol.

## IDENTIFICATION

- A. Freezing point (2.2.18): minimum 53 °C, determined on the residue obtained in the preparation of solution S (see Tests).
- B. Neutralise 5 mL of solution S to *red litmus paper R* with *strong sodium hydroxide solution R*. The solution gives the reaction of zinc (2.3.I).

## TESTS

**Solution S.** To 5.0 g add 50 mL of *ether R* and 40 mL of a 7.5 per cent V/V solution of *cadmium- and lead-free nitric acid R* in *distilled water R*. Heat under a reflux condenser until dissolution is complete. Allow to cool. In a separating funnel, separate the aqueous layer and shake the ether layer with 2 quantities, each of 4 mL, of *distilled water R*. Combine the aqueous layers, wash with 15 mL of *ether R* and heat on a water-bath until ether is completely eliminated. Allow to cool and dilute to 50.0 mL with *distilled water R* (solution S). Evaporate the ether layer to dryness and dry the residue at 105 °C.

**Appearance of solution.** Solution S is not more intensely coloured than reference solution Y<sub>6</sub> (2.2.2, *Method II*).

**Appearance of solution of fatty acids.** Dissolve 0.5 g of the residue obtained in the preparation of solution S in 10 mL of *chloroform R*. The solution is clear (2.2.1) and not more intensely coloured than reference solution Y<sub>5</sub> (2.2.2, *Method II*).

**Acidity or alkalinity.** Shake 1.0 g with 5 mL of *ethanol (96 per cent) R* and add 20 mL of *carbon dioxide-free water R* and 0.1 mL of *phenol red solution R*. Not more than 0.3 mL of 0.1 M *hydrochloric acid* or 0.1 mL of 0.1 M *sodium hydroxide* is required to change the colour of the indicator.

**Acid value of the fatty acids** (2.5.1): 195 to 210.

Dissolve 0.20 g of the residue obtained in the preparation of solution S in 25 mL of the prescribed mixture of solvents.

**Chlorides** (2.4.4): maximum 250 ppm.

Dilute 2 mL of solution S to 15 mL with *water R*.

**Sulfates** (2.4.13): maximum 0.6 per cent.

Dilute 1 mL of solution S to 50 mL with *distilled water R*. Dilute 12.5 mL of this solution to 15 mL with *distilled water R*.

**Cadmium:** maximum 5 ppm.

Atomic absorption spectrometry (2.2.23, *Method II*).

**Test solution.** Dilute 20.0 mL of solution S to 50.0 mL with a 3.5 per cent V/V solution of *cadmium- and lead-free nitric acid R*.

**Reference solutions.** Prepare the reference solutions using *cadmium standard solution (0.1 per cent Cd) R* and diluting with a 3.5 per cent V/V solution of *cadmium- and lead-free nitric acid R*.

Source: cadmium hollow-cathode lamp.

Wavelength: 228.8 nm.

Atomisation device: air-acetylene or an air-propane flame.

**Lead:** maximum 25 ppm.

Atomic absorption spectrometry (2.2.23, Method II).

Test solution. Solution S.

Reference solutions. Prepare the reference solutions using lead standard solution (0.1 per cent Pb) R and diluting with a 3.5 per cent V/V solution of cadmium- and lead-free nitric acid R.

Source: lead hollow-cathode lamp.

Wavelength: 283.3 nm. Depending on the apparatus the line at 217.0 nm may be used.

Atomisation device: air-acetylene flame.

#### ASSAY

To 1.000 g add 50 mL of dilute acetic acid R and boil for at least 10 min or until the layer of fatty acids is clear, adding more water R as necessary to maintain the original volume. Cool and filter. Wash the filter and the flask with water R until the washings are no longer acid to blue litmus paper R. Combine the filtrate and washings. Carry out the complexometric titration of zinc (2.5.11).

1 mL of 0.1 M sodium edetate is equivalent to 6.54 mg of Zn.

01/2008:0111  
corrected 6.0

## ZINC SULFATE HEPTAHYDRATE

### Zinci sulfas heptahydricus

ZnSO<sub>4</sub>·7H<sub>2</sub>O  
[7446-20-0]

M<sub>r</sub> 287.5

#### DEFINITION

Content: 99.0 per cent to 104.0 per cent.

#### CHARACTERS

Appearance: white or almost white, crystalline powder or colourless, transparent crystals, efflorescent.

Solubility: very soluble in water, practically insoluble in alcohol.

#### IDENTIFICATION

- Solution S (see Tests) gives the reactions of sulfates (2.3.1).
- Solution S gives the reaction of zinc (2.3.1).
- It complies with the limits of the assay.

#### TESTS

**Solution S.** Dissolve 2.5 g in carbon dioxide-free water R and dilute to 50 mL with the same solvent.

**Appearance of solution.** Solution S is clear (2.2.1) and colourless (2.2.2, Method II).

**pH (2.2.3):** 4.4 to 5.6 for solution S.

**Chlorides (2.4.4):** maximum 300 ppm.

3.3 mL of solution S diluted to 15 mL with water R complies with the limit test for chlorides.

**Iron (2.4.9):** maximum 100 ppm.

2 mL of solution S diluted to 10 mL with water R complies with the limit test for iron. Use in this test 0.5 mL of thioglycollic acid R.

#### ASSAY

Dissolve 0.200 g in 5 mL of dilute acetic acid R. Carry out the complexometric titration of zinc (2.5.11).

1 mL of 0.1 M sodium edetate is equivalent to 28.75 mg of ZnSO<sub>4</sub>·7H<sub>2</sub>O.

#### STORAGE

In a non-metallic, airtight container.

01/2008:1683  
corrected 6.0

## ZINC SULFATE HEXAHYDRATE

### Zinci sulfas hexahydricus

ZnSO<sub>4</sub>·6H<sub>2</sub>O  
[13986-24-8]

M<sub>r</sub> 269.5

#### DEFINITION

Content: 99.0 per cent to 104.0 per cent.

#### CHARACTERS

Appearance: white or almost white, crystalline powder or colourless transparent crystals, efflorescent.

Solubility: very soluble in water, practically insoluble in alcohol.

#### IDENTIFICATION

- Solution S (see Tests) gives the reactions of sulfates (2.3.1).
- Solution S gives the reaction of zinc (2.3.1).
- It complies with the limits of the assay.

#### TESTS

**Solution S.** Dissolve 2.5 g in carbon dioxide-free water R and dilute to 50 mL with the same solvent.

**Appearance of solution.** Solution S is clear (2.2.1) and colourless (2.2.2, Method II).

**pH (2.2.3):** 4.4 to 5.6 for solution S.

**Chlorides (2.4.4):** maximum 300 ppm.

3.3 mL of solution S diluted to 15 mL with water R complies with the limit test for chlorides.

**Iron (2.4.9):** maximum 100 ppm.

2 mL of solution S diluted to 10 mL with water R complies with the limit test for iron. Use in this test 0.5 mL of thioglycollic acid R.

#### ASSAY

Dissolve 0.200 g in 5 mL of dilute acetic acid R. Carry out the complexometric titration of zinc (2.5.11).

1 mL of 0.1 M sodium edetate is equivalent to 26.95 mg of ZnSO<sub>4</sub>·6H<sub>2</sub>O.

#### STORAGE

In a non-metallic, airtight container.

01/2010:2159

## ZINC SULFATE MONOHYDRATE

### Zinci sulfas monohydricus

ZnSO<sub>4</sub>·H<sub>2</sub>O

M<sub>r</sub> 179.5

#### DEFINITION

Content: 99.0 per cent to 101.0 per cent.

#### CHARACTERS

Appearance: white or almost white, crystalline powder, or colourless, transparent crystals.

Solubility: very soluble in water, practically insoluble in ethanol (96 per cent).

