**MINISTRY OF HEALTH OF UKRAINE
ODESSA NATIONAL MEDICAL UNIVERSITY
Department of Infectious Diseases**

**WORK PROGRAM OF
«Children's infectious diseases»**

Level of higher education: the second (Master's)
Field of knowledge: 22 "Health care"
Specialty: 222 "Medicine"
Educational and professional program: Medicine

Developer:
Head of the Department, MD, professor Chaban T.V.

Head of the department Tetiana CHABAN

Chairman of the subject cycle methodical commission for pediatric disciplines of ONMedU

Reviewed and approved at the meeting of the department

Minutes No. _____ dated " _____ " _____ 20____

1. Description of the discipline:

Name of indicators	Field of knowledge, specialty, specialization, level of higher education	Characteristics of the discipline
Total number:	Field of knowledge 22 «Health care»	<i>Full-time (day) education</i>
Credits of ECTS: 2		<i>Compulsory discipline</i>
Hours: 60	Specialty 222 «Medicine»	<i>Course: 6</i>
		<i>Semester XI - XII</i>
		<i>Lectures (0 hours)</i>
		<i>Seminars (0 hours)</i>
Content modules: 3	Level of higher education second (master's degree)	<i>Practical classes (24 hours)</i>
		<i>Laboratories (0 hours)</i>
		<i>Independent work (36 hours)</i>
		<i>including individual tasks (0 hours)</i>
		<i>Form of final control – Credit</i>

2. The purpose and tasks of the educational discipline, competencies, program learning outcomes

The purpose is Mastery by the student of higher education of knowledge and formation of elements of professional competences in the field of children's infectious diseases, and improvement of skills and competences acquired during the study of previous disciplines.

The tasks of the discipline are the following

1. Formation of skills and abilities in diagnosis, differential diagnosis of the most common infectious diseases in children, syndromes that occur with these diseases and emergency conditions that may arise during the disease.
2. Improving the skills of substantiating and establishing a clinical diagnosis according to the classification of diseases, drawing up a plan for additional laboratory and instrumental examination.
3. Mastering the ability to determine treatment tactics, providing emergency care and prevention of the most common infectious diseases in children.

The process of studying the discipline is aimed at forming elements of following competencies:

- *General competencies:*

GC1. Ability to abstract thinking, analysis and synthesis.

GC 3. Ability to apply knowledge in practical situations

GC 4. Knowledge and understanding of the subject area and understanding of professional activity.

GC 5. Ability to adapt and act in a new situation

GC 6. Ability to make reasonable decisions

GC 7. Ability to work in a team

GC 8. Ability to interpersonal interaction

GC 10. Ability to use information and communication technologies

GC 11. Ability to search, process and analyze information from various sources

GC12 Determination and persistence in relation to assigned tasks and assumed responsibilities GC14

The ability to realize one's rights and responsibilities as a member of society, to be aware of the

values of a public (free democratic) society and the need for its sustainable development, the rule of law, the rights and freedoms of a person and a citizen in Ukraine

GC15 The ability to preserve and multiply moral, cultural, scientific values and achievements of society based on an understanding of the history and patterns of development of the subject area, its place in the general system of knowledge about nature and society and in the development of society, technology and technologies, to use various types and forms of motor activity for active recreation and leading a healthy lifestyle

GC16 Ability to evaluate and ensure the quality of performed works

GC 17. Ability to evaluate and ensure the quality of the work performed.

- *Special competencies are:*

SC1. Skills of communication and clinical examination of a patient with an infectious disease.

SC 2. Ability to determine the list of necessary clinical and laboratory and instrumental studies and evaluate their results.

SC 3. Ability to establish a preliminary and clinical diagnosis of an infectious disease.

SC4 The ability to determine the necessary work and rest regime in the treatment and prevention of diseases

SC 5. Ability to determine the nature of nutrition in the treatment and prevention of infectious diseases.

SC 6. Ability to determine the principles and nature of treatment and prevention of infectious diseases.

SC 7. Ability to diagnose emergency conditions in infectious diseases

SC 8. Ability to determine tactics and provide emergency medical care for infectious diseases

SC 10. Ability to perform medical manipulations

SC 11. Ability to solve medical problems in new or unfamiliar environments in the presence of incomplete or limited information, taking into account aspects of social and ethical responsibility

SC13 Ability to carry out sanitary , hygienic and preventive measures

SC 14. Ability to plan and carry out preventive and anti-epidemic measures regarding infectious diseases

SC15 The ability to conduct a work capacity examination

SC 16. Ability to assess and ensure the quality of work performed

SC17 The ability to assess the impact of the environment, socio-economic and biological determinants on the state of health of an individual, family, population

SC20 The ability to conduct epidemiological and medical statistical studies of population health; processing of social, economic and medical information

SC23 The ability to develop and implement scientific and applied projects in the field of health care

SC 24. Compliance with ethical principles when working with patients and laboratory animals

SC 25. Adherence to professional and academic integrity, to be responsible for the reliability of the obtained scientific results

SC 26. The ability to determine the management tactics of persons subject to dispensary supervision.

- *Program learning outcomes are:*

PLO 1. Having a thorough knowledge of the structure of professional activity. Being able to carry out professional activities that require updating and integration of knowledge. To be responsible for professional development, the ability for further professional training with a high level of autonomy.

- PLO 2. Understanding and knowledge of fundamental and clinical biomedical sciences, at a level sufficient for solving professional tasks in the field of health care.
- PLO3 Specialized conceptual knowledge, which includes scientific achievements in the field of health care and is the basis for conducting research, critical understanding of problems in the field of medicine and related interdisciplinary problems.
- PLO 4. Highlight and identify leading clinical symptoms and syndromes (according to list 1); according to standard methods, using preliminary data of the patient's history, data of the patient's examination, knowledge about the person, his organs and systems, establish a preliminary clinical diagnosis of the disease (according to list 2).
- PLO 5. Collect complaints, anamnesis of life and diseases, evaluate the psychomotor and physical development of the patient, the state of organs and systems of the body, based on the results of laboratory and instrumental studies, evaluate information about the diagnosis (according to list 4), taking into account the age of the patient.
- PLO 6. Establish a final clinical diagnosis by making a reasoned decision and analyzing the received subjective and objective data of clinical, additional examination, carrying out differential diagnosis, observing the relevant ethical and legal norms, under the control of the managing physician in the conditions of a health care institution (according to list 2).
- PLO 7. Prescribe and analyze additional (mandatory and optional) examination methods (laboratory, functional and/or instrumental) (according to list 4) of patients with diseases of organs and body systems for differential diagnosis of diseases (according to list 2).
- PLO 8. Determine the main clinical syndrome or symptom that determines the severity of the victim/injured's condition (according to list 3) by making a reasoned decision about the person's condition under any circumstances (in the conditions of a health care facility, outside its boundaries), including in conditions of emergency and hostilities, in field conditions, in conditions of lack of information and limited time.
- PLO 9. Determine the nature and principles of treatment (conservative, operative) of patients with diseases (according to list 2), taking into account the age of the patient, in the conditions of a health care institution, outside its borders and at the stages of medical evacuation, including in field conditions, on the basis of a preliminary clinical diagnosis, observing the relevant ethical and legal norms, by making a reasoned decision according to existing algorithms and standard schemes, in case of the need to expand the standard scheme, be able to justify personalized recommendations under the control of the head physician in the conditions of a medical institution.
- PLO 10. Determine the necessary regime of work, rest and nutrition on the basis of the final clinical diagnosis, observing the relevant ethical and legal norms, by making a reasoned decision according to existing algorithms and standard schemes.
- PLO 14. Determine tactics and provide emergency medical care in emergency situations (according to list 3) in limited time conditions according to existing clinical protocols and treatment standards.
- PLO16 Form rational medical routes for patients; organize interaction with colleagues in their own and other institutions, organizations and institutions; to apply tools for the promotion of medical services in the market, based on the analysis of the needs of the population, in the conditions of the functioning of the health care institution, its division, in a competitive environment.
- PLO 17. Perform medical manipulations (according to list 5) in the conditions of a medical institution, at home or at work based on a previous clinical diagnosis and/or indicators of the patient's condition by making a reasoned decision, observing the relevant ethical and legal norms.
- PLO18 Determine the state of functioning and limitations of a person's life activity and the duration of incapacity for work with the preparation of relevant documents, in the conditions of a