## IDENTIFICATION

- A. Solution S (see Tests) gives the reactions of sulfates (2.3.1).  
 B. Solution S gives the reaction of zinc (2.3.1).  
 C. It complies with the limits of the assay.

## TESTS

**Solution S.** Dissolve 2.5 g in *carbon dioxide-free water R* and dilute to 50 mL with the same solvent.

**Appearance of solution.** Solution S is clear (2.2.1) and colourless (2.2.2, *Method II*).

**pH** (2.2.3): 4.0 to 5.6 for solution S.

**Chlorides** (2.4.4): maximum 300 ppm.

Dilute 3.3 mL of solution S to 15 mL with *water R*.

**Iron** (2.4.9): maximum 100 ppm.

Dilute 2 mL of solution S to 10 mL with *water R*. Use 0.5 mL of *thioglycollic acid R* in this test.

## ASSAY

Dissolve 0.160 g in 5 mL of *dilute acetic acid R*. Carry out the complexometric titration of zinc (2.5.11).

1 mL of 0.1 M *sodium edetate* is equivalent to 17.95 mg of  $ZnSO_4 \cdot H_2O$ .

## STORAGE

In a non-metallic container.

01/2008:0539  
corrected 6.0

## ZINC UNDECYLENATE

## Zinci undecylenas

$C_{22}H_{38}O_4Zn$   
[557-08-4]

$M_r$  431.9

## DEFINITION

Zinc di(undec-10-enoate).

*Content*: 98.0 per cent to 102.0 per cent (dried substance).

## CHARACTERS

*Appearance*: white or almost white, fine powder.

*Solubility*: practically insoluble in water and in ethanol (96 per cent).

mp: 116 °C to 121 °C, it may leave a slight solid residue.

## IDENTIFICATION

- A. To 2.5 g add 10 mL of *water R* and 10 mL of *dilute sulfuric acid R*. Shake with 2 quantities, each of 10 mL, of *ether R*. Reserve the aqueous layer for identification test C. Wash the combined ether layers with *water R* and evaporate to dryness. To the residue add 2 mL of freshly distilled *aniline R* and boil under a reflux condenser for 10 min. Allow to cool and add 30 mL of *ether R*. Shake with 3 quantities, each of 20 mL, of *dilute hydrochloric acid R* and then with 20 mL of *water R*. Evaporate the organic layer to dryness on a water-bath. The residue, after recrystallisation twice from *ethanol (70 per cent V/V) R* and drying *in vacuo* for 3 h, melts (2.2.14) at 66 °C to 68 °C.
- B. Dissolve 0.1 g in a mixture of 2 mL of *dilute sulfuric acid R* and 5 mL of *glacial acetic acid R*. Add dropwise 0.25 mL of *potassium permanganate solution R*. The colour of the potassium permanganate solution is discharged.
- C. A mixture of 1 mL of the aqueous layer obtained in identification test A and 4 mL of *water R* gives the reaction of zinc (2.3.1).

## TESTS

**Alkalinity.** Mix 1.0 g with 5 mL of *ethanol (96 per cent) R* and 0.5 mL of *phenol red solution R*. Add 50 mL of *carbon dioxide-free water R* and examine immediately. No reddish colour appears.

**Alkali and alkaline-earth metals:** maximum 2.0 per cent.

To 1.0 g add 25 mL of *water R* and 5 mL of *hydrochloric acid R* and heat to boiling. Filter whilst hot. Wash the filter and the residue with 25 mL of hot *water R*. Combine the filtrate and washings and add *concentrated ammonia R* until alkaline. Add 7.5 mL of *thioacetamide solution R* and heat on a water-bath for 30 min. Filter and wash the precipitate with 2 quantities, each of 10 mL, of *water R*. Combine the filtrate and washings, evaporate to dryness on a water-bath and ignite. The residue weighs a maximum of 20 mg.

**Sulfates** (2.4.13): maximum 500 ppm.

To 0.1 g add a mixture of 2 mL of *dilute hydrochloric acid R* and 10 mL of *distilled water R* and heat to boiling. Cool, filter and dilute to 15 mL with *distilled water R*. Prepare the standard using 5 mL of *sulfate standard solution (10 ppm  $SO_4$ ) R* and 10 mL of *distilled water R*.

**Loss on drying** (2.2.32): maximum 1.5 per cent, determined on 0.500 g by drying in an oven at 105 °C.

**Degree of unsaturation.** Dissolve 0.100 g in a mixture of 5 mL of *dilute hydrochloric acid R* and 30 mL of *glacial acetic acid R*. Using 0.05 mL *indigo carmine solution RI*, added towards the end of the titration as indicator. Titrate with 0.0167 M *bromide-bromate* until the colour changes from blue to yellow. 9.1 mL to 9.4 mL of 0.0167 M *bromide-bromate* is required. Carry out a blank titration.

## ASSAY

To 0.350 g add 25 mL of *dilute acetic acid R* and heat to boiling. Carry out the complexometric titration of zinc (2.5.11).

1 mL of 0.1 M *sodium edetate* is equivalent to 43.19 mg of  $C_{22}H_{38}O_4Zn$ .

## STORAGE

Protected from light.

ZIPRASIDONE HYDROCHLORIDE  
MONOHYDRATE

## Ziprasidoni hydrochloridum monohydricum

$C_{21}H_{22}Cl_2N_4OS \cdot H_2O$   
[138982-67-9]

$M_r$  467.4

## DEFINITION

5-[2-[4-(1,2-Benzisothiazol-3-yl)piperazin-1-yl]ethyl]-6-chloro-1,3-dihydro-2H-indol-2-one hydrochloride monohydrate.

*Content*: 98.0 per cent to 102.0 per cent (anhydrous substance).

## CHARACTERS

*Appearance*: white or slightly pink powder.

*Solubility*: practically insoluble in water, slightly soluble in methanol and in methylene chloride.

It shows polymorphism (5.9).

## IDENTIFICATION

## A. Infrared absorption spectrophotometry (2.2.24).

*Comparison: ziprasidone hydrochloride monohydrate CRS.*

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in *methanol R*, evaporate to dryness and record new spectra using the residues.

B. Suspend 30 mg in 2 mL of *water R*, acidify with 0.15 mL of *dilute nitric acid R* and filter. The clear filtrate gives reaction (a) of chlorides (2.3.1).

## TESTS

**Related substances.** Liquid chromatography (2.2.29). Carry out the test protected from light and prepare the solutions immediately before use.

*Solvent mixture A: water R, methanol R (40:60 V/V).*

*Solvent mixture B: hydrochloric acid R, water R, methanol R (0.04:20:80 V/V/V).*

*Test solution (a).* Dissolve 23 mg of the substance to be examined in solvent mixture A and dilute to 100.0 mL with solvent mixture A.

*Test solution (b).* Dissolve 23 mg of the substance to be examined in solvent mixture B and dilute to 50.0 mL with solvent mixture B.

*Reference solution (a).* Dissolve 2.5 mg of *ziprasidone for system suitability 1 CRS* (containing impurities A, B and C) in solvent mixture B and dilute to 10.0 mL with solvent mixture B.

*Reference solution (b).* Dilute 1.0 mL of test solution (b) to 100.0 mL with solvent mixture B. Dilute 1.0 mL of this solution to 10.0 mL with solvent mixture B.

*Reference solution (c).* Dissolve the contents of a vial of *ziprasidone for system suitability 2 CRS* (containing impurities D and E) in 1.0 mL of solvent mixture B.

## A. Column:

- size:  $l = 0.15$  m,  $\emptyset = 4.6$  mm;
- stationary phase: spherical *octylsilyl silica gel for chromatography R* (5  $\mu$ m);
- temperature: 40 °C.

## Mobile phase:

- mobile phase A: mix 40 volumes of *methanol R* and 60 volumes of a 6.8 g/L solution of *potassium dihydrogen phosphate R* adjusted to pH 3.0 with *phosphoric acid R*;
- mobile phase B: *methanol R*;

Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 20	100	0
20 - 21	100 → 0	0 → 100
21 - 24	0	100

*Flow rate:* 1.5 mL/min.