health care institution, based on data about the disease and its course, peculiarities of a person's professional activity, etc. Maintain medical documentation regarding the patient and the contingent of the population on the basis of regulatory documents.

PLO19 Plan and implement a system of anti-epidemic and preventive measures regarding the occurrence and spread of diseases among the population.

PLO20 To analyze the epidemiological situation and carry out mass and individual, general and local prevention of infectious diseases.

PLO 21. Searching for the necessary information in the professional literature and databases of other sources, analysing, evaluating and application of this information.

PLO24 To organize the necessary level of individual safety (own and the persons they care about) in case of typical dangerous situations in the individual field of activity.

PLO 29. Plan, organize and carry out measures for the specific prevention of infectious diseases, including in accordance with the National calendar of preventive vaccinations, both mandatory and recommended. Manage vaccine residues, organize additional vaccination campaigns, including immunoprophylaxis measures.

PLO 30. Determine the management tactics of persons subject to dispensary supervision (children, pregnant women, workers whose professions require mandatory dispensary examination).

PLO31 Determine the management tactics of persons suffering from chronic infectious diseases subject to dispensary supervision

As a result of studying the discipline, the student has to

Know: Etiology, pathogenesis, clinic, diagnosis, differential diagnosis, treatment, prevention of common diseases in children of different ages. **Be able:**

- Communicate with the child and his parents, collect complaints, life and disease history, vaccination status.
- Conduct clinical examination of children of different ages according to standard methods.
- Analyze the results of laboratory, functional and instrumental studies.
- Carry out differential diagnosis and substantiate the clinical diagnosis.
- Diagnose, determine tactics and provide emergency medical care in emergency situations in children with infectious pathology.
- Determine the character and principles of treatment of sick children on the basis of a preliminary clinical diagnosis, observing relevant ethical and legal norms, by making a reasoned decision according to existing algorithms and standard schemes.
- Perform medical manipulations (according to list 5) for common infectious diseases in children.
- Maintain medical documentation for common infectious diseases in children.
- Draw up a vaccination schedule for children of the first year of life and other age groups, taking into account indications and contraindications.

3. The content of the educational discipline

Content Module 1

Differential diagnosis of infectious diseases with syndrome

Topic 1. Measles, rubella, allergic exanthemas. Etiology. Epidemiology. Clinic. Diagnostics. Complications. Treatment. Organization of anti-epidemic measures in the focus of infection. Prevention.

Topic 2. Chickenpox, herpes zoster, herpes simplex. Etiology. Epidemiology. Clinic. Diagnostics. Complications. Treatment. Organization of anti-epidemic measures in the focus of infection. Prevention

Topic 3. Scarlet fever, pseudotuberculosis. Etiology. Epidemiology. Clinic. Diagnostics. Complications. Treatment. Prevention.

Topic 4. Features of the course of Lyme disease in children. Etiology. Epidemiology. Clinic. Diagnostics. Complications. Treatment. Organization of anti-epidemic measures in the focus of infection. Prevention.

Topic 5. A disease caused by the Coxsackie virus. Etiology. Epidemiology. Clinic. Diagnostics. Complications. Treatment. Prevention.

Content module 2

Differential diagnosis of diseases with respiratory syndrome in children

Topic 6. Diphtheria. Etiology. Epidemiology. Clinic. Diagnosis. Complications. Treatment. Prevention.

Topic 7. Differential diagnosis of diseases with mononucleosis-like syndrome in children: infectious mononucleosis, CMV-infection. Etiology. Epidemiology. Clinic. Diagnosis. Complications. Treatment. Prevention.

Topic 8: Epidemic mumps. Etiology. Epidemiology. Clinic. Diagnosis. Complications. Treatment. Organisation of anti-epidemic measures in the focus of infection. Prevention of the disease.

Topic 9: Lymphadenopathy syndrome in infectious diseases in children. Definition of the concept. Differential diagnosis.

Topic 10. Whooping cough, parapertussis. Etiology. Epidemiology. Clinic. Diagnosis. Complications. Treatment. Organisation of anti-epidemic measures in the focus of infection. Prevention.

Topic 11. Influenza. Etiology. Epidemiology. Clinic. Diagnosis. Complications. Treatment. Organisation of anti-epidemic measures in the focus of infection. Prevention.

Topic 12. ARVI. COVID-19. Etiology. Epidemiology. Clinic. Diagnosis. Complications (false croup, etc.). Treatment. Organisation of anti-epidemic measures in the focus of infection. Prevention.

Content module 3.

Differential diagnosis of diseases associated with meningeal syndrome in children

Topic 13. Differential diagnosis of neuroinfections in children (serous and purulent meningitis, encephalitis, neurotoxicosis, meningism)

Leading clinical symptoms of bacterial and viral meningitis, their complications and differential diagnosis. Clinical and laboratory characteristics of primary and secondary encephalitis, their complications and differential diagnosis.

Topic 14. Meningococcal infection. Etiology. Epidemiology. Clinic. Diagnosis. Complications. Treatment. Organisation of anti-epidemic measures in the focus of infection. Prevention.

Topic 15. Enterovirus infection, poliomyelitis. Etiology. Epidemiology. Clinic. Diagnosis. Complications. Treatment. Organisation of anti-epidemic measures in the focus of infection. Prevention.

Topic 16. Features of tetanus in children. Etiology. Epidemiology. Clinic. Diagnosis. Complications. Treatment. Prevention.

Content module 4

Differential diagnosis of diseases with diarrhoea in children

Topic 17. Bacterial infections accompanied by diarrhoeal syndrome: shigellosis, salmonellosis, escherichiosis. Etiology. Epidemiology. Clinic. Diagnosis. Complications. Treatment. Organisation of anti-epidemic measures in the focus of infection. Prevention.

Topic 18. Viral diarrhoea: rotavirus, norovirus and other infections. Etiology. Epidemiology. Clinic. Diagnosis. Complications. Treatment. Organisation of anti-epidemic measures in the focus of infection. Prevention. Leading clinical symptoms of toxic-excitosis and neurotoxicosis in acute intestinal infections in children. Pathogenesis of toxic syndrome, types and degrees of dehydration. Data of laboratory and instrumental studies in toxic-excitotoxicosis and neurotoxicosis syndromes. Diagnosis. Tactics of a general practitioner in the diagnosis of emergencies in acute intestinal infections in children, emergency care. Pathogenetic and symptomatic therapy. Features of oral rehydration.

Topic 19. Helminthiasis in children. Etiology. Epidemiology. Clinic. Diagnosis. Complications. Treatment. Organisation of anti-epidemic measures in the focus of infection. Prevention.

Topic 20. Giardiasis. Amoebiasis. Etiology. Epidemiology. Clinic. Diagnosis. Complications. Treatment. Prevention.

Content module 5

Differential diagnosis of jaundice syndrome in children. Features of the course of acute viral hepatitis in children

Topic 21: Viral hepatitis A, E in children. Etiology. Epidemiology. Clinic. Diagnosis. Complications. Treatment. Organisation of anti-epidemic measures in the focus of infection. Prevention.

Topic 22. Acute viral hepatitis B, C. Etiology. Epidemiology. Clinic. Diagnosis. Complications. Treatment. Organisation of anti-epidemic measures in the focus of infection. Prevention.