*Detection:* spectrophotometer at 229 nm.

*Injection:* 20  $\mu$ L of test solutions (a) and (b) and reference solutions (a) and (b).

*Identification of impurities:* use the chromatogram supplied with *ziprasidone for system suitability 1 CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A, B and C.

*Relative retention* with reference to ziprasidone (retention time = about 7 min): impurity A = about 0.4; impurity B = about 0.8; impurity C = about 0.9.

*System suitability:* reference solution (a):

- *peak-to-valley ratio:* minimum 1.2, where  $H_p$  = height above the baseline of the peak due to impurity C and  $H_v$  = height above the baseline of the lowest point of the curve separating this peak from the peak due to impurity B.

## Limits:

- *correction factor:* for the calculation of content, multiply the peak area of impurity A by 0.7;
- *impurity B in test solution (b):* not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
- *impurity A in test solution (b):* not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.15 per cent);
- *impurity C in test solution (a):* not more than 0.75 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.15 per cent);
- *unspecified impurities in test solution (b):* for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- *disregard limit in test solution (b):* 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent); disregard the peak due to impurity C and any peak with a retention time greater than 20 min.

## B. Column:

- size:  $l = 0.15$  m,  $\emptyset = 4.6$  mm;
- stationary phase: spherical *octylsilyl silica gel for chromatography R* (5  $\mu$ m);
- temperature: 35 °C.

*Mobile phase:* mix 5 volumes of *methanol R*, 40 volumes of a 6.8 g/L solution of *potassium dihydrogen phosphate R* adjusted to pH 6.0 with a 280 g/L solution of *potassium hydroxide R*, and 55 volumes of *acetonitrile R1*.

*Flow rate:* 1.0 mL/min.

*Detection:* spectrophotometer at 229 nm.

*Injection:* 20  $\mu$ L of test solution (b) and reference solutions (b) and (c).

*Run time:* 11 times the retention time of ziprasidone.

*Identification of impurities:* use the chromatogram supplied with *ziprasidone for system suitability 2 CRS* and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities D and E.

*Relative retention* with reference to ziprasidone (retention time = about 4.5 min): impurity D = about 2.0; impurity E = about 3.0.

*System suitability:* reference solution (c):

- *resolution:* minimum 6.0 between the peaks due to ziprasidone and impurity D.

## Limits:

- *correction factors:* for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity D = 1.4; impurity E = 0.5;
- *impurities D, E:* for each impurity, not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.15 per cent);
- *unspecified impurities:* for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- *disregard limit:* 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent); disregard any peak eluting before the peak due to ziprasidone.

## Limit:

- *total for tests A and B:* maximum 0.5 per cent.

**Heavy metals** (2.4.8): maximum 20 ppm.

1.0 g complies with test C. Prepare the reference solution using 2 mL of *lead standard solution (10 ppm Pb) R*.

**Water** (2.5.12): 3.7 per cent to 5.0 per cent, determined on 0.250 g.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

#### ASSAY

Liquid chromatography (2.2.29). Carry out the test protected from light and prepare the solutions immediately before use.

**Solvent mixture:** water R, methanol R (40:60 V/V).

**Test solution.** Dissolve 23.0 mg of the substance to be examined in the solvent mixture and dilute to 100.0 mL with the solvent mixture.

**Reference solution.** Dissolve 23.0 mg of ziprasidone hydrochloride monohydrate CRS in the solvent mixture and dilute to 100.0 mL with the solvent mixture.

#### Column:

- size:  $l = 0.15$  m,  $\varnothing = 4.6$  mm;
- stationary phase: spherical octylsilyl silica gel for chromatography R (5  $\mu$ m);
- temperature: 40 °C.

**Mobile phase:** mix 40 volumes of methanol R and 60 volumes of a 6.8 g/L solution of potassium dihydrogen phosphate R adjusted to pH 3.0 with phosphoric acid R.

**Flow rate:** 1.5 mL/min.

**Detection:** spectrophotometer at 229 nm.

**Injection:** 20  $\mu$ L.

**Run time:** twice the retention time of ziprasidone.

**Retention time:** ziprasidone = about 7 min.

**System suitability:** reference solution:

- symmetry factor: maximum 2.0 for the peak due to ziprasidone.

Calculate the percentage content of  $C_{21}H_{22}Cl_2N_4OS$  from the declared content of ziprasidone hydrochloride monohydrate CRS.

#### STORAGE

Protected from light.

#### IMPURITIES

Specified impurities: A, B, C, D, E.

A. 3-piperazin-1-yl-1,2-benzisothiazole,

B. 5-[2-[4-(1,2-benzisothiazol-3-yl)piperazin-1-yl]ethyl]-6-chloro-1H-indole-2,3-dione,

C. 2-[2-amino-5-[2-[4-(1,2-benzisothiazol-3-yl)piperazin-1-yl]ethyl]-4-chlorophenyl]acetic acid,

D. 5,5'-bis[2-[4-(1,2-benzisothiazol-3-yl)piperazin-1-yl]ethyl]-6,6'-dichloro-3-hydroxy-1,1',3,3'-tetrahydro-2H,2'H-3,3'-biindole-2,2'-dione,

E. 3-(1,2-benzisothiazol-3-yl)-5-[2-[4-(1,2-benzisothiazol-3-yl)piperazin-1-yl]ethyl]-6-chloro-1,3-dihydro-2H-indol-2-one.

01/2011:1280

## ZOLPIDEM TARTRATE

### Zolpidemi tartras

$C_{42}H_{48}N_6O_8$   
[99294-93-6]

$M_r$  765

#### DEFINITION

Bis[N,N-dimethyl-2-[6-methyl-2-(4-methylphenyl)imidazo[1,2-a]pyridin-3-yl]acetamide] (2R,3R)-2,3-dihydroxybutanedioate.

**Content:** 98.5 per cent to 101.0 per cent (anhydrous substance).

#### CHARACTERS

**Appearance:** white or almost white, hygroscopic, crystalline powder.

**Solubility:** slightly soluble in water, sparingly soluble in methanol, practically insoluble in methylene chloride.

#### IDENTIFICATION

**First identification:** A, C.

**Second identification:** B, C.

A. Infrared absorption spectrophotometry (2.2.24).

**Preparation:** dissolve 0.10 g in 10 mL of 0.1 M hydrochloric acid. Add 10 mL of water R. Add dropwise with stirring 1 mL of dilute ammonia R2. Filter and collect the resulting precipitate. Wash the precipitate with water R and then dry at 105 °C for 2 h. Examine the precipitate as a disc.

**Comparison:** repeat the operations using 0.10 g of zolpidem tartrate CRS.

## B. Thin-layer chromatography (2.2.27).

**Test solution.** Dissolve 50 mg of the substance to be examined in 5 mL of *methanol R*, add 0.1 mL of *diethylamine R* and dilute to 10 mL with *methanol R*.

**Reference solution (a).** Dissolve 50 mg of *zolpidem tartrate CRS* in 5 mL of *methanol R*, add 0.1 mL of *diethylamine R* and dilute to 10 mL with *methanol R*.

**Reference solution (b).** Dissolve 50 mg of *flunitrazepam CRS* in 5 mL of *methylene chloride R* and dilute to 10 mL with the same solvent. Mix 1 mL of this solution with 1 mL of reference solution (a).

**Plate:** TLC silica gel  $F_{254}$  plate *R*.

**Mobile phase:** *diethylamine R*, *cyclohexane R*, *ethyl acetate R* (10:45:45 V/V/V).

**Application:** 5  $\mu$ L.

**Development:** over 2/3 of the plate.

**Drying:** in air.

**Detection:** examine in ultraviolet light at 254 nm.

**System suitability:** reference solution (b):

- the chromatogram shows 2 clearly separated spots.

**Results:** the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Dissolve about 0.1 g in 1 mL of *methanol R* heating gently. 0.1 mL of this solution gives reaction (b) of tartrates (2.3.1).

## TESTS

**Appearance of solution.** The solution is clear (2.2.1) and not more intensely coloured than reference solution  $Y_6$  or  $BY_6$  (2.2.2, *Method II*). Prepare the solutions protected from light and carry out the test as rapidly as possible.

Triturate 0.25 g with 0.125 g of *tartaric acid R*. Dissolve the mixture in 20 mL of *water R* and dilute to 25 mL with the same solvent.

**Related substances.** Liquid chromatography (2.2.29).

**Test solution.** Dissolve 25 mg of the substance to be examined in the mobile phase and dilute to 50.0 mL with the mobile phase.

**Reference solution (a).** Dissolve 5 mg of *zolpidem impurity A CRS* in the mobile phase and dilute to 50.0 mL with the mobile phase.

**Reference solution (b).** Dissolve 5 mg of the substance to be examined in the mobile phase and dilute to 50.0 mL with the mobile phase. To 10 mL of this solution, add 10 mL of reference solution (a).

**Reference solution (c).** Dilute 2.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

**Column:**

- size:  $l = 0.15$  m,  $\varnothing = 3.9$  mm;
- stationary phase: octadecylsilyl silica gel for chromatography *R* (4  $\mu$ m).

**Mobile phase:** mix 18 volumes of *acetonitrile R*, 23 volumes of *methanol R* and 59 volumes of a 5.6 g/L solution of *phosphoric acid R* adjusted to pH 5.5 with *triethylamine R*.

**Flow rate:** 1.5 mL/min.

**Detection:** spectrophotometer at 254 nm.

**Injection:** 20  $\mu$ L of the test solution and reference solutions (b) and (c).

**Identification of impurities:** use the chromatogram obtained with reference solution (b) to identify the peak due to impurity A.

**Relative retention** with reference to *zolpidem* (retention time = about 10 min): *tartaric acid* = about 0.16; *impurity A* = about 0.8.

**System suitability:** reference solution (b):

- **resolution:** minimum 2.0 between the peaks due to impurity A and *zolpidem*.

**Limits:**

- **unspecified impurities:** for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.10 per cent);
- **total:** not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.2 per cent);
- **disregard limit:** 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent); disregard any peak due to *tartaric acid*.

**Water** (2.5.12): maximum 3.0 per cent, determined on 0.50 g.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

## ASSAY

Dissolve 0.300 g in a mixture of 20 mL of *anhydrous acetic acid R* and 20 mL of *acetic anhydride R*. Titrate with 0.1 M *perchloric acid R*, determining the end-point potentiometrically (2.2.20). Carry out a blank titration.

1 mL of 0.1 M *perchloric acid* is equivalent to 38.24 mg of  $C_{42}H_{48}N_6O_8$ .

## STORAGE

In an airtight container, protected from light.

## IMPURITIES

**Other detectable impurities** (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use* (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): A.

A. *N,N*-dimethyl-2-[7-methyl-2-(4-methylphenyl)imidazo[1,2-*a*]pyridin-3-yl]acetamide.

01/2008:1060

## ZOPICLONE

## Zopiclonum

and enantiomer

$C_{17}H_{17}ClN_6O_3$   
[43200-80-2]

$M_r$  388.8

## DEFINITION

(5*RS*)-6-(5-Chloropyridin-2-yl)-7-oxo-6,7-dihydro-5*H*-pyrrolo[3,4-*b*]pyrazin-5-yl 4-methylpiperazine-1-carboxylate.

**Content:** 98.5 per cent to 100.5 per cent.

## CHARACTERS

*Appearance*: white or slightly yellowish powder.

*Solubility*: practically insoluble in water, freely soluble in methylene chloride, sparingly soluble in acetone, practically insoluble in ethanol (96 per cent). It dissolves in dilute mineral acids.

mp: about 177 °C, with decomposition.

## IDENTIFICATION

*First identification*: B.

*Second identification*: A, C.

A. Ultraviolet and visible absorption spectrophotometry (2.2.25).

*Test solution*. Dissolve 50.0 mg in a 3.5 g/L solution of hydrochloric acid R and dilute to 100.0 mL with the same solvent. Dilute 2.0 mL of this solution to 100.0 mL with a 3.5 g/L solution of hydrochloric acid R.

*Spectral range*: 220-350 nm.

*Absorption maximum*: at 303 nm.

*Specific absorbance at the absorption maximum*: 340 to 380.

B. Infrared absorption spectrophotometry (2.2.24).

*Preparation*: discs.

*Comparison*: zopiclone CRS.

C. Thin-layer chromatography (2.2.27).

*Test solution*. Dissolve 10 mg of the substance to be examined in methylene chloride R and dilute to 10 mL with the same solvent.

*Reference solution*. Dissolve 10 mg of zopiclone CRS in methylene chloride R and dilute to 10 mL with the same solvent.

*Plate*: TLC silica gel GF<sub>254</sub> plate R.

*Mobile phase*: triethylamine R, acetone R, ethyl acetate R (2:50:50 V/V/V).

*Application*: 10 µL.

*Development*: over a path of 15 cm.

*Drying*: in air.

*Detection*: examine in ultraviolet light at 254 nm.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

## TESTS

**Solution S**. Dissolve 1.0 g in dimethylformamide R and dilute to 20.0 mL with the same solvent.

**Appearance of solution**. Solution S is not more opalescent than reference suspension II (2.2.1) and not more intensely coloured than intensity 5 of the range of reference solutions of the most appropriate colour (2.2.2, Method II).

**Optical rotation** (2.2.7): -0.05° to +0.05°.

Dilute 10.0 mL of solution S to 50.0 mL with dimethylformamide R.

**Related substances**. Liquid chromatography (2.2.29). Prepare the solutions immediately before use.

*Test solution*. Dissolve 40.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 mL with the mobile phase.

*Reference solution (a)*. Dilute 3.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Reference solution (b)*. Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Reference solution (c)*. Dissolve 4.0 mg of zopiclone oxide CRS (impurity A) in the mobile phase and dilute to 10.0 mL with the mobile phase. To 10.0 mL of this solution, add 1.0 mL of the test solution and dilute to 100.0 mL with the mobile phase.

*Column*:

– *size*:  $l = 0.25$  m,  $\varnothing = 4.6$  mm;

– *stationary phase*: octadecylsilyl silica gel for chromatography R (5 µm);

– *temperature*: 30 °C.

*Mobile phase*: mix 38 volumes of acetonitrile R and 62 volumes of a solution containing 8.1 g/L of sodium laurilsulfate R and 1.6 g/L of sodium dihydrogen phosphate R adjusted to pH 3.5 with a 10 per cent V/V solution of phosphoric acid R.

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 303 nm.

*Injection*: 20 µL.

*Run time*: 1.5 times the retention time of zopiclone.

*Retention time*: zopiclone = 27 min to 31 min; if necessary, adjust the concentration of acetonitrile in the mobile phase (increasing the concentration decreases the retention times).

*System suitability*: reference solution (c):

– *resolution*: minimum 3.0 between the peaks due to impurity A and zopiclone; if necessary, adjust the mobile phase to pH 4.0 with a 10 per cent V/V solution of phosphoric acid R.

*Limits*:

– *impurities A, B, C*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent) and not more than 2 such peaks have an area greater than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent).

**2-Propanol**. Gas chromatography (2.2.28).

*Internal standard solution*. Dilute 5 mL of ethanol R1 to 100 mL with ethylene chloride R. Dilute 1 mL of this solution to 10 mL with ethylene chloride R.