Topic 23: Intestinal yersinia. Etiology. Epidemiology. Clinic. Diagnosis. Complications. Treatment. Organisation of anti-epidemic measures in the focus of infection. Prevention.

Topic 24. Features of the course of malaria in children. Etiology. Epidemiology. Clinic. Diagnosis. Complications. Treatment. Prevention.

Content module 6

HIV/AIDS in children. Immunoprophylaxis

Topic 25. HIV/AIDS in children. Etiology, epidemiology, pathogenesis, clinic, diagnosis and treatment, prevention

Topic 26. TORCH-infections in children. Etiology, epidemiology, pathogenesis, clinic, diagnosis and treatment, prevention.

Topic 27. Immunoprophylaxis of infectious diseases in children. Diagnosis of post-vaccination reactions and complications in children.

Calendar of preventive vaccinations. Vaccinations by age. Recommended vaccinations. Contraindications to vaccination. Vaccine preparations. Organisation of the work of the preventive vaccination room. Post-vaccination reactions and complications, their diagnosis and treatment.

Topic 28. Vaccinations for health reasons. Indications. Contraindications

Topic 29. Preventive work of a doctor at the site. Features of the work of a family doctor in the prevention of infectious diseases.

4. The structure of the educational discipline

7.

7. Teaching methods

Practical classes: solving clinical cases, practicing the skills of providing medical care to patients from the moment of their hospitalization, examination, diagnosis, treatment until discharge from the hospital; practicing the skills of working in a team of applicants, doctors, other participants in the provision of medical care.

Self-study work: independent work with recommended basic and additional literature, with electronic information resources, preparation for practical classes; independent work with a bank of test tasks KPOK-2, independent mastering of algorithms for communication with the patient.

8. Forms of control and evaluation methods (including criteria for evaluating learning outcomes)

Current monitoring of the success of students' learning is carried out during practical training on the basis of theoretical knowledge and practical skills and abilities, for which the following forms of control are used

- oral survey;
- blitz survey;
- control of practical skills (work at the patient's bedside) - control by the teacher, self-control;
- control of solving a situational clinical problem with a diagnosis, its justification and answers to questions at the end of the class (written control);
- oral/written answers to questions on SRS topics in accordance with the calendar and thematic plan;
- assessment of activity in the classroom.

The grade for one practical lesson is the arithmetic mean of all components and can only have an integer value (5, 4, 3, 2), which is rounded according to the statistical method.

Final control: credit.

Evaluation of current learning activities in a practical / seminar / laboratory class:

1. Assessment of theoretical knowledge on the topic of the lesson:
 - methods: a) survey, b) oral/written answers, c) solving a situational clinical problem;
 - maximum grade - 5, minimum grade - 3, unsatisfactory grade - 2.
2. Assessment of work with a patient and practical skills on the topic of the class.
 - Methods: a) assessment of communication skills with the patient,
 - b) correctness of appointment and evaluation of laboratory and instrumental studies, c) compliance with the algorithm of differential diagnosis, d) justification of the clinical diagnosis, e) preparation of a treatment plan.
 - maximum mark - 5, minimum mark - 3, unsatisfactory mark - 2.

Current evaluation criteria in practical training

Grade	Evaluation criteria
Excellent «5»	The acquirer has a fluent command of the material, takes an active part in discussing and solving a situational clinical problem, confidently demonstrates

	practical skills during the examination of a patient and the interpretation of clinical, laboratory and instrumental research data, expresses his opinion on the topic of the lesson, demonstrates clinical thinking.
Good «4»	The acquirer has a good command of the material, participates in the discussion and solution of a situational clinical problem, demonstrates practical skills during the examination of a patient and the interpretation of clinical, laboratory and instrumental research data with some errors, expresses his opinion on the subject of the lesson, demonstrates clinical thinking.
Satisfactory «3»	The acquirer does not have sufficient knowledge of the material, is unsure of participating in the discussion and solving of the situational clinical problem, demonstrates practical skills during the examination of the patient and the interpretation of clinical, laboratory and instrumental research data with significant errors.
Unsatisfactory «2»	The acquirer does not possess the material, does not participate in the discussion and solution of the situational clinical problem, does not demonstrate practical skills during the examination of the patient and the interpretation of clinical, laboratory and instrumental research data.