*Test solution*. Dissolve 0.25 g of the substance to be examined in ethylene chloride R, add 0.5 mL of the internal standard solution and dilute to 5.0 mL with ethylene chloride R.

*Reference solution*. Dilute 4.5 mL of 2-propanol R to 100.0 mL with ethylene chloride R. To 1.0 mL of this solution, add 10.0 mL of the internal standard solution and dilute to 100.0 mL with ethylene chloride R.

*Column*:

– *material*: fused silica;

– *size*:  $l = 10$  m,  $\varnothing =$  about 0.53 mm;

– *stationary phase*: styrene-divinylbenzene copolymer R (film thickness 20 µm).

*Carrier gas*: helium for chromatography R.

*Flow rate*: 4 mL/min.

*Temperature*:

	Time (min)	Temperature (°C)
Column	0 - 5	50
	5 - 10	50 → 70
	10 - 14	70
	14 - 20.5	70 → 200
	20.5 - 27.5	200
Injection port		150
Detector		250

*Detection*: flame ionisation.

*Injection*: 1 µL.

Calculate the percentage content *m/m* of 2-propanol taking its density to be 0.785 g/mL at 20 °C.

**Limit:**

– 2-propanol: maximum 0.7 per cent *m/m*.

**Heavy metals (2.4.8):** maximum 20 ppm.

1.0 g complies with test C. Prepare the reference solution using 2 mL of lead standard solution (10 ppm Pb) R.

**Sulfated ash (2.4.14):** maximum 0.1 per cent, determined on 1.0 g.

**ASSAY**

Dissolve 0.300 g in a mixture of 10 mL of anhydrous acetic acid R and 40 mL of acetic anhydride R. Titrate with 0.1 M perchloric acid, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M perchloric acid is equivalent to 38.88 mg of C<sub>17</sub>H<sub>17</sub>ClN<sub>6</sub>O<sub>3</sub>.

**STORAGE**

Protected from light.

**IMPURITIES**

Specified impurities: A, B, C.

- A. (5*RS*)-6-(5-chloropyridin-2-yl)-7-oxo-6,7-dihydro-5*H*-pyrrolo[3,4-*b*]pyrazin-5-yl 4-methylpiperazine-1-carboxylate 4-oxide (zopiclone oxide),
- B. R-OH and enantiomer: (7*RS*)-6-(5-chloropyridin-2-yl)-7-hydroxy-6,7-dihydro-5*H*-pyrrolo[3,4-*b*]pyrazin-5-one,
- C. R-H: 6-(5-chloropyridin-2-yl)-6,7-dihydro-5*H*-pyrrolo[3,4-*b*]pyrazin-5-one.

01/2008:1707

## ZUCLOPENTHIXOL DECANOATE

### Zuclopenthixoli decanoas

C<sub>32</sub>H<sub>43</sub>ClN<sub>2</sub>O<sub>2</sub>S  
[64053-00-5]

*M<sub>r</sub>* 555.2

**DEFINITION**

2-[4-[3-[(9*Z*)-2-Chloro-9*H*-thioxanthen-9-ylidene]propyl]-piperazin-1-yl]ethyl decanoate.

**Content:** 98.0 per cent to 102.0 per cent (dried substance).

**CHARACTERS**

**Appearance:** yellow, viscous, oily liquid.

**Solubility:** very slightly soluble in water, very soluble in ethanol (96 per cent) and in methylene chloride.

**IDENTIFICATION**

Infrared absorption spectrophotometry (2.2.24).

**Comparison:** Ph. Eur. reference spectrum of zuclopenthixol decanoate.

**TESTS**

**Appearance of solution.** The solution is clear (2.2.1).

Using an ultrasonic bath, dissolve 1.0 g in ethanol (96 per cent) R and dilute to 20.0 mL with the same solvent.

**Related substances.** Liquid chromatography (2.2.29). Carry out the test protected from light and prepare the solutions immediately before use.

**Solution A.** Dissolve 8.89 g of docusate sodium R in water R, stirring for about 6-8 h, and dilute to 1000 mL with the same solvent.

**Test solution.** Dissolve 25.0 mg of the substance to be examined in acetonitrile R and dilute to 100.0 mL with the same solvent.

**Reference solution (a).** Dilute 1.0 mL of the test solution to 100.0 mL with acetonitrile R.

**Reference solution (b).** Dissolve 5.0 mg of zuclopenthixol impurity B CRS in acetonitrile R and dilute to 100.0 mL with the same solvent. Dilute 5.0 mL of this solution to 100.0 mL with acetonitrile R.

**Reference solution (c).** Dissolve the contents of a vial of zuclopenthixol for system suitability CRS (zuclopenthixol decanoate containing impurities A, B and C) in 1 mL of methanol R.

**Column:**

- size: *l* = 0.25 m, Ø = 4.6 mm;
- stationary phase: spherical end-capped octadecylsilyl silica gel for chromatography R (5 µm);
- temperature: 40 °C.

**Mobile phase:** mix 25 volumes of solution A and 75 volumes of anhydrous ethanol R, then add 0.1 volumes of phosphoric acid R.

**Flow rate:** 1.0 mL/min.

**Detection:** spectrophotometer at 270 nm.

**Injection:** 20 µL.

**Run time:** twice the retention time of zuclopenthixol decanoate.

**Identification of impurities:** use the chromatogram supplied with zuclopenthixol for system suitability CRS and the chromatograms obtained with reference solutions (b) and (c) to identify the peaks due to impurities A, B and C.

**Relative retention** with reference to zuclopenthixol decanoate (retention time = about 12 min): impurity C = about 0.4; impurity B = about 0.5; impurity A = about 1.1.

**System suitability:** reference solution (c):

- peak-to-valley ratio: minimum 2.0, where *H<sub>p</sub>* = height above the baseline of the peak due to impurity C and *H<sub>v</sub>* = height above the baseline of the lowest point of the curve separating this peak from the peak due to impurity B; and minimum 2.5, where *H<sub>p</sub>* = height above the baseline of the peak due to impurity A and *H<sub>v</sub>* = height above the baseline of the lowest point of the curve separating this peak from the peak due to zuclopenthixol decanoate.

**Limits:**

- impurity A: not more than 1.3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (1.3 per cent);
- impurity B: not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
- impurity C: not more than 0.3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);
- unspecified impurities: for each impurity, not more than 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);

- *total*: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (1.5 per cent);
- *disregard limit*: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Heavy metals** (2.4.8): maximum 20 ppm.

1.0 g complies with test C. Prepare the reference solution using 2 mL of *lead standard solution* (10 ppm Pb) R.

**Loss on drying** (2.2.32): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 60 °C at a pressure not exceeding 0.7 kPa for 3 h.

**Sulfated ash** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

#### ASSAY

Dissolve 0.250 g in 50 mL of *anhydrous acetic acid* R. Titrate with 0.1 M *perchloric acid*, determining the end-point potentiometrically (2.2.20).

1 mL of 0.1 M *perchloric acid* is equivalent to 27.76 mg of  $C_{32}H_{43}ClN_2O_2S$ .

#### STORAGE

Under an inert gas in an airtight container, protected from light, at a temperature not exceeding –20 °C.

#### IMPURITIES

*Specified impurities: A, B, C.*

A. 2-[4-[3-[(9*E*)-2-chloro-9*H*-thioxanthen-9-ylidene]propyl]piperazin-1-yl]ethyl decanoate,

B. 2-chloro-9*H*-thioxanthen-9-one,

C. 2-[4-[3-[(9*Z*)-2-chloro-9*H*-thioxanthen-9-ylidene]propyl]piperazin-1-yl]ethanol.

# INDEX

*Monographs deleted from the 6<sup>th</sup> Edition are not included in the index; a list of deleted texts is found in the Contents of Volume 1, page xxii.*

Containers for human blood and blood components, materials for (3.1.1.) .....	329	Cyproterone acetate .....	1779
Containers for human blood and blood components, plastic, sterile (3.2.3.) .....	369	Cysteine hydrochloride monohydrate .....	1781
Containers for non-injectable aqueous solutions, materials based on non-plasticised poly(vinyl chloride) for (3.1.10.) .....	349	Cystine.....	1782
Containers for parenteral preparations and for ophthalmic preparations, polyethylene with additives for (3.1.5.) .....	338	Cytarabine .....	1783
Containers for parenteral preparations and for ophthalmic preparations, polyethylene without additives for (3.1.4.) .....	337	<b>D</b>	
Containers for pharmaceutical use, glass (3.2.1.) .....	363	Dacarbazine.....	1787
Containers for preparations not for parenteral use, polyethylene terephthalate for (3.1.15) .....	357	Dalteparin sodium .....	1788
		Danaparoid sodium .....	1789
		Dandelion herb with root .....	1110
		Dandelion root.....	1111
		Dapsone .....	1792

Daunorubicin hydrochloride .....	1792	Dihydrocodeine hydrogen tartrate .....	1845
D-Camphor .....	1569	Dihydroergocristine mesilate .....	1846
Decyl oleate .....	1794	Dihydroergotamine mesilate .....	1849
Deferoxamine mesilate.....	1794	Dihydroergotamine tartrate .....	1850
Degree of coloration of liquids (2.2.2.).....	22	Dihydrostreptomycin sulfate for veterinary use.....	1851
Dembrexine hydrochloride monohydrate for veteri- nary use .....	1795	Dihydrotachysterol .....	1853
Demeclocycline hydrochloride .....	1796	Diltiazem hydrochloride .....	1855
Density of powders, bulk density and tapped (2.9.34.) .....	305	Dimenhydrinate.....	1856
Density of solids (2.2.42.) .....	66	Dimercaprol.....	1858
Density of solids, gas pycnometric (2.9.23.) .....	288	Dimethylacetamide .....	1859
Density, relative (2.2.5.) .....	25	Dimethylaniline, <i>N,N</i> - (2.4.26.).....	128
Dental type silica .....	2903	Dimethyl sulfoxide .....	1858
Depressor substances (2.6.11.).....	162	Dimeticone .....	1860
Deptropine citrate.....	1797	Dimetindene maleate .....	1860
Dequalinium chloride.....	1798	Dinoprostone .....	1863
Desflurane .....	1800	Dinoprost trometamol .....	1862
Desipramine hydrochloride .....	1801	Diosmin .....	1864
Deslanoside .....	1802	Dioxan and ethylene oxide (2.4.25.) .....	127
Desmopressin.....	1803	Dip concentrates .....	740
Desogestrel.....	1804	Diphenhydramine hydrochloride .....	1866
Desoxycortone acetate.....	1805	Diphenoxylate hydrochloride .....	1867
Detector tubes, gas (2.1.6.) .....	17	Diphtheria and tetanus toxins and toxoids, flocculation value (Lf) of, (Ramon assay) (2.7.27.) .....	231
Determination of aflatoxin B <sub>1</sub> in herbal drugs (2.8.18.).....	244	Diphtheria and tetanus vaccine (adsorbed).....	751
Determination of essential oils in herbal drugs (2.8.12.).....	241	Diphtheria and tetanus vaccine (adsorbed, reduced antigen(s) content).....	752
Determination of nitrogen by sulfuric acid digestion (2.5.9.)..	139	Diphtheria antitoxin.....	949
Determination of primary aromatic amino-nitrogen (2.5.8.)..	139	Diphtheria, tetanus and hepatitis B (rDNA) vaccine (adsorbed).....	753
Determination of tannins in herbal drugs (2.8.14.).....	243	Diphtheria, tetanus and pertussis (acellular, component) vaccine (adsorbed).....	754
Determination of water by distillation (2.2.13.) .....	31	Diphtheria, tetanus and pertussis vaccine (adsorbed) .....	755
Detomidine hydrochloride for veterinary use .....	1806	Diphtheria, tetanus and poliomyelitis (inactivated) vaccine (adsorbed, reduced antigen(s) content) .....	756
Devil's claw dry extract .....	1112	Diphtheria, tetanus, pertussis (acellular, component) and haemophilus type b conjugate vaccine (adsorbed) .....	758
Devil's claw root .....	1113	Diphtheria, tetanus, pertussis (acellular, component) and hepatitis B (rDNA) vaccine (adsorbed) .....	760
Dexamethasone .....	1807	Diphtheria, tetanus, pertussis (acellular, component) and poliomyelitis (inactivated) vaccine (adsorbed) .....	762
Dexamethasone acetate .....	1809	Diphtheria, tetanus, pertussis (acellular, component) and poliomyelitis (inactivated) vaccine (adsorbed, reduced anti- gen(s) content) .....	763
Dexamethasone isonicotinate .....	1811	Diphtheria, tetanus, pertussis (acellular, component), hepatitis B (rDNA), poliomyelitis (inactivated) and haemophilus type b conjugate vaccine (adsorbed) .....	765
Dexamethasone sodium phosphate .....	1812	Diphtheria, tetanus, pertussis (acellular, component), poliomyelitis (inactivated) and haemophilus type b conjugate vaccine (adsorbed) .....	768
Dexchlorpheniramine maleate .....	1814	Diphtheria, tetanus, pertussis and poliomyelitis (inactivated) vaccine (adsorbed).....	771
Dexpanthenol .....	1815	Diphtheria, tetanus, pertussis, poliomyelitis (inactivated) and haemophilus type b conjugate vaccine (adsorbed) .....	772
Dextran 1 for injection.....	1816	Diphtheria vaccine (adsorbed) .....	774
Dextran 40 for injection .....	1817	Diphtheria vaccine (adsorbed), assay of (2.7.6.) .....	209
Dextran 60 for injection .....	1818	Diphtheria vaccine (adsorbed, reduced antigen content) .....	776
Dextran 70 for injection .....	1819	Dipivefrine hydrochloride .....	1867
Dextranomer .....	1819	Dipotassium clorazepate .....	1869
Dextrans, molecular mass distribution in (2.2.39.) .....	60	Dipotassium phosphate .....	1870
Dextrin.....	1820	Diprophylline .....	1870