Credit is awarded to an applicant who has completed all the tasks of the work program of the discipline, actively participated in practical classes, completed and defended an individual assignment and has a current average grade of at least 3.0 and has no academic debt.

The test is taken: at the last lesson before the start of the examination session - in the case of the tape system of education, at the last lesson - in the case of the cycle system of education. The grade for the test is the arithmetic average of all components on a traditional four-point scale and has a value that is rounded according to the statistical method with two decimal places.

9. Distribution of points received by acquirers of higher education

The obtained grade point average for the discipline for students who have successfully completed the work program of the discipline is converted from the traditional four-point scale to points on a 200-point scale, as shown in the table:

Table of conversion of traditional grade into a multi-point scale

National assessment for discipline	The sum of points for the discipline
Excellent («5»)	185-200
Good («4»)	151-184
Satisfactory («3»)	120-150
Unsatisfactory («2»)	Lower then 120

A multi-point scale (200-point scale) characterizes the actual performance of each student in mastering the educational component. The conversion of the traditional grade (grade point average for a discipline) into a 200-point scale is performed by the University's Information Technology Department.

According to the points obtained on a 200-point scale, the achievements of applicants are evaluated according to the ECTS rating scale. Further ranking according to the ECTS rating

scale allows to evaluate the achievements of applicants in the educational component who study in one course of one specialty, according to the points they received.

The ECTS scale is a relative and comparative rating scale that establishes the applicant's belonging to the group of the best or worst among the reference group of fellow students (faculty, specialty). Grade A on the ECTS scale cannot be equal to grade A, and grade B cannot be equal to grade B, etc. When converting from a multi-point scale, the limits of grades "A", "B", "C", "D", "E" on the ECTS scale do not coincide with the limits of grades "5", "4", "3" on the traditional scale. Applicants who have received grades "FX" and "F" ("2") are not included in the list of ranked applicants. The grade "FX" is assigned to applicants who have scored the minimum number of points for current academic activities, but who have not been credited with the final control. The grade "F" is assigned to applicants who have attended all classes in the discipline, but have not gained an average score (3.00) for current academic activities and are not allowed to take the final control.

Acquirers enrolled in the same course (one specialty), based on the number of points gained in the discipline, are ranked on the ECTS scale as follows:

**Conversion of the traditional grade from the discipline and
the sum of points on the ECTS scale**

ECTS mark	Statistic index
"A"	Next 10% of acquirers
"B"	Next 25% of acquirers
"C"	Next 30% of acquirers
"D"	Next 25% of acquirers
"E"	Next 10% of acquirers

10. Methodological support

- Working program of the academic discipline
- Syllabus
- Methodical developments for lecture classes
- Methodical developments for practical classes
- Methodical recommendations for independent work of acquirers of higher education
- Multimedia presentations
- Illustrative materials
- Situational clinical tasks
- Situational results of laboratory examinations
- Scenarios of role-playing games (if necessary)
- Presentations and lecture notes
- Examination tickets
- Electronic bank of test tasks KROK-2

11. Questions for the final control

1. Measles. Clinic of typical and atypical forms. Complication. Differential diagnostics. Treatment. Prevention.
2. Rubella. Differential diagnosis of acquired and congenital rubella. Treatment. Prevention.