Phentolamine mesilate .....	2709	Poliomyelitis (inactivated), diphtheria, tetanus and pertussis	
Phenylalanine .....	2711	vaccine (adsorbed) .....	771
Phenylbutazone .....	2711	Poliomyelitis (inactivated), diphtheria, tetanus, pertussis	
Phenylbutyrate, sodium .....	2938	(acellular, component) and haemophilus type b conjugate	
Phenylephrine .....	2713	vaccine (adsorbed) .....	768
Phenylephrine hydrochloride .....	2714	Poliomyelitis (inactivated), diphtheria, tetanus, pertussis	
Phenylmercuric acetate .....	2715	(acellular, component), hepatitis B (rDNA) and haemophilus	
Phenylmercuric borate .....	2716	type b conjugate vaccine (adsorbed) .....	765
Phenylmercuric nitrate .....	2716	Poliomyelitis (inactivated), diphtheria, tetanus, pertussis and	
Phenylpropanolamine hydrochloride .....	2717	haemophilus type b conjugate vaccine (adsorbed) .....	772
Phenytoin .....	2718	Poliomyelitis vaccine (inactivated) .....	815
Phenytoin sodium .....	2719	Poliomyelitis vaccine (inactivated), <i>in vivo</i> assay of (2.7.20.) ..	225
Phloroglucinol, anhydrous .....	2720	Poliomyelitis vaccine (oral) .....	818
Phloroglucinol dihydrate .....	2722	Poliomyelitis vaccine (oral), test for neurovirulence (2.6.19.) ..	179
Pholcodine .....	2724	Poloxamers .....	2751
Phosphates (2.4.11.) .....	117	Polyacrylate dispersion 30 per cent .....	2752
Phosphoric acid, concentrated .....	2725	Polyamide 6/6 suture, sterile, in distributor for veterinary use	
Phosphoric acid, dilute .....	2725	.....	1038
Phosphorus in polysaccharide vaccines (2.5.18.) .....	142	Polyamide 6 suture, sterile, in distributor for veterinary use	
pH, potentiometric determination of (2.2.3.) .....	24	.....	1038
Phthalylsulfathiazole .....	2726	Polyethyleneglycols .....	2402
Physical and physicochemical methods (2.2.) .....	21	Polyethylene terephthalate for containers for preparations not	
Physostigmine salicylate .....	2726	for parenteral use (3.1.15.) .....	357
Physostigmine sulfate .....	2727	Poly(ethylene terephthalate) suture, sterile, in distributor for	
Phytomenadione .....	2728	veterinary use .....	1039
Phytosterol .....	2729	Poly(ethylene - vinyl acetate) for containers and tubing for total	
Picosulfate, sodium .....	2939	parenteral nutrition preparations (3.1.7.) .....	345
Picotamide monohydrate .....	2730	Polyethylene with additives for containers for parenteral	
Pilocarpine hydrochloride .....	2731	preparations and for ophthalmic preparations (3.1.5.) .....	338
Pilocarpine nitrate .....	2732	Polyethylene without additives for containers for parenteral	
Pimobendan .....	2734	preparations and for ophthalmic preparations (3.1.4.) .....	337
Pimozide .....	2734	Polymorphism (5.9.) .....	627
Pindolol .....	2736	Polymyxin B sulfate .....	2753
Pine (dwarf) oil .....	1116	Polyolefines (3.1.3.) .....	334
Pine sylvestris oil .....	1216	Polyoxyl castor oil .....	2398
Pinus pinaster type turpentine oil .....	1258	Polyoxyl hydrogenated castor oil .....	2397
Pipemidic acid trihydrate .....	2737	Polypropylene for containers and closures for parenteral	
Piperacillin .....	2738	preparations and ophthalmic preparations (3.1.6.) .....	342
Piperacillin sodium .....	2739	Polysaccharide vaccines, hexosamines in (2.5.20.) .....	142
Piperazine adipate .....	2741	Polysaccharide vaccines, methylpentoses in (2.5.21.) .....	143
Piperazine citrate .....	2742	Polysaccharide vaccines, nucleic acids in (2.5.17.) .....	142
Piperazine hydrate .....	2743	Polysaccharide vaccines, <i>O</i> -acetyl in (2.5.19.) .....	142
Piracetam .....	2743	Polysaccharide vaccines, phosphorus in (2.5.18.) .....	142
Pirenzepine dihydrochloride monohydrate .....	2744	Polysaccharide vaccines, protein in (2.5.16.) .....	141
Piretanide .....	2746	Polysaccharide vaccines, ribose in (2.5.31.) .....	146
Piroxicam .....	2747	Polysaccharide vaccines, sialic acid in (2.5.23.) .....	143
Pivampicillin .....	2748	Polysaccharide vaccines, uronic acids in (2.5.22.) .....	143
Pivmecillinam hydrochloride .....	2750	Polysorbate 20 .....	2754
Plasma for fractionation, human .....	2181	Polysorbate 40 .....	2755

Polysorbate 60 .....	2756	Powder fineness (2.9.35.) .....	308
Polysorbate 80 .....	2756	Powder flow (2.9.36.) .....	308
Polystyrene sulfonate, sodium .....	2940	Powder flow (2.9.36.) (5.8.) .....	622
Poly(vinyl acetate) .....	2758	Powders and granules for oral solutions and suspensions ...	718
Poly(vinyl acetate) dispersion 30 per cent .....	2759	Powders and granules for syrups .....	719
Poly(vinyl alcohol) .....	2760	Powders and tablets for rectal solutions and suspensions .....	733
Poly(vinyl alcohol) macrogol grafted copolymer .....	2401	Powders, bulk density and tapped density of (2.9.34.) .....	305
Poly(vinyl chloride) (non-plasticised) for containers for dry dosage forms for oral administration, materials based on (3.1.11.) .....	350	Powders, ear .....	710
Poly(vinyl chloride), non-plasticised, materials based on for containers for non-injectable aqueous solutions (3.1.10.) .....	349	Powders, effervescent .....	727
Poly(vinyl chloride), plasticised, empty sterile containers of for human blood and blood components (3.2.4.) .....	370	Powders for cutaneous application .....	726
Poly(vinyl chloride), plasticised, materials based on for containers for aqueous solutions for intravenous infusion (3.1.14.) .....	355	Powders for eye drops and powders for eye lotions .....	711
Poly(vinyl chloride), plasticised, materials based on for containers for human blood and blood components (3.1.1.1.) .....	329	Powders for inhalation .....	730
Poly(vinyl chloride), plasticised, materials based on for tubing used in sets for the transfusion of blood and blood components (3.1.1.2.) .....	332	Powders for injections or infusions .....	725
Poly(vinyl chloride), plasticised, sterile containers of for human blood containing anticoagulant solution (3.2.5.) .....	371	Powders for oral drops .....	719
Poppy petals, red .....	1222	Powders, nasal .....	721
Porcine actinobacillosis vaccine (inactivated) .....	926	Powders, oral .....	727
Porcine enzootic pneumonia vaccine (inactivated) .....	927	Powders, wettability of porous solids including (2.9.45.) .....	321
Porcine influenza vaccine (inactivated) .....	929	Pramipexole dihydrochloride monohydrate .....	2779
Porcine insulin .....	2247	Pravastatin sodium .....	2780
Porcine parvovirus vaccine (inactivated) .....	930	Prazepam .....	2782
Porcine progressive atrophic rhinitis vaccine (inactivated) .....	931	Praziquantel .....	2783
Pore-size distribution of solids by mercury porosimetry, porosity and (2.9.32.) .....	299	Prazosin hydrochloride .....	2784
Porosimetry, mercury, porosity and pore-size distribution of solids by (2.9.32.) .....	299	Prednicarbate .....	2785
Porosity and pore-size distribution of solids by mercury porosimetry (2.9.32.) .....	299	Prednisolone .....	2786
Porosity of sintered-glass filters (2.1.2.) .....	15	Prednisolone acetate .....	2787
Porous solids including powders, wettability of (2.9.45.) .....	321	Prednisolone pivalate .....	2789
Potassium (2.4.12.) .....	117	Prednisolone sodium phosphate .....	2790
Potassium acetate .....	2761	Prednisone .....	2791
Potassium bromide .....	2761	Pregelatinised starch .....	2983
Potassium carbonate .....	2762	Prekallikrein activator (2.6.15.) .....	175
Potassium chloride .....	2763	Premixes for medicated feeding stuffs for veterinary use .....	727
Potassium citrate .....	2763	Preparations for inhalation .....	728
Potassium clavulanate .....	2764	Preparations for inhalation: aerodynamic assessment of fine particles (2.9.18.) .....	274
Potassium clavulanate, diluted .....	2766	Preparations for irrigation .....	731
Potassium dihydrogen phosphate .....	2768	Pressurised pharmaceutical preparations .....	732
Potassium hydrogen aspartate hemihydrate .....	2768	Prilocaine .....	2792
Potassium hydrogen carbonate .....	2769	Prilocaine hydrochloride .....	2794
Potassium hydrogen tartrate .....	2769	Primaquine diphosphate .....	2795
Potassium hydroxide .....	2770	Primary aromatic amino-nitrogen, determination of (2.5.8.) ..	139
Potassium iodide .....	2771	Primary standards for volumetric solutions (4.2.1.) .....	494
Potassium metabisulfite .....	2771	Primidone .....	2796
Potassium nitrate .....	2772	Primula root .....	1217
Potassium perchlorate .....	2773	Probenecid .....	2797
Potassium permanganate .....	2773	Procainamide hydrochloride .....	2798
Potassium sodium tartrate tetrahydrate .....	2774	Procaine benzylpenicillin .....	1474
Potassium sorbate .....	2774	Procaine hydrochloride .....	2798
Potassium sulfate .....	2775	Prochlorperazine maleate .....	2799
Potato starch .....	2775	Products of fermentation .....	685
Potentiometric determination of ionic concentration using ion-selective electrodes (2.2.36.) .....	57	Products of recombinant DNA technology .....	692
Potentiometric determination of pH (2.2.3.) .....	24	Products with risk of transmitting agents of animal spongiform encephalopathies .....	686
Potentiometric titration (2.2.20.) .....	34	Progenitor cells, human haematopoietic, colony-forming cell assay for (2.7.28.) .....	232
Potentiation, methods of preparation of homoeopathic stocks and .....	1277	Progesterone .....	2800
Poultices .....	735	Progressive atrophic rhinitis vaccine (inactivated), porcine ..	931
Pour-on preparations .....	740	Proguanil hydrochloride .....	2801
Povidone .....	2776	Proline .....	2802
Povidone, iodinated .....	2778	Promazine hydrochloride .....	2803
Powdered cellulose .....	1638	Promethazine hydrochloride .....	2804

 Wild pansy (flowering aerial parts). ....1266  
 Wild thyme . ....1267  
 Willow bark . ....1268  
 Willow bark dry extract. ....1269  
 Wool alcohols. ....3227  
 Wool fat. ....3228  
 Wool fat, hydrogenated. ....3232  
 Wool fat, hydrous. ....3233  
 Wormwood . ....1270
- X**
- Xanthan gum . ....3237  
 Xenon (<sup>133</sup>Xe) injection. ....1023  
 X-ray fluorescence spectrometry (2.2.37.)..... 58  
 X-ray powder diffraction (XRPD), characterisation of crystalline and partially crystalline solids by (2.9.33.) ..... 301  
 Xylazine hydrochloride for veterinary use .....3238  
 Xylitol. ....3239  
 Xylometazoline hydrochloride . ....3241  
 Xylose. ....3242
- Y**
- Yarrow .....1271  
 Yellow beeswax.....1454  
 Yellow fever vaccine (live) .....840  
 Yellow soft paraffin. ....2671  
 Yohimbine hydrochloride. ....3247
- Z**
- Zidovudine .....3251  
 Zinc acetate dihydrate. ....3252  
 Zinc acexamate . ....3253  
 Zinc chloride . ....3254  
 Zinc gluconate . ....3255  
 Zinc oxide. ....3255  
 Zinc stearate. ....3256  
 Zinc sulfate heptahydrate. ....3257  
 Zinc sulfate hexahydrate . ....3257  
 Zinc sulfate monohydrate. ....3257  
 Zinc undecylenate . ....3258  
 Ziprasidone hydrochloride monohydrate .....3258  
 Zolpidem tartrate . ....3260  
 Zopiclone .....3261  
 Zoster (shingles) vaccine (live), herpes . ....828  
 Zuclopenthixol decanoate. ....3263

## Numerics

*α*-1-Proteinasi inhibitor humanum .....2184

## A

<i>Absinthii herba</i> . . . . .	1270

# KEY TO MONOGRAPHS

Carbimazole

EUROPEAN PHARMACOPOEIA 7.0

Version date of the text	01/2008:0884 corrected 7.0
Text reference number	<b>CARBIMAZOLE</b> Carbimazolum

Modification to be taken into account from the publication date of volume 7.0

CAS number	C <sub>7</sub> H <sub>10</sub> N <sub>2</sub> O <sub>2</sub> S [22232-54-8]	M <sub>r</sub> 186.2
------------	--	----------------------

**DEFINITION**  
Ethyl 3-methyl-2-thioxo-2,3-dihydro-1H-imidazole-1-carboxylate.  
*Content:* 98.0 per cent to 102.0 per cent (dried substance).

**CHARACTERS**  
*Appearance:* white or yellowish-white, crystalline powder.  
*Solubility:* slightly soluble in water, soluble in acetone and in ethanol (96 per cent).

**IDENTIFICATION**  
*First identification:* B.  
*Second identification:* A, C.  
A. Melting point (2.2.14): 122 °C to 125 °C.  
B. Infrared absorption spectrophotometry (2.2.24).  
*Preparation:* discs.  
*Comparison:* carbimazole CRS.

**REFERENCE STANDARD**  
C. Thin-layer chromatography (2.2.27).  
*Test solution.* Dissolve 10 mg of the substance to be examined in methylene chloride R and dilute to 10 mL with the same solvent.  
*Reference solution.* Dissolve 10 mg of carbimazole CRS in methylene chloride R and dilute to 10 mL with the same solvent.  
*Plate:* TLC silica gel GF<sub>254</sub> plate R.

**REAGENTS**  
*Mobile phase:* acetone R / methylene chloride R (20:80 V/V).  
*Application:* 10 µL.  
*Development:* over a path of 15 cm.  
*Drying:* in air for 30 min.

**DETECTION**  
*Detection:* examine in ultraviolet light at 254 nm.  
*Results:* the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

**TESTS**  
**Related substances.** Liquid chromatography (2.2.29).  
*Test solution.* Dissolve 5.0 mg of the substance to be examined in 10.0 mL of a mixture of 20 volumes of acetonitrile R and 80 volumes of water R. Use this solution within 5 min of preparation.

**REFERENCE SOLUTION**  
*Reference solution (a).* Dissolve 5 mg of thiamazole R and 0.10 g of carbimazole CRS in a mixture of 20 volumes of acetonitrile R and 80 volumes of water R and dilute to 100.0 mL with the same mixture of solvents. Dilute 1.0 mL

of this solution to 10.0 mL with a mixture of 20 volumes of acetonitrile R and 80 volumes of water R.

*Reference solution (b).* Dissolve 5.0 mg of thiamazole R in a mixture of 20 volumes of acetonitrile R and 80 volumes of water R and dilute to 10.0 mL with the same mixture of solvents. Dilute 1.0 mL of this solution to 100.0 mL with a mixture of 20 volumes of acetonitrile R and 80 volumes of water R.

**COLUMN**  
– size: l = 0.15 m, Ø = 3.9 mm,  
– stationary phase: octadecylsilyl silica gel for chromatography R (5 µm).

*Mobile phase:* acetonitrile R, water R (10:90 V/V).

*Flow rate:* 1 mL/min.

*Detection:* spectrophotometer at 254 nm.

*Injection:* 10 µL.

*Run time:* 1.5 times the retention time of carbimazole.

*Retention time:* carbimazole = about 6 min.

*System suitability:* reference solution (a):

– resolution: minimum 5.0 between the peaks due to impurity A and carbimazole.

**LIMITS**

– impurity A: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent),

– unspecified impurities: for each impurity, not more than 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent).

**LOSS ON DRYING** (2.2.32): maximum 0.5 per cent, determined on 1.000 g by drying in a desiccator over diphosphorus pentoxide R at a pressure not exceeding 0.7 kPa for 24 h.

**SULFATED ASH** (2.4.14): maximum 0.1 per cent, determined on 1.0 g.

**ASSAY**

Dissolve 50.0 mg in water R and dilute to 500.0 mL with the same solvent. To 10.0 mL add 10 mL of dilute hydrochloric acid R and dilute to 100.0 mL with water R. Measure the absorbance (2.2.25) at the absorption maximum at 291 nm.

Calculate the content of C<sub>7</sub>H<sub>10</sub>N<sub>2</sub>O<sub>2</sub>S taking the specific absorbance to be 557.

**IMPURITIES**

*Specified impurities:* A.

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use* (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. *Control of impurities in substances for pharmaceutical use*): B.

A. 1-methyl-1H-imidazole-2-thiol (thiamazole),