3. Chickenpox. Clinical picture of typical and atypical forms of chicken pox. Complication. Differential diagnostics. Congenital chicken pox. Treatment, prevention.
4. Shingles. Diagnostics. Differential diagnostics. Treatment. Prevention.
5. Herpetic infection (herpes simplex). Clinical forms. Differential diagnostics. Congenital herpes infection. Treatment. Prevention.
6. Scarlet fever. Clinical picture of typical and atypical forms. Complication. Differential diagnostics. Treatment. Prevention. Differential diagnosis of angina. Tactics of managing angina patients at home.
7. Pseudotuberculosis. Differential diagnostics. Treatment, prevention.
8. Diphtheria, clinical forms. Complication. Differential diagnosis. Treatment. Prevention of diphtheria. Diphtheria laryngotracheitis. Clinic. Differential diagnosis of true and false croup.

Emergency care.

9. Infectious mononucleosis. Differential diagnosis. Treatment. Prevention.
10. Whooping cough. Peculiarities of the course in infants. Complication. Differential diagnostics. Treatment. Prevention.
11. Apneic form of whooping cough. Clinical and pathogenetic features. Prevention of respiratory arrest in children with whooping cough. Emergency care. Apnea.
12. Mumps infection. Clinical picture of different forms of epidemic parotitis (parotitis, submaxillitis, sublinguitis, pancreatitis, orchitis, meningitis, etc.). Differential diagnosis. Treatment. Prevention.
13. Meningococcal infection. Clinical forms. Peculiarities of the course in children of the 1st year of life. Differential diagnosis of meningococemia. Treatment. Prevention. ITS in meningococemia. Diagnostics. Emergency care.
14. Bacterial and viral meningitis in children. Clinical features depending on the age of the child. Differential diagnosis. Treatment. Prevention.
15. Encephalitis in children. Etiological structure. Clinical features. Laboratory and instrumental diagnostics. Differential diagnostics. Treatment. Prevention.
16. Swelling of the brain in meningitis and encephalitis in children. Diagnostics. Emergency care.
17. Poliomyelitis. Clinical forms. Differential diagnosis. Treatment. Prevention.
18. Enterovirus infection. Clinical forms. Differential diagnosis. Treatment. Prevention.
19. Shigellosis in children. Peculiarities of the course in different age groups. Differential diagnostics. Treatment. Prevention.
20. Salmonellosis in children. Peculiarities of the course in different age groups. Differential diagnosis. Treatment. Prevention.
21. Escherichia in children. Clinical features in children of different age groups depending on the causative agent. Differential diagnosis. Treatment. Prevention.
22. Intestinal yersiniosis. Peculiarities of the course in different age groups. Differential diagnostics. Treatment. Prevention.
23. Rotavirus infection. Differential diagnostics. Treatment. Prevention.
24. Toskyko-exykosis in acute intestinal infections. Etiological structure. Types of exykosis. Clinical and laboratory diagnostics. Emergency care.
25. Neurotoxicosis with GKI. Etiological structure. Clinical and laboratory diagnostics.

Emergency care.

26. Viral hepatitis A. Differential diagnosis. Treatment. Prevention.
27. Viral hepatitis B. Features of the course in young children. Differential diagnostics. Treatment. Prevention.
28. Acute liver failure with viral hepatitis in children. Clinical and laboratory diagnostics. Emergency care.

29. Flu. Clinical course. Peculiarities in young children. Complication. Differential diagnosis. Treatment. Prevention. Emergency care for hyperthermic and convulsive syndrome.
30. Parainfluenza. Features of clinical manifestations. Differential diagnostics. Treatment. Prevention.
31. Acute stenosing laryngotracheitis. Diagnostics. Differential diagnosis with real croup. Emergency care.
32. RS-infection. Features of clinical manifestations. Differential diagnosis. Treatment. Prevention.
33. Adenovirus infection. Peculiarities of the course in young children. Differential diagnosis. Treatment. Prevention.
34. Immunoprevention of children's infectious diseases. Organization of vaccinations for children. Contraindications to vaccination. Post-vaccination reactions and complications. Diagnosis and treatment.
35. Anaphylactic shock during vaccination. Diagnostics, emergency care.
